Biggs, E. Power (Edward George Power Biggs), 1906–, Anglo-American organist. Biggs studied at the Royal Academy of Music, London. He emigrated to the United States in 1930. Through many recitals, radio broadcasts, and recordings, he helped to make the best organ music, particularly that of the baroque period and of the 20th cent., familiar to the American public.

Big Hole National Battlefield. see NATIONAL PARKS AND MONUMENTS (table)

Bighorn, river, 461 mi (741 km) long, formed in W central Wyo. by the confluence of the Wind and Pop Agie rivers and flowing north to join the Yellowstone River in S Mont. The Bighorn basin, part of the Missouri River basin project, has several dams that provide for flood control, irrigation, hydroelectricity, and recreation. Boysen and Yellowstone are the principal dams, the lake behind Yellowstone dam is the nucleus of Bighorn Canyon National Recreation Area (see NATIONAL PARKS AND MONUMENTS, table). In 1807 a U.S. trading post was established at the mouth of the Bighorn. The battle between the forces of Col. George Custer and the Sioux Indians took place (1876) near the junction of the Bighorn and the Little Bighorn rivers.

bighorn or Rocky Mountain sheep, wild sheep of W North America, formerly plentiful in mountains from Canada to Mexico. Indiscriminate hunting, disease, and scarcity of food have reduced its numbers, and in some areas it has been exterminated. It is a heavy, grayish brown animal, with a conspicuous whitish patch on its hindquarters, the male has heavy, curling horns, while the female has short, straight spikes. One type of bighorn lives at high altitudes in the W United States and another in desert regions. Alaskan types are the Dall's, or white, sheep and the Stone's, or black, sheep. Bighorn sheep are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

Bighorn Mountains, range of the Rocky Mts., N central Wyo., extending c 120 mi (190 km) N into S Montana, E of the Bighorn River. Cloud Peak, 13,165 ft (4,013 m), is the highest point. The glaciated mountain range contains Bighorn National Forest.

bight, broad bend or curve in a coastline, forming a large open bay. The New York bight, for example, is the curve in the coast described by the southern shore of Long Island and the eastern shore of New Jersey. The term *bight* may also refer to the bay so formed.

Bignon, Louis Pierre Édouard (lŭē pyēr ēdwar' bēnyōn'), 1771–1841, French diplomat and historian. He held diplomatic posts under Napoleon, was acting minister of foreign affairs during the Hundred Days, and signed the surrender of Paris after Waterloo. A member of the chamber of deputies in the Restoration, he was (1830) foreign minister under Louis Philippe, who raised him to the peerage. His major historical work, *Histoire de France sous Napoleon* (14 vol., 1829–50, completed posthumously by A. A. Ernouff), was commissioned by Napoleon.

bigonia (bīgnō'nēā), common name for the family Bignoniaceae, a family of chiefly woody vines of the American tropics and also a few shrubs and trees. The trumpet creeper (of the genus *Bignonia*) and the trumpet flower, or trumpet vine (of the genus

Campsis), both found wild in the SE United States, are sometimes cultivated for their orange-red trumpet-shaped flowers. The calabash tree of the tropics bears large fruits from which carrying gourds (called calabashes) are made and used locally, its wood is used for making pipes. The *Catalpa* genus of trees with showy flowers is valued in the United States for ornament and shade. The highly durable wood is used for lumber, as is that of the South American genus *Jacaranda* and of the West Indian boxwood (of the genus *Tabebuia*). The bignonias are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Scrophulariales.

Bigod, Hugh, 1st earl of Norfolk (bī'gōd, nōr'fak), d. 1177, English nobleman. He was instrumental in securing the throne for STEPHEN in 1135, but he subsequently switched his allegiance back and forth between Stephen and MATILDA, and it is not known for sure which one of them created him earl of Norfolk. He finally cast his lot with the future Henry II in 1153. In 1173 he joined the revolt of Henry's sons against their father. His lands were seized, his castle was burned, and a heavy fine was exacted.

Bigordi, Domenico: see GHIRLANDAIO, DOMENICO

Bigot, François (fra'nsŭa' bēgō'), 1703–77?, intendant of New France (1748–59), b. Bordeaux, France. At Louisbourg, where he served (1739–45) as commissary, it has been said that he indulged in fraudulent practices that contributed to the downfall of that fort. Powerful friends in France secured for him the office of intendant of New France. Bigot arrived at Quebec in 1748 and immediately instituted a system of official theft by which every branch of the public service was laid under tribute to enrich himself and his friends. His corrupt administration reduced the colony to bankruptcy and helped bring on the fall of New France to the British. After the capture of Quebec in 1759 he returned to France, where he was arrested, imprisoned for nearly a year, compelled to make restitution, and then banished. The date of his death in Switzerland is uncertain.

Big Rapids, city (1970 pop. 11,995), seat of Mecosta co., W central Mich., at the falls of the Muskegon River, inc. 1869. The region has extensive natural gas wells. The city's major manufactures include shoes, machine tools, and wood products. Ferris State College, part of the Univ. of Michigan system, is in Big Rapids.

Big River. see FORT GEORGE, river

Big Sioux (sōō), river, 420 mi (676 km) long, rising in NE S. Dak. and flowing S into the Missouri River. It passes through an agricultural region that produces corn, oats, hogs, and beef cattle. The Big Sioux forms part of the border between Iowa and South Dakota.

Big Spring, city (1970 pop. 28,735), seat of Howard co., W central Texas, inc. 1907. The spring for which it was named once fed a branch of the Colorado River but is now dry. The city is the trade center for a farm and livestock region. A variety of oil-related industries have been developed since the discovery of oil in 1928. Points of interest in Big Springs include a historical museum and the Comanche Trail Park. A junior college is in the city. Webb Air Force Base is nearby.

Big Stone Lake, narrow lake, c 25 mi (40 km) long, on the Minn.-S. Dak. line. Located in the outlet channel of glacial Lake AGASSIZ, it is the source of the Minnesota River.

Bigtha, chamberlain of Ahasuerus. Esther 1:10.

Bigthan (big'thān), chamberlain who conspired with Teresh against King Ahasuerus. Esther 2:21. He is called *Bigthana* in Esther 6:2.

big tree. see SEQUOIA

Bigvai (bīg'vāi, bīg'vā't) 1. Signer of the covenant. Ezra 2:2, Neh. 7:7, 10:16. 2. Name of a family in the return. Ezra 2:14, Neh. 7:19.

Bihar or Behar (bēhar'), state (1971 pop. 56,387,296), 67,198 sq mi (174,042 sq km), E central India. PATNA is the capital. RANCHI is an important administrative center. Bihar is bounded on the N by Nepal, on the E by West Bengal state, on the S by Orissa state, and on the W by Uttar Pradesh and Madhya Pradesh states. The predominantly agricultural northern area, crossed by the Ganges River, supports the bulk of the population. Rainfall, frequently inadequate, is supplemented by extensive irrigation. Rice is grown where possible, maize, wheat, barley, sugarcane, tobacco, and oilseed are also important crops. Jute is the main cash crop of the extreme northeast. The central and southern areas are hilly. The southeastern section is one of the greatest sources of India's mineral wealth, mica and copper are abundant, and iron ore, found in association with coal, is pro-

cessed at the great Jamshedpur steelworks. The chief transportation lines run east and west, thus linking central India with the Bengal ports. Bihar's population, almost entirely Hindu, is unusually homogeneous for India. The people speak Bihari, an Indo-European language. Bihar was the scene of Buddha's early life, and BODH GAYA is an ancient Buddhist center. Bihar was part of the ancient kingdom of Magadha. Muslims occupied it in 1193 and the Delhi sultans in 1497. In 1765 the British took over Bihar and merged it with Bengal. The province of Bihar and Orissa was formed in 1912, and Bihar became a separate province in 1936. About 3,150 sq mi (8,160 sq km) situated along Bihar's eastern boundary were transferred to West Bengal state in 1956. Bihar is governed by a chief minister and a cabinet responsible to a bicameral legislature with one elected house and by a governor appointed by the president of India. Bihar city (1971 pop. 100,052), on a tributary of the Ganges River, is an agricultural market.

Bisk, see **BYSK**, USSR

Biṣapur (biṣā'pūr), town (1971 pop. 103,308), Karnataka state, SE India. It is a trade and district administrative center. Cotton ginning is an important activity. Biṣapur is famous as the capital (15th-17th cent.) of the Deccan kingdom of Biṣapur, under the Adil Shahi sultans. Among the town's many notable remains is the Gol Gumbaz, the tomb of Mahmud Shah.

Bijs, Anna (a'nā bīns), c.1494-1575?, Flemish poet of Antwerp. Her three volumes (1528, 1548, 1567) of lyric verse place her among the foremost Dutch poets of her age. She excelled in robust satires passionately inveighing against the social evils of the day and deploring the Reformation. Bijs's religious poetry is sincere and moving.

Bika, El, see **BIQA**, AL

Bikaner (bīkānēr'), former native state, NW India. The state is now part of Rajasthan state. The region, almost entirely in the Thar desert, chiefly supports the raising of sheep and camels. Wool is spun and woven, and coal is mined. The city of Bikaner (1971 pop. 188,598), the capital of the former state, was founded in 1488. There are several beautiful 16th-century Rajput palaces. The city has five colleges that are affiliated with the Univ. of Rajasthan.

Bikini (bēkē'nē), atoll, c.2 sq mi (5.2 sq km), W central Pacific, one of the Ralik Chain, MARSHALL ISLANDS. It comprises 36 islets on a reef 25 mi (40 km) long. After its inhabitants were removed (1946) to Rongerik, Bikini was the scene of 23 U.S. atomic and hydrogen bomb tests between 1946 and 1958. The Bikini natives were transferred from Rongerik to Ujelang in 1947 and in 1949 were resettled on Kili. The atoll was declared safe for habitation in 1969. Bikini was formerly called Escholtz Island.

Bilac, Olavo (ōlā'vōō bēlak'), 1865-1918, Brazilian poet, journalist, and critic. He was the chief poet of the Brazilian group related to the French PARNASSIANS. His writings have an enameled elegance as well as sensual richness that gained them enduring acclaim. Some of them are gathered in *Poesias* (1888) and *Tarde* [afternoon] (1919).

Bilaspur (bēlas'pūr'), 1. Former principality, Himachal Pradesh state, NW India, in the W Himalayas. It is the site of the Bhakra dam, a massive project on the Sutlej River. The town of Bilaspur (1971 pop. 7,024), formerly the capital, trades in agricultural products. 2. Town (1971 pop. 130,804), Madhya Pradesh state, central India. Founded in the 17th cent., the city is a district administrative center and an agricultural market.

Bila Tserkva: see **BELAYA TSEKOV**, USSR

Bilauktung (bēlouk'toun), mountain range, extending c.250 mi (400 km) along the Thailand-Burma border from the Dawna Range SE to the Isthmus of Kra. The western slopes of the range, which receive the heavy rains of the monsoon, have a dense covering of tropical rain forest.

Bilbao (bēlbā'ō), city (1971 pop. 410,490), capital of Vizcaya prov., N Spain, in the Basque Provinces, on both banks of the Nervion River, near the Bay of Biscay. A leading Spanish port and commercial center since the 19th cent., it is the center of an important industrial area, with rich iron mines nearby. The production of steel and chemicals and shipbuilding are the chief industries. Founded c.1300 on the site of an ancient settlement, Bilbao flourished from a wool export trade in the 15th and 16th cent. In the 19th cent. it was three times unsuccessfully besieged by the Carlists. In the Spanish civil war, Bilbao was the seat of the short-lived Basque autonomous government from 1936 until its capture (1937) by the Insurgents.

Bilbilis: see **CALATAYUD**, Spain

Bilbo, Theodore Gilmore, 1877-1947, U.S. Senator (1935-47), b. near Poplarville, Pearl River co., Miss. After study at the Univ. of Nashville (1897-1900) and Vanderbilt Univ. law school (1905-7), he was admitted (1908) to the Tennessee bar. An ultraconservative Southern Democrat, he won political success by demagogic insistence on white supremacy. He was twice governor of Mississippi (1916-20, 1928-32) before his election to the U.S. Senate. He died while Congress was investigating charges that he had disqualified himself for the Senate by using intimidation to keep Negroes from voting and by accepting bribes. See biography by A. W. Green (1963).

Bildad, the second, and perhaps the least consoling, of Job's comforters. Job 8, 18, 25, 42 9.

Bilderdijk, Willem (wīl'əm bīl'dārdīk), 1756-1831, Dutch poet. His work influenced Dutch literature throughout the 19th cent. He tutored Louis Bonaparte in Dutch and later conducted a small private college at Leiden, where he greatly influenced his pupils, notably Isaac da Costa and Jacob van Lennep. Bilderdijk's work is of prodigious quantity and includes passionate love poetry as well as the religious verse for which he is best known. At its best, the poetry is so splendid that Bilderdijk is ranked among the great Dutch poets. His most ambitious effort is an unfinished epic, *De Ondergang der eerste Wereld* [the destruction of the first creation] (1820). His Dutch translation of the romanticists catalyzed that movement in Dutch literature, and a number of his own works were modeled after those of the British romanticists.

bile, bitter alkaline fluid of a yellow, brown, or green color, secreted, in man, by the liver. Bile, or gall, is composed of water, bile acids and their salts, bile pigments, cholesterol, fatty acids, and inorganic salts. In man it is stored in the GALL BLADDER and, in response to the action of the hormone cholecystokinin (whose secretion by the intestine is stimulated by the presence of food), is secreted via the cystic and common ducts into the duodenum. The bile salts aid in digestion by emulsifying fats, enabling the absorption of fats and of the fat-soluble vitamins (A, D, E, and K) through the intestinal wall. Since unabsorbed fats tend to coat other foods and prevent the action of digestive enzymes, adequate fat absorption mediated by bile salts is necessary for the complete digestion of food and the prevention of decomposition of partially digested foods by intestinal bacteria. The alkaline bile acts to neutralize the stomach acid in the small intestine, providing a more optimum environment for the pancreatic enzymes. The bile is a route of excretion for many drugs and metabolites, cholesterol is excreted almost entirely in the bile, as are breakdown products of heme, such as bilirubin, that color the bile and are known as the bile pigments. If the flow of bile is impeded by inflammation, gall stones, or other abnormality, digestive disturbances and frequently JAUNDICE result.

Bileam (bīl'ēām), the same as **IBELAM**

Bilgah (bīl'gā), 1. Priest 1 Chron 24:14. 2. Priest in the return. Neh 12:5, 18. He is called Bilgāi at Neh 10:8.

Bilhah (bīl'hā), 1. Rachel's maid and Jacob's concubine. Gen 29:29, 30:1-8, 35:22, 25, 46:25, 1 Chron 7:13. 2. City of Simeon, of unknown location. 1 Chron 4:29. Baalah. Joshua 15:29. Balah. Joshua 19:3.

Bilhan (bīl'hān), 1. Horite. Gen 36:27, 1 Chron 1:42. 2. Benjamite. 1 Chron 7:40.

Billaud-Varenne, Jacques Nicolas (zhak nēkōlā' bēyō'-vārēn'), 1756-1819, French revolutionary. A violent antimanagerialist in the Convention, the revolutionary national assembly, he became a member of the Committee of Public Safety. He proposed a centralization of power from which no one would be exempt; this proposal, passed as law, became the basis for the dictatorship of the REIGN OF TERROR. He plotted first against Georges DANTON and then against Maximilien ROBESPIERRE. After Robespierre's fall, however, he was deported to French Guiana for his role in the Terror. He refused an amnesty offered by Napoleon Bonaparte (later Emperor Napoleon I). Ultimately he went to Haiti, where he died.

Billerica (bīl'rīkā), town (1970 pop. 31,648), Middlesex co., NE Mass., on the Concord River, settled 1637, inc. 1655. It is mainly residential. Billerica was one of the "praying Indian" towns of John Eliot. The town's historical attractions include several 17th-, 18th-, and 19th-century homes and an Indian site and burial ground dating back to 1,000 B.C.

billiards, any one of a number of games played with a tapered, leather-tipped stick called a cue and various numbers of balls on a rectangular, cloth-cov-

ered slate table with raised and cushioned edges. Games similar to billiards were popular in England and France in the 16th cent., and there is even evidence that a billiardlike game was played in the 14th cent. The country of origin is a matter of dispute—England, France, Italy, Spain, and China have been credited by various historians with its invention. The game in its present form was probably fully developed by 1800. There are three main types of billiards: carom billiards, pocket billiards (also known as pool), and snooker. Carom billiards is played with three balls, a cue ball and two object balls, on a pocketless table, scoring is by caroms only, i.e., by causing the cue ball to strike the object balls in specified ways. Pocket billiards is played with 15 object balls and a cue ball on a table with six pockets, the essential object of the game is to cause the object balls to enter the pockets. Snooker is similar to pocket billiards, except that it uses 21 object balls and smaller pockets. There are many additional variations of the basic games, depending on the number of balls used, the positioning of the balls, the boundaries on the table, and the scoring. Among the variations are Chicago, golf, rotation, balk-line, and bumpers. William Frederick HOPPE is generally considered the foremost billiards player of all time. See Clive Cottingham, *The Game of Billiards* (1964).

Billings, John Shaw, 1838-1913, American surgeon and librarian, b. Indiana. In the Civil War he was medical inspector of the Army of the Potomac. After the war he was given charge of the Surgeon General's Library in Washington. The catalog entries greatly increased under his supervision by 1873, and soon after he began work on the great *Index Catalogue*. Sixteen volumes appeared before his military retirement. In 1879 he initiated the *Index Medicus*, a monthly guide to current medical literature. Billings designed plans for the construction of Johns Hopkins Hospital. His essays on hospital administration and training remain classics. Under his librarianship (1864-95) the National Library of Medicine became one of the greatest medical library systems in the world. In 1889 he compiled the *National Medical Dictionary*. As director of the combined Astor, Lenox, and Tilden foundations in New York City, which were to become the NEW YORK PUBLIC LIBRARY, he consolidated the collections, planned and supervised the erection of the central library building, united the various free circulating libraries of the city, secured \$5 million from Andrew Carnegie for branch buildings, and in general created the New York Public Library as it now stands. It was at Billings' suggestion that punched card machinery was developed, forming the beginnings of computer technology. He also supervised compilation of U.S. census information in 1880 and 1890. See his *Selected Papers* (comp. with a biography by F. B. Rogers, 1965), biographies by F. H. Garrison (1915) and H. M. Lydenberg (1924).

Billings, Josh, pseud. of **Henry Wheeler Shaw**, 1818-85, American humorist and lecturer, b. Lanesboro, Mass. After a roving life as farmer, explorer, and coal miner, he settled in Poughkeepsie, N.Y., as an auctioneer and real estate dealer. In 1860 he began to write humorous sketches and homespun philosophies in rural dialect and soon became a popular lecturer. His first collection was *Josh Billings' His Sayings* (1869), but his best humor was published in his annual *Farmer's Almanac* (1869-80). See study by D. B. Kesterson (1974).

Billings, William, 1746-1800, American hymn composer, b. Boston. A tanner by trade, he was one of the earliest American-born composers. He wrote popular hymns and sacred choruses of great vitality, using simple imitative counterpoint—hence their designation as "fuguing tunes." He often wrote his own texts, breaking with the colonial New England tradition of using psalm verses as texts for hymns. His self-reliance and lack of musical training made him relatively independent of European musical fashions. As a singing master, he introduced the use of both pitch pipe and violoncello to improve the intonation of church choirs. A singing class he organized in 1774 became in 1786 the Stoughton Musical Society. During the American Revolution he wrote patriotic words to his best-known hymn, "Chester," beginning "Let tyrants shake their iron rods, / And Slav'ry clank her galling chains." His songbooks include *The New England Psalm Singer* (1770), *The Singing Master's Assistant* (1778), and *The Continental Harmony* (1794). See biography by David McKay and Richard Crawford (1974). Murray Barbour, *The Church Music of William Billings* (1960, repr. 1972).

Billings, city (1970 pop. 61,581), seat of Yellowstone co., 5 mi. N. on the Yellowstone River, in a valley

surrounded by seven mountain ranges, inc as a city 1885 Founded in 1882 by the Northern Pacific RR, Billings quickly became an important shipping point and fur-trading center It is now a trade and manufacturing center for the S Montana and N Wyoming region Oil refining, sugar refining, meat packing, and flour milling are the city's major industries Wheat, sugar, beets, livestock, and wool are traded Billings, the center of a recreational area, is near Custer National Forest and Yellowstone National Park Rocky Mountain College and Eastern Montana College are in Billings

Billingsgate (bīl'ingzgīt, -gāt), wharf and fish market in the City of London, Greater London, England, on the north bank of the Thames River The market is named after a river gate in the old city wall The word *Billingsgate*, a synonym for coarse language, arose from references to the speech of the district's fish porters

Billiton: see BELITUNG

bill of exchange. see DRAFT

Bill of Rights, 1689, in British history, one of the fundamental instruments of constitutional law It registered in statutory form the outcome of the long 17th-century struggle between the Stuart kings and the English Parliament Its principles were accepted by William III and Mary II in the Declaration of Rights as a condition for ascending the throne after the revolution in which James II was dethroned (1688) The Bill of Rights stated that certain acts of James II were illegal and henceforth prohibited, that Englishmen possessed certain inviolable civil and political rights, that James had forfeited the throne by abdication and that William and Mary were lawful sovereigns, that the succession should pass to the heirs of Mary, then to Princess Anne (later queen) and her heirs, and that no Roman Catholic could ever be sovereign of England By its provisions and implications it gave political supremacy to Parliament and was supplemented (1701) by the Act of Settlement

Bill of Rights, in U.S. history see CONSTITUTION OF THE UNITED STATES

Billy the Kid, 1859-81, American outlaw, b New York City His real name was William H Bonney His family moved to Kansas and then to New Mexico when he was a child He frequented saloons and gambling halls, and before he was 16 years old he had killed several men In 1878 he led a gang in the Lincoln co cattle war, killed a sheriff, and engaged in large-scale cattle rustling John S Chisum and other cattlemen secured (1880) the election of a new sheriff sworn to rid the country of the cattle thieves Billy the Kid was captured, tried, and sentenced to death He escaped but was again trapped and was shot by Sheriff Pat F Garrett See biographies by Pat F Garrett (1882, repr 1967), R N Mullin (1967), C A Siringo (1967), and C W Breihan (1970)

Biloxi (bīl'ūk'sē), city (1970 pop 48,486), Harrison co, SE Miss, on a small peninsula between Biloxi Bay and Mississippi Sound, on the Gulf of Mexico, inc as a town 1838, as a city 1896 The warm, almost tropical climate has made Biloxi a popular resort In addition to tourism, major industries include fishing and boatbuilding, the packing and shipping of shrimps and oysters, and the manufacture of small appliances and fishing nets The first white settlement in the lower Mississippi valley was established in 1699 across the bay at Old Biloxi (now Ocean Springs) by the French under Pierre Iberville New Biloxi was founded in 1719 and was the capital of the French colony of Louisiana until 1722, when New Orleans replaced it In the city are Keesler Air Force Base, a U.S. coast guard air station, and a U.S. veterans hospital Nearby are "Beauvoir" (built 1852-54), the last home of Jefferson Davis, the Biloxi Light House (built 1848), and, off the coast, Ship Island, a Union fort in the Civil War The city has a junior college, a symphony, and a theater group

Bishan, one who returned with Zerubbabel Ezra 22, Neh 77

Bimeler, Joseph Michael (bī'mələr), 1778-1853, German religious leader, originally called Baumler A teacher of the separatists in Württemberg, in 1817 he led a group of them to America In Ohio they founded the community of ZOAR

bimetallism, in economic history, monetary system in which two commodities, usually gold and silver, were used as a standard and coined without limit at a ratio fixed by legislation that also designated both of them as legally acceptable for all payments The term was first used in 1869 by Enrico Cernuschi (1821-96), an Italian-French economist and a vigorous advocate of the system In a bimetallic system,

the ratio is expressed in terms of weight, e.g., 16 oz of silver equal 1 oz of gold, which is described as a ratio of 16 to 1 As the ratio is determined by law, it has no relation to the commercial value of the metals, which fluctuates constantly Gresham's law, therefore, applies, i.e., the metal that is commercially valued at less than its face value tends to be used as money, and the metal commercially valued at more than its face value tends to be used as metal, valued by weight, and hence is withdrawn from circulation as money Working against that is the fact that the debtor tends to pay in the commercially cheaper metal, thus creating a market demand likely to bring its commercial value up to its face value In practice, the instability predicted by Gresham's law overpowered the cushioning effect of debtors' payments, thereby making bimetalism far too unstable a monetary system for most modern nations Aside from England, which in acts of 1798 and 1816 made gold the standard currency, all countries practiced bimetalism during the late 18th cent and most of the 19th cent See J L Laughlin, *The History of Bimetallism in the United States* (1897, repr 1968)

Bimhal (bīm'hāl), Asherite 1 Chron 733

Biminis (bī'mīnēz, bāmē'nēz), island group in the Straits of Florida, forming the northwest section of the Bahamas The group includes North Bimini, South Bimini, and surrounding cays Exceptionally good fishing attracts many tourists According to legend, the Bimins are the location of the fountain of youth for which Juan Ponce de Leon searched

binary star or binary system, pair of stars that are held together by their mutual gravitational attraction and revolve about their common center of mass True binary stars are distinct from optical doubles—pairs of stars that lie nearly along the same line of sight from the earth but are not physically associated Binary stars are grouped into three classes A visual binary is a pair of stars that can be seen by direct telescopic observation to be a distinct pair with shared motion A spectroscopic binary cannot be seen as two separate stars, even with the most powerful telescopes, but spectral lines from the pair show a periodic Doppler effect that indicates mutual revolution Some lines indicate motion toward the earth while others indicate motion away, later, as the stars revolve around in their orbit, this pattern reverses An eclipsing binary has the plane of its orbit lying in the line of sight, and shows a periodic fluctuation in brightness as one star passes in front of the other The brighter star (A) of a binary is called the primary, and the less bright (B) is called the secondary, e.g., Sirius A and Sirius B are the primary and secondary components of the Sirius system It seems likely that about half the stars in our galaxy are binary or multiple (a system of more than two stars moving around their mutual center of

mass), since half the known stars within 30 light-years of the sun are binary or multiple The masses of the components of a visual binary can be deduced from the observed motions and Newton's law of gravitation, these are the only stars, other than the sun, for which masses have been directly determined Measurements of the masses of some of the visual binary stars have been used to verify the MASS-LUMINOSITY RELATION

binary system, NUMERATION system based on powers of 2, in contrast to the familiar DECIMAL SYSTEM, which is based on powers of 10 In the binary system, only the digits 0 and 1 are used Thus, the first ten numbers in binary notation, corresponding to the numbers 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9 in decimal notation, are 0, 1, 10, 11, 100, 101, 110, 111, 1000, and 1001 Since each position indicates a specific power of 2, just as the number 342 means $(3 \times 10^2) + (4 \times 10^1) + (2 \times 10^0)$, the decimal equivalent of a binary number can be calculated by adding together each digit multiplied by its power of 2, for example, the binary number 1011010 corresponds to $(1 \times 2^6) + (0 \times 2^5) + (1 \times 2^4) + (1 \times 2^3) + (0 \times 2^2) + (1 \times 2^1) + (0 \times 2^0) = 64 + 0 + 16 + 8 + 0 + 2 + 0 = 90$ in the decimal system Binary numbers are sometimes written with a subscript "b" to distinguish them from decimal numbers having the same digits As with the decimal system, fractions can be represented by digits to the right of the binary point (analogous to the decimal point) A binary number is generally much longer than the decimal equivalent, e.g., the number above, 1011010, contains seven digits while its decimal counterpart, 90, contains only two This is a disadvantage for most ordinary applications but is offset by the greater simplicity of the binary system in COMPUTER applications Since only two digits are used, any binary digit, or bit, can be transmitted and recorded electronically simply by the presence or absence of an electrical pulse or current The great speed of such devices more than compensates for the fact that a given number may contain a large number of digits

Binchois, Gilles (zhēl bān'shwa'), c 1400-1460, Flemish composer From about 1430 until his death Binchois served Philip the Good of Burgundy His secular chansons are considered his best work The 15th-century theorist Tinctoris ranked him with Du Fay and Dunstable

bindweed see MORNING GLORY

Binea (bīn'ēa), descendant of Saul 1 Chron 837, 943

Binet, Alfred (alfred' bēnā'), 1857-1911, French psychologist From 1894 he was director of the psychology laboratory at the Sorbonne He is known for his research and innovation in testing human intelligence With Theodore Simon he devised (1905-11) a series of tests that, with revisions, came into wide use in schools, industries, and the army The Stanford, the Herring, and the Kuhlmann are important revisions Binet and Simon wrote *Les Enfants anormaux* (1907, tr *Mentally Defective Children*, 1914) Most of his writings were published in *Année psychologique*, a journal that he founded in 1895 See study by T H Wolf (1973)

Bing, Rudolf (rōō'dōlf bīng), 1902-, Austrian operatic manager Naturalized a British subject in 1946, he was general manager of the Glyndebourne operatic festivals (1934-49) and artistic manager of the Edinburgh International Festival (1947-49) He became general manager of the Metropolitan Opera in New York in 1950 Bing was knighted in 1971 and retired the following year See his *5000 Nights at the Opera* (1972)

Bingen (bīng'an), city (1970 pop 23,724), Rhineland-Palatinate, W West Germany, where the Nahe River enters the Rhine A busy river port, railroad junction, and tourist center, Bingen is also noted for its wine and tobacco manufactures Dating from pre-Roman times, Bingen was fortified (1st cent BC) by Drusus In 983 it came under the rule of the archbishops of Mainz Near Bingen, on a rock in the Rhine, is the famous Mauseturm [Ger, = mice tower], where, according to legend, Archbishop Hatto I of Mainz was devoured (913) by mice for wronging his subjects

Bingham, Caleb, 1757-1817, American textbook writer, b Salisbury, Conn He taught until 1796, then became a bookseller and publisher in Boston He wrote and published some of the earliest grammars, spelling books, and geographies He was best known for his readers *The American Preceptor* (1794) and *The Columbian Orator* (1797), both widely used in New England schools for the next quarter century

A Eclipsing binary Primary component passing behind secondary (dimmer) component

B Light curve for eclipsing binary

Bingham, George Caleb, 1811–79, American genre painter and politician, b Augusta co, Va. His family moved (1819) to Missouri which was the site of most of Bingham's activities. In 1837 he studied for a short time at the Pennsylvania Academy of the Fine Arts. From 1856 to 1859 he traveled in Europe, studying at Düsseldorf for a time. Journeys on the Mississippi and through the South resulted in such paintings as *Fur Traders Descending the Missouri* (Metropolitan Mus.), *Daniel Boone Coming Through the Cumberland Gap* (1851, Washington Univ, St. Louis), and *Raftsmen Playing Cards* (City Art Mus, St. Louis). Bingham entered Missouri politics with his election to the legislature in 1848 (he had been defeated in 1846), he served as state treasurer (1862–65), after a year in the Union army, and became state adjutant general in 1875. Such pictures as *The Verdict of the People* and *Stump Speaking* (Mercantile Library Association, St. Louis) reflect his interest in politics. His scenes—vigorous, interesting in composition, humorous, and faithfully representing their time and locale—were very popular in his day, and engravings from them sold widely. See catalog and study by E. M. Bloch (2 vol., 1967), studies by A. W. Christ-Janer (1940) and J. F. McDermott (1959).

Bingham, Hiram, 1789–1869, American Congregationalist missionary, b Bennington, Vt. In 1819 the American Board of Missions sent him, with others, to found the first Protestant mission in the Hawaiian Islands. Bingham adapted the Hawaiian language to writing, published *Elementary Lessons in Hawaiian* (1822), and, with his associates, translated the Bible into Hawaiian. See his *A Residence of Twenty-one Years in the Sandwich Islands* (1847, 3d ed rev 1969).

Bingham, Hiram, 1831–1908, American Congregationalist missionary, b Honolulu, son of Hiram Bingham (1789–1869). In 1857 he founded a mission on Abaia in the Gilbert Islands. Bingham adapted the language of the Gilbert Islands to writing. He translated the Bible and also prepared in Gilbertese a Bible dictionary, a hymnbook, and a commentary on the Gospels.

Bingham, Hiram, 1875–1956, American archaeologist, historian, and statesman, b Honolulu, son of Hiram Bingham (1831–1908). He was educated at Yale (B.A., 1898), the Univ of California (M.A., 1900), and Harvard (M.A., 1901, Ph.D., 1905) and later taught (1907–23) at Yale. Bingham headed expeditions sent from Yale in 1911, 1912, and 1914–15 to South America to study Inca ruins and was the discoverer of the Inca cities of Vitcos and Machu Picchu in 1911 and 1912, the road opened to Machu Picchu in 1948 was named the Hiram Bingham Highway. His well-known books deal with these expeditions and with Machu Picchu—*Journal of an Expedition across Venezuela and Colombia* (1909), *Across South America* (1911), *Inca Land* (1922), *Machu Picchu, a Citadel of the Incas* (1930), and *Lost City of the Incas* (1948). In World War I he was notable as an aviator, heading an Allied flying school in France. After leaving Yale, he served as lieutenant governor (1923–24) and governor (1925) of Connecticut and as U.S. Senator (1925–33). He also wrote on the Monroe Doctrine and other policies of state.

Bingham, Joseph, 1668–1723, English theologian. He is known for his learned work on Christian antiquities (10 vol., 1708–22).

Bingham Canyon or Bingham, town (1970 pop 31), N central Utah, near Tooele, in a canyon of the Oquirrh Mts. SW of Salt Lake City. At first (1848) a farm of the Mormons Thomas and Sanford Bingham, it became in the 1860s a roaring mining town, dealing in gold, then silver and lead, and in the 20th cent copper. One of the world's largest open-pit mines is located nearby. The town's single street, squeezed into a mountain gulch, is 6 mi (9.7 km) long.

Binghamton (bing'amtən), industrial city (1970 pop 64,123), seat of Broome co, S central N.Y., at the confluence of the Chenango and the Susquehanna rivers, settled 1787, inc. as a city 1867. It is the largest of the Triple Cities (Binghamton, Endicott, and Johnson City), which are famous for shoes. Many electronic products are also manufactured in the city. Binghamton grew mainly after the Chenango Canal connected it with Utica in 1837. The first railroad service began in 1869. The State Univ. of New York at Binghamton includes Harpur College. The city also has a junior college and a symphony orchestra. A state mental hospital is there. A state park is to the north.

Binh, Nguyen Thi (nawin tē bēn), 1927–, Vietnamese political leader, b Saigon. She was a militant student leader in Saigon and was imprisoned (1951–54) by the French. She later joined the National Liberation Front (NLF), the Communist-supported anti-government guerrilla organization in South Vietnam, and became a member of its central committee. She represented the NLF at the Vietnam peace talks in Paris, which began in 1968, and in 1969 she was named the foreign minister of the NLF-sponsored Provisional Revolutionary Government of South Vietnam. In 1973 she was a signer of the Vietnam peace accords.

Binh Dinh: see QUI NHON, South Vietnam.

Binney, Horace, 1780–1875, American lawyer, b Philadelphia. A leading lawyer in Pennsylvania, Binney was appointed in 1808 a director of the First Bank of the United States. He served in Congress from 1833 to 1835 as an anti-Jacksonian. In 1844, opposing Daniel Webster, Binney argued successfully before the U.S. Supreme Court that a bequest of Stephen Girard to Philadelphia for philanthropic purposes was lawful. His argument had an important influence on the American law relating to charitable bequests. He wrote several biographies, as well as *Leaders of the Old Bar of Philadelphia* (1859). See biographies by C. C. Binney (1903, repr 1972) and H. L. Carson (1907).

Binns, John Alexander, c 1761–1813, American agriculturist, b Loudoun co, Va. He was one of the first to experiment with gypsum as a fertilizer and to convince others of its efficacy. Partly through example and partly through his pamphlet, *Treatise on Practical Farming* (1903), what came to be known as the Loudoun system of soil treatment spread rapidly throughout Virginia and Maryland and ultimately into other states.

Binnui (bin'yoōi), Levitical name common in Ezra and Nehemiah. The following can probably be distinguished: 1 Levite with Zerubbabel (Ezra 8:33, Neh 3:24, 10:9, 12:8); 2 Bani (Neh 8:7); 3 Banni (Neh 9:4, 2:3); 4 Men married to foreign wives (Ezra 10:30, 38). See also BANI 4.

binocular, small optical instrument consisting of two similar TELESCOPES mounted on a single frame so that separate images enter each of the viewer's eyes. As with a single telescope, distant objects appear magnified, but the binocular has the additional advantage that it substantially increases the range of depth perception of the viewer because the magnified images are seen with both eyes. The frame of a binocular is usually hinged to permit adjustment of the distance between the telescopes. Focusing can be done by means of a wheel on the central axis between the telescopes, turning the wheel changes the distance from the objective lenses of the telescopes to the eyepieces. Separate focusing of each telescope from the eyepiece may be provided in some types of binocular. The term *binocular* now usually refers to the prism binocular, in which light entering each telescope through its objective lens is bent first one way and then the other by a pair of prisms before passing through one or more additional lenses in the eyepiece. The prisms aid in reducing the length of the instrument and in enhancing the viewer's depth perception by increasing the distance between the objective lenses. Other types of binocular include the opera glass and the field glass, both use Galilean telescopes, which do not

Binocular

employ prisms and which usually have less magnifying power than the telescopes in prism binoculars. A binocular is often specified by an expression such as "7×35" or "8×50"—the first number indicates how many times the binocular magnifies an object and the second number is the diameter of either objective lens in millimeters. The size of an objective lens is a measure of how much light it can gather for effective viewing.

binomial (bī'nō'mēəl), mathematical expression (see POLYNOMIAL) containing two terms, for example, $(x+y)$. Binomials occur widely in mathematics and physics and are often raised to a power. The binomial theorem, or binomial formula, gives the expansion of the n th power of a binomial $(x+y)$ for $n=1, 2, 3, \dots$, as follows:

$$(x+y)^n = x^n + \frac{n}{1} x^{n-1}y + \frac{n(n-1)}{1 \cdot 2} x^{n-2}y^2 + \frac{n(n-1)(n-2)}{1 \cdot 2 \cdot 3} x^{n-3}y^3 + \dots + nxy^{n-1} + y^n,$$

where the ellipsis () indicates a continuation of terms following the same pattern. For example, using the formula and reducing fractions, one obtains $(x+y)^5 = x^5 + 5x^4y + 10x^3y^2 + 10x^2y^3 + 5xy^4 + y^5$. The coefficients 1, n , $n(n-1)/2$, etc., of x and y may also be found from an array known as Pascal's triangle (for Blaise Pascal), formed by adding adjacent numbers to find the number below them as follows:

		1			
	1	1			
	1	2	1		
	1	3	3	1	
1	4	6	4	1	
1	5	10	10	5	1

Bío-Bío (bē'ō-bē'ō), river, c 240 mi (390 km) long, rising in the Andes of central Chile and flowing NW to the Pacific Ocean near Concepción. It forms a natural divide between middle and southern Chile. It is navigable for much of its length by flat-bottomed boats. In colonial times bitter fighting took place along its banks between Spanish forces under Pedro de Valdivia and the Araucanian Indians. In 1612 the Bío-Bío was fixed as the boundary to Indian territory.

biochemical oxygen demand: see SEWERAGE

biochemistry, science concerned chiefly with the chemistry of biological processes, it attempts to utilize the tools and concepts of chemistry, particularly organic and physical chemistry, for elucidation of the living system. The science has been variously referred to as physiological chemistry and as biological chemistry. "Molecular biology" is a term recently coined and used to describe the area of research, closely related to and often overlapping biochemistry, conducted by biologists whose approach to and interest in biology are principally at the molecular level of organization. The related field of biophysics brings to biology the techniques and attitudes of the physicist. The domain of the biological chemist is broad and encompasses any biological problem that is amenable to the investigative techniques of both chemistry and physics. Some examples which demonstrate the diversity of the subject matter of biochemistry include the structures and physical properties of biological molecules, including the proteins, the carbohydrates, the lipids, and the nucleic acids, the mechanisms of enzyme action, the chemical regulation of metabolism, the molecular basis of genetic expression, the chemistry of vitamins, the electrochemical properties of cell membranes, chemo-luminescence, biological oxidation, energy utilization in the cell, and the chemistry of the immune response. Biochemistry has seen a great expansion of knowledge in areas bearing upon or related to chemical genetics since the report, made in 1953, of the structure of the genetic material, deoxyribonucleic acid, or DNA (see NUCLEIC ACID). That dramatic achievement in the history of biology was acknowledged by the award of the Nobel Prize in 1962 to three biochemists, James Watson, Francis Crick, and Maurice Wilkins. Much is now known about the way in which the DNA molecule is passed from one generation of cells to the next with maximal integrity of the code. At least as well studied is the chemical process by which the genetic information is translated into cellular protein. Closely related is the field of protein chemistry, which has also expanded rapidly in recent years, especially in the understanding of the mechanism of

enzyme action. The field of membrane structure and function is one today commanding the attention of a great number of biochemical research scientists, the problems posed in attempting to delve into the complexities of biological membranes are thought by many to provide the current great challenge in biology.

biocide (bī'asīd'), synonym for PESTICIDE

biogenetic law, in biology, a law stating that the earlier stages of embryos of species advanced in the evolutionary process, such as humans, resemble the embryos of ancestral species, such as fish. The law refers only to embryonic development and not to adult stages, as development proceeds, the embryos of different species become more and more dissimilar. An early form of the law was devised by the 19th-century Russian zoologist K. E. von Baer, who observed that embryos resemble the embryos, but not the adults, of other species. A later, but incorrect, theory of the 19th-century German zoologist Ernst Heinrich Haeckel states that the embryonic development (ontogeny) of an animal recapitulates the evolutionary development of the animal's ancestors (phylogeny).

biography, reconstruction in print or on film, of the lives of real men and women. Together with autobiography—an individual's interpretation of his own life—it shares a venerable tradition, meeting the demands of different audiences through the ages. Among the most ancient biographies are the narrative carvings and hieroglyphic inscriptions on Egyptian tombs and temples (c. 1300 B.C.), and the cuneiform inscriptions on Assyrian palace walls (c. 720 B.C.) or Persian rock faces (c. 520 B.C.). All these records proclaimed the deeds of kings, although accuracy often gave way to glorification. Among the first biographies of ordinary men, the Dialogues of Plato (4th cent. B.C.) and the Gospels of the New Testament (1st and 2d cent. A.D.) reveal their respective subjects by letting each speak for himself. Even these early achievements of biography, however, lack critical balance. Equilibrium was established by Plutarch in *The Parallel Lives* (2d cent. A.D.). His method was comparative, e.g., Theseus is matched with Romulus, Demosthenes with Cicero. In his conclusions, he evaluates the connection between the moral standards and worldly achievements of each. St. Augustine turned the same critical judgment on himself in his *Confessions* (4th cent.), comparing his character and conduct before and after his conversion to Christianity. During the Middle Ages credibility continued to be sacrificed to credibility. In the hagiographies, or lives of the saints, human flaws and actual events were bypassed in favor of saintly traits and miracles. Yet the few secular biographies produced in that era, Einhard's *Life of Charlemagne* (9th cent.), Eadmer's *Life of St. Anselm* (12th cent.), Jean de Joinville's *Memoirs of St. Louis IX* (13th cent.), and Jean Froissart's *Chroniques* (15th cent.), redeem the genre with their lively depiction of personalities and events. With the Renaissance came rekindled interest in worldly power and self-assertion. Benvenuto Cellini's *Autobiography* (16th cent.), recounting his escapades and artistic achievements, is a monument to the ego. St. Simon's *Memoirs* (late 17th cent.) describe Louis XIV and his court at Versailles and record the effect of the monarch's absolute power on the daily lives of others. In England, Samuel Pepys's *Diary*, John Evelyn's *Diary*, Izaak Walton's *Lives* and John Aubrey's *Lives of Eminent Men* (all mid-17th cent.) introduced informality and intimacy to their treatments. Each wrote about contemporaries who were their friends or acquaintances. By the 18th cent. literary biography (works about poets and men of letters) had become an important extension of the genre. Dr. Johnson's *Lives of the Poets* (1779-81) set the example for James Boswell's *Life of Samuel Johnson* (1791), the first definitive biography. This monumental work was drawn not only from Boswell's exact recollections of conversations with Johnson, but from letters, memoirs, and interviews with others in Johnson's circle as well. Two equally celebrated autobiographies, Benjamin Franklin's, noted for its practicality, and Jean-Jacques Rousseau's, noted for its candor, also mark this age. Among the avalanche of biographies and autobiographies published in the 19th cent. Goethe's *Dichtung und Wahrheit* (1808-31), Thomas Carlyle's *Sartor Resartus* (1833-34) and *Frederick the Great* (1858-65), and Ernest Renan's *Life of Jesus* (1863) are important. Also noteworthy was the publication of the *Dictionary of National Biography* (1882), edited by Leslie Stephen

As a result of Freud's discovery of the unconscious, the 20th cent. produced a new sort of biography—one that used the technique of psychoanalysis on the subject. Examples of such works are Freud's own *Leonardo Da Vinci* (1910) and Anais Nin's *Diaries* (1931-44). As antidotes to the tradition of the official biography Lytton Strachey wrote *Eminent Victorians* (1918) and *Queen Victoria* (1921), works that deflate and debunk. Twentieth-century biographers often sought to make structure a reflection of theme. Henry Adams's *Education of Henry Adams* (1918) explores the metaphor of the title, Thomas Merton's *Seven Storey Mountain* (1948) follows the analogue of Dante's *Inferno*, and Lillian Hellman's *Pentimento* (1973), taking its title from an art historian's term, presents portrait sketches of the people in her life as seen from the vantage point of her maturity. Notable literary and scholarly biographers of the 20th cent. include Harold Nicolson, Allan Nevins, D. S. Freeman, Andre Maurois, J. H. Plumb, Carl Sandburg, Dumas Malone, Elizabeth Longford, and Leon Edel. Motion pictures and television have adapted the form of biography to their own needs. With Paul Muni as Louis Pasteur, Charles Laughton as Rembrandt, or Spencer Tracy as Thomas Edison, films have retraced for new audiences, although sometimes in a romanticized fashion, the paths to success taken by men of intelligence and character. The old Plutarchian formula. Documentary biographies, composed of newsreel clips and photographs, have been made about public figures such as Eleanor Roosevelt, the Duke of Windsor, and Martin Luther King, Jr. Two innovations of television are the dramatic documentary and the interview. Ken Russell's film essays, commissioned by the British Broadcasting Company (1965-70), on Elgar, Rossini, Delius, Richard Strauss, and Isadora Duncan attempt to convey the essence of a person's character and work rather than just the facts of his life. Homage to Plutarch was evident again in the format of Edward R. Murrow's interview program, *Person to Person* (1953-59), where guests like Marilyn Monroe and Sir Thomas Beecham were deliberately paired. The television interview was expanded by such talk show hosts as Dick Cavett, who has led his guests, including Sir Noel Coward and Katharine Hepburn, to talk about their lives for an hour or longer. See H. G. Nicolson, *The Development of English Biography* (1928), E. H. O'Neill, *A History of American Biography* (1961), J. L. Clifford, ed., *Biography as an Art* (1962), R. D. Altick, *Lines and Letters* (1965), Andre Maurois, *Aspects of Biography* (tr. 1966).

biological clock see RHYTHM, BIOLOGICAL

biological warfare, employment in war of microorganisms to injure or destroy men, animals, or crops, also called germ or bacteriological warfare. Limited attempts have been made in the past to spread disease among the enemy, e.g., military leaders in the French and Indian Wars tried to spread smallpox among the Indians. Biological warfare has scarcely been used in modern times and was prohibited by the 1925 Geneva Convention. However, many nations in the 20th cent. have conducted research to develop suitable military microorganisms, including strains of smallpox and plague and certain nonlethal agents. Such microorganisms can be delivered by animals (especially rodents or insects) or by aerosol packages, built into artillery shells or missile warheads and released into the atmosphere to infect by inhalation. In 1971 the United States and the Soviet Union adopted an agreement, endorsed by the United Nations General Assembly, to destroy existing stockpiles of biological weapons and refrain from developing or stockpiling new biological weapons.

biology, the science that deals with living things. It is broadly divided into ZOOLOGY, the study of animal life, and BOTANY, the study of plant life. Subdivisions of each of these sciences include cytology (the study of cells), histology (the study of tissues), anatomy or morphology, physiology, and embryology (the study of the embryonic development of an individual animal or plant). Also included in biological studies are the sciences of genetics, evolution, paleontology, and taxonomy or systematics, the study of classification. The biological aspects of other sciences are studied in such fields as biochemistry (physiological chemistry), biophysics (the physics of life processes), bioclimatology and biogeography (ecology), bioengineering (the design of artificial organs), biometry or biostatistics, bioenergetics, and biomathematics. Evidences of early man's observa-

tions of nature are seen in prehistoric cave art. Biological concepts began to develop among the early Greeks. The biological works of Aristotle include his observations and classification of his large collections of animals. The invention of the microscope in the 16th cent. gave a great stimulus to biology, broadening and deepening its scope and creating the sciences of microbiology, the study of microscopic forms of life, and biomicroscopy, the microscopic study of living cells. Among the many who contributed to the science are Claude Bernard, Cuvier, Darwin, T. H. Huxley, Lamarck, Linnaeus, Mendel, and Pasteur. See MARINE BIOLOGY. See H. G. Wells et al., *The Science of Life* (1934), Karl von Frisch, *Biology: The Science of Life* (tr. 1964), G. G. Simpson and W. S. Berk, *Life: An Introduction to Biology* (2d ed. 1965), Isaac Asimov, *The Intelligent Man's Guide to the Biological Sciences* (1968), U. N. Lanham, *Origins of Modern Biology* (1968), J. H. Painter, *Biology Today* (1972), Ernest Borek, *The Sculpture of Life* (1973), P. R. Ehrlich et al., *Introductory Biology* (1973), J. D. Ebert et al., *Biology* (1973), P. C. Hanawalt and R. H. Haynes, ed., *The Chemical Basis of Life: An Introduction to Molecular and Cell Biology, Readings from Scientific American* (1973).

bioluminescence, production of light by living organisms. Plants that are bioluminescent include certain mushrooms and bacteria that emit light continuously. The dinoflagellates, a group of marine algae, produce light only when disturbed. Bioluminescent animals include such organisms as ctenophores, annelid worms, mollusks, insects such as fireflies, and fish. The production of light in bioluminescent organisms results from the conversion of chemical energy to light energy. In fireflies, one type of a group of substances known collectively as luciferin combines with ADENOSINE TRIPHOSPHATE (ATP), the compound then reacts with oxygen to create an excited state that emits yellow light. The reaction is mediated by an enzyme, luciferase. The active substance in bacterial bioluminescence is *n*-biovavin-5'-phosphate (see COENZYME). Different organisms produce different bioluminescent substances. Bioluminescent fish are common in ocean depths, the light probably aids in species recognition in the darkness. Other animals seem to use luminescence in courtship and mating and to divert predators or attract prey.

Bion (bī'ən), fl. 2d cent. ? B.C., Greek bucolic poet, an imitator of Theocritus, b. Phlossa, near Smyrna. Only fragments of his work survive. The *Lament for Adonis*, attributed to him, was the model for Shelley's *Adonais* and was translated by Elizabeth Barrett Browning.

biophysics, application of various methods and principles of physical science to the study of biological problems. In physiological biophysics physical mechanisms have been used to explain such biological processes as the transmission of nerve impulses, the muscle contraction mechanism, and the visual mechanism. Theoretical biophysics tries to use mathematical and physical models to explain life processes. Radiation biophysics studies the response of organisms to various kinds of radiations. Biophysics has contributed important tools for the study of organic molecules, and especially of large molecules, which play an important part in biological processes. Paper chromatography, a direct development of adsorption techniques, is widely used to analyze tissues for chemical components. X-ray crystallography is used to determine molecular structures and has been particularly useful in studying the structure of NUCLEIC ACIDS. Among the optical methods used in the study of biological problems are photochemistry, light scattering, absorption spectroscopy (including the use of visible, ultraviolet, and infrared radiation), LASER beams, and double refraction birefringence. The recently developed scanning electron microscope gives a three-dimensional quality to pictures of specimens. Other methods in use are tracer techniques with isotopes, ionizing radiation, sedimentation, diffusion, viscosity, electrophoresis (or migration in an electric field), electrical potential differences, magnetic methods, and ultrasounds.

biopsy, examination of cells or tissues removed from a living organism. Excised material may be studied in order to diagnose disease or to confirm findings of normalcy. Preparatory techniques depend on the nature of the tissue and the kind of study intended. Incisions may be made and total or partial lesions removed in the form of wedges or cylindrical

pieces, or scrapings of the surface membranes of internal organs may be collected. Needlelike instruments may be used to pierce the tissues and remove soft inner material. Once the tissue specimen has been obtained it is fixed, i.e., killed and coagulated, and chemical and histologic analyses are carried out. Tumors are routinely biopsied in order to determine whether they are malignant.

biosphere, irregularly shaped envelope of the earth's air, water, and land encompassing the heights and depths at which living things exist. The biosphere is a closed and self-regulating system (see **ECOLOGY**), sustained by grand-scale cycles of energy and of materials—in particular, carbon, oxygen, nitrogen, certain minerals, and water. The fundamental recycling processes are **PHOTOSYNTHESIS**, respiration, and the fixing of nitrogen by certain bacteria. Disruption of basic ecological activities in the biosphere can result from **POLLUTION**.

Biot, Jean Baptiste (zhāN bātēst' byō), 1774-1862, French physicist, grad. École polytechnique (1797). He was professor of mathematics at Beauvais before becoming professor of mathematical physics at the Collège de France in 1800. From 1809 to 1849 he taught astronomy at the Sorbonne. With French physicist François Arago, Biot measured properties of gases, and with French physicist Felix Savart, he formulated a law for the magnetic force near a wire, the force being generated when the wire carries an electric current. He discovered that when light passes through some substances, including sugar solutions, the plane of polarization of the light is rotated by an amount that depends on the color of the light.

biotin* see **VITAMIN**, **COENZYME**

biotite, iron-rich variety of phlogopite, one of the **MICA** minerals.

biplane, aircraft, typically of early design, having two sets of wings fixed at different levels, especially in a vertical stack with the fuselage included between them. See **AIRPLANE**.

Biqa, Al (āl bēkā') or **El Bika** (ēl bēkā'), upland valley of Lebanon and Syria, 75 mi (121 km) long and 5 to 9 mi (8-14.5 km) wide, between the Lebanon and Anti-Lebanon ranges, highest part of the Rift Valley complex. The village of Baalbek, site of one of the largest temples of the Roman Empire, is located on the divide between the headwaters of the Orontes and Litani rivers in the northern part of the valley. In the area N of Baalbek, located in the rain shadow of the Lebanon mts., nomadic pastoralism is dominant. South of Baalbek, the Litani River (90 mi/145 km long) flows south through the most fertile part of the valley before turning west and cutting through the Lebanon mts. to the Mediterranean Sea. This section of Al Biqa, called the granary of Lebanon, is very flat, and farming is highly mechanized; vegetables, cereals, fruits, grapes, and cotton are the chief crops. A dam and irrigation project on the lower Litani supplies water to the dry, extreme southern part of Al Biqa, where cereals and grazing are important. The Biqa valley, once the heart of ancient Coele-Syria, has been the scene of warfare since the dawn of history. Al Biqa was included in a province of the Persian Empire and was later bitterly contested by the Seleucids and the Ptolemaic kings of Egypt. The city of Antioch, Turkey, was founded by Seleucus I, king of Syria, to dominate the region. The name also appears as El Beqa, El Bukaa, and El Bekaa.

Birch, Samuel, 1813-85, English Egyptologist. He wrote a dictionary of hieroglyphics and translated the Book of the Dead.

Birch, Thomas, 1779-1851, American artist, b. London. Birch settled in Philadelphia in 1793. Famous for his paintings of landscapes and historical scenes, he is also noted for a series of engravings of views of Philadelphia, which he executed with his father. During the War of 1812, Birch painted a series of scenes of naval engagements that include *The Macedonian* (1813).

birch, common name for some members of the **Betulaceae**, a family of deciduous trees or shrubs bearing male and female flowers on separate plants, widely distributed in the Northern Hemisphere. They are valued for their hardwood lumber and edible fruits and as ornamental trees. The species of **Betulaceae** native to the United States represent five genera—*Alnus* (ALDER), *Betula* (the birches), *Corylus* (HAZEL), and *Carpinus* (HORNBEAM) and *Ostrya* (hop hornbeam), both called hornwood. The sixth genus, *Ostryopsis*, is restricted to Mongolia. The birches, beautiful bushes or trees of temperate and arctic regions, are often found mingled with evergreens in northern coniferous forests. Most American species

are trees of the Northeast, a few smaller and scrub species grow in the West. The close-grained hardwood of several of the trees is valued for furniture,

White birch, *Betula papyrifera*

flooring, and similar uses (in America, particularly that of the yellow birch, *B. lutea*), stained birch provides much of the so-called mahogany of lower-priced furniture. White-barked birches are often used as ornamental trees, e.g., the famous paper, or canoe, birch (*B. papyrifera*) of the N United States and Canada. Its bark, which separates in layers, was used by the Indians for canoes and baskets. Another familiar American species is the smaller gray birch (*B. populifolia*), also white-barked. It is often found on poor and rocky soil, especially in New England. Various birches have yielded sugar, vinegar, a tea from the leaves, and a birch beer from the sap. The sweet, or black, birch (*B. lenta*) is now the chief source of oil of WINTERGREEN. The **Betulaceae** is classified in the division **MAGNOLIOPHYTA**, class **Magnoliopsida**, order **Fagales**.

Bird, Isabella: see **BISHOP**, **ISABELLA LUCY** (BIRD)

Bird, Robert Montgomery, 1806-54, American playwright and novelist, b. New Castle, Del., M.D. Univ. of Pennsylvania, 1827. He wrote several prize-winning verse plays for the actor Edwin Forrest, notably *The Gladiator* (1831) and *The Broker of Bogota* (1834). A financial misunderstanding led to a break between the two friends, and Forrest, throughout his life, refused to release the copyrights he claimed to hold for the plays. Bird then began writing prose fiction and published the first of his popular romances, *Calavar* (1834), followed by a sequel, *The Infidel* (1835). Both works used Mexico as a background. *Nick of the Woods* (1837), his most popular novel, drew on his travels through America. In contrast to James Fenimore Cooper, Bird depicted the Indian as violent and debased. His romances, although complicated in plot, are dramatic and contain vivid character portrayal. See biography by his wife, M. M. Bird (1945), study by Dahl Curtis (1963).

bird, warm-blooded, egg-laying, vertebrate animal having its body covered with **FEATHERS** and its forelimbs modified into **WINGS**. Birds compose the class **Aves** (see **CHORDATA**). Like mammals, they have a four-chambered heart, and there is a complete separation of oxygenated and deoxygenated blood. The body temperature is from 2° to 14° higher than that of mammals. Birds have a relatively large brain, keen sight, and acute hearing, but little sense of smell. They are believed to have evolved from reptiles. The fossil remains of the archaeopteryx and of the archaeornis of the Jurassic period, found in S Germany, show reptilian tails, jaws with teeth, and clawed wings, but feathers were well developed. It is thought that the estimated 8,650 living species existed in their present form by the Pleistocene epoch. Birds are highly adapted for **FLIGHT**. Their structure combines lightness and strength. Body weight is reduced by the presence of a horny bill instead of heavy jaws and teeth and by the air sacs in the hollow bones as well as in other parts of the body. Compactness and firmness are achieved by the fusion of bones in the pelvic region and in other parts of the skeleton. The heavier parts of the body—the gizzard, intestines, flight muscles, and thigh mus-

cles—are all strategically located for maintaining balance in flight. Feathers, despite their lightness, are highly protective against cold and wet. The flight feathers, especially, have great strength. Feathers are renewed in the process of **MOLTING**. Some birds, such as the ostrich, the penguin, and the kiwi, lack the power of flight and have a flat sternum, or breastbone, without the prominent keel to which the well-developed flight muscles of other birds are attached. In the majority of species there are differences between male and female in plumage coloring. In these birds the male (except in the phalarope) is usually the more brilliant or the more distinctly marked and is the aggressor in courtship. Unusual courtship displays are performed by several species, particularly by the ruffed grouse, the bird of paradise, the crane, the pheasant, and the peacock. **BIRDSONG** reaches its highest development during the breeding season, and singing ability is usually either restricted to or superior in the male. In spring and fall many birds migrate. Not all of the factors motivating this behavior are fully understood. These trips often involve flights of hundreds and even thousands of miles over mountains and oceans. Most birds build a **NEST** in which to lay their eggs. Some birds, such as the oriole, weave an intricate structure, while others lay their eggs directly on the ground or among a few seemingly carelessly assembled twigs. Eggs vary in size, number, color, and shape. Birds are of enormous value to man because of their destruction of insect pests and weed seeds. Many are useful as scavengers. The bills of birds are well adapted to their food habits. Specialized bills are found in the crossbill, hummingbird, spoonbill, pelican, and woodpecker. The game birds hunted by man for food and sport include grouse, pheasant, quail, duck, and plover. The chief domestic birds are the chicken, duck, goose, turkey, and guinea fowl. Parrots and many members of the finch family are kept as pets. See also **MIGRATION OF ANIMALS**. Among the periodicals devoted to the study of bird life are the *Auk*, the *Condor*, and the *Wilson Bulletin*. See

General anatomy of a bird

the series of books on life histories of North American birds by A. C. Bent, R. M. De Schauensee, *A Guide to the Birds of South America* (1970), Abram Rutgers and K. A. Norris, ed., *Encyclopaedia of Aviculture* (Vol. I, 1971 and Vol. II, 1972), U.S. Bureau of Sports Fisheries and Wildlife, *Birds in Our Lives* (1970), *Avian Biology*, ed. by D. S. Farner and J. R. King (1971-), R. K. Merton, *Man and Birds* (1971), Josselyn Van Tyne and A. J. Berger, *Fundamentals of Ornithology* (1971), Hermann Heinzel, *The Birds of Britain and Europe with North Africa and the Middle East* (1972), Eliot Porter, *Birds of North America* (1972), Peter Matthiessen, *The Wind Birds* (1973).

bird of paradise, common name for any of 43 species of medium- to crow-sized passerine birds of New Guinea and the adjacent islands, known for the bright plumage, elongated tail feathers called wires, and brilliant ruffs of the males. Their common name is derived from 16th-century Spanish explorers, who believed them to be visitors from paradise. The standard-winged bird of paradise, *Semioptera wallacei*, is brownish with a glimmering green gorget at the throat. At the end of the 19th century over 50,000 bird of paradise skins per year were exported, many species were almost wiped out. It is now illegal to import skins into the United States. The 13-in-

(32 S-cm) twelve-wired bird of paradise, *Seleucidis ignotus*, is found in mangrove swamps, and has brilliant yellow plumes and an iridescent green and black throat, which are displayed to the female during courtship. The smallest member of the family is the scarlet king bird of paradise. It is only 6 in (15 cm) long and has green plumes and blue legs. Many species are polygamous, and the drab-colored female assumes all the nesting duties. The biological basis for the elaborate coloration and displays seems to be the need for an accurate means of distinction and recognition between species, since hybridization is disadvantageous. Birds of paradise are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Paradisaeidae.

bird-of-paradise flower, large tropical herb (*Strelitzia reginae*) of the family Musaceae (BANANA family), native to S Africa. Its large blue and orange blossom resembles an exotic bird, it is cultivated as an ornamental in warmer regions, as a greenhouse plant, and as a florists' cut flower. It is grown commercially chiefly in California and Hawaii. The bird-of-paradise is classified in the division MAGNOLIOPHYTA, class Liliatae, order Zingiberales, family Musaceae.

bird sanctuary: see WILDLIFE REFUGE

Birdseye, Clarence, 1886-1956, American inventor and founder of the frozen food industry, b Brooklyn, N Y, studied at Amherst College. In 1912 he went to Labrador on a fur-trading expedition and when he returned to the United States in 1916 began experimenting with freezing foods, aiming at commercial application. He developed a method for freezing fish and in 1924 he was one of the founders of the General Foods Company, which began manufacturing various frozen food products. In 1929 the company was bought by the Postum Company (later the General Foods Corp.) for \$22 million. By 1949, Birdseye had perfected the anhydrous freezing process, reducing the time needed for the operation from 18 hr to 1½ hr.

birdsong Song, call notes, and certain mechanical sounds constitute the language of birds. Song is produced in the syrinx, whose firm walls are derived from the rings of the trachea, and is modified by the larynx and tongue. The membranes of the syrinx are controlled by slender muscles, in the oscines, or song birds, there may be as many as eight pairs of these muscles, whereas other birds have four or fewer. The greater development permits intricate patternings of sound (rare outside the oscines) that express a wide range of reactions, from pleasure to distress. Recognizable by man and other animals as well as by other birds, the various calls are classified as flight, feeding, nest, flock, aggressive, alarm, and territorial-defense calls. Song is usually confined to the male and is at its height during the breeding season. Experiments have shown that hormone secretion in the male is directly connected with his propensity to sing as well as with his selecting a territory for courtship and breeding. Among the oscines are such superior singers as the southern mockingbird, the hermit and wood thrushes, the purple and house finches, the canyon wren, and the European skylark and nightingale. Natural mimicry is characteristic of the mimic thrushes, the jays and crows, and the starlings, while birds with imitative faculties developed in captivity are canaries, finches, parrots, ravens, crows, and mynas. There is evidence that songs are learned and that certain calls are inherited. Most birds have preferences regarding the place from which they sing, e.g., fence posts, treetops, thickets, the forest floor, or on the wing. Mechanical sounds include the drumming of the grouse, the tattooing of the woodpecker, and the clattering of the stork. See E. A. Armstrong, *A Study of Bird Song* (2d edn ed 1973), Charles Hartshorne, *Born to Sing* (1973).

Bird Woman: see SACAIAWEA

Biren, Ernst Johann von: see BIRON

Birganj (bêr'gānch), town (1961 pop 10,769), S Nepal, near the Indian border. It is a market town for agricultural products.

Birgitta, Saint: see BRIDGET OF SWEDEN, SAINT

Biringuccio, Vannoccio (vān-nō'chō bē-rēn-gōōt'-chō), 1480-c 1539, Italian metallurgist. He is best known for his practical manual of metallurgy, *De la pirotechnia* (1540, tr 1942). As a young man Biringuccio learned about metallurgy through visits to forges and foundries. He directed an iron mine and forge near Siena and was master of its arsenal and

mint. Exiled twice because of changing regimes, he served in Venice and Florence as a caster of cannon and as a fortifications engineer. He was later called to Rome to head the papal foundry.

Birkat Qarun, lake, Egypt. See MOERIS

Birkbeck, George, 1776-1841, English educator. He established (1800-1804) in Glasgow a popular course of lectures for workingmen, which led to the founding of the Glasgow Mechanics' Institution in 1823. He became (1824) president of the London Mechanics' Institution and was also a founder (1827) of University College of the Univ of London. He did much to further popular scientific instruction in England. Birkbeck Laboratory at University College was established by gifts from his pupils. See biographies by J. S. Godard (1884) and Thomas Kelly (1957).

Birkbeck, Morris, 1764-1825, English pioneer in the United States. One of the most advanced agriculturists in England, he had a huge farm in Surrey. In 1817 he emigrated to the United States. He and another English traveler, George Flower, sought to create a settlement in Illinois. The two quarreled, but the undertaking resulted in the occupation of thousands of acres of land and the founding of Albion, Ill. Birkbeck's *Notes on a Journey to the Territory of Illinois* (1818, repr 1968) and *Letters from Illinois* (1818, repr 1968) helped to bring European settlers to the fertile prairies of the Middle West and are invaluable historical sources.

Birkenhead, Frederick Edwin Smith, 1st earl of, 1872-1930, British statesman and jurist. He was called to the bar in 1899 and entered the House of Commons as a Conservative in 1906. A brilliant orator, he soon gained prominence as a Conservative spokesman, particularly in the fight against Irish Home Rule. He was solicitor general (1915), attorney general (1915-19), in which capacity he prosecuted Sir Roger Casement, and lord chancellor (1919-22). Created earl in 1922, he was (1924-28) secretary of state for India. His books include *International Law* (4th ed 1911), *Famous Trials of History* (1927), *Law, Life, and Letters* (1927). See biography by his son, Frederick, 2d earl of Birkenhead (1933-35, rev ed 1959).

Birkenhead (bûr'kənhēd), county borough (1971 pop 137,738), Cheshire, W central England, at the mouth of the Mersey River, connected with Liverpool by the Mersey tunnel. Flour milling, shipbuilding, and commerce are the key industries. There are also engineering, food-processing, and clothing plants and a cattle market. There are extensive docks. The chief imports are grain and cattle, coal, flour, the byproducts of milling, and machinery are exported. Milling and shipbuilding were responsible for Birkenhead's rapid growth in the 19th cent. The borough has a technical and a theological college. In 1974, Birkenhead became part of the new metropolitan county of Merseyside.

Birkhoff, George David (bûr'kôf), 1884-1944, American mathematician. The son of a physician, he was educated at Harvard (BA, 1905, Ph D, 1907). He is known for his work on linear differential equations and difference equations. He was also deeply interested in the analysis of dynamical systems, celestial mechanics, number theory, and function spaces. In addition he wrote on the foundations of relativity and quantum mechanics and on art and music, e.g., *Aesthetic Measure* (1933). See his *Collected Mathematical Papers* (3 vol., 1950). His son, Garrett Birkhoff, 1911-, is also a mathematician, who has made several important contributions to abstract mathematics and to the teaching of mathematics. From 1934 on he developed the concept of a lattice, or abstract structure, and showed how a number of subjects, e.g., Boolean algebra, projective geometry, and affine geometry, could be treated as special types of lattices. His text *A Survey of Modern Algebra* (with Saunders MacLane, 1941) became a standard undergraduate textbook. See his *Lattice Theory* (1940, 3d ed 1967).

birling (bûr'ling), sport performed on floating logs. It became popular with American lumberjacks after the middle of the 19th cent. In the main event of a birling tournament a contestant tries to spill his rival into the water by superior logrolling. Log-poling races and individual acrobatic performances on logs are also held. National birling contests in the United States have been held occasionally since 1898.

Birmingham, city (1971 pop 1,013,366), central England, since 1974, part of the new metropolitan county of West Midlands. The city is equidistant from Bristol, Liverpool, Manchester, and London,

England's main ports, and near the BLACK COUNTRY iron and coal deposits, it is connected to the Staf fordshire mines by the Birmingham Canal, built in the 18th cent. Birmingham is Britain's second-largest city (in both area and population) and is the center of water, road, and rail transportation in the MIDLANDS. The chief industries are the manufacture of automobiles, motorcycles, and bicycles and their components and accessories. Other products include electrical equipment, paint, guns, and a wide variety of metal products. By the 15th cent, Birmingham was a market town with a large leather and wool trade, by the 16th cent it was also known for its many metalworks. In the English Civil War the town was captured by the royalists. Birmingham's industrial development and population growth accelerated in the 17th and 18th cent. In 1762, Matthew Boulton and James Watt founded the Soho metalworks, where they designed and built steam engines. Joseph Priestley, the discoverer of oxygen, lived for a time in Birmingham. In 1791 a mob, incensed at his radical religious and political views, burned his home. The town was enfranchised by the 1832 REFORM BILL and was incorporated in 1838. John Bright represented it in Parliament from 1857 to 1889. During the 1870s, while Joseph Chamberlain was mayor, Birmingham underwent a large program of municipal improvements, including slum clearance and the development of gas and water works. Birmingham was among the first English localities to have a municipal bank, a comprehensive water-supply system, and development planning. The area of the city was enlarged in 1891 and again in 1911 under the Greater Birmingham scheme. No table buildings include the town hall, built in 1834, modeled after the temple of Castor and Pollux in Rome, the 18th-century baroque-style Cathedral of St Philip, and the 19th-century Cathedral of St Chad, the first Roman Catholic cathedral to be built in England after the Reformation. Bull Ring, in the center of Birmingham, is the site of the city's oldest market. The city library includes an excellent Shakespeare collection. There is a museum and art gallery (noted for its pre-Raphaelite collection) and a museum of science and industry. Annual music festivals date from 1768. In the suburb of Edgbaston are the Univ of Birmingham and the Oratory of St Philip Neri, a Roman Catholic shrine that was formerly the parish house of John Henry Cardinal Newman. In the center of the city is the Univ of Aston. Birmingham was severely damaged in World War II and has been considerably rebuilt since then.

Birmingham (bûr'mĩnghām") 1 City (1970 pop 300,910), seat of Jefferson co., N central Ala., in the Jones Valley near the southern end of the Appalachian system, inc 1871. It is the largest city in the state and the leading iron and steel center in the South. Iron, coal, limestone, and other natural resources from the area supply the city's great iron and steel plants and its metalworking factories. By the middle of the 20th cent the city's economy had become more diversified, and in addition to iron and steel, transportation equipment, construction materials, chemicals, and fabricated metals are produced. Commerce, banking, insurance, research, and government are also economically important. Founded and incorporated in 1871, Birmingham developed rapidly with the expansion of the railroads. An important trade and communications center, the city is connected with the Gulf of Mexico by canal and is a port of entry. Educational institutions in the city include Birmingham-Southern College, Miles College, Daniel Payne College, Samford Univ, the Univ of Alabama in Birmingham, and two junior colleges. Birmingham supports a football and track stadium, botanical and Japanese gardens, a symphony, a ballet group, a theater, and an art museum, a Festival of Arts is held annually. Overlooking the city, on nearby Red Mt., is a huge iron statue of Vulcan, the mythical god of the forge. 2 City (1970 pop 26,170), Oakland co., SE Mich., on the River Rouge, settled 1819, inc as a village 1864, as a city 1933. The city is largely residential.

Birmingham-Southern College, at Birmingham, Ala., United Methodist, coeducational, formed 1918 by the merger of Southern Univ (chartered 1856, opened 1859 at Greensboro, Ala.) and Birmingham College (opened 1898). The Birmingham Conservatory of Music became a part of the college in 1953.

Birmingham University, at Birmingham, England, founded 1900. It has faculties of science and engineering, arts, medicine and dentistry, commerce and social science, and law, as well as a school of education. Associated with the university are the

Barber Institute of Fine Arts and the Shakespeare Institute

Birney, James Gillespie, 1792-1857, American abolitionist, b. Danville, Ky. He practiced law at Danville from 1814 to 1818, before he moved to Alabama, where he served one term in the state legislature. Briefly (1832-34) an agent of the American Colonization Society before becoming an abolitionist, he returned (1833) to Kentucky, freed (1834) his inherited slaves, and helped organize (1835) the Kentucky Anti-Slavery Society. In 1837 he became executive secretary of the American Anti-Slavery Society, and he was a vice president of the World's Anti-Slavery Convention at London in 1840. In contrast to William Lloyd Garrison, Birney constantly advocated political action. He became the acknowledged leader of like-minded abolitionists who, forming the LIBERTY PARTY, nominated him for the presidency in 1840 and 1844. An injury sustained in 1845 took him out of public life. See his letters (ed. by D. L. Dumond, 1938), biographies by W. Birney (1969) and 8 Fladeland (1955, repr. 1969).

Birobidzhan: see JEWISH AUTONOMOUS OBLAST, USSR.

Biron or Biren, Ernst Johann von (ērnst yōhān' fən bē'rōn, bē'rān), 1690-1772, duke of Courland (1737-43, 1763-69), favorite of Czarina Anna of Russia. A Baltic nobleman, he rose to an all-powerful position under Anna, through whose influence he was elected duke of Courland. After Anna's death (1740) he was made regent for her grandnephew Ivan VI. Biron's unscrupulousness had earned him general hatred, and shortly after he became regent a coup d'état ousted and banished him (1741). In 1743, Augustus III of Poland deprived him of his duchy. Czar Peter III later recalled him and Catherine II secured the restoration of his title, but Biron never regained his former influence.

Birrell, Augustine (bī'rēl), 1850-1933, English essayist and public official. As chief secretary for Ireland (1907-16) his failure to end the plotting that resulted in the Easter Rebellion of 1916 led to his retirement from politics. His works include the pleasant and urbane critical essays *Obiter Dicta* (3 vol., 1884, 1887, 1924) and biographies of Charlotte Brontë (1887), William Hazlitt (1902), and Andrew Marvell (1905).

Birsha (būr'shā), king of Gomorrah. Gen. 14:2.

birth or labor, delivery of the fetus by the viviparous mammal. Birth is also known as parturition. Human birth normally occurs about 280 days after onset of the last menstrual period before conception. Onset of labor, the first stage, is heralded by contractions of the uterus felt as cramplike pains in the abdomen or lower back that recur at intervals of 10 to 30 min and last about 40 sec; they increase in frequency until they occur at about 2-min intervals. With each contraction the cervix, or neck of the uterus, dilates until it becomes wide enough, about 4 in. (10 cm), to permit emergence of the baby. In the second stage of labor, the baby passes through the birth canal, most commonly head first, and is born. The effectiveness of uterine contractions in this stage are enhanced by the bearing-down abdominal contractions of the mother. The third stage of labor, which occurs about 15 to 30 min after the child is born, is characterized by the separation of the placenta from the uterine wall and its expulsion. The total time of labor averages 13 to 14 hr in women pregnant for the first time and 8 to 9 hr in women who have previously borne children. The pain of childbirth can be relieved with a variety of analgesic and sedative drugs, including morphine, barbiturates, and chloroform. However, many drugs that relieve pain also slow the uterine contractions or dangerously depress the baby's respiratory system. Spinal anesthetics, injected directly into the spinal cord, while not dangerous to the child, are difficult to administer accurately and are therefore potentially dangerous to the mother. In recent years so-called natural childbirth has come into wide use, the advantages are that the child is born undrugged and the mother can be conscious at the moment of birth. Natural childbirth emphasizes the ability of many women to give birth with a minimal amount of pain-killing drugs or none at all. The Dick-Read method, formulated by the British obstetrician of that name, emphasizes maternal understanding of the birth process as an aid to relaxation and exercises to strengthen muscles and encourage proper breathing. The Lamaze method, or psychoprophylaxis, is of Russian origin, it uses breathing exercises as a conditioned response to uterine contractions. Hypnosis has also been used experimentally. Birth often cannot proceed normally because of a defect of the

cervix or weak uterine contractions, breech births, in which the feet or buttocks emerge first, and transverse births, in which the child is positioned across the uterus, usually require obstetrical intervention, such as forceps delivery, manually turning the baby, or performing a CESAREAN SECTION. About 10% of pregnancies terminate in deliveries that are too early, producing (after at least 200 days of gestation) premature infants requiring special care. Birth of a fetus prior to about 200 days of gestation is termed a miscarriage, birth within the first three months, an abortion. Stillbirth is the delivery of a dead child. Complications of childbirth affecting the newborn include infant blindness attributable to gonorrhea infection, now largely eliminated by routine administration of silver nitrate to the eyes, retrolental fibroplasia, a type of blindness common for some years in premature infants that was found to result from administration of high concentrations of oxygen and is now largely avoided, and ERYTHROBLASTOSIS FETALIS, or Rh disease, which can often be prevented. Puerperal fever, an infection of the mother's genital tract once common following labor and delivery, has now also been largely eliminated by preventive hygiene, especially in labor, and by antibiotic therapy. See PREGNANCY, OBSTETRICS.

birth control, practice of contraception for the purpose of limiting reproduction. Although contraceptive techniques had been known in ancient Egypt, Greece, and Rome, the modern movement for birth control began in Great Britain, where the writings of Thomas Robert MALTHUS stirred interest in the problem of overpopulation. In 1877, Annie BESANT and Charles BRADLAUGH were tried for selling *The Fruits of Philosophy*, a pamphlet on contraceptive methods, written in 1832 by an American, Charles Knowlton. After their famous trial, the Malthusian League was founded. In 1878 the first birth control clinic was founded in Amsterdam by Aletta Jacobs. In 1921, aided by Marie STOPES, the Malthusian League established a birth control clinic in London. The first U.S. birth control clinic, opened (1916) by Margaret SANGER in Brooklyn, N.Y., was closed by the police; she received a 30-day jail sentence. She helped organize (1917) the National Birth Control League; it became in 1921 the American Birth Control League, in 1942 the Planned Parenthood Federation of America, and in 1961 the Planned Parenthood-World Population. In 1936, the Federal law prohibiting dissemination of contraceptive information through the mails was modified. Throughout the 1940s and 50s, birth control advocates were engaged in numerous legal suits. In 1965, the U.S. Supreme Court struck down the one remaining state law (Connecticut) prohibiting the use of contraceptives. The Federal government began to take a more active part in the birth control movement in 1967, when 6% of the funds allotted to the Child Health Act was set aside for family planning; in 1970, the Family Planning Services and Population Act established separate funds for birth control. Sweden was one of the first countries to provide government assistance for birth control, which it did as early as the 1930s. Although the issue of birth control has been a controversial one in Marxist theory, the governments of the Soviet Union and of the People's Republic of China now supply birth control aid to their people. One of the most successful birth control programs is in Japan, where the birthrate has been dramatically reduced. Birth control on the international level is led by the International Planned Parenthood Federation, founded in 1952 and having members in 79 countries by 1973. Among religious bodies, the Roman Catholic Church has provided the main opposition to the birth control movement; Pope Paul VI reaffirmed this stance in a 1968 encyclical. The birth control movement gained new life in the 1960s and 70s as people became increasingly concerned about world POPULATION growth. Several of the underpopulated nations, however, have a stated policy of encouraging an increased birthrate, e.g., Argentina. Male birth control methods include withdrawal of the male before ejaculation (the oldest contraceptive technique) and use of the condom, a rubber sheath covering the penis. Contraceptive methods for women include the rhythm method—abstinence around the most likely time of ovulation—and precoital insertion into the vagina of substances (creams, foams, jellies, or suppositories) containing spermaticidal chemicals. The use of a diaphragm, a rubber cup-shaped device inserted before intercourse, prevents sperm from reaching the uterine cervix, it is usually used with spermaticidal substances. Intrauterine devices, or IUDs, are variously shaped small objects inserted by a doctor into the uterus, they apparently act by creating a uterine en-

vironment hostile either to sperm or to the fertilized egg. The so-called Pill, an oral contraceptive, involves a hormonal method in which estrogen and progestins (progesterone-like substances) are taken cyclically for 21 days a month. The elevated levels of hormones in the blood suppress production of the pituitary hormones (luteinizing hormone and follicle-stimulating hormone) that would ordinarily cause ovulation. Sterilization of the female, often but not always performed during a Cesarean section or shortly after childbirth, consists of cutting or tying both Fallopian tubes, the vessels that carry the egg cells from the ovaries to the uterus. In male sterilization (vasectomy) the vas deferens, the tubes that carry sperm from the testes to the penis, are interrupted. Sterilization, in most cases irreversible, involves no loss of libido or capacity for sex. No contraceptive yet devised is at once simple, acceptable, safe, effective, and reversible. Some, such as the diaphragm, condom, and chemical and rhythm methods, require high motivation by users; the Pill, which must be taken daily, often induces undesirable side effects, such as nausea, headache, weight gain, and increased tendency to develop blood clots. The IUDs, although requiring no personal effort or motivation, are often not tolerated or are expelled, and they sometimes cause uterine infection, septic abortion, and other problems. New birth control techniques, many still experimental, include the use of progestins that could be given by injection every three months, progestins embedded in inert carriers and implanted under the skin to release the hormones slowly and continuously, progestins incorporated into a plastic ring that a woman could insert in the vagina, needing to be changed only periodically, and IUDs carrying some antifertility agent. The use of any of various hormones that induce menstruation, and the use of a safe "morning after" or "minutes after" hormone, could eliminate some of the problems associated with continuous dosage hormones. Another experimental technique is immunization against human chorionic gonadotropin (HCG), a hormone secreted by a developing fertilized egg that stimulates production of progesterone by the ovary, the effect of the anti-HCG antibody would be to inactivate HCG and thereby induce menstruation even if fertilization occurred. See REPRODUCTIVE SYSTEM, MENSTRUATION, STERILIZATION. See Elizabeth Draper, *Birth Control in the Modern World* (1965), B. R. Berelson, *Family Planning Programs* (1969), G. J. Hardin, *Birth Control* (1970), Lawrence Lader, *The Margaret Sanger Story* (1955) and *Breeding Ourselves to Death* (1971).

birthmark, pigmented maldevelopment of the skin that varies in size, either present at birth or developing later. Birthmarks may appear as moles, varying in color from light brown to blue, and are either flat or raised above the surface of the skin. They are usually benign, unless they are situated in areas where constant irritation may cause them to become malignant (cancerous), in which case they should be removed surgically. The so-called port-wine stains and strawberry marks involve vascular tissue. The flat port-wine stains are not amenable to treatment. The strawberry marks generally disappear a few years after birth or may be treated by a physician, usually with caustic applications.

birth rate: see VITAL STATISTICS.

birthstone: see MONTH.

birthwort, common name for the Aristolochiaceae, a family of shrubs and woody climbing vines found in the tropics and other warm regions. The largest genus, *Aristolochia*, includes several plants cultivated in the United States as medicinals (e.g., the Virginia snakeroot and the birthwort) or as ornamentals for their curious flowers (e.g., the pelican flower and the Dutchman's-pipe, or pipe vine). The family also includes the North American wild ginger (*Asarum canadense*), unrelated to the true gingers of Asia. The Aristolochiaceae are classified in the division MAGNOLIOPHYTES, class Magnoliopsida.

Birzavith (bīr'zāvīth), Ashente 1 Chron. 7:31.

Bisanthe: see TEKIRDAG.

Bisbee (bīz'bē), city (1970 pop. 8,328), seat of Cochise Co., SE Ariz., near the Mexican border, inc. 1900. It is the center of one of the greatest copper-producing areas in the country. Gold, silver, and lead are also mined. After the rich copper deposits were discovered (c. 1876), the city was built in two steep-sided canyons, Mule Pass Gulch and Brewery Gulch. Nearby is Coronado National Memorial (see NATIONAL PARKS AND MONUMENTS, table), which commemorates Coronado's entry (1540) into the United States.

Biscay, Bay of, arm of the Atlantic Ocean, indenting the coast of W Europe from Ushant island (Île d'Ouessant) off Brittany, NW France, to Cape Ortegal, NW Spain. The bay is noted for its sudden, severe storms and its strong currents. The rocky northeastern and southern coasts of Biscay are irregular with many good harbors, numerous offshore islands are there. The southeastern shore is straight and sandy. The chief ports are Brest, Saint-Nazaire, La Rochelle, and Bayonne in France and San Sebastián, Bilbao, and Santander in Spain. Nantes and Bordeaux, at the head of the Loire and Garonne estuaries, respectively, in France, are also reached by oceangoing ships. There are several resorts along the French coast, notably Biarritz. The bay has important sardine-fishing grounds.

Biscayne Bay, shallow, narrow inlet of the Atlantic Ocean, c 40 mi (60 km) long, SE Fla. Famous resort areas, including Miami and Miami Beach, are on the northern shore. The house used as a retreat by President Richard Nixon is on Key Biscayne. Biscayne National Monument is at the southern end of the bay (see NATIONAL PARKS AND MONUMENTS, table).

Bisceglie (bëshēl'yēā), city (1971 pop 45,497), Apulia, S Italy, on the Adriatic Sea. It is a seaport and commercial center. Conquered by the Normans in the late 11th cent, the city later developed a prosperous merchant and military fleet. The duchy of Bisceglie was (16th cent) a fief of Alfonso of Aragon, 2d husband of Lucrezia Borgia, and of their son Rodrigo. There are several churches of the 11th-12th cent, a fine Apulian Romanesque cathedral (11th-13th cent), and ruins of an 11th-century Norman castle.

Biscoe, John, d 1848, British navigator. Commanding a British sealer of the Enderby firm of London, he discovered (1831-32) ENDERBY LAND on the coast of Antarctica. His voyage gave Great Britain the chief basis for British claims to Antarctica. He also discovered Alexander Land.

Bishlam, deputy of Artaxerxes Ezra 4:7

Bishop, Elizabeth, 1911-, American poet, b Worcester, Mass. Since her graduation from Vassar in 1934, she has lived in several places including Brazil. Her first volume of poetry, *North and South* (1946), was reprinted with additions as *North and South—A Gold Spring* (1955, Pulitzer Prize). Her poetic vision is penetrating and detached. Without straining for novelty, she finds symbolic significance in objects and events quietly observed. Among her works are her *Complete Poems* (1969) and several travel books, notably *Questions of Travel* (1965) and *Brazil* (1967). With Emanuel Brasil she edited *An Anthology of 20th Century Brazilian Poetry* (1972).

Bishop, Sir Henry Rowley, 1786-1855, English operatic conductor, composer or arranger of 120 dramatic works. He is known today for a setting of Shakespeare's "To, here the gentle lark" and the melody of *Home, Sweet Home* from J. H. Payne's comic opera, *Clari, or, The Maid of Milan* (1823).

Bishop, Isabel, 1902-, American painter, b Cincinnati, Ohio. Influenced by the New York City painters of the 1930s, Bishop produced numerous paintings of working women. Her pensive nude studies, such as *Nude—1934*, demonstrate her understanding of delicate effects of light and shade.

Bishop, Isabella Lucy (Bird), 1831-1904, English traveler and writer, first woman member of the Royal Geographical Society. She traveled extensively and wrote a number of books, including *The English Woman in America* (1856), *The Hawaiian Archipelago* (1875), *A Lady's Life in the Rocky Mountains* (1879), *Unbeaten Tracks in Japan* (1880), *Journeys in Persia and Kurdistan* (1891), and *Korea and Her Neighbors* (1898). She founded several hospitals in China and Korea. See biography by Pat Barr (1970).

bishop* see ORDERS HOLY

Bishop Auckland (ôk'lând), urban district (1971 pop 33,292), Durham, NE England, on the Wear River. It is a busy market area, as well as a mining town producing coal that is highly suitable for coking. Located near the site of a Roman fort, Auckland has been a seat of the bishops of Durham since the 12th cent. The present palace was largely constructed in the 16th cent.

Bishop's University, at Lennoxville, Que., Canada, founded 1843 by the Anglican bishop of Quebec as a liberal arts college. In 1853 it gained university status. The university has faculties of arts, science, and theology, and a school of education.

Bishops' Wars, two brief campaigns (1639 and 1640) of the Scots against Charles I of England. When Charles attempted to strengthen episcopacy in Scotland by imposing (1637) the English Book of Com-

mon Prayer, the Scots countered by pledging themselves in the National Covenant (1638) to restore Presbyterianism. A general assembly of the Scottish church abolished episcopacy. The first war was ended without fighting by the Pacification of Berwick, in which Charles conceded the Scottish right to a free church assembly and a free parliament. However, the assembly that met promptly reaffirmed the covenant. In spite of the refusal of his Short Parliament to vote him money, Charles managed to raise another army, but it was unable to stop the Scots from invading England and occupying Northumberland and Durham. Charles made peace at Ripon (Oct., 1640), and his promise there to pay an indemnity to the Scots necessitated his calling the Long Parliament. See ENGLISH CIVIL WAR.

Bisk* see BISK, USSR

Biskra (bëskra'), city (1966 pop 59,275), NE Algeria, at the foot of the Aures Mts. It is a commercial center for the nomads of the surrounding region. It was the Roman military base of Vescera, later it was an important Muslim town. After 1844 it served as a French base for operations in S Algeria. The surrounding oasis produces dates.

Bismarck, Otto von (bîz'mark, Ger ô'tô fan bîs'mark), 1815-98, German statesman, known as the Iron Chancellor. Born of an old Brandenburg Junker family, he studied at Göttingen and Berlin, and after holding minor judicial and administrative offices he was elected (1847) to the Prussian Landtag [parliament]. There he opposed the liberal movement, advocated unification of Germany under the aegis of Prussia, and defended the privileges of his social class, the Junkers. As Prussian minister to the German diet at Frankfurt (1851-59) and as ambassador to St. Petersburg (1859-62) and to Paris (1862), he gained the insight and the experience that determined his subsequent policy. In 1862, WILLIAM I, to secure adoption of his army program then being strenuously opposed in parliament, appointed Bismarck premier. Bismarck, in direct violation of the constitution, dissolved parliament and collected taxes for the army without parliamentary approval. To expel Austria from the GERMAN CONFEDERATION now became Bismarck's chief aim. The disposition of SCHLESWIG-HOLSTEIN, former Danish territory annexed by Austria and Prussia after their defeat of the Danes in 1864, provided the necessary pretext. By the Gastein Convention of 1865 the two countries agreed to rule jointly—Austria was to administer Holstein and Prussia was to administer Schleswig, but friction soon developed. Bismarck accused Austria of violating the Gastein treaty and thus precipitated the AUSTRO-PRUSSIAN WAR (1866), which ended after seven weeks with the defeat of Austria. By the treaty signed at the end of the war, Germany was reorganized under Prussian leadership in the NORTH GERMAN CONFEDERATION, from which Austria was excluded. Fear of France, skillfully propagated by Bismarck, was to bring the remaining German states into the Prussian orbit when the candidature of a Hohenzollern prince to the throne of Spain caused friction with the French Emperor Napoleon III. To make sure that this friction would provoke war, Bismarck published the famous EMS DISPATCH. In the FRANCO-PRUSSIAN WAR (1870-71) that ensued the states of S Germany rallied to the Prussian cause as Bismarck had anticipated, and in Jan., 1871, WILLIAM I of Prussia was proclaimed German emperor. Bismarck, the creator of the empire, became its first chancellor. When added to his Prussian positions (premier, foreign minister, and minister of commerce) the imperial chancellorship gave him almost complete control of foreign and domestic affairs. To maintain the peace necessary for the consolidation of the empire, he proposed to advance a strong military program, to gain the friendship of Austria, to preserve British friendship by avoiding naval or colonial rivalry, and to isolate France in diplomacy so that revanche would be impossible. Therefore, in 1872, he formed the THREE EMPERORS LEAGUE (Germany, Austria-Hungary, and Russia) and also maintained friendly relations with Italy. The Balkan rivalries of Austria and Russia and the subsequent triumph of Austria at the Congress of Berlin (see BERLIN CONGRESS OF), over which Bismarck presided, caused a rift in Russo-German relations. A defensive alliance with Austria was now concluded (1879), and this Dual Alliance became a Triple Alliance when Italy adhered in 1882 (see TRIPLE ALLIANCE AND TRIPLE ENTENTE). Friendship with Russia was revived in the Reinsurance Treaty of 1887. Bismarck, with his system of alignments and alliances, became the virtual arbiter of Europe and was acknowledged as its leading statesman. Bismarck's influence upon Ger-

man domestic affairs was no less apparent. The empire, soon after its establishment, was disturbed by the KULTURKAMPF, a fierce struggle between the state on the one hand and the Roman Catholic Church and Catholic Center party on the other. The conflict initiated a period of cooperation between Bismarck and the liberals, who were violently anticlerical. However, the struggle lost intensity after Bismarck failed to break the power of the Center party, which made large gains in the Reichstag in 1878. The detente with the liberals foundered in the late 1870s after Bismarck's refusal to appoint three liberals to his ministry and his adoption of protective tariffs in place of the liberals' free trade position. Relations between Bismarck and the Center party continued to improve, and the chancellor turned his attention toward the socialists, who had increased their strength in the Reichstag particularly after the fusion of the Lassalle and Marxian socialists (1875). Bismarck at first met the socialist opposition with extremely repressive measures. The antisocialist law passed in 1878 prohibited the circulation of socialist literature, empowered the police to break up socialist meetings, and put the trial and punishment of socialists under the jurisdiction of police courts. Although the socialists were initially weakened, they again began to increase their number in parliament. Now, partly to weaken the socialists and partly as a result of his policy of economic nationalism, Bismarck instituted a program of sweeping social reform. Between 1883 and 1887, despite violent opposition, laws were passed providing for sickness, accident, and old age insurance, limiting woman and child labor, and establishing maximum working hours. Bismarck's new economic policy also resulted in the rapid expansion of German commerce and industry and the acquisition of overseas colonies and spheres of influence (see GERMANY). The Bismarckian era closed with the death of Emperor Frederick III. A struggle for supremacy between Bismarck and WILLIAM II developed immediately upon that emperor's accession in 1888 and ended with Bismarck's dismissal in 1890. Bismarck, created prince (*Fürst*) after the Franco-Prussian War, was now made duke (*Herzog*) of Lauenburg. He retired and spent the remainder of his life in verbal and written criticism of the emperor and his ministers and in defense of his own policies. See *Bismarck, the Man and the Statesman* (his reminiscences, tr by A. J. Butler, 1898, repr 1966), Erich Eyck, *Bismarck and the German Empire* (3d ed 1968), A. J. P. Taylor, *Bismarck, the Man and the Statesman* (1955, repr 1968), Otto Pflanze, *Bismarck and the Development of Germany* (2d ed 1971).

Bismarck, city (1970 pop 34,703), state capital and seat of Burleigh co., S central N Dak., on hills overlooking the Missouri River, inc 1873. A trade and distributing point for a large spring wheat, livestock, and dairy region, it is also the center for development of the rich oil reserves in nearby Williston Basin. Food items, farm machinery, woodwork, and concrete products are made. Lewis and Clark camped nearby in 1804-5. With the beginning of the river traffic in the 1830s, a steamboat port called the "Crossing on the Missouri" emerged there. In 1872, Camp Greeley (later Camp Hancock) was erected to protect the men who were building the Northern Pacific RR. When the railroad reached the fort the next year, a town was laid out, it was subsequently named Bismarck (for Germany's chancellor) in the hope of attracting German investment in the railroad. Bismarck boomed as a river port and railroad center and as a supply point for the Black Hills gold mines (1874). It became the territorial capital in 1883. Of interest are the state capitol (1932), a skyscraper, the state historical museum, and Camp Hancock museum. Mary College and a junior college are there. The state penitentiary is nearby.

Bismarck Archipelago, volcanic group (1969 est pop 213,000), 19,200 sq mi (49,730 sq km), SW Pacific, a part of Papua New Guinea. The group includes NEW BRITAIN (the largest island), NEW IRELAND, the ADMIRALTY ISLANDS, the Mussau Islands, LAVON GAI, the VITU ISLANDS, and the DUKE OF YORK ISLANDS. The islands are generally mountainous and have several active volcanoes. The chief agricultural products are copra, cacao, coffee, tea, and rubber. Some copper and gold are mined. The inhabitants are mainly Melanesians. Discovered in 1616 by the Dutch explorer Willem SCHOUTEN, the group became a German protectorate in 1884. Seized by Australian forces in World War I, the islands were mandated to Australia by the League of Nations in 1920. Japan operated several naval and air bases in the islands during World War II. In 1947, Australia re-

ceived trusteeship over the group from the United Nations. The archipelago was included in Papua New Guinea when it became self-governing in 1973.

bismuth (bīz'math) [Ger. *Weisse Masse* = white mass], metallic chemical element, symbol *Bi*, at no 83, at wt 208.98, m.p. 271.3°C, b.p. about 1560°C, sp. gr. 9.75 at 20°C, valence +3 or +5. Bismuth is a silver-white, reddish-tinged, brittle metallic element with a rhombohedral crystalline structure. It exhibits more metallic properties than the other members of group Va of the PERIODIC TABLE. It occurs free in nature to a small extent. Bismuth does not tarnish in air, but when heated it burns to form yellow fumes of the trioxide. It reacts with the halogens and with sulfur and is dissolved in nitric acid and hot sulfuric acid. Its soluble compounds are poisonous, but some of its insoluble compounds are used in medicine to treat certain gastric disorders and skin injuries. Bismuth is the poorest heat conductor of all the metals except mercury; it is the most diamagnetic of all metals. The major ores of bismuth, bismuthinite (the sulfide), also called bismuth glance, and bismite (the oxide), are found extensively in South America but are rare in the United States, where bismuth is obtained as a by-product of lead and copper refining. Bismuth expands upon solidification, this unusual property makes it useful in type-metal alloys and for castings. The most important use of bismuth is in the manufacture of low-melting alloys, such as Wood's metal, used in electrical fuses and in automatic fire alarm and sprinkler systems. Bismuth was recognized as a metal by early observers, including Georg Agricola, in the 16th cent., but was believed to be a kind of lead or tin until Claud J. Geoffroy established it as a separate element in 1753.

bison, large hoofed mammal, genus *Bison*, of the cattle family. Bison have short horns and humped, heavily mantled shoulders that slope downward to the hindquarters. The European bison, or wisent, *Bison bonasus*, is larger and has a less luxuriant mane and beard than the American species, *B. bison*. The American bison is commonly called BUFFALO, although true buffalo are African and Asian animals of the same family. *B. bison* is characterized by a huge, low-slung head and massive hump, its legs are shorter than those of the wisent. Males may reach a shoulder height of over 5 ft (1.5 m), a body length of 9 ft (2.7 m), and a weight of 2,500 lb (1,130 kg). The winter coat of the American bison is dark brown and shaggy, it is shed in spring and replaced by a coat of short, light-brown fur. Bison graze on prairie grasses, migrating south in search of food in the winter. They formerly roamed in vast herds over much of North America, especially on the Great Plains, and were hunted by the American Indians for their flesh and hides. With the arrival of European settlers they were subjected to a wholesale slaughter that resulted in their near extinction. They were killed for their tongues, regarded as a delicacy, and shot for sport from trains. At the beginning of the 19th cent. there were over 60 million bison in North America. By the middle of the century the bison was extinct E of the Mississippi, and by 1900 there remained only two wild herds in North America, one of plains bison in Yellowstone Park, and one of the larger variety, called wood bison, in Canada. Protective laws were passed beginning at the end of the last century, and the bison population has since risen from a few hundred to over 20,000. The wood bison may have vanished as a distinct race through hybridization with the plains bison. *Bison* are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae. See F. G. Roe, *The North American Buffalo* (2d ed. 1970), Tom McHugh and Victoria Hobson, *The Time of the Buffalo* (1972).

Bispham, David Scull (bis'pam), 1857–1921, American baritone, b. Philadelphia. He made his operatic debut in London in 1891 and was leading Wagnerian baritone of the Metropolitan Opera Company, New York City, from 1896 to 1903. He advocated English translation of foreign operas and supported native opera in English. In 1921 the Opera Society of America established the Bispham Memorial Medal Award for American composers of such operas. See his *Quaker Singer's Recollections* (1920).

Bissagos Islands: see GUINEA-BISSAU.

Bissau (bisou'), town (1970 pop. 62,101), former capital of Guinea-Bissau (Portuguese Guinea), a port in the Geba estuary, off the Atlantic Ocean. It is the country's largest city, major port, and administrative and military center. Bissau has been a free port since 1869 and handles some transit trade. Peanuts, hardwoods, copra, palm oil, and rubber are the

chief items shipped. Bissau has little industry, except for food and beverage processing. The city was founded in 1687 by the Portuguese as a fortified port and trading center. In 1942 it became the capital of Portuguese Guinea but was replaced by Madina do Boe in 1974.

Bisschop, Simon: see EPISCOPIUS, SIMON.

Bisutun Inscription: see BEHISTUN INSCRIPTION.

bit: see DRILL.

bites and stings: see FIRST AID.

Bithiah (bithi'ah), a Pharaoh's daughter, wife of a Judahite. 1 Chron. 4:18.

Bithron (bith'rōn), unidentified place, E of the Jordan, probably a wadi. 2 Sam. 2:29.

Bithynia (bithin'ēa), ancient country of NW Asia Minor, in present-day Turkey. The original inhabitants were Thracians who established themselves as independent and were given some autonomy after Cyrus the Great incorporated Bithynia into the Persian Empire. After the death of Alexander the Great, the Bithynians took advantage of the wars of the Diadochi to secure freedom from the Seleucids (297 B.C.). They established a dynasty under the leadership of Zipoetes who was succeeded (c.280 B.C.) by Nicomedes I, who founded Nicomedia as the capital of his flourishing state. During his time and the following reigns of Prusias I, Prusias II, and Nicomedes II, wars continued with the Seleucids and with Pergamum. In the 1st cent. B.C., Mithradates V of Pontus had designs on Bithynia, which was ruled by Nicomedes IV (sometimes confused with Nicomedes III), a client of Rome. When Nicomedes died (74 B.C.) he willed Bithynia to Rome. The last of the wars with Mithradates resulted. Bithynia was an important province of Rome. For some time after Pompey's rearrangement of the empire it was combined with western Pontus as a single colony. Pliny the Younger (see under PLINY THE ELDER) was governor of the province (A.D. c.110) under the emperor Trajan. The reign of Hadrian soon after seems to have marked the end of Bithynian prosperity. It was invaded briefly by the Goths (A.D. 298).

Bitlis (bitlis'), town (1970 pop. 20,556), capital of Bitlis prov., E Turkey, on a tributary of the Tigris River, at c.4,500 ft (1,370 m). Grains, fruit, and tobacco are grown nearby. Located on a passage through the Taurus mts., it was an important caravan center for centuries and was captured by Persians, Arabs, Seljuk Turks, Byzantines, and Ottoman Turks. In the 19th cent. the town had a large Armenian population.

Bitola (bē'tōlā), Serbo-Croatian *Bitolj*, formerly *Monastir*, city (1971 pop. 124,648), extreme S Yugoslavia, in Macedonia. It is a commercial and industrial center for the surrounding agricultural area. Bitola was a major agricultural center in Roman times. Later settled by Slavs, it became a bishopric in the 11th cent. In 1395 the Turks conquered Bitola, which became an important military and commercial center in the 15th and 16th cent. and a Balkan administrative center in the 19th cent. The city suffered much damage during the Balkan Wars (during which the Serbs took it from the Turks) and in World War I. Bitola is noted for its numerous mosques, churches, and a former Turkish market.

Bitolj: see BITOLA, Yugoslavia.

Biton (bitōn) and **Cleobis** (kleō'bīs), in Greek mythology, sons of the priestess Cydippe. When their mother wanted to see a famous temple of Hera, which was many miles away, the brothers dragged her chariot there. At the end of the long journey Cydippe prayed to Hera that her sons might receive the greatest of blessings. Their reward was instant and painless death.

Bitonto (bētōn'tō), city (1971 pop. 41,560), Apulia, S Italy. It is an agricultural market and is noted for its olive oil. The Spanish under Charles Bourbon defeated the Austrians there in 1734 during the War of the Polish Succession. The Apulian Romanesque cathedral (12th–13th cent.) is especially remarkable for its fine sculptures.

Bitterfeld (bit'rēft), city (1970 pop. 28,964), Halle district, central East Germany, on the Mulde River. It is an industrial center and rail junction. Manufactures include chemicals, aluminum, machinery, and plastics. Lignite is mined in the region. Bitterfeld was founded in the mid-12th cent. and passed to Prussia in 1815.

bittern, common name for migratory marsh birds of the family Ardeidae (HERON family). The American bittern (*Botaurus lentiginosus*), often called "stake driver" because of the male's booming call in the spring, is widely distributed in E North America. It is mostly nocturnal and feeds on frogs, fish, and in-

sects. When pursued, the bittern escapes detection by standing motionless with bill uplifted, its brown and yellow markings and striped foreneck blending with the marsh grasses. It is about 2 to 3 ft (61–91 cm) tall, the western and eastern least bitterns, genus *Ixobrychus*, are about half this size. Of the 12 species of bitterns, 8 constitute the smaller birds. The female bittern builds the nest, which consists of an unkempt arrangement of sedge grass and reeds. The nests are built on the ground along rivers or lakeshores and house the clutch of 3 to 6 eggs. Both male and female share the incubation duties. Bitterns are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Ciconiiformes, family Ardeidae.

Bitterroot, river, c.120 mi (190 km) long, rising in SW Montana and flowing north to join the Clark Fork River near Missoula. A Roman Catholic mission was built in the river valley in 1841, and the missionaries are credited with establishing farming in the area. The Bitter Root project irrigates c.17,000 acres (6,880 hectares).

bitterroot: see PURSLANE.

Bitterroot Range, part of the Rocky Mts., on the Idaho-Mont. line. The main range, running north-west-southeast, includes Trapper Peak (10,175 ft/3,101 m high), Mt. Garfield (10,961 ft/3,341 m), in an east-running spur to the south, is the highest peak. Discovered in the 1804–5 expedition of Lewis and Clark, this rugged mountain range has long been one of the most impenetrable in the United States, except for its foothills, it remains almost completely unexploited today.

bitters, various alcoholic beverages containing bitter principles, such as angostura bark, cascarilla, quassia, gentian, orange, quinine, and other flavoring agents, and prepared by infusion or distillation. They are used as appetizers, digestives, and flavoring for mixed drinks and frequently attain an alcoholic strength of 40%.

bittersweet, name for two unrelated plants, belonging to different families, both fall-fruited woody vines sometimes cultivated for their decorative scarlet berries. One, called also woody NIGHTSHADE (*Solanum dulcamara*), is an Old World plant now naturalized in North America, belonging to the family Solanaceae (NIGHTSHADE family). The twigs and stems are occasionally used medicinally for a narcotic poison similar to belladonna. The more popular bittersweet (*Celastrus scandens*), a plant of the family Celastraceae (STAFF TREE family), grows in thickets from Maine to North Carolina and W to Nebraska. Its berry is surrounded by an orange-yellow capsule. Both bittersweets are classified in the division MAGNOLIOPHYTES, class Magnoliopsida. *S. dulcamara* belongs to the order Polemoniales, family Solanaceae. *C. scandens* belongs to the order Celastrales, family Celastraceae.

bitumen (bit'yū'mən), any of several mixtures of hydrocarbons, including asphalt, tar, and crude petroleum. Substances containing bitumens are called bituminous (e.g., bituminous coal).

bituminous coal: see COAL.

Bitzias, Albert: see GOTTFELD, JEREMIAS.

bivalve, aquatic mollusk of the class Pelecypoda ("hatchet-foot"), with a laterally compressed body and a shell consisting of two valves, or movable pieces, hinged by an elastic ligament. The valves cover the right and left sides of the animal; they are hinged dorsally (above the body) and open ventrally (below the body). Usually the two valves are similar and equal in size, but in some forms, such as the OYSTER, that attach to the substratum by one valve (i.e., lying on their sides), the left-hand (or upper) valve is larger than the right-hand (or lower) one. Two muscles, called adductors, run between the inner surfaces of the two valves, acting antagonistically to the hinge ligament; they enable the shell to close rapidly and tightly. Within the shell is a fleshy layer of tissue called the mantle; there is a cavity (the mantle cavity) between the mantle and the body wall proper. The mantle secretes the layers of the shell, including the inner nacreous, or pearly, layer. Sometimes a pearl is formed as a reaction to irritation, by the depositing of nacreous layers around a foreign particle. The head is much reduced, without eyes or tentacles, and a muscular hatchet-shaped foot projects from the front end of the animal, between the valves. The foot is used for burrowing, and, in some bivalves (e.g., razor clams), to swim. Many bivalves have two tubes, or siphons, extending from the rear end: one (the incumbent siphon) for the intake of oxygenated water and food, and one (the excurrent siphon) for the outflow of

waste products. The two tubes may be joined in a single siphon, or "neck." The gills, suspended within a mantle cavity, are usually very large and

Internal anatomy of a clam, Anodonta, representative mollusk of the class Pelecypoda (the bivalves)

function in food gathering (filter feeding) as well as in respiration. As water passes over the gills, tiny organic particles are strained out and are carried to the mouth. Members of the order Septibranchia, however, lack gills and feed on small crustaceans and worms. Bivalves have a complete digestive tract, a reduced nervous system, a complete, open circulatory system with a chambered heart, arteries, veins, and blood sinuses, and excretory and reproductive organs. In most species the sexes are separate, and the eggs and sperm are shed into the water, where fertilization occurs. The larval stage is free-swimming and lacks a shell. Bivalves differ in their habits: some, such as the oysters and marine mussels, have a reduced foot and are permanently attached to a substratum; some, such as the clams and freshwater mussels, burrow rather slowly through the sand or mud using the foot; some, such as the cockle shells, live on or near the surface of the ocean floor; still others, such as the shipworm, burrow through rocks or wood seeking protected dwellings and do damage to rock pilings and other marine installations. The scallops swim with great speed by suddenly clapping the shell valves together and ejecting water from the mantle cavity. Bivalves that are exposed at low tide, such as the marine mussels, keep their gills wet with water retained in the mantle cavity. Because of the enormous variety of sizes, shapes, surface sculpturing, and colors, shell characteristics are of great importance in the identification and classification of bivalves. Shells range in size from the tiny ($1/16$ -in/2-mm) seed shells characteristic of members of the freshwater family Sphaeriidae to the GIANT CLAM, *Tidacna*, of the South Pacific, which attains a length of over 4 ft (120 cm) and may weigh over 500 lb (225 kg). Bivalves are an important food source for humans, as well as for gastropods, fish, and shore birds. They are classified in the phylum MOLLUSCA, class Pelecypoda.

Biwa (bē'wa), lake, c 40 mi (60 km) long and from 2 to 12 mi (3.2-19 km) wide, Shiga prefecture, 5 Honshu, Japan. The lake, shaped like the biwa, a musical instrument, is the largest in Japan and is a popular scenic resort. It abounds in fish, textile industries flank its shores. Canals from the lake to Kyoto provide water supply and a transportation route.

Biysk (bē'sk), city (1970 pop. 186,000), 5 central Siberian USSR, on the Biya River. A port and the terminus of a branch of the Turkistan-Siberia RR, Biysk manufactures food-processing equipment. The city was founded as a fortress in 1709; its name is sometimes spelled Bisk or Bisk.

Bizerte (bēzērt'), Arab Banzart, city (1966 pop. 51,708), N Tunisia, on the Mediterranean Sea. It is an important port, strategically situated near the narrowest part of the Mediterranean. The city also has processing industries. Bizerte was founded by Phoenicians. While the French ruled Tunisia, they im-

proved and fortified the outer harbor and deepened the channel to the Lake of Bizerte, where there are naval works and the town of Menzel Bourgiba. The White Russian fleet (1920) and the Spanish republican fleet (1939) were interned at Bizerte. It was a German base in World War II and was heavily bombed (1943) by the Allies. Tunisian insistence that France evacuate its naval installations at Bizerte led to violent confrontations in 1961; the base was turned over to Tunisia in 1963.

Bizet, Georges (zhōrhz bēzā'), 1838-75, French operatic composer. The son of professional musicians, he entered the Paris Conservatory at the age of nine and won the Prix de Rome in 1857. He was a gifted pianist and composed instrumental music in his teens. Bizet is celebrated for his opera *Carmen* (1875), based on a story by Mérimée. One of the most popular operas ever written, *Carmen* has music that is lush, melodic, and brilliantly orchestrated. It unfolds a story of love, hate, jealousy, and murder, set in the exotic world of Spanish gypsies and bullfighters. Bizet's other works include the operas *The Pearlfishers* (1863), *The Fair Maid of Perth* (1867), and *Djamleh* (1872), *Symphony in C Major* (1855), and incidental music to Daudet's *L'Arlesienne*, in the form of two orchestral suites. See biographies by Winton Dean (1965) and Mina Curtiss (1958, repr. 1974).

Bizjōthjah (bīzjōth'jah), name in a geographical list married by copyists. Joshua 15:28.

Biztha, chamberlain of Ahasuerus. Esther 1:10.

Bjerknes, Vilhelm Frimann Koren (vī'hēlm frē'man kō'rən byēr'k'nēs), 1862-1951, Norwegian physicist and pioneer in modern meteorology. He worked on applying hydrodynamic and thermodynamic theories to atmospheric and hydrospheric conditions in order to predict future weather conditions. Bjerknes was professor at the universities of Oslo (1907-12, 1926-32), Leipzig (1912-17), and Bergen (1917-26), where he set up a geophysical institute. His work in meteorology and on electric waves was important in the early development of wireless telegraphy. His publications include *Fields of Force* (1906) and the classic book *On the Dynamics of the Circular Vortex with Applications to the Atmosphere and to Atmospheric Vortex and Wave Motion* (1921); he is also coauthor with J. W. Sandstrom (on Vol. I) and with T. Hesselberg and O. Devik (on Vol. II) of *Dynamic Meteorology and Hydrography* (Vol. I and II, 1910-11, Vol. III, 1951). He evolved a theory of cyclones known as the polar front theory with his son Jakob Aall Bonnevie Bjerknes, 1897-, who became a U.S. citizen in 1946. Jakob Bjerknes served as professor of meteorology at the Univ. of Bergen (1931-40) and at the Univ. of California (from 1940).

Bjorling, Jussi (yōōs'ī byor'ling), 1907-60, Swedish tenor. He studied at the Royal Opera School in Stockholm, making his debut there in 1930 as Don Ottavio in Mozart's *Don Giovanni*. He made guest appearances in leading roles with opera companies in Copenhagen, Dresden, Prague, Vienna, Paris, and Buenos Aires. In the United States he was acclaimed at a recital in 1937 in Springfield, Mass. He appeared that year with the Chicago Civic Opera Company and was engaged for the 1938-39 season at the Metropolitan Opera House. During World War II Bjorling remained in Sweden, returning to the United States to rejoin the Metropolitan Opera Company in 1945. Because his voice was both lyric and dramatic, he had an extensive repertory, including leading roles in *La Bohème*, *Rigoletto*, *Il Trovatore*, and *Faust*.

Bjorneborg, Finland. See PORI.

Bjornøya (byōrn'ōya), island, 69 sq mi (179 sq km), in the Barents Sea, c 275 mi (440 km) N of Norway, southernmost island of Svalbard. It rises to 1,759 ft (536 m). There are polar fox and polar bear on the island. Probably known to Norsemen in the 12th cent., it was rediscovered by Willem Barentz, the Dutch navigator, in 1596, and was formally annexed by Norway in 1915. It is also known as Bear Island.

Bjornson, Bjørnstjerne (byōrn'styēr'nə byōrn'sōn), 1832-1910, Norwegian writer and political leader, one of the major figures of Norwegian literature. A brilliant journalist, he long had great influence in Norway. As a dramatist, he sought to break the Danish yoke on the Norwegian theater, as an orator, to revive Norwegian as a literary language, and as a reformer, to champion the rights of the oppressed. His celebrated *Synnove Solbakken* (1857, first tr. 1881, *Sunny Hill*, 1932), was perhaps the first Norwegian major novel. Bjornson succeeded his friend Ibsen as director of the Ole Bull Theater in Bergen

(1857-59) and then became involved in politics, fighting against Norwegian amalgamation with Sweden and championing parliamentary democracy. To link the resurgent nation with its epic past he created sagalike dramas, the finest of which is the trilogy *Sigurd Slembe* (1862, tr. 1888). Bjornson became national poet of Norway—one of his poems became the national anthem—and reached his pinnacle as a lyric poet while abroad in Europe (1860-63). Returning to Oslo in 1863, he was granted an annuity and directed the Oslo Theater until 1867. In the next years he wrote his finest works: the novel *The Fisher Girl* (1868, tr. 1871), the epic poem *Arnljot Gelline* (1870, tr. 1917), and *The Bankrupt* (1875, tr. 1914). After enduring a religious crisis (1878-79) Bjornson accepted Darwinian evolution in a religious context, rejecting traditional religion. From this time his writings urged the liberation of the human spirit from dogma and prejudice. The story *Dust* (1882, tr. 1884) supported secular education, the play *A Gauntlet* (1883, tr. 1890) attacked the double standard, and the drama *Beyond Our Power* (2 parts, 1883-95, tr. of 1st part, Pastor Sang, 1893, tr. of 2d part, *Beyond Human Might*, 1914) treated basic social and philosophic conflicts in modern society. Bjornson received the 1903 Nobel Prize in Literature. See biography by Harold Larson (1944), separate study in G. M. C. Brandes, *Henrik Ibsen* (1964).

Bjornsson, Sveinn (svān byōrn'sōn), 1881-1952, Icelandic diplomat and political leader, first president of Iceland (1944-52). A distinguished lawyer, he was elected to the Althing (Icelandic parliament) for the first time in 1914. From 1912 to 1920 he was president of the Reykjavik city council. During World War I, Bjornsson undertook numerous diplomatic missions to Great Britain and the United States and afterward served as minister to Denmark (1920-41). He was regent of Iceland from 1941 to 1944, when, on Iceland's independence from Denmark, he became president. He was reelected in 1945 and 1949.

Bk, chemical symbol of the element BERKELIUM.

Blacher, Boris (bla'khər), 1903-, Estonian-German composer, b. Ying-k'ou, China. Blacher lived for six years in Siberia. He studied in Berlin and in 1953 became the director of the West Berlin Conservatory of Music. Blacher has written concertos for various instruments, numerous operas, including *200,000 Taler* (1969, after Sholem Aleichem), ballets, chamber music, and song cycles. He has experimented with variable meters or rhythmic rows, as in *Ornaments* (1953) for orchestra, and with abstract operas concerned with human situations but without plot.

Black, Greene Vardiman, 1836-1915, American dentist, b. Scott co., Ill. Professor at Chicago College of Dental Surgery (now part of Loyola Univ.) from 1883 to 1889 and professor (from 1891) and dean (from 1897) at the Northwestern Univ. dental school, he made large contributions to dentistry as teacher, as originator of methods and instruments, and as author. His works include *Formation of Poisons by Microorganisms* (1884), *Dental Anatomy* (1891), and *Operative Dentistry* (1908). The Black method of preparing amalgam alloys for fillings is still in use.

Black, Hugh, 1868-1953, Scottish-American theologian and author. After serving as a pastor in Paisley and Edinburgh, he emigrated to the United States in 1906 to begin a professorship of practical theology in Union Theological Seminary, New York City. His books include *Culture and Restraint* (1900), *Christ's Service of Love* (1907), *The New World* (1915), *The Adventure of Being Man* (1929), and *Christ or Caesar* (1938).

Black, Hugo Lafayette, 1886-1971, Associate Justice of the U.S. Supreme Court (1937-71), b. Harlan, Clay co., Ala. He received his law degree from the Univ. of Alabama in 1906. He practiced law and held local offices before serving (1927-37) in the U.S. Senate. As Senator he ardently supported New Deal measures, conducted Senate investigations of merchant-marine subsidies (1933) and lobbying (1935), and sponsored (1937) the Wages and Hours bill. His appointment to the Supreme Court by President Franklin Delano Roosevelt met strong opposition from the public and in the Senate because of his earlier membership in the Ku Klux Klan. Black was, however, a staunch defender of civil liberties, and he became the leader of the activists on the Supreme Court, consistently opposing congressional and state violations of free speech and due process. See study by Virginia Hamilton (1972).

Black, James, 1823-93, American temperance leader. A Pennsylvania lawyer, he was active in state and national temperance work. His plan for a National

Publication House was adopted by the National Temperance Convention (1865). In 1872, as presidential nominee of the Prohibition party, he gained some 5,000 votes.

Black, Jeremiah Sullivan, 1810-83, American cabinet officer, b Somerset co, Pa. Admitted to the Pennsylvania bar in 1830, Black became a successful lawyer. As U.S. Attorney General (1857-60) under President Buchanan he hired Edwin M. Stanton, later his successor, to clear up the involved land-title cases in California. Black was less successful, however, in enforcing unpopular legislation concerning slavery. It was his opinion that although the seceding Southern states could not be coerced, Federal property in the South should be protected, and measures taken to resist armed rebellion. He replaced (Dec., 1860) Lewis Cass as Secretary of State and succeeded in persuading Buchanan to send supplies to Fort Sumter. Buchanan appointed him to the Supreme Court in Feb., 1861, but the Senate, with both Democrats and Republicans hostile to Black, refused to confirm him. See P. G. Auchampaugh, *James Buchanan and His Cabinet on the Eve of Secession* (1926), biography by W. N. Brigrance (1934, repr. 1971).

Black, Joseph, 1728-99, Scottish chemist and physician, b France. He was professor of chemistry at Glasgow (1756-66) and from 1766 at Edinburgh. He is best known for his theories of latent heat and specific heat. He also laid the foundations of chemistry as an exact science in his investigations on magnesium carbonate, during which he discovered carbon dioxide, which he called "fixed air."

Black, Max, 1909-, American analytical philosopher, b Baku, Russia, grad Cambridge Univ., Ph.D. Univ. of London, 1939. He taught at the Univ. of Ill. (1940-46) before going to Cornell Univ. (1946). Influenced by Ludwig Wittgenstein, he wrote *A Companion to Wittgenstein's Tractatus* (1964). His concern with clear language was expressed in *Language and Philosophy* (1949), *Models and Metaphors* (1962), *The Labyrinth of Language* (1968), and *Margins of Precision: Essays in Logic and Language* (1970).

black-and-tan coonhound: see COONHOUND, BLACK-AND-TAN

Black Angus cattle: see ANGUS CATTLE

Blackbeard, d. 1718, English pirate. His name was probably Edward Teach, Thatch, or Thach. It is supposed that he began as a privateer in the War of the Spanish Succession (1701-14) and at its end turned pirate. Between 1716 and 1718 he preyed on the shipping and coastal settlements of the West Indies and the Atlantic coast of North America, becoming notorious for his cruelty. His headquarters were in the Bahamas and the Carolinas. The compliant governor of North Carolina shared some of the booty, but despite such protection Blackbeard was killed by a British force sent from Virginia. Legend has romanticized Blackbeard's history.

Black Belt, term loosely applied to several areas of the U.S. South that are characterized by black soil and excellent cotton-growing conditions. The Black Belt of NE Mississippi and S central Alabama, in the heart of the Old South and generally associated with the term, was historically important as the nation's main cotton producer in the mid-1800s. Soil depletion, erosion, the boll weevil, and economic conditions combined to drive cotton from the region. Livestock, peanuts, and truck crops are now the chief crops. The Coastal Cuesta of central South Carolina and Georgia is one of the original cotton-producing areas in the United States. It remains an important cotton producer because of the extensive use of fertilizers and its proximity to textile mills. The Black Prairie of E Texas, extending north from the Gulf coastal plain to the Red River, has the state's richest farmland and is one of the best cotton-growing areas in the United States.

blackberry, name for several species of thorny plants of the genus *Rubus* of the family Rosaceae (ROSE family). See BRAMBLE.

blackbird, common name in North America of a perching bird allied to the bobolink, the meadow lark, the oriole, and the grackle and belonging to the family Icteridae. The European blackbird, *Turdus merula*, is a thrush. The red-winged blackbird of E North America is a familiar sight, its scarlet shoulder patches conspicuous among the tall grasses of the marshes and wet meadows where it nests. It eats grain, insects, and weed seeds. Another common species is the yellow-headed blackbird, *Xanthocephalus xanthocephalus*. Except during the breeding season blackbirds usually travel in flocks. The yellow-headed, the tricolored red-winged, and

brewer blackbirds are found in the West. The rusty blackbird, glossy blue-black in summer when the brown edging of its winter feathers has worn off, winters in the United States. Many members of the family are polygamous, although the incidence of polygamous behavior varies from population to population. For example, in the brewer blackbird, the male becomes polygamous only when there are more females than males, when the balance is even, monogamy is the rule. The female blackbird usually builds the nest, which consists of a cup-shaped structure made of grasses. Flocks of blackbirds may be as large as 5 million birds, and they often do serious crop damage when foraging for food. However, the birds are invaluable because of the insects they consume. Blackbirds are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Icteridae.

black body, in physics, an ideal black substance that absorbs all and reflects none of the radiant energy falling on it. Lampblack, or powdered carbon, which reflects almost 2% of the radiation falling on it, approximates an ideal black body. Since a black body is a perfect absorber of radiant energy, by the laws of thermodynamics it must also be a perfect emitter of radiation. The distribution according to wavelength of the radiant energy of a black body radiator depends on the absolute temperature of the black body and not on its internal nature or structure. As the temperature increases, the wavelength at which the energy emitted per second is a maximum decreases. This phenomenon can be seen in the behavior of an ordinary incandescent object, which gives off its maximum radiation at shorter and shorter wavelengths as it becomes hotter and hotter. First it glows in long red wavelengths, then in yellow wavelengths, and finally in short blue wavelengths. In order to explain the spectral distribution of black body radiation, Max Planck developed the QUANTUM THEORY in 1901. In thermodynamics the principle of the black body is used to determine the nature and amount of the energy emitted by a heated object.

blackbuck, small antelope, *Antelope cervicapra*, found in plains and open forest throughout India. Males are dark brown above and white below, with white rings around the eyes; they stand about 32 in (81 cm) at the shoulder and weigh about 90 lb (41 kg). Their heavily ridged, corkscrew-shaped horns are about 18 in (45 cm) long. The smaller, hornless females are fawn-colored above and white below. Blackbucks graze in herds of 10 to 100 individuals and, unlike most antelopes, graze mostly by day, even in intense heat. They are extremely swift animals; a cheetah can run down a blackbuck, but only if it overtakes it in the first few hundred yards. Although they have been hunted intensively by man, sometimes with the aid of cheetahs, blackbucks have survived in large numbers. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

Blackburn, Joseph, b. c. 1700, d. after 1765, American portrait painter. Little is known concerning him except that from 1750 to 1765 he painted portraits (usually signed J.B.), chiefly of members of distinguished families in Boston and Portsmouth, N.H. Imitating the English rococo style, he painted portraits of Col. Theodore Atkinson (Worcester Art Mus.), three members of the Greenleaf family (Metropolitan Mus.), and the Isaac Winslow Family (Mus. of Fine Arts, Boston).

Blackburn, county borough (1971 pop. 101,672), Lancashire, NW England. It was formerly a great cotton-weaving center, noted especially for calicoes. Textiles are still important, but now there are other large industries that make engineering equipment, radio parts, beer, felt, and carpets. Blackburn is also an agricultural market. The textile industry started very early—Blackburn checks (a linen product made of Irish flax) were well known about the middle of the 17th cent. When James Hargreaves invented (c. 1765) the spinning jenny nearby, the manufacture of cotton goods received a new impetus. The completion of the Leeds-Blackburn-Liverpool Canal in 1816 substantially aided Blackburn's 19th-century economic growth. John Morley, the statesman, was born in Blackburn. There is a technical college in the borough. In 1974, Blackburn became part of the new nonmetropolitan county of Lancashire.

Black Canyon of the Gunnison National Monument: see NATIONAL PARKS AND MONUMENTS (table), GUNNISON, river

black codes, in U.S. history, series of statutes passed by the ex-Confederate states, 1865-66, dealing with the status of the newly freed Negroes. They varied greatly from state to state as to their harshness and

restrictiveness. Although the codes granted certain basic civil rights to Negroes (the right to marry, to own personal property, and to sue in court), they also provided for the segregation of public facilities and placed severe restrictions on the freedman's status as a free laborer, his right to own real estate, and his right to testify in court. The North interpreted the codes as an attempt by the South to reenslave the Negro. The FREEDMEN'S BUREAU prevented their enforcement, and the codes were later repealed by the radical Republican state governments.

Black Country, highly industrialized region, mostly in Staffordshire but partly in Worcestershire and Warwickshire, W central England. It includes the cities of Dudley, Rowley Regis (see WARLEY), Tipton, Walsall, Wednesbury, West Bromwich, and Wolverhampton. From the mid-18th to the mid-19th cent. the area's resources—coal, iron, clay, and limestone—made iron smelting and the manufacture of iron products the main industries. The black smoke from the factories gave the region its name. Today the iron and coal mines are depleted, and the manufacturing industries utilize iron, steel, brass, and copper from outside the region to make metal products. These include hardware, tubes, boilers, machinery and machine tools, home appliances, and road and rail vehicles. There are also chemical and constructional-engineering industries.

Blackett, Patrick Maynard Stuart (blāk'it), 1897-1974, English physicist. He was professor of physics at the Univ. of Manchester (1937-53) and in 1953 became professor at the Univ. of London. For his work in improving and extending the use of the Wilson cloud chamber and for his discoveries concerning cosmic rays he received the 1948 Nobel Prize in Physics. He is the author of *Military and Political Consequences of Atomic Energy* (1948, rev. ed. 1949), *American ed. Fear, War and the Bomb* (1949) and *Atomic Weapons and East-West Relations* (1956). In 1965 he was elected president of the Royal Society, London.

black-eyed bean or black-eyed pea: see COWPEA

black-eyed Susan or yellow daisy, North American daisylike wild flower (*Rudbeckia hirta*) of the family Compositae (COMPOSITE family) with yellow rays and a dark brown center. It is a weedy biennial or annual and grows in dry places. The black-eyed Susan and the other rudbeckias are called yellow coneflowers. The most widely cultivated is the golden glow (*R. laciniata hortensis*), a tall double-blossomed perennial. Black-eyed Susans are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Compositae.

Blackfeet Indians: see BLACKFOOT INDIANS

black fly, name for any of the FLIES of the family Simuliidae. The black fly is about 1/8 in (32 cm) long and has large eyes, short legs, a stout, humped back, broad gauzy wings, and piercing-sucking mouthparts. Species of black flies occur worldwide. The female inflicts a painful bite, sucking the blood of birds and mammals, including humans. Livestock and other large mammals may be bitten to death by swarms of black flies, the black fly problem of some subarctic regions is so severe as to make human settlement impossible. Some tropical African and American species carry the larvae of roundworms that in human hosts cause swellings of the skin and eyes and sometimes blindness. The eggs of black flies are commonly laid in masses on wet rocks, logs, and plants; the larvae live in fast flowing water, clinging to rocks by means of anal sucking disks and straining out organic matter by fanlike head organs. Pupation occurs underwater; the pupa accumulates a bubble of air in its case, enabling it to rise to the surface and emerge when mature. The Adirondack black fly, *Simulium hirtipes*, the white stockinged black fly, *S. venustum*, the buffalo gnat, *S. pecuarum*, and the turkey gnat, *S. mendonae*, are common species. Black flies are classified in the phylum ARTHROPODA, class Insecta, order Diptera, family Simuliidae. See INSECT.

Blackfoot Indians, North American Indians of the Algonquian branch of the Algonquian-Wakashan linguistic stock (see AMERICAN INDIAN LANGUAGES). They occupied in the early 19th cent. a large range of territory around the Upper Missouri (above the Yellowstone) and North Saskatchewan rivers W to the Rockies. Their name derives from the fact that they dyed their moccasins black. There were three main tribes—the Siksika, or Blackfoot proper, the

Piegán, and the Kainah, or Blood. Although they did not form a unified political entity, they were united in defending their lands and in warfare. The Atsina Indians (related to the Arapaho) and the Athapascan-speaking Sarsi Indians were allied with the Blackfoot group. The Blackfoot were unremittingly hostile toward neighboring tribes and usually toward white men, intrusions upon Blackfoot lands were efficiently repelled. Prior to the mid-18th cent they had moved into the N Great Plains area, acquired horses from southern tribes, and developed a nomadic Plains culture, largely dependent on the buffalo. Their only cultivated crop was tobacco, grown for ceremonial purposes. With the early coming of the white man, the Blackfoot gained wealth from the sale of beaver pelts, but the killing off of the buffalo and the near exhaustion of fur stocks brought them to near starvation. Presently there are some 6,200 Blackfeet on a reservation in Montana and another 2,600 on a reservation in Alberta. They continue to a small degree the rich ceremonialism that earlier marked their religion, important rituals include the sun dance and the vision quest. See J. C. Ewers, *The Blackfeet: Raiders on the Northwestern Plains* (1958, repr. 1967), H. A. Dempsey, *Crowfoot, Chief of the Blackfeet* (1972), Malcolm McFee, *Modern Blackfeet* (1972).

Black Forest, Ger. *Schwarzwald*, mountain range, SW West Germany, extending 90 mi (145 km) between the Rhine and Neckar rivers. Feldberg is the highest (4,898 ft/1,493 m) peak. The range is covered by dark pine forests and cut by deep valleys and small lakes. The Danube and Neckar rivers rise there. Lumbering is an important economic activity. Orchards and cattle are found in the valleys, grains are grown in the highlands. The Black Forest is famous for its clock and toy industries (cuckoo clocks, music boxes). It is a year-round resort area, Baden-Baden and Freiburg are the chief cities.

Black Friday, Sept. 24, 1869, in U.S. history, day of financial panic. In 1869 a small group of American financial speculators, including Jay Gould and James Fisk, sought the support of Federal officials of the Grant administration in a drive to corner the gold market. The attempt failed when government gold was released for sale. The drive culminated on a Friday, when thousands were ruined—the day is popularly called Black Friday. There was great indignation against the perpetrators. Several other days of financial panic have also been occasionally referred to as Black Friday.

black gum, ornamental deciduous tree (*Nyssa sylvatica*) native to E North America. The leaves turn bright scarlet in the fall. The very tough wood has been used for wheel hubs and other purposes. It is sometimes called sour gum, tupelo, and pepperidge, names also given other species of the genus, some native to Asia. The genus *Nyssa* is probably derived from an ancestral dogwood and is included by some botanists in the family Cornaceae (dogwood family) of the division MAGNOLIOPHYTES, class Magnoliopsida, order Cornales.

Black Hand, symbol and name for a criminal and terroristic secret society, and especially associated with the MAFIA and the CAMORRA. The Black Hand flourished in Sicily in the late 19th cent., and in the United States it was especially active in New York City at the beginning of the 20th cent. It is estimated that at one time 90% of New York City's Italian population was blackmailed by letters threatening death and marked with a black hand. Famous incidents associated with the Black Hand include the murder (1890) in New Orleans of chief of police Daniel Hennessy and the shooting (1909), in Palermo, Italy, of Lt. Joseph Petrosino of the New York City police.

black hawk. see HONEYSUCKLE

Black Hawk War, conflict between the Sac and Fox Indians and the United States in 1832. After the War of 1812, whites settling the Illinois country exerted pressure on the Indians. A treaty of 1804, which had no real claim to validity, provided for removal of the Sac and Fox Indians W of the Mississippi. An Indian leader, Black Hawk (1767-1838), who was born in the Sac village near the site of present Rock Island, Ill., and who had fought for the British in the War of 1812, denounced the treaty and resisted removal. Years of intermittent skirmishing followed. In 1831 the whites used force to impose a new treaty that compelled the Indians to retire from their lands. In April, 1832, Black Hawk, with some 400 braves and their families, returned to Illinois. Not receiving the support he expected, he admitted defeat, but when one of the peaceful emissaries he sent was shot down in cold blood, the outraged Black Hawk suc-

cessfully attacked a larger white force, then retired into what is now Wisconsin. A large force of volunteers was gathered under Gen. Henry Atkinson. The last battle of the war took place on the Bad Axe River, where Black Hawk was attacked by these troops and a Sioux war party. Trapped, he displayed a white flag, but this was ignored and almost all of his band, including women and children, were wiped out. Black Hawk himself escaped, surrendered to the Winnebago, was turned over for imprisonment, and was released in 1833 to return to the pitiful remnant of his tribe and his family in Iowa. Lorado Taft's colossal statue (1911) near Oregon, Ill., has come to be known as the Black Hawk Monument. See his autobiography (1833, ed. by Donald Jackson, 1955), Cyrenus Cole, *I Am a Man: The Indian Black Hawk* (1938).

blackhead, yellowish or blackish plug of material accumulated in the duct of a sebaceous gland. The material consists of keratin (horny cells of the epidermis) and modified sebum (oil secretions of the sebaceous gland). Blackheads are the primary lesions in ACNE. Treatment is the same as for acne, with frequent cleansing of the skin followed by the application of astringent solutions. Plugs should be extracted only by a physician, since damage to the surrounding tissues occasioned by squeezing often leads to scarring.

Blackheath, common, 267 acres (108 hectares) in Lewisham and Greenwich boroughs, London, England. It was the gathering place of highwaymen and of several martial groups, including the followers of Wat Tyler in 1381 and of Jack Cade in 1450, who made Blackheath the headquarters for their attacks on London.

Black Hills, rugged mountains, c. 6,000 sq mi (15,540 sq km), enclosed by the Belle Fourche and Cheyenne rivers, SW 5 Dak. and NE Wyo., and rising c. 2,500 ft (760 m) above the surrounding Great Plains. Harney Peak, 7,242 ft (2,207 m) above sea level, is the highest point in the Black Hills and in South Dakota. The mountains received their name from the heavily forested slopes that appear black from afar. Indians, settlers, and railroad companies depended on wood from the Black Hills for fuel and building material. Gold was discovered in the hills in 1874 by an expedition led by Gen. George Custer, and the resulting gold rush drove out the Indians. White settlements grew rapidly after 1876, chiefly in such mining towns in South Dakota as Custer, Deadwood, Lead, Spearfish, and Rapid City, the largest city in the Black Hills. Gold is still mined in the area; Homestake Mine is the largest gold mine in the United States. Other important minerals found in the hills are uranium, feldspar, mica, and silver. The Black Hills are a major recreational area of the northern plains. Most of the slopes are in two national forests: Wind Cave National Park, Jewel Cave National Monument, Mt. Rushmore National Memorial, and Custer State Park are tourist spots.

black hole, in astronomy see GRAVITATIONAL COLLAPSE

Black Hole of Calcutta: see CALCUTTA

black humor, in literature, drama, and film, grotesque or morbid humor used to express the absurdity, insensitivity, paradox, and cruelty of the modern world. Ordinary characters or situations are usually exaggerated far beyond the limits of normal satire or irony. For example, Stanley Kubrick's film *Dr. Strangelove, or, How I Learned to Stop Worrying and Love the Bomb* (1963) is a terrifying comic treatment of the circumstances surrounding an accidental dropping of an atom bomb, while Jules Feiffer's comedy *Little Murders* (1965) is a delineation of the horrors of modern urban life, focusing particularly on random assassinations. The novels of such writers as Kurt Vonnegut, Thomas Pynchon, John Barth, Joseph Heller, and Philip Roth contain elements of black humor.

Black Isle, peninsula, 18 mi (29 km) long and up to 9 mi (14.5 km) wide, Ross and Cromarty co., N Scotland, extending into Moray Firth. It has the best farmland in the county, producing grain and potatoes. Cattle are raised there.

blackjack, one of the world's principal gambling card games, also known as twenty-one or vingt-et-un. Each player receives one card face down and bets that this card plus one or more cards dealt face up will beat the dealer's hand without exceeding 21. An ace counts 1 or 11, a face card 10, and all other cards according to their face value. A score of 21 on the first two cards is the perfect hand, called blackjack.

Black Kettle, d. 1868, chief of the southern CHEYENNE INDIANS in Colorado. His attempt to make peace

(1864) with the white men ended in the massacre of about half his people at SAND CREEK. Despite this treachery on the part of the whites, he continued to seek peace with them, and in 1865 he signed the Treaty of the Little Arkansas. The government ignored its guarantees, and Black Kettle tried again to negotiate, signing the Medicine Lodge Treaty of 1867. The Cheyenne might have retired to the reservation provided for them, had it not been for Gen. George Armstrong Custer. On Nov. 27, 1868, Custer and his 7th Cavalry attacked Black Kettle's camp on the Washita River without warning and killed the chief and hundreds of the Indians.

black lead: see GRAPHITE

blackleg or black quarter, acute infectious disease of cattle, less often of sheep, caused by an organism of the genus *Clostridium*. It is characterized by inflammation of muscles with swelling and pain in the affected areas. Toxins formed by the organism produce severe muscle damage, and mortality is high. Animals between the ages of six months and two years are most commonly affected. Treatment with large doses of antibiotics is only partially successful, in endemic areas, young animals can be vaccinated for prevention.

black letter. see TYPE

black light: see ULTRAVIOLET RADIATION

black locust. see LOCUST

black lung. see PNEUMOCONIOSIS

blackmail, in law, exaction of money from another by THREAT of exposure of criminal action or of disreputable conduct. The term was originally used for the tribute levied until the 18th cent. upon the inhabitants of the Scottish border to provide immunity from raids by Scottish bands. Statutes often treat blackmail as a form of EXTORTION.

black market, term for the selling or buying of commodities at prices above the legal ceiling or beyond the amount allotted to a customer in countries that have placed restrictions on sales and prices. Such trading was common during World War II wherever the demand and the means of payment exceeded the available supply. Most of the warring countries attempted to equalize distribution of scarce commodities by rationing and price fixing. In the United States black-market transactions were carried on extensively in meat, sugar, tires, and gasoline. In Great Britain, where clothing and liquor were rationed, these were popular black-market commodities. In the United States, rationing terminated at the end of the war, but a black market in automobiles and building materials continued while the scarcity lasted. In the decades following World War II, as the countries of Eastern Europe were trying to industrialize their economies, extensive black-market operations developed because of a scarcity of consumer goods. During the prohibition era BOOTLEGGING was a black-market operation under a different name. Black marketing is also common in exchange of foreign for domestic currency, typically in those countries that have set the official exchange value of domestic currency too high in terms of the purchasing power of foreign money. Black-market money activities also grow when holders of domestic currency are anxious to convert it into foreign currency through a fear that the former is losing its purchasing power as a result of inflation. See Walter Rundell, *Black Market Money* (1964).

Blackmore, Sir Richard, c. 1650-1729, English poet. He was physician to William III and to Queen Anne. Of Blackmore's copious writings, his best-known work is "The Creation" (1712), a poem meant to prove the existence of God. A mediocre poet, he was praised by Dr. Johnson and satirized by Pope in *The Dunciad*.

Blackmore, Richard Doddridge, 1825-1900, English novelist. Although trained as a lawyer and called to the bar, he abandoned his legal career because of ill health. His reputation rests chiefly on his romantic novel about the 17th-century outlaws of Exmoor, *Lorna Doone* (1869), but he wrote also 13 other novels—including *The Maid of Sker* (1872) and *Springhaven* (1887)—and several volumes of poetry. See biography by W. H. Dunn (1956, repr. 1974), study by K. G. Rudd (1960).

Black Mountains: see APPALACHIAN MOUNTAINS, MITCHELL MOUNT

Blackmun, Harry Andrew, 1908-, Associate Justice of the U.S. Supreme Court (1970-), b. Nashville, Ill. Admitted to the bar in 1932, he practiced law until he became (1959) a Federal circuit court judge. He was appointed to the Supreme Court by President Richard M. Nixon. Widely praised for his scholarly and carefully drafted opinions, Blackmun tended

toward a liberal view in civil rights cases, while remaining essentially conservative in other areas

Blackmur, Richard P., 1904-65, American poet and critic, b. Springfield, Mass. Although he had no formal education after high school, he was a resident fellow (1940-48) and professor (1948-65) at Princeton. His volumes of literary essays include *The Double Agent* (1935), *Lion and the Honeycomb* (1955), and *Primer of Ignorance* (1967). He also wrote such volumes of poetry as *From Jordan's Delight* (1937) and *Second World* (1942).

Black Muslims, black nationalist religious movement in the United States, also called the Nation of Islam. It was founded (1930) in Detroit by Wali Farad (or W. D. Fard), whom his followers believed to be "Allah in person." When Farad disappeared mysteriously in 1934, Elijah MUHAMMAD assumed leadership of the group, first in Detroit and then in Chicago. Under his leadership the black separatist sect expanded, mainly among poor blacks and in prisons. Although the group numbered only about 8,000 when Muhammad took over, it grew rapidly in the 1950s and 60s particularly as a result of the preaching of one of its ministers, MALCOLM X. Tension between Muhammad and Malcolm developed, however, and Malcolm's subsequent suspension (1963) and assassination (1965), possibly by Muhammad's followers, caused great dissension in the movement, although this later abated. The Black Muslims are an extremely moralistic group and pray five times daily, they are forbidden to smoke, drink, gamble, or take narcotics. Shunning contact with whites as much as possible, they maintain a number of their own businesses, farms, stores, and schools. Black Muslims renounce their legal surnames (which they consider slave names) and adopt the letter X instead.

Black Panthers, U.S. black militant party, founded (1966) in Oakland, Calif., by Huey P. Newton and Bobby Seale. Originally espousing violent revolution as the only means of achieving black liberation, the Black Panthers called on all blacks to arm themselves for the liberation struggle. In the late 1960s party members became involved in a series of violent confrontations with the police (resulting in deaths on both sides) and in a series of court cases, some resulting from direct shoot-outs with the police and some from independent charges. Most notable among the trials were those of Huey Newton for killing a policeman in 1967 (three mistrials, the last in 1971), of Bobby Seale, as one of the "Chicago Seven" charged and convicted of conspiracy to violently disrupt the Democratic National Convention of 1968 (conviction later overturned), and as a codefendant in a Connecticut case charging murder of an alleged informer on the party (acquittal, 1971), and of 13 Panthers in New York City accused of conspiring to bomb public places (acquittal, 1971). The results of these trials were taken by many observers as confirmation of their suspicions that the Black Panthers were being subjected to extreme police harassment. Another incident that supported this view was the killing in a raid by Chicago police of Illinois party leader Fred Hampton and another Panther in 1969; review of this incident revealed that the two Panthers had been shot in their beds without any provocation. While controversy raged over the civil liberties issue, the Panthers themselves were riven with internal disputes. A major split took place, with Newton and Seale (who in 1972 announced their intention of abandoning violent methods) on the one side and Eldridge Cleaver (formerly the chief publicist for the party, who continued to preach violent revolution) on the other. Cleaver headed the so-called international headquarters of the party (until 1973) in Algeria.

Blackpool, county borough (1971 pop. 151,311), Lancashire, NW England, on the Irish Sea. One of England's most popular seaside resorts, Blackpool has 7 mi (11.3 km) of beaches and promenades, many sport and amusement facilities, and a tower 520 ft (158 m) high, modeled on the Eiffel Tower in Paris. Blackpool's manufactures include aircraft, biscuits, candy, and joinery. In 1974, Blackpool became part of the new nonmetropolitan county of Lancashire.

Black Prince: see EDWARD THE BLACK PRINCE

black quarter: see BLACKLEG

Black River, 1. River rising in SE Mo. and flowing c. 300 mi (480 km) SE, then SW to the White River near Newport, Ark. It is partly navigable. Clearwater Dam is on the river near Piedmont, Mo. 2. River of N.Y., c. 120 mi (190 km) long, rising in the Adirondack Mts. and flowing mainly N and W to Black River Bay, an inlet of Lake Ontario. Its falls provide power for many factories, especially paper mills.

3. River, c. 160 mi (260 km) long, rising in central Wis. and winding SW to the Mississippi River at La Crosse, Wis. It was important in the lumbering industry and is now used to transport coal and petroleum products. Big Manitou Falls, the highest falls in Wisconsin (165 ft/50 m), are in the river.

Black Sea, inland sea, c. 159,600 sq mi (413,360 sq km), between Europe and Asia, connected with the Mediterranean Sea by the Bosphorus, the Sea of Marmara, and the Dardanelles. It is c. 750 mi (1,210 km) long, from 75 to 350 mi (120-560 km) wide, and has a maximum depth of 7,364 ft (2,245 m). The largest arm of the Black Sea is the Sea of Azov, which joins it through the Kerch Strait. The Black Sea is enclosed by the USSR on the north and east, by Turkey on the south, and by Bulgaria and Rumania on the west. The Black Sea was once part of a large body of water that included the Caspian and Aral seas. In the Tertiary period, it was separated from the Caspian Sea and was linked to the Mediterranean Sea. The Dnepr, Southern Bug, Dniestr, and Danube rivers are its principal feeders; the Don and Kuban rivers flow into the Sea of Azov. The rivers flowing into the northern part of the Black Sea carry much silt and form deltas, sandbars and lagoons along the generally low and sandy northern coast. The southern coast is steep and rocky. The Black Sea has two layers of water of different densities. The heavily saline bottom layer has little movement and contains hydrogen sulfide; it has no marine life. The top layer has low salinity and flows in a counterclockwise direction around the sea. It has many varieties of fish. There is little tidal action. The Black Sea is subject to severe winter storms, and waterspouts are common in summer. The Black Sea is an important navigation route and remains ice-free in winter. It is the chief sea outlet of the USSR, Odessa, Novorossiysk, and Sevastopol are the main Soviet ports. Other important ports are Constanța in Rumania, Varna and Burgas in Bulgaria, and Trabzon, Samsun and Zonguldak in Turkey. The Black Sea region, especially in the S Crimea and W Caucasus, is a popular resort area. The Pontus Euxinus [hospitable sea] of the ancients, the Black Sea has been navigated since prehistoric times. Its shores were colonized by the Greeks (8th-6th cent. B.C.) and later by the Romans (3d-1st cent. B.C.). Its importance increased with the founding of Constantinople (330 A.D.). In the 13th cent. the Genoese established their colonies on the Black Sea, and from the 15th to the 18th cent. it was a Turkish lake. The rise and expansion of Russia and its ambition to gain control of the Bosphorus and the Dardanelles led it into protracted dispute with the Ottoman empire. In 1783, Russia annexed the Tatar Khanate of CRIMEA, which blocked its access to the sea, but suffered a setback as a Black Sea power as a result of the Treaty of Paris, which ended the Crimean War of 1856.

Black Shirts, colloquial term originally used to refer to the members of the *Fasci di combattimento*, units of the Fascist organization founded in Italy in March, 1919 by Benito MUSSOLINI. A black shirt was the most distinctive part of their uniform. The Black Shirts were mainly discontented ex-soldiers. Ultra-nationalist, they posed as champions of law and order and violently attacked Communists, socialists, and other radical and progressive groups. They broke up strikes, destroyed trade union headquarters, and drove socialist and Communist officials from office. In Oct., 1922, their activities culminated in the famous march on Rome, which brought Mussolini to power. Afterward, while the term "Black Shirts" continued to be used to refer to party militants in general, the name *Fasci di combattimento* designated the local party units.

black snake, name for several snakes, not all closely related, that are black in color. In the United States the name is applied chiefly to the black RACER and to the black rat snake (*Elaphe obsoleta*), both partly arboreal in their habits. The black rat snake, also called pilot black snake and mountain black snake, is found in the NE United States. Like other rat snakes, (*Elaphe* species), it is a constrictor and a valuable destroyer of rats and mice. It has shiny, slightly keeled scales and reaches a length of 8 ft (2.4 m). The poisonous Australian black snake belongs to the cobra family and has a hood. The North American black snakes are classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Squamata, family Colubridae.

Blackstone, Sir William, 1723-80, English jurist. At first unsuccessful in legal practice, he turned to scholarship and teaching. He became (1758) the first Vinerian professor of law at Oxford, where he inaugurated courses in English law. British universities

had previously confined themselves to the study of Roman law. Blackstone published his lectures as *Commentaries on the Laws of England* (4 vol., 1765-69), a work that reduced to order and lucidity the formless bulk of English law. It ranks with the achievements of Sir Edward Coke and Sir Matthew Hale, Blackstone's great predecessors. Blackstone's *Commentaries*, written in an urbane, dignified, and clear style, is regarded as the most thorough treatment of the whole of English law ever produced by one man. It demonstrated that English law as a system of justice was comparable to Roman law and the civil law of the Continent. Blackstone has been criticized, notably by Jeremy Bentham, for a complacent belief that, in the main, English law was beyond improvement and for his failure to analyze exactly the social and historical factors underlying legal systems. Blackstone's book exerted tremendous influence on the legal profession and on the teaching of law in England and in the United States. In his later life Blackstone resumed practice, served in Parliament, was solicitor general to the queen, and was a judge of the Court of Common Pleas. See *The Sovereignty of the Law*, selections from Blackstone's *Commentaries*, ed. and with an intro. by Gareth Jones (1973), biography by O. A. Lockmiller (1938), Jeremy Bentham, *A Comment on the Commentaries* (ed. by C. W. Everett, 1928), Paul Lucas, *Essays in the Margin of Blackstone's Commentaries* (1962).

Blackstone, river, c. 50 mi (80 km) long, rising near Worcester, Mass., and flowing SE to Narragansett Bay at Providence, R.I. The river's clean water was a major factor in the early development of the area's textile industry.

black studies: see ETHNIC STUDIES

blackthorn or **sloe**, low, spreading, thorny bush or small tree (*Prunus spinosa*) of the plum genus of the family Rosaceae (ROSE family), having black bark, white flowers, and deep blue fruits, usually rather acid and not much larger than peas. Native to the Mediterranean area, the blackthorn is cultivated for hedges; its limbs are used in Ireland for canes and cudgels, and the juice of the berries is used in making brandy, sloe gin, and preserves and as a diluent of port. One of the hawthorns is sometimes called blackthorn. Blackthorn is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rosales, family Rosaceae.

Black Tom, part of Jersey City, N.J., also called Black Tom Island. In July, 1916, German saboteurs demolished U.S. munitions stores there; in Jan., 1917, they destroyed the Kingsland, N.J., munitions plant. Sued by the U.S. government in 1922 but vindicated in 1930 by an international claims commission, the German government, upon new hearings in 1939, was ultimately ordered to pay \$50 million in damages.

Blacktown, city (1971 pop. 156,619), New South Wales, SE Australia. It is a suburb of Sydney.

Black Warrior, navigable river, 178 mi (286 km) long, rising in N central Ala. and flowing generally SW to the Tombigbee River. The Black Warrior drains a rich coal- and cotton-producing area and is an important outlet for the manufactured products of Birmingham, Ala.

Black Warrior, merchant steamer that plied between New York City and Mobile, usually stopping at Havana, Cuba. Her seizure on Feb. 28, 1854, by Spanish authorities at Havana and the imposition of a \$6,000 fine on the grounds that she had violated customs regulations nearly caused war between the United States and Spain. The South, anxious to secure Cuba, was ready for war, but the North refused to support the idea, and after the *Black Warrior* was released the excitement subsided.

Black Watch or **Royal Highland Regiment**, Scottish infantry regiment. The first companies were raised in 1725 to watch the rebellious Scottish highlands and keep the peace, and the regiment was formed 1739-40. It became known as the Black Watch because of the dark colors of the regimental tartan. It was for a time the 43d, but since 1749 it has been the 42d regiment.

Blackwater, river, c. 100 mi (161 km) long, rising in Co. Kerry, SW Republic of Ireland. It flows east through the dairy region of Co. Cork and Co. Waterford before turning abruptly south and entering the Atlantic Ocean at Youghal Bay. Salmon and trout are caught in the river.

Blackwell, Alice Stone, 1857-1950, American feminist, b. East Orange, N.J., grad. Boston Univ., 1881, daughter of Henry Brown Blackwell and Lucy Stone. She was an editor (1881-1917) of the *Woman's Jour-*

nal, first as assistant to her parents and after their death as editor in chief. Among her works are a biography of her mother (1930) and anthologies of poetry translated from several languages.

Blackwell, Antoinette Louisa (Brown), 1825-1921, American Unitarian minister, b. Henrietta, N.Y., grad. Oberlin College, 1847, and Oberlin Theological Seminary, 1850. One of the first women to receive a college education in the United States, she was ordained a Congregational minister in 1853, thus becoming the first ordained woman minister in the country. She later became a Unitarian. She was an active feminist, an abolitionist, and a temperance advocate. She was the sister-in-law of Henry B. Blackwell and Elizabeth Blackwell. Her books include *The Sexes throughout Nature* (1875) and *The Making of the Universe* (1914).

Blackwell, Elizabeth, 1821-1910, American physician, b. England, sister of Henry Brown Blackwell. She was the first woman in the United States to receive a medical degree, which was granted (1849) to her by Geneva Medical College (then part of Geneva College, early name of Hobart). With her sister, Emily Blackwell (1826-1910) who was also a doctor, and Marie Zakrzewska, she founded (1857) the New York Infirmary for Women and Children, which was expanded in 1868 to include a Women's College for the training of doctors, the first of its kind. In 1869, Dr. Blackwell settled in England, where she became (1875) professor of gynecology at the London School of Medicine for Women, which she had helped to establish. She wrote *Pioneer Work in Opening the Medical Profession to Women* (1895) and many other books and papers on health and education. See biographies by Ann McFerran (1966) and D. C. Wilson (1970).

Blackwell, Henry Brown, 1825-1909, American reformer, b. Bristol, England, brother of Elizabeth Blackwell. He was an abolitionist and later, with his wife, Lucy Stone, a worker for woman suffrage.

black whale, name for the black RIGHT WHALE and for the SPERM WHALE.

black widow, poisonous spider of the genus *Latrodectus*, found throughout North and South America and common in the SW United States. The name derives from the fact that the female, like those of many other spider species, may eat the male after mating. The adult is black with a red or reddish-orange hourglass-shaped marking on the lower abdominal surface. The female is somewhat less than 1/2 in. (1.3 cm) long, and the male is much smaller. The bite venom is a neurotoxin and may cause a severe reaction with intense local pain that spreads to other parts of the body. Occasional fatal cases, which result from respiratory paralysis, are usually limited to children. The most effective treatment is an antivenom. Black widow spiders are classified in the phylum ARTHROPODA, class Arachnida, order Araneae, family Therididae.

blackwood, name for several trees, especially an ACACIA.

bladder, urinary, muscular sac located in the pelvis that stores URINE and contracts to expel it from the body. Urine enters the bladder from the kidneys through the URETERS and is discharged from the body via the URETHRA. The bladder of the adult human can hold over a pint (0.6 liters) of urine. When the level of urine reaches about half this amount, pressure of the accumulating fluid stimulates nervous impulses that relax the external sphincter, a muscle that forms a dense band around the urethra at the base of the bladder. This muscle can be controlled voluntarily in most mammals. The muscles in the wall of the bladder also contract, forcing urine out through the urethra. The bladder is subject to infection (commonly called CYSTITIS) and the formation of stones. Its normal function may also be affected by nervous disorders or by external pressure, as from prostatic enlargement or pregnancy. See URINARY SYSTEM.

bladderwort, any plant of the genus *Utricularia*, insectivorous or carnivorous aquatic plants, many native to North America. Small animals are caught and digested in bladderlike organs of the finely divided submerged leaves. Bladderworts and similar related genera are an important element of aquatic and marsh flora on all continents. They are sometimes grown in aquariums as curiosities. Bladderworts are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Scrophulariales, family Lentibulariaceae.

Bladensburg (blā'dənzbürg), town (1970 pop. 7,488), Prince Georges co., S central Md., a residential suburb of Washington, D.C., chartered 1742, inc.

1854. The defeat (Aug. 24, 1814) at Bladensburg of American troops under Gen. W. H. Winder permitted the British under Gen. Robert Ross to march on Washington, D.C., and burn many of the public buildings. The town was also the scene of a historic duel in which Stephen Decatur was mortally wounded (1820) by James Barron.

Blaeu, Willem Janszoon (vī'ləm yān'sōn blou), 1571-1638, Dutch cartographer and printer. He studied astronomy and instrument making under the Danish astronomer Tycho Brahe. The printing establishment he founded in Amsterdam was famed for its fine instruments, marine publications, globes and atlases, especially the great folio atlas compiled by Blaeu himself. He designed new presses incorporating important innovations and his shop had some claim to being the best of its time. The sons and grandsons of Blaeu continued his work.

Blagoveshchensk (blāgəv'yēsh'chīnsk), city (1970 pop. 128,000), capital of Amur oblast, Far Eastern USSR, at the confluence of the Amur and Zeya rivers. A river port and railroad hub, Blagoveshchensk is also an agricultural center and a supply point for the Zeya gold-mining basin. Shipbuilding is carried on in the town. Russian pioneers settled Blagoveshchensk in 1644, but the area was returned to China in 1689. The city became a Russian army post in 1856.

Blagoyevgrad (blāgō'yēvgrat), city (1968 est. pop. 35,000), SW Bulgaria, is a farming region known especially for its tobacco. The city has one of the largest tobacco-fermentation factories in the Balkans. In Thracian times a settlement was established around the warm mineral springs that still attract visitors to Blagoyevgrad. The city is named for Dimitar Blagoev, founder of the Bulgarian Communist party.

Blaine, James Gillespie, 1830-93, American politician, b. West Brownsville, Pa. He taught school and studied law before moving (1854) to Maine, where he became an influential newspaper editor. A leader in the formation of the Republican party in Maine, Blaine was state chairman (1859-61) and was elected to three terms in the legislature. In 1863 he entered Congress, serving in the House of Representatives until 1876 and holding the speakership from 1869 to 1875. His friendship with James A. Garfield of Ohio and William B. Allison of Iowa brought him support in the West, but a slighting personal remark he made in 1866 about Roscoe Conkling won him the lifelong enmity of that leader of the "Stalwart" Republicans. Blaine, leader of the "Half-Breed" Republicans, who were against the corrupt patronage practices of the "Stalwarts," was widely considered the logical Republican choice for President in 1876. Shortly before the party convention, however, a Democratic House investigating committee charged him with using his influence as speaker to secure a land grant for a railroad in Arkansas and with selling the railroad's bonds at a liberal commission. Blaine privately secured possession of the famous "Mulligan letters," which had been named as proof, before they could be placed on record, and he never surrendered them. He read portions of them, out of chronological order, before the House in an attempt to defend himself, but the episode was an important factor in his defeat for the presidential nomination at the 1876 Republican convention. Blaine, as U.S. Senator (1876-81), loyally supported President Rutherford B. Hayes. In 1880, Blaine was again a candidate for the presidential nomination, but the Conkling faction successfully prevented his nomination. The deadlock was broken by the choice of Blaine's friend, Garfield, with Chester A. Arthur, a Conkling man, nominated for Vice President. Blaine became Garfield's Secretary of State, but upon the President's assassination resigned. Retiring to private life, he wrote *Twenty Years of Congress* (2 vol., 1884-86). He was finally nominated for President in 1884 and ran against the Democratic candidate Grover Cleveland. Allusions to the "Mulligan letters" and to Cleveland's admitted paternity of an illegitimate child enlivened the bitter campaign. However, reform Republicans (MUGWUMPS) such as Carl Schurz preferred Cleveland's untainted public record to Blaine's private virtue. Their defection was made the more important when a tactless New York Presbyterian clergyman, the Rev. Samuel D. Burchard, spoke, in Blaine's presence, of the Democrats as "the party whose antecedents are rum, Romanism, and rebellion." Blaine's failure to disavow the remark offended the large Irish Catholic vote in New York, he lost that state by a scant thousand votes and thereby lost the election. In 1888, Blaine unexpectedly declined to run for President, supporting Benjamin Harrison, who, upon becoming President, made him

Secretary of State again. Three days before the Republican convention of 1892, Blaine resigned to seek the nomination for President, but Harrison was renominated. Thereafter Blaine's health failed rapidly, and he died the next year. As Secretary of State, Blaine was particularly energetic in fostering closer relations with the Latin American nations. During his second term in office he was able to bring about and preside over the first Pan-American Congress (see PAN-AMERICANISM), thus laying the foundation for subsequent meetings, and the Pan American Union was established. Blaine hoped to increase commercial relations among American nations by reciprocal tariff treaties, and although the McKinley Tariff Act prevented this, his idea of tariff "reciprocity" gained some credence. He also concluded a treaty with Great Britain to submit the fur-seal controversy to arbitration (see under BERING SEA). See biographies by Edward Stanwood (1908) and D. S. Muzzey (1934, repr. 1963), A. F. Tyler, *The Foreign Policy of James G. Blaine* (1927, repr. 1965).

Blaine, city (1970 pop. 20,640), Anoka co., SE Minn., a suburb N of Minneapolis, settled 1862, inc. 1964. Construction is the major industry. The area was organized as a township in 1877 and was named in honor of James G. Blaine, then Senator from Maine.

Blair, Francis Preston, 1791-1876, American journalist and politician, b. Abingdon, Va. Through the *Frankfort, Ky.*, journal *Argus of Western America*, which he edited with Amos KENDALL, Blair was an ardent supporter of Andrew Jackson. At William T. Barry's suggestion, he traveled to Washington and established the *Washington (D.C.) Globe* in Dec. 1830, which exerted great political influence as the Jacksonian "court journal" until 1841. Along with Kendall, Blair also was one of the leading members of the KITCHEN CABINET. In Washington he also founded the *Congressional Globe* (now the *Congressional Record*), in which the daily proceedings of Congress were recorded. When James K. Polk became President, Blair, a Van Buren Democrat, was forced to sell his interest in the *Washington Globe* to Thomas Ritchie. Later, because of his antislavery views, Blair was one of the founders of the Republican party, and he presided over its first national convention in 1856. In 1865 he engineered the futile HAMPTON ROADS PEACE CONFERENCE. An influential adviser to President Lincoln during the early years of the Civil War, he eventually returned to the Democratic party because he was opposed to radical Republicanism. See W. E. Smith, *The Francis Preston Blair Family in Politics* (1933), A. M. Schlesinger, Jr., *The Age of Jackson* (1945), B. J. Hendrick, *Lincoln's War Cabinet* (1946).

Blair, Francis Preston, 1821-75, American political leader and Union general in the Civil War, b. Lexington, Ky., son of Francis Preston Blair (1791-1876). A St. Louis lawyer, Blair led the Free-Soil party in Missouri in 1848, served as state legislator (1852-56), and as Congressman (1857-59, June, 1860, 1861-62). In Congress he attacked slavery as harmful to the interests of poor whites and became an energetic Lincoln supporter in 1860. Instrumental in keeping Missouri loyal to the Union by seizing, with Nathaniel Lyon, secessionist Camp Jackson and the U.S. arsenal early in 1861, he was appointed major general of volunteers (Nov., 1862) and served in the Vicksburg, Chattanooga, and Atlanta campaigns. After the Civil War, Blair was denied political preferment by the radical Republicans and in 1868 ran for Vice President on the unsuccessful Democratic ticket with Horatio Seymour. He helped overthrow the radicals in Missouri in 1870 and was elected to the state legislature, which, in turn, sent him to the U.S. Senate (1871-73). See W. E. Smith, *The Francis Preston Blair Family in Politics* (1933), B. J. Hendrick, *Lincoln's War Cabinet* (1946).

Blair, James, 1656-1743, Church of England clergyman, missionary to colonial Virginia, and founder of the College of William and Mary, b. Scotland. At the request of the bishop of London, Blair traveled to Virginia in 1685 to revive and reform the church in the colony. He returned to England (1691) to petition for a college, which when chartered in 1693 was named William and Mary after the monarchs. Blair was made president for life. In 1694 he was appointed by the king to the Virginia council, of which he was a lifelong member (except for a brief period) and in 1740-41 president. With Henry Hartwell and Edward Chilton, Blair wrote *The Present State of Virginia and the College* (1727, ed. by H. D. Farish, 1940). See biography by Parke Rouse (1971).

Blair, Montgomery, 1813-83, U.S. Postmaster General (1861-64), b. Franklin co., Ky., son of Francis P. Blair (1791-1876). He resigned from the army in 1836 after serving against the Seminole Indians and set

tled in St. Louis as the legal and political protege of Senator Thomas H. BENTON. A successful lawyer and mayor of St. Louis (1842-43), he moved to Washington, D.C., where he was the first U.S. solicitor in the Court of Claims and made many appearances before the U.S. Supreme Court, including one as counsel for Scott in the famous DRED SCOTT CASE. His antislavery views brought him to the Republican party, and he became Postmaster General in the Lincoln cabinet. To appease the radicals in the cabinet, the President forced his resignation before the election of 1864. Opposed to radical Republicanism, he returned to the Democratic party and was one of Samuel J. Tilden's counsel in the disputed election of 1876. See W. E. Smith, *The Francis Preston Blair Family in Politics* (1933), B. J. Hendrick, *Lincoln's War Cabinet* (1946).

Blair, Robert, 1699-1746, English poet and clergyman. His literary reputation rests solely on his didactic, blank-verse poem on death, *The Grave* (1743).

Blair Atholl (äth'äl), parish, Perthshire, central Scotland, at the confluence of the Garry and the Tilt rivers. Blair Castle, begun c. 1269, is the seat of the duke of Atholl and his Atholl Highlanders, Great Britain's only private army. The castle was an important fortress in Scotland's civil wars. In 1975, Blair Atholl became part of the Tayside region.

Blake, Edward, 1833-1912, Canadian Liberal party leader, b. Upper Canada (Ontario). A prominent constitutional lawyer, he was elected to the House of Commons in 1867. In 1871 he became prime minister of Ontario, and he later served as minister of justice (1875-77) in Alexander Mackenzie's government and as leader of the Liberal party (1880-87). After withdrawing from Canadian politics (1890), he sat in the British House of Commons (1892-1907) as an Irish nationalist. See biography by M. A. Banks (1957).

Blake, Nicholas: see DAY LEWIS, CECIL.

Blake, Robert, 1599-1657, English admiral. A merchant, he sat in the Short Parliament (1640) and joined the parliamentary side in the civil war. He defended Bristol, Lyme, and Taunton against royalist attacks (1643-45). Appointed a "general at sea" (1649), he embarked on a brilliant naval career in his middle age. In 1650 he pursued the royalist fleet under Prince Rupert to Portugal, where he intercepted a large Portuguese treasure fleet at the mouth of the Tagus River. He caught up with Rupert in the Mediterranean and virtually destroyed his fleet. In 1651 he captured the Scilly Islands from royalist privateers and helped to reduce Jersey. In the first of the DUTCH WARS he won several major victories against the Dutch and suffered one serious defeat. In 1655 he attacked and destroyed a Barbary pirate fleet at Porto Farino. In the winter of 1656-57 he blockaded the Spanish coast and sank the Spanish fleet at Santa Cruz. Made a member of the council of state in 1651, he helped to develop the effective Commonwealth navy. See Maurice Ashley, *Cromwell's Generals* (1954).

Blake, William, 1757-1827, English poet and artist, b. London. Although he exerted a great influence on English ROMANTICISM, Blake defies characterization by school, movement, or even period. At the same time, no poet has been more sensitive or responsive to the realities of the human condition and of his time. His father, a prosperous hosier, encouraged young Blake's artistic tastes and sent him to drawing school. At 14 he was apprenticed to James Basire, an engraver, with whom he stayed until 1778. After attending the Royal Academy, where he rebelled against the school's stifling atmosphere, he set up as an engraver. In 1782 he married Catherine Boucher, whom he taught to read and write and draw. She became his inseparable companion, assisting him in nearly all his work. Blake's life, except for three years at Felpham where he prepared illustrations for an edition of Cowper, was spent in London. *Poetical Sketches* (1783), his first book, was the only one published conventionally during his lifetime. He engraved and published all his other major poetry himself (the rest remained in manuscript), for which he originated a method of engraving text and illustration on the same plate. But like his artwork, his poetry enjoyed neither commercial nor critical success until long after his death. In *Songs of Innocence* (1789) and *Songs of Experience* (1794) the world is seen from a child's point of view, directly and simply but without sentimentality. In the first group, which includes such poems as "The Lamb," "Infant Joy," and "Laughing Songs," both the beauty and the pain of life are captured. The latter group, which includes "The Tyger," "Infant Sorrow," "The Sick Rose," and "London," reveal a consciousness of cruelty and injustice in the world, for which people,

not fate, are responsible. As parables of adult life, the Songs are rich in meaning and implication. Blake's Prophetic Books combine, in poetry, vision, prophecy, and exhortation. They include *The Book of Thel* (1789), *The Marriage of Heaven and Hell* (c. 1790), *The French Revolution* (1791), *America* (1793), *Europe* (1794), *The Book of Urizen* (1794), *The Book of Los* (1795), *Milton* (1804-8), and *Jerusalem* (1804-20). These comprise no less than a vision of the whole of human life, in which energy and imagination struggle with the forces of oppression both physical and mental. Blake exalted love and pure liberty, and abhorred the reductive, rationalist philosophy that served to justify the political and economic inequities attendant upon the Industrial Revolution. The Prophetic Books are founded in the real world, as are Blake's passions and anger, but they appear abstruse because they are ordered by a mythology devised by the poet, which draw from Swedenborg, Jacob Boehme, and other mystical sources. Despite this, and despite the fact that from childhood on Blake was a mystic who thought it quite natural to see and converse with angels and Old Testament prophets, he by no means forsook concrete reality for a mystical life of the spirit. On the contrary, reality, whose center was human life, was for Blake inseparable from imagination. The spiritual, indeed God himself, was an expression of the human. Blake's paintings and engravings, notably his illustrations of his own works, works by Milton, and of the Book of Job, are painstakingly realistic in their representation of human anatomy and other natural forms. But they are also radiantly imaginative, often depicting fanciful creatures in exacting detail. Nearly unknown during his life, Blake was generally dismissed as an eccentric or worse long thereafter. His following has gradually increased, and today he is widely appreciated. See his complete writings, ed. by Geoffrey Keynes (rev. ed. 1966), his letters, ed. by Geoffrey Keynes (2d ed. 1968), his notebook, ed. by D. V. Erdman (1973), biography by Mona Wilson, ed. by Geoffrey Keynes (3d ed. 1971), studies by K. J. Raine (2 vol., 1968), D. V. Erdman (2d ed. 1969), Geoffrey Keynes (2d ed. 1971), D. G. Gillham (1973), David Wagenknecht (1973), and A. K. Mellor (1974), Anthony Blunt, *The Art of William Blake* (1959), D. V. Erdman and J. E. Grant, ed., *Blake's Visionary Forms Dramatic* (1970).

Blakelock, Ralph Albert, 1847-1919, American landscape painter, b. New York City, son of a doctor. Educated for a medical career, he abandoned it for painting, in which he was largely self-taught. His life was one of hardship. At first his work was flatly rejected, later, those who purchased his paintings took gross advantage of him. Unable to support his family of ten, he went mad. Committed to an asylum in 1899, he was released in 1916, and did not paint again. By this time his paintings had been accorded recognition and brought great prices to dealers, but nothing to him. Blakelock's landscapes are painted in great detail with strong lights and silhouetted dark masses, expressing a melancholy and romantic temperament. The subjects, including landscapes with small Indian figures, are often drawn from his early journey to the West (1896). He is particularly noted for his moonlight effects. Among his well-known works are *Brook by Moonlight* (Toledo Mus. of Art), *Indian Encampment* and *Pipe Dance* (Metropolitan Mus.), and *Sunset and Moonrise* (National Gall. of Art, Washington, D.C.). Blakelock's work was among the most often forged of any American painter. See study by Lloyd Goodrich (1947).

Blakeslee, Albert Francis, 1874-1954, American botanist, b. Geneseo, New York. He received his Ph.D. at Harvard (1904) and was a member of the faculty until 1907. After several years as professor at Connecticut Agricultural College (now the Univ. of Connecticut), he joined the staff of the Carnegie Institution of Washington at Cold Spring Harbor, N.Y., and later served as its director (1936-41). In 1943 he became director of the Smith College Genetics Experiment Station. From his earliest research, the discovery of sexual reproduction in bread molds, his contributions to botany and genetics were of far-reaching significance. His study of the inheritance and geographical distribution of the jimson weed, *Datura*, has provided important information concerning chromosome behavior, genic balance, and species evolution. He introduced the use of the alkaloid colchicine to increase the number of chromosomes in the plant cell.

Blanc, Louis (lwè blaN), 1811-82, French socialist politician and journalist, b. Spain. In his noted *Organisation du travail* (1840, tr. *Organization of*

Work, 1911), he outlined his ideal of a new social order based on the principle "From each according to his abilities, to each according to his needs." He advocated, as a first stage in the achievement of this goal, a system of social workshops (*ateliers sociaux*) controlled by workmen with the support of the state. His attacks on the Louis Philippe government in *Histoire de dix ans* (5 vol., 1841-44, tr. *The History of Ten Years, 1830-1840, 1844-45*) stirred up agitation among the workers. As a member of the provisional government of 1848 he insisted on the establishment of the social workshops, but the plan was sabotaged under the leadership of Alexandre Thomas MARIE. Implicated in the subsequent insurrection of the workers, Blanc fled to England, where he remained until 1871. While in exile, he produced the 12-volume *Histoire de la Revolution française* (1847-64). After his return to France, he became (1871) a member of the national assembly and was later a leader of the left in the chamber of deputies. Blanc's ideas, representing a link between utopian and Marxist socialism, had great influence on the thought of later men, especially Ferdinand Lassalle and the German socialists. See biographies by Eduard Renard (1921) and L. A. Loubere (1961), D. C. McKay, *The National Workshops* (1933), Carl Landaur, *European Socialism* (1959).

Blanc, Mont. see MONT BLANC.

Blanchard, Jean Pierre (zhāN pyēr blaNshār'), or **François Blanchard** (frāNswā'), 1753-1809, French balloonist. In 1785 he made with Dr. John Jeffries of Boston, Mass., the first crossing by air of the English Channel. His ascents at Philadelphia (1793) and New York City (1796) are thought to be the first in America.

Blanche of Castile (kăstēl'), 1185?-1252, queen of Louis VIII of France and regent during the minority (1226-34) of their son LOUIS IX. A forceful and capable ruler, she checked the coalitions of the great lords and frustrated the attempt (1230) of HENRY III of England to regain his father's lands in France. She remained a lifelong adviser to Louis IX, was again regent on his departure (1248) for the Holy Land, and was coregent with her son Alphonse from 1250 until her death.

Blanchot, Maurice (mōrēs' blaNshō'), 1907-, French novelist and literary critic. In his critical works, notably *L'Espace littéraire* (1955), Blanchot propounds the theory that literary compositions are organic entities separate from the external world. Such novels as *Thomas l'obscur* (1941, tr. 1973) and *Le Tres-Haut* (1948) exemplify his theoretical ideas in their complex language and imaginary settings. Blanchot's later fiction has dispensed with plot, character, and other elements of representation.

Blanco, Antonio Guzmán: see GUZMÁN BLANCO.

Blanco Fombona, Rufino (rōfē'nō blāN'kō fōmbō'na), 1874-1944, Venezuelan poet, essayist, and novelist, one of the leaders of MODERNISMO. Active in Venezuelan political affairs, he was several times imprisoned. He lived in exile in France and Spain for a quarter of a century and contributed much toward spreading the knowledge of Spanish American literature abroad. A prolific writer, Blanco Fombona satirized politicians, the clergy, and Yankee imperialism. His poems, such as the collection *Cantos de la prision y del destierro* [songs of prison and exile] (1911), are superior to his novels. The novels include *El hombre de hierro* [the man of iron] (1905) and *El hombre de oro* (1916, tr. *Man of Gold*, 1920). Blanco Fombona was most distinguished in the field of the essay. Well known are "La evolución política y social de Hispanoamérica" (1911) and "El modernismo y los poetas modernistas" (1929).

Bland, Richard Parks, 1835-99, American statesman, b. near Hartford, Ky. He taught in rural schools in Kentucky and Missouri before he went to the gold fields of California in 1855. He was a prospector, miner, lawyer, and local official in mining towns of California, Colorado, and Nevada, and after 10 years he returned to Missouri and small-town law practice. In 1872 he was elected to the House of Representatives, where he served (except for 1895-97) until his death. A champion of Western interests and particularly of the free coinage of silver, he was the author of the original bill that, after major modifications by William B. Allison, became the Bland-Allison Act of 1878. Bland was not satisfied with this or the succeeding compromise, the SHERMAN SILVER PURCHASE ACT of 1890. He was a leader of the Western radicals who took over the Democratic national convention at Chicago in 1896, and was a leading candidate for the presidential nomination on the first three ballots. In the election he worked hard but futilely for the victory of William Jennings

Bryan See W V Byars, *An American Commoner* (1900)

Bland-Allison Act, 1878, passed by the U.S. Congress to provide for freer coinage of silver. The original bill offered by Representative Richard P. Bland incorporated the demands of the Western radicals for free and unlimited coinage of silver. This was passed by the House but was unacceptable to the conservative Senate. Senator William B. Allison then offered an amended version. The act as adopted required the U.S. Treasury to purchase between \$2 million and \$4 million worth of silver bullion each month at market prices; this was to be coined into silver dollars, which were made legal tender for all debts. Attempts of the free-silver forces to replace the act with provision for unlimited coinage were defeated, as were attempts of the gold-standard forces to repeal it altogether. President Hayes and his successors weakened the act's effect by purchasing only the minimum amount of bullion. It remained law until replaced by the **SHERMAN SILVER PURCHASE ACT** of 1890.

Blankenburg (blāŋkən'bōrk), **Blankenburg am Harz** (-am harts), or **Bad Blankenburg** (bāt'-), city (1970 pop. 10,628), Magdeburg district, W. East Germany. It is a spa located at the northern foot of the Harz mts. and also has industries that manufacture woollens and paper. During his residence in Blankenburg (1837-45), the educator Friedrich Froebel founded the first kindergarten.

blanket, sheet, usually of heavy woolen, or partly woolen, cloth, for use as a shawl, bed covering, or horse covering. The blanketmaking of primitive people is one of the finest remaining examples of early domestic artwork. The blankets of Mysore, India, are famous for their fine, soft texture, so delicate that it is said their 18 ft (5.5 m) of length can be rolled inside a hollow bamboo rod. The loom of the American Indian, though simple in construction, can produce blankets so closely woven as to be waterproof. The Navaho, Zuñi, Hopi, and other Southwestern Indians are noted for their distinctive, firmly woven blankets. The Navahos were especially adept in producing beautifully designed blankets that were characterized by geometrical designs woven with yarns colored with vegetable dyes. During the mid-19th cent. the Navahos began to use yarns imported from Europe, because of their brighter colors. The ceremonial Chilcat blanket of the Tlingit Indians of the Northwest, generally woven with a warp of cedar bark and wool and a weft of goats' hair, was curved and fringed at the lower end. In the 20th cent., the electric blanket, with electric wiring between layers of fabric, gained wide popularity.

blanketflower: see GAILLARDIA

blank verse: see PENTAMETER

Blanqui, Jérôme Adolphe (zhārōm' adōlf' blaŋkē'), 1798-1854, French economist. Among his works are *Resume de l'histoire du commerce et de l'industrie* (1826) and *Histoire de l'économie politique en Europe, depuis les anciens jusqu'à nos jours* (tr. 1880, repr. 1968).

Blanqui, Louis Auguste (lwē ōgust'), 1805-81, French revolutionary and radical thinker. While a student in Paris, he joined (1824) a branch of the Carbonari, a revolutionary secret society; thenceforth he was prominent in every revolutionary upheaval in France until his death. More than half his life was spent in prison. In 1847 he set up the Central Republican Society, which was powerful in the February Revolution of 1848. An exile in Brussels (1865-70), Blanqui organized the extremist opposition against Napoleon III, in whose deposition (Sept. 4, 1870) he was instrumental. The crucial role played by Blanqui and his followers in the expulsion (Oct. 1870) of the moderate government of Paris led his opponents to compromise on a government headed by Adolphe Thiers, and shortly before the proclamation of the COMMUNE OF PARIS, Thiers had Blanqui arrested. The commune, whose temporary success was largely Blanqui's work, vainly offered its hostages in exchange for Blanqui. He was released in 1879 and was elected a deputy from Bordeaux, although the government did not allow him to serve. His followers, the Blanquists, were eventually absorbed into the unified socialist party. Advocating direct revolutionary action, Blanqui was among the first to conceive of the professional revolutionary. His social theories, stressing the class struggle and the dictatorship of the proletariat, profoundly influenced Karl Marx. See *Blanqui's Critique Sociale* (1885), R. W. Postgate, *Revolution from 1789-1906* (1920), studies by Neil Stewart (1939) and Alan Spitzer (1957, repr. 1970).

Blantyre (blāntī'ər), city (1971 est. pop. 169,000), S. Malawi, in the Shire Highlands. It is the chief commercial and industrial center of Malawi with cement, food processing, and textile industries. Blantyre was founded in 1876 as a Church of Scotland mission station and was named for the birthplace of David Livingstone. In 1956, Blantyre was combined with Limbe to form one city.

Blarney, village, Co. Cork, SE. Republic of Ireland. He who kisses the Blarney Stone, placed in an almost inaccessible position near the top of the thick stone wall of the 15th-century castle, is supposed to gain marvelous powers of persuasion. The castle was militarily important in the 17th-century wars of Oliver Cromwell and William III. Tweed is manufactured in the village.

Blasco Ibañez, Vicente (vēthān'tā bla'skō ēbā-nyāth) 1867-1928, Spanish novelist and politician, b. Valencia. Outspoken against the monarchy, Blasco Ibañez published a radical republican journal, *El pueblo*, and was imprisoned 30 times for political activism. His novels are primarily realistic in conception. The early ones, set in Valencia, include *Flor de mayo* (1895, tr. *The Mayflower*, 1921), *La barraca* [the cabin] (1898), *Cañas y barro* (1902, tr. *Reeds and Mud*, 1928), and *La catedral* (1903, tr. *The Shadow of the Cathedral*, 1909). He traveled in South America, returning to Spain at the outbreak of World War I. He became a propagandist for the Allies, and his war novel, *Los cuatro jinetes del Apocalipsis* (1916, tr. *The Four Horsemen of the Apocalypse*, 1918), made him world famous. He died a voluntary political exile. See study by A. G. Day and E. C. Knowlton (1972).

Blashfield, Edwin Howland, 1848-1936, American mural painter and mosaic designer, b. New York City, studied with Bonnat in Paris. From the 1890s on he worked chiefly as a muralist, creating large works of a historical or allegorical nature, including *The Evolution of Civilization* (Library of Congress dome), decorations for the Wisconsin, Minnesota, and Iowa state capitols, and a large mosaic for the Church of St. Matthew, Washington, D.C. He also wrote *Mural Painting in America* (1913) and, with his wife, *Italian Cities* (1900, new ed. 1913).

Blasket Islands, group of rock islets, Co. Kerry, SW. Republic of Ireland, a lighthouse is on one of the islets. Most of the inhabitants of the islands were moved to the mainland in 1953. Great Blasket, largest of the islands, was the stronghold of Piaras Ferriter, the last Irish chieftain to surrender to Oliver Cromwell.

blast cleaning: see SANDBLAST

blast furnace, structure used chiefly in smelting, i.e., for the extraction of metals, mainly iron and copper, from their ores. The principle involved is that of the reduction of the ores by the action of carbon monoxide, i.e., the removal of oxygen from the metal oxide in order to obtain the metal. Blast furnaces differ in construction. The one used in the produc-

tion of iron consists of a chimneylike structure (usually 80-100 ft/24-30 m high) made of iron or steel and lined with firebrick. It is narrow at the top, increasing in diameter downward, but narrowing again suddenly almost at the bottom, to form the hearth or crucible. There the fine molten products are caught. The furnace is fed from the top with a charge of definite quantities of ore, coke, and a flux, mostly limestone. Preheated compressed air is introduced at the bottom through pipes (tuyeres) entering just above the hearth. The air passes upward through the charge. The coke is oxidized to carbon dioxide, which changes to carbon monoxide at the high temperature. The carbon monoxide then reduces the ores and, taking on oxygen, reverts to carbon dioxide. This gas, together with unused carbon monoxide, nitrogen, and other constituents of the air originally introduced, is led off through a pipe from the top of the furnace and, being still at a high temperature, is employed to heat the stoves into which fresh air for the process is brought. As the operation proceeds, the mass in the furnace becomes molten and descends into the crucible. The iron sinks to the bottom, impurities, called the slag, being lighter, float on top. The slag is drained through a pipe in the upper portion of the crucible. The iron is tapped from below and run into sand molds to harden. The product is known as pig iron or cast iron (see IRON). Efforts to increase production rates have led to the addition of pure oxygen and steam and the sizing of ore to obtain better gas-solid contact. Flux and ore are sometimes combined into pellets. Pig iron prepared in the blast furnace is converted into steel by the BESSEMER PROCESS. Copper ore treated in a blast furnace yields a copper matte, from which only a part of the impurities are removed. It is usually further refined by electrolytic methods (see COPPER).

blasting, shattering, breaking, or splitting of rock or other material by the discharge of an EXPLOSIVE placed within or in contact with it. It is a necessary part of many engineering operations. An ancient method of breaking rock consisted of heating the rock by fire and then pouring water on it, the sudden contraction resulting in shattering or cleavage. Modern methods of blasting involve four operations: drilling the holes to receive the charge, placing it, stemming the hole (i.e., filling the hole above the charge with earth or clay), and igniting or detonating the charge. The location, size, and number of holes drilled depend upon local conditions and the nature of the work. The holes vary from 1 to 3 in (2.5-7.6 cm) in diameter and from a few inches up to 20 ft (6.1 m) or more in depth. The charge is made up of some explosive, such as dynamite or ammonium nitrate, black powder, the oldest known explosive, is rarely used today. Multiple charges are sometimes set off, either simultaneously or in sequence.

Blast furnace for production of iron

Blastus, Herod's chamberlain, mediator for the Tyrans and Sidonians (Acts 12 20)

Blau, Joseph Leon (blou), 1909–, American Jewish scholar and educator, b Brooklyn, N.Y., grad Columbia (A.B., 1931, M.A., 1933; Ph.D., 1945). He taught at Columbia from 1944, becoming professor of religion in 1962. Like his teacher Salo Wittmayer Baron, he stressed the effect of cross-cultural influences upon the development of Judaism in a number of works, among them *The Story of Jewish Philosophy* (1962), *The Jews of the United States, 1790–1840: A Documentary History* (ed. with S.W. Baron, 3 vol., 1963), and *Modern Varieties of Judaism* (1966). His *Christian Interpretation of the Cabala in the Renaissance* (1944) studied this process at work in the opposite direction. Also a student of John Dewey, Blau published a number of studies in American philosophy, among them *Men and Movements in American Philosophy* (1952).

Blaue Reiter, der (dër blou'ə rī'tər) (Ger., =the blue rider), German expressionist art movement, lasting from 1911 to 1914. It took its name from a painting by Kandinsky, *Le cavalier bleu*. Following the BRÜCKE artists of the previous decade, this second wave of expressionism was led by Kandinsky, Klee, Marc, and Macke, in Munich. They sought to discover spiritual truths that they felt the impressionists had overlooked. Less united stylistically and as a group than the BRÜCKE, their art ranged from the pure abstractions of Kandinsky to the romantic imagery of Marc. In 1911, Kandinsky and Marc prepared a significant collection of articles and illustrations published as the *Blaue Reiter Album*. Common to the artists in the group was a philosophical spirit, an intellectual approach to technique, and great lyrical spontaneity. The group disbanded at the outbreak of World War I. Marc and Macke were killed in battle. See study by H.K. Roethel (tr. 1972).

Blavatsky, Helena Petrovna (blätvăt'skë), 1831–91, Russian theosophist and occultist. She was the daughter of a German named Hahn who had settled in Russia and who was distantly connected with the Russian aristocracy. At the age of 16 she married an elderly man, Nicephore Blavatsky, whom she soon left. She traveled extensively in Asia, the United States, and Europe. An imposing and persuasive woman, she claimed to have spent seven years in Tibet, where she was supposedly initiated into mysteries of the occult. In 1873 she went to New York City, and in collaboration with prominent persons interested in spiritism she founded (1875) the Theosophical Society. The society soon experienced serious schisms, and in 1878 Madame Blavatsky, as she was known, left for India, where she established headquarters at Adyar near Madras. There she devoted herself, with some success, to theosophical organization and propaganda. She demonstrated many supernormal phenomena, which were accepted as miracles by her followers, but published claims of fraud in the 1880s and 90s seriously damaged her reputation. Her major works were *Isis Unveiled* (1877) and *The Secret Doctrine* (1888), which became the textbooks of her disciples. The day of her death (May 8) is celebrated by her followers as White Lotus Day. See bibliography under THEOSOPHY. See her memoirs (comp. by M.K. Neff, 2d ed. 1967), biography by John Symonds (1959, repr. 1960), a harshly critical work is G.M. Williams, *Priestess of the Occult* (1946).

Blaydon, urban district (1971 pop. 32,018), Durham, NE England, on the Tyne River. It manufactures iron and steel goods, bricks, and the by-products of coal from nearby mines. There are also engineering works. In 1974, Blaydon became part of the new metropolitan county of Tyne and Wear.

blazing star or **button snakeroot**, any plant of the genus *Liatris*, showy North American perennials of the family Compositae (COMPOSITE family). The blossoms, rosy purple or white, are in somewhat feathery heads along a usually wandlike stalk. Medicinal use has been made of a few species by both Indians and white men. Some are called gayfeather. Blazing star is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Compositae.

blazonry (blā'zən'rē), science of describing or depicting armorial bearings. The introduction, since the Middle Ages, of artificial rules and fanciful medieval terms has complicated the science, particularly in England. The chief part of blazonry is the description of the escutcheon, or shield, the essential part of the coat of arms. This involves the description of the color of the field on which devices are displayed. Arms are identified by their charges, the most common of these, the ordinaries, include lines

of division, e.g., a cross, a chief (a band occupying the top third of the shield), a fess (a band across the shield in the middle), and a bend (a diagonal band). Other characteristic charges are heraldic animals or flowers, e.g., the lion, the fleur-de-lis, and the trefoil. The arms of younger sons should, in theory, show differences, thus a second son should display a crescent in his field. The bend sinister (a band from the upper right to the lower left of the shield) is not a difference and does not necessarily (as is popularly believed) indicate illegitimacy, which is usually blazoned by a wavy border around the shield. Blazonry also involves the description of the CREST above the shield and of the motto. The tinctures, or colors, used in blazonry are gold (or), white or silver (argent), red (gules), blue (azure), green (vert), purple, and black (sable). In England, blazonry is regulated by the HERALDS' COLLEGE. See also HERALDRY.

bleaching, process of whitening by chemicals or by exposure to sun and air, commonly applied to textiles, paper pulp, wheat flour, petroleum products, oils and fats, straw, hair, feathers, and wood. Chemical methods include oxidation, as by hypochlorites, ozone, and the per-compounds, reduction, as with sulphur dioxide, and adsorption, as by bone charcoal used to decolorize sugar solutions. Textiles have long been whitened by grass bleaching, a method virtually monopolized by the Dutch from the time of the Crusades to the 18th cent. They developed a technique in which goods were alternately soaked in alkaline solutions and grassed, or crofted, a procedure in which they are exposed to air and sunlight, the goods were then treated with sour milk to remove excess alkali. Later they substituted dilute sulfuric acid for the milk. In 1785 the French chemist Claude Berthollet suggested the commercial application of chlorine for bleaching, and in 1799 the Scottish chemist Charles Macintosh invented bleaching powder, or chloride of lime, the first of the modern chemical bleaches. Bleaching processes vary for different fibers. Cotton, naturally a grayish yellow, contains waxy and oily impurities that interfere with the action of dyes. It must be scoured and boiled in huge kettles (kiers) before bleaching. Grass bleaching has been combined with or superseded by chemical methods, which are deleterious unless rigidly controlled. Four degrees, ranging from quarter to full bleach, are recognized in the industry. Full bleach is reputed to weaken the fiber as much as 20 percent. Since chlorine bleaches react with the protein of animal fibers, silk and wool are commonly bleached with hydrogen peroxide. Although sulfurous acid or sulfur dioxide are also used for wool, they do not permanently whiten it. For effective bleaching, wool must first be scoured and silk must be degummed. Common bleaching agents used domestically are Javelle water, which is sodium hypochlorite in water, and other chlorine-based mixtures.

bleaching powder, white or nearly white powder that is usually a mixture of calcium chloride hypochlorite, $\text{CaCl}(\text{OCl})$, calcium hypochlorite, $\text{Ca}(\text{OCl})_2$, and calcium chloride, CaCl_2 . Sometimes called chloride of lime, it can be prepared by reacting calcium hydroxide or slaked lime, $\text{Ca}(\text{OH})_2$, with chlorine gas, Cl_2 . It is used as a strong bleaching agent, as a disinfectant, and in making JAVELLE WATER. Bleaching powder was first produced in 1799 by Charles Tennant in Glasgow, Scotland.

Bled (blēt), town, NW Yugoslavia, in Slovenia. Situated in the Julian Alps and on the small Lake of Bled, it is one of the most popular resorts in Yugoslavia. In the vicinity are a medieval castle, a former royal villa, and a church on an islet.

bleeding heart. see FUMITORY

Bleimor: see CALLOCH JEAN PIERRE

blende: see SPHALERITE

Blenheim (blēn'əm), Ger. *Blindheim*, village, Bavaria, S West Germany, on the Danube River. Between Blenheim and nearby Hochstadt, John Churchill, 1st duke of Marlborough, and Prince Eugene of Savoy defeated (Aug. 13, 1704) the French and Bavarians under marshals C. Tallard and F. Marsin in one of the most important battles of the War of the Spanish Succession. In gratitude for this and other military successes by the duke of Marlborough the English Parliament had an immense mansion, Blenheim palace, constructed near Woodstock, Oxfordshire, central England.

Blenheim, battle of, major engagement of the War of the Spanish Succession (see SPANISH SUCCESSION, WAR OF THE), fought on Aug. 13, 1704, at the village of Blenheim, near Hochstadt, Bavaria. Responding to appeals from Vienna, which was threatened by French and Bavarian forces, the English commander,

John Churchill, duke of Marlborough, marched his army from the Netherlands to Bavaria and joined forces with the Austrian general, Prince Eugene of Savoy. At Blenheim their combined army overwhelmed a Franco-Bavarian force under Marshall Tallard and the elector of Bavaria. For the first time in two generations the French suffered a crushing defeat, and the results were immediate and far-reaching. Bavaria was conquered and Vienna saved. The territorial ambitions of Louis XIV beyond the Rhine were checked, and France was placed on the defensive.

Blenheim Park, estate, Oxfordshire, central England, near Woodstock. The stately palace was designed by Sir John VANBRUGH and stands on spacious grounds. Seat of the dukes of Marlborough, the palace was the gift of Queen Anne to the first duke in honor of his victories in the War of the Spanish Succession. Its construction lasted from 1705 to 1724.

Blennerhassett, Harman, 1765–1831, Anglo-Irish pioneer in America, an associate of Aaron Burr. Wealthy and gifted, he fell in love with and married his beautiful niece, Margaret Agnew. The couple was ostracized, and in 1796 Blennerhassett sold his estates and emigrated to the United States, where he bought (1798) part of what came to be called Blennerhassett Island. There he lived as a gentleman scholar interested in experiments in physics until Aaron BURR won (1805) his interest in Burr's plan of Western colonization. Blennerhassett advanced money to Burr. When President Jefferson proclaimed Burr's intentions traitorous, the local militia was mustered. Blennerhassett fled (Dec., 1806) down the river and was taken into custody. He was released after the government failed to convict Burr, but his fortunes were ruined. After a disastrous failure to recoup his losses on a Mississippi plantation, he attempted to practice law in Montreal, returned to England in 1822, and died on the island of Guernsey.

Blennerhassett Island, in the Ohio River, near Parkersburg, W. Va. On it Harman Blennerhassett built a mansion and a laboratory for his study. The island was ransacked by the local militia when Aaron Burr's schemes, with which Blennerhassett was connected, were declared traitorous by President Thomas Jefferson. See N.F. Schneider, *Blennerhassett Island and the Burr Conspiracy* (1938).

blenny, common name of various species of extremely numerous small fishes belonging to the families Blenniidae (combtooth blennies) and Nototheniidae (Antarctic blennies). They are characterized by elongated, tapering bodies and a continuous long dorsal fin. Blennies live among eelgrass in shallow brackish or fresh water and feed on small invertebrates. Some blennies have scales and some do not, certain species have fleshy filaments on the head. Tropical Atlantic species include the striped blenny (found as far north as New York) and the more southerly freckled blenny. The kelpfishes are a closely allied Pacific family. Those that live in kelp beds are mottled in coloration and those found in eelgrass are silver and green, matching their environment. The closely related wolfishes of the family Anarhichadidae, with large, tusklike teeth, are found in arctic Atlantic waters. They average 3 ft (90 cm) in length and are good food fishes, sold commercially as "ocean catfish." Blennies are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, families Blenniidae and Nototheniidae.

Blériot, Louis (lîvê blārêō'), 1872–1936, French aviator and inventor. He devoted the fortune acquired by his invention of an automobile searchlight to the invention and construction of monoplanes. After making several short-distance records, he was the first to cross (July 25, 1909) the English Channel in a heavier-than-air machine.

blesbok: see DAMALISK

Blessington, Marguerite, countess of, 1789–1849, English author and famous beauty, b. Ireland. At the age of 14 she was forced by her father into marriage with Capt. Maurice St. Leger Farmer, a sadist who abused her. She soon left him and after his death married (1818) the earl of Blessington. In 1822 she began a liaison with Count D'Orsay (husband of her stepdaughter), and with him, after Blessington's death, set up a brilliant salon at Gore House, Kensington. To meet expenses she wrote a number of popular novels. Her most successful work, however, is her graphic journal of her *Conversations with Lord Byron* (1834). See biography by Michael Sadleir (rev. ed. 1947).

Blest Gana, Alberto (albār'tō blēst gā'nā), 1830–1920, Chilean novelist. He is considered the princi-

pal 19th-century Spanish American realist. Although as a diplomat he spent much of his life abroad, his novels, both social and historical, depict Chilean scenes. In both *Aritmetica en el amor* (1860) and *Martin Rivas* (1862, tr 1918), his masterpiece, he attacked the mores of the aristocracy and the upper middle class. His novel *Durante la reconquista* (1897) concerns the Chilean revolt against Spain.

Bleuler, Paul Eugen (poul oi'gen bloi' lar), 1857–1939, Swiss psychiatrist and neurologist. He served (1898–1927) as professor at the Univ. of Zurich. In 1911 he made an important contribution to the study of dementia praecox by introducing the term *schizophrenia*. He concluded that the disease was not one of dementia, a condition of diminished mentality, but a disharmonious state of mind in which contradictory tendencies exist together, splitting the harmony of the mind. He postulated a dichotomy of primary and secondary symptoms, the former caused by morbid somatic processes and the latter by psychogenic factors. See his *Dementia Praecox* (1911, tr 1950).

Blida (blé'da), town (1966 pop 99,238), N Algeria, at the foot of the Atlas Mts. It is an administrative center and an agricultural trading town. Blida is surrounded by gardens and by orange, olive, and almond tree plantations. The city is noted for its fruit and flower essences. Built on the site of a Roman military base, Blida was founded in 1553 by Andalusians, who developed irrigation works and orange cultivation. Most of the old town was destroyed by earthquakes in 1825 and 1867.

Bligh, William (bli), 1754–1817, British admiral. He is chiefly remembered for the mutiny (1789) on his ship, the *BOUNTY*, but he had a long and notable career. He was sailing master on Capt. James Cook's last voyage (1776–79). Later he was a commander in the French wars, then (1805–8) governor of New South Wales, where he was briefly imprisoned (1808) by army mutineers in the so-called Rum Rebellion. Bligh was made a rear admiral in 1811 and a vice admiral in 1814. A brave and able officer, he was handicapped in dealing with men by his difficult temper. See biographies by Geoffrey Rawson (1930) and George Mackaness (rev ed 1951), H. V. Evatt, *The Rum Rebellion* (1938).

blight, general term for any sudden and severe plant disease or for the agent that causes it. Blights are characterized by withering and resultant death, without rotting, of the plant or its parts. The term is now applied chiefly to diseases caused by bacteria (e.g., bean blights and fire blight of fruit trees), viruses (e.g., soybean bud blight), and fungi (e.g., potato blights and chestnut blight). Other plant afflictions (caused by insects or unfavorable climatic conditions) that display similar symptoms are also called blights. See DISEASES OF PLANTS.

blimp see AIRSHIP

Blind, Karl (blint), 1826–1907, German revolutionary and German-English writer. Arrested for his part in the German uprisings of 1848–49, he was later freed and from 1852 lived in England. There he became a distinguished writer on politics, history, literature, and especially German folklore and ethnology. He was the stepfather of the poet Mathilde Blind.

blindfish see CAVE FISH

Blind Harry or Henry the Minstrel, fl. late 15th cent., supposed Scottish poet. He is considered the author of the patriotic epic, *The Wallace*, which celebrates the life of Sir William Wallace. Violently anti-English, the poem was popular in Scotland down to the 18th cent. Since the skillful literary technique of *The Wallace* makes its composition by the traditionally blind and humble Harry unlikely, it is felt that the poem owes much to another hand. See edition by W. A. Craigie (1940).

blindness, partial or complete loss of sight. Blindness may be caused by injury, by lesions of the brain or optic nerve, by disease of the cornea or retina, by pathological changes originating in systemic disorders (e.g., DIABETES) and by CATARACT, GLAUCOMA, or retinal detachment. Blindness caused by infectious diseases, such as TRACHOMA, and by dietary deficiencies is common in underdeveloped countries where medical care is inadequate. Most infectious diseases of the eye can be prevented or cured. Blindness may also be congenital. A major cause of congenital blindness in the United States, ophthalmia neonatorum (caused by gonorrhea organisms in the maternal birth canal), is now prevented by placing silver nitrate solution in all newborn infants' eyes. COLOR BLINDNESS is an inability to distinguish colors, most commonly red and green. Snow blindness is a temporary condition resulting from a burn of the cornea caused by the reflection of sunlight on snow.

Night blindness results from a deficiency of vitamin A. See EYE.

Blind River, town (1971 pop 3,450), S Ont., Canada, on North Channel of Lake Huron. It is the center of the Algoma uranium fields. Just to the east of the town is Ontario's first uranium mine (1955).

blink microscope, in astronomy, device for determining a change in position or magnitude (brightness) of a star relative to other stars in the background. Two photographs of the same field or area of the sky are projected so that they precisely coincide. The combined image is viewed through a magnifying eyepiece while light from first one photograph and then the other is interrupted mechanically. A change in position or magnitude of a star can usually be detected since the star will seem to flicker or jump to and fro while the background stars remain steady in both position and brightness.

Bliss, Sir Arthur, 1891–, English composer. Bliss's teachers included Charles Stanford, Ralph Vaughan Williams, and Gustav Holst. He was made Master of the Queen's Musick in 1953. His early works, including pieces for wordless voices, were considered avant-garde. Bliss's works include ballets, cantatas, operas such as *The Olympians* (1949) and *Tobias and the Angel* (1958), the *Colour Symphony* (1932), a piano concerto (1938), quintets for oboe (1927) and clarinet (1931) with strings, and a concertina for cello and orchestra (1969). His autobiography was published in 1970.

Bliss, Daniel, 1823–1916, American missionary, b. Franklin co., Vt., founder of Syrian Protestant College (now the American Univ. of Beirut) in Lebanon. He went to Syria in 1855, returning in 1862 to secure funds and a charter for the college, which was opened in 1866, he was its president until 1902. See his *Reminiscences* (ed. by his son, 1920). His son, **Howard Sweetser Bliss**, 1860–1920, b. Syria, grad. Amherst, 1882, and Union Theological Seminary, 1887, succeeded him as president and enlarged and liberalized the college.

Bliss, Howard Sweetser see BLISS, DANIEL

Bliss, Philip Paul, 1838–76, American evangelist and writer of gospel songs, b. Clearfield co., Pa. A fine baritone voice and a handsome presence aided him in his work, and his songs became tremendously popular. After the publication of his *Gospel Songs* (1874) he became associated with Dwight L. Moody and joined Ira D. Sankey in producing a series of songbooks called *Gospel Hymns*, the first of which appeared in 1875. Among his songs are "Hold the Fort," "Let the Lower Lights Be Burning," and "Jesus Loves Me."

Bliss, Tasker Howard, 1853–1930, American army officer and statesman, b. Lewisburg, Pa., grad. West Point, 1875. He was (1898) chief of staff to Gen. James H. Wilson in the Puerto Rico campaign of the Spanish-American War, served (1898–1902) as collector of customs in Cuba, and in 1902 negotiated the treaty of reciprocity between Cuba and the United States. Several important administration appointments followed in the United States and in the Philippines, and he was appointed (1917) chief of staff of the U.S. army. He helped work out the mobilization plans followed by the United States in World War I. President Wilson promoted (1917) him to the rank of general and appointed him to the Allied Supreme War Council. As a delegate at the Paris Peace Conference, Bliss urged the admission of Germany and the USSR to the League of Nations and advocated postwar disarmament. See biography by Frederick Palmer (1934), study by D. F. Trask (1966).

blister, puffy swelling of the outer skin (epidermis) caused by burn, friction, or irritants like poison ivy. A response of the body to protect deeper tissue, blisters generally contain serum, the liquid component of blood. The so-called blood blister, however, forms over ruptured capillaries and therefore contains whole blood.

blister beetle, common name for certain soft-bodied, usually black or brown, mostly elongate and cylindrical beetles belonging to the family Meloidae. Blister beetles are common insects found feeding on the flowers and foliage of various plants. Occasionally some, e.g., POTATO BEETLES, become serious defoliating pests of potatoes, tomatoes, beets, asters, and other crops and flowers. The larvae are predaceous or parasitic, feeding on the eggs of grasshoppers and of bees. Blister beetles undergo hypermetamorphosis, a complex life cycle with several different larval forms. The first of the six larval stages, called a triungulin, is a minute, active, and

long-legged form that seeks out the host's nest, the following stages are grublike. Adults emerge in mid summer. One group of blister beetles has body fluids that contain cantharidin, a substance that can cause the skin to blister, from which the family gets its name. The Spanish fly (*Lytta vesicatoria*), a bright green or bluish blister beetle, is a common S. European species from which cantharides are extracted and commercially prepared by crushing the wing covers (elytra) of the adults. This quite poisonous chemical is used medicinally as a skin irritant (in plasters), a diuretic, and an aphrodisiac. The lethal dosage for man is about 0.3 grams. Another group of meloid beetles has no cantharidin and is sometimes called the oil beetles because of the oily substance they secrete as protection against predators. Blister and oil beetles may be brushed into pans of kerosene or killed with systemic poisons or contact insecticides (except arsenic compounds). Blister beetles are classified in the phylum ARTHROPODA, class Insecta, order Coleoptera, family Meloidae.

blister gas see POISON GAS

blister rust see RUST

Blixen, Karen see DINESEN, ISAK

blizzard, winter storm characterized by high winds, low temperatures, and driving snow, according to the official definition given in 1958 by the U.S. Weather Bureau, the winds must be 35 mi (56 km) per hr or more and the temperature 20°F (−7°C) or lower. Blizzards are most common in the N. Great Plains states—South Dakota is sometimes called "the Blizzard State"—but they also occur as far south as Texas and as far east as Maine.

bloat, excessive accumulation of gases in the rumen, the first stomach of a cud-chewing animal. Bloat is probably formed to a large extent by bacterial action. It occurs in all ruminants, but is most common in cattle; it appears typically in animals that graze on newly developed, highly productive, lush green pastures, especially during a wet summer on clover-dominant pastures. Bloat can result from excess frothiness of the ruminal ingesta or loss of tone and motility of the rumen. Both of these conditions will prevent the normal eructation process. Treatment consists of passing a tube to the stomach or of reducing the foam formation by oral administration of mineral or vegetable oils. Prevention is attempted by carefully controlled management practices, administration of antibiotics, and the use of nontoxic oils.

bloc, parliamentary [Fr., = block], group of legislators formed to support special interests. A bloc may form because of a specific issue and dissolve when that issue has been resolved, or it may have a more permanent character, based on a more general interest. It is usually more tightly knit and aggressive than a coalition. The bloc has been a common device in legislatures made up of many parties, where it has tended to create two loose groups of "left" and "right." In nominally bipartisan legislatures, such as those of the United States, blocs are smaller groups and are usually organized to promote a specific economic or social interest or policy as, for example, the farm bloc. Recent years have seen the emergence of bloc voting by groups of states in the General Assembly of the United Nations.

Bloch, Ernest (blök), 1880–1959, Swiss-American composer. Among his teachers were Jacques-Dalcroze and Ysaye. He taught at the Geneva Conservatory, 1911–15, and at the Mannes School, New York, 1917–19, he was director of the Cleveland Institute of Music, 1920–25, and of the San Francisco Conservatory, 1925–30. His music is based in the classical tradition, but it has a peculiarly personal intensity of expression and often a distinct Hebraic quality, as in the Hebrew rhapsody *Schelomo* and the symphonic poem *Israel* (both 1916). Other outstanding works are an opera, *Macbeth* (1909), a concerto grosso, for string orchestra and piano (1925), the symphonic poems *America* (1926) and *Helvetia* (1929), a modern setting of the Jewish *Sacred Service* (1933), and *A Voice in the Wilderness*, for cello and orchestra (1937).

Bloch, Konrad E., 1912–, American biochemist, b. Niesse, Germany. He was educated at Munich and at Columbia (Ph.D., 1938). He taught at Columbia and at the Univ. of Chicago before going to Harvard in 1954. He became a U.S. citizen in 1944. He shared the 1964 Nobel Prize in Physiology and Medicine with Feodor Lynen for discoveries concerning the mechanism and regulation of cholesterol and fatty acid metabolism.

Bloch, Marc (blök), 1886–1944, French historian and an authority on medieval feudalism. He taught at the Univ. of Strasbourg from 1919, became professor

at the Sorbonne in 1936, and was cofounder of the journal *Annales*. Bloch did much to promote the study of economic history. As a Jew, he was subject to German restrictions during World War II. He joined the French Resistance in Lyon in 1942, helping to publish the newspaper *Franc-Tireur*, a name adopted by the Resistance forces in the region. His activities led to his execution by the Germans in 1944. His *Strange Defeat* (tr 1949) describes wartime France. Among Bloch's major works are *The Historian's Craft* (tr 1953) and *French Rural History* (tr 1966). His *Feudal Society* (tr 1961) is a brilliant modern synthesis of the subject. In it Bloch stressed feudalism's rise from a mixed society and concluded that German elements reinforced feudal tendencies already present in the late Roman Empire. He described the feudal system as primarily a system of human relationships.

Block, Adriaen, fl 1610-24, Dutch navigator. Eager to establish an Indian fur trade, Amsterdam merchants sent (1613) Block and another Dutch navigator to explore the region discovered by Henry Hudson. After wintering near Albany, Block sailed from the Hudson into Long Island Sound (1614), which he may have been the first European to enter, coming in through the East River passage that he named Hellegat (Hell Gate). He discovered the Connecticut River, sailed past and named Block Island, and explored Narragansett Bay. Block made the *Figurative Map of 1614*, showing details of the southern coast of New England and showing (the first to do so) Long Island and Manhattan as separate.

Block, Herbert Lawrence (Herblock), 1909-, American editorial cartoonist, b. Chicago. Herblock began drawing cartoons (1929-33) for the *Chicago Daily News*, later moving to the *Newspaper Enterprise Association* (1933-43) and to the *Washington Post* (1946-). His work has been syndicated widely and was awarded the Pulitzer Prize in 1942 and 1954. Collections of his cartoons include *The Herblock Book* (1952), *Herblock's Here and Now* (1955), *Straight Herblock* (1964), *Herblock's State of the Union* (1972), and *Herblock's Special Report* (1974).

blockade, use of naval forces to cut off maritime communication and supply. Blockades may be used to prevent shipping from reaching enemy ports, or they may serve purposes of coercion. The term is rarely applied to land sieges. During the Napoleonic wars, both France and Great Britain attempted to control neutral commerce through blockades and embargoes which neither could enforce with sufficient rigor. The Declaration of Paris (see PARIS, DECLARATION OF) proclaimed (1856) that blockades were henceforth to be announced to all affected parties and would be legal only if effectively enforced against all neutrals. In both World Wars blockades were made more effective by the employment, in addition to naval vessels, of mines and aircraft. North Vietnamese ports were mined and blockaded by the United States during later stages of the Vietnam War. Blockades have also occasionally been employed in times of peace as threats to implement diplomacy, as in the blockade of Cuba by the United States in 1962.

block and tackle: see PULLEY

block book Before and after the invention of printing from movable types in the mid-15th cent., some books were printed in Europe from engraved wooden blocks, with one block for each page. This method was developed by the 9th cent. A.D. in China. The practice has a richer history in the Orient than in the Occident since the number of characters used in Chinese writing made printing from movable type exceedingly difficult. Chinese and Japanese illustrated block books are often beautifully printed in colors. European block books, on the contrary, were crude and inexpensive. They were, however, the first examples of printed book illustration in the West. The best-known block book is the *Biblia pauperum* [poor man's Bible].

blockhouse, small FORTIFICATION, usually temporary, serving as a post for a small garrison. Blockhouses seem to have come into use in the 15th cent. to prevent access to a strategically important objective such as a bridge, a ford, or a pass. Later the term was broadened to include all detached and isolated small forts, especially those in country just captured from an enemy. The typical blockhouse was of two stories, with an overhanging second story and loopholes on all sides for gunfire. In the North American colonies, blockhouses were used in frontier communities as protection against Indian attacks; they were built of timber or stone (in New England) or of logs banked with earth (in the South and West). The frontier blockhouses were frequently surrounded by

palisades and thus were technically stockaded forts. The principal use of blockhouses in present-day military fortification is in defending isolated units against small-arms fire. See PILLBOX.

Block Island, 7 mi (11.2 km) long and 3.5 mi (5.6 km) wide, off S.R.I. at the eastern entrance to Long Island Sound. Visited by the Dutch navigator Adriaen Block in 1614, it was settled in 1661. The murder (1637) there of John Oldham, an English trader, was the direct cause of the Pequot War (see PEQUOT INDIANS). Characterized by numerous small ponds, low hills, and a mild climate, the island has long been a favorite fishing and resort area. Possessing two harbors, it accommodates both local fishing boats and summer pleasure craft. There are two lighthouses. The town of New Shoreham (1970 pop 489, inc 1672) is coextensive with the island.

block printing: see textile printing under TEXTILES

block-signal system. See SIGNALING

Blodgett, Katharine Burr, 1898-, American physicist and chemist, b. Schenectady, N.Y., B.A. Bryn Mawr, 1917, Ph.D. Cambridge, 1926. In 1918 she became research physicist for the General Electric Company, where she worked with Irving Langmuir on tungsten filaments and later on monomolecular layers. Further research produced the method of preparing nonreflecting glass and of measuring the thickness of monomolecular films within one micron.

Bloemfontein (bloōm'fōntān'), city (1970 pop 148,282), capital of the Orange Free State and the judicial center of the Republic of South Africa. It is a transportation hub and industrial center, containing railroad workshops, food-processing plants, and factories that produce furniture, plastics, and glassware. Bloemfontein was founded in 1846 and served as the capital of the ORANGE FREE STATE Republic until its capture (1900) by British forces during the South African War. Afterward, it was the site of the final negotiations (1909) that led to the establishment (1910) of the Union of South Africa. Among the city's educational institutions are the Univ. of the Orange Free State (founded 1855, university status 1950) and a technical college.

Blois (bliwa), town (1968 pop 44,762), capital of Loiret-Cher dept., central France, in Orléanais, on the Loire River. A commercial and industrial center with an outstanding trade in wines and brandies, it is also one of the most historic towns of France. The counts of Blois emerged in the 10th cent. as the most powerful feudal lords of France. Their line began with Thibaut the Cheat, who by various means acquired Touraine and Chartres, his successors added (11th-12th cent.) Champagne, Brié, and other lands, although in the west they were checked by the counts of Anjou. The last count of Blois, childless and heavily in debt, sold his fief to Louis, duc d'Orléans, who took possession in 1397. With the accession (1498) of Louis' grandson, Louis XII, as king of France, the countship passed to the crown as part of Orléanais. The town was a favorite royal residence. Louis XII was born in the Renaissance château there. Several States-General of France were held in the château, notably in 1576-77 and in 1588. Henri, duc de Guise, was assassinated there in 1588. The Treaties of Blois, signed in 1504-5, were a temporary settlement of the Italian Wars.

Blok, Aleksandr Aleksandrovich (alyiksan'dar'alyiksan'dravich blök), 1880-1921, Russian poet, considered the greatest of the Russian SYMBOLISTS. As the leading disciple of Vladimir Soloviev, he voiced both mysticism and idealistic passion in an early cycle of love poems, *Verses about the Lady Beautiful* (1904). In 1905 he turned to themes of despair, degradation, and the attraction of evil. *The Unknown Woman* (1906) is his best-known poem of this period. Later he found hope in the idealization of Russia, welcoming the Revolution of 1917 in his epic poem *The Twelve* (1918, tr 1920). This work celebrates the passion, violence, and exhilaration of the revolution, with which Blok later became disenchanted. *The Scythians* (1920) is directed against the Western forces fighting the Bolsheviks. See his selected poems, ed. by Avril Pyman (1972), his account of his journey to Italy, ed. by L. E. Vogel (1973), studies by F. D. Reeve (1962) and Robin Kimball (1965).

Blondel, François (fran'swa' blōNdēl'), 1617-86, French architect. Blondel's best-known work is the triumphal arch called the Porte St-Denis (1672), in Paris. In 1672 he became director of the Academy of Architecture. Blondel's writings, which exerted great influence, include *Cours d'architecture enseignée dans l'Académie royale d'architecture* (2 vol., 1675-

83) and *Nouvelle Manière de fortifier les places* (1684). He advocated a strict adherence to a classical and rationalist doctrine of architecture. His nephew, Jacques François Blondel, 1705-74, opened the first French private school of architecture in 1739. As architect to the king he devised plans for the civic beautification of Metz and Strasbourg. He designed the town hall and Place d'Armes at Strasbourg and the west portal of the cathedral at Metz. His published works include *L'Architecture française* (1752), valuable for its engraved views of buildings that no longer exist, and *Cours d'architecture, ou, Traité de la décoration* (6 vol., 1771-77).

Blondel, Maurice, 1861-1949, French Catholic philosopher, b. Dijon. He was a professor at the universities of Montauban, Lille, and Aix-Marseille during his influential career. Like his contemporary Henri Bergson he was anti-rationalist and scorned science. In his first work, *L'Action* (1893, rev. ed 1950), he laid the groundwork for his later thought. Blondel held that action could never be satisfied by any finite good and could only be fulfilled in God, whom he described as the "first principle and last term." In his positive affirmation of God he was close to St. Augustine, Plato, and Leibniz, he later also accorded legitimacy to the rational proofs of God's existence. His other chief works were *La Pensee* (2 vol., 1934-35) and *Le Problème de la philosophie catholique* (1932). See study by Henri Bouillard (1969).

Blondel de Nesle (blōn'dal də nēl, fr blōNdēl' də nēl), fl. late 12th cent., French troubadour, a favorite of RICHARD I of England. Legend relates that after Richard was captured and imprisoned by Leopold V of Austria in 1193, Blondel wandered through Germany, singing a song known only to him and his lost master, until Richard answered from his prison. Blondel was then able to tell the English where Richard was held captive.

blood, fluid that is pumped by the heart and circulates throughout the body via the arteries, veins, and capillaries. An adult male of average size normally has about 6 qt (5.6 liters) of blood. The blood carries oxygen and nutrients to the body tissues and carries away carbon dioxide and other wastes. The colorless fluid of the blood, or plasma, contains a variety of cells and substances. Most numerous are the erythrocytes, or red blood cells, which number from 4.5 million to 6 million per cubic millimeter of blood. They carry out the exchange of oxygen and carbon dioxide between the lungs and the body tissues. In order to combine effectively with oxygen, the erythrocytes must contain a normal amount of the red protein pigment hemoglobin, which in turn is dependent on the amount of iron in the body. A deficiency of iron and therefore of hemoglobin leads to ANEMIA and poor oxygenation of the body tissues. Nucleated immature erythrocytes develop in the BONE MARROW. As they mature, the erythrocytes also lose their nuclei, become disk-shaped, and begin to produce hemoglobin. After circulating for about 120 days the erythrocytes wear out and are destroyed by the spleen. Although all red blood cells are essentially similar, certain structures on their surfaces vary from person to person, on the basis of these structures blood is classified into BLOOD GROUPS. The leukocytes, or white blood cells, defend the body against infecting organisms and foreign agents both in the tissues and in the bloodstream itself. Human blood contains about 5,000 to 10,000 leukocytes per cubic millimeter, the number increases in the presence of infection. An extraordinary and prolonged proliferation of leukocytes is known as LEUKEMIA, and is usually fatal. Conversely, a sharp decrease in the number of leukocytes (leukopenia), usually the result of drug toxicity, strips the blood of its defense against infection and is an equally serious condition. Leukocytes have nuclei and are classified into three groups. The granulocytes form in the bone marrow and account for about 70% of all white blood cells. There are three subdivisions of granulocytes: neutrophils, eosinophils, and basophils. Neutrophils constitute the vast majority of granulocytes. They are capable of amoeboid movement and can surround and destroy bacteria and other microorganisms. The eosinophils, ordinarily about 2% of the granulocyte count, increase in number in the presence of allergic disorders and parasitic infestations. The basophils account for about 1% of the granulocytes, and they may be the source of heparin, which delays blood clotting. The second group of white blood cells, the lymphocytes, are formed in the lymphoid tissue, under normal conditions they make up about 20% to 35% of all white cells. Lymphocytes tend to migrate into the connective tissue, where they develop into plasma cells that produce anti-

bodies against foreign microorganisms. The third group, the monocytes, are derived from the phagocytic cells that line many vascular and lymph channels, called the reticuloendothelial system, monocytes, which are also produced from lymphocytes, ordinarily number 4% to 8% of the white cells. They attack and destroy organisms left behind by the granulocytes and lymphocytes. In certain diseases of long duration (tuberculosis, malaria, typhoid) the monocytes are thought to be the main instrument of defense. The blood also contains platelets, or thrombocytes, and other substances active in BLOOD CLOTTING. Also circulating in the plasma are the hormones that the endocrine glands secrete directly into the bloodstream. In addition, essential salts (like those of sodium and potassium), essential proteins (albumin, globulins, and fibrinogen), and metabolic wastes (such as urea) circulate in the plasma. Serum, a straw-colored liquid, is essentially plasma without fibrinogen. It is the liquid component of blood that separates from the clot. Serum is removed from whole blood by centrifuging and is put to various medical uses. Normal human serum is sometimes introduced into a patient to counteract surgical or traumatic shock or the loss of fluid resulting from severe burns. Human blood is classified into four major groups, an important distinction in successful BLOOD TRANSFUSION.

blood bank, site for collecting, processing, typing, and storing whole BLOOD and blood plasma. Whole blood may be preserved up to 21 days without losing its usefulness in BLOOD TRANSFUSIONS, an anticoagulant is added to it to prevent clotting. Blood plasma, the fluid portion of the blood, may be frozen and stored indefinitely. The earliest whole blood transfusions were performed during World War I, but the first blood bank was not established until 1937 at Cook County Hospital in Chicago. Today most hospitals maintain their own blood reserves and the U.S. Red Cross provides a nationwide distribution service.

blood clotting, process by which the blood coagulates to form solid masses, or clots. In minor injuries, small oval bodies called platelets, or thrombocytes, tend to collect and form plugs in blood vessel openings. To control bleeding from vessels larger than capillaries a clot must form at the point of injury. The coagulation of the blood is also initiated by the blood platelets. The platelets produce a substance that combines with calcium ions in the blood to form thromboplastin, which in turn converts the protein prothrombin into thrombin in a complex series of reactions. Thrombin, a proteolytic enzyme, converts fibrinogen, a protein substance, into fibrin, an insoluble protein that forms an intricate network of minute threadlike structures called fibrils and causes the blood plasma to gel. The blood cells and plasma are enmeshed in the network of fibrils to form the clot. Blood clotting can be initiated by the extrinsic mechanism, in which substances from damaged tissues are mixed with the blood, or by the intrinsic mechanism, in which the blood itself is traumatized. More than 30 substances in blood have been found to affect clotting, whether or not blood will coagulate depends on a balance between those substances that promote coagulation (procoagulants) and those that inhibit it (anticoagulants). Prothrombin, a substance essential to the clotting mechanism, is produced by the liver in the presence of vitamin K. When the body is deficient in this vitamin, bleeding is more difficult to control. In hemophiliacs, or "bleeders," the blood's coagulation time is greatly prolonged (see HEMOPHILIA). The coagulation of blood within blood vessels in the absence of injury can cause serious illness or death, especially when a clot forms in the coronary arteries (THROMBOSIS) or cerebral arteries (APOPLEXY). To prevent coagulation of the blood in persons with known tendency to clot formation, and also as prophylaxis before performing surgery or blood transfusion, the blood's natural anticoagulating substance, heparin, is reinforced by an additional amount of an anticoagulant such as Dicumarol injected into the body.

blood feud see VENDETTA

blood groups, substances in red blood cells, classified according to their immunological (antigenic) properties. Blood groups are genetically determined. Each has a specific chemical structure that is part of the surface structure of red blood cells. About 200 different blood group substances have been identified and placed within 19 known blood group systems. Like many other chemical substances, blood group substances act antigenically, i.e., when injected into a recipient they will elicit the formation of specific ANTIBODIES. Antigen-anti-

body reactions are studied in IMMUNOLOGY. The most commonly encountered blood group system is the OAB, or LANDSTEINER, system. Individuals may contain the A, B, or AB antigenic substances, or else lack these substances (type O). In the OAB system an individual who lacks one or more of these antigens will spontaneously develop the corresponding antibodies (agglutinins) shortly after birth. Thus a person with A type blood will naturally produce anti-B agglutinins, a person with B blood will produce anti-A agglutinins, and a person with O blood will produce anti-A and anti-B agglutinins, but a person with AB blood will not produce any agglutinins in this blood group system. In the special case of the OAB system, agglutinins are always present in the blood, and in BLOOD TRANSFUSION the donor blood must be compatible with the recipient's blood, i.e., the donor's blood must not contain antigen corresponding to the recipient's antibody. Other blood group systems, such as the MNSs, Lutheran, and P systems, are not as important in transfusion because they act like true antigen-antibody systems, i.e., antibodies do not appear in blood plasma until the individual has been immunized by exposure to the other blood group antigens as in previous transfusions. In general, blood group substances are weak antigens, and antibody formation after transfusion occurs less than 3% of the time. Immunization can occur by pregnancy as well as by transfusion. Thus, in the RH FACTOR blood group system, an Rh-negative mother carrying an Rh-positive fetus produces anti-Rh antibodies against fetal red blood cells that cross the placenta. These maternal anti-Rh antibodies move back across the placenta and cause hemolysis of the red blood cells in the fetal bloodstream. Blood group typing is used legally to establish paternity. Any blood factor that occurs in a child must be present in at least one of the child's biological parents, where a child lacks a blood antigen (as when his blood type is O) both biological parents must also lack that factor. Anthropologists use the frequency of occurrence of various blood groups as tools to study racial or tribal origins.

bloodhound, breed of large HOUND whose ancestors were known in the Mediterranean region before the Christian era. It stands about 25 in. (63.5 cm) high at the shoulder and weighs between 80 and 110 lb (36.3-49.9 kg). Its short, smooth coat may be black and tan, red and tan, or tawny. The skin is very loose and hangs in deep folds over the forehead and at the sides of the face, giving the dog its characteristically mournful expression. The oldest hound breed and probable progenitor of all the hounds, it was introduced into Europe long before the Crusades and became popular with the aristocracy and clergy. The latter, especially, were responsible for the dog's careful breeding and purity of strain, which led it to be called the "blooded hound," i.e., hound of noble ancestry. It was imported into the United States in the early 19th cent. Its sense of smell is second to no other breed and has earned it a singular reputation as a tracker of criminals and missing persons. Unlike the police or war dog, it does not attack the man or animal it is tracking. See DOG.

Blood Indians, see BLACKFOOT INDIANS

bloodletting, also called bleeding, practice of drawing blood from the body in the treatment of disease. General bloodletting consists of the abstraction of blood by incision into an artery (arteriotomy) or vein (venesection, or phlebotomy). Local bloodletting is the abstraction of blood from smaller vessels by watercupping or by leeching. From antiquity through the 18th cent. bloodletting was widely practiced in western medicine. A broad assortment of ailments were believed to result from the impurity or superabundance of blood in the system, periodic bloodletting was felt to assure the patient of good health. In modern times the medicinal leech (*Hirudo medicinalis*) is still used in some areas of the world for the removal of blood from bruises and black eyes. Venesection is employed to treat erythremia, an abnormal condition characterized by the overproduction of red blood cells, and to relieve the congestion of blood resulting from acute heart failure.

blood poisoning see SEPTICEMIA

blood pressure, force exerted by the blood upon the walls of the arteries. The pressure in the arteries is initiated by the pumping action of the heart, and pressure waves can be felt at the wrist and at other points where arteries lie near the surface of the body (see PULSE). Blood pressure is strongest in the aorta, where the blood leaves the heart. It diminishes progressively in the smaller blood vessels and

reaches its lowest point in the veins (see CIRCULATORY SYSTEM). Blood pressure is dramatically manifested when an artery is severed or pierced, and the blood (under pressure) ejects in spurts. Since the heart can pump blood into the large arteries more quickly than it can be absorbed and released by the tiny arterioles and capillaries, there is always considerable inner pressure in the arteries. The contraction of the heart (systole) causes the blood pressure to rise to its highest point, and relaxation of the heart (diastole) brings the pressure down to its lowest point. Since blood pressure varies in different arteries, the pressure in the brachial artery of the forearm is used as a standard. It is measured in millimeters of mercury by means of an instrument known as a sphygmomanometer. The normal readings in young people are about 120 mm for systolic pressure and about 80 mm for diastolic pressure, commonly written as 120/80 and read as "one-twenty over eighty." With age, and the constriction of the small arteries and then the larger ones, blood pressure increases, so that at 50 years it is considered normal to have a systolic pressure between 140 and 150, and a diastolic pressure of about 90. Factors other than heart action and the condition of the arteries also influence blood pressure. Temporary high blood pressure usually occurs during or following physical activity, nervous strain, and periods of rage or fear. Therapy for persistent high blood pressure consists of sufficient rest, mild sedation (especially with pressure-reducing drugs), a diet low in salt and protein, and reduction in weight where there is obesity. Low blood pressure (hypotension) is considered to be advantageous if it is not caused by disease or injury.

bloodroot, see POPPY

bloodstone or **heliotrope**, green CHALCEDONY spotted with red, used as a gem stone. It is obtained from India, the United States, Brazil, and Australia.

blood test, examination of BLOOD routinely or as an aid in diagnosing a suspected disease. Tests may be performed on whole blood or on the plasma portion only. Blood volume tends to fluctuate with various disorders, it decreases after severe hemorrhage and increases with heart disease. Blood typing identifies the proteins at specific sites on the red blood cells, a necessity in determining compatibility for BLOOD TRANSFUSION. Microscopic counts of red blood cells are used in the diagnosis of ANEMIA and POLYCYTHEMIA, while white cell counts are vital in detecting infections or in confirming LEUKEMIA. Plasma may be collected, cultured, and inoculated with bacteria or other pathogens for the purpose of detecting the presence of antibodies, defending substances found in the blood, if the foreign body, or antigen, thrives in the culture there is an antibody deficiency. Plasma may also be examined for evidence of functional disorders, e.g., for blood sugar in testing for diabetes mellitus and for fat and cholesterol content in detecting susceptibility to heart and systemic disease.

blood transfusion, transfer of blood from the venous system of one person to that of another, or from one animal to another of the same species. Transfusions are performed to replace a large loss of blood and as supportive treatment in certain diseases and blood disorders. When whole blood is not needed, or when it is not available, plasma, the fluid of the blood without the blood cells, can be given. In giving a successful whole blood transfusion from one person to another it is necessary for the blood of the donor to be compatible with that of the recipient. Blood is incompatible when certain factors in red blood cells and plasma differ in donor and recipient, when that occurs, agglutinins (i.e., antibodies) in the recipient's blood will clump with the red blood cells of the donor's blood. The most frequent blood transfusion reactions are caused by substances of the Landsteiner, or OAB, BLOOD GROUP system and the Rh factor system. In the OAB system, group AB individuals are known as universal recipients because they can accept A, B, AB, or O donor blood. Persons with O blood are sometimes called universal donors because the red cells of this group are less likely to be agglutinated by the blood of any other group, but even O donor blood, if it has a high concentration of agglutinins, may initiate a transfusion reaction when large quantities are mixed with blood of another type. In the Rh factor system, agglutinins are not produced spontaneously in an individual but only in response to previous exposure to Rh antigens, as in some earlier transfusion. Transfusion reactions involving incompatibility eventually cause hemolysis, or disruption of donor cells. The resulting liberation of hemoglobin

into the circulatory system, causing jaundice and kidney damage, can be lethal. In addition to providing for the compatibility of blood groups in transfusion, it is necessary to determine that the donor's blood is free of organisms that might cause *SYPHILIS*, *MALARIA*, or serum *HEPATITIS*. Sometimes there is a purely allergic reaction because allergic antibodies have been transmitted from the donor's blood, possibly because of some type of food recently ingested by the donor.

bloodworm, name for the larva of the MIDGE and for a red-blooded marine annelid worm.

Bloody Assizes* see JEFFREYS OF WEM, GEORGE JEFFREYS 1ST BARON

Bloom, Hyman, 1913–, American painter, b. Latvia. Bloom was brought to the United States and settled with his family in Boston in 1920. Primarily a philosophical painter of expressionistic style, Bloom reveals in his works the influence of Rouault and Soutine. His canvases are often thickly encrusted with flamboyant color. Many, such as *Slaughtered Animal* (1953), Univ. of California, Los Angeles), are concerned with death.

Bloomer, Amelia Jenks, 1818–94, American reformer, b. Homer, N.Y. She was editor (1848–54) of the *Lily*, first published in Seneca Falls, N.Y., and devoted to woman's rights and to temperance. In 1851 she recommended and adopted the reformed dress of short skirt and full trousers introduced by Elizabeth Smith Miller. Because she advertised it in the *Lily* and wore it in her lecture work, it became universally known as the Bloomer costume, or bloomers. See biography by her husband, D. C. Bloomer (1895), C. N. Gattey, *The Bloomer Girls* (1968).

Bloomfield, Leonard, 1887–1949, American linguist, b. Chicago. Bloomfield was professor at Ohio State Univ. (1921–27), at the Univ. of Chicago (1927–40), and at Yale (from 1940). His specialty for years was Germanic languages, especially in their comparative aspects. He became interested, however, in languages from a scientific, descriptive viewpoint. His masterpiece, *Language* (1933) is a standard text. It had a profound influence on linguistics, for it was a clear statement of principles that became axiomatic, notably that language study must always be centered in the spoken language, as against documents, that the definitions used in grammar should be based on the forms of the language, not on the meanings of the forms, and that a given language at a given time is a complete system of sounds and forms that exist independently of the past—so that the history of a form does not explain its actual meaning. His other works include *Tagalog Texts with Grammatical Analysis* (1917), *Linguistic Aspects of Science* (1939), *Spoken Dutch* (1945), and *Spoken Russian* (1945).

Bloomfield. 1. Town (1970 pop. 18,301), Hartford co., N. Conn., a suburb of Hartford, in a tobacco and dairy region, settled c. 1642, inc. 1835. Aircraft parts are manufactured, and the home office of a large insurance company is there. 2. Town (1970 pop. 52,029), Essex co., N.E. N.J., an industrial and residential suburb of Newark, settled c. 1660, inc. as a town 1812, as a city 1900. Electrical equipment and pharmaceuticals are made in the town, which is also the seat of Bloomfield College. Named for the Revolutionary War general Joseph Bloomfield, who later became governor of New Jersey, Bloomfield was a supply point for both sides during the war. In the 19th cent. it was a trade and transportation hub. The Presbyterian church there dates from 1796. The author Randolph Bourne was born in Bloomfield.

Bloomgarten or **Blumengarten**, **Solomon**, pseud. **Yehoash** (yehō'ash), 1870–1927, American writer in Yiddish, b. Lithuania. He emigrated to America in 1891 and, except for 10 years in Colorado (1900–1910), lived chiefly in New York City. His poetry, which holds a high place in Jewish-American literature, includes the collections *Through Mist and Sunshine* (1913) and *In the Weaving* (2 vol., 1919–21). *The Feet of the Messenger* (1921) was translated into English (1923). Considered to be his greatest work was the translation of the entire Old Testament from Hebrew into Yiddish. With Charles D. Spivak he compiled a Hebrew-Yiddish dictionary (1911). A translation of his poems appeared in 1952.

Bloomington. 1. City (1970 pop. 39,992), seat of McLean co., central Ill., inc. 1839. It is an important rail, commercial, and industrial center in a rich farm and coal area. In 1856 the state Republican party was organized in Bloomington, at which time Lincoln delivered his famous "lost speech" (no copy of which is known to exist). The city is the seat of Illinois Wesleyan Univ. and the Illinois Soldiers and

Sailors Children's Home. Illinois State Univ. is in adjacent Normal (formerly North Bloomington). Of interest are the burial place of Adlai E. Stevenson and the David Davis Mansion, a state historic shrine. 2. City (1970 pop. 42,890), seat of Monroe co., S. central Ind., in a densely forested region, settled 1816, inc. 1878. Electronic machinery, electrical appliances, and elevators are manufactured. Quarrying and marketing of the limestone abundant in the area has sustained the city's economy for many years. It is the seat of Indiana Univ., and its growth is closely related to the development of that institution. In the area are three state parks, a state forest, Hoosier National Forest, and lakes Monroe (Indiana's largest) and Lemon. 3. City (1970 pop. 81,970), Hennepin co., SE Minn., a suburb adjacent to Minneapolis, inc. 1953. Its many manufactures include lawn mowers, electronic equipment, and metal products.

Bloomsburg, industrial town (1970 pop. 11,652), seat of Columbia co., E. Pa., on the Susquehanna River, settled 1772, inc. 1870. Carpets, aluminum products, and silk are among its manufactures. It is the only incorporated town in the state. Bloomsburg State College and a transportation museum are there.

Bloomsbury group, name given to the literary group that made Bloomsbury Square in London the center of its activities from 1904 to c. 1939. It included Lytton Strachey, Virginia Woolf, Leonard Woolf, E. M. Forster, V. Sackville-West, Roger Fry, Clive Bell, and John Maynard Keynes. Not to be confused with a literary school, it was primarily a social clique that assembled on Thursday nights for conversation and became prominent as the fame of its members grew. By the 1920s its reputation as a cultural circle was fully established to the extent that its mannerisms were parodied and *Bloomsbury* became a widely used term connoting an insular, snobbish aestheticism. See J. K. Johnstone, *The Bloomsbury Group* (1954), Leonard Woolf, *Beginning Again* (1964), Quentin Bell, *Bloomsbury* (1969).

Bloor, Ella Reeve, 1862–1951, American radical, popularly known as Mother Bloor, b. Staten Island, N.Y. After an early career in the woman-suffrage and temperance movements she joined the Socialist party in 1902 and was an organizer until 1919 when she broke with the Socialists to help organize the Communist party. She served as chairman of the party's women's commission and was (1932–1948) a member of the national committee. She wrote *Women of the Soviet Union* (1930) and the autobiographical *We Are Many* (1940).

Blount, James Henderson (blūnt), 1837–1903, American public official, b. Jones co., Ga. U.S. Representative from Georgia (1873–93), he was chosen by President Cleveland as a special commissioner to the Hawaiian Islands in 1893. There the creation of an American-fostered provisional government, under Sanford B. Dole, in opposition to Queen Liliuokalani had caused a crisis. After investigation Blount declared against the provisional government, and in consequence Cleveland withdrew the treaty of annexation concluded with that government. He recalled the American minister and appointed Blount U.S. minister instead.

Blount, William, 1749–1800, American political leader, b. near Windsor, N.C. He served in the American Revolution and later became a legislator in North Carolina, a member of the Continental Congress (1782–83, 1786–87), and a delegate to the Federal Constitutional Convention (1787). Washington appointed (1790) him governor of the Territory South of the River Ohio (present-day Tennessee), and there he also had charge (1790–96) of Indian affairs. Blount handled this dual position successfully until financial difficulties forced him into a plan whereby frontiersmen and Indians were to help the British conquer Spanish Florida and Louisiana. Before the plan was discovered he presided over the Tennessee constitutional convention (1796) and became one of the state's first U.S. Senators. When the Florida plot was discovered he was expelled (1797) from the Senate. While impeachment proceedings (later dropped) were being instituted, Blount was elected (1798) to the Tennessee senate and was chosen its speaker. See biography by W. H. Masters (1954, repr. 1969).

Blount, Winton Malcolm, 1921–, U.S. Postmaster General (1969–71), b. Union Springs, Ala. A successful building contractor, he was (1946–68) president and chairman of the board of Blount Brothers Corp. After serving (1968) as president of the U.S. Chamber of Commerce, Blount became (1969) Postmaster General in President Richard M. Nixon's cabinet. He

ended the patronage filling of postmaster vacancies and presided over (1971) the shift of the U.S. Post Office from a cabinet department to a nonprofit government-owned corporation. In 1972 he ran unsuccessfully as the Republican candidate for the U.S. Senate from Alabama.

Blow, John, 1649–1708, English composer. He was organist and choirmaster at Westminster Abbey and the Chapel Royal and the teacher of Henry Purcell. He wrote more than 100 anthems and 10 sacred services, mostly unpublished, and a masque, *Venus and Adonis*.

Blow, Susan Elizabeth, 1843–1916, American educator, b. St. Louis. After study in New York City under a disciple of Froebel, she opened in Carondelet (now in St. Louis) the first successful public kindergarten (1873) and a training school for kindergarten teachers (1874). Among her books are *Symbolic Education* (1894), *Educational Issues in the Kindergarten* (1908), and a translation of Froebel's *Mutter- und Kose-Lieder* (called *Mother Play*) in two volumes (1895).

blowfly, name for FLIES of the family Calliphoridae. Blowflies are about the same size as, and resemble, the housefly, because they are usually metallic blue or green; they are also called bluebottle or greenbottle flies. The eggs are laid on the material that serves as food for the larvae, e.g., decaying flesh and other organic matter. Blowflies are often carriers of disease, such as dysentery. The larvae of certain species of blowfly, raised under germ-free conditions and known as surgical maggots, were formerly used to consume dead tissue and thus promote healing. The screwworm fly, common in the S. United States, may invade wounds or orifices in wild and domestic animals and sometimes in humans. In recent years the screwworm population has been reduced by releasing large numbers of sterilized male flies into the environment, the females, which mate only once, then lay eggs that fail to hatch. Blowflies are classified in the phylum ARTHROPODA, class Insecta, order Diptera, family Calliphoridae. See INSECT.

blowgun, hollow tube from which a dart or an arrow is blown by a man's breath. Blowguns were widely used by prehistoric peoples. In modern times they are still employed in SE Asia and by some Indian tribes of the Amazon and Guiana regions of N. South America.

blowpipe. 1. In its simplest form in the laboratory, a hollow, tapering tube, through the wide end of which air is blown by the operator while the other end is introduced into the FLAME of a gas burner. The jet of flame that results is directed toward a material under study. The reaction caused by the flame can be used to identify the material. A bellows or other apparatus is often employed to produce a steady, continuous stream of air. Blowpipe analysis has been largely replaced by more accurate testing methods, such as the examination of an X-ray powder diffraction spectrum of the material. 2. In glass-making, a long, straight hollow tube used to shape glass. Part of the shaping process involves blowing through the tube. See GLASS.

Bloy, Léon (lōn' blwā), 1846–1917, French writer. A Roman Catholic and a social reformer, Bloy wrote violent and vituperative attacks on religious conformism and bitter portraits of his life and friends. His works decry cruelty and injustice, and their fervor made them influential in Europe. They include the autobiographical novels *Le Desespéré* [the hopeless one] (1886) and *La Femme pauvre* (1897, tr. *The Woman Who Was Poor*, 1939), *Salut par les Juifs* (1892), a tribute to the Jews, and a vast body of correspondence. See studies by Albert Beguin (tr. 1947), M. R. Brady (1969), and Rayner Heppenstall (1969).

Blucher, Gebhard Leberecht von (gēp'härt lā'bā-rēkt fən blū'khar), 1742–1819, Prussian field marshal, an outstanding military opponent of Napoleon I. An officer in the army of King Frederick II from 1760, he incurred royal displeasure when, believing himself passed over for promotion, he abruptly resigned in the early 1770s. He returned to service only in 1787 after Frederick's death. He fought well in the disastrous campaign of 1806 against the French and surrendered with honor near Lubeck. In the dark days that followed he helped Karl vom und zum Stein, K. A. von Hardenberg, and General Scharnhorst recreate the Prussian opposition to Napoleon. He was a leader in the War of Liberation (1813–14). Although ill and subject to delusions, he won brilliant victories at Wahlstatt and Mockern and played a part in the defeat of the French at Leipzig. Crossing the Rhine, he led his army to Paris. In the Waterloo campaign of 1815, he was defeated at Ligny but arrived at the battle of Waterloo in time to

make it a victory. In 1814 he was made prince of Wahlstatt. See study by E. F. Henderson (1911).

Blucher, Vasily Konstantinovich (väsýē'lyē kánstantýē'návich), 1889-1937?, Russian general. An enlisted man in the czarist army, Blucher joined the Bolshevik party in 1916. He rose to high command in the civil war that followed the Bolshevik revolution. Appointed commander in the Russian Far East, he drove the Japanese interventionists from Vladivostok (1922). He was sent (1924) to China as military adviser to the Kuomintang-Communist alliance. The Chinese knew him as "Galen." He later returned to Moscow and was assigned to command Soviet forces in the Far East. He was created marshal in 1936 but was a victim soon afterward of Joseph Stalin's purge of the military hierarchy. He was posthumously rehabilitated in 1956.

blue baby, infant born with a congenital heart defect that causes a bluish coloration of the skin. The color is most noticeable around the lips and at the tips of the fingers and toes, it is caused by cyanosis, or the presence of deoxygenated blood in the arteries. The cyanotic condition occurs when a large portion of the venous blood bypasses the lungs. Normally, deoxygenated blood from the veins is pumped from the right side of the heart to the lungs, where it is oxygenated (see CIRCULATORY SYSTEM). In some blue babies there is a hole in the atrial or ventricular septum between the left and right side of the heart allowing deoxygenated blood to pass directly into the aorta and thereby into the arteries. In other cases the pulmonary artery is too narrow to allow sufficient blood to pass into the lungs for oxygenation. Surgical correction of the defect is usually required and is usually quite successful. An incompatibility of fetal and maternal blood types may also cause a bluish coloration in newborn infants, a condition that results when red blood cells in the infant's blood are destroyed by antibodies in the mother's blood (see RH FACTOR). Sophisticated knowledge of blood types has made this condition increasingly rare.

Bluebeard, nickname of the chevalier Raoul in a story by Charles Perrault. In the story Bluebeard's seventh wife, Fatima, yielding to curiosity, opens a locked door and discovers the slain bodies of her predecessors. She is saved from death by the timely arrival of her brothers, for whose coming her sister Anne has been watching from a tower. Breton tradition links Bluebeard with the seigneur de Retz, but the story occurs in the folklore of several countries.

bluebell, common name for several plants belonging to completely different classes, particularly the BELLFLOWER and the Virginia cowslip, or Virginia bluebell, of the family Boraginaceae (BORAGE family) and the wood hyacinth, a squill of the family Liliaceae (LILY family). Bluebells of the former family are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Lamiales, while those of the latter are in the same division but in the class Liliatae, order Liliales.

blueberry, plant of the large genus *Vaccinium*, widely distributed shrubs (occasionally small trees) of the family Ericaceae (HEATH family), usually found on acid soil. They are often confused with the related HUCKLEBERRY. Blueberries were a favorite food of the American Indians, who ate them fresh or dried them for winter use. The berries have been an article of commerce since early days. The high-bush blueberry (*V. corymbosum*) and the low-bush blueberry (*V. angustifolium* or *pennsylvanicum*), native to North America from Minnesota eastward, are the species most often cultivated, and greatly improved varieties are now grown in the East and West. Various species are sometimes called bilberry or whortleberry. The "huckleberry" of florists, sold for greenery, is a West Coast evergreen species, *V. ovatum*, called box blueberry and kinnikinnick. The related cranberry is considered by some botanists to be of the same genus as the blueberries. Blueberries are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ericales, family Ericaceae.

bluebird, common name for a North American migratory bird of the family Turdidae (thrush family). The eastern bluebird, *Sialia sialis*, is among the first spring arrivals in the North. It is about 7 in. (17.8 cm) long. The plumage of the male appears vivid blue in bright light and black at a distance, the breast is cinnamon-red, the under parts white. The female's coloring is duller. The bluebird usually nests in orchards or on the edges of woodlands but will also use nesting boxes. As a destroyer of insects it is of great value, it also eats wild fruits. Related birds are the mountain, the western (genus *Sialia*) or chestnut-backed, and the Florida bluebirds. Bluebirds

have a cheerful call and a sweet, warbling song. They raise several broods during a single mating season. The female is responsible for the incubation duties. Bluebirds are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Turdidae.

bluebonnet: see LUPINE

bluebottle: see CORNFLOWER

bluebottle fly: see BLOWFLY

blue crab, common name for a CRUSTACEAN, *Callinectes sapidus*, found on the S Atlantic and Gulf coasts of North America. The blue crab is a member of the family of swimming crabs known as the Portunidae and is characterized by a broad, semitriangular carapace (shell) covering the thorax, by a narrow abdomen tucked under its body, and by five pairs of appendages called pereopods, of which the first two bear large claws (chela) and the last two are flattened paddles modified for swimming. It is the most common edible crab of the Atlantic coast, and several million pounds are fished commercially by trapping or trawling each year. It is sold both as the hard-shell variety and as the familiar delicacy known as the soft-shelled crab. In the hard-shell form, the crab is in an intermolt phase (between molts) and the exoskeleton is fully hardened (sclerotized). In its soft-shell stage, the crab is in the phase just after the molt but before the exoskeleton has hardened. Since, in nature, the crab retires to secluded areas at the time of the molt and is thus difficult to collect, commercial fishermen collect the crabs at the so-called "peeler" stage, which occurs two to three days before the molt. The crabs are then held in pens, on floats in the water, until just after the molt, when they are marketable. The ovaries of the female begin to develop only after mating has taken place. The female carries the young under her abdomen until they hatch as tiny larvae, which are only 1/25 in. (0.1 cm) long. The crabs molt many times and grow to 7 in. (17.8 cm) in about 200 days. Blue crabs are classified in the phylum ARTHROPODA, class Crustacea, order Decapoda, family Portunidae.

Blue Cross plans: see HEALTH INSURANCE

blue-eyed grass: see IRIS

Bluefield, city (1970 pop. 15,921), Mercer co., extreme SW W Va., in the Allegheny Mts. adjacent to Bluefield, Va., settled 1777, inc. 1889. It is a trade center and a shipping point for the Pocahontas coal field. Lumber and electrical equipment are produced. Bluefield State College is there, and nearby are two state parks.

Bluefields, town (1970 est. pop. 22,910), capital of Zelaya dept., SE Nicaragua, on Bluefields Bay at the mouth of the Escondido River. It is Nicaragua's chief Caribbean port. Bananas, hardwoods, and coconuts are exported. Bluefields was a rendezvous for English and Dutch buccaneers in the 16th and 17th cent. and became (1678) capital of the British protectorate over the MOSQUITO COAST. During the U.S. interventions (1912-15, 1926-33) in Nicaragua, marines were stationed at Bluefields.

bluefish, voracious marine fish of the family Pomatomidae, resembling the pompano but more closely related to the sea basses. Bluefish are found in the warm waters of the Indian Ocean, the Mediterranean Sea, and the Atlantic. They average 30 in. (75 cm) in length and 10 to 12 lb (4.5-5.5 kg) in weight. Their sweet and pleasant-tasting flesh and their streamlined agility make them excellent food and game fish. Bluefish wander erratically in dense schools, feeding on menhaden and mullet and leaving a trail of carnage, for they destroy much more than they consume, they are even known to regurgitate in order to gorge themselves more. Bluefish are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Pomatomidae.

bluegill: see SUNFISH

bluegrass, any species of the large and widely distributed genus *Poa*, chiefly range and pasture grasses of economic importance in temperate and cool regions. In general, bluegrasses are perennial with fine-leaved foliage that is bluish green in some species. One of the best known and most important is the sod-forming Kentucky bluegrass, or June grass (*P. pratensis*), believed to have been introduced from the Old World and now widely naturalized in the United States. Kentucky is known as the Bluegrass State because this species is so prevalent there. Others are rough bluegrass (*P. trivialis*), used for shady lawns, Sandberg bluegrass (*P. secunda*), the most common native species, and big bluegrass (*P. ampla*), an important range grass. Bluegrass is classi-

fied in the division MAGNOLIOPHYTA, class Liliatae, order Cyperales, family Gramineae.

bluegrass music: see COUNTRY AND WESTERN MUSIC

blue-green algae: see SCHIZOPHYTA

Blue Island, city (1970 pop. 22,958), Cook co., NE Ill., a residential and industrial suburb of Chicago, on the Little Calumet River, inc. 1843. It has oil refineries, railroad yards and shops, canneries, and plants manufacturing electric signals, plastic products, steel forgings, glass, chemicals, and medical and dental supplies.

blue jay, common name for a familiar bird (*Cyanocitta cristata*) of central and E North America, allied to the crow, the raven, and the magpie, belonging to the family Corvidae. Almost a foot (30 cm) long, it is handsome and conspicuous. Its upper parts, including the crest, are grayish violet blue. The wings and tail are bright blue with black and white markings, the neck is collared with black, and the under parts are gray and white. Except during the nesting season it has a raucous cry with hawklike and other imitative sounds. Some winter in their northern range, but many travel south. They feed chiefly on large insects, seeds, and nuts (especially acorns and beechnuts), they also eat eggs and nestlings. Blue jays are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Corvidae.

blue laws, legislation regulating public and private conduct, especially laws relating to Sabbath observance. The term was originally applied to the 17th-century laws of the theocratic New Haven colony, they were called "blue laws" after the blue paper on which they were printed. New Haven and other Puritan colonies of New England had rigid laws prohibiting Sabbath breaking, breaches in family discipline, drunkenness, and excesses in dress. Although such legislation had its origins in European SABBATARIAN and SUMPTUARY LAWS, the term "blue laws" is usually applied only to American legislation. With the dissolution of the Puritan theocracies after the American Revolution, blue laws declined, many of them lay forgotten in state statute books only to be revived much later. The growth of the PROHIBITION movement in the 19th cent. and early 20th cent. brought with it other laws regulating private conduct. Many states forbade the sale of cigarettes, and laws prohibited secular amusements as well as all unnecessary work on Sunday, provision was made for strict local censorship of books, plays, films and other means of instruction and entertainment. Although much of this legislation has been softened if not repealed, there are still many areas and communities in the United States, especially those where religious fundamentalism is strong, that retain blue laws. The Supreme Court has upheld Sunday closing laws ruling that such laws do not interfere with the free exercise of religion and do not constitute the establishment of a state religion.

Blue Mountains, uplifted, eroded part of the Columbia Plateau, c. 6,500 ft (1,980 m) high, NE Oregon and SE Wash. Lava flows cover much of the surface. The upper, wooded slopes are used for lumbering. Irrigated farming (especially of peas and green beans) and cattle raising are carried on in the surrounding lowlands. Rock Creek Butte, 9,105 ft (2,775 m) high, is the highest point in the Blue Mts.

Blue Nile, Arab *Al Bahr al Azraq*, river, c. 1,000 mi (1,600 km) long, the chief headstream of the Nile, rising in Lake Tana, NW Ethiopia, at an altitude of c. 6,000 ft (1,800 m). It flows generally S from the Lake Tana region, then W across Ethiopia, and finally NW into the Sudan. At Khartoum the Blue Nile merges with the White Nile to form the Nile proper. The flow of the Blue Nile reaches maximum volume in the rainy season (from June to September), when it supplies about two thirds of the water of the Nile proper. The Blue Nile used to cause the annual Nile flood before the completion in 1970 of the ASWAN HIGH DAM in Egypt. In Ethiopia the Blue Nile, also known there as the Abbai, flows in a deep gorge and receives many tributaries. There are dams on the Blue Nile at Roseires and Sennar in the Sudan, the latter is used to irrigate the AL JAZIRAH region. See Alan Moorehead, *The Blue Nile* (1962).

blueprint, white-on-blue photographic print, commonly of a working drawing used during building or manufacturing, also called a cyanotype. The plan is first drawn to scale on a special paper or tracing cloth through which light can penetrate. The drawing is then placed over so-called blueprint paper, prepared by treatment with a mixture of potassium ferricyanide and ammonium ferric citrate. When the drawing and the blueprint paper thus attached are

exposed to a strong light, the ferric salt not lying beneath the lines of the drawing, and hence unprotected, is changed to a ferrous salt that reacts with the ferricyanide to form Turnbull's blue. This blue is the background of the finished print. The ferric salt under the lines of the drawing, hence protected from the light, remains unchanged and is dissolved away during the washing in water that must follow exposure. As a result, the lines of the original drawing appear white in the finished blueprint.

Blue Rider. see **BLAU REITER DER**

Blue Ridge, eastern range of the Appalachian Mts., extending south from S Pa. to N Ga., highest mountains in the E United States. Mt. Mitchell, 6,684 ft (2,037 m) high, is the tallest peak. Beginning with a narrow ridge in the north, c 10 mi (16 km) wide, the range broadens toward the south, reaching a maximum width of 70 mi (113 km) in North Carolina. Receiving much rain, the region is heavily forested, wood is the area's chief resource. The Blue Ridge was a barrier to the pioneers' westward movement. Numerous gaps cross the ridge, the gap at Harpers Ferry, W Va., is an important railroad traverse. Most of the people of the Blue Ridge live on small farms in sheltered valleys and retain traditional lifestyles and speech. Subsistence agriculture is the main activity; corn is used to make whiskey. Commercial apple orchards are found in Virginia, Maryland, and Pennsylvania. The Blue Ridge is a major East Coast recreation area noted for its resorts and scenery. The APPALACHIAN TRAIL winds atop the range. Skyline Drive, Va., following the crest of the Blue Ridge in Shenandoah National Park, has many roadside lookouts. The Blue Ridge Parkway (see NATIONAL PARKS AND MONUMENTS, table), designed especially for motor recreation, links the Shenandoah and Great Smoky Mts. national parks.

blues: see **JAZZ**.

Blues and Greens, political factions in the Byzantine Empire in the 6th cent. They took their names from two of the four colors worn by the circus choristers. Their clashes were intensified by religious differences. The Greens represented MONOTHEISM and the lower classes, the Blues, orthodoxy and the upper classes. In 532 the two factions joined in the Nika revolt against Emperor JUSTINIAN I and Empress THEODORA. However, Theodora's resolute stand and the aid of Belisarius and Narses ended the revolt. The factions continued to oppose each other into the 7th cent., but by the 9th cent. they had become mostly ceremonial.

bluestocking, derisive term originally applied to certain 18th-century women with pronounced literary interests. During the 1750s, Elizabeth Vesey held evening parties, at which the entertainment consisted of conversation on literary subjects. Eminent men of the day were invited to contribute to these conversations. Hannah MORE, Elizabeth MONTAGU, and Elizabeth CARTER, among others, continued this tradition. Boswell, in his *Life of Dr. Johnson*, states that these "bluestocking clubs" were so named because of Benjamin Stillingfleet, who attended in unconventional blue worsted stockings rather than the customary black silk stockings. In time the name *bluestocking* was applied solely to women of pedantic literary tastes.

bluestone, common name for the blue, crystalline heptahydrate of CUPRIC SULFATE. It also refers to a blue-gray sandstone that occurs in New York state.

bluet. see **MADDER**

blue vitriol, the pentahydrate of CUPRIC SULFATE.

blue whale, a baleen WHALE, *Balaenoptera muscula*. Also called the sulfur-bottom whale and Sibbald's rorqual, it is the largest animal that has ever lived. Blue whales have been known to reach a length of 100 ft (30.5 m) and to weigh as much as 120 tons, however, specimens even 80 ft (24.4 m) long are now very rare because of extensive WHALING. *B. muscula* is slate blue in color and has a dorsal fin. It is toothless, and has fringed baleen, or whalebone, plates in its mouth, which act as a food strainer. As water is expelled from the whale's mouth, plankton is trapped behind the strainer. The neck of the blue whale has 80 to 100 conspicuous furrows called ventral grooves, which alternately expand and contract as the animal takes in and expels water. The blue whale is cosmopolitan in distribution. In summer it inhabits polar seas, feeding in the water of melting icepacks, in winter it migrates to warmer latitudes, occasionally reaching the equator. Mating occurs at the end of winter, with a single calf born every second or third year, after a gestation period of 10 to 11 months. The calf is nursed for 6 months, and reaches puberty in about 3 yr. Blue whales may live

as long as 50 yr. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Cetacea, family Balaenopteridae. See G. C. Small, *The Blue Whale* (1971).

Blum, Léon (lāōN' blōōm), 1872-1950, French Socialist leader and writer. Well established in literary circles, he entered politics during the DREYFUS AFFAIR and rose to party leadership. In 1936 he brought about the coalition of Radical Socialists, Socialists, and Communists in the Popular Front, which won an overwhelming electoral victory. This first Popular Front government, which he headed, inaugurated the 40-hour week, collective bargaining, and compulsory arbitration, it also reorganized and nationalized the Bank of France, and nationalized the munitions industry. Conservative opposition to Blum's fiscal measures forced his resignation (1937). Blum served as vice premier (1937-38) under Camille CHAUTEMPS, was briefly premier in 1938, and opposed the Munich Pact. Arrested (1940) by the Vichy government, he was among the defendants in the abortive war-guilt trial at Riom in 1942. Blum was imprisoned until the end of the war. After negotiating (1946) a credit agreement with the United States, he was again premier for a little more than a month in 1946-47, heading an active Socialist cabinet. The elder statesman of French Socialists, Blum gradually came to represent the moderate wing. His writings include *Marriage* (tr. 1937) and *For All Mankind* (tr. 1946, repr. 1969). See biographies by L. E. Dalby (1963) and Joel Colton (1966, repr. 1974).

Blume, Peter (blōōm), 1906-, American painter, b. Russia. Blume emigrated to the United States in 1911. In his early work, such as *The Parade* (1930; Mus. of Modern Art, New York City), he sought to depict through symbolism the smooth, hard contours of the industrial world. His paintings, which gained recognition in the 1930s, are precise, linear, and fantastic treatments of modern social themes, painted in microscopic detail. Major works include the powerful antifascist *Eternal City* (1934-37; Mus. of Modern Art) and *The Rock* (1945-48; Art Inst., Chicago). See exhibition catalog by Frank Getlein (1968).

Blumenbach, Johann Friedrich (yōhān' frē'drīkh blōō'manbāk), 1752-1840, German naturalist and anthropologist. He introduced and developed the science of comparative anatomy in Germany. His *De generis humani varietate nativa* (1775, tr. *On the Natural Varieties of Mankind*, 1865, repr. 1969) marked the beginnings of physical anthropology and described the five divisions of mankind which have been the basis of all subsequent racial classifications. Blumenbach's analysis of an extensive skull collection, published as *Collectio craniorum diversarum gentium* (1790-1828), established craniometric study. English translations of his works include *The Anthropological Treatises of Johann Friedrich Blumenbach* (1865, repr. 1969).

Blumengarten, Solomon: see **BLOOMGARDEN SOLOMON**

Blunden, Edmund Charles, 1896-1974, English author. Besides being a poet of rural England, he was an editor, biographer, and critic. His prose works include *Undertones of War* (1928), an account of his experiences in World War I, *Life of Leigh Hunt* (1930), *Charles Lamb and His Contemporaries* (1933), *Shelley* (1946), and *War Poets, 1914-1918* (1962). In 1966 he was named to the poetry chair at Oxford.

Blunt, Sir Anthony Frederick, 1907-, English art historian. Director of the Courtauld Institute of Art since 1947 and professor of the history of art at the Univ. of London, Blunt has also served since 1952 as Surveyor of the Queen's Pictures. His numerous writings include *Artistic Theory in Italy, 1450-1600* (1940), *François Mansart and the Origins of French Classical Architecture* (1941), *The Drawings of Poussin* (with Walter Friedlaender, 3 vol., 1939-53), *Art and Architecture in France, 1500-1700* (1953), *The Art of William Blake* (1959), *The Paintings of Nicolas Poussin* (1968), *Picasso's Guernica* (1968), and *Sicilian Baroque* (1968). He also wrote several catalogs of the drawings at Windsor Castle. See his bibliography, ed. by Elsa Scheerer, in *Studies in Renaissance and Baroque Art*, presented on his 60th birthday (1967).

Blunt, George William, 1802-78, American hydrographer, son of Edmund March Blunt, a pioneer publisher of nautical books and charts in Newburyport, Mass. He established (1821) himself in a similar business in New York and published the numerous editions of *Bowditch's Navigator*, *Blunt's Coast Pilot*, and nautical charts of the entire world. The cop-

perplates of these maps and the copyrights to the *Navigator* and *Coast Pilot* were later purchased by the U.S. Hydrographic Office when that bureau began its publication work. From 1833 until his death, Blunt was first assistant in the U.S. Coast Survey. He served also for 32 years on the Board of Pilot Commissioners and did much to put through needed reforms in the U.S. Lighthouse Service.

Blunt, James Gilpatrick, 1826-81, American physician and Union general in the Civil War, b. Hancock co., Maine. He practiced medicine in Ohio and later in Kansas, where he became associated with John Brown in antislavery activity. Blunt served in the Union forces throughout the war and was made a brigadier general in 1862. The border region of Kansas, Missouri, and Arkansas was the principal scene of his activity. He was victorious at Old Fort Wayne (Oct., 1862) and at Cane Hill (Nov., 1862). With Gen. F. J. Herron, he drove back T. C. Hindman at Prairie Grove (Dec., 1862). In 1864, Blunt was instrumental in repulsing Sterling Price's raid in Missouri.

Blunt, Wilfrid Scawen (sfō'n), 1840-1922, English poet and political writer. After retiring c. 1872 from the diplomatic service, he began a career of travel and political crusading. He wrote several works championing Indian, Egyptian, and Irish independence. His poetry, noted for its emotional force, includes *The Love Sonnets of Proteus* (1880) and *The Wind and the Whirlwind* (1883). See his diaries (1919-20), study by Thomas J. Assad (1964).

Bluntschli, Johann Kaspar (yō'hān kās'pār blōōnch'lē), 1808-81, Swiss jurist and political scientist. Trained at the Univ. of Berlin, he taught law at Zürich and later at Munich and Heidelberg. He expounded the organic theory of the state in *Allgemeines Staatsrecht* (2 vol., 1851-52, partial tr. 1892), carrying the theory to a complete equation of the life of a state and the life of a person. In *Deutsches Privatrecht* [German private law] (2 vol., 1853-54), he attempted to contrast the indigenous elements in German law with those derived from Roman law. Bluntschli was of some political importance in Baden as a spokesman of the liberal Protestant middle class favoring unification of Germany under Prussia, and he was a founder of the Institute of International Law at Ghent.

Bly, Robert, 1926-, American poet, translator, editor, and publisher, b. Madison, Minn., grad. Harvard, 1950. His poems, personal and precisely observant, are informed by the American landscape. Among his volumes of poetry are *The Light Around the Body* (1967) and *Sleepers Joining Hands* (1972). As head of the Sixties Press he has influenced modern writing by printing unconventional poetry and translations from lesser-known foreign poets. His translations include Selma Lagerlöf's *The Story of Gosta Berling* (1962) and *Neruda and Vallejo: Selected Poems* (1973).

Blyth (blith), municipal borough (1971 pop. 34,617), Northumberland, NE England, at the mouth of the Blyth River. It is an industrial center and seaport, with shipbuilding and ship repair and a large trade in coal and timber. Ropes and sails, confectionery, textiles, and clothing are manufactured. The area south of the harbor is a seaside resort.

Blythe, David Gilmour, 1815-65, American artist, b. East Liverpool, Ohio. Working in Pennsylvania, Blythe produced GENRE scenes that depict the rough existence of the early frontier. Many of his paintings are satirical portrayals of the everyday world of early 19th-century America.

Blytheville (blith'vīl), city (1970 pop. 24,752), seat of Mississippi co., NE Ark., near the Mississippi River, inc. 1891. It is the trading center of the state's richest cotton area, soybeans and feed crops are also grown in the region. The city is an industrial center as well, manufacturing food products, office supplies, and chrome trim. Blytheville Air Force Base is there, and a game refuge is nearby.

B'nai B'rith (bənā' brith) [Heb. = Sons of the Covenant], oldest and largest Jewish service organization in the United States. It was founded (1843) by American Jews "to provide service to their own people and to humanity at large." Its broad-based program allows B'nai B'rith to embrace a wide cross-section of American Jewry. Its subdivisions include the Hillel Foundation (for Jewish college students), the Anti-Defamation League (a civil rights organization), and B'nai B'rith Women. B'nai B'rith has about 500,000 members in 75 state and regional groups. The national office, located in Washington, D.C., publishes the *National Jewish Monthly* and other periodicals.

boa, name for live-bearing constrictor SNAKES of the family Boidae, found mostly in the Americas. This

family, which also comprises the egg-laying PYTHONS of the Old World, includes the largest of all snakes, as well as many smaller ones. Members of the boa family have two functional lungs instead of one, as is found in other snakes, and vestiges of hind limbs, these primitive characteristics are indicative of their relationship to lizards. Each of the two tiny, internal leg bones ends in an external horny claw, the claws are much more prominent in males than in females. Boas capture their prey by striking with their teeth and simultaneously throwing their bodies in a coil around the victim. They then squeeze the animal so that, unable to expand its rib cage, it suffocates. Like other snakes, boas swallow the prey whole. Over 30 boa species are found from Mexico to South America, with the greatest variety in the tropics, and two in the United States. Boas may be terrestrial, arboreal, or burrowing. Some are brightly colored, like the green and white emerald tree boa of the tropics (*Boa canina*), or indescend, like the wide-ranging rainbow boa (*Epicrates cenchris*). Best known is the boa constrictor (*Constrictor constrictor*), which lives in a variety of terrestrial habitats from S Mexico to central Argentina. It averages 6 to 9 ft (1.8-2.7 m) in length, occasionally reaching 14 ft (4.3 m), and has dark brown diamond markings on a lighter background. The South American anaconda (*Eunectes murinus*) is a semiaquatic boa that inhabits swamps and river shallows, catching animals that come to drink. The longest member of the boa family and the thickest of all snakes, it may reach 25 ft (7.9 m) in length and 3 ft (90 cm) in girth. The rubber boa (*Charina bottae*) is found in moist regions of the far W United States and extreme SW Canada. It is a burrower, about 18 in (46 cm) long, with a narrow, blunt head, broad, blunt tail, and silver-green skin. It feeds chiefly on lizards and rodents. The rosy boa (*Lichanura roseofusca*) is found in chaparral in the SW United States and N Mexico, it grows about 3 ft (90 cm) long. It has large, dark brown spots on a lighter background. Several species of sand boa (*Eryx*) are distributed from India and central Asia to N Africa and SE Europe, all are burrowers in sand. There are also several boa species on Madagascar and several on Pacific islands. Boas are classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Squamata, family Boidae.

Boabdil (bōābdēl'), d. 1538, last Moorish king of GRANADA in Spain (1482-92). He seized the throne from his father and thus plunged Granada into civil war at the time the Castilians were beginning their attack on the kingdom. As the Christians overran western Granada, Boabdil secretly promised (1487) them that he would surrender the city of Granada in return for some cities held by the rival Granadian party. However, he repudiated the agreement, and in April, 1491, the Castilians laid siege to Granada. After valiant resistance, Boabdil surrendered in Jan., 1492, and fled to Morocco. His surrender marked the end of Moorish rule in Spain, and he is the subject of a number of romantic legends.

Boadicea (bō'ādīsē'ā), d. A.D. 61, British queen of the Iceni (of Norfolk), properly called Boudicca. Her husband, King Prasutagus, died in A.D. 59 or 60, leaving half his property to the Roman emperor and half to his daughters. The Romans, however, seized the kingdom and began to despoil it, thus provoking the Iceni to revolt. Boadicea led them in sacking Colchester, London, and Verulamium (St. Albans). Her army was eventually crushed by the Roman governor Caius Suetonius Paulinus, and Boadicea took poison.

Boanerges (bō'anūr'jēz), sons of Zebedee. See JAMES, SAINT (St. James the Greater), and JOHN, SAINT **boar**: see SWINE.

Boas, Franz (bō'ās), 1858-1942, German-American anthropologist, b. Minden, Germany, Ph.D. Univ. of Kiel, 1881. He joined an expedition to Baffin Island in 1883 and initiated his fieldwork with observations of the Central Eskimos. In 1886 he began his investigations of the Indian tribes of British Columbia. After securing (1889) at Clark Univ. his first position in the United States, he was associated with the American Museum of Natural History from 1895 to 1905. Boas began to lecture at Columbia in 1896 and in 1899 became its first professor of anthropology, a position he held for 37 years. No one has more greatly influenced American anthropology. Boas re-examined the premises of physical anthropology and pioneered in applying statistical methods to biometric study. He was an early contributor to stratigraphic archaeology in Mexico. As a student of American Indian languages, Boas emphasized the importance of linguistic analysis from internal linguistic structure. His insistence on a rigorous meth-

odology served to establish the scientific value of his contributions, and his methods and conclusions are still influential. Boas taught and inspired a generation of anthropologists, and wrote hundreds of scientific monographs and articles. His best-known works include *The Mind of Primitive Man* (1911, rev. ed. 1938), *Primitive Art* (1927, repr. 1955), *Anthropology and Modern Life* (1928, rev. ed. 1932), and two volumes of collected writings, *Race, Language and Culture* (1940) and *Race and Democratic Society* (1945). He edited *General Anthropology* (1938). See studies by A. L. Kroeber et al. (1943), W. R. Goldschmidt, ed. (1959), and M. J. Herskovits (1953, repr. 1973).

boat, small, open nautical vessel propelled by sail, oar, pole, paddle, or motor. The use of the term *boat* for larger vessels, although common, is somewhat improper, but the line between boats and ships is not easy to draw. A number of special types of boat are generally referred to by their individual names rather than by the generic term, e.g., the CANOE, the KAYAK (Eskimo decked canoe), and the UMIAC (Eskimo open boat). Simple dugouts, made from hollowed-out logs, have been known since prehistoric times to all peoples dwelling on waterways. The ancient Egyptians used boats made of acacia wood and held together with pegs. Modern wooden boats are built in four ways: with fore-and-aft planks laid with their edges flush (carvel-built), with fore-and-aft planks laid with overlapping edges (clinker-built), with inner and outer layers of planks running diagonally in opposite directions, and with planking consisting of large sheets of plywood. Many boats, however, are now made of molded fiber glass or of aluminum. Primitive boats in many parts of the world are stabilized by an outrigger—a parallel float attached by projecting arms. The varieties of boats in modern use are almost infinite. The Chinese junk, with high poop and overhanging bow, is large enough to be classified as a ship, the junk, together with the sampan (a wide, flat-bottomed skiff, often having a mat-covered cabin with living quarters), is a familiar sight in the rivers and coastal waters of the Far East. The lateen-rigged dhow, in which energetic Arab merchants of the Middle Ages plied their trade along all the shores of S Asia and E Africa, is still in use today. A familiar local craft on the Mediterranean is the flat-bottomed, canoe-like, pole-driven gondola of the Venetian canals. A typical Mediterranean vessel of ancient times was the GALLEY, usually propelled by oars. Because the northern seas were stormier, the Viking boats, which the Norsemen were building by the 5th cent. A.D., were more seaworthy, they were believed to be the first clinker-built boats. Deckless or half-decked, with elevated bow and stern, these early boats took the Norsemen to all the coasts of Europe and across the Atlantic. The later rugged whaleboat was developed from the Viking type of construction and came to be used for numerous purposes. The fishing boats of the North and Baltic seas, also built on Viking principles, are roughly similar to whaleboats. Another important fishing boat is the dory, a small, versatile, flat-bottomed craft easily transported on shipboard and used in the entire N Atlantic. For bibliography, see separate articles on various types of boats.

boat-billed heron or **boatbill**, a tropical New World HERON, *Choclearius choclearius*. With shorter legs and a squatter appearance than most herons, this bird is remarkable chiefly for its broad bill, which is shaped like an overturned boat. Its coloring is dull brown, gray, and black and is similar in both the male and female. It is a nocturnal, shallow-water feeder, living on a diet of fishes and insects, it roosts and nests in trees. The boat-billed heron inhabits mangrove swamps from Mexico to S Brazil. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Ciconiiformes, family Ardeidae.

boating: see CANOEING ICEBOATING MOTORBOATING ROWING, and SAILING.

Boa Vista (bō'ā vēsh'tā), city (1970 pop. 36,491), capital of Roraima Federal Dist., NW Brazil, on the Rio Branco. Its economy is based on the processing and shipment of minerals (gold, bauxite, quartz, and oil) found in the surrounding region. Boa Vista became the capital when the district was created in 1943.

Boaz (bō'āz) 1 Ruth's husband, ancestor of David. Ruth 2, 3, 4. Boaz. Mat. 15, Luke 3:32. 2 Pillar of Solomon's Temple. See JACHIN AND BOAZ.

bobac (bō'bāk) see MARMOT.

Bobadilla, Francisco de (franthes'kō dā bōbādē'l-lyā), d. 1502, Spanish colonial governor. He super-

seeded Columbus in the West Indies (1500) and sent him home as a prisoner. Recalled in 1502, he was drowned on the voyage to Europe.

bobbin, implement on which thread is wound, used in sewing, spinning, weaving, and lace making. Sometimes the wooden spools of sewing thread are called bobbins. The bobbin of a sewing machine is a metal cylinder, with a flange at each end, on which the lower thread is wound to be carried through the shuttle to the seam. In some primitive handweaving the weft, or woof, was wound on a bobbin flanged at one end and passed or carried by it through the warp. In tapestry weaving, bobbin looms are essential, as weft strands of different colors must go back and forth for the distance required by the design, somewhat in the manner of an embroidery needle darning in a pattern. In making pillow lace, bobbins form an important part of the equipment, as each thread of the pattern requires a different bobbin, intricate patterns call for hundreds of bobbins to hold the fine thread in order. Bobbins for lace making are made in various shapes and sizes, from a variety of materials, as walnut, rosewood, boxwood, and olive wood, glass, metal, ivory, coral, malachite, and bamboo, and are ornamented with carving, painting, or engraving.

Bobbio (bōbb'yō), town, in Emilia-Romagna, N central Italy. It is a commercial center and a summer resort. St. COLUMBAN founded a monastery there in 612, and during the 9th-12th cent. it was a center of European cultural life. The monastery later declined, and the invaluable manuscripts of its great library were dispersed in the 15th and 16th cent. The monastery itself was dissolved in the early 19th cent.

bobcat. see LYNX.

Bobigny (bōbēnyē'), city (1968 pop. 39,453), capital of Seine-Saint Denis dept., N central France, an industrial suburb of Paris. Metals, food products, and toys are among the major manufactures.

bobolink (bōb'əlīŋk'), common name in the N United States and Canada for an American songbird, *Dolichonyx oryzivorus*, related to the blackbird and the oriole, belonging to the family Icteridae. In spring the plumage of the male is black except for the white shoulders and lower back and the buff nape. After the breeding season the male assumes yellowish, brown-streaked plumage like that of the female, and his former voluble singing is reduced to a single call note. Bobolinks winter in South America, in Jamaica they are called butter birds. In the north they are insectivorous, but they may feed on rice crops during migration in the south. They have been known to gorge themselves in the eastern wild rice marshes and in cultivated fields in South Carolina and Georgia, becoming so fat that they used to be hunted as game birds. Because of these feeding habits they did serious damage to crops as they migrated, and they were called rice birds or reed birds. Bobolinks are now a protected species and are no longer hunted. Cup-shaped nests are built by the female in grassy fields. Polygamy occurs, but monogamy is more common. Bobolinks are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Icteridae.

Bobruisk: see BOBRUYSK, USSR.

Bobruysk (bābrōō'sk), city (1970 pop. 138,000), Belorussia, W central European USSR, a port on the Berezina River. It is also a railway junction and tire manufacturing center. Bobruysk has been known since the 15th cent.

bobsledding, winter sport in which a bobsled—an open, steel-bodied vehicle, with sledlike runners, that accommodates two or four persons—hurtles down a course of icy, snow-surfaced, steeply banked, twisting inclines. The crew of a four-man bobsled is composed of a driver and three bobsers, the last one being the brakeman. A two-man sled consists of a driver and his brakeman. An offspring of tobogganing, bobsledding was developed by a group of American and English vacationers at St. Moritz, Switzerland, in the late 19th cent. The sport was included in the first Winter Olympic games (1924) and has been an Olympic event since then. The Mt. Van Hoevenberg run at Lake Placid, N.Y., is the only course in the United States. On the straightaways of a course, sleds sometimes reach the exhilarating but dangerous speed of 90 mi (145 km) per hr.

bobwhite, common name for an American henlike bird of the family Phasianidae, which also includes the pheasant and the partridge. The eastern bobwhite quail (*Colinus virginianus*) is about 10 in (25 cm) long. Its plumage is mixed brown, black, and white in the male and brown and buff in the female.

of the origin of the solar system have tried to explain the apparent regularity in the mean orbital distances of the planets, arguing that it could not arise by chance, but must be a manifestation of the laws of physics. Some astronomers hold that the deviation of Neptune and Pluto from their predicted positions signifies that they are no longer at their original positions in the solar system. However, since Bode's law is not a law in the usual scientific sense, i.e., it is not universal and invariant, it alone should not be taken as evidence for such a conclusion.

Bodh Gaya or Buddh Gaya (both bōd ga'ya), village (1971 pop 6,993), Bihar state, E central India. According to tradition, BUDDHA received enlightenment under a pipal tree (bo tree) in Bodh Gaya. There are extensive relics of Buddhist sculpture, dating from the 8th to the 12th cent. A.D.

Bodhidharma: see ZEN BUDDHISM

bodhisattva (bō'disat'wə) [Sanskrit, =enlightenment-being], in early BUDDHISM the term used to refer to the Buddha before he attained supreme enlightenment, more generally, any being destined for enlightenment or intent on enlightenment. The spiritual path of the bodhisattva is the central teaching of Mahayana Buddhism. One becomes a bodhisattva by arousing the "mind of enlightenment," taking a vow to attain supreme enlightenment for the sake of all beings. The bodhisattva does not aspire to leave the round of birth-and-death (samsara) before all beings are saved, he is thus distinguished from the arhant of earlier Buddhism, who allegedly seeks NIRVANA only for himself and is regarded by Mahayanists as having an inferior spiritual attainment. The practice of a bodhisattva consists of the six "perfections" or paramitas: charity (dāna), morality (śīla), forbearance (kṣānti), diligence (vīrya), meditation (dhyāna), and wisdom (prajñā). There are in Buddhism an actual congregation of bodhisattvas, both laymen and monks, and also many celestial bodhisattvas, who are worshiped along with the Gautama Buddha and the buddhas of other worlds. The most important celestial bodhisattvas are Avalokitesvara, the bodhisattva of compassion, Mañjuśrī, the bodhisattva of wisdom, and Maitreya, who in heaven awaits birth as the next buddha. See also SUNYATA.

Bodin, Jean (zhān bōdān'), 1530?-1596, French social and political philosopher. He studied and taught at Toulouse and enjoyed a successful legal career. His most notable book, *Six livres de la république* (1576, tr. *Six Bookes of the Commonweale*, 1606) ranks as a major work of political theory. During the last half of the 16th cent., France was experiencing severe disorders caused by religious disagreements between Roman Catholics and Huguenots (see RELIGION, WARS OF). Dismayed by this chaos, Bodin believed that a restoration of order could only be accomplished by religious toleration and the establishment of a fully sovereign monarch. These suggestions aroused a great deal of opposition in his time, but they now establish Bodin as a major theoretical contributor toward the development of the modern nation-state. His assertion that an absolutely sovereign monarch was necessary for a well-ordered state prefigured Hobbes and was an attack on remnants of feudal society. His economic policies concerning taxation and government involvement in trade were also influential. See studies by J. H. Franklin (1963 and 1973), and Beatrice Reynolds (1931, repr. 1969), J. W. Allen, *A History of Political Thought in the Sixteenth Century* (1961).

Bodhinayakanur (bō'dīnayak'anōr'), town (1971 pop 54,118), Tamil Nadu state, at the foot of the Western Ghats, SE India. A Bodhinayakanur state is said to have been established in 1336. The area was seized by Hyder Ali in 1776 and ceded to the British in 1793. The town is surrounded by hills. It is a market for cardamom, coffee, tea, silk, and cotton, and it has cotton mills.

Bodleian Library (bōd'lēan, bōd'lē'an), at Oxford Univ. The original library, destroyed in the reign of Edward VI, was replaced in 1602, chiefly through the efforts of Sir Thomas BODLEY, who gave it valuable collections of books and manuscripts and in his will left a fund for maintenance. The library has one of the great collections of English books, including a major Shakespearean section, its extensive manuscript collection is especially rich in biblical and Arabic material. A new building for the library was opened in 1946. See H. H. E. Craster, *History of the Bodleian Library, 1845-1945* (1952), M. B. Bennett, *Bodleian Library* (1958).

Bodley, George Frederick (bōd'lē), 1827-1907, English architect. One of the most prominent and prolific ecclesiastical architects of his time, Bodley

was a pupil of Sir George Gilbert Scott, an adherent of the Victorian Gothic revival. A friend of William Morris and the other Pre-Raphaelites, he did much to foster good taste in the applied arts. Among his many works is Queens' College Chapel at Cambridge. His secular buildings include additions to Magdalen and other colleges at Oxford and the London school board offices. Besides his English work, he designed cathedrals in Tasmania, in San Francisco, and, with his pupil James Vaughan, the Cathedral of St. Peter and St. Paul in Washington, D.C. See B. F. L. Clarke, *Church Builders of the Nineteenth Century* (1938).

Bodley, Sir Thomas, 1545-1613, English scholar and diplomat, organizer of the BODLEIAN LIBRARY at Oxford Univ. He was a Greek scholar and teacher at Oxford, and in 1584 he was elected to Parliament. He spent 11 years (1585-96) abroad on diplomatic missions for Queen Elizabeth I. In 1598 his offer to restore Duke Humphrey's library was accepted by Oxford, and he spent the rest of his life and most of his fortune on it. See his *Letters to Thomas James, First Keeper of the Bodleian Library*, ed. by G. W. Wheeler (1926).

Bodmer, Johann Jakob (yō'han ya'kōp bōd'mər), 1698-1783, Swiss critic, poet, and editor. He translated Milton's *Paradise Lost* and *Middle High German poetry*. Inspired by the *Spectator*, Bodmer published, with J. J. Breitinger, the critical journal *Discourse der Mahlern* (1721-23), which greatly influenced 18th-century German poetry. Bodmer, who championed Klopstock, Wieland, and Herder, is famous for his argument with Gottsched, whose rationalism he countered with an essay (1740) on fancy in poetry.

Bodmin, municipal borough (1971 pop 9,204), county town of Cornwall, SW England. The county offices are now in Truro. Bodmin was formerly a busy market for tin and wool. The borough has a psychiatric hospital and a 15th-century church.

Bodo (bō'do), city (1970 pop 29,123), capital of Nordland co., W Norway, at the mouth of the Saltfjord, N of the Arctic Circle. It is a center for coastal shipping, tourism, and fishing and serves as the port of the SULITJELMA copper and pyrite mines. The city was heavily damaged in World War II. Of note is a modern cathedral (1956). Nearby is Bodin Church, a medieval stone structure.

Bodoni, Giambattista (jambat-tē'sta bōdō'nē), 1740-1813, Italian printer b. Piedmont. He was the son of a printer and worked for a time at the press of the Vatican. Under the patronage of the duke of Parma, he produced stately quartos and folios with impressive title pages and luxurious margins. With BASKERVILLE in England and the DIDOT family in France, Bodoni was a leader in originating pseudo-classical typefaces. These were distinguished from the "old style" of CASLON by emphasizing the contrast of light and heavy lines and by long, level serifs. Bodoni's most notable publications include folio editions of Horace (1791), Vergil (1793), *The Divine Comedy* (1795), and Homer (1808). His coldly elegant books were frankly made to be admired for typeface and layout, not to be studied or read. He was apparently indifferent to the quality of the text he printed and to editing and proofreading. William Morris considered Bodoni's mechanical perfection in typography the ultimate example of modern ugliness.

body-marking, painting, tattooing, or scarification (cutting or burning) of the body for ritual, esthetic, medicinal, magic, or religious purposes. Evidence from prehistoric burials, rock carvings, and paintings indicates that body-marking existed in ancient times, ethnographic studies show that it is still practiced today. Markings may indicate religious dedication or alliance with a particular god, they may also serve as protection against some evil such as a disease, as identification with a certain group, such as the tribe, or as evidence of personal rank or status within the group. Among examples of the widespread custom of painting the body are the red ochre found in prehistoric burial sites, the blue woad of the ancient Britons, Kohl used in Asia to enhance the beauty of the eyes, the use of henna on the fingernails in the Middle East, and the war paint of some American Indian tribes. The TATTOO is an extension of the practice. Scarification was used in ancient times as a property mark for slaves and more recently in Europe and elsewhere, until the latter part of the 19th cent., for the identification of criminals. Besides being employed for magical or ritual purposes, scarification has also been used for its supposed curative powers. The forms used in Africa include stretched lips and earlobes, filed teeth, and flattened skulls. See W. D. Hambly, *The History of*

Tattooing and its Significance (1925), Henry Field, *Body-Marking in Southwestern Asia* (1958), W. C. Handy, *Forever the Land of Men* (1965).

body snatching, the stealing of corpses from graves and morgues. Before cadavers were legally available for dissection and study by medical students, traffic in stolen bodies was profitable. Those who engaged in the illicit practice were sometimes called resurrectionists; they were active from about the early 18th cent. to the middle 19th cent. Public opposition to any dissection of bodies was further aroused by discovery of the resurrectionists' activities, outbursts of violence occurred in Europe as well as in America. Robert Knox, an eminent British anatomist, became a victim of public attack because a body he had purchased for dissection proved to be that of one of a number of victims murdered by William Hare and an accomplice named William Burke for the purpose of selling the bodies, the murderers were brought to trial (1828) and convicted. This and other similar cases led to the passage (1832) in Great Britain of the Anatomy Act, which permitted the legal acquisition by medical schools of unclaimed bodies. In the United States dissection of the human body was practiced from the middle of the 18th cent., riots and acts of violence frequently occurred in protest against lecturers on anatomy and medical students, who reputedly dug up bodies for study. In 1788 outraged citizens of New York City precipitated a riot while ransacking the rooms of anatomy students and professors at Columbia College Medical School in search of bodies. The following year body snatching was prohibited by law, thus creating a climate for the growth of an illegal group of professional body snatchers. It was not until 1854 that anatomy students were allowed access to unclaimed bodies from public institutions. See *The Diary of a Resurrectionist* (ed. by J. B. Bailey, 1896), Thomas Gallagher, *The Doctors' Story* (1967).

body temperature, internal temperature of a living organism. Mammals and birds are termed warm-blooded, or homeothermic, i.e., they are able to maintain a relatively constant inner body temperature, whereas other animals are cold-blooded, or poikilothermic, i.e., their body temperature varies according to the temperature of the environment. In man and other mammals, temperature regulation represents the balance between heat production from metabolic sources and heat loss from evaporation (perspiration) and the processes of radiation, convection, and conduction. In a cold environment, body heat is conserved first by constriction of blood vessels near the body surface and later by waves of muscle contractions, or shivering, which serve to increase metabolism. Shivering can result in a maximum fivefold increase in metabolism. Below about 40°F (4°C) the nude human cannot sufficiently increase the metabolic rate to replace heat lost to the environment. Another heat-conserving mechanism, goose bumps, or piloerection, raises the body hairs, although not especially effective in man, in animals it increases the thickness of the insulating fur or feather layer. In a warm environment, heat must be dissipated to maintain body temperature. In man, increased surface blood flow, especially to the limbs, acts to dissipate heat at the surface. At environmental temperatures above 93°F (34°C), or at lower temperatures when metabolism has been increased by work, heat must be lost by evaporation of the water in sweat. Men in active work may lose as much as 4 quarts per hour for short periods. However, when the temperature and humidity are both high, evaporation is slowed, and sweating is not effective. Most mammals do not have sweat glands but keep cool by panting (evaporation through the respiratory tract) and by increased salivation and skin and fur licking. Temperature regulatory mechanisms act through the autonomic nervous system and are largely controlled by the hypothalamus of the brain, which responds to stimuli from nerve receptors in the skin. Continued exposure to heat or cold results in some slow acclimatization, e.g., more active sweating in response to continued heat, and an increase in subcutaneous fat deposits in response to continued cold. Environmental extremes may result in failure to maintain normal body temperature. In both increased body temperature, or hyperthermia, and decreased body temperature, or hypothermia, death may result (see HEAT EXHAUSTION). Controlled hypothermia is used in some types of surgery to temporarily decrease the metabolic rate. FEVER, caused by a resetting of the temperature regulatory mechanism, is a response to fever-causing, or pyrogenic, substances, such as

bacterial endotoxins or leucocyte extracts The upper limit of body temperature compatible with survival is about 107°F (42°C), while the lower limit varies In man the inner body temperature alternates in daily activity cycles, it is usually lowest in early morning and is slightly higher at the late afternoon peak In human females there is also a monthly temperature variation related to the ovulatory cycle In many mammals and birds the body temperature shows more pronounced cyclic variations than in man For example, in hibernators, the body temperature may lower to only a few degrees above the environmental temperature during the dormant periods, mammalian hibernators reawake spontaneously and in their active period are homeothermic Reptiles and other poikilothermic animals bask in warm weather and must hibernate in winter The body temperature of fishes must remain close to that of the surrounding water, because heat is lost directly into the water during respiration, however, in some fishes, such as the bluefin tuna, a special network of fine veins and arteries called the rete mirabile provides a thermal barrier against loss of metabolic heat The mechanism of temperature regulation in homeotherms is considered an important evolutionary advance, in that physical activity in such animals can be relatively independent of the environment

Boece, Roman philosopher see **BOETHIUS**

Boece or Boethius, Hector (bōēs', bois, bōē'thēās), 1465?-1536?, Scottish historian He studied at the Univ of Paris, where he knew Erasmus, and in 1498 he went to Aberdeen as the first principal of the new university The most important of his works is a Latin history of Scotland (1527), it is a vast collection of historical fables from medieval chronicles, generously sprinkled with myths and miracles Despite its shortcomings it was held in high repute until the 18th cent It supplied Holinshed with the Duncan-Macbeth tale from which Shakespeare took his plot In the 16th cent it was translated into a metrical Scottish version by William Stewart and a better-known prose Scottish version by John Bellenden See J B Black and W D Simpson, *Quatercentenary of the Death of Hector Boece* (1937)

Boecklin, Arnold see **BOCKLIN ARNOLD**

Boehm, Martin: see **BEHAIM, MARTIN**

Boehler, Peter (bō'lār), 1712-75, missionary and bishop of the MORAVIAN CHURCH, b Germany He went (1738) to Savannah, Ga, to minister to the Moravians In 1740 he migrated with a group to Pennsylvania and there founded Nazareth and Bethlehem He went to England and organized a new company of emigrants, the "Sea Congregation," which settled in Bethlehem in 1742 He was superintendent (1747-53) of the Moravian Church in England and was made a bishop in 1748 Boehler returned to America and directed the founding of new Moravian settlements from 1753 to 1764

Boehm, Martin (bām), 1725-1812, American evangelical preacher, b Conestoga, Pa He was the son of a Palatinate Mennonite who settled in Lancaster co, Pa Boehm became a Mennonite preacher c 1756 and a bishop in 1759 A personal conversion resulted in dissatisfaction with the formalism of his denomination and his adoption of a more evangelistic type of preaching He was excluded from the Mennonite Church In association with Philip William OTTERBEIN, whom he met c 1768, he traveled as an evangelist through Pennsylvania and Maryland and into Virginia, attracting large audiences, especially in the German settlements Boehm was allied with the Methodists for a time, but finally became one of the founders of the United Brethren in Christ (see EVANGELICAL UNITED BRETHREN CHURCH), of which he was elected bishop at the first annual conference in 1800

Boehme or Bohme, Jakob (bē'mā, Ger yā'kōp bō'ma), 1575-1624, German religious mystic, a cobbler of Görlitz, in England also called Behmen He was a student of the Bible and was influenced by Paracelsus In his major works, *De signatura rerum* (tr *The Signature of all Things*, 1912) and *Mysterium magnum*, Boehme describes God as the abyss, the nothing and the all, the primordial depths from which the creative will struggles forth to find manifestation and self-consciousness Evil is a result of the striving of single elements of Deity to become the whole, conflict ensues as man and nature strive to achieve God who, in himself, contains all antithetical principles Boehme exerted a profound influence on the philosophies of Baader, Schelling, Hegel, and Schopenhauer Boehme claimed divine revelation and had many followers in Germany and Holland Societies of Behmenites were formed in England, many

of them were later absorbed by the Quakers See *The Confessions of Jacob Boehme*, ed by W S Palmer (1954), study by J J Stoudt (1957)

Boeotia (bōē'shā), region of ancient Greece It lay N of Attica, Megaris, and the Gulf of Corinth The early inhabitants were from Thessaly A number of small cities scattered over the rough country—mountainous in the south, hilly in the north—may have had a sort of confederacy before the Boeotian League was formed (c 7th cent B C) Thebes dominated the region and the league The rival cities were Orchomenus, Plataea, and Thespiae The history of Boeotia is largely a record of the vain attempts of these cities to escape the domination of Thebes and the attempts of Thebes to prevent encroachment on the region by others of the great city-states Boeotia, therefore, was the scene of various important battles—PLATAEA, LEUCTRA, Coronea, and Chaeronea After the defeat of the Persians at Plataea (479), the Greeks besieged Thebes for aiding the Persians, and the Boeotian League was disbanded The league was temporarily revived in 457 B C before being defeated in the same year by Athens, which briefly attached the Boeotian cities to the Athenian empire Thebes returned to power at the head of the league in 446 Later, after the victory of EPAMINONDAS over the Spartans, the history of Boeotia was completely absorbed into that of Thebes Boeotia was the home of the poets Hesiod and Pindar

Boer (bōōr, bōr) [Du, =farmer], inhabitant of South Africa of Dutch or French Huguenot descent Boers are also known as Afrikaners They first settled (1652) in what is now CAPE PROVINCE After Great Britain annexed (1806) this territory, many of the Boers departed (1835-40) on the Great Trek (see TREK) and created republics in NATAL, the ORANGE FREE STATE, and the TRANSVAAL Hostility between the Boers and the British resulted in the SOUTH AFRICAN WAR (1899-1902), after which the Boer territories were annexed and the Union of South Africa formed There has been some tension between South Africans of British descent and the Boers South Africa withdrew (1961) from the British Commonwealth and became a republic, an event that was strongly supported by Afrikaner nationalists AFRIKAANS, the local form of Dutch, is an official language of the republic, along with English Boer politicians were largely responsible for the inauguration of the policy of APARTHEID, which is applied to the non-white population of South Africa See Sheila Patterson, *The Last Trek* (1957), John Fisher, *The Afrikaners* (1969)

Boerhaave, Hermann (hēr'mān bōōr'hāva), 1668-1738, Dutch physician and humanist One of the most influential clinicians and teachers of the 18th cent, Boerhaave spent almost his entire life in Leiden, which became a leading medical center of Europe Like Thomas Sydenham he helped to revive the Hippocratic method of bedside instruction, he further insisted on post-mortem examination of patients whereby he demonstrated the relation of symptoms to lesions He thus instituted the clinicopathological conference still in use today Boerhaave's fame was enormous, extending far beyond Europe to China Skilled as chemist, botanist, and anatomist, he adhered to no single tradition but combined the best features of the mechanistic and chemical schools in his own brand of eclecticism His methods of instruction were spread throughout Europe by a host of students The two works by which he is best remembered, the *Institutiones Medicinae* (1708) and the *Elementa Chemiae* (1732), remained standard textbooks for many decades

Boethius (bōē'thēās), **Boetius** (bōē'shās), or **Boece** (bōēs') (Anicius Manlius Severinus Boethius), c 475-525, Roman philosopher and statesman An honored figure in the public life of Rome, where he was consul in 510, he became the able minister of the Emperor Theodoric Late in Theodoric's reign false charges of treason were brought against Boethius, after imprisonment in Pavia, he was sentenced without trial and put to death While in prison he wrote his greatest work, *De consolatore philosophiae* (tr *The Consolation of Philosophy*, 1943) His treatise on ancient music, *De musica*, was for a thousand years the unquestioned authority on music in the West One of the last ancient Neoplatonists, Boethius translated some of the writings of Aristotle and made commentaries on them His works served to transmit Greek philosophy to the early centuries of the Middle Ages See H F Stewart, *Boethius* (1891), H R Patch, *The Traditions of Boethius* (1935, repr 1970)

Boethius, Hector: see **BOECE, HECTOR**

Boethus (bōē'thās), fl 1st half of 2d cent B C, Greek sculptor of genre subjects and worker in silver He was born in Chalcidion and seems to have worked mainly at Rhodes In the writings of Pliny and Pausanias he is mentioned as having made a bronze figure of a boy struggling with a goose and a statue of a seated boy The figure of a boy with a goose in the Louvre may be one of many copies of this work A second authenticated work, a bronze representing Agon, god of contests, as a winged boy (Tunis) was found in the remains of a ship of the 1st cent B C wrecked off Tunis

Boetius, Roman philosopher see **BOETHIUS**

bog, very old lake without inlet or outlet that becomes acid and is gradually overgrown with a characteristic vegetation (see SWAMP) Peat moss, or SPHAGNUM, grows around the edge of the open water of a bog (PEAT is obtained from old bogs) and out on the surface With its continued growth, the moss forms a mat on the water in which other bog plants find a foothold, and humus and soil are slowly built up on the body of the water Because of this formation bogs are sometimes treacherous (quaking bogs shake under the weight of a man) and have occasionally resulted in fatalities when a man or animal breaks through the vegetative crust Because of their extreme acidity, bogs form a natural preservative and have been found to be a valuable repository of animals and plants of earlier times Typical bog plants of today include, besides sphagnum, many orchids, the pitcher plant, the sundew, and the cranberry (old bogs are utilized for cranberry cultivation) Because of the reclamation of old bog lands by drainage and by their natural filling in, bogs in America are becoming rare, and with them their unique flora and fauna One example of the latter is the bog turtle, *Clemmys muhlenbergi*, a tiny animal with a black, sculptured shell and orange head markings The bog turtle has disappeared from most of its original habitat in the middle Atlantic states Another consequence of the drainage and filling of bogs is the decreased water-holding capacity of the land, resulting in rapid run-off during rains and the increased siltation of rivers and streams

Bogalusa (bōgālō'sā), city (1970 pop 18,412), Washington parish, SE La, inc 1914 It is a manufacturing and trading center of the Pearl river valley Its name derives from the Indian-named creek, Bogue Lusa ("smoky or dark waters"), that flows through the city Bogalusa was founded in 1906 when the lumber industry established operations in this extensive pine area The city still has pine nurseries Its manufactures include paper and paper products, furniture, tung oil, machine parts, and food products

Bogan, Louise, 1897-1970, American poet and critic, b Livermore, Maine She spent much of her life in New York City and was for many years poetry editor for the *New Yorker* magazine Her verse is intense, personal, and yet restrained, revealing a metaphysical awareness of the tragedy of life Among her volumes of poetry are *Body of This Death* (1923), *Poems and New Poems* (1941), *Collected Poems* (1954), and *The Blue Estuaries Poems 1923-1968* (1968) Her other works include a literary history, *Achievement in American Poetry, 1900-1950* (1950), and collections of criticism, *Selected Criticism* (1958) and *A Poet's Alphabet* (1970) See her collected letters, ed by Ruth Limmer (1973)

Boganda, Barthélémy (bärtālmē bōgān'dā), 1910-59, premier of the Central African Republic (1958-59) He was a Roman Catholic priest for a decade (1938-48) before turning exclusively to politics Founder of the nationalist movement in the French territory of Ubangi-Shari, he became (1957) president of the federal grand council of French Equatorial Africa When Ubangi-Shari joined the French Community as the Central African Republic in 1958, Boganda was the first premier He died in an air crash and was succeeded by his cousin, David DACKO

Bogarde, Dirk (dūrk bō'gārd), 1920-, English film actor, b Hampstead, his original name was Derek Van den Bogaerde In his early career Bogarde played romantic leads in such films as *So Long at the Fair* (1950) and *A Tale of Two Cities* (1958) He later showed great versatility playing character parts—the sinister valet in *The Servant* (1963), the dying, obsessed composer in *Death in Venice* (1971) His other films include *Esther Waters* (1948), *Doctor in the House* (1954), *Darling* (1965), *Accident* (1967), *The Damned* (1969), and *The Night Porter* (1974)

Bogardus, James, 1800-1874, American architect, b Catskill, N Y Among the first to use cast iron in the

construction of building facades, Bogardus was noted for his commercial building designs. His best-known works include the Iron Building at Centre and Duane streets in New York City. Bogardus's success with cast-iron exteriors led eventually to the adoption of steel-frame construction for entire buildings.

Bogart, Humphrey DeForest, 1899–1957, American film actor, b. New York City. After a succession of stage roles he achieved note with his portrayal of the tough gangster Duke Mantee in *The Petrified Forest* (1934). He was in films after 1930 but it was the re-creation (1936) of that role that brought him fame, and thereafter followed a succession of notable performances in *The Maltese Falcon* (1941), *Casablanca* (1942), *To Have and Have Not* (1944), *The Big Sleep* (1946), *Treasure of the Sierra Madre* and *Key Largo* (1948), and *The Caine Mutiny* (1954). He became famous for his portrayals of tough, cynical heroes. In 1952 he won an Academy Award for his performance in *The African Queen*. His work has had an enormous following since his death.

Boğazkoy or Boghazkeui (bōaz'koy), village, N central Turkey. Boğazkoy (or Hattusas as it was called) was the chief center of the Hittite empire (1400–1200 B.C.), which was consolidated by Shub-biluluma (fl. 1380 B.C.). Hugo Winckler found there (1906–7) the principal Hittite inscriptions on 10,000 tablets, this discovery greatly added to the knowledge of Hittite civilization. Among the impressive remains are huge fortifications, gates, and temples. Below this level, archaeologists have found levels of an earlier period. Nearby is the Hittite carved sanctuary of Yazılıkaya. Boğazkoy is by tradition the site of Pteria, where Croesus and Cyrus the Great fought an indecisive battle (546 B.C.). The name of the village is also written Boghazkoy.

bog iron ore: see LIMONITE

bog lime: see MARL

Bognor Regis (bōg'nōr rē'jīs), urban district (1971 pop. 34,389), West Sussex, S. central England. It is a seaside resort. At nearby Felpham is the cottage where the poet William Blake lived from 1801 to 1804. The title Regis was granted to the town after George V convalesced there in 1929.

Bogomils (bōgōm'ilz), members of a religious group that flourished in Bulgaria and the Balkans from the 10th to the 15th cent. Their creed, a dualism adapted from the PAULICIANS and modified by other Gnostic and Manichaean sources, is attributed to Theophilus or Bogomil, a Bulgarian priest of the 10th cent. The movement was intensely nationalistic and political as well as religious and reflected resentment of Byzantine culture, Slavic serfdom, and imperial authority. Similar groups were known in other countries as CATHARI, Euchites, and Patarines. In the 12th cent. the Patarines were dominant in Bosnia and neighboring lands and began to proselytize in Italy. From there, the Cathari converted the ALBIGENSES of France. Through the combined efforts of the Western and Eastern churches and of the Holy Roman and Byzantine empires, the Bogomils were weakened and suppressed. They vanished in the expansion of Islam, but bits of their ideas and folklore persisted for centuries in Slavic lands. See Dmitri Obolensky, *Bogomiles* (1948).

Bogor (bō'gōr), formerly **Buitenzorg** (boi'tanzōrk'h) [Dutch, = free from care], city (1961 pop. 154,092), W Java, Indonesia. At the foot of two volcanoes, it is a highland resort and an agricultural research center, known chiefly for its magnificent botanical gardens (laid out 1817). Adjacent to the gardens is the presidential country palace, formerly used by the Dutch governors. Rainfall is heavy in the area, tea is grown on the surrounding highlands, and coffee, rice, and rubber are also important crops. Automobile tires are among the manufactures. The site was selected as the resort residence of the Dutch governor-general in 1745, and the town grew around the palace. Bogor is the seat of the Indonesian general agricultural research station, a state agricultural university, two private universities, an army intelligence school, and forestry and rubber research institutes.

Bogorodsk: see NOGINSK, USSR

Bogota (bōgō'tā'), city (1968 est. pop. 1,966,341, pop. of Bogota Special District 2,148,387), central Colombia, capital and largest city of Colombia, and capital of Cundinamarca dept. A picturesque, spacious city, Bogota is on a high, fertile plateau (c. 8,560 ft/2,610 m) in the E. Andes and has a cool, moist climate. Several rivers join at the site to form the Bogotá, a tributary of the Río Magdalena, the chief means of transportation in colonial times. Today Bogota is the

political, social, and financial center of the republic, although Medellín and Barranquilla enjoy economic supremacy. It is the marketing and processing center for a region of coffee, cocoa, and tobacco. The city is rich in splendid colonial architecture, notably the cathedral and the churches of San Ignacio and San Francisco. It has several universities and a museum with an internationally famous collection of pre-Columbian gold art. The region was a Chibcha Indian center before the city was founded in 1538 by Jiménez de Quesada and named Santa Fe de Bogota (in memory of the Chibcha chief Bacata). As capital and archiepiscopal see of the colonial viceroyalty of NEW GRANADA, the city became an early religious and intellectual center. Alexander von Humboldt called it (c. 1800) the Athens of America in honor of its cultural and scientific institutions. Among them were the first astronomical observatory in South America, founded by Jose Celestino Mutis. The intellectual impact of the French Revolution inspired Antonio Nariño and others to agitate against Spanish rule. Jose Acevedo y Gomez led the first successful revolt in the city against Spain in 1810. Later Santander and Bolívar were prominent in Bogota. After Bolívar's decisive victory at Boyaca (1819), Bogota became the capital of Greater Colombia, when the country was divided in 1830, Bogota became the capital of what was later called Colombia. Much of the city was damaged during rioting in 1948 following the assassination of the radical leader, Jorge Eliecer Gaitan. In 1955, Bogota and the surrounding area were organized as a Special District of 613 sq mi (1,588 sq km). A short distance from the city is the Salto de Tequendama waterfall and the underground cathedral at the salt mines of Zipaquirá.

Bogra (bōg'ra), town (1961 pop. 33,800), N Bangladesh, on the Karatoya River, a tributary of the Jamuna. It is a road junction and commercial center, with soap, match, and metalware industries. Bogra also contains a nursery for sericultural development. It has a college affiliated with Rajshahi Univ.

Bohan (bō'hān), son of Reuben. Joshua 15:6, 18:17.

Bohemia, Czech *Cechy*, historic region (20,368 sq mi/52,753 sq km) and former kingdom, W Czechoslovakia. Bohemia is bounded by Austria in the southeast, by West and East Germany in the west and northwest, by Poland in the north and northeast, and by Moravia in the east. Its natural boundaries are the BOHEMIAN FOREST, the ERZGEBIRGE ("ore mountains") chain, the SUDETES, and the Bohemian-Moravian heights. With MORAVIA and Czech Silesia, Bohemia constitutes the traditional Czech lands of Czechoslovakia, and in its broader meaning Bohemia is often understood to include this entire area, which until 1918 was a Hapsburg crown land. Prague is the traditional Bohemian capital. Although Bohemia, with about 40% of Czechoslovakia's area and 45% of its people, is the country's most urbanized and densely inhabited region, agriculture and rural life and customs retain their importance. Central Bohemia consists of fertile lowlands and plateaus, drained by the Elbe and Vltava (Moldau) rivers. Grain, sugar beets, grapes and other fruit, flax, and the famous hops used in the breweries of PLZEN (Pilsen) are the principal crops. Mining (coal, silver, copper, lead, iron, and, at JACHYMOV, radium and uranium) and textile and glass manufactures are important in the mountain districts. Prague is the center of a heavy industrial region, and Plzeň is also known for the huge Skoda works, producing machinery and munitions. Bohemia is celebrated for its spas and beautiful resorts, notably KARLOVY VARY (Ger. *Karlsbad*) and MARIÁNSKÉ LÁZNĚ (Ger. *Marienbad*). The overwhelming majority of the population is Czech, but there are some Slovak, German, and other minorities. The Romans called the area Boiohaemum after the Boii tribe, probably Celtic, which was displaced (1st–5th cent. A.D.) by Slavic settlers, the Czechs. Subjugated by the Avars, the Czechs freed themselves under the leadership of Samo (d. c. 658). The legendary Queen Libussa and her husband, the peasant PRĚMYSL, founded the first Bohemian dynasty in the 9th cent. Christianity was introduced by saints CYRIL and METHODIUS while Bohemia was part of the great Moravian empire, from which it withdrew at the end of the century to become an independent principality. St. WENCESLAUS, the first great Bohemian ruler (920–29), successfully defended his land from Germanic invasion, but his brother, Boleslav I (929–67), was forced to acknowledge (950) the rule of Otto I, and Bohemia became a part of the Holy Roman Empire. The Bohemian principality retained autonomy in internal affairs, however. Later Přemyslide rulers acquired Moravia and most of SILESIA. German influence in Bohemia in-

creased with the growth of the towns and the rise of trade between East and West. Silver, mined chiefly at KUTNA HORA, greatly added to the wealth and prestige of the dukes, who by the 12th cent. began to take part in the imperial elections. In 1198, OTTO CAR I was crowned king of Bohemia, which became an independent kingdom within the empire. The conquests and acquisitions of OTTOCAR II (1253–78) brought Bohemia to the height of its power and its greatest extent (from the Oder to the Adriatic), but his defeat by RUDOLF I of Hapsburg cost Bohemia all his conquests. After the Přemyslide line became extinct (1306), JOHN OF LUXEMBURG was elected king in 1310. The reign of his son, CHARLES IV (1346–78), who was crowned Holy Roman Emperor in 1355, was the golden age of Bohemia, and Prague became the seat of the empire. His Golden Bull (1356) permanently established the kings of Bohemia as ELECTORS. In the reigns of his successors, emperors WENCESLAUS and SIGISMUND, religious, political, and social tensions exploded in the movement, both religious and nationalist, of the HUSSITES against the Holy Roman Empire. THE HUSSITE WARS led to the defeat (1434) of the radical Taborites at the hands of the moderate Utraquists, who were supported by the great nobles. In 1436, by the so-called Compactata, the Utraquists returned to communion with the Roman Catholic Church and established Utraquism as the national religion. Meanwhile the crown had passed to ALBERT II, a Hapsburg, and then to LADISLAUS V of Hungary (in Bohemia, Ladislaus I). GEORGE OF PODEBRAD actually ruled for Ladislaus and was elected to succeed him as king in 1458. On his death (1471) the crown reverted to the kings of Hungary—ULADISLAUS II (Ladislaus II), MATTHIAS CORVINUS, and LOUIS II. The nobles profited from the disorders of the period and in 1487 secured vast privileges, reducing the peasantry to virtual serfdom. The accession (1526) of Archduke Ferdinand (later Emperor FERDINAND I) began the long Hapsburg domination of Bohemia. Ferdinand began the gradual process by which Bohemia was deprived of self-rule. He also introduced the Jesuits in order to secure the return of Bohemia to Roman Catholicism. The religious situation remained explosive. The conservative wing of the Utraquists had become almost indistinguishable from the Roman Church, and there had arisen a frankly Protestant movement, the Bohemian Brethren (see MORAVIAN CHURCH). The Brethren and their close allies, the Lutherans, won equality with the Utraquists by inducing Emperor Maximilian II to declare (1567) that the Compactata no longer were the law of the land. RUDOLF II was forced to grant freedom of religion by the so-called Letter of Majesty (*Majestatsbrief*) of 1609. When, in 1618, Emperor Matthias disregarded the *Majestatsbrief*, members of the Bohemian diet revolted and dramatized their position by throwing two imperial councillors out of the windows of Hradcín Castle on May 23, 1618. The so-called Defenestration of Prague precipitated the THIRTY YEARS WAR, which came to involve most of Europe. Matthias's son (later Emperor FERDINAND II) was declared deposed, and FREDERICK THE WINTER KING was elected king of Bohemia. Frederick and the Protestants were crushed in the battle of the WHITE MOUNTAIN (1620) by Ferdinand II. The Protestants were suppressed, and in 1627 Bohemia was demoted from a constituent Hapsburg kingdom to an imperial crown land, its diet was reduced to a consultative body. The Thirty Years War laid Bohemia waste, after the Peace of Westphalia (1648), forcible Germanization, oppressive taxation, and absentee landownership reduced the Czechs, except a few favored magnates, to misery. The suppression (1749) of the separate chancellery at Prague by MARIA THE RESA and the introduction of German as the sole official language completed the process. JOSEPH II freed the serfs and permitted freedom of worship, but he incurred the hatred of the Czechs by his rigorous policy of Germanization. LEOPOLD II tried to conciliate the Czechs, he was the last ruler to be crowned king of Bohemia (1791). During the later 18th cent. the foundations of industrialization were laid in Bohemia, but the German population fared better than the mostly peasant Czechs. The 19th cent. brought a rebirth of Czech nationalism. Under the leadership of PALACKÝ a Slavic congress assembled at Prague in the Revolution of 1848, but by 1849, although the Czech peasantry had been emancipated, absolute Austrian domination had been forcibly restored. The establishment (1867) of the AUSTRO-HUNGARIAN MONARCHY thoroughly disappointed the Czech aspirations for wide political autonomy within a federalized Austria. Instead, the Czech lands were relegated to a mere province of the empire.

Concessions were made (1879) by the Austrian minister TAAFFE, Czechs entered the imperial bureaucracy and parliament at Vienna. However, many Czechs continued to advocate complete separation from the Hapsburg empire. Full independence was reached only at the end of World War I under the guidance of T. G. MASARYK. In 1918, Bohemia became the core of the new state of Czechoslovakia. After the Munich Pact of 1938, Czechoslovakia was stripped of the so-called Sudeten area, which was annexed to Germany. In 1939, Bohemia was invaded by German troops and proclaimed part of the German protectorate of Bohemia and Moravia. After World War II the pre-1938 boundaries were restored, and most of the German-speaking population was expelled. In 1948, Bohemia's status as a province was abolished, and it was divided into nine administrative regions. The administrative reorganization of 1960 redivided it into five regions and the city of Prague. See C. E. Maurice, *Bohemia from the Earliest Times to the Foundation of the Czechoslovak Republic* in 1918 (2d ed. 1922), Josef Macek, *The Hussite Movement in Bohemia* (tr. 1965), R. J. Kerner, *Bohemia in the Eighteenth Century* (1932, repr. 1969), S. Z. Pech, *The Czech Revolution of 1848* (1969), Eduard Beneš, *Bohemia's Case for Independence* (1917, repr. 1971), R. J. Evans, *Rudolf II and his World* (1973).

Bohemian Forest, Czech *Český les*, Ger. *Böhmerwald*, mountain range, extending c 150 mi (240 km) along the N Czechoslovakian-West German border and extending into Austria. The Czech name for its southern section is Sumava. A thickly wooded area, it rises to 4,780 ft (1,457 m) in the Grosser Arber (Czech Javor). There are many marshes, swamps, and peat bogs in the Bohemian Forest. Agriculture is limited because of the harsh climate, grazing is common. Coal, lignite, graphite, kaolin, and granite are extracted. The region is known for its glassmaking and woodworking.

Bohemian literature. see CZECH LITERATURE

bohemiaum (bōhē'mēəm), former name of the chemical element RHENIUM

Bohemond I (bō'həmənd), c 1056-1111, prince of Antioch (1099-1111), a leader in the First Crusade (see CRUSADES), elder son of ROBERT GUISCARD. With his father he fought (1081-85) against the Byzantine emperor ALEXIUS I. When his father's duchy of Apulia passed to his younger brother Roger, Bohemond made war against him and obtained S. Apulia as a fief. In 1096 he joined the Crusaders. He swore the oath of fealty to Alexius at Constantinople (1097) and in 1098 at the siege of ANTIOCH devised the stratagem by which the city was captured. He subsequently made himself prince of Antioch, in defiance of his oath to Alexius, and over the opposition of Raymond IV of Toulouse, leader of the crusade. Captured by Muslims (1100), he was released in 1103. Returning to Europe, he married the daughter of Philip I of France and secured support for a crusade against Alexius, by whom he was defeated (1108) and as a result was forced to reaffirm his vassalage. In 1109 he was defeated by the Muslims at Harran. He did not return to Antioch, and his relative Tancred was regent for him. See biography by R. B. Yewdale (1924, repr. 1971).

Böhl de Faber, Cecilia. see CABALLERO FERNAN

Bohlen, Charles Eustis, 1904-74, American diplomat, born Clayton, N.Y. He entered (1929) the U.S. Foreign Service and undertook consular assignments in Prague (1929-31), Paris (1931-34), Moscow (1934-35, 1937-40), and Tokyo (1940-41). A specialist in Russian affairs, Bohlen served as Russian interpreter for President Franklin D. Roosevelt at the Teheran and Yalta conferences and for President Harry S. Truman at the Potsdam Conference. During the Truman administration he played a major role in formulating policy toward the USSR. Appointed ambassador to Russia in 1953, he was confirmed despite the opposition of a group of ultraconservative Senators. Serious differences with Secretary of State John F. Dulles led to his transfer (1957) to the Philippines. In 1959, Dulles's successor, Christian A. Herter, returned Bohlen to his primary field as special assistant for Soviet affairs. Bohlen later served (1962-68) as ambassador to France. He wrote *The Transformation of American Foreign Policy* (1969). See his autobiography, *Witness to History* (1973).

Böhm, Dominikus (dōmē'nēkōōs böm), 1880-1955, German architect. The widely varied styles of Catholic churches designed by Böhm have strongly influenced 20th-century ecclesiastical architecture in Europe and America. The Gothic fantasia of the Suburban War Memorial Church in Neu-Ulm (1923) and the simple parabolic vaulting of the church at

Bischofsheim (1925) are examples of his expressionist period. By 1929, Böhm had achieved a rectangular simplicity in design as, e.g., in the church of Maria Königin at Marienburg outside Cologne (1954). Sankt Engelbert, Cologne-Riehl (1931-33), with its circular plan and paraboloid vaulting, is perhaps Böhm's finest work.

Bohm, Karl, 1894-, Austrian conductor. He studied with the musicologist Eusebius Mandyczewski and took a law degree before turning to conducting. After successful appearances with leading German orchestras, he was appointed director of the Vienna State Opera, a position he held from 1943 to 1945 and from 1954 to 1956. In 1956, Böhm gave his first American performance, conducting the Chicago Symphony Orchestra. He subsequently appeared with many European and American orchestras, including the Metropolitan Opera Orchestra and the New York Philharmonic-Symphony Orchestra. He shows a particular preference for the works of Mozart and Richard Strauss.

Böhm-Bawerk, Eugen (oigān' böm'-ba'vērĭ), 1851-1914, Austrian economist. Three times minister of finance (1895, 1897, and 1900), he initiated important tax reforms and farsighted financial policies. Rejecting the standard theory of value, Böhm-Bawerk posited a theory of interest and of capital that was based on psychological factors and on the nature of production. His theories marked an early point of departure from classical economics. Among his works are *Capital and Interest* (2 parts, 1884-89, tr. 1890, repr. 1970) and *Positive Theory of Capital* (1889, tr. 1923).

Böhmerwald. see BOHEMIAN FOREST

Bohmisch-Lepa: see ČESKÁ LÍPA, Czechoslovakia

Bohol (bō'hōl'), island (1970 pop. 674,806), 1,491 sq mi (3,862 sq km), the Philippines, one of the Visayan Islands, SW of Leyte. It is a major corn-producing area. Rice, cacao, and hemp are also grown, and manganese and copper are mined. Bohol prov. comprises the main island and several offshore islands; its capital is at Tagbilaran.

Bohr, Niels Henrik David (nēls hān' rēk dā'vēth bö), 1885-1962, Danish physicist, one of the foremost scientists of modern physics. He studied at the Univ. of Copenhagen (Ph.D. 1911) and carried on research on the structure of the ATOM at Cambridge under Sir James J. Thomson and at Manchester under Lord Ernest Rutherford. In 1916, Bohr became professor of theoretical physics at the Univ. of Copenhagen, and in 1920 he was made director of the Institute of Theoretical Physics, which he was instrumental in founding. Rutherford had discovered the nucleus of the atom in 1911, but classical theory was unable to explain the stability of the nuclear model of the atom. Bohr provided the solution to this problem in 1913, when he postulated that electrons move around the nucleus of the atom in restricted orbits and explained the manner in which the atom absorbs and emits energy. He thus combined the QUANTUM THEORY with this concept of atomic structure. Much of the knowledge of modern physics was made possible by Bohr's initial revolutionary assumption that atomic processes cannot be explained by classical laws alone. Bohr was a leading figure in the continuing development of the quantum theory over the next twenty years. He received the 1922 Nobel Prize in Physics. When he visited the United States in 1938 and 1939, Bohr told American scientists of his belief, based on experiments reported by German scientists, that the uranium atom could be split into approximately equal halves. This was verified by scientists at Columbia. Bohr returned to Denmark but fled from the Nazi-occupied country in 1943. He gave valuable assistance in the atomic bomb research at Los Alamos, N. Mex., and in 1945 again returned to Denmark. His writings include *The Theory of Spectra and Atomic Constitution* (1922) and *Atomic Theory and the Description of Nature* (1934). See his collected works, ed. by León Rosenfeld (Vol. I, 1972), biography by R. E. Moore (1966). His brother, Harald August Bohr, 1887-1951, a mathematician, taught (1915-30) at the College of Technology in Copenhagen and in 1930 became professor at the Univ. of Copenhagen. His most noted contribution to mathematics was his formulation of the theory of almost periodic functions. See his collected mathematical works, ed. by Erling Følner and Børge Jessen, (3 vol., 1952).

Bohun, Henry de, 1st earl of Hereford (bōon, hē'rafard), 1176-1220, English nobleman. Although King John granted him the marcher lordship of Hereford in 1199, Henry was one of the barons who

forced the king to accept the Magna Carta in 1215 and one of those appointed to oversee its observance. He fought against the king in the ensuing civil war. He died on a pilgrimage to the Holy Land.

Bohun, Humphrey V de, 2d earl of Hereford and 1st earl of Essex, d. 1275, English nobleman, son of Henry de Bohun, 1st earl of Hereford. A member of the household of Henry III, he inherited the earldom of Essex from a maternal uncle and in 1242 went with the king on his French campaign. In 1258 he joined the baronial opposition to Henry and was one of 24 men who drew up the PROVISIONS OF OXFORD. In the BARONS WAR, however, he returned (1263) to the side of the king and was captured (1264) by Simon de Montfort at Lewes.

Bohun, Humphrey VII de, 3d earl of Hereford and 2d earl of Essex, d. 1298, English nobleman. He was constable of England and with Roger Bigod, earl of Norfolk, led the baronial opposition to EDWARD I that forced the king to sign the important confirmation of the charters (1297).

Bohun, Humphrey VIII de, 4th earl of Hereford and 3d earl of Essex, 1276-1322, English nobleman, son of Humphrey VII de Bohun. One of the lords ordainers who attempted to curb the powers of EDWARD II in 1310, he took part in the execution (1312) of the hated Piers GAVESTON. He fought for Edward at Bannockburn (1314), was captured by the Scots, and was exchanged. He was killed at Boroughbridge fighting on the baronial side against the king and the Despensers.

Boiardo or Bojardo, Matteo Maria (māt-tē'ō mārē'ā böyār'dō), 1441?-1494, Italian poet, count of Scandiano. A favorite at the Este court in Ferrara, he served on diplomatic missions and became ducal captain of Modena and later of Reggio. He wrote Latin eclogues and songs and lyric love poems, and he translated Herodotus, Xenophon, Lucian, and Apuleius. His great unfinished *Orlando Innamorato* (1st complete ed., 1506) is a transformation of the Roland epic, recounting the love of ROLAND for the pagan Angelica and her love for his cousin Rinaldo. In this work Boiardo fused elements of Arthurian and Carolingian poetic cycles with material from classical antiquity. The vigorous beauty of Boiardo's epic was lost in the revision by Francesco Berni, which supplanted it until the 20th cent. ARIOSTO continued the tale in *Orlando Furioso*. See study by Giacomo Grillo (1942).

Boieldieu, François Adrien (frā'nswā' ādrē'āN bwāldyō'), 1775-1834, French composer. He studied with the organist of the cathedral in Rouen and composed one successful opera, *Le Calife de Bagdad* (1800), before he went to St. Petersburg. There he conducted (1803-11) the Imperial Opera. After his return to Paris his graceful *opéras comiques*, such as *Jean de Paris* (1812) and *La Dame blanche* (1825), were popular. He taught piano and composition at the Paris Conservatory.

boil or furuncle, tender, painful inflammatory nodule in the skin, which becomes pustular but with a hard center (see ABSCESS). It may be caused by any of various microbes, the most usual being *Staphylococcus aureus*. If proper care and precautions are not taken it may spread to many sites (a condition called furunculosis). Several adjoining furuncles that coalesce are known as a CARBUNCLE. The point of entry is usually a hair follicle or a sebaceous gland duct. Boils may occur anywhere in the skin but are most common at places where the skin is constantly exposed or chafed—neck, face, ear, armpit, breast, and extremities. The treatment of small boils consists of scrupulous cleanliness, protection from irritation, and applications of antibiotic ointments and moist heat. Large boils, especially those on the nose, upper lip, or near the eyes (where there is the greatest danger of their causing meningitis or blood poisoning), must be treated professionally with antibiotics. Such lesions should be incised and drained by a physician rather than allowed to discharge spontaneously.

Boileau-Despreaux, Nicolas (nēkōlā' bwālō'-dāprāō'), 1636-1711, French literary critic and poet. He was the spokesman of CLASSICISM, drawing his principles from his contemporaries, among them his friends Racine, Molière, and La Fontaine. His critical precepts are embodied in *L'Art poétique* (1674), a verse treatise, *Le Lutrin* (1683), a mock epic, 12 *Satires* (1st collected ed., 1716) and 12 *Épîtres* (1st collected ed., 1701), after Horace, and *Les Heros de roman* (1688), a dialogue in literary criticism. Revered in the 18th cent. as a literary lawgiver, he was later detested by the romantics. Boileau's poetic reputation rests on his satires, especially *Le Lutrin*, on the clerical world, *Satires III* and *VI*, on life in Paris, and

Satire X, on women. He was a zealous polemicist, notably in quarrels with Desmarests de Saint-Sorlin and Perrault. See edition of *Les Héros de roman* by T. F. Crane (1902), studies by Sister Marie Philip Haley (1938) and A. F. Clark (1925, repr. 1971).

boiler, device for generating steam. It consists of two principal parts: the furnace, which provides heat, usually by burning a fuel, and the boiler proper, a device in which the heat changes water into steam. A steam engine is driven by steam generated under pressure in a boiler. The amount of steam that can be generated per hour depends upon the rate of combustion of the fuel in the furnace and upon the efficiency of heat transfer to the boiler proper. Since the rate of combustion of the fuel in a furnace is largely dependent upon the quantity of air available, i.e., upon the draft, a sufficient supply of air is an important consideration in boiler construction. In some large installations the incoming air is preheated by the waste heat of the flue gases, and in order to increase the speed of combustion a forced draft (air at higher than atmospheric pressure) is often used. Two types of boilers are most common—fire-tube boilers, containing long steel tubes through which the hot gases from the furnace pass and around which the water to be changed to steam circulates, and water-tube boilers, in which the conditions are reversed. Water is changed to steam in these continuous circuits and also is superheated in transit. This additional heating of the steam increases the efficiency of the power-generating cycle. The SAFETY VALVE is used to prevent explosions by releasing steam if the pressure becomes too great. The construction of boilers in the United States is governed by the American Society of Mechanical Engineers' Boiler Construction Code. Progress in boiler design and performance have been governed by the continuous development of improved materials.

boiling point, temperature at which a substance changes its state from liquid to gas. A stricter definition of boiling point is the temperature at which the liquid and vapor (gas) phases of a substance can exist in equilibrium. When heat is applied to a liquid, the temperature of the liquid rises until the VAPOR PRESSURE of the liquid equals the pressure of the surrounding gases. At this point there is no further rise in temperature, and the additional heat energy supplied is absorbed as LATENT HEAT of vaporization to transform the liquid into gas. This transformation occurs not only at the surface of the liquid (as in the case of EVAPORATION) but also throughout the volume of the liquid, where bubbles of gas are formed. The boiling point of a liquid is lowered if the pressure of the surrounding gases is decreased. For example, water will boil at a lower temperature at the top of a mountain, where the atmospheric pressure on the water is less, than it will at sea level, where the pressure is greater. In the laboratory, liquids can be made to boil at temperatures far below their normal boiling points by heating them in vacuum flasks under greatly reduced pressure. On the other hand, if the pressure is increased, the boiling point is raised. For this reason, it is customary when the boiling point of a substance is given to include the pressure at which it is observed, if that pressure is other than standard, i.e., 760 mm of mercury or 1 atmosphere (see STP). The boiling point of a SOLUTION is always higher than that of the pure solvent, this boiling-point elevation is one of the COLLAGATIVE PROPERTIES common to all solutions.

Boisbaudran, Paul Émile Lecoq de (pól'âmél' lă-kôk' də bwabōdraN'), 1838-1912, French discoverer of the elements gallium, samarium, and dysprosium. He also made contributions in the field of spectroscopy, including his experimentation with the rare-earth metals.

Boisbrûlés (bwaburulă') [Fr. =burnt wood], name given the descendants of the fur traders and Indians in W. Canada, because of their dark complexion. The boisbrûlés, or brûlés, were in the early 19th cent. an important social group in the west and were particularly notable in the Red River Settlement and in Riel's Rebellion. In the later 19th cent. they were absorbed into the general population.

Bois de Boulogne (bwă də bōlō'nyə), park in Paris, France, bordering on the western suburb of NEUILLY-SUR SEINE. A favorite pleasure ground since the 17th cent., the park contains the race courses of Auteuil and Longchamps and many delightful promenades and bridle paths.

Boise (boi'sē, -zē), city (1970 pop. 74,990), state capital and seat of Ada co., SW Idaho, on the Boise River, inc. 1864. The largest city in Idaho, Boise is an important trade and transportation center. Food

processing and light manufacturing are the major activities, and there are many state and Federal government offices. A gold rush in the Boise valley and the establishment of a military post in 1863 led to the founding of Boise City, which grew as a distributing center for miners and became the capital of Idaho Territory in 1864. Later, particularly with the building of Arrowrock Dam (1911-15), the region was developed for farming, and Boise drew wealth from orchards and fields rather than mines. The BOISE PROJECT has increased the area's agricultural yield. In the city are Boise State College, a veterans hospital, and a state penitentiary.

Boise, river, c.160 mi (260 km) long, rising in SW Idaho and flowing west to join the Snake River at the Oregon line. In 1811 the Boise River, originally called Reed's River, was explored by an expedition financed by John Jacob Astor (1763-1848), an American merchant. Irrigation, hydroelectric power, and flood control are part of the Boise project.

Boise, Fort. see FORT BOISE

Boise project, in the Boise, Payette, and Snake river valleys, SW Idaho and E Oregon, developed in 1905 by the U.S. Bureau of RECLAMATION for irrigation (360,000 acres/145,690 hectares), hydroelectricity (360,000 kw total capacity), flood control, and recreation. The project has turned the area into a major seed-producing area and one of the best dairy regions in the United States. Anderson Ranch, Arrowrock, and Boise dams are the principal facilities of the project's Arrowrock division, located between the Snake and Boise rivers, the Payette division, between the Payette and Boise rivers, includes Black Canyon, Cascade, and Deadwood dams.

Boisguilbert, Pierre le Pesant, sieur de (pyër lă pazaN' syor də bwagēlbër'), 1646-1714, French economist. A local official of Rouen after 1689, he proposed a radical alteration of the French fiscal system in order to revive the finances of the nearly bankrupt state. Seeing the results of King Louis XIV's military expenditures in heavy taxation and oppression of the poor, Boisguilbert urged an income tax of 10 percent, particularly in *Le Détail de la France* (1695) and *Factum de la France* (1707). He insistently forced his advice on Michel Chamillart, controller general to Louis XIV. Chamillart had him exiled for six months in 1707. His name also appears as Boisguillebert. See biography by H. V. Roberts (1935).

Bois-le-Duc, Netherlands. see 'S HERTOGENBOSCH

Boito, Arrigo (ărē'gō bōtēō), 1842-1918, Italian composer and librettist. His opera *Meisofele* (1868, rev. 1875), influenced by Wagner's music-drama, helped to bring about a new dramatic style in Italian opera. Its first performance at La Scala, Milan, caused a riot, but it subsequently became very popular. Another opera, *Nerone*, was posthumously finished and produced by Toscanini in 1924. Many consider Boito's masterpieces to be the librettos for Verdi's *Otello* and *Falstaff*. He also was librettist for Ponchielli's *La Gioconda* and wrote novels and poems.

Bojardo, Matteo Maria see BOLIARDO

Bojer, Johan (yō'han boi'ər), 1872-1959, Norwegian writer. Bojer's novels of contemporary Norwegian life treat social issues from a classical liberal viewpoint. *The Power of a Lie* (1903, tr. 1908) and *The Great Hunger* (1916, tr. 1918) illustrate his humanistic philosophy. The greater depth of *The Last of the Vikings* (1921, tr. 1923) and *Folk by the Sea* (1929, tr. 1931) won critical acclaim in Norway. Bojer's later novels include *The King's Men* (1938, tr. 1940) and *Skyld* (1948).

Bok, Derek Curtis, 1930-, American educator and university president, b. Bryn Mawr, Pa., grad. Stanford (B.A., 1951) and Harvard (LL.B., 1954). He became a professor of law at Harvard in 1958. From 1968 to 1971 he served as Dean of the Law School. In 1971 he was appointed president of Harvard University. He is coauthor of *Labor Law* (1962) and author of *Labor and the American Community* (1970).

Bok, Edward William, 1863-1930, American editor, b. Helder, Netherlands. His family emigrated to the United States in 1870. He founded the *Brooklyn Magazine* (later *Cosmopolitan*) in 1883. As editor (1889-1919), he made the *Ladies' Home Journal* a leading American magazine for women, introducing serious articles and crusades to a medium previously restricted to light entertainment. Bok published fiction by Howells, Twain, Bret Harte, and Kipling and articles by several American Presidents. Of the books he wrote, his autobiographical *Americanization of Edward Bok* (1920) was the most popular and won a Pulitzer Prize. He engaged in

various philanthropic activities including the erection of the Bok Singing Tower, a carillon in Iron Mountain, Fla., and the endowment of the Woodrow Wilson professorship of literature at Princeton.

Bokassa, Jean Bedel (zhaN bēdēl' bōka'sa), 1921-, president of Central African Republic. He served (1939-61) in the French army and then organized his country's army, becoming commander in chief in 1963. In 1966 he led an army coup and became president and prime minister of the republic, holding several other cabinet posts in addition. He was appointed life president in 1972.

Boker, George Henry (bō'kər), 1823-90, American poet and playwright, b. Philadelphia, grad. Princeton, 1842. He is best remembered for his romantic and heroic tragedies, written in the manner of Elizabethan drama. The best of these were *Leonor de Guzman* (1853) and *Francesca da Rimini* (1855), based on the story of Francesca and Paolo. He also wrote a series of love sonnets. See biography by E. S. Bradley (1927, repr. 1972).

Bokhara: see BUKHARA, USSR

Bokher, Elya see LEVITA, ELIJAH

Boksburg (bōks'būrg'), city (1970 pop. 104,745), Transvaal prov., NE South Africa. It is an important gold- and coal-mining center. Manufactures include railroad equipment, electrical and metal goods, clay products, canned foods, and refined petroleum. Boksburg, founded in 1887 as the administrative center of the East Rand, is the second oldest town on the WITWATERSRAND.

Bol, Ferdinand (fēr'dinānt bōl), 1616-80, Dutch painter. He studied with Rembrandt in Amsterdam, and his early work (e.g., *Elizabeth Bas*, Amsterdam) has sometimes been confused with that of his master. His style was modified after 1650 through contact with van der Helst. Thereafter he moved away from a preoccupation with psychological probing and developed lighter tonalities and elegant forms. He is noted mainly for his portraits, a large collection of which is in the Rijks Museum and the Hermitage. Bol also executed a number of engravings.

Bolan Pass or Bholan Pass (both bōlan'), gap in the central Brahui Range, W. Pakistan, c.60 mi (100 km) long, alt. 5,880 ft (1,792 m). A railroad and highway cross the pass en route to the Afghanistan frontier. The pass, which is strategically located, was long used by traders, invaders, and nomadic tribes as a gateway to India.

Boldini, Giovanni (jōvan'nē bōldē'nē), 1842-1931, Italian portrait painter. Having worked in Florence and London, he reached his peak of creativity and success in Paris, painting romantic vignettes and portraits. His works are distinguished by the bravura of the brushwork. A portrait of Consuelo, Duchess of Marlborough, with Lord Ivor Spencer-Churchill is in the Metropolitan Museum.

Boldredwood, Rolf see BROWNE, THOMAS ALEXANDER

bolero (bōlār'ō), national dance of Spain, introduced c.1780 by Sebastian Zerezo, or Cerezo. Of Moroccan origin, it resembles the FANDANGO. It is in 2-4 or 3-4 time for solo or duo dancing and is performed to the accompaniment of castanets, guitar, and the voices of the dancers. Ravel's *Bolero* is in this rhythm.

Boleslaus I (bō'iaslōs), c.966-1025, Polish ruler (992-1025), the first to call himself king, also called Boleslaus the Brave. He succeeded his father, MIESZKO I, as duke of Poland, seized the territories left to his two brothers under their father's will, and set about increasing his holdings. With the sanction of Holy Roman Emperor Otto III, he obtained (1000) the elevation of G涅ZNO into a metropolitan see, thus emancipating the Polish church from German control. Otto also supported plans for Polish political autonomy. Otto's successor, Holy Roman Emperor HENRY II, opposed Boleslaus's ambition, when Boleslaus overran Meissen and the East Mark. Henry refused to confirm his control of these territories. Boleslaus took advantage of dynastic troubles to occupy Bohemia in 1003, expelled in 1004, he still retained Moravia. He repelled a series of invasions of Poland by Henry. In 1018, in the Peace of Bautzen, Boleslaus received Lusatia as a fief of the Holy Roman Empire. Subsequently he campaigned successfully against Kiev. Boleslaus ranks among Poland's foremost rulers, he reorganized the administration, systematized taxation, and created a large standing army. Shortly before his death he was crowned king with the approval of the Holy See. He was succeeded by his son, MIESZKO II.

Boleslaus II, c.1039-1081, duke (1058-76), and later king (1076-79) of Poland, son and successor of Casi-

mir I Throughout his reign he opposed the influence of the Holy Roman Empire. He asserted Polish power in Bohemia, Hungary, and S Russia by interfering in their civil wars. As a reward for submitting his foreign policy to papal control he was crowned king in 1076. He became involved in a sharp conflict with the Polish clergy and nobility, and in 1079 he killed (or procured the death of) Stanislaus, bishop of Krakow. The death provoked immediate reaction, the king's younger brother, Ladislaus Herman, joined in league with the powerful nobles and seized the royal power. Excommunicated and deprived of his title by Pope Gregory VII, Boleslaus died in exile in Hungary.

Boleslaus III, 1085–1138, duke of Poland (1102–38). The kingdom had been divided by his father, Ladislaus Herman, between Boleslaus and his elder brother Zbigniew, whose legitimacy was disputed. Zbigniew was supported by the Holy Roman emperor and other powers, however, Boleslaus defeated Zbigniew and reunited the kingdom. He routed (1109) Holy Roman Emperor Henry V at Hundsfield and warred against Bohemia, Hungary, and Kiev. Having also regained Pomerania, which Mieszko II had lost to Denmark, Boleslaus entrusted the Christianization of its inhabitants to the bishop of Bamberg. In 1135 at Merseburg he signed a treaty with Holy Roman Emperor Lothair II, by which he received Pomerania and Rugen as fiefs of the empire. Vainly seeking to prevent the disintegration of his kingdom, Boleslaus altered the law of succession of his dynasty (see *PIAST*). Among his sons, *CASIMIR II* was the most notable.

Boleslav I, d. 967, duke of Bohemia (929–67). He became duke by assassinating his elder brother, Duke Wenceslaus (see *WENCESLAUS, SAINT*). Although Boleslav was involved in constant warfare against the encroaching Germans, he was able to create a Bohemian state. He built fortresses to control restless tribes, conquered Moravia and part of Silesia, and encouraged the spread of Christianity. In 950 he was forced to recognize German suzerainty, although Bohemia remained largely autonomous.

Boleslav II, d. 999, duke of Bohemia (967–99), son and successor of *BOLESNAV I*. Continuing his father's policies, he largely completed the Christianization of Bohemia. In 973 he agreed to the establishment of the bishopric of Prague under the archbishop of Mainz, and in 993 he founded the first monastery in Bohemia. He supported his German overlords against Poland but also clashed with them in two wars. Boleslav strengthened his internal rule by eliminating princely rivals to his own Premyslide dynasty.

Boleyn, Anne (bōl'ēn, bōl'ēn'), 1507?–1536, second queen consort of *HENRY VIII* and mother of Elizabeth I. She was the daughter of Sir Thomas Boleyn, later earl of Wiltshire and Ormonde, and on her mother's side she was related to the Howard family. After spending some years in France, she was introduced to the English court in 1522. Soon Henry, who had already enjoyed the favors of her older sister, fell deeply in love with Anne. Unlike her sister, however, Anne refused to become his mistress, and this fact, coupled with Henry's desire for a male heir, led the king to begin divorce proceedings against *KATHARINE OF ARAGON* in 1527. In 1532, Anne finally yielded to the king, and the resulting pregnancy hastened a secret marriage (Jan. 1533) and the final annulment (May) by Archbishop *CRANMER* of Henry's previous marriage. Anne was crowned queen on June 1. Her delivery of a daughter (Elizabeth) in Sept., 1533, bitterly disappointed Henry, who soon took up with Jane *SEYMOUR*. In 1536, after the miscarriage of a son, Anne was brought to trial for adultery and incest. Whether she was guilty has never been determined, but a court, headed by her uncle Thomas Howard, duke of Norfolk, condemned her, and she was beheaded. Two days before her death her marriage was declared void by the Church of England. See the often published love letters of Henry VIII, biography by M. L. Bruce (1972), W. S. Pakenham-Walsh, *A Tudor Story: The Return of Anne Boleyn* (1963), M. H. Albert, *The Divorce* (1965).

Bolivar, Simon (sēmōn' bōlē'vār), 1783–1830, South American revolutionary, called the Liberator, b. Caracas, Venezuela, of a wealthy creole family. Educated by tutors such as Andres BELLO and Simon

Rodriguez, he was deeply influenced by the teachings of Jean Jacques Rousseau. When the revolution against Spain broke out in 1810, he became an enthusiastic patriot, but in 1812 his forces were defeated at Puerto Cabello. This ill fortune increased dissension among the revolutionaries, and Bolivar was one of the men who seized and imprisoned the patriot leader, Francisco de MIRANDA. Bolivar went to Cartagena, where he cooperated with the forces of Antonio NARIÑO and won notable victories. In 1815, however, the patriots were again scattered and crushed by a royalist army under Pablo MORILLO. Bolivar escaped to the island of Jamaica and from there fled to Haiti. In the spring of 1816 he led an invasion of Venezuela, which proved a disastrous failure. He was forced to return to Haiti. However, in 1817, when the patriot army had proven unsuccessful against royalist forces, he was recalled as supreme commander. He reinforced the ranks of the rebel army by enlisting the support of José Antonio PÁEZ, leader of the llaneros (plainsmen), and of European volunteers, who were veterans of the Napoleonic wars. With a band of guerrilla fighters he resumed the war, occupied part of the lower Orinoco basin, and at Angostura (now CIUDAD BOLÍVAR) a congress elected him president of Venezuela. There in 1819 he conceived a bold plan of splitting the royalist forces. With a large force—made up largely of llaneros under Francisco de Paula SANTANDER and Páez—he crossed the flooded Apure valley, climbed to the bitterly cold Andean passes, and defeated the surprised Spanish forces at BOYACÁ (Aug. 7, 1819). The same year he was elected president of Greater Colombia (present-day Colombia, Venezuela, Ecuador, and Panama). In June, 1821, his victory at Carabobo sealed the freedom of the north, and Bolivar entered Caracas in triumph. Ecuador, however, was not taken from the Spanish until he and Antonio Jose de SUCRE won the battle of Pichincha in May, 1822. Bolivar then undertook to free Peru and the present Bolivia, where the forces of the great Argentine liberator José de SAN MARTÍN were already operating. At Guayaquil in July, 1822, Bolivar and San Martin joined in secret meetings. The events that occurred there are unknown, although speculation still continues after a century and a half. The outcome, in any case, was the withdrawal of San Martin. Bolivar was the commander in chief of the patriot forces that won at Junin in 1824. A little later the battle of Ayacucho marked the final triumph of the revolution in South America. Bolivar was unrivaled as the most powerful man of the continent. The president of Greater Colombia, he also organized the government of Peru and created Bolivia. In 1826 he expanded his vision of a united Spanish America by calling a conference of all the new republics at Panama, although little was actually accomplished, the meeting was the beginning of Pan-Americanism. There was much murmuring against his power and his somewhat high-handed methods, he was widely accused of imperial designs, and revolts and separatist movements shook the union. Bolivar declared himself dictator in 1828, and the next night, Sept. 24, 1828 ("the September night"), he barely escaped assassination by jumping from a high window and hiding. He was successful in a campaign against Peru to prevent Peruvian interference in Bolivia and Colombia, but he could not halt the crumbling of Greater Colombia. Venezuela and Ecuador seceded, and Bolivar, in poor health and disillusioned ("We have ploughed the sea," he said), resigned the presidency in 1830. Soon afterward he died of tuberculosis near Santa Marta. At the time of his death Bolivar was poor and bitterly hated, but it was not long before South Americans began to pay tribute to this passionate, headstrong idealist, who is today revered as the greatest Latin American hero. Monumental statues of Bolivar may be seen in the major cities of the Andean region. See biographies by Hildegarde Angell (1930), Salvador de Madariaga (1952, repr. 1969), and Gerhard Masur (rev. ed. 1969).

Bolivia (bōlī'vā, Span. bōlē'vya), republic (1973 est. pop. 5,250,000), 424,162 sq mi (1,098,581 sq km), W South America. SUCRE is the legal capital and seat of the judiciary, but LA PAZ is the political and commercial focus of the nation. One of the two inland countries of South America, Bolivia is shut in from the Pacific in the W by Chile and Peru, in the east and north it borders on Brazil, in the SE on Paraguay, and in the S on Argentina. Bolivia presents a sharp contrast between high, bleak mountains and plateaus in the west and lush, tropical rain forests in the east. In the southeast it merges into the semiarid plains of the CHACO. The Andes mountain system reaches its greatest width in Bolivia. Two cordilleras, the western one tracing the border with Chile and

the eastern running north and south across the center of the country, are divided by a high plateau (altiplano), most of it 12,000 ft (3,660 m) above sea

level—barren, windswept, and segmented by mountain spurs. Despite the harsh conditions the altiplano is the population center of Bolivia. Many sections for want of drainage have brackish lakes and salt beds, notably the extensive Salar de Uyuni in the south. In the north are Lake Titicaca, which Bolivia shares with Peru, and Lake Poopo. This region, world famous for its breathtaking scenery, was the home of one of the great pre-Columbian civilizations. Well known are the ruins of TIHUANACO. The eastern mountains, consisting of three major ranges, rise to the cold, forbidding heights of the Puna plateau (as high as 16,000 ft/4,880 m) and in the north to the snow-capped peaks of Illimani (21,184 ft/6,457 m) and Illampu (21,276 ft/6,485 m). In these mountains lies the source of the exploited wealth of Bolivia—its minerals. Tin is by far the most important product, but silver was once the chief metal, and copper, wolframite, bismuth, antimony, zinc, lead, and gold are also mined. The names of some mining towns, notably POTOSÍ and Oruro, are world famous. From the mountains, headstreams cut their way eastward carving deep gorges and fingerlike valleys. In these deep-cut valleys are some of the garden spots of Bolivia—Sucre, Cochabamba, and TARIJA. SANTA CRUZ, just east of the high mountains, is the only major city in tropical Bolivia. In the eastern foothills the headstreams gather to form the Beni, the Guaporé, and the Mamoré (tributaries of the Madera, in Brazil), which flow through the torrid, humid YUNGAS, covered with dense rain forests, not yet adequately exploited, and inhabited mainly by Indians. The region is the most fertile in the country, yielding cacao, coffee, and tropical fruits, and in the early 20th cent. was a major source of wild rubber and quinine. Some of the more accessible valleys, with luxuriant scenery and a pleasantly warm climate, have become popular Bolivian resort areas. To the south, in the Chaco, are major petroleum deposits. Despite the importance of its mines, Bolivia still lives by a subsistence economy. More than half the people eke out a bare living from agriculture. Sugarcane, potatoes, corn, wheat, and rice are the leading crops. Industry is limited to processing and small-scale manufacturing. Bolivia's mineral wealth furnishes the bulk of its exports, foodstuffs, manufactured goods, and chemicals are imported. The United States and Great Britain are the chief trading partners. In 1969, Bolivia's per capita gross national product was \$190. More than half the population of Bolivia is pure Indian, although the whites and the cholos (those of mixed Indian and white blood, or Indians assimilated to white culture) maintain economic, political, and social hegemony. The predominant Indian languages are Aymara and Quechua. Many tribes are untouched by the white culture. Most of the population is Roman Catholic,

although many Indians retain the substance of their pre-Christian beliefs. There are eight universities in the country. The rate of illiteracy is about 70%. Bolivia has had more than 185 revolutions since it became independent in 1825. The latest constitution was adopted in 1967. It provides for a president elected for a four-year term and a bicameral congress. However, the congress has been suspended since Sept., 1969, and no presidential election has been held since 1966. The altiplano was a center of Indian life even before the days of the Inca, but the AYMARA had been absorbed into the Inca empire long before Gonzalo and Hernando PIZARRO began the Spanish conquest of the Inca in 1532. In 1538 the Indians in Bolivia were defeated. Uninviting though the high, cold country was, it attracted the Spanish because of its rich silver mines, discovered as early as 1545. Exploiters poured in, bent on quick wealth. Forcing the Indians to work the mines and the *obrajos* [textile mills] under duress, they remained indifferent to all development other than the construction of transportation facilities to remove the unearthed riches. Indian laborers were also used on great landholdings. Thus began the system of plunder economy and social inequality that persisted in Bolivia until recent years. Economic development was further retarded by the rugged terrain, and conditions did not change when the region was made (1559) into the audiencia of CHARCAS, which was attached until 1776 to the viceroyalty of Peru and later to the viceroyalty of La Plata. The revolution against Spanish control came early, with an uprising in Chuquisaca in 1809, but Bolivia remained Spanish until the campaigns of José de SAN MARTÍN and Simón BOLÍVAR, independence was won only with the victory (1824) at AYACUCHO of Antonio José de SUCRE. After the formal proclamation of independence in 1825, Bolívar drew up (1826) a constitution for the new republic. The nation was named Bolivia, and Chuquisaca was renamed Sucre, after the revolutionary hero. Bolivia inherited ambitions and extensive territorial claims that proved disastrous, leading to warfare and defeat. At the time of independence it had a seacoast, a portion of the Amazon basin, and claims to most of the Chaco, in little more than a century all these were lost. The strife-ridden internal history of Bolivia began when the first president, Sucre, was forced to resign in 1828. A steady stream of egocentric, frequently barbarous caudillos plagued Bolivia thereafter. Andrés SANTA CRUZ, desiring to reunite Bolivia and Peru, invaded Peru in 1836 and established a confederation, which three years later was dissolved in blood on the battlefield of Yungay. Although a few presidents, notably José BALLIVIAN, made efforts to reform the administration and improve the economy, the temptation to wholesale corruption was always strong, and honest reform was hard to achieve. The nitrate deposits of ATACAMA proved valuable, but the mining concessions were given to Chileans. Trouble over them led (1879), during the administration of Hilarión DAZA, to the War of the Pacific (see PACIFIC, WAR OF THE). As a result Bolivia lost Atacama to Chile. The next serious loss was the little-known region of the Acre River, which had become valuable because of its wild rubber. After a bitter conflict, Bolivia, under President José Manuel PANDO, yielded the area to Brazil in 1903 for an indemnity. Attempts at reorganization and reform, especially by Ismael MONTEs, were overshadowed in the 20th cent. by military coups, rule of dictators, and bankruptcy. This repeated sequence led to foreign loans, such as the Nicolaus loan from North American bankers, sometimes at exorbitant rates. This led in turn to an increase of foreign influence, strengthened by foreign interests in mines and oil fields. Attempts to raise Bolivia from its status as an underdeveloped country met with little success, although great personal fortunes were amassed from tin mining by tycoons such as Simón I. PATIÑO. Conflicting claims to the Chaco, which was thought to be oil-rich, brought on yet another disastrous territorial war, this time with Paraguay (1932-35). The fighting ended in 1935 with both nations exhausted and Bolivia defeated and stripped of most of its claims in that area. The war and the defeat aggravated internal discontent, and programs, radical, conservative, and moderate, for curing the ills of the nation were hampered by military coups and countercoups. World War II proved a boon to the Bolivian economy by increasing demands for tin and wolframite. International pressure over pro-German elements in the government eventually forced Bolivia to break relations with the Axis and declare war (1943). Meanwhile, rising prices had aggravated the restiveness of the

miners over miserable working conditions, strikes were brutally suppressed. The crisis reached a peak in Dec., 1943, when the nationalistic, pro-miner MNR (*Movimiento Nacional Revolucionario*) engineered a successful revolt. The regime, however, was not recognized by other American nations (except Argentina) until 1944, when pro-Axis elements in the MNR were officially removed. Bolivia then became a member of the United Nations. In 1946 the leader of the MNR-backed government, Major Gualberto Villaroel, was lynched. The conservative government installed in 1947 was soon threatened by opposition from the MNR and the extreme left, two serious MNR-led revolts broke out in 1949. In the 1951 presidential elections Víctor Paz Estenssoro, the MNR candidate, won a majority of the votes, but was prevented from taking office by a military junta. The MNR, with the aid of the national police (the *carabineros*) and of a militia recruited from miners and peasants, then rebelled and took power. The revolutionary government proceeded to expropriate and nationalize the tin holdings of the huge Patiño, Hochschild, and Aramayo interests and inaugurated a program of agrarian reform. Civil rights and suffrage were extended to the Indians. Education, health, and construction projects were begun. In 1956 the MNR candidate, Hernán SILES ZUASO won the presidential election, and in 1960 the MNR further consolidated its power with the reelection of Víctor Paz Estenssoro. The United States, in spite of losses incurred by American investors, stepped up its program of technical and financial assistance, and Siles Zuaso temporarily succeeded in stemming inflation. But economic and political factors weakened the government. Income from tin exports sank to a postwar low, thus crippling attempts at industrial diversification, technical and administrative incompetence was rife, the fiscal system, never sound, became chaotic, and, worst of all, an incredible eruption of dissident splinter groups, some fostering acts of political terror, brought all attempts at further reform to a virtual halt. In 1964 the government was overthrown by the military. A junta dominated by Gen. René BARRIENTOS ORTUÑO assumed power. The regime used troops to occupy the mines but did not rescind the important reforms of the MNR. Barrientos was elected president in 1966. A radical guerrilla movement, led by the Cuban Ernesto "Che" Guevara, was set back seriously when government troops killed Guevara in Oct., 1967. Barrientos died in a helicopter crash in 1969. His successor, Luis Adolfo Siles Salinas, was overthrown by Gen. Alfredo OVANDO CANDIA. Ovando nationalized, with compensation, the Gulf Oil Company facilities in Bolivia. A rightist military junta overthrew Ovando in Oct., 1970, but lasted only one day, succumbing to a leftist coup led by Gen. Juan José TORRES. Under Torres relations with the Soviet Union, which had been established by Ovando, became closer, to the detriment of ties with the United States. Torres was overthrown in Aug., 1971, by Col. Hugo Banzer Suárez, who was supported by both the MNR and its traditional rightist opponent, the Bolivian Socialist Falange. Banzer closed the universities and returned Bolivia to a pro-U.S. foreign policy. With his power insecure, Banzer frequently arrested politicians, alleging anti-government plots. Churchmen were accused of aiding the guerrilla National Liberation Army. In June, 1974, following months of protests from peasants, miners, students, and opposition politicians, there was an unsuccessful attempt to depose Banzer. The government was reorganized and an all-military cabinet was installed in July. See Harold Osborne, *Bolivia: A Land Divided* (3d ed. 1964), Robert Barton, *A Short History of the Republic of Bolivia* (2d ed. 1968), H. S. Klein, *Parties and Political Change in Bolivia, 1880-1952* (1969), D. B. Heath et al., *Land Reform and Social Revolution in Bolivia* (1969), W. E. Carter, *Bolivia: A Profile* (1971), J. M. Malloy and R. S. Thorn, ed., *Beyond the Revolution: Bolivia Since 1952* (1971), J. V. Fifer, *Bolivia: Land, Location, and Politics Since 1825* (1972), D. B. Heath, *Historical Dictionary of Bolivia* (1972).

Böll, Heinrich (hīn'rikh bōl), 1917-, German novelist, short-story writer, and playwright. Böll presents a critical, antimilitarist view of modern society in a collection of masterful short stories, *Wanderer, kommst du nach Spa* (1950, tr. *Traveller, If You Come to Spa*, 1956), and the novels *Wo warst du, Adam?* (1951, tr. *Adam, Where Art Thou?*, 1955) and *Billard um halb zehn* (1959, tr. *Billiards at Half Past Nine*, 1961). Man's excesses and his inability to alter his destiny are among Böll's principal concerns in the narratives *Und sagte kein einziges Wort* (1953, tr. *Acquainted with the Night*, 1954), *Haus*

ohne Huter (1954, tr. *Tomorrow and Yesterday*, 1957), *Ansichten eines Clowns* (1963, tr. *The Clown*, 1965), and *Entfernung von den Truppen* (1964, tr. *Absent without Leave*, 1965). Many of Böll's works present his critical reflections on Catholicism and the church and his view of contemporary German society. Among his other notable works are a collection of travel essays, *Irish Journal* (tr. 1967), the novel *Gruppenbild mit Dame* (1971, tr. *Group Portrait with Lady*, 1973), and two anthologies in English, *Eighteen Stories* (1966) and *Children Are Civilians Too* (1970). Böll won the Nobel Prize in Literature in 1972. See study by W. J. Schwarz (tr. 1969).

Bollandists (bōl'andists), group of Jesuits in Belgium, named for their early leader, Jean Bolland, a Flemish Jesuit of the 17th cent. They were charged by the Holy See with compiling an authoritative edition of the lives of the saints, the monumental *Acta sanctorum*, which is still being constantly brought up to date.

Bolley, Henry Luke, 1865-1956, American plant pathologist, b. Dearborn, Mich. He is noted for his work on organisms causing diseases of crop plants (including the discovery of the cause of potato scab), for his methods of preventing oat smut, wheat bunt, and other diseases, and for developing varieties of wilt-resistant flax and rust-resistant wheat.

Bollingen (bōl'īng), town (1970 pop. 26,121), Bern canton, W. central Switzerland. It is a dairy and industrial center. There is a 16th-century church in the town.

Bollnas (bōl'nēs'), city (1970 pop. 13,498), E. Sweden, on the Ljusnan River. It is an important trade center and has railroad workshops. A 15th-century church is there.

boll weevil or **cotton boll weevil**, cotton-eating weevil, or snout beetle, *Anthonomus grandis*. Probably of Mexican or Central American origin, it appeared in S. Texas in 1892 and has since spread to most of the cotton-growing regions of the United States, causing losses as great as \$200 million a year to the cotton crop. The adult is grayish when young and black when older. It is about 1/4 in. (6 mm) long, with a snout, about half as long as the body, that is used to bore into the cotton boll, or seed pod. Both adults and larvae feed on the developing cotton fibers within the boll; females lay their eggs in holes made by eating, and the developing larvae eventually eat the entire contents of the boll. Earlier in the season some of the flower buds are destroyed in a similar manner, buds infested with larvae do not mature into bolls. Pupation (see INSECT) occurs within the bud or the boll. The entire metamorphosis from egg to adult takes about three weeks, from 2 to 10 generations occur each season. Adults can be destroyed by insecticides, but the larvae are protected within the boll. Another control measure aimed at the adults is elimination of the rubbish piles in which they take shelter during the winter. Fast-developing strains of cotton have been bred to minimize the amount of damage the larvae can do before harvesting. Devastation caused by the boll weevil has been a major reason for the change from a one-crop economy to more diversified agriculture in the South. The boll weevil is classified in the phylum ARTHROPODA, class Insecta, order Coleoptera, family Curculionidae. See U.S. Agricultural Research Service, Entomology Research Div., *The Boll Weevil* (rev. ed. 1969), bibliographies by H. A. Dunn (1964) and L. L. Millin and Norman Millin (1968).

bollworm, name for the larvae of two different moths. The PINK BOLLWORM is a serious pest of cotton, and the CORN EARWORM, or cotton bollworm, attacks cotton, corn, and other crops.

Bologna, Giovanni, or Giambologna (jūvān'ñē bōlō'nyā, jam'bōlō'nyā), 1524-1608, Flemish sculptor, whose real name was Jean Bologne or Boulogne. Though born in Douai, France, he is identified chiefly with the Italian Renaissance as one of its greatest sculptors. His masterpiece, *Flying Mercury*, is in the Bargello, Florence. *The Rape of the Sabinas* (Florence), with its spiraling forms and multiple viewpoints, is one of the finest examples of mannerist sculpture. This work exerted a profound influence on later art. Among his other works are the equestrian statues in Florence of the Medicis, one of Ferdinand I (see Browning's poem "The Statue and the Bust") and another of Cosimo I, two fountains in the Boboli Gardens, Florence, the bronze doors of the cathedral in Pisa, a Neptune fountain in Bologna, and the colossal statue *Apennines* at Pratolino. There are two of Giambologna's elegant statuettes of the Evangelists in the Metropolitan Museum and one at the museum of the Univ. of Kansas.

Bologna (bōlō'nyā), city (1971 pop. 490,036), capital of Emilia-Romagna and of Bologna prov., N central Italy, at the foot of the Apennines and on the Aemilian Way. It is a commercial and industrial center and a railroad junction. Manufactures include farm machinery, motor vehicles, metal goods, processed food, and chemicals. Originally an Etruscan town called Felsina, it became a Roman colony in 189 B.C. The city came under Byzantine rule in the 6th cent. A.D. and later passed to the papacy. In the early 12th cent. a strong free commune was established. The victory of Bologna over Emperor Frederick II at Fossalta (1249) added political power to the city, then known chiefly as an intellectual center. Bologna's famous university originated (c. 1088) with its Roman law school (founded A.D. 425), where IRENIUS and ACCURSUS taught, medical and theological faculties and courses in the liberal arts were added in the 14th cent. In later years those active at the university included Malpighi, Galvani, and Marconi. Bologna has long been a center of printing, and its observatory (founded 1712) is the oldest in Italy. In politics the rivalry between the Guelphs and the Ghibellines enabled several ambitious families to seize power (13th–15th cent.). The Pepoli were succeeded by the Visconti of Milan and, after a short period of papal rule, by the BENTIVOGLIO (1446). In 1506, Pope Julius II reestablished papal rule, which was interrupted in 1797, when Bologna was made the capital of the Cispadane Republic, but resumed in 1815 after the Congress of Vienna. The coronation of Charles V at Bologna (1530) was the last imperial crowning by a pope. The Council of Trent met at Bologna in 1547–48. There were unsuccessful revolts against papal rule in 1831, 1843, and 1848, and in 1860 Bologna voted to unite with the kingdom of Sardinia. The city was heavily bombed by the Allies in World War II. It has retained a marked medieval aspect, many streets are arcaded. Noteworthy structures include the Palazzo Comunale (13th and 15th–16th cent.), the Renaissance-style Palazzo del Podestà, the palace of King Enzo (13th cent.), the Basilica of San Petronio (begun in 1390), with a 15th-century doorway by Jacopo della Quercia, the Church of Santo Stefano, the Church of San Giacomo Maggiore (founded 1267, major alterations in the 15th cent.), the Church of San Domenico (early 13th cent.), and the Archiginnasio (once the seat of the university and now a library). Bologna has an archaeological museum, an art gallery, with works by Bolognese artists, including FRANCESCA, the CARRACCI, and Guido RENI, and a nuclear research institute. On hills near the city are the Renaissance Church of San Michele (in Bosco) and a former Carthusian monastery.

Bologna, University of, at Bologna, Italy, founded in the 11th cent. It originated as a school where law books brought from Ravenna were interpreted. It has faculties of law, political science, economics and commerce, letters and philosophy, teacher training, medicine, industrial chemistry, pharmacy, veterinary medicine, agriculture, engineering, and mathematics, physics, and natural sciences.

Bologne, Jean: see BOLOGNA GIOVANNI

bolometer (bōlōm'atər, bə-), instrument for detecting and measuring RADIATION, e.g., visible LIGHT, INFRARED RADIATION, and ULTRAVIOLET RADIATION, in amounts as small as one millionth of an erg. The bolometer was invented in 1880 by Samuel P. Langley. Basically it consists of a radiation-sensitive resistance element in one branch of a Wheatstone bridge; changes in radiation cause changes in the electrical resistance of the element. The radiation-sensitive element may be a platinum strip, a semiconductor film, or any other substance whose resistance is altered by slight changes in the amount of radiant energy falling on it.

Bolsena (bōlsē'na), town (1971 pop. 3,953), Latium, central Italy, on picturesque Lake Bolsena, near the site of the second VOLSINI. It is an agricultural and tourist center. Of note are an imposing castle (12th cent.) and the Church of Santa Cristina (11th–16th cent.).

Bolshevism and Menshevism (bōl'shəvīzəm, bōl'-, mēn'shəvīzəm), the two main branches of Russian SOCIALISM from 1903 until the consolidation of the Bolshevik dictatorship under LENIN in the civil war of 1918–20. The Russian Social Democratic Labor party, secretly formed at a congress at Minsk in 1898, was based on the doctrines of MARXISM. At the second party congress, held at Brussels and then London in 1903, Lenin's faction gained a majority. His group was thereafter known as the *Bolsheviks* [members of the majority] and his opponents as the *Mensheviks* [members of the minority], although the Bolsheviks promptly lost their numerical superi-

ority. Lenin favored a small, disciplined party of professional revolutionaries; the Mensheviks wanted a loosely organized mass party. In a pamphlet published in 1905, Lenin outlined his concept of revolution in Russia since the Russian bourgeoisie was too weak to lead its own revolution, the proletarians and peasants must unite to overthrow the czarist regime and establish a dictatorship of the proletariat and peasantry. The Mensheviks, led by PLEKHANOV, believed that Russia could not pass directly from its backward state to a rule by the proletariat and that first an intermediary bourgeois regime must be developed. These differences were not always clear-cut, and many Socialist leaders, such as TROTSKY, passed from one group to the other and back again. The RUSSIAN REVOLUTION of 1905 was a common effort of all revolutionary and reformist movements. In the first Duma of 1906, which was boycotted by the Social Democrats, the Liberal Constitutional Democrats were the strongest party, but in 1907 the Social Democrats took part in the elections. In 1912 the Bolsheviks and Mensheviks formally became separate parties. In World War I, the Bolsheviks hoped for the defeat of czarist Russia and sought to transform the conflict into an international civil war that would bring the proletariat to power. The right wing of the Mensheviks supported Russia's war effort, the left wing called for pacifism. In the Russian Revolution of 1917 the Mensheviks participated in the Kerensky provisional government. Lenin, returning from exile in April, declared that Russia was ripe for an immediate socialist revolution. The Bolsheviks gained majorities in the important SOVIETs and overthrew the government in the October Revolution. The Mensheviks opposed this coup d'état and participated in the short-lived Constituent Assembly (Jan., 1918), but they generally refused to side with the anti-Bolshevik forces during the civil war. The Mensheviks were suppressed by 1921. Meanwhile, in 1918, the Bolsheviks became the Russian Communist party. See Adam B. Ulam, *The Bolsheviks: The Intellectual and Political History of the Triumph of Communism in Russia* (1965, repr. 1968), Leonard Schapiro, *The Communist Party of the Soviet Union* (2d ed., rev. 1970).

Bolshoi Ballet, the principal ballet company of the Soviet Union. It began as a dancing school for the Moscow Orphanage in 1773. Opened in 1856, the Bolshoi Theatre in its early decades competed for preeminence with the Maryinsky Theatre of St. Petersburg. Alexander Gorsky revitalized it in the early 20th cent. and introduced a new dramatic realism to the classical ballets. Igor Moiseyev experimented with folk-dance ballets at the Bolshoi in the 1930s. The company is internationally acclaimed for its superb ensemble skills and for the spectacular realism of its scenery and costumes. Since the mid-1960s Maya PLISETSKAYA has been the company's prima ballerina. The Bolshoi has toured both Europe and the United States with celebrated productions of such classics as *Giselle* and *Swan Lake*.

Bolton, Herbert Eugene, 1870–1953, American historian and teacher, b. Wilton, Monroe co., Wis. He taught history at the Univ. of Texas (1901–9), Stanford (1909–11), and the Univ. of California (1911–44) and became an outstanding authority on Spanish colonial days in the West. He edited and translated numerous important journals of Spanish soldiers and priests, widening the printed sources immeasurably, but he is perhaps better known for such works as *Texas in the Middle Eighteenth Century* (1921, repr. 1970), *The Spanish Borderlands* (1921), *Outpost of Empire* (1931, repr. 1966), the story of the founding of San Francisco, and the biographies *Rim of Christendom* (1936, repr. 1960), on Father Eusebio Francisco Kino, and *Coronado* (1949). For these sound studies of a colorful period Bolton employed a prose that reflected his own vigorous and colorful personality. He also promoted the study of the history of the Americas as a unit of human development, for this purpose he wrote a syllabus, *History of the Americas* (1928), and a survey of the colonial period, *Wider Horizons of American History* (1939, repr. 1967). He was also director from 1916 to 1940 of the Bancroft Library at the Univ. of California. See studies by Lewis Hanke, ed. (1964), and W. R. Jacobs et al. (1965).

Bolton or Bolton-le-Moors (bōl'tən-lə-mōōrz), county borough (1971 pop. 153,977), Lancashire, NW England. Since the late 18th cent., when spinning factories were built and a canal (1791) was constructed to Manchester, Bolton has been a cotton-textile center. Prior to that time, woolen weaving, which was stimulated by the immigration of Flemings in the 14th cent., was important. Besides

the great textile plants (sheets, quilts, towels, bedcovers, and dress materials), there are factories that pack poultry and produce textile and other machinery, chemicals, leather goods, furniture, carpets, and paper. Samuel Crompton, inventor of the spinning mule (1779), was born nearby and is buried in Bolton. Sir Richard Arkwright invented the "water frame" there c. 1768. In 1974, Bolton became part of the new metropolitan county of Greater Manchester.

Boltraffio or Beltraffio, Giovanni Antonio (jōvān'āntō'nyō bōl'trāf'fyo, bāl-), 1467–1516, Italian painter, b. Milan. He was a pupil of Leonardo da Vinci, whose style he adhered to faithfully. There are examples of Boltraffio's work in Milan, the National Gallery, London, and the Louvre.

Boltwood, Bertram Borden, 1870–1927, American chemist and physicist, b. Amherst, Mass., grad. Sheffield Scientific School, Yale, 1892. After graduate study at Leipzig and Yale (Ph.D., 1897), he taught at Yale until his death, serving from 1910 to 1927 as professor of radiochemistry. An expert in laboratory technique and apparatus, he gave much of his energy to planning and supervising the building of the Sloane Physics Laboratory and the Sterling Chemistry Laboratory, both at Yale. He did important research on radioactive elements (he discovered ionium, an isotope of thorium, but believed it to be a new element) and pioneered in the radioactive dating of geological strata.

Boltzmann, Ludwig (lōōt'vīkh bōlts'mān), 1844–1906, Austrian physicist, b. Vienna, educated at Univ. of Vienna. He began teaching (1869) at Graz Univ. In 1873 he became mathematics professor at Vienna and then physics professor at Graz (1876), Munich (1890), Vienna (1895), and Leipzig (1900). Boltzmann made important contributions to the kinetic theory of gases and to statistical mechanics—the Boltzmann constant, the ratio of the mean total energy of a molecule to its absolute temperature, is used widely in statistics and is named for him. Working independently, he demonstrated a law on radiation from a BLACK BODY that had been stated by the Austrian physicist Josef Stefan, hence the law is sometimes known as the Stefan-Boltzmann law.

Bolyai (bō'lyoi), family of Hungarian mathematicians. The father, Farkas, or Wolfgang, Bolyai, 1775–1856, b. Bolya, Transylvania, was educated in Nagyszében from 1781 to 1796 and studied in Germany during the next three years at Jena and Göttingen, where he began a lifelong friendship with Carl F. Gauss. From 1804 to 1853 he was professor of mathematics at Maros Vasarhely. His primary interest was in the Euclidean parallel postulate. His principal work, the *Tentamen* (1832–33), inspired by his mathematically gifted son Janos, is an attempt at a rigorous and systematic foundation of geometry (Vol. I) and of arithmetic, algebra, and analysis (Vol. II). Janos, or Johann, Bolyai, 1802–60, b. Kolosvar, Transylvania, was educated by his father in Maros Vasarhely and from 1818 to 1822 in Vienna, where he received military training at the imperial engineering academy. In 1820 he began to work in a direction that ultimately led him to a non-Euclidean geometry. In 1823, after vain attempts to prove the Euclidean parallel postulate, he developed his system by assuming that a geometry could be constructed without the parallel postulate. His theory of absolute space was published as an appendix to his father's *Tentamen* and constituted the sole work published in his lifetime.

Bolzano, Bernard (bōltsa'nō), 1781–1848, Czech philosopher, mathematician, and theologian. Though as a Catholic priest he himself was primarily concerned with religious and ethical questions, he is known today for his work in philosophy, methodology of science, mathematics, and logic. Among his important works are *Wissenschaftslehre* (1837), an attempt at a complete theory of science and knowledge, *Rein analytischer Beweis* (1817), which contains an early successful attempt to free differential calculus from the concept of infinitesimals, and *Theorie der reellen Zahlen*, which laid the cornerstone of the theory of real numbers. He tried to devise a geometry without the use of Euclid's parallel postulate, developed a fairly complete theory of real functions, and worked at an ideal language. However, his work did not attract the attention of his contemporaries and thus did not influence the development of mathematics.

Bolzano (bōltsa'nō), Ger. Bozen (bō'tsən), city (1971 pop. 103,267), capital of Bolzano prov., in Trentino-Alto Adige, N. Italy, on the Isarco River near its confluence with the Adige. It is the center of the German-speaking part of S. Tyrol and is a tourist and

health resort noted for its Alpine scenery and mild climate. Its position on the Brenner road has made it the chief commercial center of the area since the Middle Ages, when important fairs were held there. The city's manufactures today include steel, plastics, aluminum products, and woolen goods. Bolzano was part of the bishopric of Trent from the 11th cent. until the 16th cent., when it was ceded to the Hapsburgs. It then followed the fortunes of TYROL and was awarded to Italy in 1919. The city was severely damaged in World War II. Noteworthy buildings include the Romanesque-Gothic cathedral (13th-16th cent.) and several houses of the 15th to 17th cent.

Boma (bō'mə), city (1967 est. pop. 79,000), Bas-Zaïre region, W Zaïre, on the Congo estuary. A port and railhead, it exports tropical timber, bananas, cacao, and palm products. Boma was the capital of the Congo Free State (after 1908 the Belgian Congo) from 1887 to 1929.

bombax, common name for the Bombacaceae, a family of deciduous trees, often tall and with unusually thick trunks, found chiefly in the American tropics. The family includes many commercially important members, e.g., the BAOBAB, the balsa, or corkwood (*Ochroma lagopus*), which yields the lightest lumber in the world, and the KAPOK and several species of the genera *Bombax* and *Cerba* whose seed fibers are used as filling material. The Bombacaceae are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Malvales.

Bombay (bōmbā'), former state, W central India, on the Arabian Sea. The state contained within its borders the former Portuguese colonies of Goa, Daman, and Diu. The region of Bombay has a rich history, and remains exist from the period (320-184 B.C.) when much of Bombay belonged to the Buddhist Maurya empire. Buddhism was supplanted (c. 5th cent. A.D.) by Hinduism, which has been the major religion except during Muslim control (13th-18th cent.). In the 16th cent., Portugal was the leading foreign power in Bombay, but Great Britain predominated in the 17th cent. and by the early 19th cent. had formed the Bombay presidency, which included Sind. In 1937, Bombay was made a province. After India gained its independence in 1947, all former native states within the provincial boundary joined Bombay, Baroda and Kolhapur were the largest. In 1956, Bombay was reorganized as a state and absorbed parts of Hyderabad and Madhya Pradesh and the princely states of Kutch and Saurashtra. In 1960, however, Bombay state was divided into the new states of Gujarat and Maharashtra. The city of Bombay (1971 pop. 5,968,546), now the capital of Maharashtra state, occupies about 25 sq mi (65 sq km) on Bombay and Salsette islands just off the coast. Bombay Island was created in the 19th cent. by reclamation projects that combined seven basaltic islets. Today it is a peninsula of the larger Salsette Island to the north. Salsette Island itself is connected to the mainland by causeways and railroad embankments. The city of Bombay has the only natural deepwater harbor in W India. It is a transportation hub and industrial center. Industries include cotton-textile and chemical manufacturing and petroleum refining. There is an extensive system of hydroelectric stations, and nearby at Trombay is a nuclear reactor. Bombay University (founded 1857) is in the city. Bombay has many large suburbs. Among the largest are Andheri, Santa Cruz, Thana, and Ulhasnagar, all having populations of more than 100,000. The area of the city was ceded (1534) to Portugal by the sultan of Gujarat. Bombay, after it passed to Great Britain in 1661, was the headquarters (1668-1858) of the East India Company in India, and during the American Civil War it expanded to meet the world demand for cotton and became a leading cotton-spinning and weaving center. On Salsette Island are Buddhist caves. The nearby small island of Elephanta is noted for its antiquities. Bombay has the largest community of PARSIS in India.

Bomberg, David, 1890-1957, English artist. Bomberg was apprenticed to a lithographer in 1905 and studied under Walter Sickert at the Westminster School of Art. His abstract works are filled with angular forms and painted in a hard-edge style.

Bomoseen, Lake (bōmō'sēn'), 7.5 mi (12 km) long, 1.5 mi (2.4 km) wide, W Vt., largest lake wholly within Vermont. Surrounded by wooded hills, it is a popular summer resort. Bomoseen State Park is on the west shore.

Bomu (bō'mō), river, c. 500 mi (800 km) long, rising in NE Zaïre and flowing generally westward. It forms part of the Zaïre-Central African Republic border. The Bomu merges with the Uele to form the Ubangi, a tributary of the Congo.

Bon, Cape (bōn), **Ras at Tib** (ras at tīb), or **Ras Addar** (adar'), peninsula, NE Tunisia, projecting c. 50 mi (80 km) into the Mediterranean Sea toward Sicily. Cape Bon, the eastern terminus of the Saharan Atlas Mts., is a hilly, fertile region that supports citrus groves, vineyards, and tobacco plantations. During World War II the last German forces in North Africa surrendered to the Allies on Cape Bon in May, 1943.

Bona Dea (bō'nā dē'a), in Roman religion, ancient fertility goddess worshiped only by women, also called Fauna. She was said to be the daughter, sister, or wife of Faunus. No man could be present at her annual festival in May.

Bonaire (bōnēr'), island (1970 pop. 8,191), 112 sq mi (290 sq km), in the Leeward Islands group of the Netherlands Antilles. Kralendijk is the chief town. Its good harbor has made Bonaire an export point. Sisal and salt are produced on the island, and goats and sheep are raised. Tourism is increasingly important.

Bonampak (bōnampak'), ruined city of the Late Classic period of the MAYA, close to TUXTLA, in Chiapas, S Mexico. Discovered in 1946, it consists of a group of temples, one of which is remarkable for a number of very well preserved frescoes, painted in bright, flat colors, depicting in considerable detail scenes of Maya life.

Bonanza Creek, stream, c. 20 mi (30 km) long, W Yukon Territory, Canada. It flows NW to the Klondike River near Dawson. The first gold strike in the Yukon occurred there in 1896.

Bonaparte (bō'nəpart'), Ital. *Buonaparte* (bwōnəpar'tā), family name of NAPOLEON I, emperor of the French. His father, Carlo Buonaparte, 1746-85, a petty Corsican nobleman, was a lawyer in Ajaccio. He supported (1768-69) Pasquale PAOLI, then changed sides and became one of the staunchest leaders of the pro-French party in Corsica. He sent his sons to be educated in France. Napoleon's mother, Letizia, or Laetitia, Ramolino Bonaparte, c. 1750-1836, had simple virtues much admired by her son's followers. At Napoleon's court she was given the title Madame Mere. After the final downfall of Napoleon she found refuge in Rome. The eldest of the children of Carlo and Letizia to survive infancy was Joseph Bonaparte, 1768-1844. Having gained some note as French minister to Parma and to Rome and as a member of the Council of Five Hundred, Joseph negotiated a treaty (1800) with the United States and represented France in the peace negotiations at Lunéville (1801) and Amiens (1802). When Napoleon became emperor, Joseph bitterly protested being left out of the line of succession. In 1806, Napoleon made him king of Naples, which Joseph administered very inefficiently, and in 1808 he was made king of Spain instead. Thoroughly unsuccessful in defending his throne during the PENINSULAR WAR, he reluctantly abdicated in 1813. From 1815 to 1841 he lived mainly in the United States—at Bordentown, N.J. He died in Italy. Napoleon I himself was born in 1769. His brother Lucien Bonaparte, 1775-1840, first became prominent as president of the Council of Five Hundred. He took an important part in the coup d'état of 18 Brumaire (1799), by boldly haranguing the troops while the council was about to outlaw Napoleon, who had lost his nerve. Lucien succeeded in dispersing the Five Hundred. The Directory was overthrown, and Napoleon became First Consul. However, Lucien was critical of his brother's policies and married a commoner against Napoleon's wishes. He went to live in Italy under the protection of Pope Pius VII, who made him prince of Canino. When Napoleon made the pope a prisoner, Lucien attempted to flee (1810) to the United States but was captured at sea by the British and interned in England. He returned to Italy in 1814 and became reconciled with Napoleon, who was then in Elba. Lucien returned to France in the Hundred Days, and after Waterloo he tried to secure the throne for Napoleon II. He died in exile in Italy. His sister Elisa Bonaparte, 1777-1820, married Felix Pasquale Bacciocchi, an insignificant captain of infantry. Napoleon made her princess of Piombino and Lucca (1805) and grand duchess of Tuscany (1809). She was a competent administrator and was admired for her intelligence. After Waterloo she lived in retirement. Another brother, Louis Bonaparte, 1778-1846, was king of Holland (1806-10). He reluctantly married (1802) Hortense de Beauharnais. Napoleon forced him to abdicate because Louis, more concerned for the interests of the Dutch people than for those of France, defied the ruinous Continental System. He died in Italy. Pauline Bonaparte, 1780-1825, was Napoleon's favorite sister. A woman of remarkable beauty but of a vain, frivolous

character, she was the subject of considerable scandal. She accompanied her husband, General LECLERC, on the expedition to Haiti. After Leclerc's death Napoleon arranged her marriage (1803) to Camillo Borghese, a member of the Roman nobility. They soon separated, however. Pauline, made princess of Guastalla in 1806, fell into temporary disfavor with her brother because of her hostility to Empress Marie Louise, but when Napoleon's fortune failed, Pauline showed herself more loyal than any of his other sisters and brothers. Another sister, Caroline Bonaparte, 1782-1839, went to France with the family in 1793 and married (1800) General MURAT. Her ambition, joined with that of her husband, made her grand duchess of Cleves and Berg and later (1808-15) queen of Naples. There she did much to stimulate art and letters and encouraged the recovery of the classical treasures of Pompeii and Naples. Her restless ambition was still unsatisfied, the birth of Napoleon's son destroyed her hope of succession for her own son. She and Murat entered upon intrigues with Napoleon's enemies, but with no positive result. After the fall of Napoleon, Clemens von METTERNICH tried to save Murat's throne. Murat's rashness, however, led to his execution, and Caroline fled to Austria. Jérôme Bonaparte, 1784-1860, Napoleon's youngest brother, served in the navy and was sent to the West Indies. On a visit to the United States he met Elizabeth PATTERSON, whom he married in 1803, although, as a minor, he lacked the necessary consent. Napoleon refused to recognize the marriage and had little difficulty in changing the mind of the flighty Jérôme, for whom he made (1807) a new match with Catherine of Württemberg. Jérôme became king of Westphalia (1807-13), fought in the Russian campaign, and led a division at Waterloo. He was more remarkable for his extravagant irresponsibility than for administrative or military skill. Leaving France after Waterloo, he returned in 1847 and later received honors at the court of his nephew, Napoleon III. There he was known as Prince Jérôme. Of the second generation of the family the most important was Louis Bonaparte's son, Louis Napoleon, who became emperor as NAPOLEON III (See separate article for NAPOLEON II, son of Napoleon I and Marie Louise). Other members of the family also became prominent. Charles Lucien Jules Laurent Bonaparte, 1803-57, prince of Canino, son of Lucien, lived in the United States from 1824 to 1833 and was important as a naturalist, particularly as author of *American Ornithology* (4 vol., 1825-33, in English). He took part in the Roman insurrection of 1848. Pierre Napoleon Bonaparte, 1815-81, another son of Lucien, after an adventurous career as soldier of fortune, became a French politician. Although a Republican, he accepted the empire of Napoleon III. In 1870 he killed the journalist Victor Noir in the heat of a quarrel but was acquitted of murder. He was notoriously immoral, as was his cousin Napoleon Joseph Charles Paul Bonaparte, 1822-91, commonly called Prince Napoleon or, more familiarly, Plon-Plon. The son of Jérôme and Catherine of Württemberg, he was named as successor to his cousin Napoleon III, in case the emperor should die childless. He was, however, a liberal and on occasion opposed the emperor's measures. His marriage (1859) to Princess Clotilde, the daughter of King Victor Emmanuel II, was a move in Napoleon III's Italian policy. Prince Napoleon became a pretender to the throne after the death of the only son of Napoleon III, Napoleon Eugene Louis Jean Joseph Bonaparte, 1856-79, the Prince Imperial, who was killed while fighting the Zulus as a member of the British army. Napoleon Victor Jérôme Frédéric Bonaparte (Victor Bonaparte), 1862-1926, inherited the claims of Prince Napoleon, his father. The daughter of Jérôme and Catherine of Württemberg, the princess Mathilde Bonaparte, 1820-1904, was prominent during and after the second empire as hostess to men of arts and letters. Marie Bonaparte, 1882-1962, granddaughter of Pierre Napoleon, was a disciple and friend of Sigmund Freud. She helped Freud escape from Vienna after the German invasion in 1938. By his American wife, Elizabeth Patterson, Jérôme had a son, Jerome Napoleon Bonaparte, 1805-70, from whom the American line is descended. The most prominent of this line was Charles Joseph BONAPARTE. See Walter Geer, *Napoleon and His Family* (3 vol., 1927-29), F. M. Kirichen, *The Jovial King* (1928, tr. 1932), R. McNair Wilson, *Napoleon's Mother* (1933), C. E. Macartney and J. G. Dorrance, *The Bonapartes in America* (1939), Sidney Mitchell, *A Family Lawsuit: The Story of Elisabeth Patterson and Jérôme Bonaparte* (1958), Monica Stirling, *Madame Letizia* (1961), David Stacton, *The Bonapartes* (1966).

Bonaparte, Charles Joseph, 1851-1921, U.S. cabinet official, b. Baltimore, grandson of Jérôme Bonaparte and Elizabeth Patterson. A lawyer and political leader in Baltimore, he identified himself with reform causes. President Theodore Roosevelt appointed him one of the commissioners to investigate conditions in the Indian Territory and in 1905 appointed him Secretary of the Navy. In Dec., 1906, he shifted from this office to that of Attorney General, which he retained until the end of Roosevelt's administration. He was active in suits brought against the trusts and was largely responsible for breaking up the tobacco monopoly. He was one of the founders, and for a time the president, of the National Municipal League. See biography by J. B. Bishop (1922).

Bonar, Horatius (bōn'ār), 1808-89, Scottish clergyman and hymn writer. In 1837 he became minister to the North Parish in Kelso, in 1843, Bonar, with his congregation, seceded in the movement leading to the formation of the Free Church. He wrote religious tracts and edited religious periodicals and collections of hymns, including *Hymns of Faith and Hope* (3 series, 1857-66). He is best remembered, however, for his fine hymn texts, such as *I Heard the Voice of Jesus Say*.

Bonar Law, Andrew: see LAW, ANDREW BONAR

Bonaventure or Bonaventura, Saint (bōnāvēn'-char, bō'nāvāntōō'rā), 1221-74, Italian scholastic theologian, cardinal, Doctor of the Church, called the Seraphic Doctor, b. near Viterbo, Italy. His original name was Giovanni di Fidanza. He entered (1238 or 1243) the Franciscan order, studied at the Univ. of Paris under Alexander of Hales, then taught there with St. Thomas Aquinas until 1255. He was made (1257) general of his order and (1273) cardinal bishop of Albano. He died while attending the Second Council of Lyons, at which he was a papal legate. Among his philosophic and theological works are commentaries on the Sentences of Peter Lombard and the "three little works"—*Breviloquium* (tr. 1947), *Itinerarium mentis in Deum* (tr. *The Mind's Road to God*, 1953), and *De reductione artium ad theologiam* (tr. 1939). He succeeded in reconciling Aristotle's learning to orthodox Augustinianism, and he was a proponent of moderate realism (see REALISM, in philosophy, 1). His later mystical works bring the teachings of St. Bernard of Clairvaux and Hugh of Saint Victor to full flower. He emphasized the total dependence of all things upon God, and he wrote guides to mystic contemplation. He also wrote the official and much-translated life of St. Francis. Feast July 14. See J. C. Bougerol, *Introduction to the Works of Bonaventura* (Am. ed. 1964), Étienne Gilson, *The Philosophy of St. Bonaventura* (new ed. 1965).

Bonaventure Island, 2½ mi (4 km) long and ¾ mi (1.2 km) wide, off E. Que., Canada, in the Gulf of St. Lawrence, c. 3 mi (5 km) N. of Perce Rock. It has the largest bird sanctuary on the N. Atlantic coast.

Bonavista Bay, arm of the Atlantic Ocean, c. 40 mi (60 km) long and 40 mi (60 km) wide, E. N. F., Canada. The bay is irregular and filled with islands. Cape Bonavista, the headland of the Bonavista Peninsula, marks the southern entrance to the bay and is the reputed landfall (1497) of John Cabot, the discoverer of Newfoundland. Bonavista is the chief fishing town.

Bond, Carrie Jacobs, 1862-1946, American song writer, b. Janesville, Wis. A self-taught musician, she composed about 175 songs, both words and music, gave concerts of them, and even published them herself. Eventually the popularity of such songs as *I Love You Truly*, *Just a-Wearyin' for You*, and *A Perfect Day* earned her a fortune. See her autobiography, *The Roads of Melody* (1927).

Bond, George Phillips, 1825-65, American astronomer, b. near Boston, grad. Harvard, 1845. He became the assistant of his father, William Cranch Bond, and in 1859 succeeded him as director of the Harvard College Observatory. Much of his work was done in cooperation with his father. While they were studying Saturn together, George in 1848 discovered its eighth satellite, Hyperion. His observations led him to reject the previously held theory that the rings of Saturn were of solid structure, though his hypothesis of their being in fluid state was in turn soon discarded. His memoir on the Donati comet of 1858 in the *Annals of the Harvard College Observatory*, Vol. III, remains the most complete description of a great comet that has been written. His revision of his father's work on the Orion nebula was published posthumously. His photographs of the moon created a sensation among astronomers in Europe

when taken there in 1851. He was a pioneer in the use of photography in mapping the sky, determining stellar parallax, and measuring double stars. He also used photographs for determining the comparative brightness of the planets. See E. S. Holden, *Memorials of William Cranch Bond and of His Son George Phillips Bond* (1897).

Bond, Julian, 1940-, U.S. civil rights leader, b. Nashville, Tenn. As a student at Morehouse College, he participated (1960) in the sit-ins at segregated restaurants in Atlanta. He was a founder (1960) of the Student Nonviolent Coordinating Committee and served (1961-65) as its communications director. Elected (1965) to the Georgia state assembly, Bond was denied his seat because of his statements opposing the war in Vietnam. Re-elected in 1966, he began serving after the U.S. Supreme Court unanimously upheld (Dec., 1966) his right to hold office. Bond led a group of black delegates to the 1968 Democratic Convention where he successfully challenged the party's unit rule and won representation at the expense of the regular Georgia delegation. He is the author of *A Time to Speak, a Time to Act* (1972). See biographies by John Neary (1971) and R. M. Williams (1971).

Bond, Sir Robert, 1857-1927, Newfoundland political leader. He was educated in England and later entered Newfoundland politics. In 1890, he negotiated a reciprocity agreement between Newfoundland and the United States, but protests from the rest of Canada prevented its ratification. After he became prime minister in 1900, he repurchased the railways and docks from private interests. His ministry was marked by attempts to diversify Newfoundland's economy away from fishing and by disputes over U.S. fishing in provincial waters. Bond's government fell in 1909, and his influence quickly declined. He was knighted in 1901.

Bond, William Cranch, 1789-1859, American astronomer, b. Portland, Maine. He early aided his father in the trades of silversmith and clockmaker in Boston. He soon became an expert in the making of chronometers and by 1812 was fashioning most of the superior ones used by ships sailing out of Boston. He developed a passion for astronomy, and, turning part of his home into an amateur observatory, he devoted all his free time to it. In 1815 he was sent by Harvard College to Europe to visit existing observatories and gather data preliminary to the building of an observatory at Harvard. In 1839 the observatory was founded, Bond supervised its construction and became its first director. In 1847 a 15-in. (37.5 cm) telescope, then matched in size by only one other in the world, was installed. With it, Bond made elaborate studies of sunspots, of the Orion nebula, and of the planet Saturn, publishing his results chiefly in the *Annals of the Harvard College Observatory*. Together with his son he developed the chronograph for automatically recording the position of stars, and he was a pioneer in the use of the chronometer and the telegraph for determining longitude. He and his son George Phillips Bond made the first practical use in America of Daguerre's photographic process applied to astronomy. See E. S. Holden, *Memorials of William Cranch Bond and of His Son George Phillips Bond* (1897).

bond, in finance, usually a formal certificate of indebtedness issued in writing by governments or business corporations in return for loans. It bears interest and promises to pay a certain sum of money to the holder after a definite period, usually 10 to 20 years. Security is usually pledged against a bond, unsecured bonds are regarded as a long-term obligation on the capital of the issuing body. Some bonds are convertible upon maturity into the stock of the issuing company. One method used to retire bonds is the sinking fund, in such a case the issuing body buys back some of its bonds each year and holds them itself, applying the interest to the fund. The entire bond issue, most of which the firm has already acquired, is then retired on maturity. In the case of serial bonds, part of the issue is called in and paid for in full each year. Bonds were sold by the U.S. government to finance both World Wars and are still an important money-raising device. U.S. government savings bonds are available in either the H series, which pay interest semiannually and mature in 10 years, or the E series, which are sold at discount and mature in 7 to 10 years. Government bonds are backed by the full faith and credit of the government issuing them, including its taxing power, and sometimes also by specifically designated security. Bonds are usually bought by those wishing conservative investment. A fidelity bond is a

type of insurance agreement whereby one party guarantees to protect a second party against losses caused by the dishonesty of a third party who holds a position of trust. See Leonard A. Jones, *Bonds and Bond Securities* (4th ed., 4 vol., 1935-50), T. R. Atkinson, *Trends in Corporate Bond Quality* (1967), Alan Rabinowitz, *Municipal Bond Finance and Administration* (1969).

bond, chemical: see CHEMICAL BOND

Bondfield, Margaret Grace, 1873-1953, British political and trade union leader. A Labour member of Parliament (1923-24, 1926-31), she served as secretary to the minister of labor (1924) and, under Ramsay MacDonald, as minister of labor (1929-31). She wrote and lectured extensively on labor and socialist movements.

bonding: see INSURANCE

Bond Street, in Westminster, London, England, famous for its fashionable shops. Among the noted residents of Bond St. have been the authors Laurence Sterne, James Boswell, and Jonathan Swift, Admiral Horatio Nelson, and Lady Emma Hamilton.

Bōne: see ANNABA, Algeria

bone, hard substance that forms the SKELETON of the body in vertebrate animals. In the very young the skeleton is composed largely of cartilage and is therefore pliable, reducing the incidence of fracture and breakage in childhood. The inorganic, or min-

Bone

eral, content of bone is mainly calcium and phosphorus salts. The organic content is a gelatinous material called collagen. As the body grows older, the mineral content of the bones increases. In the elderly the extreme brittleness of bones increases the danger of fracture. Bones assume a variety of sizes and shapes, however, all bone tissue has a three-layered structure. A spongy layer forms the interior. Long bones (such as those in the arms and legs) are hollow, the inner spaces being filled with MARROW, important in the formation of blood cells. Surrounding the spongy, inner layer is a hard, compact layer that functions as the basic supportive tissue of the body. The outer layer is a tough membrane called the periosteum, which sheaths most bones. Although bone appears solid, it contains numerous microscopic canals permitting the passage of blood vessels and nerve fibers.

bone black, solid black material, largely carbon, produced by heating animal bones to high temperatures in the absence of air so as to drive off volatile substances. Finely divided bone black is useful as a pigment, bone char, a similar material, is an important source of activated charcoal for use in refining and decolorizing sugar.

bone china, variety of PORCELAIN developed by English potters in the last half of the 18th and early 19th cent. The clay is tempered with phosphate of lime or bone ash. This innovation greatly increased the strength of the porcelain during and after firing. See Bernard and Thérèse Hughes, *English Porcelain and Bone China, 1743-1850* (1955).

bonefish, common name for a fish belonging to either of two species of the family Albulidae. *Albula vulpes* is widespread in warm, shallow marine waters, and *Dixonina nemoptera* is found only in the West Indies. The bonefish is silvery in color, with a long, deeply forked tail and a single dorsal fin, it has a pointed head covered by a thick, transparent cartilage and a receding mouth filled with numerous small rounded teeth. *D. nemoptera* is distinguished by two long trailing filaments, one extending from

its dorsal fin and one from its anal fin. Also known as ladyfish and banana fish, the bonefish may reach 35 ft (107 cm) in length, and 18 lb (8 kg) in weight. It is a bottom dweller of shallow, sandy areas where it feeds on crabs, shrimp, and worms. It is much prized as a game fish, despite the numerous tiny bones that limit its appeal as food. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Clupeiformes, family Albulidae.

bone meal, finely ground bone used as a fertilizer for its content of phosphate and nitrogen (about 23%–30% available phosphate and 2%–4% nitrogen), it is an expensive form of phosphoric acid when compared with SUPERPHOSPHATES. Bone meal is also fed to farm animals to supply needed mineral food constituents, e.g., calcium and phosphorus.

Boner or Bonerius, Ulrich (ōōl'rikh bō'nār, bōnēr'-ēās), fl. 14th cent., Swiss fabulist, a Dominican monk. His *Edelstein* (c.1345), a collection of 100 moralizing beast fables, was one of the first German books to be printed (1461).

boneset or thoroughwort, perennial North American herb (*Eupatorium perfoliatum*) of the family Compositae (COMPOSITE family), having terminal clusters of small, chiefly white blossoms. Indian and white man alike valued the plant for the bitter tea made from its leaves and flowers, for which it was often cultivated in gardens. The tea was used for treating colds, fever, and ague (whence the name agueweed). The herb is still sold for medicinal purposes. Other species of *Eupatorium*, most of which are American, are often called thoroughwort and occasionally boneset, e.g., the purple boneset, or JOE-PYE WEED. Boneset is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Compositae.

Bongo, Omar (bōng'gō), 1935–, Gabonese political leader, president of Gabon (1967–), originally named Albert-Bernard Bongo. He entered (1958) the civil service and served in several ministries. He became minister of information and tourism in 1966, vice president in 1967, and succeeded to the presidency later in that year. Reelected in 1973, he held the additional offices of prime minister and defense minister.

bongo (bōng'gō), spiral-horned ANTELOPE, *Taurotragus eurycerus*, found in jungles and thick bamboo forests of equatorial Africa. Shy, elusive animals, bongos never emerge into the open and are seldom seen; they browse singly or in small groups. They are fairly large, heavy-bodied antelopes, with males standing 4 ft (120 cm) at the shoulder. Both sexes have horns, in the male these are up to 3 ft (90 cm) long. The body is rich chestnut brown with narrow white stripes running across the back and down the sides, a pattern that provides excellent camouflage in dense thickets. Bongos have been much prized as trophies by big-game hunters. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

Bonheur, Rosa (bōnōr'), 1822–99, French painter of animals. She was a pupil of her father, Raymond Bonheur. Her paintings were regularly exhibited in the Salon from 1841. Bonheur's informed and sympathetic pictures of animal life were remarkably enlightened in approach. They gained her wide popularity, particularly in England and America, where much of her work is to be seen. Her most famous painting, *The Horse Fair* (1853–55) is in the Metropolitan Museum.

Bonhoeffer, Dietrich (dē'trikh bōn'hōfər), 1906–45, German Protestant theologian, imprisoned for two years and hanged for his role in the plot to overthrow Adolf Hitler. Bonhoeffer, who was influenced very early by the thinking of Karl Barth, urged a conformation to the form of Christ as the suffering servant in a total commitment of the self to the lives of others. His writings, many of them fragmentary, were collected and published posthumously. They include *The Cost of Discipleship* (tr. 1948), *Prisoner for God: Letters and Papers from Prison* (tr. 1953), *No Rusty Swords* (tr. 1965), and *Ethics* (tr. 1965). See biographies by Eberhard Bethge (1967), Mary Bosanquet (1968), Andre Dumas (1971), and Larry Rasmussen (1972).

Bonichi, Gino see SCIPIONE

Boniface, Saint (bōn'fās, -fās), c. 675–754?, English missionary monk and martyr, called the Apostle of Germany, b. Devonshire, England. His English name was Winfrid. He was educated in the Benedictine monastery of Nursling, near Winchester. In 716 he made his first trip to Friesland to aid the mission of St. Willibrord, but unsettled conditions forced his

return to England. In 718 he left England for Rome where Pope Gregory II encouraged his missionary zeal and gave him the name Boniface. Under the protection of the Frankish ruler Charles Martel, Boniface and his companions made many converts in Thuringia, Hesse, Franconia, and Bavaria. His chopping down of Donar's famed sacred oak at Fritzlar symbolized the advance of Christianity in pagan Germany. He established an orderly Christianity there closely tied to the papacy. He became regentary bishop (722) and metropolitan of Germany (731), creating new bishoprics under the supervision of his English disciples. He founded monasteries at Reichenau (724), Murbach (728), and Fulda (744), which became important centers of learning. As papal legate he reformed (c. 745) the decaying Frankish Church. He was consecrated (745) archbishop of MAINZ. He was martyred by pagans in Friesland. Feast June 5. See his correspondence tr. by E. Kyle (1966), biography by G. F. Muller (1964).

Boniface, Saint, d. 1009, German missionary, known also by his lay name, Bruno of Querfurt. He evangelized the Balts and died a martyr. He is known as the Apostle of the Prussians. Feast June 19.

Boniface VIII, 1235–1303, pope (1294–1303), an Italian (b. Anagni) named Benedetto Caetani, successor of St. Celestine V. As a cardinal he was independent of the factions in the papal court, and he opposed the election of Celestine. Boniface was elected on Celestine's abdication, and during his first years he was opposed by those who had suffered from Celestine's retirement—the Neapolitans, the Colonna family, and the extreme Franciscans, among them Jacopone da Todi. To preclude schism, Boniface kept Celestine imprisoned for the rest of his life. Boniface reigned in a time of crisis in Europe. He wished to emulate St. Gregory VII and Innocent III, but he was no such statesman, and the times had changed. He interfered in Sicily, but he was openly flouted when Frederick II and the Sicilians forced Boniface to recognize Frederick as king. He brought CHARLES OF VALOIS into Italy to pacify Florence and succeeded only in stirring up more trouble. Dante was exiled in this struggle of Guelphs and Ghibelines. Boniface's contest with PHILIP IV of France was the principal feature of his career. The pope tried to stop Philip from his illegal levies on the clergy by the bull *Clericis laicos* (1296), enunciating the principle that laymen could not tax clerics without the consent of the Holy See. Philip retaliated by cutting off the contributions of the French church to Rome. In England the Pope faced an equally resistant EDWARD I, and in a subsequent bull (1297) Boniface relaxed the ruling. The dispute began again in earnest in 1301 with the trial of Bernard Saisset, and Boniface never again yielded. Two of his statements in the controversy are famous—the bull *Ausculat filii* (1301), which summoned a synod of French to meet at Rome to discuss the reformation of French affairs, and the bull *Unam sanctam* (1302), an extreme statement (not naming Philip) of the principle that Catholic princes as well as others are subject to the pope in temporal (moral) and religious matters. Philip paid no attention, and in 1303 he sent Nogaret to Italy, soon proclaiming his intention of deposing the pope. Nogaret found the pope at Anagni and harassed him; the pope stood firm and according to tradition was slapped by Nogaret's companion, Sciarra Colonna. The outraged people of Anagni thereupon drove out the soldiery, Boniface was rescued and escorted to Rome. He died in a month. Philip pursued Boniface dead as he had alive. In 1310 he forced CLEMENT V to begin a process to determine that Boniface was heretical, that accusation was abandoned, but Clement consented to repudiate such of Boniface's acts as had hurt Philip. Boniface, an excellent canon lawyer, planned and promulgated a new revision of the code called the *Sext* (1298). He was the first to establish (1300) a holy year. He was succeeded by Benedict XI. See biography by T. S. Boase (1933), C. T. Wood, *Philip the Fair and Boniface VIII: State vs. Papacy* (1967).

Boniface IX, c. 1345–1404, pope (1389–1404), a Neapolitan named Pietro Tomacelli, successor of Urban VI. The Avignon antipopes Clement VII and Benedict XIII were his contemporaries during the Great Schism. He succeeded in imposing his rule on the Papal States. He fortified Rome and brought Naples under the Roman obedience. His attempt to replenish the papal treasury proved unpopular, and he was accused of nepotism and simony. Boniface decreed the feast of the Visitation. He was succeeded by Innocent VII.

Boniface (bōn'fās), d. 432, Roman general. He defended (413) Marseilles against the Visigoths under Ataulf. Having supported GALLA PLACIDIA in her strug-

gle with her brother, Emperor Honorius, Boniface fled to Africa in 422. There, as semi-independent governor, he supported (424) VALENTINIAN III against the usurper John and was rewarded with the title count of Africa. Recalled in 427, he rebelled, a civil war between Africa and the imperial government began. This struggle prepared the way for the invasion (429) of Africa by the Vandals under Gaiseric. A truce was arranged between Africa and Rome, and Boniface attacked the Vandals. He was defeated and besieged (430) at Hippo, during the siege his good friend St. Augustine died. Beaten again in 431, Boniface was recalled to Italy by Placidia to assist her against the general AETIUS. He defeated (432) Aetius but died of a wound received in the battle. The historian Procopius, without convincing evidence, held Boniface responsible for inviting the Vandals into Africa.

Bonifácio, José (zhōōzā' bōnēfā'sēō), 1763–1838, Brazilian statesman and scientist. He studied in Europe and gained international fame as a geologist before returning (1819) to Brazil. Seeking a peaceful solution to Brazilian unrest against Portuguese rule, he urged the establishment of a constitutional monarchy and influenced the prince regent to declare (1822) Brazilian independence and proclaim himself Emperor PEDRO I. Bonifácio served as first minister in the new empire, but his insistence upon a liberal constitution led to his banishment from Brazil (1823–29). Many of his ideas were included in the 1824 constitution, however, and he later (1831–33) served as tutor to Pedro II. He is regarded as the architect of Brazilian independence. His full name was José Bonifácio de Andrada e Silva.

Bonifacio (bōnēfā'cho), town (1968 pop. 2,433), S Corsica, France. A picturesque port with trade in olive oil and fish, Bonifacio faces Sardinia across the Strait of Bonifacio (7 mi/11.3 km wide). The oldest town of Corsica, it was founded (c. B28) on the site of a citadel built by Boniface I, count of Tuscany. It later passed to Pisa and to Genoa. There is a Pisan-style church (12th–13th cent.). The town, surrounded by a rampart, is medieval in character.

Bonington, Richard Parkes, 1802–28, English painter. Moving to Calais at the age of 15, his first art study was with Louis Francia, who taught him watercolor and lithography. Bonington studied in Paris at the École des Beaux-Arts and in 1820 entered the studio of Gros. At that time he formed a close friendship with Delacroix, with whom he traveled to England. Bonington was the embodiment of the close link between the English landscape painters Constable and Turner and the budding school of French romanticists. He won early recognition from the Salon, but died of tuberculosis at the age of 26. Best known for his sparkling watercolors painted rapidly, directly from nature, Bonington also brought to his oil painting an immediacy and dexterity unusual in his day. He was a masterly lithographer as well. Represented in the Louvre and in most important British galleries, Bonington's work is best seen in the Wallace Collection, London. The Metropolitan Museum has two marines and a landscape. See study by R. P. Dubousson (tr. 1924).

Bonin Islands (bō'nin), Jap. *Ogasawara-gunto*, volcanic island group (1967 est. pop. 200), c. 40 sq mi (100 sq km), in the W Pacific Ocean, c. 500 mi (800 km) S of Tokyo, part of Tokyo prefecture, Japan. The largest and principal island is Chichi (formerly Peel Island), c. 10 sq mi (30 sq km), the site of Omura, the capital of the group, and Futami-ko (Port Lloyd), the chief harbor. The principal products are sugarcane, cocoa, bananas, and pineapples. The majority of the inhabitants are Japanese, there are some Koreans and Formosans. Discovered by the Japanese in the 16th cent. and later by the Spanish, the islands were claimed by the British in 1827. The islands were claimed by Japan in 1875 and placed under the Tokyo prefecture in 1880. In World War II the islands formed a major Japanese military stronghold and were the scene of land, sea, and air battles. The U.S. navy occupied the islands in 1945. Japan regained technical sovereignty over them in 1951, but they continued to be under U.S. military administration until 1968, when they were returned to Japan.

bonito: see MACKEREL

Bonivard, François de: see BONNIVARD, FRANÇOIS DE

Bonn (bōn, Ger. bōn), city (1970 pop. 274,518), capital of the Federal Republic of Germany, North Rhine-Westphalia, W West Germany, on the Rhine River. It is the administrative center of West Germany and the site of foreign embassies. Villa Hammerschmidt there is the residence of the federal president, and Palais Schaumburg is the home of the federal chancellor. The parliament house (Ger.

Bundeshaus, built in the early 1950s) is located near the Rhine. Manufactures of the city include light-metal products, ceramics, office equipment, chemicals, and pharmaceuticals. Bonn was founded in the 1st cent AD as the Roman garrison of *Castra Bonnensia*. It was devastated by the Normans in the 9th cent and later became the residence (1238-1794) of the electors of Cologne and the scene of the coronations of Frederick the Handsome (1314) and Charles IV (1346) as kings of the Romans. During the Palatine Succession War (1689), Bonn was destroyed by Elector Frederick III of Brandenburg. The city was rebuilt thereafter, largely in the baroque style. Bonn was occupied (1794) and later annexed (1798-1814) by France. In 1815 it passed to Prussia. In 1948-49 delegates from the parts of Germany occupied by France, Great Britain, and the United States met in Bonn and drafted a constitution for the Federal Republic of Germany. In 1949, Bonn was also made the capital of West Germany. In 1969 a number of nearby towns, including Bad Godesberg, were incorporated into Bonn. The house where Ludwig van Beethoven was born (1770) has been preserved and is a museum. Bonn is the seat of a famous university (founded 1784), whose main building formerly was the electoral palace (built 1697-1725). The city has a noteworthy church (11th-13th cent.) and museums of zoology and Rhenish culture.

Bonnard, Pierre (pyër bônârd'), 1867-1947, French painter, lithographer, and illustrator. In the 1890s he was associated with the Nabis. His delight in familiar views of everyday life was transmitted to canvas with joy and gentle fantasy. Sometimes called an intimist, he explored the play of sunlight in domestic interiors in an exuberant style close to impressionism (e.g., *Bowl of Fruit*, 1933, Philadelphia Mus. of Art). His later works exhibit more vivacious color and dynamic brushwork. Bonnard also designed sets for the stage. See studies by J. Elliott et al. (1964) and Andre Fermigier (1970).

Bonnat, Léon Joseph Florentin (lädN' zhôzêf' flôraNtân' bônâ'), 1833-c.1922, French portrait and historical painter. He received many academic honors and is best known for his portraits of famous men, including Thiers, Victor Hugo, and Dumas fils. Bonnat is represented in the Metropolitan Museum.

Bonnet, Charles (sharl bônâ'), 1720-93, Swiss naturalist and philosopher. He drew attention to parthenogenesis in aphids, but his theories to explain his findings were highly fanciful and unscientific. His books include *Traite d'insectologie* (1745) and *Contemplation de la nature* (1764-65).

Bonnet, Georges (zhôrzh), 1889-1973, French politician. He entered politics as a Radical Socialist. A financial expert, he was prominent at international conferences on reparations and other economic questions. He was ambassador (1937) to the United States and several times finance minister, notably in the Camille Chautemps cabinet (1937-38). His stringent fiscal policy was partially responsible for the fall of the Chautemps government. As foreign minister (1938-39) in Édouard Daladier's cabinet, Bonnet helped to draft the Munich Pact, and as a member of the Vichy National Council (1941), he supported collaboration with Germany. Excluded from the Radical party, Bonnet entered the French national assembly in 1956 as a dissident radical, serving until May 1968.

bonnet shark: see HAMMERHEAD SHARK

Bonneville, Lake (bôn'ävîl, bôn'ëvîl, bôn'vîl), ancient lake, once covering c. 19,500 sq mi (50,500 sq km), NW Utah. The lake expanded during the period of heavy precipitation brought on by the advancing glaciers of the Pleistocene epoch. At the end of the Pleistocene epoch the lake's area rapidly shrank. Its six terraces still exist and locate the different lake levels. Great Salt Lake, Lake Sevier, and Utah Lake are remnants of Lake Bonneville, which was named for U.S. explorer Benjamin de Bonneville.

Bonneville Dam, one of the major dams on the Columbia River, between Oregon and Wash. The dam, 2,690 ft (820 m) long and 197 ft (60 m) high, was built between 1933 and 1943 by the U.S. Corps of Engineers and was one of the largest hydroelectric projects undertaken under the NEW DEAL. It is used for navigation, flood control, and power production (518,400 kw annually). Locks permit ships to pass around the dam, and fish ladders allow salmon to spawn upriver.

Bonnie Prince Charlie: see STUART CHARLES EDWARD

Bonnivard or Bonivard, François de (both fraNsvâ' də bônëvâr'), c.1493-1570, Swiss patriot and historian. The prior of St. Victor, near Geneva,

he supported the revolt of GENEVA against Charles III of Savoy, who imprisoned him from 1519 to 1521. He was again imprisoned from 1530 to 1536 in the castle of Chillon, romanticized in Lord Byron's poem "Prisoner of Chillon." Released by the Bernese, he later became a Protestant. Geneva honored him with a pension. His chronicle of Geneva was first published in 1831.

Bonny (bôn'ë), town, SE Nigeria, in the Niger River delta, on the Bight of Biafra. In the 18th and 19th cent., Bonny was the center of a powerful trading state, and in the 19th cent. it became a leading exporter of palm oil. From 1885 to 1894 it was the administrative center of the British Oil Rivers Protectorate. Bonny declined in the 20th cent. but revived after 1961, when its port was modernized as the export point for petroleum refined at PORT HARCOURT.

Bononcini (bônônchë'në) or **Buononcini** (bwö-), musical family of Modena, Italy. Giovanni Maria Bononcini, 1642-78, choirmaster and organist at Bologna and Modena, was a composer and the author of a treatise entitled *Musico pratico* (1673). His son Giovanni Battista Bononcini, 1670-c.1750, was a composer, chiefly of operas. In London he was the associate and later the rival of Handel. The opera *Muzio Scevola* (London, 1721) was a *pasticcio* by Bononcini, Filippo Mattei, and Handel. After failing in his operatic ventures Bononcini, charged with plagiarism, left England and spent the rest of his life in obscure wanderings. He composed operas, produced in Venice, from 1748. Another son, Marc Antonio Bononcini, 1677-1726, became musical director to the duke of Modena in 1721. He wrote many operas, most of which were produced in Venice. His opera *Camilla* (London, 1706) was one of those that helped begin the English fashion for Italian opera.

bonsai (bôn'sî), art of cultivating DWARF TREES. Bonsai, developed by the Japanese more than a thousand years ago, is derived from the Chinese practice of growing miniature plants. In bonsai cultivation, woody plants are kept small and in true proportion to their natural models by growing them in small containers, feeding and watering them only enough for healthy growth, pruning, and training branches in the desired shape by the application of wire coils, the term bonsai also refers to the plants dwarfed by this method. Weathered trees in harsh climates serve as natural models for aged-looking, gnarled, bent, and overhanging miniature trees. The selection of containers, the position of the plant in the container, and the choice of single plants or plant groupings are important aesthetic considerations. In Japan, various native evergreens, i.e., junipers, spruces, and pines, as well as many flowering deciduous trees are cultivated, in America many native species have been found suitable. The Brooklyn Botanic Garden in New York City houses an extensive bonsai collection. See Brooklyn Botanic Garden *Handbook on Dwarfed Potted Trees*. The *Bonsai of Japan* (1974).

bontebok: see DAMALISK

Bontecou, Lee (bôn'təkō), 1931-, American artist, b. Providence, R.I. Bontecou is best known for her wall reliefs, constructions made of canvas stretched over wire armatures. Their large, bulging, roughly concentric shapes converging in a black, seemingly endless hole in the center give them a menacing quality. Examples of her work are in the Jewish Museum, New York City.

bontequagga (bôn'tëkwäg'ə) see ZEBRA

bonus, extra amount in money, bonds, or goods over what is normally due. The term is applied especially to payments to employees either for production in excess of the normal (wage incentive) or as a share of surplus profits. The wage incentive was designed during the late 19th cent. not only to increase production but to reward the more skillful and more energetic workers. The hourly or weekly wage was to be figured as payment for a standard rate of work, and the workers who exceeded that standard were to receive a bonus. However, the system fell into disfavor with labor unions because rate cutting was often resorted to when bonuses became too high. Industrial engineers of the 1930s realized that definite standards of accomplishment and quality must be set to make wage incentives workable. Many firms have used an annual bonus plan for distributing abnormal profits to employees. The term is also applied to payments to former servicemen in addition to regular pensions and insurance. Veterans of World War I lobbied to obtain a bonus for their military service. In 1924 each veteran received an adjusted compensation certificate entitling him to a payment averaging \$1,000 to be made in 1945. In 1932 about 15,000 unemployed veterans formed the

"Bonus Expeditionary Force," or BONUS MARCHERS, and marched to Washington to demand immediate payment of the certificates. President Hoover ordered troops to oust them from Federal property. In 1936 Congress passed a law permitting the veterans to exchange their certificates for cashable bonds. A number of states voted veterans' bonuses after World War II and the Korean War. See W. W. Waters, *B.E.F. The Whole Story of the Bonus Army* (1933, repr. 1969), V. D. Kennedy, *Union Policy and Incentive Wage Methods* (1945, repr. 1969), J. K. Loudon, *Wage Incentives* (2d ed. 1959), Reginald Marriott, *Incentive Payment Systems* (3d rev. ed. 1968).

Bonus Marchers, in U.S. history, more than 20,000 veterans, most of them unemployed and in desperate financial straits, who, in the spring of 1932, spontaneously made their way to Washington, D.C. They demanded passage of a bill introduced by Representative Wright Patman providing for immediate payment of their World War I bonus. Calling themselves the Bonus Expeditionary Force, they camped in vacant government buildings and in open fields made available by police superintendent Pelham D. Glassford. The veterans conducted themselves in a peaceful and orderly way, but when the Senate defeated the Patman bill (June 17, 1932) the marchers refused to return home. On July 28, President Herbert Hoover ordered the army, under the command of Douglas MacArthur, to evict them forcibly. MacArthur had their camps set on fire, and the army drove the veterans from the city. Hoover was much criticized by the press and the general public for the severity of his response.

Bonvalot, Pierre Gabriel Édouard (pyër gabrêl' ädwar' bônvalô'), 1853-1933, French explorer and author. In 1880-82 he visited central Asia, explored Kohistan, and returned to France by way of Bukhara, the Caspian sea, and the Caucasus. In 1886 he made the first crossing of the Pamirs, from Ferghana to Chitral, India. He crossed Tibet from Lob Nor to Tengri Nor (1889), traversed Asia from Siberia to Tonkin (1889-90), and led an official mission to Entotto, Ethiopia. His works include *De Moscou en Bactriane* (1884), *De Paris au Tonkin à travers Tibet inconnu* (1892), *L'Asie inconnue* (1896), and *Marco Polo* (1925).

booby, common name for some members of the family Sulidae, large, streamlined sea birds. Tropical and subtropical members of the family are called boobies; those of northern waters are called gannets. These birds have heavy bodies, long, pointed wings, long, wedge-shaped tails, and short, stout legs. They fish by diving on their prey from great heights and pursuing it underwater, air sacs under their skin cushion the impact with the water and provide buoyancy, as with pelicans. The masked, red-footed (*Sula sula*), and brown (*S. leucogaster*) boobies are found the world over, the Peruvian and blue-footed (*S. nebouxii*) boobies, on the west coasts of the Americas, and the Abbott's booby, in the Indian Ocean. The common gannet of the North Atlantic, *Morus bassanus*, breeds in the British Isles, in the Gaspé region of Canada, and on Bird Island in the Gulf of St. Lawrence. A Pacific gannet is one of the chief guano producers of the offshore islands of Peru. Gannets build crude nests of debris on narrow cliff ledges. The female lays a single egg, which she and the male incubate by covering it with their feet. Gannets have strong migration tendencies, while the boobies do not. The name booby is descriptive not only of the rather stupid facial expression of these birds, but also of their unwary, gullible behavior when hunted by man—a factor that accounts for their diminishing numbers. Boobies and gannets are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Pelecaniformes, family Sulidae.

book. The word book has come to have many meanings, e.g., any collection of sheets of paper, wood, or other material sewn or bound together (such as a bankbook), a division of a written work (books of the Bible, books of Caesar's *Galic War*), and statements of financial accounting (bookkeeping). The primary meaning today is, however, a written work either in manuscript or in printed form that is of substantial length. A printed book is distinguished from a PAMPHLET in that it is larger (some publishers limit the term book to works of more than 64 or more than 96 pages). It is distinguished from a periodical in that it is a unit and issued as such. Early in the history of bookmaking the printed book was distinguished in size by the number of times the original large sheet of paper on which the type was printed had been folded, i.e., folio, quarto, octavo, and duodecimo. With the advent of machine-made

paper, these sizes were standardized to measurements, the standard octavo is, according to the American Library Association, between 20 cm and 25 cm in height. Books apparently did not come into existence until long after writing, e.g., INSCRIPTION, was widespread. Fragmentary early papyrus represented literature in ancient Egypt and may possibly be considered as books, although it is customary to speak of the BOOK OF THE DEAD as the first of the Egyptian papyrus books. The CUNEIFORM tablets gathered into the great Assyrian library of Assurbanipal represented an enormous collection of works, but the book as we know it may be said to be derived from the Egyptian writings on papyrus. The vast literature of the Greeks, collected in the greatest library of the ancient world, in Alexandria, was generally written on large sheets of papyrus, which were glued together and rolled up. The rolls varied greatly in size, many of them were about 1 ft (30 cm) wide and about 30 ft (9 m) long when unrolled. In the Hellenistic era large works were divided into tomes [from Gr. = cutting] that were stored together in cylinders and labeled. The method of having the leaves held together in quires (24 or 25 sheets) in the fashion of the modern book seems not to have originated until about the 2d cent. A.D. The manuscripts in leaves are commonly called codices (although the term *codex* may also be loosely used for any ancient manuscript). Most Roman production of books, therefore, was also in rolls. From at least the early part of the 2d cent. B.C. the more permanent vellum (a type of fine PARCHMENT first used in the Middle East) was also used for writing books, and this grew to be very popular in the Middle Ages when books were copied by monks in the scriptoria of monasteries. The codices were the first books to receive the protection of BOOKBINDING, an art that was highly developed before the advent of printing. In the scriptoria the art of ILLUMINATION flourished, making artistic masterpieces of many medieval liturgical volumes. An astonishing number of copies of books were made by hand copying. In ancient Rome hundreds of copies of a popular book were made in a fairly short time. The production of books in great quantity had to await the mechanical processes of printing from movable type. Printing was invented in China, where the first printed book is thought to date from the 9th cent. In the West movable metal type was developed by Johann GUTENBURG of Mainz, and to a very large extent the history of the book was henceforth the history of PRINTING. Book production developed very rapidly, the craft becoming enormously sophisticated by the 16th cent. Italian printers set the standards of format and quality retained in Europe until the 19th cent. Great printing houses arose in France and the Netherlands and, after a general decline in the 17th cent., in England and the United States. The 19th cent. witnessed machine replacement of all the old manual processes. By the end of the century printing quality had been so debased that a revolution, led by William MORRIS during the ARTS AND CRAFTS movement in England, was necessary to restore the concept of beauty to bookmaking. The bookselling business increased over the centuries with widespread education and improvement of transportation. In recent years the printing and distribution of comparatively inexpensive softcover books, or paperbacks, is responsible for a vastly expanded publishing industry. The standing of the book as an information source has been threatened since World War II by other media including television and computer systems. See BLOCK BOOK, BOOK CLUBS, BOOK COLLECTING, BOOK PUBLISHING, INCUNABULA, LIBRARY, MANUSCRIPT, TYPE, WRITING. For a brief and excellent bibliography, see Hellmut Lehmann-Haupt, *One Hundred Books about Bookmaking* (1949). See F. G. Kenyon, *Books and Readers in Ancient Greece and Rome* (2d ed. 1951), Edward Chiera, *They Wrote on Clay* (1958), F. L. Schick, *The Paperbound Book in America: The History of Paperbacks and Their European Background* (1959), R. B. McKerrow, *An Introduction to Bibliography for Literary Students* (1965), H. D. Verriest, ed., *The Book through Five Thousand Years* (1972).

bookbinding The art and business of bookbinding began with the protection of parchment manuscripts with boards. Papyrus had originally been produced in rolls, but sheets of parchment came to be folded and fastened together with sewing by the 2d cent. A.D. In the Middle Ages the practice of making fine bindings for these sewn volumes rose to great heights, books were rare and precious articles, and many were treated with exquisite bindings: they were gilded, jeweled, fashioned of ivory, wood, leather, or brass. The techniques of folding

and sewing together sheets in small lots, combining those lots with tapes, and sewing and fastening boards on the outside as protection changed but little from the medieval monastery to the modern book bindery. The invention of PRINTING greatly increased the demand for the bookbinder's work, establishing it as a business. The finest binding is still done by hand. In machine binding (called casing), the cover, or case, is made separate from the book and then glued to it. The covering of the boards, usually called the binding, is most frequently of cloth, heavy paper, vellum, leather, or imitations of leather. The preferred leathers are oasis goat and levant. Leather bindings are sometimes decorated by MARBLING, tooling, or EMBOSSEING. See Hellmut Lehmann-Haupt, ed., *Bookbinding in America* (1941, repr. 1967), Ivor Robinson, *Introducing Bookbinding* (1968), F. E. Comparato, *Books for the Millions* (1971).

book clubs As a phenomenon in American cultural life, book clubs have made an impact in two widely separated periods of history. During the 18th and 19th cent. book clubs were formed for the purposes of discussion and debate. Foremost among these was the Junto, a literary society formed by Benjamin Franklin in 1726, more representative was the Cadmus Club of Galesburg, Ill., founded in 1895, whose aims were the promotion of good fellowship, good reading, and literary works of local interest. What most people in the 20th cent. understand by the term "book club" is not a club at all but an organization that promotes the mail-order sale of books. Among the best known are the Book-of-the-Month Club, the Literary Guild, and the Book Find Club. There are also clubs to match more specialized interests, such as the Antiques Book Society, the Cook Book Club, and the Gamblers' Book Club. The workings of mail-order clubs—set up as they are to ensure that the tastes and choices of their readership will be met—are models of mass production and distribution methods aimed to supply individual selection. The Book Find Club buys publishers' printing plates in order to print its selections cheaply and bind them sturdily for mailing. In exchange, it offers the publisher a 10% royalty on sales. Club members must select a minimum number of books from a monthly list. They order negatively, that is, they let the club know which books they do not want by returning an order card. Although mail-order book clubs enjoy large memberships, they have lost ground to the paperback book industry since the 1950s.

book collecting, or bibliophily, is the acquiring of printed books that are, or are expected to become, rare and that possess permanent interest in addition to their text. Collecting has traditionally concentrated on first editions in the field of pure literature. Contemporary accounts mention personal manuscript collections in ancient Egypt, Greece, and Rome, but because manuscript media—scrolls and papyrus—were scarce and expensive (and illiteracy general), collecting was done only by religious leaders and heads of state. During the Middle Ages monastic institutions were the main accumulators of valuable manuscripts. Book collecting proper began after the invention of movable type in the West (c. 1437), which produced widespread literacy and a proliferation of inexpensive books. The aim of early collectors, such as Willibald Pirckheimer (1470–1530) and Jean GROlier DE SERVIÈRES, was to assemble personal working libraries. Many early collections became the cornerstones of public libraries. The BODLEIAN LIBRARY at Oxford and the HARLEIAN LIBRARY of the British Museum were founded respectively on the private collections of Sir Thomas Bodley and Robert Harley, 1st earl of Oxford. By the end of the 17th cent., book auctioning was common throughout Europe. In the 18th cent. collectors shifted their focus from building up libraries to seeking original editions, including INCUNABULA, of earlier works. At first, criteria were more visual than literary: early printing, fancy binding, and colorful illumination. Richard Heber (1773–1833), whose collection of first editions of literature and history filled several houses, was one of the first collectors to consider contextual factors primary. During the 19th cent. first editions of native contemporary literature began to attract book collectors. The two most notable collectors of the second half of the century were Henry Huth (1815–78), an Englishman, and Robert Hoe, the first important American collector. In 1884, Hoe became the first president of the newly founded Grolier Club, a New York-based society dedicated to the appreciation of fine book production. The three greatest American book collectors were Henry Clay FOLGER, John Pierpont MORGAN,

and Henry E. HUNTINGTON. During the 20th cent. book collecting on the massive scale practiced by Huntington has declined. The incursion into the field by institutional libraries has limited the circulation of rare books formerly dispersed by auction and through antiquarian bookshops. The three traditional approaches to collecting first editions are the author collection, the subject collection, and the cabinet collection. The latter is a collection of deliberately small size (originally a single bookcase) designed to represent the epitome of one bibliophilic category, such as 15th-century French illumination. The desirability of the first edition is based not only on speculative but also on historical considerations; a first edition is one step from a manuscript. Dealers and collectors usually define a first edition as the first appearance of a written work in book form, although some collectors have shown an interest in periodical serializations of works later published integrally. The most valuable first editions are of literary classics and early or obscure works of famous authors. Original editions of Shakespeare, Poe, and books issued by William Caxton have traditionally been the most sought-after items. Modern collectors who cannot afford the very few incunabula offered to the public—a Caxton printing of *The Canterbury Tales* was sold at a 1965 London auction for \$84,000—collect in peripheral fields. Such fields include AMERICANA, books illustrated by famous artists, early books on natural history (especially those with colored plates), books printed by such noted private presses as the KELMSCOTT PRESS, the CUALA PRESS, and the NONESUCH PRESS, early books recounting travel and exploration, ancient manuscripts, and letters. But even books in these fields, sold at places of auction like Christie's in London and the Sotheby Parke-Bernet Gallery in New York City, bring substantial prices. For example, the following sales were reported in *American Book Prices Current* for the year 1969–70: first edition, first issue, of Walt Whitman's *Leaves of Grass* (1855)—\$9,000, Kelmescott Press edition of Chaucer's works (1896)—\$3,250, letter written by George Washington while at Valley Forge—\$2,600. Individual pages of incunabula are also popular with collectors; single leaves of the Gutenberg Bible sold for \$2,200 in 1969–70. During the 1960s and 70s works by 20th-century writers have brought substantial fees, e.g., in 1974 a first edition of W. H. Auden's *Poems*, privately published in 1928 and later autographed by the author with marginal notes by Auden and Stephen Spender, sold for \$8,500. Book collectors use points, such as broken type and text excisions, to distinguish between different issues of first editions. Information on the existence, location, and prices of collector's items can be found in author bibliographies, dealer and auction catalogs, and book-collecting periodicals such as *The Colophon* (1930–1950), *The Book Collecting World*, and the *Antiquarian Bookman*. *American Book Prices Current* (published annually since 1895) lists titles and prices of books sold at important auctions in the United States, England, and Canada. See John T. and David A. Randall, *A Primer of Book Collecting* (rev. ed. 1966), John Carter, *Books and Book Collecting* (1957) and *Taste and Technique in Book Collecting* (1948, repr. 1970).

bookkeeping, maintenance of systematic and convenient records of money transactions in order to show the condition of a business enterprise. The essential purpose of bookkeeping is to reveal the amounts and sources of the losses and profits for any given period. Proper bookkeeping should also reveal the nature and value of the assets and liabilities of a firm, as well as its net worth at the close of that period. Such records are kept in columnar form, using separate columns for the date of transaction, an explanation of the nature of the transaction, and its value. Other columns may be added. In general, two sets of columns are used, the assets being placed in one set of columns and the liabilities in another set (a money value having been assigned to all assets and all liabilities of the business). Such an arrangement is called double entry. A balance sheet may be compiled at any time by totaling each column and subtracting the smaller total from the greater to give either a surplus or a deficit. The result is called the net worth, and it gives an indication of the financial state of a firm. A detailed balance for a period between two balance sheets is called a profit and loss statement. The process of deciding whether to enter items into one set of columns or the other, i.e., into the debit side or the credit side, is called

journalizing, since the analyzed items are placed in a journal, or daybook, soon after the transactions occur. Separate accounts of persons or sections are kept in a book called a ledger. The transfer of items from the journal to the ledger is called posting. In large businesses, the journal is broken into many sections, each concerning a separate function of the business, such as sales, purchases, accounts receivable, accounts payable, sales return, purchases return, and cash. Books from which or to which postings are made are known as principal books. Another class, called auxiliary books, includes invoice, inventory, order, cash, sales, bill, and check-books. Single-entry bookkeeping enters all debits and credits in a single set of columns in a journal and labels each entry *Dr* (debit) or *Cr* (credit). Thus in a single entry only one element of a transaction is entered. Single-entry bookkeeping fails to give detailed information as to the sources of gain or loss. The slip system uses carbon copies of original invoices, or slips, to be arranged as convenient, or the slips themselves constitute the original entries and are kept in filing cabinets. Card ledgers have each account on a separate card in a file case. The slip system, card ledgers, and loose-leaf ledgers are adapted to the use of bookkeeping machines. Such equipment ranges from the simple adding machine to the high-speed electronic computer, the use of which has revolutionized bookkeeping. All of the routine operations and most of the more complicated procedures, except overall organization of the accounts, can be performed by computers. The Babylonians, Egyptians, Greeks, and Romans kept business records. Double entry seems to have been first developed by the people of N Italy during the great commercial expansion of the 14th and 15th cent. and has consequently been called the Italian method. The system then spread to the Netherlands, England, and elsewhere. Single entry developed later. See also ACCOUNTING, AUDITING. A standard work is A G Hall, *Introduction to Modern Bookkeeping* (2d ed 1970).

book lung, terrestrial respiratory organ characteristic of arachnids such as scorpions and primitive spiders. Each book lung consists of hollow flat plates. Air bathes the outer surface of the plates and blood circulates within them, facilitating the exchange of gases. In most species, adequate gas exchange occurs without any muscular movement to ventilate the lung.

Book of Changes (I Ching), classic ancient Chinese book of prophecy and wisdom. The oldest parts of its text are thought to have attained their present form in the century before Confucius. Its images and concepts were taken from mythology, history, and poetry of earlier ages and from the individual insights of the book's original authors. The *I Ching* consists of eight trigrams, corresponding to the powers of nature, which according to legend were copied by an emperor from the back of a river creature. The trigrams are used to interpret the future with the textual help of supplementary definitions, intuitions, and Confucian commentary. The best-known English edition is that by Cary F. Baynes (3d ed 1970), it is a translation of the German version by Richard Wilhelm.

Book of Common Prayer, title given to the service book used in the Church of England and in other churches of the Anglican Communion. The first complete English Book of Common Prayer was produced, mainly by Thomas Cranmer, in 1549 under Edward VI. Essentially it was a selection and translation from the breviary and the missal, with some additions from other sources. It was made compulsory by the Act of Uniformity (1549). Revision, undertaken by Cranmer, resulted in the Prayer Book of 1552, which showed the influence of foreign reformers then resident in England, for it made possible a wide diversity of views regarding the Eucharist, all justified by this official service book. The prayer book was in use only about eight months before Queen Mary's repeal legislation restored Roman Catholicism in England. In 1559, under Elizabeth I, the Prayer Book of 1552 was restored in a slightly altered version. From 1645 to 1660, under the Commonwealth and Protectorate, the prayer book was suppressed. In a new revision after the Restoration, it was again declared the only legal service book for use in England by an Act of Uniformity (1662). Alterations in the 1662 revision were largely those making for liturgical improvement. In 1927 a revised form was submitted to Parliament, whose approval was (and is) still required, and passed by the House of Lords but rejected by the Commons, it was resubmitted (with certain modifications) in 1928 and

again rejected. Nonetheless, the revised prayer book was quite widely adopted in the Church of England with episcopal approval. This situation was finally legalized by the Prayer Book Measure, passed by Parliament in 1965. In addition to authorizing revisions already in use, the act approved the experimental use of new forms of worship drawn up by a liturgical commission. In 1789, when the first General Convention of the Protestant Episcopal Church in the United States met, a revised version of the Book of Common Prayer was adopted, it embodied such changes as were required by the new conditions. In the U.S. Episcopal Church, as in other churches of the Anglican Communion over which the British Parliament has no control, there has been greater freedom in liturgical revision. See histories of the prayer book by J. H. Blunt (1868), F. E. Brightman (2d ed 1921, repr 1970), W. K. Lowther Clarke (1932, repr 1959), and Verney Johnstone, Ernest Evans, and L. C. Lewis (1949), J. W. Suter and G. J. Cleaveland, *The American Book of Common Prayer* (1949), M. H. Shepherd, *The Oxford American Prayer Book Commentary* (1950), for a comparison of revisions, see J. H. Arnold, ed., *Anglican Liturgies* (1939).

Book of Concord, name under which the collected documents of the authoritative confessions of faith of the Lutheran Church were published in 1580, the 50th anniversary of the Augsburg Confession. The Apostles', Nicene, and Athanasian creeds were included with the particular Lutheran confessions that had appeared from 1530 to 1580. These were the Augsburg Confession, Apology of the Augsburg Confession, Schmalkald Articles, Luther's Larger and Smaller Catechisms, and the Formula of Concord.

book of hours, form of prayer book developed in the 14th cent. from the prayers of clerics appended to the main service. The subjects of the miniature illustrations (see MINIATURE PAINTING) were frequently derived from the appendix of the Psalter. The book of hours served as a devotional work containing various prayers and meditations appropriate to seasons, months, days of the week, and hours of the day. Many such books are masterpieces of illumination and were symbols of refinement and wealth in fashionable houses of the 15th cent. Jean, duc de Berry, was among the most renowned collectors of books of hours, and his *Tres Riches Heures* (Musée Condé, Chantilly), illustrated in part by the LIMBOURG BROTHERS (c 1415), is among the greatest achievements in this genre.

Book of Kells: see CEANANNUS MOR.

Book of the Dead, term used to describe Egyptian funerary literature. The texts consist of charms, spells, and formulas for use by the deceased in the afterworld and contain many of the basic ideas of EGYPTIAN RELIGION. At first inscribed on the stone sarcophagi, the texts were later written on papyrus and placed inside the mummy case. The earliest collection, known as the Helopolitan Recension, dates from the XVIII dynasty (1580-1350 B.C.). It also contains selections from the two previous collections of Egyptian religious literature—the Coffin Texts of the Middle Kingdom (c 2000 B.C.) and the Pyramid Texts of the Old Kingdom (c 2600-2300 B.C.). The Theban Recension, a text that may be contemporary or slightly later, is distinguished by its distinctive format. There are several noteworthy papyri, valuable for their art. Among them are the *Papyrus of Ani* and *The Book of the Dead of Hunefer*. The two most celebrated English translations were made by Sir Peter le Page Renouf (1892-97) and Sir E. Wallis Budge (1895, repr 1967).

bookplate, label pasted in a book to indicate ownership, also called *ex libris* [Lat., =from the books of]. The bookplate is usually of paper on which heraldic or other designs are engraved or printed. The earliest printed bookplates date from c 1480 in Germany. Dürer and Holbein designed and engraved a number of bookplates. A Stephen Daye bookplate of 1642 may have been among the first printed in the United States, the John Cotton plate of 1674 certainly was. Paul Revere was well known for his bookplate engravings, as was Nathaniel Hurd. The practice of designing bookplates flourished throughout the 18th and 19th cent. Fine examples are still being produced mainly for collectors and connoisseurs by a number of graphic artists including Leonard Baskin and Peter Lippman. See J. B. L. Warren (Lord De Tabley), *Guide to the Study of Bookplates* (1880), Walter Hamilton, *Dated Bookplates* (1895), E. J. Kavanagh, ed., *Bookplates* (1966), C. D. Allen, *American Bookplates* (1895, repr 1968).

book publishing. The term *publishing* means, in the broadest sense, making something publicly

known. Usually it refers to the issuing of printed materials, such as books, magazines, periodicals, and the like. There is, however, great latitude of meaning, because publishing has never emerged, and cannot emerge, as a profession completely separate from printing on the one hand and the retailing of printed matter on the other. In the ancient world the making of extra copies of manuscripts for sale or distribution was widely practiced. There is some evidence of such treatment of manuscripts in Athens in the 5th cent. B.C., and the great libraries of the Hellenistic world encouraged the making of copies of manuscripts. In Rome there were booksellers—Horace mentions the *Sosii*, who were apparently brothers—and the copying of books by trained slaves reached considerable proportions. During imperial times there seems to have been an organized business of making and selling books. After the decline of Rome, the church was the sole preserver of learning, and the copying of manuscripts was limited to the monastic *scriptoria*. The humanists of the early Renaissance revived manuscript publication somewhat, but the immense labor required always kept reproduction at a minimum. With the introduction of printing to Europe in the middle of the 15th cent. (see TYPE), publishing at once sprang into lively existence. The author, the printer, and the publisher of a work were sometimes all the same man, as in the case of members of the Estienne family. The differentiation of printer, publisher, and bookseller appeared astonishingly early, however, as patrons of literature had books printed for distribution and booksellers had their printing done by others to meet the growing demand. The first important publishing house was that of the Elzevir family (see ELZEVR, LOUIS), which first issued a book in 1583. The Elzevirs were businessmen rather than scholars like the Estiennes, and the business of bookselling grew as literacy spread. Conversely, printing, publishing, and bookselling spread learning across the West. Religious controversy bred polemics, and arguments committed to broadsides, pamphlets, and books were handed out zealously and bought eagerly by partisans. Not long after the appearance of printing came censorship, one of the bugaboos of publishing ever since. The opponents of censorship today are taking a short view when they say that censorship is increasing, it was not so long ago, in the days of the Puritan Revolution in England, that a man could have his ears cropped for injudiciously publishing works critical of the authorities. An interest in knowing the future also increased the amount of literature issued by bookseller-publishers, and almanacs and the like were issued for the wider public. With the steadily broadening mass of readers, great publishing houses slowly came into being, many were well established by the late 18th cent. Leipzig had become a printing center in the 15th cent. and retained its eminence, along with Munich, most of the larger German cities had flourishing publishing concerns by the end of the 19th cent. Modern cities with long traditions of publishing are Vienna, Florence, Milan, Zurich, Paris, London, and Edinburgh. The rate of literacy is very high in the Scandinavian countries, and publishing occupies a relatively larger place in the economy than in most Western countries. In the United States, Boston, Philadelphia, and New York City early took the lead in publishing, with the weight ultimately swinging to New York, in the 20th cent. this lead has been challenged somewhat by Western cities. During the 19th cent. specialization became increasingly evident. Music publishing became almost a completely separate business, as did map publishing. Somewhat less rigidly divorced from general publishing are the houses specializing in religious books, in textbooks, in art books, in technical books, and in reprints. Frequently a house issuing works for the general trade may also have a strong textbook department, a strong juvenile department, or a good list of sports books. Some houses founded for more or less special purposes may broaden their scope, as is sometimes the case with the UNIVERSITY PRESS. In the late 19th and 20th cent. specialization has also grown within many of the houses themselves. Thus, editorial departments become distinct from production, and both may be quite separate from sales, promotion, and distribution. The multiplication of technical specialties often goes much farther. For example, the copy editor who prepares a book for printing may have nothing to do with the policy-setting editor who chooses or helps to choose books for publication. This splintering of functions varies from one publishing firm to another. The necessity for numerous skills and specialties, however, creates a financial problem, par-

ticularly in the United States, where the extent of the country and the generally high standard of living tend to have a bearing on publishing and restrict much of the book trade to titles aimed at a large mass market. Also, since books are a luxury item, a purchaser can dispense with them when hard times cut down his spending money. One partial solution of the problem in the United States has been the issuance of paperback books, long a standard form of book publication in Europe. During the 1930s and 1940s the paperback, pocket-size book rose meteorically in popularity in English-speaking countries, and in the 1950s the "quality" paperback appeared, presenting durable yet inexpensive editions of well-known writers. Indeed, it seemed probable that by 1980 the majority of books published would be paperbacks. Publishing has traditionally been an industry of numerous, small, family-owned firms. During the great publishing boom of the 1960s, however, American publishing houses were continually being bought by and consolidated with other companies. For example, Rinehart & Company and the John C. Winston Company were purchased by Henry Holt to form Holt, Rinehart & Winston, Inc. In addition, publishing firms were being taken over by conglomerate companies, e.g., Holt, Rinehart & Winston, Inc., was purchased by the Columbia Broadcasting System. During the 1960s the publishing industry expanded considerably: in 1963 total book sales were \$1.5 billion, and in 1972, despite a cutback in federal school library funds, sales totaled \$3.2 billion (some of the increase due to inflation) with a total of 37,000 titles sold. By the mid-1970s, however, it was evident that the effects of inflation and recession were causing the industry to contract. Companies were cutting their publication lists drastically, and many announced that they would no longer publish first novels by unknown authors. Historically, publishers cooperated in having copy-right laws passed to halt pirating of books and succeeded in establishing considerable regulation of book sales to enforce fixed prices. There are today active associations among publishers, the most notable in the United States being the American Book Publishers Council. In addition certain associations present awards for books of unusual merit, e.g., the National Book Committee presented the National Book Awards in five categories: fiction, poetry, arts and letters, history and biography, and science, philosophy, and religion. For material on magazine and newspaper publishing see JOURNALISM, NEWSPAPER, PERIODICAL; see also BOOK COLLECTING, CHILDREN'S LITERATURE. See Chandler Grannis, ed., *What Happens in Book Publishing* (2d ed. 1967); H. S. Bailey, Jr., *The Art and Science of Book Publishing* (1970); A. P. Wales, ed., *Classified World Directory of Publishing* (1971); J. W. Tebbel, *A History of Book Publishing in the United States* (1972).

bookworm, popular name for the larvae of several beetles that bore through books, e.g., the drugstore, spider, and deathwatch beetles. Almost any insect that feeds on dry, starchy material (e.g., the book louse and the silverfish) may damage books.

Boole, George, 1815-64, English mathematician and logician. He became professor at Queen's College, Cork, in 1849. Boole wrote *An Investigation of the Laws of Thought* (1854) and works on calculus and differential equations. He developed a form of SYMBOLIC LOGIC, called Boolean algebra, that is of fundamental importance in the study of the foundations of pure mathematics and is also at the basis of computer technology.

boomerang (bōō'marāng'), special form of throwing stick, used mainly by the aborigines of Australia. Other forms of throwing sticks were used by the peoples of ancient Egypt, Ethiopia, and India and by the Indians of the SW United States. The boomerang is sickle-shaped with arms slightly curved in opposite directions as in a propeller. The trajectory of a boomerang is usually an arc, but in some cases it is a full circle. The boomerang of the Australian aborigines (from whom the name is derived) is made in two types. The smaller boomerang, 12 to 30 in. (30.5 to 76.2 cm) long, is used only for sport and is thrown so that it returns to the thrower. The larger war boomerang is 24 to 36 in. (61 to 91.4 cm) long and does not return, it is used for hunting and warfare.

Boone, Daniel, 1734-1820, American frontiersman, b. Oley (now Exeter) township, near Reading, Pa. The Boones, English Quakers, left Pennsylvania in 1750 and settled (1751 or 1752) in the Yadkin valley of North Carolina. Daniel served as a wagoner in Braddock's ill-fated expedition (1755) against Fort Duquesne (Pittsburgh) and almost certainly took part in Gen. John Forbes's successful march on the

same place in 1758. He became interested in Florida, but his wife, the former Rebecca Bryan, whom he married in 1756, refused to accompany him. He explored (1769-71) the Kentucky region thoroughly, and its prospects delighted him. Indian attacks turned back his first colonizing attempt (1773), but in March, 1775, as advance agent for Richard HENDERSON and the TRANSYLVANIA COMPANY and with an armed band of 30 men, he blazed the famous WILDERNESS ROAD and founded Boonesboro (or Boonesborough) on the Kentucky River. Henderson arrived in a few weeks with additional settlers, and later in the same season Boone guided a second party, including his family. When Kentucky was made a county of Virginia in 1776, he was elected a captain of militia. In the American Revolution, while on an expedition to find salt in the Blue Licks on the Licking River, Boone and his party were captured (Feb., 1778) by Shawnee Indians and taken to British headquarters at Detroit. Highly regarded by the Indians, he was adopted as a member of the tribe. He led his captors to think that he would prevail on the other settlers to surrender, but, after four months of captivity, he escaped in time to prepare Boonesboro for an attack by the Indians, which failed. A disgruntled element charged Boone with disloyalty, and although he was promptly acquitted and elected major, he left Boonesboro and, after collecting his family, which had returned to North Carolina after his capture, founded (1779) a new settlement, Boone's Station, near what is now Athens, Ky. He served several terms as representative in the Virginia legislature. His titles to large tracts of land were adjudged imperfect, and despite his services to Kentucky he lost his best holdings through ejectment suits. Disgusted, he and Rebecca followed (1799) a son to Missouri, where the Spanish government granted him a large tract in the Femme Osage valley and made him district magistrate. When the United States assumed jurisdiction over this territory after the Louisiana Purchase (1803), his land titles were again found to be defective, but the direct intercession of Congress (1814) restored part of his acreage. His adventures became well known through the so-called autobiographical account that appeared in the widely read *Discovery, Settlement, and Present State of Kentucke* (1784), by John Filson, and Lord Byron's verses on him in *Don Juan* gave his name international prominence. Historical scholarship has disproved many of the legends about him, nevertheless these still attest to those qualities of courage and determination that earned him enduring popularity. See biographies by John Bakeless (1965), R. G. Thwaites (1963, repr. 1971), and R. E. McDowell (1972).

Boone, city (1970 pop. 12,468), seat of Boone co., central Iowa, on the Des Moines River, inc. 1865. It is a railroad and industrial center with plants making machinery, steel fabrications, and plastic signs. It was laid out (1865) by the railroad, which built a long, high double-track bridge there. In 1887 it annexed the nearby rival town of Boonesboro (founded 1851). A junior college is in Boone, and a state park is nearby.

Boonesboro, former settlement, central Ky., on the Kentucky River. It was named for Daniel BOONE, who in 1775 built a small fort there under orders from the TRANSYLVANIA COMPANY, organized by the American colonizer Richard HENDERSON. The seat of the government of Transylvania for several years, Boonesboro was later abandoned because of repeated Indian attacks.

boot. See SHOE.

Bootes (bō-ō'tēz) [Gr., =the herdsman], northern CONSTELLATION located to the SE of the Big Dipper in Ursa Major and W of Corona Borealis, the Northern Crown. It contains the brilliant orange star ARCTURUS. The figure traditionally associated with Bootes shows a man holding a staff in one hand and two leashed dogs in the other (the Hunting Dogs of the constellation Canes Venatici). Bootes is also known as the Keeper of the Bear because it follows Ursa Major, the Large Bear. It reaches its highest point in the evening sky in June.

Booth, family prominent in the SALVATION ARMY, founded by William BOOTH. His wife, Catherine Mumford Booth (1829-90), whom he married in 1855, played a leading part in the foundation and development of the Salvation Army, devoting herself particularly to the work among women and children. Their eldest son, Bramwell Booth (1856-1929), succeeded his father in 1912 as general of the Salvation Army. Another son, Ballington Booth (1859-1940), was commander (1885-87) of the Army in Australia and then commander (1887-96) in the

United States, where his wife, Maud Charlesworth Ballington Booth (1865-1948), shared his labors, in 1896 they withdrew from the Salvation Army and founded the VOLUNTEERS OF AMERICA. A daughter of William Booth, Emma Moss Booth-Tucker (1860-1903), was in charge (1880-88) of the international training homes of the Salvation Army. She and her husband, Frederick St. George de Latour Booth-Tucker (1853-1929), who had resigned from the India civil service to join the Salvation Army, jointly commanded the Army in the United States from 1896 until her death in 1903. See BOOTH, EVANGELINE CORY.

Booth, Charles, 1840-1916, English social investigator, pioneer in developing the social survey method. Aided by the notable social scientist Beatrice Potter WEBB, he made an exhaustive statistical study of poverty in London, showing its extent, causes, and location. This was published as *Life and Labour of the People in London* (17 vol., 1891-1903). Booth was also active in reform groups interested in the poor and aged. His other writings include *Old Age Pensions and the Aged Poor* (1899) and *Industrial Unrest and Trade Union Policy* (1914). See his selected writings (1967), study by Thomas Simey and Margaret Simey (1960).

Booth, Edwin, 1833-93, one of the first great American actors, b. "Tudor Hall," near Bel Air, Md. The second son of Junius Brutus BOOTH, he made his debut at the Boston Museum (1849) as Tresselt to his father's Richard III. After years of touring with his father in California, Hawaii, and Australia, in 1857 he appeared in New York City, being particularly successful as Richard III. His style was gentle and restrained, a far cry from the bombast of Edwin Forrest, and his portrayals were exquisitely detailed. He toured (1861-63) England and on the death of his first wife returned to New York and leased the Winter Garden Theatre, where in 1864 he presented his famous 100-night run of *Hamlet* (a record which was not broken until John Barrymore's 101-night run in 1922). His magnificent Shakespearean productions at the Winter Garden terminated in 1865, when his brother John Wilkes BOOTH assassinated President Lincoln. Because of the scandal that followed, Edwin Booth was forced to retire, but he returned to the Winter Garden in 1866. When it burned down, he built Booth's Theatre, New York (1869), where he acted with his second wife, Mary McVicker, and presented such stars as Salvini and Ristori in Shakespeare until his bankruptcy in 1873. He again toured (1880-82) England, at one time alternating with Henry Irving in the roles of Iago and Othello. Associated with Lawrence Barrett, he later appeared (1889-90) with Helena Modjeska. In 1891 he made his last appearance at the Brooklyn Academy of Music as Hamlet. The founder (1888) and first president of the Players' Club, he bequeathed his New York house to the organization. See his letters, ed. by D. J. Watermeier (1971), recollections by his daughter Edwina Booth Grossman (1894, repr. 1969), biographies by Eleanor Ruggles (1953), William Winter (1893, repr. 1968), and Richard Lockridge (1932, repr. 1971), C. H. Shattuck, *The Hamlet of Edwin Booth* (1969).

Booth, Evangeline Cory, 1865-1950, general of the SALVATION ARMY, b. England, daughter of William Booth. At the age of 17, she began evangelistic preaching. She was field commissioner of the Salvation Army in London for five years, commander of the Army in Canada from 1895 to 1904, and commander in the United States from 1904 to 1934. Booth was general of the international Salvation Army from 1934 to 1939. Her works include *Love Is All* (1925), *Songs of the Evangel* (1927), and *Woman* (1930). See BOOTH, family. See biography by P. W. Wilson (1948).

Booth, John Wilkes (wīlks), 1838-65, American actor, the assassin of Abraham LINCOLN, b. near Bel Air, Md., son of Junius Brutus Booth and brother of Edwin Booth. He made his debut at the age of 17 in Baltimore, toured widely, and soon became a star, winning acclaim for his Shakespearean roles. Unlike the rest of his family, Booth was an ardent Confederate sympathizer. He had joined (1859) the Virginia militia company that assisted in the capture of John Brown, but he did not enter Confederate service in the Civil War. Instead, he continued with his theatrical career in the North. For some six months in 1864-65 Booth, an egomaniac, laid plans to abduct Lincoln and carry him to Richmond, a scheme that was frustrated when Lincoln failed to appear (March 20, 1865) at the spot where Booth and his six fellow conspirators lay in wait. On Good Friday, April 14, 1865, Booth, having learned that Lincoln planned to

attend Laura Keane's performance of *Our American Cousin* at Ford's Theater in Washington on that evening, plotted the assassination of the President, Vice President Andrew Johnson, and Secretary of State William H. Seward. Lewis Thornton Powell, who called himself Payne, guided by David E. Herold, seriously wounded Seward and three others at Seward's house. George A. Atzerodt, assigned to Johnson, lost his nerve. The main act, Booth, naturally reserved for himself. His crime was committed shortly after 10 P.M., when he entered the presidential box unobserved, suddenly shot Lincoln, and vaulted to the stage (breaking his left leg in the process) shouting "Sic semper tyrannis! The South is avenged!" He then went behind the scenes and down the back stairs to a waiting horse upon which he made his escape. Not until April 26, after a hysterical two-week search by the army and secret service forces, was he discovered, hiding in a barn on Garrett's farm near Bowling Green, Caroline co., Va. The barn was set afire and Booth was either shot by his pursuers or shot himself rather than surrender. Although it has been said that no dead body was ever more definitely identified, the myth—completely unsupported by evidence—that Booth escaped has persisted. For the fate of others involved, see SURRATT, MARY EUGENIA. See memoir by his sister, Asia Booth Clarke, biographies by Philip Van Doren Stern (rev. ed. 1955) and Francis Wilson (1929, repr. 1972).

Booth, Junius Brutus, 1796–1852, Anglo-American actor. After experience in the provinces, he appeared at Covent Garden. In 1817, with his portrayal of Richard III, he established himself as a rival of Edmund Kean. In 1821 he emigrated to the United States, where he spent most of his remaining life. An imposing tragic actor with a full, rich voice and a rugged grandeur, Booth had an erratic personal life complicated by intemperate habits. He had three sons of whom two were in the theater: Junius Brutus Booth, Jr., who excelled as a manager and Edwin BOOTH, who surpassed his father as an actor. His third son was the assassin of President Lincoln, John Wilkes BOOTH. See Stanley Kimmel, *The Mad Booths of Maryland* (2d ed., 1969).

Booth, William, 1829–1912, English religious leader, founder and first general of the SALVATION ARMY, b. Nottingham. Originally a local preacher for the Wesleyan Methodists, he went (1849) to London and entered (1852) the ministry of the Methodist New Connexion Church, but in 1861 he began independent evangelistic work. In 1865, with the able help of his wife, Catherine Booth, he started the East London Revival Society (soon known as the Christian Mission) in Whitechapel, London. The Christian Mission developed in 1878 into the Salvation Army. General Booth, a remarkable organizer, traveled widely, extending the field of labor to other parts of the world and winning recognition wherever he went. In 1890 he published *In Darkest England and the Way Out* in collaboration with W. T. Stead. See BOOTH, family, BOOTH, EVANGELINE CORY. See biographies by G. S. Railton (2d ed. 1912), Harold Begbie (1920), St. John Ervine (2 vol., 1934), Harold C. Steele (1954), Edward Bishop (1964), and Richard Collier (1965).

Boothia Peninsula (bōō'thēa), 12,483 sq mi (32,331 sq km), S central Franklin dist., Northwest Territories, Canada, the northernmost (71°58'N) tip of the North American mainland. It is almost an island, being connected with the mainland only by the narrow Isthmus of Boothia. Topographically and in climate it is like the islands of the Arctic Archipelago. A narrow strait separates it in the north from Somerset Island. To the east the Gulf of Boothia separates it from Baffin Island. It is virtually uninhabited except for a few hundred settlers at Spence Bay and Thom Bay. The peninsula was discovered and explored (1829–33) by John Ross, the British explorer, and named for a patron of the expedition, Sir Felix Booth. Near the southwest end the expedition of Sir John Franklin, the British explorer, ended in tragedy. Roald Amundsen, a Norwegian, explored the peninsula in 1903–5.

Bootle, county borough (1971 pop. 74,208), Lancashire, NW England, at the mouth of the Mersey River. It has extensive docks adjacent to those of Liverpool. Besides shipping, Bootle's industries include tanning, tin smelting, engineering, and flour milling. In 1974, the borough became part of the new metropolitan county of Merseyside.

bootlegging, in the United States, the illegal distribution or production of liquor and other highly taxed goods. First practiced when liquor taxes were high, bootlegging was instrumental in defeating early attempts to regulate the liquor business by tax-

ation. After the appearance of local and state option, those areas that voted to prohibit liquor were supplied with bootlegged liquor. There was also considerable smuggling from foreign countries in order to evade customs duties. In the period of PROHIBITION (1920–33) these activities increased greatly, and by 1930 they were well organized as a large illegitimate industry. Certain areas were dominated by gangs that fought to defend or extend their territory. Infamous gangsters such as AL CAPONE in Chicago and Legs Diamond in New York City were heavily involved in bootlegging. The retail outlet in the prohibition period was the speakeasy, though a house-to-house delivery system to established customers was also well developed. A high degree of organization also prevailed in international liquor SMUGGLING. The combination of graft and violence accompanying this industry became so intolerable that it was an important factor in the final repeal of prohibition. Bootlegging remains a practice in many areas where prohibition is still in practice. Other highly taxed products may also become a target for bootleggers, e.g., a system of bootlegging untaxed cigarettes into New York City existed in the early 1970s. See Kenneth Allsop, *The Bootleggers* (1961, repr. 1970), Andrew Sinclair, *Prohibition: The Era of Excess* (1962, repr. 1964), Harold Waters, *Smugglers of Spirits* (1971).

Booz (bō'ōz), the same as BOAZ 1.

Bopp, Franz (fränts bōp), 1791–1867, German philologist. A professor at the Univ. of Berlin from 1821 to 1864, he did research in many languages and earned a great reputation as a scholar by demonstrating the relationship of the Indo-European languages in his *Vergleichende Grammatik* [comparative grammar] (1833–52).

Bora, Katharina von: see LUTHER, MARTIN

Bora-Bora (bō'ra bō'ra), volcanic island, 15 sq mi (39 sq km), South Pacific, in the Leeward group of the SOCIETY ISLANDS, FRENCH POLYNESIA. It is a mountainous island, with Mt. Taimanu (2,379 ft/725 m) the highest peak. Bora-Bora has a good harbor, which is a large lagoon surrounded by coral islets. Copra, oranges, and vanilla are produced on the island.

boracic acid: see BORIC ACID

borage (bō'rāj, bū'r-), common name for the Boraginaceae, a family of widely distributed herbs and some tropical shrubs or trees characterized by rough or hairy stems, four-part fruits, and usually fragrant

Forget-me-not, Myosotis virginica, a member of the borage family

blossoms. Its species are most abundant in the Mediterranean area, but many are native to North America and are cultivated, e.g., the Virginia cowslip, or Virginia bluebell (*Mertensia virginica*), species of forget-me-not (genus *Myosotis*), and species of HELOTROPE (genus *Heliotropium*). The family is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Lamiales.

Borah, William Edgar, 1865–1940, U.S. Senator (1907–40), b. near Fairfield, Ill. Admitted to the bar in Kansas in 1887, after 1890 he became prominent in law and politics at Boise, Idaho. Shortly after election to the Senate, he gained (1907) national attention by his prosecution of William HAYWOOD and two other leaders of the Western Federation of Miners, who were accused of conspiring to murder (1905) ex-Governor Frank STEUBENBERG. In the Senate he was outstanding as an orator, as an expounder of the Constitution, and as a Republican notable for

his independent stands (he was sometimes called "the great opposer"). Borah was one of the Senate leaders in defeating the Versailles Treaty and the League of Nations after World War I. From 1924 to 1933 he was chairman of the Senate Committee on Foreign Affairs, and his major interest was in foreign policy. He early asked for recognition of the USSR, favored the collection of war debts, and opposed intervention in Latin American countries to protect U.S. investments. An advocate of disarmament and the outlawing of war, he suggested the Washington Conference of 1921–22 and promoted the Kellogg-Briand Pact, in 1939 he fought revision of the Neutrality Act. In domestic affairs, Borah staunchly favored prohibition. He spoke against economic monopoly and for enforcement of the antitrust laws, but he was opposed to extension of governmental powers and disapproved of the National Recovery Administration and many other New Deal measures. See biographies by C. O. Johnson (1936, new ed. 1967, repr. 1969) and M. C. McKenna (1961), studies by J. C. Vinson (1957), R. J. Maddox (1969), and LeRoy Ashby (1972).

Borah, Mount [for William E. Borah], peak, 12,662 ft (3,859 m) high, central Idaho, in the Lost River Mts., highest point in the state.

Borås (bōōrōs'), city (1970 pop. 73,475), Älvsborg co., SW Sweden, on the Viskan River. It is a transportation and commercial center and has numerous cotton and woolen textile factories. Borås was founded in 1632 by Gustavus II.

borax or sodium tetraborate decahydrate (sō'dēam tē'trabōr'āt dēk'ahī'drāt), chemical compound, Na₂B₄O₇ · 10H₂O, sp. gr. 1.73, slightly soluble in cold water, very soluble in hot water, insoluble in acids. Borax is a colorless, monoclinic crystalline salt; it also occurs as a white powder. It readily effloresces, especially on heating. It loses all water of hydration when heated above 320°C and fuses when heated above 740°C, a "borax bead" so formed is used in chemical analysis (see BEAD TEST). Borax is widely and diversely used, e.g., as a mild antiseptic, a cleansing agent, a water softener, a corrosion inhibitor for antifreeze, a flux for silver soldering, and in the manufacture of enamels, shellacs, heat-resistant glass (e.g., Pyrex), fertilizers, pharmaceuticals, and other chemicals. It is sometimes used as a preservative but is toxic if consumed in large doses. Naturally occurring borax (sometimes called tincal) is found in large deposits in the W United States (Borax Lake in Death Valley, Calif., Nevada, and Oregon) and in Tibet. Borax can also be obtained from borate minerals such as kernite, colemanite, or ulexite. California is the chief source of borate minerals in the United States.

borax bead test: see BEAD TEST

Borchgrevink, Carsten Egeberg (kar'stan ā'gōbēr bōrk'grā'vīngk), 1864–1934, Norwegian-Australian antarctic explorer. He emigrated to Australia in 1888, and in 1894 he went south in a whaling vessel and at Cape Adare took part in the first landing on the continent of Antarctica. In 1898 he left England in command of a British-sponsored expedition on the Southern Cross. He disembarked at Cape Adare and sent the ship back to New Zealand. To prove that man could withstand the harsh climate of Antarctica, he and his companions spent the winter on the continent, the first to do so. In the spring he explored the Ross Sea, did extensive mapping of the Ross Barrier, and described its flora and fauna. See his *First on the Antarctic Continent* (1901).

Bordeaux (bōrdō'), city (1968 pop. 270,996), capital of Gironde dept., SW France, on the Garonne River. Bordeaux is a major economic and cultural center, and a busy port accessible to oceangoing ships from the Atlantic through the Gironde River. Although Bordeaux has important shipyards and industries (machines, chemicals, and airplanes), its principal source of wealth is the wine trade. Bordeaux wine is the generic name of the wine produced in the Bordelais region, which is dotted with châteaux that give their names to many vineyards. Known as Burdigala by the Romans, Bordeaux was the capital of the province of Aquitania and a prosperous commercial city. It became an archiepiscopal see in the 4th cent. Bordeaux's importance declined under Visigothic and Frankish rule (c. 5th cent.), but was revived when the city became (11th cent.) the seat of the dukes of AQUITAINE. Eleanor of Aquitaine, who was born there, precipitated through her successive marriages to Louis VII of France and Henry II of England the long struggle between the two nations. As a result of these wars Bordeaux came under English rule, which lasted from 1154 to 1453. The city's commercial importance dates from this pe-

riod Reconquered by France, Bordeaux became capital of the province of Guienne Louis XI established the powerful PARLEMENT of Bordeaux and granted great privileges to the university founded (1441) by Pope Eugene IV The intellectual reputation of Bordeaux was made by Montaigne and Montesquieu, who were born nearby and who were both magistrates in the city Bordeaux reached the height of its prosperity in the 18th cent Its relations with England were always close, many English firms exporting wine and spirits established themselves in the city Bordeaux was the center of the GIRONDIS in the French Revolution and the site of the National Assembly of 1871 that established the Third Republic In 1914 and again in 1940, at the onset of the World Wars, the city was the temporary seat of the French government The Place des Quinconces, with its statues of Montaigne and Montesquieu, dominates the center of the city Other points of interest are the Gothic Cathedral of St Andre, several art museums, and some elegant 18th-century buildings designed by Victor Louis and Jacques Gabriel An engineering school and a research center studying mass-media communications are also in Bordeaux

Bordeaux mixture (bördö'), fungicide consisting of CUPRIC SULFATE and lime in water Its fungicidal activity is associated with the slow formation of copper compounds, the ultimate toxicant being the cupric ion It originated in France in 1885 and was widely used for spraying orchards, dusting crops, and treating seeds until c 1930 Since it was found that Bordeaux mixture frequently caused russetting of fruit, injured the leaves, and led to premature defoliation, it has been generally replaced by solutions made with powdered fixed copper Sal soda Bordeaux, or Burgundy mixture, containing cupric sulfate and sodium carbonate (sal soda), was formerly used to spray small fruits but has been replaced by more convenient preparations See PESTICIDE

Borden, Sir Frederick William, 1847-1917, Canadian statesman, b Cornwallis, NS He entered (1874) the Canadian House of Commons as a Liberal and served (1896-1911) as Wilfrid Laurier's minister of militia and defense During his ministry, the last British troops were withdrawn from Canada (1901), the practice of appointing a British general to command the Canadian militia was ended, and Canada took control from Great Britain of the naval bases of Halifax and Esquimalt

Borden, Gail, 1801-74, American dairyman, surveyor, and inventor, b Norwich, NY He was for several years a deputy surveyor in Mississippi, afterward he joined the colony of Stephen F AUSTIN in Texas There, besides farming, stock-raising, and newspaper activities, he superintended the surveying of lands for Austin He laid out the city of Galveston, where he became collector of customs After returning (1851) to New York, he worked on a process of evaporating milk, which he patented in 1856 Jeremiah Milbank backed him financially, and the Borden Milk Company (now Borden, Inc) opened its first evaporating plant in 1858 During the Civil War his product was found to be of the greatest value for the army, and its use spread rapidly afterward Borden subsequently also patented processes for concentrating fruit juices and other beverages See biography by J B Frantz (1951)

Borden, Lizzie Andrew, 1860-1927, American woman accused of killing her father and her stepmother, b Fall River, Mass The elder Borden was hacked to death with an ax on Aug 4, 1892 Although Lizzie Borden claimed that she was out in the barn at the time, she was accused of the murders and tried The trial, which aroused great public interest, ended with a verdict of not guilty The case was never solved See E D Radin, *Lizzie Borden: The Untold Story* (1961), Victoria Lincoln, *Private Disgrace* (1967), Robert Sullivan, *Goodbye Lizzie Borden* (1974)

Borden, Sir Robert Laird, 1854-1937, Canadian political leader, prime minister during World War I, b Grand Pre, NS Called to the bar in 1878, he won a reputation as a constitutional lawyer He was elected to the House of Commons in 1896 and in 1901 succeeded Sir Charles Tupper as leader of the Conservative party He led the opposition until 1911, when Sir Wilfrid Laurier's Liberal government fell During the election campaign Borden had opposed the creation of a separate Canadian navy and had criticized Laurier's reciprocity agreement with the United States The agreement, which would have lowered tariffs between the two countries, was opposed by powerful economic interests in Canada

As prime minister, Borden headed a Conservative government until 1917 and a Union (coalition) government until his resignation in 1920 He is remembered for his leadership in carrying Canada through World War I and, subsequently, in defining the new status of the self-governing dominions in the British Empire Largely through his efforts the dominions were given separate representation in the League of Nations, and the Canadian Parliament ratified the treaties that resulted from the peace conference of 1919 Borden later represented Canada at the naval armament conference in Washington (1921-22) and in the League of Nations He was also chancellor of Queen's Univ (1924-30) His *Canadian Constitutional Studies* (1922) and *Canada in the Commonwealth* (1929) are significant works See his memoirs, ed by Henry Borden (1938), H A Wilson, *Imperial Policy of Sir Robert Borden* (1966)

Border, the, region surrounding the boundary between England and Scotland From the coast near Berwick along the Tweed River through the Cheviot Hills and on to Solway Firth, the narrow, rugged country is dotted with sites of battles between the Scots and the English The wild country figures much in literature—in legend, in folklore, and particularly in the Border ballads

border collie, breed of medium-sized, sheepherding dog developed in the British Isles It stands about 18 in (45.7 cm) high at the shoulder and weighs from 30 to 45 lb (13.6-20.4 kg) Its double coat consists of a soft, fuzzy underlayer and a harsh, very dense, wavy or slightly curly topcoat of varying lengths Its color is black with white around the neck and on the chest, face, feet, and tip of tail Bred for many years exclusively to develop its herding instinct, the border collie is unsurpassed as a sheep dog and has been used with equal success for herding cattle, swine, and poultry It is exhibited in the miscellaneous class at dog shows sanctioned by the American Kennel Club See DOG

border terrier, breed of hardy, medium-sized TERRIER developed in the Border districts of N England in the 18th and 19th cent It stands about 12 in (30 cm) high at the shoulder and weighs from 13½ to 15½ lb (6.1-6.9 kg) Its weather-resistant double coat is composed of a short, dense underlayer and a close-lying, very wiry topcoat It may be red, grizzle and tan, blue and tan, or wheaten in color, occasionally with a small amount of white on the chest The border terrier was bred to hunt and kill the large hill fox of its native Border districts and came to be used against a wide variety of vermin Raised today chiefly as a pet, it is a relatively rare breed in the United States See DOG

Bordet, Jules (zhul bördä'), 1870-1961, Belgian serologist and immunologist, M D Univ of Brussels, 1892 He became director of the Pasteur Institute in Brussels in 1901 and professor at the Univ of Brussels in 1907 With Octave Gengou he devised (1900) the technique of the complement-fixation reaction (applied by Wassermann to the diagnosis of syphilis) and discovered (1906) the bacillus of whooping cough For his work in immunity he received the 1919 Nobel Prize in Medicine

Bordone, Paris (pa-rēs bördō'nā), 1500-71, Venetian painter of the Renaissance, pupil of Titian Skillful in his use of color, he was particularly interested in variations of texture in fabric, as seen in his numerous portraits (Brera, Milan, National Gall, London, Louvre, Uffizi, and Vienna) Bordone's conception of space changed from a precise rendering of architectural settings in his famous *Fisherman Presenting the Ring to the Doge* (Academy, Venice) to a more contorted mannerist treatment in *Christ and the Doctors* (Gardner Mus., Boston) and the *Gloria* (Academy, Venice) He created many sensual mythological paintings, including *Diana and Minerva at the Forge of Vulcan* (National Gall of Art, Washington, D C)

bore, inrush of water that advances upstream with a wavelike front caused by the progress of incoming tide from a wide-mouthed bay into its narrower portion The tidal movement tends to be retarded by friction as it reaches the shallower water and meets the river current, it therefore piles up and forms a low wall of water that moves upstream with considerable force and velocity as the tide continues to rise In the mouth of the Amazon River a tidal bore known locally as the pororoca occurs every spring tide It has a wall of water from 5 to 15 ft (1.5-4.6 m) high and advances at a speed of from 10 to 15 mi (16-24 km) per hr The highest recorded bore (15 ft/4.6 m) is found in the Ch'ien-tang River near Hangchow, China Bores are found also in the Bay of Fundy, in Solway Firth, in the Severn, Seine, and Hooghly rivers, and in Hangchow Bay

Boreas (bōr'ēas) see EOS

borecole: see KALE

Borel, Félix Édouard Émile (fālēks' ādwar' āmēl' bōrēl'), 1871-1956, French mathematician He is noted for his work in infinitesimal calculus and the calculus of probabilities He was professor at the Univ of Paris (1904-41), director of the Henri Poincaré Institute (from 1927), and a representative in the French chamber of deputies (1924-36)

Borel, Petrus, pseud of Joseph-Pierre Borel D'Hauterive, 1809-59, French novelist, poet, and translator Although trained as an architect, he soon turned to writing Borel was the most extreme of the *bousingos*, a group of extravagant young romantic artists and writers He loathed the bourgeoisie and believed in the hatred of men for each other Among his works, whose aim was to shock, are *Rhapsodies* (1832) and *Madame Putip-her* (1839), both of which are horrifying and melodramic

Borelli, Giovanni Alfonso (jōvan'nē alfōn'sō bōrēl'le), 1608-79, Italian physiologist, physicist, astronomer, and mathematician, son of a Spanish infantryman His wide interests led to original contributions in many fields, including anatomy, epidemiology, the study of fermentation, volcanology, magnetism, fluid dynamics, and the observation of comets In his study of disease he concluded, against most contemporaries, that meteorological and astrological causes were not at work, but that something entered the body and could be remedied chemically In *Euclides restitutus* he reworked Euclid's *Elements* into a more concise form He is perhaps best known for his *De motu animalium* (1679), a study of the mechanical basis of respiration, circulation, and muscular contraction in animals

Boreman, Arthur Ingram, 1823-96, first governor of West Virginia (1863-69), b Waynesburg, Pa A member (1855-61) of the Virginia house of delegates, Boreman opposed secession and presided over the Wheeling Convention of June, 1861, which set up the loyal government of Virginia with Francis H PIERPONT as governor It was this government that consented to the partition of Virginia, and on June 20, 1863, Boreman was inaugurated as governor of the new state of West Virginia Re-elected governor in 1864 and 1866, he was elected in 1869 to the US Senate, where he served until 1875

Borenus, Tancred, 1885-1948, art historian and teacher, b Finland He became professor of the history of art at University College, London, in 1922 In 1933 he became director of the excavations of Clarendon Palace near Salisbury, England Borenus was managing editor of the *Burlington Magazine* from 1940 to 1945 Among his many publications are *The Painters of Vicenza* (1909), *The Iconography of St Thomas of Canterbury* (1929), and *Rembrandt Selected Paintings* (1942)

borer, name applied to various animals that are injurious because of their ability to penetrate plant or animal tissues Among insects, some borers are beetles, e.g., the flatheaded apple-tree borer, a serious pest of many shade and fruit trees, the roundheaded apple-tree borer, and the bronze birch, locust, elm, shot-hole, and poplar borers Other boring insects are moths that are harmful in the larval stage, e.g., the peach, currant, squash, lilac, and southern cornstalk borers and the European CORN BORER Marine borers include the boring sponge, certain marine worms, and some bivalve mollusks, e.g., the rock borer, the SHIPWORM, and the piddock, which are thought to secrete acids that dissolve rock and other substances The HAGFISH, or borer, is a marine pest that burrows into the bodies of other fish

Borgå (bōr'gō) or **Porvoo** (pōr'vō), city (1970 pop 16,684), Uusimaa prov., S central Finland, on the Gulf of Finland at the mouth of the Porvoonjoki River It is an export center for forest products and has plywood and cellulose mills, breweries, and a publishing industry A trade center in the early Middle Ages, it was chartered in 1350 In 1809, Alexander I of Russia granted Finland a constitution at Borgå Most of the population is Swedish-speaking The home and grave of the Finnish national poet J L Runeberg is in Borgå

Borger (bōr'gar), city (1970 pop 14,195), Hutchinson co., extreme N Texas, in the Panhandle, inc 1930 After the discovery of oil in 1925, Borger grew as the industrial center of a vast natural-gas and oil field In the area are refineries, carbon-black plants, synthetic-rubber factories, and related enterprises A junior college is in Borger

Borgerhout (bōrkharhout), city (1970 pop 49,002), Antwerp prov., N Belgium, on the Albert Canal, an industrial suburb of Antwerp

Borges, Jorge Luis (hòr'hā lōōēs' bôr'hās), 1899–, Argentine poet, critic and short-story writer, b. Buenos Aires. Borges has been widely hailed as the foremost contemporary Spanish American writer. He was educated in Switzerland and afterwards lived in Spain, where he became an exponent of *ultraísmo*, a poetic movement that followed the decline of MODERNISMO after World War I. *Ultraísmo* advocated the use of bold images and daring metaphors in an attempt to create pure poetry, divorced not only from the past but from reality. Borges, who brought the movement to Argentina, never adhered strictly to its tenets. He helped to found three avant-garde journals and served as director of the National Library and professor of English at the Univ. of Buenos Aires. His poems, collected in *Fervor de Buenos Aires* (1923), *Luna de enfrente* (1925), *Cuadernos San Martín* (1954), *Dreamtigers* (tr. 1964), *A Personal Anthology* (tr. 1967), *Selected Poems 1923–1967* (1972), and *In Praise of Darkness* (tr. 1974), are often inspired by events of daily life or episodes of Argentine history. Characterized by lyricism, imagination, and boldness, they are, in his own words, "spiritual adventures." His essays, collected in *Inquisiciones* (1925) and *Otras inquisiciones* (1960, tr. 1964), deal with philosophical problems and questions of literary criticism. His tales, ranging from metaphysical allegories and fantasies (e.g., *The Book of Imaginary Beings*, 1967, tr. 1969) to sophisticated detective yarns, reveal a wide variety of influences (Kafka, Chesterton, Virginia Woolf) but are nevertheless strikingly original. Major collections of his short stories include *Historia universal de la infancia* (1935, tr. 1972), *Ficciones* (1944, tr. 1962), *El Aleph* (1949, tr. 1970), *Extraordinary Tales* (1955, tr. 1971), and *Dr. Brodie's Report* (tr. 1972). *Labyrinths* (tr. 1962) is a collection of stories and selected writings in translation. See studies by A. M. Barrenechea (tr. 1965), R. J. Christ (1969), Carter Wheelock (1969), Jaime Alazraki (1971), L. Dunham and Ivar Ivask, ed., *The Cardinal Points of Borges* (1971). See also Richard Burgin, *Conversations with Jorge Luis Borges* (1969).

Borgese, Giuseppe Antonio (jōōzēp'ā antō'nyō bōrjā'zā), 1882–1952, Italian-American author, b. near Palermo, Ph.D. Univ. of Florence, 1903. From 1910 to 1931 he taught at the universities of Rome and Milan. An anti-Fascist, he emigrated to the United States in 1931 and was naturalized in 1938. He taught at Smith (1932–35) and the Univ. of Chicago (from 1936). Secretary of the Committee to Frame a World Constitution, he was the chief author of its Chicago draft (1947). All his activities—philosophic, poetic, political—were colored by his concept of spiritual unity or, in his word, *syntax*. His works of criticism, fiction, and poetry include the novel *Rube* (1921, tr. 1923) and, written in English, *Goliath*, *The March of Fascism* (1937) and *Common Cause* (1943).

Borghese (bōrgē'zā), Roman noble family, originally of Siena. It produced one pope, PAUL V, several cardinals, and many prominent citizens. The Borgheses were noted patrons of arts and letters. Scipione Cardinal Borghese built the fine Villa Borghese in Rome. Camillo Borghese, a general under Napoleon I, married his sister Pauline BONAPARTE.

Borghese Villa or **Villa Umberto I** (vēl'la ōōmbēr'io prēmō), summer palace built by Scipione Cardinal Borghese outside the Porta del Popolo, Rome. Begun in 1605, the villa was transformed in the 18th cent. into a more elaborate edifice. In 1806 it yielded much of its priceless art to Paris. It is now government owned and has become the repository for many of the paintings from the Borghese Palace.

Borgholm (bōr'yāhōlm'), town (1970 pop. 2,409), Kalmar co., SE Sweden, on Öland Island and on the Kalmarsund, an arm of the Baltic Sea. It is a seaside resort. Of note are the ruins of Borgholm castle (13th cent., rebuilt 16th–17th cent.), destroyed by fire in the early 19th cent.

Borgia (bōr'ja), Span. *Borja* (bōr'ha), Spanish-Italian noble family, originally from Aragon. When Alfonso de Borja, cardinal-archbishop of Valencia, was pope as Calixtus III (1455–58), several relatives followed him to Rome. His nephew Rodrigo became pope as ALEXANDER VI, and Rodrigo's illegitimate children were Cesare and Lucrezia Borgia, the later reputations of these Borgias made the family name a synonym for avarice and treachery. To the Spanish branch of the family belonged St. FRANCIS BORGIA and Francisco Borja (1581–1658), a Spanish general and viceroy of Peru. The direct line of the family, whose senior members bore the title duke of Gandia, died out in the 18th cent. See study by E. R. Chamberlin (1974).

Borgia, Cesare or **Caesar** (chā'zārā), 1476–1507, Italian soldier and politician, younger son of Pope ALEXANDER VI and an outstanding figure of the Italian Renaissance. Throughout his pontificate Alexander VI used his position to aggrandize his son and establish a papal empire in N and central Italy. Archbishop of Valencia and a cardinal by 1493, Cesare resigned the dignity after the death (1498) of his elder brother, the duke of Gandia, in whose murder he was probably involved. He now began his political career as papal legate to France. He struck an alliance with King Louis XII who made him duke of Valentinois (Valence), and married (1499) Charlotte d'Albret, a sister of the king of Navarre. The French having overrun Italy (see ITALIAN WARS), Cesare, with his father's encouragement, subdued (1499–1500) the cities of the ROMAGNA one by one. Made duke of Romagna (1501) by the pope, Cesare also seized (1502) Piombino, Elba, Camerino, and the duchy of Urbino, and he crowned his achievements by artfully luring his chief enemies to the castle of Senigallia, where he had some of them strangled. By killing his enemies, packing the college of cardinals, pushing his conquests as fast as possible, and buying the loyalty of the Roman gentry, he had hoped to make his position independent of the papacy or at least to insure that the election of any future pope would be to his liking. But before his schemes could be realized, Cesare was struck in 1503 by the same poison (or illness) that suddenly killed his father. Cesare recovered, however, his political power had suffered a fatal blow. Pius III, after a short reign, was succeeded by JULIUS II, an implacable enemy of Cesare Borgia. Louis XII then turned against him. Julius demanded the immediate return of what territory remained to Cesare and had him temporarily arrested. Returning to Naples, Cesare was soon arrested by the Spanish governor there as the result of collusion between Julius II and the Spanish rulers, Ferdinand and Isabella. Sent to prison in Spain, he escaped and finally found refuge (1506) at the court of the king of Navarre. He died fighting for him at Viana. His former possessions had passed under direct papal rule, thus, Cesare must be regarded as instrumental in the consolidation of the Papal States, even if that was not his purpose. Cesare has long been considered the model of the Renaissance prince, the prototype of Niccolò Machiavelli's *Prince*—intelligent, cruel, treacherous, and ruthlessly opportunistic. See biographies by W. H. Woodward (1913) and Rafael Sabatini (1923), Michael Mallett, *The Borgias* (1969).

Borgia, Francis: see FRANCIS BORGIA SAINT

Borgia, Lucrezia (lōōkrā'tsya), 1480–1519, Italian noblewoman, famous figure of the Italian Renaissance, daughter of Pope ALEXANDER VI. Her first marriage (1492) to Giovanni Sforza of Pesaro was annulled in 1497, and she was married to Alfonso of Aragon, illegitimate son of Alfonso II of Naples. Her brother, Cesare Borgia, had her second husband murdered in 1500, and, in 1501, Lucrezia was married to Alfonso d'Este, who became duke of Ferrara in 1505. As duchess of Ferrara, Lucrezia at last escaped the vicious atmosphere of her family. Her brilliant court attracted many artists and poets, notably Anosto, and her beauty and kindness won esteem for her. Rumors of her participation in her family's poison plots, of incestuous relations with her father and brother, and of her supposed extravagant vices have not been proved. Nevertheless, Lucrezia Borgia remains best known as portrayed in Victor Hugo's drama and Donizetti's opera, both based on these legends. See biographies by Maria Bellonci (tr. 1953) and Ferdinand Gregorovius (rev. ed. 1875, in German, tr. 1949, repr. 1968).

Borgia, Rodrigo: see ALEXANDER VI

Borglum, Gutzon (John Gutzon de la Mothe Borglum), 1867–1941, American sculptor, b. Idaho, son of a Danish physician and rancher. He studied at the San Francisco Art Academy and in Paris at Julian's academy and the École des Beaux-Arts. His first commission after his return to New York in 1901 was the statue of Lincoln which stands in the rotunda of the Capitol, Washington, D.C. Other works of his earlier period were a statue of Henry Ward Beecher (Brooklyn), *Mares of Diomedes* (Metropolitan Mus.), and figures of the apostles for the Cathedral of St. John the Divine, New York City. He designed and began carving (1916) a Confederate memorial on Stone Mt., Ga. The work was interrupted by World War I but was resumed in 1924. As the result of a controversy with the Stone Mountain Memorial Association, Borglum ceased working and destroyed his models. His supervision of the gigantic MOUNT RUSHMORE NATIONAL MEMORIAL in South Dakota was

begun in 1927. One of the largest sculptural projects in existence, with heads 60 ft (18.3 m) high, the Memorial was also a great engineering feat. Borglum had finished the heads of the four Presidents (Washington, Jefferson, Lincoln, and Theodore Roosevelt) when he died. The work was finished by his son Lincoln Borglum. Borglum was a man of tremendous vitality and decided opinions which led him into frequent controversies. His brother Solon Hannibal Borglum, 1868–1922, was also a sculptor, noted especially for his portrayal of horses, cattle, Indians, and cowboys. See R. J. Casey and Mary Borglum, *Give the Man Room: the Story of Gutzon Borglum* (1952), Willadene Price, *Gutzon Borglum, Artist and Patriot* (1961).

Borgognone: see BERGOGNONE

Bori, Lucrezia (bō'rē), 1887–1960, Spanish soprano, whose real name was Borja (Ital. *Borgia*). She made her debut (1908) in Rome as Micaela in *Carmen*, later sang *Manon Lescaut* opposite Caruso in Paris (1910), and was long a leading performer at the Metropolitan Opera in New York City (1912–15, and, after a throat operation, 1920–36). After 1935 she was a director of the Metropolitan Opera Association. She was notable for her beauty and her stage presence as well as her lyric voice.

boric acid, any one of the three chemical compounds, orthoboric (or boracic) acid, metaboric acid, and tetraboric (or pyroboric) acid, the term often refers simply to orthoboric acid. The acids may be thought of as hydrates of boric oxide, B₂O₃. Orthoboric acid, H₃BO₃ or B₂O₃ · 3H₂O, is colorless, weakly acidic, and forms triclinic crystals. It is fairly soluble in boiling water (about 27% by weight) but less so in cool water (about 6% by weight at room temperature). When orthoboric acid is heated above 170°C it dehydrates, forming metaboric acid, HBO₃ or B₂O₃ · H₂O. Metaboric acid is a white, cubic crystalline solid and is only slightly soluble in water. It melts at about 236°C, and when heated above about 300°C further dehydrates, forming tetraboric acid, H₂B₄O₇ or 2B₂O₃ · H₂O. Tetraboric acid is either a vitreous solid or a white powder and is water soluble. When tetraboric or metaboric acid is dissolved it reverts largely to orthoboric acid. The major uses of the boric acids are in forming other boron compounds and in borate salts, e.g., BORAX. A dilute water solution of boric acid is commonly used as a mild antiseptic and eyewash. Boric acid is also used in leather manufacture, electroplating, and cosmetics. Boric acid can be crystallized from an acidified borax solution. It occurs as the mineral sassolite in the Tuscan region of Italy, where it is also recovered from hot springs and vapors. In the United States boric acid is recovered from brines from Seales Lake in California.

Borinage (bōrēnazh'), region, Hainaut prov., S Belgium, surrounding Mons and extending to the French border. A coal-mining district, it was formerly known for the miserable conditions of its miners.

boring mill, machine tool used to increase the size of a hole previously made in a workpiece, usually with the purpose of obtaining a required degree of finish and accuracy in the final hole. In a horizontal boring mill the workpiece is held stationary on a vertical table whose position can be adjusted. A spindle attached to a vertically adjustable head holds the cutting tool, which is fed horizontally into the work. In a vertical boring mill the workpiece is made to revolve on a horizontal circular table as the tool is fed in.

Boris I, d. 907, khan [ruler] of Bulgaria (852–89). Baptized in 864, he introduced Christianity of the Byzantine rite among the Bulgarians. There followed a rivalry between Rome and Constantinople for the loyalty of the Bulgarian church. In 889, Boris abdicated and retired to a monastery. His son was Czar Simeon I.

Boris III, 1894–1943, czar of Bulgaria (1918–43), son of Czar FERDINAND, on whose abdication he succeeded to the throne. He ruled constitutionally until 1934, then set up a military dictatorship under his premier, Kimon Georgiev, and in 1935 began his personal dictatorship. He turned toward the Axis Powers and in 1940 forced Rumania to restore S. DOBRUJA to Bulgaria. While visiting Hitler in Berlin, he agreed to declare war on Great Britain and the United States, but not on Russia. His mysterious death soon followed. His son, SIMEON II, succeeded under a regency.

Boris Godunov: see GODUNOV, BORIS

Borlänge (bōrlēng'ə), city (1970 pop. 29,652), Kopparberg co., S central Sweden, on the Dalälven

River, chartered 1944. It has major factories manufacturing iron and steel and paper and also sawmills, machine shops, and a school of engineering.

Borlaug, Norman Ernest (bôr'lôg), 1914-, U.S. agronomist, b. Cresco, Iowa, grad. Univ. of Minn. (Ph.D., 1941). He worked as researcher with the E. I. du Pont Company until 1944, when he joined the Rockefeller Foundation in Mexico. He became a director at the Foundation and headed a team of scientists from 17 nations experimenting with improvement of grains. In 1970 he was awarded the Nobel Peace Prize for his efforts to eradicate hunger and build international prosperity. His "green revolution," which involves the use of improved wheat seed, new types of higher-yield rice, and more efficient use of fertilizer and water, has provided larger food crops in many of the less-developed countries of the Middle East and Latin America. Borlaug is credited with Mexico's self-sufficiency in wheat production.

Bormann, Martin (bôr'man), 1900-1945, German National Socialist (Nazi) leader. He met Adolf Hitler in 1924 and soon became an important figure in the Nazi party hierarchy. He succeeded Rudolf Hess in Hitler's inner circle in 1941 after Hess's flight to Scotland. In 1942 he became Hitler's personal secretary. After Hitler's suicide in 1945, Bormann disappeared and was assumed dead. He was tried in absentia at Nuremberg and sentenced to death. Rumors persisted, however, that Bormann had escaped to Argentina. In 1973, after identification of a skeleton unearthed in West Berlin, the West German government declared him dead, a suicide on May 2, 1945.

Born, Bertrand de. see BERTRAND DE BORN

Born, Max, 1882-1970, British physicist, b. Germany, Ph.D. Univ. of Göttingen, 1907. He was head of the physics department at the Univ. of Göttingen from 1921 to 1933. When Nazi policies forced him to leave Germany, he went to England, where he was a lecturer at Cambridge Univ., then became (1936) a professor of natural philosophy at the Univ. of Edinburgh. Born was made a British citizen in 1939. In 1953 he retired to West Germany. Known for his research in quantum mechanics, he shared the 1954 Nobel Prize in Physics with Walter Bothe. Born's writings include *Problems of Atomic Dynamics* (1926, tr. 1960). See his autobiography, *My Life and My Views* (1968).

Borne, Karl Ludwig (lôôt'vîkh bôr'na), 1786-1837, German journalist, of Jewish origin. His original name was Lob Baruch. He studied medicine and political science and held office in Frankfurt until, after the fall of Napoleon, a policy of racial discrimination was restored. His lucid and incisive writings, notably his *Briefe aus Paris* (1830-33), bitterly attacked German despotism and upheld the rights of the individual. With Heine, Borne was an initiator and leader of the revolutionary Young Germany movement in German literature.

Borneo, island (1970 est. pop. 6,800,000), c. 287,000 sq mi (743,330 sq km), largest of the Malay Archipelago and third largest island in the world, SW of the Philippines and N of Java. Indonesian Borneo (called Kalimantan by the Indonesians) covers over 70% of the total area, and the Malaysian states of SABAH and SARAWAK and the British-protected sultanate of BRUNAI stretch across the north coast. The island largely consists of dense jungle and mountains, reaching its highest point at Mt. Kinabalu (13,455 ft/4,101 m) in Sabah. Much of the terrain is virtually impassable, and large areas are unexplored. Many of the rivers are navigable to small craft, however, and provide access into the interior. The largest rivers are the Kapuas in the west and the Barito in the south. The coastal area is generally swampy and fringed with mangrove forests. Banjarmasin, Pontianak, Balikpapan, Tarakan, Kuching, Brunei, and Sandakan are leading ports. The climate is tropical, i.e., hot and humid, annual rainfall averages more than 100 in (254 cm), and there is a prolonged monsoon (generally from November to May). The fauna is roughly similar to that of Sumatra and includes the elephant, deer, orangutan, gibbon, Malay bear, and crocodile, and many varieties of snakes. Rhinoceroses, once numerous, have been extensively hunted and are now almost extinct. The island is one of the most sparsely populated regions in the world. The two major ethnic groups are the primitive DYAKS and the coastal Malays. Kalimantan was also a center for Chinese settlement. Kalimantan contains Indonesia's greatest expanse of tropical rain forests, including valuable stands of camphor, sandalwood, and ironwood, and many palms. The thick jungle and myriad insects discourage large-scale agriculture,

but rice, sago, tobacco, millet, coconuts, pepper, sweet potatoes, sugarcane, coffee, and rubber are grown. Kalimantan contains some of Indonesia's most productive oilfields (discovered in 1888). Coal has been mined there for more than a century, and gold since earliest times. Other mineral resources include industrial diamonds, bauxite, and extensive reserves of low-grade iron ore, which are, however, little exploited. Borneo was visited by the Portuguese in 1521, and shortly thereafter by the Spanish, who established trade relations with the island. The Dutch arrived in the early 1600s, and the English c. 1665. Dutch influence was established on the west coast in the early 1800s and was gradually extended to the south and east. The British adventurer James Brooke took the north edge of the island in the 1840s, and present-day Sabah, Sarawak, and Brunei were declared British protectorates in 1880. The final boundaries were defined in 1905. In World War II the island was held by the Japanese from 1942 to 1945. Dutch Borneo became part of the republic of Indonesia in 1950. The union of Sabah and Sarawak with the federation of Malaysia in 1963 was resented by Indonesians, Indonesian guerrilla raids against both areas, begun in 1964, continued sporadically until Aug., 1966.

Bornholm (bôr'nôlm), island group (1971 pop. 47,241), 227 sq mi (588 sq km), extreme E. Denmark, in the Baltic Sea, near Sweden. Bornholm, the main island, constitutes almost all of the land area and population of the group. Christiansholm, Frederiksholm, and Graesholm are also part of the group. Bornholm is a low tableland, rocky and steep on its northern and western coasts. Farming, fishing, handicrafts, and tourism are the chief occupations, granite and kaolin are the main exports. Rønne is the principal town. Bornholm was divided (1149) between Denmark and Sweden, ruled (1327-1522) by the Danish archbishops, governed (1525-76) by Lübeck merchants, and ceded (1658) to Denmark. After Germany's surrender (May, 1945) in World War II, German forces made a desperate stand on Bornholm before Soviet troops forced them to surrender.

Bornu (bôr'nô), former Muslim state, mostly in NE Nigeria, extending S and W of Lake Chad. It began its existence as a separate state in the late 14th cent. From the 14th to the 18th cent. Bornu exported slaves, eunuchs, fabrics dyed with saffron, and other goods to N. Africa. Bornu reached its peak under the mai (ruler) Idris Alawma (ruled 1570-1610), when it was the leading state in the central Sudan region. Bornu declined from the 17th cent. In the early 19th cent. it was severely threatened by the FULANI but maintained its independence when Muhammad al-Kanemi (ruled 1814-35), who established a new dynasty, revived the state. However, Bornu began to decline again after c. 1850 because of weak rulers, and was conquered (1893-96) by the forces of Rabih, a Sudanese slave trader. In 1898, Bornu was divided among Great Britain, France, and Germany. In 1922 the German portion became part of the British Cameroons mandate of the League of Nations.

Borobudur or **Boroboeider** (both bô'rôbôôdôor'), ruins of one of the finest Buddhist monuments, in central Java, Indonesia. Built by the Sailendras of Sumatra, this magnificent shrine dates from about the 9th cent. It is a huge, truncated pyramid, covered with intricately carved blocks of stone that illustrate episodes in the life of the Buddha. A seated Buddha within may be seen from three platforms above the seven stone terraces that encircle the pyramid.

Borodin, Aleksandr Porfirevich (alyiksan'dar porfêrivich bôrôdyên'), 1833-87, Russian composer, chemist, and physician. He studied at the academy of medicine in St. Petersburg, where he later taught chemistry. He also helped found a school of medicine for women. An amateur musician, he had little musical training, consisting mainly of study with Balakirev. His principal works are two symphonies, several fine songs, an orchestral tone poem, *In the Steppes of Central Asia* (1880), and an opera, *Prince Igor*, left unfinished, which Rimsky-Korsakov and Glazunov completed. It was first performed in St. Petersburg in 1890. He was one of a group of Russian nationalist composers known as The Five. See biography by Gerald Abraham, V. I. Seroff, *The Mighty Five* (1948), M. O. Zetlin, *The Five* (tr. 1959).

Borodino (bôradyîno'), village, central European USSR, c. 70 mi (110 km) W of Moscow. It was the site, on Sept. 7, 1812, of a battle between Napoleon's Grande Armée and Gen. Mikhail Kutuzov's Russian forces defending Moscow. The battle, which cost some 108,000 casualties, is described in Tolstoy's

War and Peace. Napoleon entered Moscow on Sept. 14 after severely battering but not totally defeating the Russians.

Boroimhe, Brian see BRIAN BORU

boron (bôr'ôn) [New Gr. from *borax*], chemical element, symbol B, at no. 5, at wt. 10.811, mp. about 2100°C, bp. about 2500°C, sp. gr. 2.3 at 25°C, valence +3. Boron is a nonmetallic element existing as a dark brown to black amorphous powder or as an extremely hard, usually jet-black to silver-gray, brittle, lustrous, metallic crystalline solid (see ALLOTROPY). One tetragonal and two rhombohedral forms of crystalline boron are known. The chemistry of boron more closely resembles the chemistry of SILICON than that of the other elements in group IIIa of the PERIODIC TABLE, of which it is a member. The chemical reactivity of boron depends on its form; generally, the crystalline form is far less reactive than the amorphous form. For example, the amorphous powder is oxidized slowly in air at room temperature and ignites spontaneously at high temperatures to form an oxide, the crystalline form is oxidized only very slowly, even at higher temperatures. Boron forms compounds with oxygen, hydrogen, the halogens, nitrogen, phosphorus, and carbon (only diamond is harder than boron carbide). It also forms organic compounds. It is most commonly used in its compounds, especially BORAX and BORIC ACID. Boron is used as a deoxidizer and degasifier in metallurgy. Because it absorbs neutrons, it is used in the shielding material and in some control rods of nuclear reactors. Boron fibers, which have a very high tensile strength, can be added to plastics to make a material that is stronger than steel yet lighter than aluminum. Boron does not occur free in nature. Large deposits of borax, kermite, colemanite, and other boron minerals are found in the arid regions of the W. United States. It occurs also in the mineral TOURMALINE. The simplest method of preparing boron is the reduction of boron trioxide by heating with magnesium; this yields the amorphous powder. Boron was first isolated in England in 1807 by Sir Humphry Davy and then in France in 1808 by Joseph Louis Gay-Lussac and Louis Jacques Thenard.

Borough, Stephen, 1525-84, English navigator. Under the direction of Richard CHANCELLOR he was master of the *Edward Bonaventure*, the first ship to round (1553) North Cape and reach Russia by the arctic route, and the only ship to return safely from the expedition. Thereupon, Sebastian Cabot and others who had fostered the plan formed the MUSCOVY COMPANY, establishing a profitable trade with Russia. Sailing again for that company, Borough in a voyage of 1556-57 reached Novaya Zemlya and discovered the strait south of it leading to the Kara Sea.

Borough, William, 1536-99, British naval officer. A younger brother of Stephen Borough, William accompanied him on early voyages and was himself a captain for the Muscovy Company. As a naval officer he took part in Sir Francis Drake's attack on Cadiz (1587) and also fought against the Spanish Armada (1588). He wrote accounts of his voyages and a treatise on the variation of the compass and compiled several charts.

borough: see CITY GOVERNMENT

borough-English, a custom of inheritance in parts of England whereby land passed typically to the youngest son in preference to his older brothers. Of Anglo-Saxon origin, the custom was abolished by law in 1925. For alternative systems of inheritance in England see GAVELKIND and PRIMOGENITURE.

Borromean Islands see MAGGIORE, LAGO, Italy

Borromeo, Charles: see CHARLES BORROMEO, SAINT

Borromini, Francesco (franchâ'skô bôr-rômê'nê), 1599-1677, major Italian baroque architect. His first independent commission (begun 1634) was San Carlo alle Quattro Fontane, Rome. The church is noted for its undulating rhythm of architectural elements within a basically geometric plan. In 1642 he began the designs for Sant' Ivo della Sapienza, Rome, a dynamic hexagonal structure. He was also entrusted with the reconstruction of St. John the Lateran, as well as the completion of Sant' Agnese in the Piazza Navona and Sant' Andrea della Fratte. Borromini's innovations in palace as well as church design had a tremendous influence in Italy and northern Europe.

Borrow, George Henry, 1803-81, English writer and traveler. He led a nomadic life in England and on the Continent, where he was a translator and agent for the British and Foreign Bible Society. His friendship with the gypsies, whose language he learned, resulted in *The Zincali*, or *The Gypsies of Spain* (1841). Although his most famous book is *The Bible in Spain* (1843), his best is probably the

autobiographical *Lavengro* (1851), with its sequel, *Romany Rye* (1857). All Borrow's works are based on his wanderings. See Norwich edition of his works (16 vol., 1923-24), biography by C. K. Shorter (1920), study by R. R. Meyers (1966).

Borstal system, rehabilitation method in Great Britain for delinquent boys aged 16 to 21. The idea originated (1895) with the Gladstone Committee as an attempt to reform young offenders. The first institution was established (1902) at Borstal Prison, Kent, England. Main elements in the Borstal programs include education, regular work, vocational training, and group counseling. Those showing sufficient improvement are paroled to the Central After-Care Association, which supervises them during the period after release. Some Borstals, such as Lowdham Grange, are open, having no walls or gates. See Brendan Behan, *Borstal Boy* (1958), Roger Hood, *Borstal Re-Assessed* (1965).

bort, see DIAMOND

Borten, Per (për bôr'tôn), 1913-, Norwegian political leader and agronomist. Active in the agricultural administration and provincial government of Sør-Trøndelag (1946-65), he served as head of the region's Agrarian Youth Movement. He became a member of the Storting (parliament) in 1950 and in 1955 was made chairman of the Agrarian party. In 1965 he became prime minister. His coalition government of four non-Socialist parties resigned in 1971 after Borten had revealed confidential information about Norway's negotiations for Common Market membership.

Bortniansky, Dmitri Stepanovich (dämë'trë sty'pā'nāvich būrtnyān'skë), 1751-1825, Russian composer, studied with Galuppi in St. Petersburg and Venice. After producing two operas in Italy, in 1779 he returned to St. Petersburg. There, in 1796, he became director of the Imperial Chapel Choir, for which he set a high standard. He wrote mainly church music, combining Russian church style and Italian style. In 1882, Tchaikovsky completed an edition of his works, published in 10 volumes.

Boru, Brian: see BRIAN BORU

Borysthenes, USSR: see DNEPR

borzoi (bôr'zoi), breed of tall, swift HOUND developed in Russia in the early 17th cent., also called Russian wolfhound. It stands from 26 to 31 in. (66-81.2 cm) high at the shoulder and weighs about 85 lb (38.6 kg). Its long, silky coat may be flat, wavy or curly, and forms fringes of longer hair, or feathers, on the chest, back of legs, and tail. The coat may be any color but is usually white with lemon, brindle, tan, gray, or black markings. Originally bred for hunting wolves and coursing hares, it is now most popular as a show competitor and pet. See DOG.

Bos, Jerom: see BOSCH, HIERONYMUS

Bosanquet, Bernard (bô'zankit), 1848-1923, English philosopher, educated at Oxford. He lectured there (1871-81) and at St. Andrews (1903-8). His major works include *A History of Aesthetic* (1892), *The Philosophical Theory of the State* (1899), and *The Value and Destiny of the Individual* (1913). They exemplify the idealists' discontent with British empiricism at the end of the 19th cent. See biography by Helen Bosanquet (1924), J. H. Muirhead, ed., *Bernard Bosanquet and His Friends* (1935).

Bosboom-Toussaint, Anna Louisa Geertruida (a'nā lōō'bē'zā härtroī'da bōs'bōm-tōōsān'), 1812-86, Dutch novelist. She published her first novel, *Almagro*, in 1837. Her perceptive historical fiction was written in ornate and purposely archaic style. One of her chief works treated modern life, this epistolary novel, *Majoors Frans* (1874, tr. *Major Frank*, 1886), exhibits a real appreciation of the problems of women.

Boscán Almogáver, Juan (hwan bōskān' almōgā'vër), c. 1495-1542, Spanish poet. A Catalan aristocrat, Boscán was a literary figure at the court of Ferdinand V. He introduced Italian poetic forms into Spanish poetry, thus revolutionizing its traditional system of metrics. Among his compositions, written in different combinations of the 11-syllable line, are sonnets and canciones. He also translated Castiglione's *Courtier*. His works were first printed in 1543 together with those of his collaborator and friend GARCILASO DE LA VEGA.

Boscath, the same as BOZKATH

Boscawen, Edward (bōskō'wən), 1711-61, British admiral. He was a popular naval hero, famous for his decisive courage displayed against France and Spain at Portobelo (1739), Cape Finisterre (1747), and Lagos Bay (1759). He is noted also for attempts to improve health conditions in the fleet.

Bosch, Hieronymus, or Jerom Bos (hērōn'tmās, yā'rōm bōs), c. 1450-1516, Flemish painter. His sur-

name was van Aeken. Bosch refers to Hertogenbosch, where he was born and worked. Little is known of his life and training. His paintings, executed in brilliant colors and with an uncanny mastery of detail, are filled with animated objects, bizarre plants and animals, and monstrous, amusing, or diabolical figures believed to have been suggested by folk legends, allegorical poems, moralizing religious literature, and aspects of late Gothic art. Some of his works appear to be intricate allegories, their symbolism, however, is obscure and he has consistently defied satisfactory interpretation. Feverishly imaginative, Bosch had a passion for the grotesque, the exuberant, and the macabre. King Philip II of Spain collected some of his finest creations, such as the *Garden of Earthly Delights* (Prado). The *Temptation of St. Anthony* (Lisbon) and *The Last Judgment* were favorite themes. Other examples of his art may be seen in the Escorial and in Brussels. Examples of the *Adoration of the Magi* are in the Metropolitan Museum and in the Philadelphia Museum, which also has the *Mocking of Christ*. Bosch, who deeply influenced the work of Peter Bruegel the Elder, was hailed in the 20th cent. as a forerunner of the surrealists. See his paintings, ed. by G. Martin (1966, repr. 1971), studies by Charles de Tolnay (tr. 1966) and James Snyder, ed. (1973).

Bosch, Juan (hwān bōsh), 1909-, president of the Dominican Republic (Feb.-Sept., 1963). A teacher and writer, he spent 25 years in exile during the dictatorship of Rafael Trujillo and helped found the Dominican Revolutionary party. He returned (1961) to the Dominican Republic after the assassination of Trujillo and was elected president in the first free elections (Dec., 1962) held in 38 years. He introduced sweeping social and economic reforms but was ousted after seven months by military leaders who viewed him as too leftist. An attempt by his supporters to restore him to power in April, 1965, brought civil war and provoked armed intervention by U.S. troops. In 1966, Bosch was overwhelmingly defeated for the presidency by Joaquín BALAGUER. After a voluntary exile in Europe, Bosch returned (1970) and joined the opposition to President Balaguer. In 1973 he founded the Dominican Liberation party.

Boscobel (bōs'kəbəl), parish, Shropshire, W. central England. The oak in which Charles II supposedly hid after his defeat by Oliver Cromwell in the battle of Worcester (1651) was near Boscobel House, which is still standing.

Boscoreale (bōs'kōrā-a'lā), town (1971 pop. 18,674), in Campania, S. Italy, at the foot of Vesuvius. Roman villas have been excavated in the town. Also, a celebrated collection of gold coins, jewelry, and silverwork (consisting mostly of plates and cups with relief ornamentation) dating from the 1st and 2d cent. A.D. was unearthed there in the late 1800s.

Boscovich, Ruggiero Giuseppe (rōdō-jā'rō jōōzēp'pā bōs'kōvēch), 1711-87, Italian mathematician, astronomer, and physicist. He became a Jesuit and taught at Rome, Pavia, and Milan. Later he was director of optics for the French navy. An early advocate of Newton's theories, he wrote many works including one in which he introduced his molecular theory.

Bose, Sir Jagadis Chandra, or Sir Jagadis Chunder Bose (jagā'dēs chūn'drā bōs, chūn'dar), 1858-1937, Indian physicist and plant physiologist, educated in Calcutta and at Christ's College, Cambridge. He was professor of physical science (1885-1915) at Presidency College, Calcutta, and founded the Bose Research Institute in Calcutta. He is noted for his researches in plant life, especially his comparison of the responses of plant and animal tissue to various stimuli. One of his inventions is the crescograph, a device for measuring plant growth. Among his publications are *Comparative Electro-Physiology* (1907), *Researches on Irritability of Plants* (1913), *The Physiology of Photosynthesis* (1924), *The Nervous Mechanism of Plants* (1926), and *Growth and Tropic Movements of Plants* (1929).

Bose, Subhas Chandra (shōōbhāsh' chūn'drā bōs), 1897-1945, Indian nationalist. He began his political career in Calcutta and soon became the leader of the left wing of the Indian National Congress party. He was president of the party in 1938-39 but was forced to resign after a dispute with Mohandas K. Gandhi, he advocated militancy to achieve independence for India and believed in dictatorship to unify the country. Jailed by the British for his Axis sympathies in World War II, he escaped (1941) and fled to Germany. In 1943 he headed in Singapore a Japanese-sponsored "provisional government of India" and organized an "Indian national army." Al-

though sympathetic to totalitarianism, his collaboration was principally directed toward freeing India from British rule and the establishment of an independent regime. He was killed in an airplane crash. See his collected writings and letters, ed. by J. S. Bright (2d ed. 1947), biography by D. K. Roy (1966), study by Hugh Toye (1959).

Bosio, François Joseph, Baron (fra'Nswā' zhōzēf' barōn' bōsyo'), 1769-1845, French sculptor. He was employed by Napoleon I to make the bas-reliefs for the column of the Place Vendôme and also as portraitist to the imperial family. At that time he produced one of his best portrait busts—that of Empress Josephine (Dijon). Louis XVIII made him court sculptor, and Charles X conferred the title baron on him. Of his larger works the most important are the equestrian statue of Louis XVI (Place de Victoires), the quadriga (four-horse chariot) of the Arc de Triomphe du Carrousel, and *Hercules Struggling with a Serpent* (garden of the Tuileries).

Bosnia and Herzegovina (bōz'nēā, hērtsəgōvē'nā), Serbo-Croatian *Bosna i Hercegovina*, constituent republic of Yugoslavia (1971 pop. 3,742,852), 19,741 sq. mi. (51,129 sq. km), W. central Yugoslavia. It consists of two regions—Bosnia in the north, and Herzegovina in the south. SARAJEVO, in Bosnia, is the capital. The chief city of Herzegovina is MOSTAR. The republic lies mostly in the Dinaric Alps and has one narrow outlet to the Adriatic Sea, but no port facilities. The Sava and its tributaries are the chief rivers. Half of the area is forested, and timber is an important product of Bosnia. Much of Herzegovina's terrain is denuded. About one fourth of the republic's land is cultivated, corn, wheat, and flax are the principal products of Bosnia and tobacco, cotton, fruits, and grapes of Herzegovina. Mining is important, and there are large deposits of lignite, iron ore, and bauxite, as well as smaller quantities of such minerals as copper and manganese. Despite some industrialization and development of the republic's extensive hydroelectric resources, it remains one of the poorer areas of Yugoslavia. The population speaks Serbo-Croatian and is divided among the Muslim, Roman Catholic, and Eastern Orthodox religions. The area was part of the Roman province of Illyricum. Bosnia was settled by Serbs in the 7th cent., it appeared as an independent country by the 12th cent. but later at times acknowledged the kings of Hungary as suzerains. Medieval Bosnia reached the height of its power in the second half of the 14th cent., when it controlled many surrounding territories. Bosnia also annexed the duchy of Hum, which, however, regained autonomy in 1448 and became known as Herzegovina. During this period the region was weakened by religious strife among Roman Catholics, Orthodox, and Bogomils. Thus disunited, Bosnia fell to the Turks in 1463. Herzegovina held out until 1482, when it too was occupied and joined administratively to Bosnia. The nobility and a large part of the peasantry accepted Islam. Under Turkish rule, Bosnia and Herzegovina's economy declined. Physical remoteness facilitated the retention of medieval social structure, including serfdom (remnants of which lasted until the 20th cent.). Refusal by the Turkish to institute reforms led to a peasant uprising (1875) that soon came to involve outside powers and led to the Russo-Turkish War of 1877-78. After the war, the Congress of Berlin (1878) placed Bosnia and Herzegovina under Austro-Hungarian administration and occupation, while recognizing the sovereignty of the Turkish sultan. Austria-Hungary improved economic conditions in the area but sought unsuccessfully to combat rising Serbian nationalism, which mounted further when Bosnia and Herzegovina were completely annexed in 1908. The assassination (1914), by a Serbian nationalist, of Archduke Francis Ferdinand in Sarajevo precipitated World War I. In 1918 Bosnia and Herzegovina were annexed to Serbia. The dismemberment of Yugoslavia during World War II led to Bosnia and Herzegovina's incorporation into the German puppet state of Croatia. Much partisan guerrilla warfare raged in the mountains of Bosnia during the war. In 1946, Bosnia and Herzegovina became one of the six constituent republics of Yugoslavia. See 8 E. Schmitt, *The Annexation of Bosnia, 1908-1909* (1937, repr. 1971), J. G. Wilkinson, *Dalmatia and Montenegro* (2 vol., 1848, repr. 1971).

Bosor (bō'sōr), the same as BEOR 1.

Bosporus (bōs'pōrəs) [Gr., =ox ford, in reference to the story of Io], Turk. *Boğaziçi*, strait, c. 20 mi. (30 km) long and c. 2,100 ft. (640 m) wide at its narrowest, separating European from Asian Turkey and joining the Black Sea with the Sea of Marmara. Istanbul is situated on the Bosporus, which is lined with many

historic remains and modern villas. At its narrowest point are two famous castles: Anadolu Hisar, built in 1390, on the Asian side and Rumeli Hisar, completed in 1452, on the European side. The strait was re-fortified by Turkey after the Montreux Convention of 1936 (see DARDANELLES). The Bosphorus Bridge, one of the world's longest suspension bridges (3,524 ft/1,074 m long, opened 1973) spans the strait at Istanbul.

Bosporus, University of the, at Istanbul, Turkey, opened 1863 as Robert College, with funds contributed by Christopher R. Robert and other Americans for the higher education of Turkish men. Its name was changed in 1971. It has schools of engineering, arts and sciences, and administrative sciences. Instruction is in Turkish and English.

Bosse, Abraham (abra-am' bōs), 1602-76, French engraver and painter. He studied art in Paris and became a teacher of perspective in the Académie royale. A prolific and skillful worker, he engraved more than 1,400 pieces. He is best known for his faithful representation of French civil life and costumes during the period of Louis XIII. Bosse wrote several valued treatises on art and perspective. One of his rare paintings, *The Foolish Virgins*, is in the Cluny Museum, Paris.

Bossier City (bō'shār), city (1970 pop. 41,598), Bossier parish, NW La., on the Red River, across from Shreveport, with which it is connected by several bridges, inc. 1907. Barksdale Air Force Base, home of the Second U.S. Air Force, is the major employer.

bossism, in U.S. history, system of political control centering about a single powerful figure (the boss) and a complex organization of lesser figures (the machine) bound together by reciprocity in promoting financial and social self-interest. Bossism depends upon manipulation of the voters and thus always has some aspects of corruption and fraud, even though particular bosses and particular machines may do much good service for the community, the state, or the nation. Control of blocks of votes enables boss and machine to secure the nomination and election or appointment of candidates for public office; the officers thus chosen respond by advancing the interests of the machine. The boss became important in U.S. political life in the mid-19th cent., when many poor immigrants crowded into the cities. In return for their votes the boss offered them protection; he saw that the newcomers got financial and other help. The contact was direct and personal; the boss and his cohorts gave away coal and food, got the sick into hospitals, obtained leniency for the wayward through the courts, and secured government jobs and other work for the unemployed. Bossism was primarily on the local level, but the machines in very large cities soon exerted state and national influence, sometimes very powerful. The highly invidious implications of the term date from the exposure of the Tweed Ring (see under TWEED, WILLIAM MARCY) in New York City in 1872 (see also TAMMANY). Some of the men who came to nationwide notice as connected with bossism and machines in the late 19th and 20th cent. were Richard CROKER and Charles MURPHY of New York, Frank HAGUE of New Jersey, Thomas J. PENDERGAST of Kansas City, James M. CURLEY of Boston, William Hale THOMPSON of Chicago, William VARE of Philadelphia and Abraham RUEF of San Francisco. The original sort of bossism gradually declined with the assimilation of older immigrant stocks and reduction of new immigration, growing literacy, extension of government into the social-welfare area previously cared for by the machine, and increase in the number of jobs falling under civil-service requirements. In contemporary politics a new and more sophisticated type of boss has come into being; he uses techniques of public relations rather than personal contacts to build up his power and that of the machine. See H. F. Gosnell, *Machine Politics* (1937, repr. 1968), Samuel Lubell, *The Future of American Politics* (3d ed. 1965), E. C. Banfield and J. Q. Wilson, *City Politics* (1963, repr. 1966).

Bossuet, Jacques Bénigne (zhak bānē'nə bōsuā'), 1627-1704, French prelate, one of the greatest orators in French history. At an early age he was made a canon at Metz, he became bishop of Condom and was (1670-81) tutor to the dauphin (father of Louis XV), for whom he wrote his great *Discourse on Universal History* (1681, tr. 1778, 1821), *Politics Derived from Holy Writ* (1709), and *Treatise of the Knowledge of God and One's Self* (1722). In 1681 he became bishop of Meaux. Unrivaled for his eloquence, he is celebrated for his *Funeral Orations* (1689), particularly those on Henrietta of England, on her daughter, and on Condé, which are master-

pieces of their kind. He was also a great moralist, a magnificent stylist, and a powerful controversialist, brilliantly attacking Fenelon and the quietists, the Jesuits, and the Protestants. See biographies by E. K. Sanders (1921) and E. E. Reynolds (1963), studies by Pierre Floquet (1864), G. Lanson (1895), Alfred Rabbellau (5th ed. 1900), and M. C. Gotaas (1953, repr. 1970).

Bostanai ben Chaninai (bō'stānī bēn kha-nēnī'), c. 618-670, first Jewish exilarch (i.e., ruler of the Jewish exiles in Babylonia) under Arab rule. He is the subject of many legends. His name is also spelled Bostanai ben Haninai. ANAN BEN DAVID is said to have been among his descendants.

Boston, municipal borough (1971 pop. 25,995), administrative center of the Parts of Holland, Lincolnshire, E. central England, on the Witham River. Boston's fame as a port dates from the 13th cent., when it was a Hanseatic port trading wool and wine. Having recovered from a decline in the 18th and 19th cent. caused by silting, Boston now exports coal, grain, agricultural machinery, potatoes, and cattle; it imports timber, grain, fruit, vegetables, and fertilizers. It is also a shellfishery center and a market for a rich lowland farm area. There are food-processing plants and other light industries. Puritans under John COTTON sailed in 1633 from Boston to Massachusetts Bay (renamed Boston). St. Botolph's Church is on the site of a 7th-century monastery, founded by St. Botolph, for whom the town is named (Botolph's tun, or town). The 288-ft (88-m) tower (called the Stump, because it does not come to a point) is a landmark. The guildhall, begun in 1545, was restored in 1911 and is now a museum.

Boston, city (1970 pop. 641,071), state capital and seat of Suffolk co., E. Mass., at the head of Boston Bay, inc. 1822. The largest city in New England, Boston is a major financial center, a leading port, and an important market for fish and wool. Its industries include publishing, food processing, and the manufacture of shoes, textiles, machinery, and electronic equipment. Established by the elder John Winthrop in 1630 as the main colony of the MASSACHUSETTS BAY COMPANY, Boston was an early center of American Puritanism, with notable ministers and theocratic-minded statesmen contributing to the vigorous intellectual life. The Boston Public Latin School was opened in 1635; Harvard University was founded at nearby Cambridge in 1636; a public library was started in 1653, and the first newspaper in the Thirteen Colonies, the *Newsletter*, appeared in 1704. With its excellent port, Boston soon gained commercial ascendancy over the other towns of colonial Massachusetts. As the American Revolution approached, it became a center of opposition to the British. The Battle of Bunker Hill, fought there on June 17, 1775, was one of the first battles of the Revolution, and Boston was under siege until the British withdrew in March, 1776. After a short post-war depression, Boston entered a period of prosperity that lasted until the middle of the 19th cent. Ships built there made Boston known around the world. Prominent Boston families—the Cabots, the Lowells, the Lodges, and others—made fortunes from shipping and from mills and factories built on New England rivers to produce textiles and shoes. These prominent families built substantial houses on Beacon Hill and in the Back Bay sections and patronized the arts and letters, making Boston "the Athens of America." Despite the generally conservative tone of their culture, they backed reformers, notably the ABOLITIONISTS. Their influence persisted long after the growth of industry brought many immigrants (at first mostly Irish), and Boston changed from a commercial city surrounded by farms to an industrial metropolis. The city limits were expanded to include nearby cities and towns, some with traditions as old as Boston's own—Roxbury and West Roxbury (with the Roxbury Latin School, Forest Hills Cemetery, and BROOK FARM), Dorchester (where Richard Mather had been the minister), Charlestown, Brighton, and Hyde Park. The city of today, with its broad avenues running into the crooked narrow streets of colonial Boston, cherishes the landmarks of the past: the 17th-century house in which Paul Revere lived, Old North Church, famous for its part in Revere's story, Old South Meetinghouse, a rallying place for patriots during the Revolution, the old statehouse (1713), now a museum, the Boston Common, one of the oldest public parks in the country, Faneuil Hall, the golden-domed statehouse, with its facade designed by Charles Bulfinch, and the red-brick houses of Louisburg Square. Among notable Boston churches are King's Chapel, the birthplace of American Unitarianism (1785), the

Mother Church of Christian Science, and Trinity Church (1872-77), designed by H. H. Richardson and decorated by John LaFarge. Boston Light (1716), at the entrance to Boston Harbor, is the oldest lighthouse in the United States. Boston is one of the great cultural centers of the nation. In the city are the Massachusetts Historical Society (founded 1791), the Boston Athenaeum (1807), the Boston Public Library, the New England Conservatory of Music, the Boston Symphony Orchestra, the Museum of Fine Arts, the Isabella Stewart Gardner Museum, and the offices of the *Christian Science Monitor*. Harvard Medical School is in Boston proper, as are the New England Medical Center and Massachusetts General Hospital. Other educational institutions include Boston Univ., Simmons College, Emerson College, Emmanuel College, and Northeastern Univ. The Boston Naval Shipyard (est. 1800, closed 1973) was the berth of the restored U.S.S. *Constitution*, which was originally launched (1797) a short distance away. The city has an international airport and a War Memorial Auditorium. It fields professional teams in the big leagues of all major sports. See H. and J. Kirker, *Bulfinch's Boston, 1787-1817* (1964), A. Taylor, *A Book of Boston* (3 vol., 1960-1964), W. M. Whitehill, *Boston in the Age of John Fitzgerald Kennedy* (1966) and *Boston: A Topographical History* (2d ed. 1968), G. B. Warden, *Boston, 1689-1776* (1970), P. R. Knights, *The Plain People of Boston: A Study in City Growth, 1830-1860* (1973), G. J. Lankevich, *Boston* (1974).

Boston College, mainly at Chestnut Hill, Mass., co-educational, Jesuit, est. and opened 1863. The liberal arts school is at Lenox, and the schools of philosophy, theology, and geophysics are at Weston.

Boston ivy or **Japanese ivy**, tall-climbing woody vine (*Parthenocissus tricuspidata*) from the Orient, one of the most popular of city wall coverings. Of the same genus as the Virginia creeper and sometimes called AMPELOPSIS, it climbs by disk-tipped tendrils and has three-lobed, or three-parted, leaves, which develop vivid colors in the fall. Boston ivy is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rhaminales, family Vitaceae.

Boston Latin School, at Boston, opened 1635 as a school for boys, one of the oldest free public schools in the United States. Many famous men attended the school, including five signers of the Declaration of Independence and four presidents of Harvard Univ. In 1972 it became coeducational. See Philip Marson, *Breeder of Democracy* (1963).

Boston Massacre, 1770, pre-Revolutionary incident growing out of the resentment against the British troops sent to Boston to maintain order and to enforce the TOWNSHEND ACTS. The troops, constantly tormented by irresponsible gangs, finally (March 5, 1770) fired into a rioting crowd and killed five men—three on the spot, two of wounds later. The funeral of the victims was the occasion for a great patriot demonstration. The British captain, Thomas Preston, and his men were tried for murder, with Robert Treat Paine as prosecutor, John Adams and Josiah Quincy as lawyers for the defense. Preston and six of his men were acquitted, two others were found guilty of manslaughter, punished, and discharged from the army. See study by H. B. Zobel (1970).

Boston Mountains, most rugged part of the Ozarks, NW Ark. and E. Okla., rising to 2,700 ft (823 m). Isolated because of its physical makeup, the region developed its own life-style, mountain people occupy small farms, cultivating the narrow valleys and living on the ridges. The Boston Mts., along with the rest of the highlands, have become a popular recreation center, Ozark National Forest is there.

Boston Museum of Fine Arts: see MUSEUM OF FINE ARTS, at Boston, Mass.

Boston Port Bill: see INTOLERABLE ACTS

Boston Public Library, founded in 1852, chiefly through the gift of Joshua Bates. It is the oldest free public city library supported by taxation in the world. Its present building on Copley Square, designed by McKim, Mead, and White, was completed in 1895. The main hall is decorated with murals by Puvis de Chavannes. Other rooms have murals by Edwin Abbey and John S. Sargent. The library holds about 2.5 million volumes, its special collections include Spanish and Portuguese literature, histories of printing, the theater, and the woman's rights movement, the libraries of John Adams and Nathaniel Bowditch, and the Albert H. Wiggin collection of paintings and etchings. The library opened a new wing designed by Philip Johnson and John Burgee in 1973. See W. M. Whitehill, *Boston Public Library: A Centennial History* (1956).

Boston Symphony Orchestra, founded in 1881 by Henry Lee Higginson, who was its director and financial backer until 1918. Its outstanding conductors have been Sir George Henschel (1881-84), Arthur Nikisch (1889-93), Pierre Monteux (1919-24), Serge Koussevitzky (1924-49), Charles Munch (1949-62), Erich Leinsdorf (1962-69), William Steinberg (1969-73), and Seiji Ozawa (1973-). Symphony Hall, built for concerts of the orchestra, was opened in 1900. One of America's oldest orchestras, it has summer activities which include the Berkshire Festival and the Boston Pops Concerts. See M. A. De Wolfe Howe, *The Boston Symphony Orchestra* (1931), H. E. Dickson, *Gentlemen, More Dolce, Please* (1969).

Boston Tea Party, 1773 In the contest between British Parliament and the American colonists before the Revolution, Parliament, when repealing the TOWNSHEND ACTS, had retained the tea tax, partly as a symbol of its right to tax the colonies, partly to aid the financially embarrassed East India Company. The colonists tried to prevent the consignees from accepting taxed tea and were successful in New York and Philadelphia. At Charleston the tea was landed but was held in government warehouses. At Boston, three tea ships arrived and remained unloaded but Gov. Thomas Hutchinson refused to let the ships leave without first paying the duties. A group of indignant colonists, led by Samuel Adams, Paul Revere, and others, disguised themselves as Indians, boarded the ships on the night of Dec. 16, 1773, and threw the tea into the harbor. In reply Parliament passed the Boston Port Bill (see INTOLERABLE ACTS). See study by B. W. Labaree (1964).

Boston terrier, breed of small, lively NONSPORTING DOG developed in the United States in the second half of the 19th cent. It stands between 14 and 17 in (35.6-43.2 cm) high at the shoulder and weighs from 13 to 25 lb (5.9-11.3 kg). Its short, smooth, glossy coat may be brindle or black, both with white markings. One of the few breeds native to the United States, it was developed in Boston from a cross between the bulldog and a now extinct white English terrier. Since its perfection in the 1880s, the Boston terrier has steadily increased in popularity as a companion and house pet. See DOG.

Boston University, at Boston, Mass., coeducational, founded 1839, chartered 1869, first baccalaureate granted 1871. It is composed of 16 schools and colleges. Among its notable research facilities are a medical center (including the school of medicine, school of graduate dentistry, and university hospital), an urban institute, and an African studies center. See E. R. Speare, *Interesting Happenings in Boston University's History* (1957), W. O. Ault, *Boston University: The College of Liberal Arts, 1873-1973* (1973).

Boswell, James, 1740-95, Scottish author, b. Edinburgh, son of a distinguished judge. At his father's insistence young Boswell reluctantly studied law. Admitted to the bar in 1766, he practiced throughout his life, but his true interest was in a literary career and in associating with the great men of his day. Boswell first met Samuel Johnson on a trip to London in 1763. The same year he traveled about the Continent, where he made the acquaintance of Rousseau and Voltaire. He achieved literary fame with his *Account of Corsica* (1768), based on his visit to that island and on his acquaintance with the Corsican patriot Pasquale Paoli. Boswell married his cousin Margaret Montgomerie in 1769. In 1773 he became a member of Johnson's club, to which Burke, Garrick, Reynolds, and Goldsmith belonged. Later that year he and Johnson toured Scotland, a visit Boswell described in *The Journal of a Tour of the Hebrides with Samuel Johnson, LL.D.* (1785, complete edition from manuscript, 1936). His great work, *The Life of Samuel Johnson, LL.D.*, appeared in 1791. In it Boswell recorded Johnson's conversation minutely, but with a fine sense of critical judgment. So skillful was his work that Johnson is perhaps better remembered today for his sayings in the biography than for his own works. The curious combination of Boswell's own character (he was vain-glorious, a heavy drinker, and a libertine) and his genius at biography have intrigued later critics, who conclude that he is probably the greatest biographer in Western literature. Misconduct led to poverty and ill health in his final years. In the 20th cent. great masses of Boswell manuscripts—journals, letters, and other papers—were discovered, most of them at Malahide Castle, Ireland. Lt. Col. Ralph H. Isham purchased the first in 1927 and sold these and later finds to Yale Univ. Publication of these "Yale Editions of the Private Papers," under the general editorship of Frederick A. Pottle, had reached many

volumes by 1970. The recent findings, most particularly his voluminous journals, have enhanced Boswell's literary reputation. Always lively and, at times, even exciting, the journals portray Boswell's daily life in extraordinary detail. They are written in an easy, colloquial style, which resembles the style of many 20th-century authors. See Frederick A. Pottle, *James Boswell* (1966), the first volume of a definitive biography, studies by James L. Clifford, ed. (1970), David L. Passler (1971), Hesketh Pearson (1958, repr. 1972), and W. R. Siebenshuh (1972).

Bosworth Field, Leicestershire, central England. It was the scene of the battle (1485) at which Richard III was killed and the crown was passed to his opponent the earl of Richmond (Henry VII), first of the Tudors.

botanical garden, public place in which plants are grown both for display and for scientific study. An arboretum is a botanical garden devoted chiefly to the growing of woody plants. The plants in botanical gardens are labeled, usually with both the common and the scientific names, and they are often arranged in cultural or habitat groups, such as rock gardens, aquatic gardens, desert gardens, and tropical gardens. Botanical gardens perform diversified functions, e.g., the collection and cultivation of plants from all parts of the world, experimentation in plant breeding and hybridization, the maintenance of botanical libraries and herbariums, and the administration of educational programs for adults and children. The two most important gardens in the United States are the New York Botanical Garden, Bronx Park, New York City (est. 1891) and the Missouri Botanical Garden, St. Louis, Mo. (the earliest in the United States, founded c. 1860 and affiliated with Washington Univ.). The Santa Barbara Botanic Garden, formerly Blakely Botanic Garden, Santa Barbara, Calif. (est. 1926), is noted for its collection of desert and subtropical ornamental plants. Other well-known botanical gardens are the Arnold Arboretum, near Boston, Mass. (est. 1872 as part of Harvard Univ.), Brooklyn Botanic Garden, Brooklyn, N.Y. (est. 1910), Highland and Durand-Eastman parks, Rochester, N.Y., Bartram's Gardens, Philadelphia (founded 1728), Fairchild Tropical Garden, Coconut Grove, Fla. (est. 1938), Fort Worth Botanic Garden, Fort Worth, Texas (est. 1933), Rancho Santa Ana Botanical Garden, Anaheim, Calif. (est. 1927), Huntington Botanical Garden, San Marino, Calif., the botanical gardens at Ottawa, Montreal, and Toronto, Canada, and the innumerable major botanical gardens of Europe, including the Royal Botanic Gardens, known as Kew Gardens, London, and the Jardin des Plantes, Paris. See Donald Wyman, *The Arboretum and Botanical Gardens of North America* (rev. ed. 1959), H. R. Fletcher et al., ed., *International Directory of Botanical Gardens* (2d ed. 1969).

botany, science devoted to the study of plants. Botany, microbiology, and zoology together compose the science of BIOLOGY. Man's earliest concern with plants was with their practical uses, i.e., for fuel, clothing, shelter, and, particularly, food and drugs. The Assyrians and Egyptians were experienced cultivators more than 8,000 years ago, and at approximately the same period the pre-Incas in Peru developed the techniques of maize cultivation that later dominated the Americas. The establishment of botany as an intellectual science came in classical times. In the 4th cent. B.C., Aristotle and his pupil Theophrastus worked out descriptions and principles of plant types and functions that remained the prototype for botanical observation for 1,000 years. During the stagnant period of the Middle Ages the knowledge of the classical scholars was preserved in the European monasteries and by the Arabs in the Middle East. In the 16th and 17th cent. an interest in botany revived in Europe and spread to America by way of European conquest and colonization. At that time the art of gardening (see GARDEN) stressed the utility of plants for man, the popular HERBAL, describing the medical uses of plants, mingled current superstition with fact. In the late 17th and the 18th cent. the influence of the ancient scholars was modified by the growth of scientific botany. Through careful and accurate observation the sciences of taxonomy and morphology (see BIOLOGY) were developed, providing the basis for the first systematic CLASSIFICATION of organisms, chiefly in the work of LINNAEUS. With the microscope came the development of plant anatomy and researches on the cell. New knowledge of the principles of chemistry and physics spurred experimentation in plant physiology, notably the early work of Stephen Hales on the sources and manufacture of plant food, which led to studies of such basic processes as PHO-

TOSYNTHESIS. Modern botany has expanded into all areas of biology. Perhaps most significant was the work of MENDEL in plant BREEDING at the middle (1859) of the 19th cent., from which grew the science of GENETICS. Allied with experimental botany are the various practical aspects that have developed into specific scientific disciplines (e.g., AGRICULTURE, AGRONOMY, HORTICULTURE, and FORESTRY). See Julius von Sachs, *History of Botany* (tr. 1890, repr. 1967), C. L. Wilson and W. E. Loomis, *Botany* (4th ed. 1967), C. B. Lees, *Gardens, Plants and Man* (1970).

Botany Bay, inlet, New South Wales, SE Australia, just S of Sydney. It was visited in 1770 by James Cook, who proclaimed British sovereignty over the east coast of Australia. The site of the landing is marked by a monument on Inscription Point. The bay was named by Cook and Sir Joseph Banks because of the interesting flora on its shores. Although Australia's first penal colony was often called Botany Bay, its actual site was at Sydney on Port Jackson.

Botev, Khristo (khris'tō bō'tēf), 1848-76, Bulgarian poet and patriot. At 17, Botev was sent to Russia, where he became enamored of socialist doctrine. He sought to promote revolution against the Ottoman domination and was killed in action leading a band of his own organizing. His few lyrics and ballads are filled with patriotic fervor. English translations of his work appear as *Khristo Botev Selections* (1948) and *Poems* (1955).

botfly, common name for several families of hairy FLIES whose larvae live as parasites within the bodies of mammals. The horse botfly secretes an irritating substance that is used to attach its eggs to the body hairs of a horse, mule, or donkey. When the animal licks off the irritant, the larvae are carried into the host's mouth and later migrate to the stomach. They attach themselves to the lining, where they feed until ready to pupate, and then drop to the ground with the feces. The larvae, which may cause serious damage to the digestive tract and weaken the animal, can be eliminated by a veterinarian. Sheep botflies lay their eggs in the nostrils of the host without alighting. The larvae work their way up into the head cavities causing fits of vertigo known as blind staggers, failure to eat because of irritability may result in death. Old World species of this family attack camels, elephants, horses, mules, donkeys, and deer. The warble flies, also called heel flies, or bomb flies, parasitize cattle and other animals. The larvae, called cattle grubs or cattle maggots, penetrate the skin of the host immediately after hatching, they migrate through the flesh, causing irritability, loss of weight, and decreased milk production, and then settle under the skin of the back, producing cysts, or warbles. Breathing holes made in the warbles by the larvae damage the hide. A species of human botfly found in Central and South America attaches its eggs to a bloodsucking mosquito that it captures and then releases. When the mosquito comes in contact with humans or other warm-blooded animals, the fly eggs hatch and the larvae fasten to the mammal's skin. The larvae bore into muscle tissue, infestation is called myiasis. For control methods, see bulletins of the U.S. Dept. of Agriculture. The botflies are classified in the phylum ARTHROPODA, class Insecta, order Diptera. Horse botflies are classified in the family Gasterophilidae, sheep botflies and warble flies are classified in the family Oestridae, the human botfly is classified in the family Cuterebridae. See INSECT.

Botha, Louis (bō'tā), 1862-1919, South African soldier and statesman. A Boer, he participated in the founding (1884) of the New Republic, which joined (1888) the Transvaal. Although Botha had little previous military experience, he brilliantly commanded Boer troops in the South African War. He besieged the British at Ladysmith and defeated their forces at Colenso. In 1900 he succeeded General Joubert as commander of the Transvaal army and led its remnants in guerrilla fighting. After the war (1902) he favored cooperation with the British. Botha was (1907-10) premier of the Transvaal. As the leader of the United South African, or Unionist, party he was prime minister of the Union of South Africa from its organization (1910) until his death, and he was ably assisted by Jan Christiaan Smuts. In World War I, Botha declared South Africa a belligerent on the side of the Allies. He suppressed a Boer revolt and in 1915 led the forces that conquered the German colony of South West Africa. See biography by Earl Buxton (1924), Basil Williams, *Botha, Smuts, and South Africa* (1946), N. G. Garson, *Louis Botha or John X. Merriman* (1969).

Bothnia, Gulf of: see BALTIC SEA.

Bothwell, James Hepburn, 4th earl of (hē'bərn, bōth'wəl), 1536?-1578, Scottish nobleman, third husband of MARY QUEEN OF SCOTS. Though a Protestant, he was a strong partisan of the Catholic regent, Mary of Guise, mother of Mary Queen of Scots. In 1562, Bothwell's old enemy, James Hamilton, earl of Arran, accused Bothwell of proposing to kidnap the queen, and Bothwell was imprisoned. He escaped and started for France, but was imprisoned for a year by the English before he reached it. Mary recalled him in 1565 to help her put down the rebellion by the earl of Murray, her half brother. In 1566, Mary's secretary, David Rizzio, was murdered by conspirators, among them her husband, Lord DARNLEY. Thereafter she trusted only Bothwell and was with him constantly. In Feb., 1567, Darnley was murdered. Bothwell was undoubtedly responsible, but he was acquitted in a trial that was a judicial mockery. Shortly after the trial, Bothwell abducted Mary and, having divorced his wife, married the queen. The Scottish nobles now rose against Bothwell and forced Mary to give him up (June, 1567). He fled to Denmark, where he was imprisoned and died insane.

bo tree or pipal (pē'pəl), fig tree (*Ficus religiosa*) of India held sacred by the Buddhists, who believe that Gautama received enlightenment under a bo tree at Bodhi Gaya. A slip of this tree was planted at Anuradhapura to become one of the oldest known trees. The bo tree attains great size and age, the leaves, which hang from long, flexible petioles, rustle in the slightest breeze. Pipal is also spelled peepul or pipul. The bo tree is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Urticales, family Moraceae.

Botsford, George Willis, 1862-1917, American historian, b. West Union, Iowa. After some years (1895-1901) at Harvard, he taught (1901-17) ancient history at Columbia. An outstanding authority on ancient history, he wrote numerous monographs and scholarly works but is best remembered for his high school and college textbooks. His *Hellenic History* (1922) was especially well received. He collaborated with E. G. Sihler on a source book, *Hellenic Civilization* (1915, repr. 1965).

Botswana (bōtswā'nə), formerly **Bechuanaland** (bēchōō'a'nəlānd'), republic (1971 pop. 630,379), 231,804 sq mi (600,372 sq km), S central Africa. GABORONE is the capital. Botswana is bordered by South West Africa on the west and north, by Zambia at a

the principal subsistence crops, and cotton, peanuts, and sunflowers are the main cash crops. Many citizens of Botswana work in the mines of South Africa, and lesser numbers are employed in Rhodesia. Botswana's bleak economic outlook was dramatically brightened during the 1960s with the discovery of significant quantities of several minerals. The only known minerals in the country at the time of independence were manganese and some gold and asbestos. Large nickel, copper, and diamond deposits have since been found, as well as salt and soda ash, antimony and sulfur are known to exist, and the discovery of oil is a serious possibility. Vast coal deposits are also being worked. Development of a tourist industry has been based partly on the attraction of one of Africa's few remaining large natural game reserves. Despite the promise of growing wealth and economic diversification, Botswana is likely, because of its landlocked position, to remain heavily dependent on its white-ruled neighbors. South Africa provides port facilities, and Rhodesia controls and operates the railroad from Cape Town that passes through Botswana. There are also road links with South Africa and Rhodesia. South Africa has a customs union with Botswana, whose currency is the South African rand and whose chief trading partners are South Africa and Rhodesia. The country's population consists mainly of the Tswana, who are divided into eight major groups, all speaking Bantu languages. English and Tswana are the country's official tongues. The great majority of the people practice traditional religions, but there is a small Christian minority. San (Bushmen) were the original inhabitants of what is now Botswana. In the 18th cent. the Tswana supplanted the San, who remained as serfs. David Livingstone and other European missionaries visited the area in the mid-19th cent. Beginning in the 1820s, the region was disrupted by the expansion of the Zulu and their offshoot, the Ndebele. However, Khama, chief of the Ngwato (the largest Tswana tribe), curbed the depredations of the Ndebele and established a fairly unified state. A new threat arose in the late 19th cent. with the incursion of Boers from neighboring Transvaal. After gold was discovered in the region in 1867, the Transvaal government sought to annex parts of Botswana. Although the British forbade annexation, the Boers continued to encroach on tribal lands during the 1870s and 80s. German colonial expansion in South West Africa caused the British to reexamine their policies, and, urged on by Khama, they established (1884-85) a protectorate called Bechuanaland. The southern part of the area was incorporated into Cape Colony in 1895. Until 1961, Bechuanaland was administered by a resident commissioner at Mafeking, in South Africa, who was responsible to the British high commissioner for South Africa. Britain provided for the eventual transfer of Bechuanaland to the Union of South Africa, which was established in 1910, in succeeding years, however, South Africa's attempts at annexation were countered by British insistence that Bechuanaland's inhabitants first be consulted. The rise of the National party in South Africa in 1948 and its pursuit of apartheid turned British opinion against the incorporation of Bechuanaland into South Africa. Although Bechuanaland spawned no nationalist movement, Britain granted internal self-government in 1965 and full independence on Sept. 30, 1966. Seretse Khama, grandson of Khama, was elected the first president. Botswana remained in the Commonwealth of Nations. The country has maintained close ties with its white-ruled neighbors and has refused to let its territory harbor guerrilla operations against them. Botswana's 1966 constitution provides for a parliament composed of the president and the national assembly. There is an advisory house of chiefs. See Isaac Schapera, *The Tswana* (1953), Anthony Silillery, *Founding a Protectorate* (1965), Zdeněk Červenka, *Republic of Botswana* (1970), Philippus Smit, *Botswana: Resources and Development* (1970), Anthony Silillery, *Botswana: A Short Political History* (1974).

Botta, Paul Émile (pól ā'mēl' bōtā'), 1805-70, French archaeologist and government official. While consular agent at Mosul (1843) he made his renowned discoveries of Assyrian inscriptions at Khorsabad. Botta wrote *Monument de Ninive* (S vol., 1849-50).

Böttger, Johann Friedrich (yō'hān frē'drīkh bōt'gar), 1682-1719, German chemist and originator of Dresden china. When the Swedish invasion of Saxony occurred (1706), Böttger and his aides were removed from Dresden to protect the secret of the process. He developed a variety of glazes, including black and a delicate violet, later much used. He

made use of silver and gold in the decoration. His potteries were under royal patronage, and he was made director of the extensive works in 1708. He perfected white porcelain in 1715. The following year he was imprisoned because of an attempt to sell his secret.

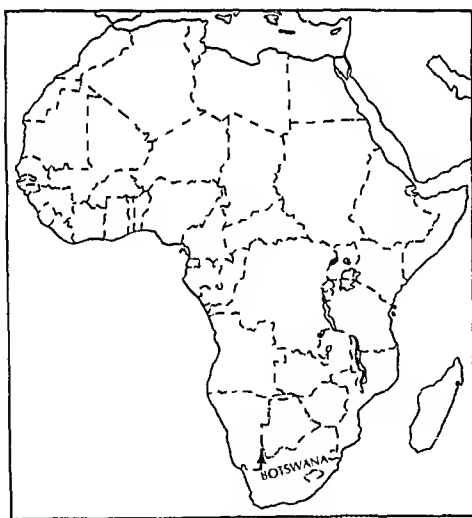

Botticelli, Sandro (san'drō bōt'lichēll'ē), c.1444-1510, Florentine painter of the Renaissance, whose real name was Alessandro di Mariano Filipepi (alēssān'drō dē marē'ānō fēlēpā'pē). He was apprenticed to Fra Filippo Lippi, whose delicate coloring can be seen in such early works as the *Adoration of the Kings* (National Gall., London) and *Chigi Madonna* (Gardner Mus., Boston). Elements of the more vigorous style of Pollaiuolo and Verrocchio soon entered his paintings, e.g., *Fortitude* (Uffizi), *St. Augustine* (Ognissanti), and *Portrait of a Young Man* (Uffizi). He became a favorite painter of the Medici, whose portraits he included, in addition to a self-portrait, among the splendid figures in the *Adoration of the Magi* (Uffizi). In 1481 Pope Sixtus IV asked him to help decorate the Sistine Chapel. After painting three biblical frescoes he returned to Florence, where he reached the height of his popularity. Through the Medici he came into contact with the Neoplatonic circle and was influenced by the ideas of Ficino and Poliziano. His enchanting mythological scenes, *Spring*, *Birth of Venus*, *Mars and Venus*, and *Pallas Subduing a Centaur*, have allegorical implications. In general they allude to the triumph of love and reason over brutal instinct. Probably in the 1490s he drew the visionary illustrations for the *Divine Comedy*. He painted a set of frescoes for the Villa Tornabuoni (Louvre) and created a series of radiant Madonnas, including the *Magnificat* and the *Madonna of the Pomegranate* (Uffizi). From Alberti's description, he re-created the famous lost work of antiquity, *The Calumny of Apelles*. The religious passion of Savonarola's sermons was reflected in Botticelli's work. His piety is evident in the *Nativity* (National Gall., London), *Last Communion of St. Jerome* (Metropolitan Mus.) and *Pieta* (Fogg Mus., Cambridge). His reputation probably declined, as he received fewer commissions. In the 19th cent. the Pre-Raphaelites rediscovered him. Supported by Ruskin, they admired the extreme refinement and poignancy of his conceptions. He is undoubtedly one of the greatest colorists of Florence and a master of rhythmic line. See studies by H. P. Horne (1908), Lionello Venturi (1949, repr. 1961), and G. C. Argan (tr. by J. Emmons, 1957).

Bottomley, Gordon, 1874-1948, English poet and dramatist, b. Yorkshire. His major artistic efforts were directed at reviving verse drama in English. Among his plays are *The Crier by Night* (1902), *The Riding To Lithend* (1909), *King Lear's Wife* (1915), and *Gruach* (1921), the latter two are "prefaces" to the action of *Lear* and *Macbeth* respectively. His volumes of poetry include *A Vision of Giorgione* (1910).

Bottrop (bōt'rōp), city (1970 pop. 106,657), North Rhine-Westphalia, W. West Germany, in the RUHR district. It was a small town until 1863, when it began to develop as a coal-mining center. The city is today also an industrial center, its manufactures include chemicals, electrical equipment, and textiles. There are large carbonization plants there. Bottrop was known around the 11th cent. as Borgthorpe.

botulism (bōch'aliz'əm), acute poisoning resulting from ingestion of food containing toxins produced by the bacillus *Clostridium botulinum*. The bacterium can grow only in an anaerobic atmosphere, particularly in canned foods. Consequently, botulism is almost always caused by preserved foods which have been improperly processed, usually a product canned imperfectly at home. The toxins are destroyed by boiling canned food for 30 min at 176°F (80°C). Once the toxins (which are impervious to destruction by the enzymes of the gastrointestinal tract) have entered the body, they interfere with the transmission of nerve impulses, causing disturbances in vision, speech, and swallowing, and ultimately paralysis of the respiratory muscles, leading to suffocation. Symptoms of the disease appear about 18 to 36 hr after ingestion of toxins. Botulinus antiserum is given to persons who have been exposed to contaminated food before they develop symptoms of the disease and is given to diagnosed cases of the disease as soon as possible. Botulism has a high mortality rate (about 65%) and requires expert nursing and medical care. See FOOD POISONING.

Botvinnik, Mikhail (mēkhayēl' bōt'venyik), 1911-, Russian chess player, b. St. Petersburg (now Leningrad). He ranked as a master at the age of 16 and

narrow strip in the north, by Rhodesia on the east, and by the Republic of South Africa on the east and south. The terrain is mostly an arid plateau (c. 3,000 ft/910 m high) of rolling land. In the east are hills. The Kalahari Desert lies in the south and west. In the northwest the Okavango River drains into the vast region of the Okavango swamp and Lake Ngami, thus forming a huge marshland. Rainfall varies from less than 9 in (23 cm) per year in the southwest to about 25 in (64 cm) in the north. The climate ranges from subtropical to temperate. Most of Botswana's people are pastoralists, and cattle raising and the export of beef and other cattle products are the chief economic activities. The country's water shortage and consequent lack of sufficient irrigation facilities have hampered agriculture, only a small percentage of the potentially arable land is under cultivation. Sorghum, maize, millet, and beans are

won the USSR championship at 20. An electrical engineer by profession, he won the world championship after a round-robin tournament in Moscow in 1948. Botvinnik lost the title to Vassily Smyslov in 1957 but regained it in 1958. He lost again, to Mikhail Tal, in 1960, regained the title for two years, but was defeated by Tigran PETROSIAN in 1963.

Bouake (bwa'kã, bwakã'), town (1963 est. pop. 53,000), central Ivory Coast. It is a transportation hub and a commercial center and was once the crossroads for the caravan trade. Tobacco products are produced in the town, and gold and manganese are found nearby. A variant spelling is Bwake.

Bouchardon, Edme (ēdmã' bōōshardōN'), 1698–1762, French sculptor, pupil of Guillaume Coustou. He is known for his fountain in the Rue de Grenelle, Paris, and for numerous works at Versailles, in the Louvre, and in Saint-Sulpice, Paris. Bouchardon was famous for the classical purity of his style.

Boucher, François (fraNswã' bōōshã'), 1703–70, French painter. Boucher's art embodied the spirit of his time, it was elegant, frivolous, and artificial. He studied briefly with François Le Moyne but was also influenced by Watteau, many of whose works he engraved. At the age of 20 he won the Grand Prix, and from 1727 to 1731 he studied in Italy, being particularly attentive to works by Tiepolo and Albani. On his return he rapidly became the most fashionable painter of his day and a teacher and favorite of Mme de Pompadour. He produced a vast number of pictures, decorations, tapestry designs, stage settings for ballet and opera, and fine etchings. As a result, Boucher enjoyed many academic and official honors including that of director of the Gobelins tapestry works. He is best known, however, as a decorator and above all for his brilliant, voluptuous decorations of boudoirs. Fragonard was his pupil for a time. The Louvre and the Wallace Collection, London, excel in selections of Boucher's work. He is well represented in the United States by his *Peace and War* in the Museum of Fine Arts, Boston, his *Toilet of Venus and Birth and Triumph of Venus* in the Metropolitan Museum, and his *Voluptuary and Winter Scene* in the New-York Historical Society. Fine examples of his work are in the Frick Collection, New York City.

Boucher de Crevecoeur de Perthes, Jacques (zhak, də krēvkōr' də pērt'), 1788–1868, French writer and archaeologist. He was the first to show that man had existed in the Pleistocene epoch, thereby disputing the theory of diluvial CATASTROPHISM. He collected roughly chipped flint artifacts near Abbeville, France, and demonstrated that these man-made objects came from the same period as Ice Age fauna. See PALEOLITHIC PERIOD.

Bouches-du-Rhône (bōōsh-du-rōn), department (1968 pop. 1,470,271), in Provence, SE France. It includes the island of Camargue in the Rhône delta. MARSEILLES is the capital.

Boucicault, Dion (bōō'sīkō), 1822?–1890, Anglo-Irish dramatist and actor. At 19 he had success with his play *London Assurance* at Covent Garden, London. In 1853 he went to the United States with his wife, Agnes Robertson, an actress who was the adopted daughter of Charles Kean. Boucicault became known for his work there as well as in London. A prolific writer who successfully employed theatrical tricks, he wrote or adapted over 300 farces, comedies, and melodramas, in which he often acted. The most notable of these were *Grimaldi* (1855), *The Sidewalks of New York* (1857), *The Octoroon* (1859), *The Colleen Bawn* (1860), *Arrah-na-Pogue* (1864), *Rip Van Winkle* (1865, with Joseph Jefferson), *The O'Dowd* (1873), and *The Shaughraun* (1874). The growth of the road company that performs one play owes much to Boucicault's influence. See his *Art of Acting* (1916), study by R. G. Hogan (1969).

Boucicaut (bōōsēkō'), c. 1366–1421, marshal of France and crusader against the Ottoman Turks, whose real name was Jean le Meingre. Captured by Ottoman Sultan Beyazid I at NIKOPOL (1396), he was ransomed. In 1399 the French sent him to defend Constantinople against Beyazid I. He was governor (1401–7) of Genoa, then under French protection, was captured by the English at Agincourt (1415), and died in England. He wrote several ballads and other poems.

Boucicaut Master (bōōsēkō'), active c. 1375–1400, Franco-Flemish manuscript illuminator. The master was named for his greatest work, *The Hours of the Marechal de Boucicaut* (Musée Jacquemart-André, Paris). In this work were combined the Italian advances in painting techniques, such as perspective, and the French style of ILLUMINATION.

Boudin, Eugène Louis (ozhēn' lwē bōōdāN'), 1824–98, French painter. He began painting at 25 in Paris. His best-known paintings are little beach scenes of Brittany, Normandy, and the Netherlands. Noted for the pervasive clarity and directness of his outdoor scenes, Boudin excelled in depicting nuances of light and atmosphere. He painted from nature, influencing the impressionists, notably Monet, to use this working method. Boudin is represented in the Louvre by several works and in the Metropolitan Museum by *Baie de Fourmis*, *Beaulieu* and *On the Beach at Trouville*. See study by G. J. Aubry (tr. 1969).

Boudinot, Elias (bōō'dīnōt), 1740–1821, political leader in the American Revolution, b. Philadelphia. A lawyer of Elizabethtown (now Elizabeth), N. J., he took an active part in anti-British activities and was a member of the Continental Congress both before and after the adoption of the Articles of Confederation (1777–78, 1781–84), serving as its president from 1782 to 1783. He ardently supported the U.S. Constitution and helped secure its ratification by New Jersey. He served in Congress (1789–95) and was director of the U.S. mint (1795–1805). He was an ardent philanthropist, notably for the Indians, and he was first president (1816–21) of the American Bible Society. See his *Journal of Events in the Revolution* (1894, repr. 1968), biography by G. A. Boyd (1956).

Boufflers, Louis François, duc de (lwē fraNswã' duk də bōōflēr'), 1644–1711, marshal and peer of France. He served under the French commanders François de Crequy and the vicomte de Turenne. King Louis XIV created him a duke in 1694. His best-known exploits are his defense of Namur (1695) in the War of the Grand Alliance, and in the War of the Spanish Succession his defense of Lille against the duke of Marlborough and Prince Eugene (1708), and his skillful retreat from the field of Malplaquet (1709).

Bougainville, Louis Antoine de (lwē āNtwān' də bōōgāNvēl'), 1729–1811, French navigator. He accompanied Montcalm to Canada as aide-de-camp, and he later (c. 1764) established a colony on the Falkland Islands but had to surrender the settlement to Spain (1766). Accompanied by naturalists and astronomers, he made a voyage around the world (1767–69), visiting Tahiti in the Society Islands, the Samoan group, and the New Hebrides, and rediscovering the Solomon Islands, the largest of which is named for him. In the American Revolution he fought Admiral Hood at Martinique. His name is also given to the strait between Bougainville and Choiseul Island, to a strait in the New Hebrides, and to the bougainvillea vine. Bougainville's *Description d'un voyage autour du monde* (2 vol., 1771–72, tr. 1772) helped to popularize Rousseau's theories on the morality of man in his natural state and inspired Diderot to write (1772) his *Supplément au voyage de Bougainville*, a defense of sexual freedom.

Bougainville (bōō'ganvīl, Fr. bōōgāNvēl'), volcanic island (1964 pop. 64,100), c. 3,880 sq mi (10,050 sq km), SW Pacific, largest of the SOLOMON ISLANDS. With the neighboring island of Buka, it forms a part of Papua New Guinea. Bougainville is rugged and densely forested. There are several good harbors, with the main port at Kieta. The economy is mainly agricultural; major exports are copra, ivory nuts, green snails, cocoa, tortoise shells, and trepang. Copper and gold are mined. The center of administration is at Sohano, a coral island in the Buka Passage. The island was discovered in 1768 by the French navigator Louis de Bougainville. Unlike the rest of the Solomon Islands, which became a British territory, Bougainville and Buka became part of German New Guinea in 1884. Occupied by Australian forces during World War I, Bougainville was mandated to Australia by the League of Nations in 1920. During World War II the island was the last Japanese stronghold in the Solomons.

bougainvillea or **bougainvillaea** (both bōō'-ganvīl'ēa) [for L. A. de Bougainville], any plant of the genus *Bougainvillea* of the family Nyctaginaceae (FOUR-O'CLOCK family), chiefly tropical American woody vines with showy petallike bracts, usually in shades of brilliant red or purple. Bougainvillea are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Caryophyllales, family Nyctaginaceae.

Bouguer see BEJAJA, Algeria.

Bouguer, Pierre (pyēr bōōgēr'), 1698–1758, French mathematician and hydrographer. He made some of the first photometric measurements, calculating the intensity of the light of the sun as compared with that of the moon, and invented (1748) the heliometer.

His works include *Essai d'optique sur la gradation de la lumière* (1729) and *La Figure de la terre* (1749).

Bouguereau, Adolphe William (adōlf', bōōgrō'), 1825–1905, French academic painter. Best known for his glossy nudes, he was also highly popular in the 19th cent. as a painter of historical and religious subjects. His *La Jeunesse et l'Amour* is in the Louvre.

Bouillon, Frédéric Maurice de La Tour d'Auvergne, duc de (frādrāk' mōrēs' də la tōōr dōvēr'-nyā duk də bōōyōN'), c. 1605–1652, French general, son of Henri de Bouillon. Brought up a Protestant, he campaigned in Holland under his uncle MAURICE OF NASSAU. In 1635 he entered the service of France. He rebelled against Cardinal RICHELIEU in 1641, but after a reconciliation he was given command (1642) of the French forces in Italy. Soon afterward he was arrested in the CINQ MARS conspiracy and, in return for pardon, ceded to France the sovereign principality of Sedan, which his family had held. He embraced Roman Catholicism, went to Rome, and commanded the papal troops. In 1649 he returned to France and took part in the FRONDE on the side of the princes. In 1651, however, he submitted and exchanged Sedan and Rocourt, which he then held as fiefs, for other territories.

Bouillon, Godfrey of. see GODFREY OF BOUILLON.

Bouillon, Henri de La Tour d'Auvergne, vicomte de Turenne, duc de (aNrē', vēkōNt' də turēn'), 1555–1623, marshal of France, diplomat, and Protestant leader. He served with Henry IV against the Catholic LEAGUE but fled (1603) to Geneva when he was ordered arrested for his part in a conspiracy against the king. Under Marie de' Medici he returned and entered the council of regency, from which he withdrew after a quarrel with the queen. He participated in a series of pro-Calvinist intrigues but later retired to his independent duchy, which he had acquired through marriage in 1591. He founded a library and a Protestant college at Sedan. Bouillon was the grandson of Anne de Montmorency and the father of TURENNE.

Bouillon, town (1970 pop. 2,944), Luxembourg prov., SE Belgium, in the Ardennes on the Semois River, near the French border. It is a small manufacturing and tourist center. Its old castle belonged to Godfrey of Bouillon, one of the leaders of the First Crusade, who pledged (1095) the town and the surrounding duchy to the bishop of Liege to raise funds for the Crusade. Bouillon was nominally under the suzerainty of the prince-bishops of Liege until it passed (15th cent.) to William de la Marck, the "Boar of the Ardennes," whose descendants assumed the titles duke of Bouillon and prince of Sedan. The duchy was taken (1676) by Louis XIV of France and given to the La Tour d'Auvergne family. It was under direct French rule from 1794 to 1815, when it passed to the Netherlands. It became part of Belgium in 1830.

Boulanger, Georges Ernest (zhōrhzh ērnēs't' bōōlanzhã'), 1837–91, French general and reactionary politician. He served in North Africa and Indochina, and in the Franco-Prussian War. Later, he was briefly commander of French troops in Tunisia. A protégé of Georges Clemenceau, the radical republican leader, he was appointed minister of war in 1886. Appealing to the French desire for revenge against Germany, he attracted the disparate elements hostile to the Third Republic. Boulanger's personal ambition soon alienated his republican supporters, who recognized in him a potential military dictator. Although he was forced from his ministry in 1887 and later deprived of his army command, Boulanger's ardent nationalism increased his mass appeal. Numerous royalists gave him financial aid, although Boulanger saw himself as a future dictator rather than a restorer of kings. Many times elected a parliamentary deputy, he was ineligible for the post until the government retired him from the army (1888); nevertheless, he built up wide electoral support and was overwhelmingly elected in Paris in Jan., 1889. A coup d'état seemed probable, but Boulanger failed to act. Shortly afterwards the French government issued a warrant for his arrest for treasonable activity. Boulanger fled to Belgium. After his flight support for him dwindled, and the Boulangerists, as his followers were called, were defeated in the general elections of July, 1889. Two years later, while still in exile, he committed suicide. See studies by F. H. Seager (1969) and James Harding (1971).

Boulanger, Nadia (nadya'), 1887–, French conductor and musician, b. Paris. Boulanger is considered the outstanding contemporary teacher of composition. She studied at the Paris Conservatory, where in 1945 she was appointed professor. Boulanger taught

at the École normale de Musique, Paris, and (since 1921) at the American Conservatory, Fontainebleau, becoming its director in 1950. As the teacher of such American composers as Walter Piston, Aaron Copland, Virgil Thomson, Roy Harris, and Marc Blitzstein, she has profoundly influenced contemporary American music. She has often visited the United States, as teacher, lecturer, organist, and guest conductor of the Boston Symphony (1938) and the New York Philharmonic (1939). She is noted for her conducting of choral works. Boulanger's sister Lily (1893–1918) was a distinguished composer.

Boulder, city (1970 pop. 66,870), seat of Boulder co., N central Colo., inc. 1871. Situated c 5,350 ft (1,630 m) above sea level, it is a major resort of the Rocky Mts. and has mineral springs. Its manufactures include aircraft, computers, electronic equipment, chemicals, and sporting goods. The Univ. of Colorado, the National Center for Atmospheric Research, and many other scientific and research facilities are in the city. A U.S. atomic energy plant is nearby.

boulder, large stone formed and detached from its parent consolidated rock by weathering and erosion. In engineering and geology, especially in the United States, the term is applied to loose rocks having specific sizes according to various systems of classification. For example, in the Wentworth scale (for C. K. Wentworth, American geologist), a boulder has one linear dimension of at least 10.1 in. (25.4 cm). Boulders usually can be transported only by glacial ice. Hence, the occurrence of large boulders in abundance in a region is taken as evidence that the region has been subjected to glacial action in the past. See DRIFT, MORAINÉ, BOULDER CLAY.

Boulder City, residential city (1970 pop. 5,223), S Nev., just W of HOOVER DAM near Lake Mead, inc. 1959. Built (1932) by the Federal government as headquarters during the dam's construction, it became a self-governing municipality by act of Congress in 1958. It is a year-round tourist center and the headquarters of Lake Mead National Recreation Area.

boulder clay, see DRIFT.

Boulder Dam, see HOOVER DAM.

Boulez, Pierre (pyër bööl'ez'), 1925–, French composer and conductor. He studied at the Paris Conservatoire with Olivier Messiaen (1944–45) and studied 12-tone technique with René Leibowitz (1946). A radical leader of the avant-garde in music, Boulez produces compositions in which the techniques of SERIAL MUSIC are applied not only to melody and counterpoint but also to melody and rhythm. Because of its complexity, Boulez's work is difficult to perform and has elicited violent reactions from audiences. Among his compositions are *Le Soleil des eaux* (1948), for voice and orchestra, *Symphonie concertante* (1950), for piano and orchestra, *Pli selon pli* (1960), and *Éclat* (1965), for 15-piece chamber orchestra. Boulez was director of music for Jean-Louis Barrault's theater in Paris, and there he founded the Concerts Marigny and the Domaine Musical to present avant-garde works. He has conducted major orchestras throughout the world and has published several works in French. In 1971 he became music director and conductor of the New York Philharmonic-Symphony Orchestra.

Boule or Buhl, André Charles (both aNdrä' sharl bööl), 1642–1732, French cabinetmaker, the master of a distinctive style of furniture, much imitated, for which his name has become a synonym. In 1672 he was admitted to a group of skilled artists maintained by Louis XIV in the Louvre palace, and thereafter he devoted himself to creating costly furniture and objects of art for the king and court. Boule's pieces, having in general the character of Louis XIV and RÉGENCE design, were built for the immense formal rooms of the period. Boule, a master of MARQUETRY, specialized in the inlaying of ebony with precious woods and mother-of-pearl. Large areas were covered with tortoise shell, inlaid with arabesques of gilded brass. He added splendid bas-relief compositions, as well as sculptured rosettes, masks, and acanthus scrolls, all in gilded bronze. Superb examples of his art exist at Versailles, Fontainebleau, and the Louvre and in England at Windsor Castle and in the Wallace Collection, London. The title cabinetmaker to the king passed to his four sons, Jean Philippe, Pierre Benoît, André Charles, and Charles Joseph.

Boulogne, Jean, see BOLOGNA, GIOVANNI.

Boulogne-Billancourt (böölö'nya-bēyāNkōr'), city (1968 pop. 109,380), Hauts-de-Seine dept., N central France, a suburb SW of Paris. One of the largest automobile factories in France is in the city.

Other manufactures include airplanes, electrical goods, chemicals, bicycles, and processed foods. Part of the city is residential, with elegant homes bordering on the BOIS DE BOULOGNE. There is a 14th-century Gothic cathedral.

Boulogne-sur-Mer (böölö'nya-sur-mër'), city (1968 pop. 50,138), Pas-de-Calais dept., N France, in Picardy, on the English Channel. It is a great commercial seaport and the leading fishing port of France. It has canning and shipbuilding industries. From there the Romans sailed (A.D. 43) to conquer Britain, and there again Napoleon assembled an invasion fleet (which never sailed) in 1803–5. The port was a main base for British armies in World War I and a German submarine base in World War II. Most of the city was destroyed during the latter conflict. The Cathedral of Notre Dame (built 19th cent., damaged 1941, since restored) is a great shrine of pilgrimage; it stands on a site where miracles were believed to have occurred in the 7th cent.

Boult, Sir Adrian, 1889–, English conductor. Boult studied conducting in Leipzig with Arthur Nikisch (1912–13). In 1930 he became conductor of the newly formed BBC Symphony Orchestra, and he was conductor of the London Philharmonic from 1950 to 1957. Boult led the premieres of many works by British composers and is considered an authoritative interpreter of Elgar and Vaughan Williams. He wrote *A Handbook on the Technique of Conducting* (1968). Boult was knighted in 1937. See his autobiography, *My Own Trumpet* (1973).

Boumedienne, Houari (hōār'ē böömēdēēn'), 1932?–, president and prime minister of Algeria. While studying in Cairo during the early 1950s he joined a group of expatriate Algerian nationalists that included Ahmed Ben Bella. Boumedienne secretly reentered Algeria (1955) to join a group of guerrillas operating in the province of Oran. He was (1960–62) chief of staff of the exiled National Liberation Army in Tunisia and served as Algeria's minister of defense from the time of its independence. After a series of disputes with Ben Bella, Boumedienne led a coup d'état that overthrew his former ally's government. After the coup, Boumedienne assumed the posts of president, prime minister, and chairman of the revolutionary council. His government assumed a rigorous anti-Israeli stand.

bouncing bet, see PINK.

Boundary Peak, 13,140 ft (4,005 m) high, SW Nev., in the White Mts. near the Calif. line. It is the highest point in Nevada.

Bound Brook, borough (1970 pop. 10,450), Somerset co., N central N.J., on the Raritan River, settled 1681, inc. 1891. It has large orchid and gardenia nurseries and chemical manufactures. The city's land was purchased from the Raritan Indians. In the Revolution, George Washington maintained an outpost there, and American forces were defeated (April, 1777) by Cornwallis. Local attractions include Washington's camp grounds and several 18th-century houses.

Bountiful, city (1970 pop. 27,853), Davis co., N central Utah, inc. 1892. It is a residential suburb N of Salt Lake City. Bountiful was settled by Mormons in 1847.

Bounty, British naval vessel commanded by William BLIGH. She set sail for the Pacific in Dec., 1787, to transport breadfruit trees from the Society Islands to the West Indies. In April, 1789, the ship's mate, Fletcher Christian, led a successful mutiny against Bligh. The captain and 18 of his crew were set adrift in a small open boat. By remarkable seamanship they went 3,618 mi. (5,822 km), reached Timor in June, and proceeded to England. Some of the mutineers were later captured and court-martialed in England, three were executed. Other mutineers under Christian landed at PITCAIRN ISLAND, burned the Bounty, and founded a colony where their descendants continue to live. See George MacKane, ed., *A Book of the Bounty* (1938), Alexander McKee, *H.M.S. Bounty* (1961).

bounty, amount paid by a government for the achievement of certain economic goals considered to be desirable. It is usually a premium paid for the increased production or export of certain goods. The bounty was an important technique of mercantilist economic policy. Whereas a SUBSIDY is a lump sum given in exchange for the meeting of some previously established condition, a bounty is given as a gratuity per unit of production. Bounties are usually in the form of direct cash payments. However, bounties can be in a concealed form such as exports relieved from payment of a tax or excise duty, special railway rates, rebates on taxes and import du-

ties, credit facilities, and export credits guaranteed by the government. Effects of an export bounty can be destroyed by a countervailing duty imposed by an importing country. The compensatory export bounty is aimed at compensating producers for duties paid on imported raw materials used in making the particular commodity. Bounties have been also granted by states for roads, canals, railroads, and other public works. Bounties were frequently used by nations as an inducement to army enlistment. State governments in the United States give bounties for the killing of destructive animals.

Bouquet, Henry (böökä'), 1719–65, British army officer in the French and Indian Wars. A French Swiss, he came to America in 1756 and distinguished himself as second in command to Gen. John FORBES in the successful expedition (1758) against Fort Duquesne (Pittsburgh). In PONTIAC'S REBELLION he decisively defeated the Indians in a hotly contested battle at Bushy Run (Aug., 1763) near Pittsburgh. In 1764, Bouquet, on an expedition into the Ohio country, forced the Shawnee and other Indians to lay down their arms. He was brigadier general commanding the Southern Dist. at his death. See his papers, ed. by S. K. Stevens et al. (2 vol., 1951–72), M. C. Darlington, *History of Colonel Henry Bouquet and the Western Frontiers of Pennsylvania* (1920, repr. 1971).

Bourassa, Henri (aNrē' böörāsā'), 1868–1952, Canadian political leader and publisher, b. Montreal, grandson of Louis Joseph Papineau. He was elected as an Independent Liberal to the Canadian House of Commons in 1896 but resigned in 1899 in protest against sending Canadian troops to the South African War, he was almost immediately reelected. A man of oratorical and literary gifts, he rallied around him various groups discontented with the regime of Sir Wilfrid Laurier and welded them into a powerful opposition party in Quebec that became known as the Nationalist party; it took the stand that Canada should hold aloof from diplomatic entanglements with Great Britain and the United States. Opposing (1909–11) the bill to construct a Canadian navy, Bourassa withdrew enough support from Laurier to cause the fall of the government. In 1910 he founded, as the Nationalist journal, *Le Devoir*, a Montreal daily, and was its editor for many years. He led French Canadian opposition to participation in World War I, denouncing in violent terms the conscription act of 1917. See studies by Casey Murrow (1968) and Joseph Levitt (1969).

Bourbaki, Charles Denis Sauter (sharl dānē' sōtā' böörbakē'), 1816–97, French general of Greek ancestry. In the Algerian campaigns and the Crimean War he gained one of the highest military reputations in Europe. Offered the Greek throne (1862), he declined. In the Franco-Prussian War, put in command of the Army of the East by the provisional government, he failed to raise the siege of Belfort and was pursued to Switzerland, where his troops were dispersed and interned (Feb. 2, 1871).

Bourbon (böörbōN'), royal family, originally of France, a cadet branch of the Capetian dynasty. Its branches ruled Spain, the Two Sicilies, and Parma. It takes its name from the now ruined castle of Bourbon, at Bourbon-l'Archambault, Allier dept., which was the seat of a powerful family descended from Adhemar, a noble of the 9th cent. Robert of Clermont, sixth son of Louis IX of France, married (1272) Beatrice, heiress of Bourbon, and thus is considered the founder of the royal line. Robert's son, Louis, was created (1327) 1st duc de Bourbon. The ducal title remained with the descendants of his eldest son until 1527, when Charles, duc de Bourbon, died without issue. Because of his treason, his extensive fiefs (Bourbonnais, Marche, Auvergne, Forez) were seized by the crown and the ducal title was discontinued. A younger son of Louis, 1st duc de Bourbon, gave issue to the line of Bourbon-Vendôme. The marriage (1548) of Antoine de Bourbon, duc de Vendôme, with Jeanne d'Albret added vast territories in 5 France (see ALBRET) and the title king of Navarre to his other fiefs (Vendôme, Périgord, Rouergue). From Antoine's brother, Louis I de Conde, the houses of CONDE and CONTI were issued. Antoine's son became (1589) the first Bourbon king of France as HENRY IV, the older branches of Louis IX's issue having become extinct (see VALOIS). Henry IV was succeeded by his son, Louis XIII, and his grandson, Louis XIV. Louis XIV's descendants ruled France (except during the French Revolution and the Napoleonic era, 1792–1814) until the deposition (1830) of Charles X (see FRANCE), with the death (1883) of Henri, comte de CHAMBOARD, grandson of Charles X, the senior French branch of Bourbon came to an

end From Louis XIV's brother Philip the cadet branch of Bourbon-Orleans (see ORLÉANS, family) is issued, it furnished one king, Louis Philippe (1830-48), and inherited the claim to the French crown in 1883. The line of Bourbon-Spain began with the accession (1700) of PHILIP V, a grandson of Louis XIV, to the Spanish throne. He was succeeded by Ferdinand VI, Charles III, Charles IV, and FERDINAND VII. Ferdinand VII set aside the Salic law of succession, introduced into Spain by Philip V, in favor of his daughter, ISABELLA II. Her succession was contested by the partisans of Don Carlos, second son of Charles IV, and of his descendants (see CARLISTS). Relative order was reestablished after Isabella's son was proclaimed (1874) king as Alfonso XII. His son, Alfonso XIII, was deposed in 1931 and died in exile in 1941. His marriage (1906) with Victoria of BATTENBERG introduced HEMOPHILIA into his family. His first and fourth sons died of minor accidents in 1938 and 1934, respectively. His second son, Jaime, early renounced his right of succession, which fell to Alfonso's third son, Don Juan, who was free from the disease. His son Juan Carlos, who married Princess Sophia of Greece, was chosen by the Spanish dictator Francisco FRANCO as his successor and future king of Spain. The line of Bourbon-Sicily came out of the Spanish line, it was founded by Ferdinand I of the TWO SICILIES, who succeeded (1759) his father as king of Naples and of Sicily when the latter became king of Spain as CHARLES III. His great-grandson, Francis II, was deposed in 1860, he had issue. The house of Bourbon-Parma was established (1748) in the duchy of PARMA and Piacenza by Philip, a younger son of Philip V of Spain and ELIZABETH FARNÈSE of Parma. Robert, fifth duke of the line, was deposed in 1859. Among his numerous children were Empress ZITA of Austria, SIXTUS OF BOURBON-PARMA, and Prince Rene, who married Princess Margaret of Denmark. Rene's and Margaret's daughter, Anne, married (1948) MICHAEL of Rumania.

Bourbon, Antoine de (āntwān' də), 1518-62, duc de Vendôme, king of Navarre through his marriage to JEANNE D'ALBRET, father of Henry IV of France. He converted to Protestantism after his marriage (1548), becoming one of the most influential Huguenot leaders. Although he did not take part in the conspiracy of Amboise (March, 1560), which was masterminded by his brother Louis I de Conde (see under CONDÉ, family), he supported Conde in another plot later that year. It miscarried, and Antoine was forced to hand Conde over to Catherine de' Medici. Upon the death of Francis II in Dec., 1560, Antoine renounced his right to the regency for the minor Charles IX in return for Conde's release, he was awarded the prestigious but powerless position of royal lieutenant general. In 1561 he reembraced Roman Catholicism, joining the Guise-Montmorency alliance, which hoped to replace Catherine's regency with his own. He was killed the next year fighting the Protestants at Rouen.

Bourbon, Charles, duc de (sharl, dūk də), 1490-1527, constable of France and governor of Milan. He distinguished himself at the battle of Marignano (1515) in the Italian Wars between King Francis I and Holy Roman Emperor Charles V. Enmity, encouraged by the queen mother, LOUISE OF SAVOY, arose between King Francis I and the duke, who went over to the emperor, after long negotiations, in 1523. His estates were confiscated. He fought against the French in Italy, notably at the battle of Pavia (1525), and was killed in an attack on Rome, which was sacked by his unpaid, mutinous troops. See biography by Charles Hare (1911).

Bourbonnais (bōrbōnā'), former province, central France, in the northern part of the Massif Central. It was approximately the same area as today's Allier dept. The chief cities are Moulins, Montluçon, and Vichy. It is a largely arid plateau (except for the fertile Limagne area in the west), used for grazing and cattle raising. There are coal mines near Commentry and a large steel industry at Montluçon. Moulins, the ancient capital, has many historical monuments. The counts (later dukes) of Bourbon held the Bourbonnais as an appanage until 1527, when Francis I of France confiscated it upon the death of the constable Charles of Bourbon.

Bourbon-Parma, Bourbon-Sicily, and Bourbon-Spain see BOURBON, royal family.

bourbat (būr'bat) see COD.

Bourdelle, Émile Antoine (āmēl' āntwān' bōördēl'), 1861-1929, French sculptor, son of a cabinetmaker of Montauban. He went to Paris in 1884, where he studied successively under Falguière, Dalou, and Rodin. Bourdelle differed sharply from Ro-

din in his preoccupation with the relation of sculpture to architecture. Seeking his inspiration in archaic Greece and the Gothic, he achieved his greatest success in heroic and monumental works such as *Hercules*, of which there is a cast in the Metropolitan Museum, his colossal *Virgin of Alsace*, his bas-reliefs for the Théâtre des Champs Élysées, and his monument to Americans who died in World War I (Pointe de Grave). He is also noted for his numerous portrait heads. See study by I. Jianu (1966).

Bourdon, Sébastien (sābastyān' bōördōn'), 1616-71, French painter. He imitated the styles of several painters including Claude Lorrain, Le Nain, and Poussin. Bourdon was active in Rome (1634-37), in Sweden (1652-54) as Queen Christina's court portrait painter, and in Paris, he also worked in his native Montpellier, where he painted *The Fall of Simon Magus* for the cathedral. *The Finding of Moses* is in the National Gallery of Art, Washington, D.C.

Bourdon gauge: see PRESSURE.

Bourg-en-Bresse or Bourg (bōörk-ān-brēs'), town (1968 pop. 40,407), capital of Ain dept., in Burgundy, E. central France. A major transportation hub, farm market, and gastronomic center, it is the chief city of Bresse. Machinery, morocco leather, furniture, shoes, and ceramics are also made. The church (late 15th cent.) of nearby Brou is one of the finest in France.

Bourgeois, Léon (lāōn' bōörzhwā'), 1851-1925, French statesman and social philosopher. He held cabinet posts, notably the premiership (1895-96) and was a delegate to the first and second Hague peace conferences and a member of the Permanent Court of Arbitration at The Hague. One of the earliest proponents of the League of Nations, he headed the French delegation in the League. In 1920 he was awarded the Nobel Peace Prize. His influential book, *Solidarité* (1896), advocated the use of public authority to achieve the solidarity increasingly necessary within and among nations.

bourgeoisie (bōörzhwāzé'), originally the name for the inhabitants of French medieval towns who worked as artisans and craftsmen and who occupied a socio-economic position between the peasants and the landlords in the countryside. The term was extended to include the middle class of France and subsequently of other nations. The bourgeoisie as a historical phenomenon did not begin to emerge until the development of medieval cities as centers for trade and commerce in Central and Western Europe, beginning in the 11th cent. The bourgeoisie, or merchants and craftsmen, began to organize themselves into corporations as a result of their conflict with the landed proprietors. Although trade and commerce existed in the ancient city-states of Greece and in the Roman Empire, it was primarily in the hands of those who were prevented from acquiring land. Thus, the bourgeoisie as a separate class preoccupied with material gain did not exist prior to the rise of the medieval cities. At the end of the Middle Ages, under the early national monarchies in Western Europe, the bourgeoisie found it in their interests to support the throne against the feudal disorder of competing local authorities. In England and the Netherlands, the bourgeoisie was the driving force in uprooting feudalism in the late 16th and early 17th cent. In the 17th and 18th cent., the bourgeoisie supported principles of constitutionality and natural right, against the claims of divine right and against the privileges held by nobles and prelates. The English, American, and French revolutions derived partly from the desire of the bourgeoisie to rid itself of feudal trammels and royal encroachments on personal liberty and on the rights of trade and property. In the 19th cent., the bourgeoisie, triumphantly propounding liberalism, gained political rights as well as religious and civil liberties. Thus modern Western society, in its political and also in its cultural aspects, owes much to bourgeois activities and philosophy. Subsequent to the Industrial Revolution, the class greatly expanded, and differences within it became more distinct, notably between the high bourgeois—industrialists and bankers—and the petty bourgeois—tradesmen and white-collar workers. By the end of the 19th cent., the capitalists (the original bourgeois) tended to be associated with a widened upper class, while the spread of technology and technical occupations was opening the bourgeoisie to entry from below. The term bourgeois has also long been used to imply an outlook associated with materialism, narrowness, and lack of culture—these characteristics were early satirized by Molière and have continued to be a subject of literary analysis. Within Karl Marx's the-

ory of class struggle, the bourgeoisie plays a significant role. By overthrowing the feudal system it is seen as an originally progressive force that later becomes a reactionary force as it tries to prevent the ascendancy of the proletariat (wage earners) in order to maintain its own position of predominance. Some writers argue that Marx's theory fails because he did not foresee the rise of a new, expanded middle class of professionals and managers, which, although wage earners, would not fit easily into his definition of the proletariat. See Nicholas Berdyaev, *The Bourgeois Mind and Other Essays* (1934, repr. 1966), Charles Moraze, *The Triumph of the Middle Classes* (1966), A. G. Frank, *Lumpenbourgeoisie* (1972).

Bourges (bōörzh), city (1968 pop. 73,998), capital of Cher dept., central France. It is a transportation center with foundries, arsenals, breweries, printing plants, and aeronautical and food industries. Known as Avaricum, Bourges was the Roman capital of Aquitania N. of the Garonne River (see GAUL). It early became an archiepiscopal see and the capital of BERRY. Charles VII resided there while most of France was in English hands. In 1438 he promulgated the PRAGMATIC SANCTION OF BOURGES, which was revoked in 1461 by his son Louis XI, who was born in Bourges. Louis XI founded (1463) the Univ. of Bourges, where Jacques Cujas later taught; it was abolished in the French Revolution. The Cathedral of St. Etienne (13th cent.), one of the glories of French Gothic, is remarkable in that it has no transept. Jacques Cœur, whose splendid house still stands, and Louis Bourdaloue were born in Bourges.

Bourget, Paul (pōl bōörzhā'), 1852-1935, French novelist. His early novels were naturalistic, but *Le Disciple* (1889, tr. 1901) marked a change. This work recounts the destruction of a pupil who applies his master's naturalistic literary theories to life. Bourget thereafter wrote in a Catholic and strongly moralistic tone. His psychological analysis and classic style won admiration, but the conservatism of his views restricted his popularity. Representative of his more than 60 novels are *Cruelle Énigme* (1885, tr. *Love's Cruel Enigma*, 1891), *Cosmopolis* (1893, tr. 1893), *Le Démon de midi* (1914), and *Le Sens de la mort* (1915, tr. *The Night Cometh*, 1916). He also wrote verse, plays, and critical essays.

Bourget, Le, town (1968 pop. 49,302), Seine-Saint-Denis dept., N. central France. One of the major airports of Paris is there. Charles Lindbergh landed at Le Bourget after his transatlantic flight of 1927.

Bourget, lake, 16 sq. mi. (41 sq. km), c. 11 mi. (18 km) long and 2 mi. (3.2 km) wide, NE Savoie dept., E France. It is famous for its scenic beauty. Aix-les-Bains and other resorts are located on its shores. The celebrated abbey of Haute-Combe (founded 12th cent., restored 19th cent.) is situated on the western shore.

Bourgmont, Étienne Venyard, steur de (ātyēn' vāNyār' syōr də bōörmōn'), fl. 1706-25, French explorer in what is now the United States. He came to America c. 1685. While he was acting commander of Detroit, he deserted his post in 1706 in the face of an Indian uprising caused by his intemperate actions in dealing with them. He fled to the wilderness and traveled over the region of the lower Missouri River. In 1719 the governor of New France sent Bourgmont back to France to report his discoveries, and in 1720 Bourgmont was made "commandant on the River Missouri" to block Spanish intrusion from the Southwest. In 1724 he went westward and made a treaty with the Comanche somewhere in present-day W. Kansas. In 1725 he returned to France.

Bourgogne, Hôtel de see HÔTEL DE BOURGOGNE.

Bourguiba, Habib (ha'bēb bōörgē'ba), 1903-, Tunisian statesman. Early active in the Destour party, he was an advocate of close cooperation with France. Later, however, he became a staunch nationalist and in 1934 formed the Neo-Destour party. Because of its anti-French agitation, the Neo-Destour was several times outlawed and Bourguiba was often imprisoned. In 1946 he escaped to Cairo and later went to the United States to promote Tunisian nationalism. He was imprisoned again from 1949 until he was released (1954) to negotiate an agreement that led to Tunisian autonomy (1954) and to independence in 1956. That year, he was elected premier. In 1957 he deposed the bey and was chosen president of the republic by the constituent assembly. A moderate, Bourguiba maintained close ties with the United States and favored negotiation with Israel. In Jan., 1974, he tentatively agreed to a plan for the eventual merger of Tunisia and Libya.

Bourignon, Antoinette (āntwānēt' bōörēnyōn'), 1616-80, Flemish Christian mystic, adherent of QUI-

ETISM In 1636 she fled from home to avoid a marriage urged by her father, spent a short time in a convent, and was in charge (1653-62) of an orphanage. Believing herself divinely directed to restore the pure spirit of the Gospel, she gathered (1667) at Amsterdam a fanatical following. Moving from place to place, she took her printing press with her and disseminated her quietistic teachings. According to her alleged revelations, religion was a matter of internal emotion, not of faith and practice. Her mystical ideas found particular favor in Scotland, where Bourignonism was declared a heresy (1711) and candidates for the ministry were required to renounce it before ordination. Her autobiography was translated into English as *The Light of the World* (1696). See A. R. Macewen, *Antoinette Bourignon, Quietist* (1910).

Bourinot, Sir John George (bōōr'īnō'), 1837-1902, Canadian historian and political scientist, b. Sydney, N.S. He is remembered as an authority on the Canadian constitution and government. His *Local Government in Canada* (1887), *Manual of the Constitutional History of Canada* (1888, rev. ed. 1901), *How Canada Is Governed* (1895, rev. ed. 1918), and other books are still authoritative.

Bourke-White, Margaret, 1904-71, American photo-journalist, b. New York City. One of the original staff photographers at *Fortune*, *Life*, and *Time* magazines, Bourke-White was noted for her coverage of World War II, particularly of the invasion of Russia and the liberation of Italy and of German concentration camps. Her series on the rural South during the depression, mining in South Africa, Korean guerrilla warfare, and American industry, and her portraits of world leaders are especially celebrated. Bourke-White's books include *Purple Heart Valley* (1944), *You Have Seen Their Faces* (1937, with her husband, Erskine CALDWELL), and *Portrait of Myself* (1963). She died after a 14-year battle with Parkinson's disease.

Bourmont, Louis Auguste, comte de Ghaisnes de (lwē ōgust' kōnt dā gān dā bōōrmōn'), 1773-1846, marshal of France. An emigre, he fought against the French Revolution under the prince de Condé, in the VENDEE, and as a leader of the CHOUANS. Imprisoned in 1800, he escaped (1804) to Portugal, but in 1807 he was reconciled to Napoleon, whom he served in several campaigns. In the Hundred Days he deserted to the Prussians on the eve of Waterloo and joined the Bourbon standard. King Charles X made him minister of war (1829) and marshal (1830). He was successfully leading an army to Algeria when the revolution of 1830 made him an exile. In 1832 he aided Caroline de BERRY in her feeble insurrection, in 1840 he returned to France under an amnesty.

Bourne, Francis (bōrn), 1861-1935, English prelate, cardinal of the Roman Catholic Church. He entered the priesthood in 1884 and later was made bishop coadjutor of Southwark (1896), bishop of Southwark (1897), archbishop of Westminster (1903), and cardinal (1911). He accomplished a great deal by his moderate policies in avoiding difficulties between the Catholic Church and the state in England.

Bourne, Hugh (bōōrn), 1772-1852, English founder of the sect of Primitive Methodists. In 1799 he joined the Wesleyan Methodists and became a preacher. In 1807 he began holding outdoor revival services, despite prohibitions by the Wesleyan Methodist Conference. His adherents gathered around him to establish a new community, whose first class was organized in 1810. In 1812 the name Primitive Methodists was adopted. Within the lifetime of the founder the sect gained over 110,000 members. From 1844 to 1846, Bourne visited the United States, where he gathered large congregations. See biography by J. T. Wilkinson (1952).

Bourne, Randolph Sillman (bōōrn), 1886-1918, American author, b. Bloomfield, N.J., grad. Columbia, 1912. His critical examination of the American way of life established him as a spokesman for his generation. The books he wrote on progressive education, *The Gary Schools* (1916) and *Education and Living* (1917), reflect the influence of John Dewey. Bourne opposed U.S. entry into World War I and wrote pacifist and nonintervention articles, which were collected posthumously in *Untimely Papers* (1919). See his *History of a Literary Radical* (ed. by Van Wyck Brooks, 1920), biography by J. A. Moreau (1966).

Bourne, summer resort town (1970 pop. 12,637), Barnstable co., SE Mass., crossed by Cape Cod Canal, settled 1627, inc. 1884. The canal was bridged in 1935. Tourism is the chief industry, followed closely by fishing. Points of interest in the town include the Massachusetts Maritime Academy, a replica (built

1926) of the Aptuxet Trading Post (1627), Indian Burial Hill, Sacrifice Rock, and Wishing Rock.

Bournemouth (bōrn'math), county borough (1971 pop. 153,425), Hampshire, 5 central England, on Poole Bay. It has grown since the middle of the 19th cent. from a small fishing village in the sheltered, pine-wooded valley of the Bourne to a popular resort and fine-arts center. It has an excellent sandy beach, a fine climate, and numerous parks. There is a municipal college. Mary Shelley, writer and wife of the poet, is buried in the parish churchyard. In 1974, Bournemouth became part of the new non-metropolitan county of Dorset.

Bournonville, Auguste (ōgust' bōōrnōnvēl'), 1805-79, Danish dancer, choreographer, and teacher. Bournonville studied in Copenhagen and in Paris with Auguste Vestris. He joined the Royal Danish Ballet in 1830. As soloist and, after 1848, as choreographer of more than 50 works, he developed a distinctive romantic style and precision of technique which made the company internationally famous. Bournonville fought with extraordinary energy for the recognition in Denmark of ballet as an art form. His surviving dance works include a version of *La Sylphide* and *The Dancing School*.

Bourrienne, Louis Antoine Fauvelot de (lwē aNtwan' fōvālā dā bōōrēēn'), 1769-1834, French political figure. He was a friend and for a time (1797-1802) private secretary to Napoleon, who made him a councillor of state. Bourrienne later supported the Bourbon restoration and was elected to the chamber of deputies, where he was a spokesman for the ultraroyalist followers of King Charles X. His memoirs (10 vol., 1829-31) are vivid but untrustworthy. **bourse** (bōōrs), term applied to a European STOCK EXCHANGE. The first international bourse was established in Antwerp in the 16th cent. The Paris bourse, dating from 1720, includes both the parquet, equivalent to the New York State Exchange and consisting of 70 members (who must be French citizens) ruled by a committee, and the coulisse, comparable to the lesser American exchanges and dealing in securities exchanged from the parquet.

Boussingault, Jean Baptiste Joseph Dieudonné (zhaN batēst' zhōzēf' dyodōnā' bōōsāNgō'), 1802-87, French agricultural chemist. He was professor of chemistry at Lyons and later professor of agriculture and analytical chemistry at the Paris Conservatoire des Arts et Metiers. He is known especially for his research on the nitrogen cycle. He also worked on the composition of plant tissues and on the nutritive value of forages. He is credited with the idea of agricultural field experiments. In about 1834 he laid out a series of trials on his farm in which he weighed and analyzed both the materials applied to the soil as well as the crops produced. His *Economie rurale* (1844) was later republished as *Agronomie, chimie agricole, et physiologie* (1887-91) and translated into English and German. Boussingault's experiments, however, were not limited to agriculture; his research also included work on atomic weights and the properties of steel alloys.

Bouteflika, Abdelaziz (abdēl'azēz' bōōtēflēka'), 1937-, Algerian political leader. He fought against the French in the National Liberation Army and was appointed minister of sports shortly after independence (1962). As Algeria's foreign minister (1963), Bouteflika became a major spokesman of the non-aligned nations. In 1974 he served as president of the 29th UN General Assembly.

Boutens, Pieter Cornelis (pē'tər kōrnā'lis bou'tans), 1870-1943, Dutch poet. His *Verzen* (1898) won him early praise. His impressionistic and mystical lyric verse was marked by rhythmic freedom. Boutens made extensive translations, particularly from Greek.

Boutet de Monvel, Louis Maurice (lwē mōrēs' bōōtā' dā mōNvēl'), 1851-1913, French painter and illustrator. His fame rests chiefly on his decorative illustrations for children's books and his charming watercolors, e.g., *Chansons et rondes pour les enfants*, *Chansons de France*, *La Vie de Jeanne d'Arc*, and *Nos Enfants*.

Bouts, Dierick, Dirk, or Thierry (dē'rik, dīrk, tyē'rē bouts), c. 1420-1475, early Netherlandish painter, b. Haarlem, active in Louvain. Bouts was influenced by Roger van der Weyden, the van Eycks, and Petrus Christus. His elongated, often stiffly posed figures occupy landscapes that reveal a loving care for detail. His luminous panels have a calm beauty, particularly in the landscape backgrounds, where his sensitive treatment of changing color and light is demonstrated. The *Last Supper* altarpiece (St Peter's, Louvain) is his major work. Two paintings of the Madonna and a portrait are in the Metropolitan Museum.

Boutwell, George Sewall, 1818-1905, American politician, b. Brookline, Mass. He served seven terms in the Massachusetts legislature between 1842 and 1851, was elected governor for the years 1851-52 by a coalition of Free-Soilers and Democrats, and was an organizer (1855) of the Republican party in Massachusetts. As U.S. Representative (1863-69), Boutwell, a leading radical Republican, was for a time chairman of the Committee on Reconstruction. He was one of the managers who handled the impeachment case against President Andrew Johnson, and he delivered one of the final arguments before the Senate. Although he had been (1862-63) the first commissioner of internal revenue, Boutwell knew little about finance. His selection as Secretary of the Treasury (1869-73) was representative of President Grant's many poor appointments. His one absorbing interest was the reduction of the national debt, and he neglected more important problems. His release of government gold defeated the famous attempt to corner the gold market on BLACK FRIDAY, Sept. 24, 1869, but the conspiracy need never have proceeded so far had he acted more promptly. He was a U.S. Senator from 1873 to 1877. See his *Reminiscences of Sixty Years in Public Affairs* (1902), Allan Nevins, *Hamilton Fish* (1936).

Bouvier, John (bōōvēr'), 1787-1851, American writer on law, b. France. He emigrated to Philadelphia in 1802 with his parents and later was a lawyer and journalist in Pennsylvania. His *Law Dictionary* (1839), compiled especially for American lawyers, a reference work for both the student and the practitioner, was revised and reprinted in the 19th and 20th cent.

Bouvier des Flandres (bōōvyā' dā flāN'drā), breed of powerful WORKING DOG perfected in Belgium around the beginning of the 20th cent. It stands from 23 to 28 in. (58-71 cm) high at the shoulder and weighs from 60 to 70 lb (27-32 kg). It has a fine, soft undercoat and a harsh, wiry outercoat ranging in color from fawn to black. Its ears are cropped and stand erect, and its tail is docked to approximately 4 in. (10 cm). The Bouvier is primarily a herder of cattle, but it has also been trained successfully as a police and war dog. See DOG.

Bouvines (bōōvēn'), village (1968 pop. 560), Nord dept., N. France, in Flanders. In an epochal battle there in 1214, Philip II of France defeated the joint forces of King John of England, Emperor Otto IV, and the count of Flanders, establishing the power of the French monarchy.

Bovet, Daniele (bōvā'), 1907-, Italian pharmacologist, b. Switzerland, D. Sc. Univ. of Geneva, 1929. From 1929 to 1947 he was a researcher and then head of the laboratory of therapeutic chemistry at the Institut Pasteur in Paris. From 1947 he was associated with the Instituto Superiore de Sanita in Rome. He won the 1957 Nobel Prize in Physiology and Medicine for work in developing antihistamines, sulfa drugs, and curare derivatives and other muscle relaxants for use in surgery. He also became known for studies of the effects of mental illness on the chemistry of the brain. His writings include numerous works on microbiology, toxicology, and endocrinology.

Bow (bō), river, 315 mi (507 km) long, rising in the Rocky Mts., 5 Alta., Canada, and flowing SE through Banff National Park. It emerges from the mountains in the Bow River Pass and continues past Calgary southeastward across the plains to its junction with the Belly River to form the South Saskatchewan River. On the Bow is the Bassano or Horseshoe Bend Dam (built 1912).

bow (bō), implement used in playing stringed instruments. Its name originated from the fact that in its early form it resembled an archer's bow, but by the

Bows

17th cent the European bow had gradually become flat. The violin bow received its definitive form during the period from 1775 to 1781 at the hands of François Tourte (1747–1835). He made the bow of Pernambuco wood, gave it a slightly concave curvature, and invented the device by which the horsehairs are held in place and tightened. The violoncello and the double bass are played with a bow that is shorter and heavier than the violin bow.

bow and arrow, weapon consisting of two parts, the bow is made of a strip of flexible material, such as wood, with a cord linking the two ends of the strip to form a tension from which is propelled the arrow, the arrow is a straight shaft with a sharp point on one end and usually with feathers attached to the other end. The use of the bow and arrow for hunting and for war dates back to the Paleolithic period in Africa, Asia, and Europe. It was widely used in ancient Egypt, Mesopotamia, Persia, the Americas, and Europe until the introduction of gunpowder. Arrowheads were first made of burnt wood, then of flint and bone, later of bronze, and ultimately of steel. Greek and Roman armies employed heavy infantry rather than light infantry armed with bows and arrows, but the Romans made extensive use of mounted archers. With the rise of the armored knight in the Middle Ages, infantry was armed with bows and arrows. Archery continued to develop in the 14th cent with the rise of the foot soldier. The crossbow, although known in Roman times, was not widely used until the Middle Ages. It consisted of a bow set on a stock, and was more powerful than the ordinary bow, it could fire arrows, darts, or stones. It was, however, slower than the longbow and more difficult to wield, even the arbalest, a later crossbow, was clumsy and slow. By the end of the 13th cent use of the crossbow had declined, and at the battle of Crecy (1346) English longbowmen, firing from fixed positions, so thoroughly outclassed Genoese crossbowmen fighting for the French that the longbow replaced the crossbow as the dominant European projectile weapon. The longbow had originated in Wales, probably in the 12th cent, and became prominent in the Welsh Wars of Edward I in the late 13th cent. Also significant in the history of the bow and arrow is the Asiatic bow. It was made shorter and lighter for use on horseback, and though not so strong as the longbow it was more maneuverable and could be more rapidly fired. The Chinese also developed a longbow, which proved much less effective than the English variety. The rapid rate of fire attained by archers kept the bow and arrow in use in warfare long after gunpowder was introduced, for primitive firearms required much time to load. The North American Indians and the English were particularly noted as archers. See ARCHERY. See S. T. Pope, *Bows and Arrows* (2d ed 1930, repr 1962), D. F. Featherstone, *The Bowmen of England* (1967).

Bow Bells (bō), in the church of St Mary-le-Bow (Bow Church), Cheapside, London, England. The church is located in mid-London, and tradition says that only one who is born within sound of the Bow Bells is a true Londoner, or Cockney. According to legend the Bow Bells called Dick Whittington (see WHITTINGTON, RICHARD) back to London. The fine steeple, which is over 222 ft (68 m) high, was constructed by Christopher Wren when he rebuilt the church after the great fire of 1666, the crypt of the original Norman church, with the arches (bows) for which the church is named, still stands.

Bowditch, Nathaniel, 1773–1838, American navigator and mathematician, b. Salem, Mass. He had no formal schooling after the age of 10. In 1795 he went to sea, and on five long voyages he carried out his studies in navigation and as a result corrected some 8,000 errors in Moore's *Practical Navigator*, first published in America in 1799. A new edition appeared under Bowditch's name as *The American Practical Navigator* (1802–19), it has been published by the U.S. Hydrographic Office since 1867. Bowditch made a translation (4 vol., 1829–39) of Laplace's *Mécanique céleste*. See biographies by his son N. I. Bowditch (3d ed 1884) and Paul Rink (1969).

Bowdler, Thomas (boud'lar, bōd'-), 1754–1825, English editor. He is best known for his *Family Shakespeare* (10 vol., 1818), an expurgated edition for family reading that, although attacked for its prudery, was reprinted many times. Bowdler also edited (omitting passages of an irreligious or immoral tendency) selections from the Old Testament (1822) and Gibbon's *History of the Decline and Fall of the Roman Empire* (6 vol., 1826). His editorial activities gave rise to the term *bowdlerize*, which means to expurgate a book by deleting sections considered indelicate.

Bowdoin, James (bō'dan), 1726–90, American political leader, b. Boston. He was elected to the Massachusetts General Court in 1753 and served until 1774. Illness prevented him (1774) from taking his place as a delegate to the Continental Congress. Bowdoin was (1775–77) a leading figure in the council that governed Massachusetts during the Revolution, presided over the state constitutional convention in 1779, and served (1785–87) as governor of the state. A conservative, as governor he played an active role in suppressing SHAYS'S REBELLION and also forwarded the movement toward a centralized national government. Bowdoin College, in Maine, was named for him.

Bowdoin College, at Brunswick, Maine, coeducational, chartered 1794, opened 1802, named for James Bowdoin. One of the nation's older colleges, its alumni include Nathaniel Hawthorne, Henry Wadsworth Longfellow, and Franklin Pierce.

bowel: see INTESTINE.

Bowell, Sir Mackenzie (bō'āl), 1823–1917, Canadian prime minister, b. England. A leader of the Protestant and English interests in Canada, he served as a Conservative in the Canadian House of Commons (1867–92) and in the Senate (1892–1906). After the Conservative party took office in 1878, he held a number of cabinet posts. For two years (1894–96) he was prime minister, but in 1896 his cabinet was split by the resignation of half of the ministers, and he himself was obliged to resign. He was then chosen opposition leader in the Senate but did not play an active role in politics. He was knighted in 1895.

Bowen, Elizabeth (bō'in), 1899–1973, Anglo-Irish novelist, b. Dublin. In impeccable prose she treated love and frustration through studies of complex psychological relationships. Her novels include *The Hotel* (1927), *To the North* (1932), *The House in Paris* (1936), *The Death of the Heart* (1938), and *The Heat of the Day* (1949). In her last three novels—*A World of Love* (1955), *Two Little Girls* (1964), and *Eva Trout, or, Changing Scenes* (1968)—Bowen was less concerned with rendering reality than with exploring truths best expressed in myth or parable. *Look at All Those Roses* (1941), *Ivy Gripp'd the Steps* (1946), and *A Day in the Dark and Other Stories* (1965) are volumes of short stories. Nonfiction works include *Bowen's Court* (1942), on her ancestral home, *The Shelbourne Hotel* (1951), and *Seven Winters, and Afterthoughts* (1962), a collection of childhood memories and literary studies. *Pictures and Conversations* (1975) is a collection of miscellaneous writings, including portions of a novel and autobiography left unfinished at Bowen's death. See study by A. E. Austin (1971).

bowerbird, common name for any of several species of birds of the family Ptilonorhynchidae, native to Australia and New Guinea, which build, for courtship display, a bower of sticks or grasses. Usually the males construct the bowers, some of which are large (up to 9 ft/275 cm high), while others are like small cabins or runways. The crestless gardener bowerbird, *Amblyornis inornatus*, makes a lawn around its bower. Colored stones, shells, feathers, flowers, and other bright objects, which are replaced when they become withered or worn, are used to decorate the lawns and the bowers. The satin bowerbird, *Ptilonorhynchus violaceus*, prefers blue decorative articles. The bower is constructed by the male in his effort to attract a female and has no other function than for the courtship performance. After mating has taken place in the bower, a nest is built by the female away from the bower, and there the clutch of two eggs is laid. The birds are crowlike and lack the showy plumage of the related bird of paradise. The bowers may be high pyramids, such as those built by the five species of maypole builder bowerbirds, or lower, more intricate, and painted with blue and green paints made of saliva and pigments, such as those built by the satin bowerbird and regent bowerbird (*Sericulus chryscephalus*). The great gray bowerbird (genus *Chlamydera*) of Australia is the largest member of the family, being 15 in. (37.5 cm) long. Bowerbirds do not have very pleasant calls, but they are good mimics, sometimes other species' songs are included in their repertoires. Bowerbirds are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Ptilonorhynchidae.

Bowers, Claude Gernade (zhō'nād' bou'ərz), 1878–1958, American journalist, historian, and diplomat, b. Hamilton co., Ind. After serving as editor of the Fort Wayne *Journal Gazette* (1917–23), Bowers, as editorial writer on the New York *World* (1923–31) and political columnist on the New York *Journal* (1931–33), was an influential spokesman for the

Democratic party. Ambassador to Spain (1933–39), Bowers remained in Madrid throughout the Spanish civil war. He then served (1939–53) as ambassador to Chile. Though much of his historical writing is vigorous, well written, and deservedly popular, it is frankly partisan, further praising or reappraising favorably the characters and accomplishments of Democratic leaders in the past, e.g., *The Party Battles of the Jackson Period* (1922, repr 1965), *Jefferson and Hamilton* (1925), *The Tragic Era* (1929), *Jefferson in Power* (1936), and *The Young Jefferson, 1743–1789* (1945, repr 1969). See his autobiographical *My Mission to Spain* (1954) and *Chile through Embassy Windows* (1958) and his memoirs, *My Life* (1962).

Bowers, Eilley, c. 1827–1903, American frontier figure, b. Eilley Orrum in Scotland. She became a Mormon and moved (1855) to Nevada with her second husband. He returned (1857) to Salt Lake City, but she remained, earning her living by running a boarding house for miners. Her claim in the Comstock Lode was next to that of Lemuel Sanford Bowers, whom she later married. They were among the first to derive great wealth from the lode, and they erected a great mansion near Virginia City, Nev. Their mine soon gave out, and she died in poverty. See biography by Swift Paine (1929).

Bowery, the (bou'ərē, -rē) [Dutch *Bouwerie*=farm], section of lower Manhattan, New York City. The Bowery, the street that gives the area its name, was once a road to the farm of New Amsterdam Governor Peter Stuyvesant, who is buried at St Mark's-in-the-Bouwerie, an Episcopal church. The mail route (est. 1673) to Boston traveled this road. By the 1860s and 70s it had many fine theaters. Later the section became notorious for its saloons, dance halls, swindlers, petty criminals, and derelicts. In the 1960s a portion of the area was rehabilitated and several middle-income housing projects were built.

bowfin, primitive freshwater fish found in the Mississippi basin, the Great Lakes, and E. to Vermont. The bowfin has a light covering of rounded, overlapping scales, a large mouth, and sharp teeth. Its swim bladder is capable of functioning as a lung, and the bowfin can survive out of water for a day. It prefers sluggish water and surfaces occasionally to gulp air. The female, up to 2 ft (60 cm) long, lays eggs. The smaller male builds the nest and guards the young after they hatch. Bowfins are also called freshwater dogfish, they are voracious and destructive feeders on fish and invertebrates and are sometimes cannibalistic. As game fish they are good fighters, but they are not regarded as food fish in most parts of the United States. Bowfins are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Amiiformes, family Amiidae.

bowhead whale: see RIGHT WHALE.

Bowie, James (bō'ē, bō'ē), c. 1796–1836, hero of the Texas Revolution, b. Logan co., Ky. Before arriving in Texas in 1828, he and his brother, Rezin Bowie, were noted frontiersmen in the backwoods of Catahoula parish, La. In Texas, James became a leader of the American settlers who opposed the Mexican government and joined in the Nacogdoches disturbances of 1832. When the revolution began in 1835, he was appointed colonel; he died at the ALAMO. Legend attributes the Bowie knife to his invention, but there are many different accounts of its origin. See C. L. Douglas, *James Bowie* (1944), R. W. Thorp, *Bowie Knife* (1948).

Bowie (bō'ē), city (1970 pop. 35,028), Prince Georges co., W. central Md., inc. 1916. It is mainly a residential community. Points of interest include the Woodward Mansion (c. 1743), which now serves as the city hall, and Belair Stables, now a historical museum. Bowie State College is in the city, and a racetrack is nearby.

bowlegs (genu varum), outward curvature of the leg bone (tibia) or thigh bone (femur) causing the knees to separate when the feet are placed together. When the condition is severe enough to be considered a deformity, the cause is usually a disorder that occurs early in life such as RICKETS, flat feet, a congenital disease, or an injury. Bowlegs can be corrected mechanically by braces, shoe wedges, or other orthopedic devices. In some cases the bone is straightened surgically.

Bowles, Chester Bliss (bōlz), 1901–, U.S. public official, b. Springfield, Mass., grandson of Samuel Bowles (1851–1915). At first a journalist and an advertising man, Bowles was later (1942–43) head of the Connecticut Office of Price Administration (OPA) and then national OPA director (1943–46). He then served as director of the Office of Economic Stabilization. In 1948 he was elected governor of

Connecticut as a Democrat. Defeated for reelection in 1950, he was appointed (1951) ambassador to India, where he served until 1953. From 1959–61 he sat in the U.S. House of Representatives. Chosen chairman of the Democratic platform committee for the 1960 national elections, he led the fight for a strong civil rights plank and for a vigorous policy of foreign economic and technical aid. In 1961, he was Under Secretary of State. Again appointed (1963) ambassador to India, he served until 1969. Among his writings are *The Coming Political Breakthrough* (1959), *The Conscience of a Liberal* (1962), and *Promises to Keep: My Years in Public Life, 1941–1969* (1971).

Bowles, Paul, 1910–, American writer and composer, b. New York City. He studied in Paris with Virgil Thompson and Aaron Copeland and has composed many operas, ballets, and orchestral and chamber pieces. Since 1952 he has lived in Tangier, Morocco. His fiction often traces the psychic disintegration of civilized men when faced with a primitive environment. His works include the short-story collections *The Delicate Prey* (1950) and *The Time of Friendship* (1967), and the novels *The Sheltering Sky* (1949) and *Up Above the World* (1966). See his autobiography (1972). His wife was Jane Auer. **Bowles**, 1917–73, American writer, b. New York City. Original and idiosyncratic, her works often treat the conflict between the weak and the strong. They include *Two Serious Ladies* (1943), a novel, and *In the Summer House* (1954), a play. See her *Collected Works* (1964).

Bowles, Samuel, 1797–1851, American newspaper editor, b. Hartford, Conn. He founded (1824) the Springfield (Mass.) *Republican*, a weekly. In 1844 it became a daily under the influence of his son, Samuel Bowles, 1826–78, b. Springfield, Mass., who had joined the *Republican* at 17. At 25, when his father died, he took control. His vigor, discipline, practical policies, and general editorial competence, together with the aid of an exceptional but small staff, made the Springfield *Republican* one of the half-dozen most influential newspapers in the United States. Bowles, by urging the union of all antislavery groups into a single national party, opened the way for the establishment of the Republican party in New England and became one of its most ardent members. He gave complete support to Lincoln and in the Reconstruction period opposed the legislation of the radicals and the carpetbaggers, in favor of milder measures. His condemnation of the political and financial corruption of the period resembled that of the MUCKRAKERS, and he was once sued by James Fisk for libel. In later life he traveled a great deal and sent letters about his travels back to his paper. Those of his Western trip of 1865 were collected in *Across the Continent* (1865), and those of his sojourn in Colorado, 1868, in *The Switzerland of America* (1869). See G. S. Merriam, *Life and Times of Samuel Bowles* (1885). His son, Samuel Bowles, 1851–1915, b. Springfield, Mass., was the third of the family to edit the *Republican*. He maintained its high quality by close editorial direction, but did little writing himself.

Bowles, William Lisle, 1762–1850, English poet, cleric, and literary critic. In 1804 he became vicar of Bremhill, Wiltshire, in 1818 chaplain to the prince regent, and in 1828 canon residentiary of Salisbury Cathedral. He won the admiration of Coleridge with the melancholy, rather emotional verse included in *Fourteen Sonnets* (1789). Bowles's other poetry includes *The Battle of the Nile* (1799), *The Sorrows of Switzerland* (1801), and *The Spirit of Discovery* (1804). In 1806 Bowles published an edition of Pope that was highly critical of the poet and his work, this led to an acrimonious controversy in which Bowles was vigorously assailed by Byron.

bowling, indoor sport, also called tenpins, played on an alley by rolling a ball at 10 maple pins. It is the most popular indoor participation sport in the United States, with over 20 million active players. A regulation bowling alley is constructed of polished wood and measures 41 to 42 in. (104.1 to 106.7 cm) wide and 60 ft (18.3 m) from the foul line to the center of the head pin (63 ft or 19.2 m to the end of the alley). A ball with three or four finger holes, weighing from 10 to 16 lb (4.5 to 7.26 kg) is thrown by a bowler at the pins, each of which is 15 in. (38.1 cm) high, set up in a triangular array in rows of increasing length (one through four) at the opposite end of the alley. A bowling contest is divided into 10 frames, with two throws allowed a bowler in each frame, if necessary. Each pin knocked down counts one point. Toppling all pins with the first ball is a strike and scores 10 points plus the total of the next two throws. Clearing the alley with two balls is

a spare and scores 10 points plus the next throw. A perfect game, 300 points, requires 12 consecutive strikes. Bowling originated in ancient Germany, but the Dutch introduced the game in America, where it became popular in the 19th cent. Bowling, which was played with varying numbers of pins (e.g., in ninepins) throughout the ages, was standardized as a 10-pin game in the mid-19th cent. The popularity of bowling has been spurred by the invention of automatic pin-setting machines and the televising of contests. The American Bowling Congress (founded 1895) and the Women's International Bowling Congress (founded 1916) hold yearly championships. The Federation Internationale des Quilleurs serves as the world governing body for the bowling committees of some 40 nations, including the United States and Canada. The games of duck pins, candle pins, and barrel pins are similar to bowling but are played with much smaller balls and pins. See J. L. Martin, *Bowling* (2d ed. 1971).

Bowling Green. 1 City (1970 pop. 36,253), seat of Warren co., S Ky., on the Barren River, inc. 1812. It is a shipping and marketing center for an area producing tobacco, corn, livestock, and dairy items. Textiles, apparel, automobile parts, woodwork, and heavy equipment are manufactured in the city. Bowling Green was occupied by the Confederates at the beginning of the Civil War until the Federal advance forced them to retreat in 1862. The city is the seat of Western Kentucky Univ. Nearby is Lost River Cave, said to have been a hideaway for the James brothers and for Gen. John Hunt Morgan. To the southwest lie the ruins of a Shaker settlement established in 1800. 2 City (1970 pop. 21,760), seat of Wood co., NW Ohio, in a farm area, inc. 1855. Tomato products, hydraulic hoists, and plastics are the chief manufactures. Bowling Green State Univ. is there.

Bowling Green State University, at Bowling Green, Ohio, coeducational, chartered 1910 as a normal school, opened 1914. It became a college in 1929, a university in 1935. The school maintains two-year centers in Bryan, Fostoria, and Fremont as well as a branch near Sandusky.

bowls, ancient sport (the bocce of Caesar's Rome is still played by Italians), especially popular in Great Britain and Australia, known as lawn bowls or bowling on the green in the United States. It was played in America before the American Revolution (hence Bowling Green in numerous place names), but later declined in popularity. Christian Schepflin revived the game in 1879 by forming the Dunellen (N.J.) Bowling Club. The usual "bowling green" is about 120 ft (36.58 m) square and is divided into six alleys, or rinks, each of which is 20 ft (6.1 m) wide and 120 ft long. A small white ball, called a jack, is thrown on the alley by one of the players at some spot not less than 25 yd (22.86 m) from the bowling mat. The object of the game is to roll a ball—weighing 3.5 lb (1.6 kg) and made biased so as to swerve while rolling—as close to the jack as possible, and, if necessary, to dislodge balls previously thrown by opponents. The American Lawn Bowls Association (founded 1915) standardizes rules in the United States; it is one of 10 national groups affiliated with the International Bowling Board (founded 1905). The sport called CURLING, played on ice, is related to bowls.

Bowman, Isaiah, 1878–1950, American geographer, b. Waterloo, Ont., B.S. Harvard, 1905, Ph.D. Yale, 1909. He taught geography at Yale (1905–15) and then became director (1915–35) of the American Geographical Society. He led the first Yale South American expedition (1907), served as geographer-geologist on the Yale Peruvian expedition (1911), and led the American Geographical Society Expedition to the Central Andes (1913). He was chief territorial adviser to President Wilson at the Versailles conference and served the Dept. of State as territorial adviser in World War II. He was a member of the executive committee of the National Research Council from 1919 to 1929 and was its chairman from 1933 to 1935. He was president of Johns Hopkins Univ. from 1935 until his retirement in 1948. His work on many commissions and boards includes contributions as an active officer of the Explorers Club, the Association of American Geographers, and the Council of Foreign Relations and as president (1931–34) of the International Geographical Union, and as vice president (1940–45) of the National Academy of Sciences. He was considered one of the greatest modern authorities on political geography. His books include *The Andes of Southern Peru* (1916) and *Desert Trails of Atacama* (1924), a standard work, *Forest Physiography* (1911), *The Pro-*

neer Fringe (1931), first of a series on world frontier areas, *The New World: Problems in Political Geography* (1922), and *Design for Scholarship* (1936).

Bowne, Borden Parker (boun), 1847–1910, American philosopher, b. Monmouth co., N.J. In 1876 he became head of the department of philosophy at Boston Univ. and later served as dean of the graduate school. In his philosophy, which he called personalism, he stressed the reality and freedom of the self and insisted on the central importance of personality. His masterpiece, *Metaphysics*, appeared in 1882. Other works include *Principles of Ethics* (1892), *The Immanence of God* (1905), *Personalism* (1908), and *The Essence of Religion* (1910). See J. R. Shive, *The Meaning of Individuality: A Comparative Study of Alfred North Whitehead, Borden Parker Bowne, and Edgar Sheffield Brightman* (1961), F. K. Lazarus, *Rāmānuja and Bowne* (1962).

Bowra, C. M. (Sir Cecil Maurice Bowra), 1898–1971, English classical scholar, b. China. Associated with Oxford Univ. throughout his adult life, he was warden of Wadham College (1922–71) and also served as professor of poetry (1946–51) and vice chancellor (1951–54). He was knighted in 1951. Although he wrote and edited books in many areas of literature, Bowra is particularly known for his studies of ancient Greek poetry and culture, notably *Tradition and Design in the Iliad* (1930), *Greek Lyrical Poetry* (1936), *The Greek Experience* (1957), *Pindar* (1964), and *Homer* (1972). He also edited *The Oxford Book of Greek Verse in Translation* (1937).

Bowring, Sir John (bou'ring), 1792–1872, British diplomat, linguist, and writer. An extraordinarily versatile linguist, he is remembered for his anthologies and translations of poetry from many European and Oriental languages. He was a friend of Jeremy BENTHAM, whose works he later collected and edited, and became (1824) the first editor of Bentham's *Westminster Review*. He was a member of Parliament (1835–37, 1841–49) and went on numerous financial and commercial missions to Europe and the Middle and Far East. He served as consul at Canton and in 1854 was knighted and sent as governor to Hong Kong. There he precipitated a war with China by ordering (1856) the bombardment of Canton in a dispute over the right of the Chinese to remove a Chinese pirate from a Chinese ship when that ship was registered by the British (although, in this case, the registration had expired). His *Kingdom and People of Siam* (1857) was the result of a diplomatic mission in that country. See his *Autobiographical Recollections* (1877), G. L. Nesbitt, *Benthamite Reviewing* (1934).

Bow ware (bō), English porcelain, similar to CHELSEA WARE. It was made at Stratford-le-Bow from 1730 to 1776, when its factory was absorbed by the DERRY WARE pottery.

bowwood: see MULBERRY.

box, common name for the Buxaceae, a family of trees and shrubs with leathery evergreen leaves, native to the tropics and subtropics of the Old World and to Central America. The boxes (genus *Buxus*) have been widely introduced to other regions for use as hedge plants and for their wood. Boxwood is close-grained, strong and hard, and polishes well; it is valued for wood engraving, carving, and turning, and for making musical instruments. *Pachysandra procumbens*, a native American species of an otherwise Asiatic genus, is a low, creeping herb found in the S Appalachians and cultivated elsewhere as a ground cover. The box family is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Euphorbiales.

box elder. see MAPLE.

boxer, breed of medium-sized, muscular WORKING DOG perfected in Germany in the 19th cent. but whose origins may be traced back in Europe to the 16th cent. It stands from 21 to 25 in. (53.3–63.5 cm) high at the shoulder and weighs from 60 to 75 lb (27.2–34 kg). It has a short, smooth, shiny coat of fawn or brindle, often with white markings on the head, chest, and feet, and a black muzzle. The ears are cropped to stand erect, and the tail is docked. A relative of numerous breeds of the bulldog type, the boxer was originally used in dogfighting and bull baiting. Today it is trained as a police dog and as a guide dog for the blind. The boxer is also kept as a pet. See DOG.

Boxer Uprising, 1898–1900, anticolonial movement in China, culminating in a desperate uprising against Westerners and Western influence. By the end of the 19th cent. the Western powers and Japan had established wide interests in China. The Opium War (1839–42), which Great Britain had provoked, forced China to grant commercial concessions (see

TREATY PORT) and to recognize the principle of EXTRA-TERRITORIALITY. The concessions to Great Britain were soon followed by similar ones to France, Germany, and Russia. The CH'ING regime, already weakened by European encroachments, was more enfeebled by Japan's success in the First Sino-Japanese War (1894-95) and the subsequent further partitioning of China into foreign spheres of influence. The CH'ing emperor, KUANG HSU, attempted to meet the imperialist threat by adopting modern educational and administrative reforms, but he stirred conservative opposition and was frustrated (1898) by the dowager empress, TZ'U HSI, who, favoring a last effort to expel foreign influence, supported armed resistance. She tacitly encouraged an antiforeign secret society called I Ho Ch'uan [Chinese, = righteous, harmonious fists] or, in English, the Boxers. The Boxers soon grew powerful, and late in 1899 the movement began to assume menacing proportions. Violent attacks on foreigners and on Chinese Christians occurred, particularly in the provinces of Chihli, Shansi, and Shantung, in Manchuria, and in Inner Mongolia. In those regions, railway building a visible symbol of the foreigner, was most active, and Chinese Christians, especially Roman Catholics, adherents to the foreigners' religion, were most numerous. Also located there were the majority of territorial leaseholds acquired by the European powers. In June, 1900, the Boxers (some 140,000 strong and now led by the war party at court), occupied Peking and for eight weeks besieged the foreigners and the Chinese Christians there. Provincial governors in SE China suppressed the court's declaration of war and assured the powers of protection for foreign interests, thus limiting the area of conflict to N China. The siege was lifted in August by an international force of British, French, Russian, American, German, and Japanese troops, which had fought its way through from Tientsin. The Boxer Uprising thus ended. The Western powers and Japan agreed—mainly because of U.S. pressure to “preserve Chinese territorial and administrative entity” and because of mutual jealousies among the powers—not to carry further the partition of China. Nevertheless China was compelled (1901) to pay an indemnity of \$333 million, to amend commercial treaties to the advantage of the foreign nations and to permit the stationing of foreign troops in Peking. The United States later (1908) used some of its share of the indemnity for scholarships for Chinese students. China emerged from the Boxer Uprising with a greatly increased debt and was, in effect, a subject nation. See A. H. Smith, *China in Convulsion* (1901), G. N. Steiger, *China and the Occident* (1927), C. C. Tan, *The Boxer Catastrophe* (1955), Peter Fleming, *The Siege at Peking* (1959), V. W. W. Purcell, *The Boxer Uprising* (1963), Richard O'Connor, *The Spirit Soldiers* (1973).

boxfish: see TRUNKFISH

boxing, sport of fighting with fists, also called pugilism and prizefighting. Mentioned by Homer and included in the ancient Olympian games, boxing is one of the oldest forms of competition known to man. It was popular with the Romans, who bound the fists with a knotted, and often metal-weighted, leather band, or cestus. The sport died out after the fall of Rome. It was revived in England in the early 18th cent., helped by royal patronage in the form of betting on or offering prizes to the contestants, as well as by the ring prowess of James Figg, the first British champion (1719-30), and the first set of rules, drawn up by Jack Broughton (1743). Its popularity soon spread to other countries. The use of bare fists declined after the marquis of QUEENSBERRY introduced (1865) his celebrated code of boxing rules, which became standard by 1889. The code called for boxing gloves, a limited number of 3-min rounds, the forbidding of gouging and wrestling, a count of 10 sec before a floored man is called the loser, and various other features of modern boxing. In the United States boxing was illegal for many years. New York was the first state to legalize it (1896), and others soon followed suit. Today, professional boxing is regulated in each state by athletic or boxing commissions, most of which are members of the World Boxing Association (WBA), founded in 1921. However, several states do not accept WBA rulings, and on occasion more than one champion reigns. Professional boxers, wearing gloves weighing at least 5 oz (141.75 grams) each, fight in a roped-off area, or ring, about 20 ft (6.1 m) square. Competitors are divided into classes according to maximum weight—flyweight (112 lb/50.81 kg), bantamweight (118 lb/53.53 kg), featherweight (126 lb/57.15 kg), lightweight (135 lb/61.24 kg), welterweight (147 lb/

66.68 kg), middleweight (160 lb/72.58 kg), light heavyweight (175 lb/79.38 kg), and heavyweight (over 175 lb). John L. Sullivan was the bareknuckle champion from 1882 to 1892. After the Queensberry rules were generally accepted, the recognized world's heavyweight champions were James J. Corbett (1892-97), Robert L. Fitzsimmons (1897-99), James J. Jeffries (1899-1905) [disputed 1905-10], Jack Johnson (1910-15), Jess Willard (1915-19), William H. (Jack) Dempsey (1919-26), Gene Tunney (1926-28) [disputed 1928-30], Max Schmeling (1930-32), Jack Sharkey (1932-33), Primo Carnera (1933-34), Max Baer (1934-35), James J. Braddock (1935-37), Joe Louis (Joseph Louis Barrow, 1937-49), Ezzard Charles (1949-51), Jersey Joe Walcott (Arnold Cream, 1951-52), Rocky Marciano (Rocco Marchegiano, 1952-56), Floyd Patterson (1956-59, 1960-62), Ingemar Johansson (1959-60), Charles (Sonny) Liston (1962-64), Muhammad Ali (Cassius Clay, 1964-67, 1974-) [disputed 1967-70 after Muhammad Ali's title was declared forfeit as a result of his refusal to enter the army], Joe Frazier (1970-73), George Foreman (1973-74). Other famous boxers include Henry Armstrong, Tony Canzoneri, Georges Carpentier, George Dixon, Johnny Dundee, Joe Gans, Harry Greb, Stanley Ketchel, Benny Leonard, Tommy Loughran, Kid McCoy, Jimmy McLarin, Terry McGovern, Archie Moore, Battling Nelson, “Philadelphia” Jack O'Brien, “Sugar” Ray Robinson, Barney Ross, Mickey Walker, and Jimmy Wilde. Boxing reached its peak of popularity in the 1920s and 30s. Since World War II boxing has declined in popularity, rising admission prices and the influence of television have been the main factors in the decline. Most major championship fights are now telecast only on closed-circuit networks in theaters. Other injurious influences have been scandals, ring injuries and deaths, and monopolistic practices by promoters. The largest purse in boxing history was the \$10 million split by George Foreman and Muhammad Ali in their 1974 bout in Zaire, in which Ali regained the championship. Largely drawn by Ali, one of boxing's most colorful and controversial figures, many millions of people throughout the world watched his victory on either satellite or cable television. Amateur boxing in the United States is regulated by the Amateur Athletic Union. The National Collegiate Athletic Association championships and the Golden Gloves competition are other important amateur bouts. Boxing became part of the modern Olympic games in 1904. Olympic weight divisions correspond closely to those used in professional boxing. See Pierce Egan *Boxiana* (1812, repr. 1971), N. S. Fleischer, *50 Years at Ringside* (1940, repr. 1969), John Durant, *The Heavyweight Champions* (4th ed., rev. and enl. 1971), Art Fischer et al., *Garden of Innocents* (1972), Rex Lardner, *The Legendary Champions* (1972).

box turtle, hard-shelled land TURTLE of the genus *Terrapene*, native to North America. Its lower shell, or plastron, has a hinge dividing it into front and rear sections, the animal can raise these sections to meet the upper shell, or CARAPACE, forming a secure box around its body. It is primarily a vegetarian, although it also eats insects, earthworms, and slugs. The box turtle hibernates during cold winters and mates in the spring. In summer the female buries from two to seven eggs, which hatch out in the early fall. The young often remain in the nest until the following spring. The Eastern box turtle, *Terrapene carolina*, is a woodland species found in the eastern and central United States. The Western species, *T. omata*, is found in the grasslands of the central United States and northern Mexico. There are also several rare Mexican species. Box turtles are classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Chelonina, family Emydidae.

Boyacá (bōyākā'), town (1968 est. pop. 7,700), N central Colombia, near Tunja. At Boyacá on Aug. 7, 1819, revolutionary forces under Simón BOLÍVAR won the decisive engagement that assured the independence of present-day Colombia and Venezuela from Spain.

boyars (bōyärz'), upper nobility in Russia from the 10th through the 17th cent. The boyars originally obtained influence and government posts through their military support of the Kievan princes. Their power and prestige, however, soon came to depend almost completely on landownership. The boyars occupied the highest state offices and through a council advised the prince. When political power shifted to Moscow in the 14th and 15th cent., the boyars retained their influence. However, as the Moscow grand princes consolidated their power,

the influence of the boyars was gradually eroded, particularly under Ivan III and Ivan IV. Their ancient right to leave the service of one prince for another was curtailed, as was their right to hold land without giving obligatory service to the czar. The political turmoil of the so-called time of troubles further weakened the boyars, and in the 17th cent. the rank and title of boyar was abolished by Peter I.

Boyce, William, c. 1710-1779, English composer. After studying in London, he became a composer (1736) and later an organist (1758) of the Chapel Royal and Master of the King's Music in 1755. Although overshadowed by Handel, he was the foremost English-born composer of his day. He wrote symphonies, stage works, and much vocal music. His most important work is *Cathedral Music* (3 vol., 1760-78), a compilation of church music by many English composers.

boycott, concerted economic or social ostracism of an individual, group, or nation to express disapproval or coerce change. The practice was named (1880) after Capt. Charles Cunningham Boycott, an English land agent in Ireland whose ruthlessness in evicting tenants led his employees to refuse all cooperation with him and his family. In the United States the boycott is used chiefly in labor disputes, consumers' and businessmen's groups also resort to the method. Boycotts may be either primary or secondary. A typical example of a primary boycott is the refusal of aggrieved employees and their supporters to purchase the goods or services of an employer. A secondary boycott occurs when the aggrieved party attempts either to boycott a third party or to coerce it into joining an ongoing boycott. Thus, workers instituting a boycott may refuse to patronize firms that continue to deal with the initially boycotted party. Similarly, a secondary boycott would occur if workers struck an employer in order to force him to join the boycott of another firm. In the United States, such secondary actions are prohibited by both the Taft-Hartley Act (1947) and the Landrum-Griffin Act (1959), although little has been done to enforce the ban. During the late 1960s and early 70s the United Farm Workers union employed a series of boycotts in an attempt to gain recognition as the sole bargaining agent for grape and lettuce fieldworkers. The boycott has been used as a weapon in political and racial issues. Outstanding examples are the refusal of American colonials to buy British goods after the passage of the Stamp Act (1765), the Chinese boycott of U.S. goods (1905) because of the poor treatment of Chinese in America, the refusal of Gandhi's followers to buy British-made goods in India, and the Arab League boycott (1948) of all companies dealing with the state of Israel. The legal status of the boycott differs with various governments. See H. W. Laidler, *Boycotts and the Labor Struggle* (1914, repr. 1968).

Boyd, Alan Stephenson, 1922-, U.S. Secretary of Transportation (1967-69), b. Macclenny, Fla. A lawyer in Florida, he served as general counsel to the Florida Turnpike Authority (1955) and as a member (1955-59) and chairman (1957-58) of the Florida Railroad and Public Utilities Commission. He was named to membership on the Civil Aeronautics Board by President Eisenhower in 1959, becoming its chairman in 1961. In 1965, President Lyndon B. Johnson appointed him Undersecretary of Commerce for transportation, and in 1967 he became head of the newly created Dept. of Transportation.

Boyd, Belle, 1844-1900, Confederate spy in the Civil War, b. Martinsburg, Va. (now WV). Operating (probably unofficially) in Martinsburg and Front Royal, she provided Gen. T. J. (Stonewall) Jackson with valuable information on Union activities in the Shenandoah Valley in 1862. In 1864, after being twice imprisoned and released, she went to England, supposedly with secret dispatches from Jefferson Davis to Confederate agents there. The first of her three husbands, a Union officer who had been her captor, followed her to England to marry her. After his death she began a career on the English stage (1866) and on her subsequent return to the United States toured widely, especially in the Middle West, giving dramatic talks about herself and sundry episodes of the Civil War. She wrote *Belle Boyd in Camp and Prison* (1865). See biography by L. A. Sigaud (1945).

Boyd, Ernest, 1887-1946, American critic and author, b. Dublin, Ireland. In the British consular service, he resigned in 1920 and settled in New York City, where he became an important literary figure. He contributed editorials to periodicals, wrote criticism on European literature, and translated modern French and German authors. His works include

Contemporary Drama of Ireland (1917), *Portraits, Real and Imaginary* (1924), *H. L. Mencken* (1925), *Guy de Maupassant* (1926), and *Literary Blasphemies* (1927). He was editor and translator of the complete works of Guy de Maupassant.

Boyd, Louise Arner, 1887-1972, American arctic explorer, b. San Rafael, Calif. She led a series of scientific explorations on the east coast of Greenland. The expedition of 1933, sponsored by the American Geographical Society, was described in her *The Fiord Region of East Greenland* (1935), on those of 1937 and 1938 a submarine ridge between Bear Island and Jan Mayen was made known, that of 1941 was undertaken for the National Bureau of Standards. In World War II she was (1942-43) a technical expert in the War Dept. In 1955, Boyd flew over the North Pole, the first woman to do so successfully, she photographed the area around the North Pole and the Arctic Sea. She wrote *The Coast of North-east Greenland* (1948).

Boydell, John (boi'dəl), 1719-1804, English engraver and print publisher, originator and builder of the Boydell Shakespeare Gallery. He studied engraving in London and early began to amass his fortune with the publication of his engravings of views of England and Wales. It is as the publisher of works by other engravers, however, that he is better known. In 1786 he began the publication, by subscription, of prints illustrating Shakespeare's works. The leading English artists were commissioned and a gallery was built by Boydell to house the works. Because of financial reverses, the collection was sold by lottery in 1804.

Boyd Orr, John Boyd Orr, 1st Baron, 1880-1971, British nutritionist and agricultural scientist, b. Scotland, grad. Univ. of Glasgow. He served as professor of agriculture at the Univ. of Aberdeen (1942-45), as government consultant on nutrition and health, and as director general (1946-47) of the United Nations Food and Agriculture Organization. He made notable contributions to the science of nutrition and to the solution of world food problems, and he worked toward the establishment of a world government. Knighted in 1935, he was created baron in 1949. He was awarded the 1949 Nobel Peace Prize for advocating a world food policy based on human needs rather than trade interests. His writings include *The National Food Supply and Its Influence on Public Health* (1934), *Food and the People* (1943), *Food—The Foundation of World Unity* (1948), and *The White Man's Dilemma* (1953).

Boye, Karin (ka'rēn bö'yē), 1900-1941, Swedish novelist, poet, and short-story writer. Boye's volumes of poetry, including *Moln* [clouds] (1922) and *Glomdalen* [forgotten land] (1924), reveal an austere and ardent idealism as well as a seriousness and social awareness equal to that of her prose fiction. Her early novels, e.g., *Astarte* (1931) and *Kris* [Crisis] (1934), are stylized and expressionist in style. *Kallöcarin* (1941), her last novel, is a fierce protest against totalitarianism. Boye died an apparent suicide at 40.

Boyen, Hermann von (boi'ən), 1771-1848, Prussian field marshal. After the Prussian defeat by Emperor NAPOLEON I and the disastrous treaties of Tilsit in 1807 (see TILSIT, TREATIES OF), he assisted SCHARNHORST in the reorganization of the Prussian army. As chief of staff to F. W. von BÜLOW, he fought (1813-14) against the French in the War of Liberation, and as minister of war (1814-19) he completed the reforms that were initiated earlier. His measures, including the introduction of general conscription and the development of a national guard, formed the basis of Prussian military strength. He was again minister of war from 1841 to 1847.

Boyer, Jean Pierre (zhaN pyēr bwayā'), 1776-1850, president of Haiti (1818-43). A free mulatto, he fought under TOUSSAINT L'OUVERTURE and then joined André RIGAUD, also a mulatto, in the latter's abortive insurrection against Toussaint. He returned in 1802 with the French army of Charles CLÉBER but later joined the patriots under Alexandre PÉTION, who chose him as his successor. He united N and S Haiti after the suicide of Henri CHRISTOPHE (1820), and in 1822, taking advantage of the weakness of Spanish Santo Domingo, he took control of the whole island. Compulsory labor was instituted. In 1825 a French fleet forced Boyer to pay an exorbitant indemnity in return for French losses. France then recognized Haitian independence. Financial embarrassment, combined with the labor policy and the devastation of an earthquake in 1843, brought about Boyer's overthrow and permanent exile.

Boyesen, Hjalmar Hjorth (hya'l-mär hyört boi'-ēsen), 1848-95, American writer, b. Norway, educated at the universities of Leipzig and Christiania

(Ph.D., 1868). He came to the United States in 1869 and became editor of *Fremad*, a Norwegian weekly published in Chicago. Later he was a professor at Cornell and Columbia universities; his scholarly works include *Goethe and Schiller* (1879) and *Essays on Scandinavian Literature* (1895). Boyesen is best remembered for his fiction, including *Gunnar* (1874), a romance of Norwegian life, and realistic urban novels, such as *The Mammon of Unrighteousness* (1891) and *The Social Strugglers* (1893). See biography by C. A. Glasrud (1963).

Boyle, Charles, 4th earl of Orrery. see ORRERY, CHARLES BOYLE, 4TH EARL OF

Boyle, Kay, 1903-, American writer, b. St. Paul, Minn. She lived in Europe for 30 years and has taught English at San Francisco State College since 1963. Her novels and stories often illuminate a desperate moment when courageous action is demanded although tragedy will probably result. Among her works are the novel *Plagued by Nightingales* (1931), a short-story collection, *Nothing Ever Breaks Except the Heart* (1966), and an essay collection, *The Long Walk at San Francisco State and Other Essays* (1970).

Boyle, Richard, 1st earl of Cork, 1566-1643, English settler in Ireland. He first went to Ireland in 1588 and in 1602 purchased for a small sum Sir Walter Raleigh's large landholdings in Cork, Waterford, and Tipperary. His energy and success in improving the lands, building mills, establishing ironworks and other industries, founding towns, and creating trade were remarkable and won him rapid advancement. Created earl of Cork in 1620, he was appointed (1629) one of the lord justices of Ireland and in 1631 became lord high treasurer of the kingdom. In this position he came into conflict with Thomas Wentworth (later 1st earl of STRAFFORD), who arrived in Ireland as lord deputy in 1633. In their long struggle Strafford at first was successful in depriving Boyle of a large part of his privileges and income, but Boyle's patient marshaling of the forces of opposition to Strafford's Irish program was an important factor in the latter's downfall. He remained loyal to the crown, however, and helped put down the sudden Irish rebellion of 1641. Two of his seven sons became well known—Roger Boyle, 1st earl of Orrery, and Robert Boyle, the scientist. See Dorothea Townshend, *The Life and Letters of the Great Earl of Cork* (1904).

Boyle, Robert, 1627-91, Anglo-Irish physicist and chemist. The seventh son of the 1st earl of Cork, he was educated at Eton and on the Continent and conducted most of his researches at his own laboratories at Oxford (1654-68) and London (1668-91). He invented a vacuum pump and used it in the discovery (1662) of what is now known as Boyle's law (see GAS LAWS). Boyle is often referred to as the father of modern chemistry; he separated chemistry from alchemy and gave the first precise definitions of a chemical element, a chemical reaction, and chemical analysis. He also made studies of the calcination of metals, combustion, acids and bases, the nature of colors, and the propagation of sound. Although he was especially noted for his experimental work, Boyle also contributed to physical theory, supporting an early form of the atomic theory of matter, which he called the corpuscular philosophy, and using it to explain many of his experimental results. His extensive writings established him as the leading scientist of his time and contributed greatly to the dominance of the mechanistic theory following Newton's work. Boyle was one of the group at Oxford that later became the Royal Society, but he refused the presidency of the society in 1680, as well as many other honors. See his works, ed. by Thomas Birch (6 vol., 1772, repr. 1965-66), biography by R. E. W. Maddison (1969), study by Marie Boas Hall (1958, repr. 1968).

Boyle's law: see GAS LAWS

Boylston, Zabdiel, 1679-1766, American physician, b. Brookline, Mass. He was privately educated in medicine and settled in Boston. In an epidemic of smallpox in 1721 he was persuaded by Cotton Mather to inoculate, thus introducing the practice to the United States. Beginning with his son and two slaves, he inoculated over 240 persons, all but six of whom survived. Public sentiment, however, was against the experiment, and the lives of both Boylston and Mather were threatened. In 1724, Boylston visited England, and his *Historical Account of the Small-Pox Inoculated in New England* was published there in 1726.

Boyne, river, c. 70 mi (110 km) long, rising in the Bo of Allen, Co. Kildare, E. Republic of Ireland, and flowing NE through Co. Meath, past Trim, to the Irish Sea near Drogheda. Salmon is caught in the river. In the battle of the Boyne (July, 1690) near Drogheda, the armies of King William III defeated the Catholic James II, who fled to France. The victory is commemorated annually by Irish Protestants.

Boynton Beach, city (1970 pop. 18,115), Palm Beach co., SE Fla., on the Atlantic coast, inc. 1920. It is a beach resort.

Boyron, Michel: see BARON, MICHEL

Boys' Clubs of America, federation of more than 900 clubs organized (1906) in Boston as the Federated Boys' Clubs. Its purpose is to fight delinquency by providing leisure-time activities.

Boy Scouts, organization of boys over 12 years old, founded (1908) in Great Britain by Sir Robert BADEN-POWELL. It was incorporated in 1910 in the United States, where its appearance was connected with earlier organizations—the Sons of Daniel Boone, organized by Daniel Carter BEARD, and the Woodcraft Indians, organized by Ernest Thompson SETON. In the United States, James E. West was chief scout from 1911 to 1943. From those beginnings the movement spread throughout most of the world, with the organization and program basically the same in every country. It is intended to be nonmilitary and without racial, religious, political, or class distinctions. The community-level unit is the troop, which is subdivided into patrols of about 10 boys each. An adult scoutmaster administers the troop's program. Scouts are divided into classes—tenderfoot and second-class and first-class scouts. The program of activities aims at a threefold development, mental, moral, and physical, it stresses outdoor knowledge and skills and embraces training in citizenship, nature lore, wood and camp craft, manual arts, lifesaving, and sports. Boy Scouts have performed useful service in many civic projects, sharing in nationwide safety-first and city-improvement campaigns, acting as assistant traffic patrols, and aiding in the prevention of forest fires. The first of several international gatherings of Boy Scouts, called jamborees, was held in London in 1920. See Edwin Nicholson, *Education and the Boy Scout Movement in America* (1941, repr. 1973). Two related organizations, the Cub Scouts and the Explorer Scouts, offer similar programs to 8- to 10-year-olds and older teenagers, respectively. See GIRL SCOUTS.

boysenberry: see BRAMBLE

Boys Town, village, Douglas co., E. Nebr., inc. 1936. The noted community was founded in 1917 by Father Edward J. Flanagan (1886-1948) for homeless or abandoned boys. The village is governed by the boys themselves and maintained by voluntary contributions.

Bozcaada (böz'ja'a'da) or **Tenedos** (tēn'ədōs), is land (1970 pop. 2,030), 15 sq. mi (39 sq. km), NW Turkey, in the Aegean Sea. The strategically located island was a station of the Greek fleet during the Trojan War. Xerxes used it (5th cent. B.C.) as a base for the Persian fleet. The Ottoman Turks captured it in 1657.

Bozeman, John M. (böz'mən), 1835-67, American pioneer. A Georgian, he went to the gold fields of Colorado (1861) and Montana (1862). In the winter of 1862-63 he traveled with a companion from Bannack, Mont., to Colorado by a route lying E of the Big Horn Mts. through lands reserved by treaty to the Indians. Since the only other approaches to Montana from the east were the long, circuitous Missouri River or a trail leading N from the Overland Trail in Idaho (which necessitated a double crossing of the Continental Divide), he was enthusiastic about his short cut, which became known as the **Bozeman Trail**. Several parties, including one guided by Bozeman himself, used the trail in 1864, and in 1865-66 the Federal government built forts Reno, Phil Kearney, and C. F. Smith to guard it. However, after the Fetterman Massacre, Dec. 1866 (see under FETTERMAN, WILLIAM JUDD), the trail S and E of Fort C. F. Smith was abandoned. In April, 1867, Bozeman was killed by Indians. Bozeman Pass, where the trail crossed the Belt Mts., and Bozeman, Mont., were named for him. See study by D. M. Johnson (1971).

Bozeman, city (1970 pop. 18,670), seat of Gallatin co., SW Mont., inc. 1883. The city is named after John M. Bozeman, a pioneer who led the first settlers there in 1864. Bozeman is the center of a farming and stock-raising area. Tourism is an important source of revenue; the city is the headquarters of Gallatin National Forest, and Yellowstone National Park is nearby. Montana State Univ. is in Bozeman.

Bozeman Trail: see under BOZEMAN, JOHN M

Bozen: see BOLZANO, Italy

Bozez (bō'zēz) and **Seneh** (sē'nē), two cliffs, at the entrance to the ravine of Michmah (now the Wadi Suveinet) 1 Sam 14 4,5

Bozkath (bōz'kāth), unidentified place, SW Palestine Joshua 15 39 Boscath 2 Kings 22 1

Bozrah (bōz'ra) 1 Important city of Edom, probably the modern Busayra (Jordan), SE of the Dead Sea The prophets often linked the name Bozrah with that of Edom Gen 36 33, 1 Chron 1 44, Isa 34 6, Jer 49 13,22, Amos 1 12, Micah 2 12 2 City of Moab, perhaps identical with Bezer Jer 48 24

Bozzaris, Marco or Markos (bōzār'is, -zār'is, Gr bōt'sarēs), c 1788-1823, Greek patriot Exiled from his native Epirus in 1803, he joined ALI PASHA in 1820 and later was prominent in the Greek War of Independence, notably in the defense of Mesolongion (1822-23) and at Karpenision, where he defeated the Turks with a handful of men but died in battle

Br, chemical symbol of the element BROMINE

Brabant (Fr brābān', Flemish brabant'), province (1970 pop 2,176,373), 1,268 sq mi (3,284 sq km), central Belgium BRUSSELS (the capital) and LOUVAIN are the chief cities The densely populated province is drained by the Dyle, Senne, and Demer rivers Much of its soil is fertile and is under cultivation, and there is much industry Except in Brussels, the population is mostly Flemish-speaking The province occupies the southern part of the former duchy of Brabant

Brabant, duchy of, former duchy, now divided between Belgium (Brabant and Antwerp provs) and the Netherlands (NORTH BRABANT prov) Louvain, Brussels, and Antwerp were its chief cities The duchy of Brabant emerged (1190) from the duchy of Lower Lorraine In 1430 it passed to Philip the Good of Burgundy, and in 1477 it was taken by the Hapsburgs (For the history of Brabant from 1477 to 1794 see NETHERLANDS, AUSTRIAN AND SPANISH) Like the rest of the S Low Countries, Brabant owed its extraordinary prosperity during the Middle Ages to its wool and other textile industries and to the commercial enterprise of the inhabitants of its cities and towns ANTWERP, its greatest city, was for a time the financial capital of Europe The dukes of Brabant, who relied on the towns for money to finance their wars and their luxurious life styles, granted the towns virtual self-government and an ever-increasing share in the management of the duchy In 1356 this trend culminated in the granting of a charter of liberties known as the *foyeuse Entree*, so called because each subsequent duke had to swear to it when entering Louvain after acceding According to the charter, the dukes could not declare war, conclude alliances, or coin money without the consent of delegates of the clergy, nobility, and towns, who together formed an assembly later known as the Estates of Brabant The charter was abolished (1789) by Emperor Joseph II In 1830, S Brabant led the revolt against Dutch rule that resulted in independence for Belgium Since 1840 the eldest son of the king of the Belgians has held the title duke of Brabant

Brač (brach), Ital Brazza, island (1971 pop 12,831), 152 sq mi (394 sq km), off the Dalmatian coast in the Adriatic Sea, W Yugoslavia It is a popular summer resort and tourist spot Supetar (Ital San Pietro), a small port, is the island's chief town

Bracara Augusta: see BRAGA, Portugal

Brace, Charles Loring, 1826-90, American social reformer, b Litchfield, Conn He founded (1853) the Children's Aid Society of New York, a pioneer organization that established modern methods in child welfare Among his books are *Short Sermons to Newsboys* (1866) and *Gesta Christi* (1882) See biography by Emma Brace (1894), Gordon Trasler, *In Place of Parents* (1960)

brace: see DRILL

Bracegirdle, Anne, 1663?-1748, English actress A pupil of Betterton, she was the delight of Colley Cibber and the favorite of Congreve, achieving her greatest successes as the heroines of Congreve's comedies, which were written for her Eclipsed by Anne Oldfield, she retired in 1707, but in 1710 made a reappearance as Angelica in *Love for Love* together with Betterton and Mrs Barry

Brachiopoda (brākēōp'ōdā), phylum of shelled sessile or sedentary marine animals, commonly known as lamp shells, and characterized by a peculiar feeding organ, the lophophore The shell consists of two parts, called valves, that completely enclose the body, the external appearance of the animal is much like that of a bivalve mollusk, or pelecypod,

such as a clam However, the valves of a lamp shell cover the top and bottom of the animal, while those of a clam cover the right and left sides Furthermore,

Internal anatomy of a lamp shell, Magellania, representative of the phylum Brachiopoda

the internal anatomy of brachiopods does not resemble that of pelecypods, the two groups are not related There are two classes in the phylum the Inarticulata, members of which have the valves held together by muscles alone, and the Articulata, members of which have interlocking processes that form a hinge A complex set of muscles opens the shell for feeding and closes it for protection In most brachiopods a short stalk called a pedicel, or peduncle, emerges between the valves or through an opening in the lower valve Most sessile brachiopods attach to objects by means of the pedicel, but a few lack pedicels and attach directly by the ventral valve Burrowing lamp shells have long pedicels, which they contract to retreat into the burrow The lophophore consists of two tentacle-bearing arms, often spirally coiled, one on either side of the mouth The tentacles have cilia that create currents, drawing water-bearing food particles and oxygen into the shell Food particles are trapped in mucus on the tentacles and moved by the cilia to the mouth Oxygen is absorbed through the body wall Brachiopods have a simple digestive and nervous system, and are equipped with excretory organs called nephridia The open circulatory system includes a contractile vessel, or heart, and sinuses for the flow of the colorless circulatory fluid to various parts of the body Reproduction is sexual and the sexes are usually separate In most species the eggs and sperm are shed into the sea, where fertilization results in the development of free-living, ciliated larvae The larvae settle to the bottom after developing rudiments of the adult structures A few species brood their young Brachiopods are believed to be related to the shell-less bryozoans, or moss animals (phylum ECTOPROCTA), which also have a lophophore Abundant at the start of the Cambrian period, brachiopods were widespread and numerous in ancient seas About 30,000 extinct species are known, and members of the largest species were almost 1 ft (30 cm) in diameter Fewer than 300 species are extant today, and these are relatively small, usually 1 to 2 in (2.5-5 cm) across All are marine and most prefer shallow water, they are sporadically distributed, although some are very abundant locally Among the better known lamp shells are the burrowing *Lingula* (class Inarticulata) and the stalkless, sessile *Crania* (class Articulata)

Bracken, John, 1883-1969, Canadian political leader, b Ontario A noted agricultural expert, he was premier of Manitoba for 20 years (1922-42) In 1942 he was chosen to lead Canada's Conservative party, which he renamed Progressive Conservative Elected in 1945 to the Canadian House of Commons, he served as leader of the opposition until 1948, when he resigned

bracken or brake, common name for a tall fern (*Pteridium aquilinum*) with large triangular fronds, widespread throughout the world, often as a weed It is considered poisonous to livestock when eaten in quantity, but the rootstocks and the young shoots, cooked, have been used for food Bracken is also a source of tannin and is used for thatching and as bedding for livestock A beverage is made from the roots The names *bracken* and *brake* are some-

times also applied to other large, coarse ferns and, as general terms, to a thicket of such plants Bracken is classified in the division POLYPODIOPHYTES, class Polypodiopsida, order Filicales, family Polypodiaceae

Brackenridge, Henry Marie, 1786-1871, American writer, b Pittsburgh, son of Hugh Henry Brackenridge Admitted to the Pennsylvania bar in 1806, he moved to St Louis, where he was a lawyer and journalist Among his writings are *Views of Louisiana* (1814), part of which was one of the sources of Washington Irving's *Astoria*, and a pamphlet *South America* (1817), which puts forth a policy similar to the Monroe Doctrine Sent to South America to study political conditions, he recounted his experiences in *Voyage to South America* (1819) His *Recollections of Persons and Places in the West* (1834) is a valuable historical source See biography by W F Keller (1956)

Brackenridge, Hugh Henry, 1748-1816, American author and jurist, b Scotland, grad Princeton, 1771 He studied theology and served in the American Revolution as chaplain, but later turned to law His early writings include two patriotic plays and some verse In 1781 he moved to Pittsburgh, where he founded (1786) the *Pittsburgh Gazette*, the city's first newspaper, and helped to establish the Pittsburgh Academy (now the Univ of Pittsburgh) A leading Pennsylvania supporter of the Federal Constitution, Brackenridge later acted (1794) as a peacemaker in the Whiskey Rebellion He was also a justice of the Pennsylvania supreme court from 1799 to his death He is, however, best known as an author His satirical and picaresque novel, *Modern Chivalry* (6 vol, 1792-1805, rev ed, 4 vol, 1804-7), written in a vigorous style, pictures backwoods life in America In it, the moderate democrat Brackenridge ridicules the excesses of a raw democracy He also wrote an account of the Whiskey Rebellion and several political tracts See C M Newlin, *Life and Writings of Hugh Henry Brackenridge* (1932, repr 1971), biography by Daniel Marder (1967)

Brackley, Thomas Egerton, Viscount see ELLESMERE, THOMAS EGERTON, BARON

Bracknell, new town and civil parish (1971 pop 37,279), Easthamstead rural district, Berkshire, S England Bracknell was designated one of the NEW TOWNS in 1949 to alleviate overpopulation in London Its current population target is 60,000 In 1949, Bracknell was a market town of some 5,000 persons, with timber yards and a brickmaking industry Its new industries include the manufacture of boilers, gasoline pumps, tools, clothing, and sealing compounds There is a college of further education

Bracquemond, Félix (fālēks' brakmōN'), 1833-1914, French engraver, painter, and decorator of ceramics He is best known for his many etchings, both original and reproductions of famous paintings Bracquemond was a chief founder of the influential Society of Painter-Engravers, established in France in 1889

Bracton, Henry de, d 1268, English writer on law He was the author of *De legibus et consuetudinibus Angliae* [on the laws and customs of England], a broad, philosophic treatise that is often called the most important work on English law before that of Sir William BLACKSTONE Sir Edward COKE and others used the work in their legal arguments against the king in the English civil war See edition of *De legibus* by G E Woodbine (4 vol, 1915-42), edition of Bracton's notebook by F W Maitland (3 vol, 1887)

Bradbury, Ray, 1920-, American writer, b Waukegan, Ill A popular writer of SCIENCE FICTION, Bradbury skillfully combines social and technological criticism with delightful fantasy His best-known works include the short-story collections *The Martian Chronicles* (1950) and *Dandelion Wine* (1957), the novels *Fahrenheit 451* (1953), *Something Wicked This Way Comes* (1962), and *The Halloween Tree* (1972), and a volume of poetry, *When Elephants Last in the Dooryard Bloomed* (1972)

Bradbury, William Batchelder, 1816-68, American hymn composer and music editor, b York, Maine, pupil of Lowell Mason He organized the Juvenile Music Festivals in New York, and later, after studying in Germany, he started music conventions in New Jersey He compiled over 50 collections of Sunday-school songs, and his own tunes, such as those for *He Leadeth Me*, for *Just as I Am, without One Plea*, and for *Savior, like a Shepherd Lead Us*, are still popular

Braddock, Edward, 1695-1755, British general in the French and Indian Wars Although he had seen little

active campaigning before 1754, Braddock was reputed to have a good knowledge of European military tactics and was noted as a stern disciplinarian. He was promoted to major general in 1754 and early in 1755 arrived in Virginia as commander in chief of the British forces in North America against the French. His immediate objective was the French stronghold at the forks of the Ohio (see FORT DUQUESNE). With some 700 colonial militiamen, whom he regarded disdainfully, and over 1,400 British regulars, he moved across the Alleghenies from Fort Cumberland (now Cumberland, Md.), building a road (the foundation of the National Road) as he went. The march was so slow, however, that he feared the French would reinforce Duquesne before he could reach there. Adopting the suggestion of one of his aides-de-camp, George Washington, he left the wagons behind him with one of the two British regiments and pushed ahead with about two thirds of his total force. While crossing the Monongahela River, Braddock was met (July 9, 1755) by a force of not more than 900 men (a few French, some Canadians, and many Indians) under Daniel Beaujeu, who had already learned of the advance. The British regulars, as unfamiliar with Indian-style fighting as their commander (although both had been given fair warning by the colonials), bolted from their column formation under the steady fire from a ubiquitous enemy safely concealed in ravines and behind trees. The affair turned into a bloody rout. Since the Indians paused to collect scalps and other trophies of war, the demoralized troops were able to rejoin the rear guard and both retreated safely to Fort Cumberland. Of the 1,459 actively engaged, 977 were killed or wounded, including 63 of the 89 officers, who—unlike the soldiers—fought bravely. Braddock himself had four horses shot from under him before he was mortally wounded. He died four days later at Great Meadows and was buried there, near the site of Uniontown, Pa. See D. S. Freeman, *George Washington*, Vol. II (1948), biography by Lee McCardell (1958).

Braddock, borough (1970 pop. 8,795), Allegheny co., W. Pa., an industrial suburb of Pittsburgh, on the Monongahela River, settled 1742, inc. 1867. It is a steel-manufacturing center. On that site, in 1755, Gen. Edward Braddock was defeated by the French and the Indians.

Bradenton (bră'dəntən), city (1970 pop. 21,040), seat of Manatee co., SW Fla., on Tampa Bay at the mouths of the Braden and the Manatee rivers, inc. 1903. A popular winter resort with excellent fishing in the rivers, bay, and Gulf, it is also a shipping center for the citrus fruit and truck crops of the area. Travertine is quarried and refined there. Hernando DeSoto is believed to have landed near that site in 1539, the DeSoto National Memorial is to the west (see NATIONAL PARKS AND MONUMENTS, table). The area was settled (1850s) by Joseph Braden, whose castlelike home is a local landmark. An annual event (March) is the reenactment of the DeSoto landing.

Bradford, Andrew, 1686–1742, colonial printer of Pennsylvania, b. Philadelphia, son of William BRADFORD (1663–1752). Andrew learned the trade in his father's shop in New York City and in 1712 went to Philadelphia, where he established his own press and became a bookseller. In 1719 he began publication of the *American Weekly Mercury*, the first newspaper in Pennsylvania and the third in the colonies. He was imprisoned for publishing political criticism but defended his own case for freedom of the press, establishing a precedent for the defense of John Peter Zenger. In 1741 he began publication of the short-lived (three issues) *American Magazine*, the first colonial magazine.

Bradford, Augustus Williamson, 1806–61, Civil War governor of Maryland (1862–66), b. Bel Air, Md. As a delegate to the 1861 peace conference in Washington, he strongly pleaded for the Union and became the Union party candidate for governor of Maryland. Elected by a large majority, partially as a result of intimidation at the polls by Union soldiers, Bradford served from 1862 to 1866, assuring Federal control of the state. In 1862 and 1863 he appealed for volunteers in a state-equipped local militia that helped turn back Confederate invasions of state territory. Denying that the Federal government had the power to free the slaves in Maryland, he called a state convention in 1864 that framed a new constitution abolishing slavery. See W. B. Hesseltine, *Lincoln and the War Governors* (1948).

Bradford, Gamaliel, 1863–1932, American biographer, b. Boston. After many unsuccessful years as a writer, he achieved literary fame as a biographer with his *Lee*, the *American* (1912). He perfected the

method of writing "psychographs," or short portraits of historical figures. His works in this area include *Confederate Portraits* (1914), *Union Portraits* (1916), and *Damaged Souls* (1923). See his autobiographical *Life and I* (1928) and his journal (1933) and letters (1934), both edited by Van Wyck Brooks.

Bradford, John, 1510?–1555, English Protestant martyr, burned at Smithfield as a heretic in 1555. A complete collection of his writings, edited by Aubrey Townsend, was published in 1848–53.

Bradford, John, 1749–1830, pioneer printer of Kentucky, b. Virginia. He moved to Kentucky c. 1779. Although he had no previous practical experience, he issued at Lexington on Aug. 11, 1787, the first number of the *Kentucky Gazette*, the first newspaper in the territory, and succeeded, despite many handicaps, in making it a creditable sheet. In 1788 he printed the *Kentucke Almanac*, the first pamphlet in the W. United States. In 1792, Bradford published the acts of the initial session of the Kentucky legislature, the first book to be published in Kentucky. He aided in founding Transylvania Univ. and was the first chairman of the board (1799–1811). In 1826 he began to publish in the *Gazette* his "Notes of Kentucky," a valuable historical source, which continued until 1829.

Bradford, William, 1590–1657, governor of Plymouth Colony, b. Austerfield, Yorkshire, England. As a young man he joined the separatist congregation at Scrooby and in 1609 emigrated with others to Holland, where, at Leiden, he acquired a wide acquaintance with theological literature. Bradford came to New England on the *Mayflower* in 1620 and in 1621, on the death of John CARVER, was chosen leader of the Pilgrims. He remained governor for most of his life, being reelected 30 times, during the five years in which he chose not to serve, he was elected assistant. Bradford, though firm, used his large powers with discretion, and there were few complaints about his leadership. He maintained friendly relations with the Indians and struggled hard to establish fishing, trade, and agriculture. He stressed the obligations of the colonists to their London backers and was one of the eight colonial "undertakers" who in 1627 assumed Plymouth Colony's debt to the merchants adventurers. Given a monopoly of fishing and trading privileges, they finally discharged the debt in 1648. Bradford was more tolerant of other religious beliefs than were the Puritan leaders of Boston (although he was by no means consistent in this respect), and he was largely responsible for keeping Plymouth independent of the Massachusetts Bay colony. His famous *History of Plimoth Plantation*, not published in full until 1856, forms the basis for all accounts of the Plymouth Colony. The editions of W. T. Davis (1908), W. C. Ford (1912), and Samuel Eliot Morison (1952) are the best. See also G. F. Willison, *Saints and Strangers* (1945), biography by Bradford Smith (1951).

Bradford, William, 1663–1752, British pioneer printer in the American colonies. Born in Leicestershire, England, he served an apprenticeship under a London printer before emigrating in 1685 to Philadelphia, where he set up the first press. He added a bookstore in 1688 and was in 1690 one of the founders of the first paper mill in the colonies. He was arrested for printing a pamphlet critical of the Quaker government, his trial, at which no verdict was reached, was probably the first in the United States involving freedom of the press. Bradford moved (c. 1693) to New York City where he became royal printer and issued some 400 items in the next 50 years, including the first American Book of Common Prayer (1710), some of the earliest of American almanacs and many pamphlets and political writings. In 1725 he began publication of the royalist *New York Gazette*, the first New York newspaper. Many of his descendants, including Andrew BRADFORD and William BRADFORD, became printers.

Bradford, William, 1722–91, American Revolutionary printer and patriot, grandson of William Bradford (1663–1752). He learned printing from his uncle, Andrew Bradford, in Philadelphia, and in 1742 he set up his own shop. He established the successful anti-British *Weekly Advertiser*, which competed for many years with Benjamin Franklin's newspaper, the *Pennsylvania Gazette*. He also printed a number of books and published (1757–58) the *American Magazine* and *Monthly Chronicle*. In 1754 he established the London Coffee House in Philadelphia, this became the seat of the merchants' exchange. Bradford opposed the Stamp Act and took an active part in opposition to British measures, becoming a leader of the Sons of Liberty. He advocated and became official printer to the First Continental Con-

gress. Sacrificing his business, he became a major in the Continental Army and took part in the campaign in New Jersey. At Princeton he was badly wounded and his health shattered. His son, Thomas Bradford (1745–1838), carried on the business and published the *Merchants' Daily Advertiser*. See J. W. Wallace, *An Old Philadelphian* (1884).

Bradford, county borough (1971 pop. 293,756), West Riding of Yorkshire, N. central England, on a small tributary of the Aire River. It is a center of the worsted industry, which dates from the Middle Ages. There is an important wool exchange. Besides woollens, other fabrics (including synthetics) are made. Electroplating, electrical engineering, and the manufacture of machinery and automobiles are also important industries. There are stone quarries nearby. Bradford's landmarks include the memorial hall, dedicated to Edmund Cartwright, inventor of the power loom, St. Peter's Church (1458), now the cathedral of the diocese of Bradford, and the Conditioning House, a unique textile-testing establishment. The Univ. of Bradford, Bradford Technical College, Bradford Regional College of Art, and Margaret McMillan Memorial College of Education are in the borough. In 1974, Bradford became part of the new metropolitan county of West Yorkshire.

Bradford, city (1970 pop. 12,672), McKean co., NW Pa., in the Alleghenies, near the N.Y. line, settled c. 1823, inc. as a city 1879. The growth of the city was initiated by the discovery of oil (c. 1871), and oil refining is still a major industry. Other products include electronic components, steel couplings, cutlery, chemicals, and explosives. A two-year branch of the Univ. of Pittsburgh is in the city. Nearby are Allegheny National Forest (with its dam and reservoir) and Allegany State Park (N.Y.), the area is popular for hunting and fishing.

Bradlaugh, Charles (brăd'lô), 1833–91, British social reformer, a secularist. Editor of the free-thinking weekly *National Reformer* from 1860 and later associated with Annie BESANT, he was an early advocate of woman's suffrage, birth control, free speech, national education, trade unionism, and other controversial causes. In 1880, Bradlaugh was elected to Parliament after several unsuccessful attempts. Rather than take a Bible oath to be sworn in as a member of Parliament, Bradlaugh, an atheist, demanded the right to take an affirmation. This action provoked a great deal of controversy, and it was not until 1886 that the matter was settled in his favor. His numerous works include *Land for the People* (1877), *The True Story of My Parliamentary Struggle* (1882), and *Speeches* (1890). See H. Bradlaugh Bonner, *Charles Bradlaugh* (7th ed. 1908), J. P. Gilmour, ed., *Champion of Liberty* (1933), Walter L. Arnstein, *The Bradlaugh Case* (1965), David Tribe, *President Charles Bradlaugh*, M. P. (1971).

Bradley, Andrew Cecil, 1851–1935, English scholar and critic, b. Cheltenham, brother of Francis Herbert Bradley. He taught at Oxford for many years and was professor of poetry there (1901–6). Bradley is noted for his *Shakespearean Tragedy* (1904), a classic work of criticism noted for its exposition of Hamlet, Othello, and Macbeth as psychological beings and of Shakespeare as a consummate interpreter of the human soul. Bradley's other works include *Oxford Lectures on Poetry* (1909) and *Ideals of Religion* (1940).

Bradley, Francis Herbert, 1846–1924, English philosopher. He was educated at Oxford, where he became a fellow of Merton College in 1876. His works include *Ethical Studies* (1876), *Principles of Logic* (1883), and *Appearance and Reality* (1893). In logic Bradley attacked the psychological tendencies of empiricism by differentiating sharply between the mental act as a psychological event and its universal meaning, to him only the latter was the concern of logic. In metaphysics Bradley held that absolute idealism, in which the world of appearance is characterized by contradiction, is opposed to the absolute, in which all contradiction, including the gulf between subject and object, is transcended. Although greatly influenced by Hegel, Bradley's metaphysics is generally considered a highly original contribution to philosophical thought. See his collection of essays (2 vol., 1935), studies by Richard Wollheim (1959), A. K. Ganguly (1964), and G. L. Vander Veer (1970).

Bradley, James, 1693–1762, English astronomer, educated at Oxford. His discovery of the aberration of light, announced in 1729, placed him among the foremost contemporary astronomers. His second important discovery, the nutation, or "nodding," of the earth's axis, was not made known until 1748, when it had stood the test of careful observations.

over a period of nearly 19 years. In 1742, Bradley became astronomer royal. Under his direction the observatory at Greenwich was supplied with new instruments.

Bradley, Omar Nelson, 1893–, U.S. general, b. Clark, Mo. A graduate of West Point, he served in World War I and filled various army administrative and academic posts before assuming (1943) command of the 2d Corps in World War II. Bradley was active (1943) in the N. African and Sicilian campaigns and led (1944) the U.S. 1st Army in the invasion of Normandy. Later he commanded the U.S. 12th Army Group in the battle for Germany. Bradley acted (1945–47) as administrator of veterans' affairs, was appointed (1948) chief of staff of the U.S. army, and served (1949–53) as first permanent chairman of the joint chiefs of staff. Promoted to general of the army in 1950, he retired in 1953 to become a business executive. See his *Soldier's Story* (1951) and *Collected Writings* (4 vol., 1967).

Bradshaw, George, 1801–53, English map engraver and the originator of railway guides. *Bradshaw's Railway Time-Tables*, first published in 1839, became *Bradshaw's Monthly Railway Guide* (first issued 1841). He afterwards published *The Continental Railway Guide* and others.

Bradshaw, Henry, 1831–86, English librarian and antiquarian at Cambridge Univ. He discovered, organized, and made known the university's treasures of manuscripts and incunabula, especially those in Gaelic—the Book of Deer and old Celtic glossaries—and the early Waldensian records in the Piedmont MSS. He was dean of King's College from 1857 to 1865.

Bradshaw, John, 1602–59, English regicide judge. In 1649 he was made president of the parliamentary commission to try Charles I., other lawyers of greater prominence having refused the position. His conduct of the trial was arbitrary, he even refused the king the right to speak in his own defense. For a short time he was rewarded with honors and offices and acted (1649–53) as president of the council of state. He was forced to retire when Oliver Cromwell dissolved the council, and he became an opponent of the Protectorate.

Bradstreet, Anne (Dudley), c. 1612–1672, early American poet, b. Northampton, England, considered the first significant woman author in the American colonies. She came to Massachusetts in the Winthrop Puritan group in 1630 with her father, Thomas Dudley, and her husband, Simon Bradstreet, both later governors of the state. A dutiful Puritan wife who raised a large family, she nevertheless found time to write poetry. In 1650 her first volume of verse appeared in London as *The Tenth Muse Lately Sprung Up in America*. It was followed by *Several Poems* (Boston, 1678), which contains "Contemplations," probably her best work. Her verses are often derivative and formal, but some are graced by realistic simplicity and genuine feeling. See her works ed. by J. Hensley (1967), biography by E. W. White (1971).

Bradstreet, John, c. 1711–1774, British officer in the French and Indian Wars. A Nova Scotian, he was captured (1744) by the French and confined at LOUISBURG. After his exchange he described the weaknesses of the fortress, and in 1745 Sir William Pepperell captured the stronghold. For his services in the expedition, Bradstreet was promoted to the rank of captain and made lieutenant governor of St. John's, N.F., a post he held permanently. He led (1758) the successful expedition against Fort Frontenac, thereby cutting communications between the French forces in Canada and those on the Ohio River. Later he served (1759) under Lord AMHERST at Ticonderoga and Crown Point. In PONTIAC'S REBELLION, Bradstreet commanded the forces that garrisoned (1764) Detroit and other Western posts.

Bradstreet, Simon, 1603–97, colonial governor of Massachusetts, b. Lincolnshire, England. He emigrated to New England in 1630 and was assistant in the Massachusetts Bay Company for 49 years (1630–79) and for part of that time served as secretary (1630–36). In 1634, Bradstreet was sent with four others to the Plymouth, New Haven, and Connecticut colonies to negotiate concerning the formation of the New England Confederation, and on its organization became one of two Massachusetts representatives, a post he retained for 33 years. After the Restoration, John Norton and he went to England and succeeded in persuading Charles II to confirm the colony's charter. His first period as governor (1679–86) was followed by the unsuccessful royal administration of Sir Edmund ANDROS. He served as governor again, from 1689 to 1692. Anne BRADSTREET was his wife.

Bradwardine, Thomas (brād'wārdēn), c. 1295–1349, English mathematician, natural philosopher, and theologian. He was chaplain to Edward III (c. 1338) and later Archbishop of Canterbury. As a mathematician he is known for his *Tractatus de proportionibus velocitatum* (1328), which goes beyond the usual scholastic approach in attempting to derive novel quantitative relations between speed and force, as a natural philosopher he defended Aristotle's concept of the plenum against atomistic views, e.g., in his *Tractatus de continuo*. His major theological work, *De causa Dei contra Pelagium*, takes a determinist position on the problem of free will.

Brady, Diamond Jim (James Buchanan Brady), 1856–1917, American financier and philanthropist, b. New York City. He was a bellboy and messenger and then worked for the New York Central RR in various capacities. He later was employed by a railroad supply company, and his selling ability rapidly brought him a fortune. He began collecting diamonds and other jewels and amassed 30 complete sets of jewelry estimated as worth well over \$1 million. He was famous for his appetite and elaborate meals and was one of the best-known men in New York's Broadway night life. In 1912 he gave funds to Johns Hopkins Hospital, Baltimore (where he had received treatment) to found the James Buchanan Brady Urological Institute. See biography by Parker Morrell (1934, repr. 1970).

Brady, Mathew B., c. 1823–96, American pioneer photographer, b. Warren co., N.Y. Brady learned the daguerreotype process from S. F. B. Morse and in 1844 opened his own photographic studio in New York City, which brought him widespread fame. He published *Gallery of Illustrious Americans* in 1850 and five years later experimented successfully with the wet-plate process. He began photographing President Lincoln in 1860. When the Civil War began Brady was authorized to accompany and photograph the armies, through his efforts a vast visual record of the war was preserved. In 1875 the government purchased part of Brady's collection, but the rest passed into private hands after the photographer's financial failure. In 1954 the Library of Congress acquired the enormous Handy collection of Brady's work. See Roy Meredith, *Mr. Lincoln's Camera Man* (1946, repr. 1974), J. D. Horan, *Mathew Brady, Historian with a Camera* (1955), H. D. Milhollen and D. H. Mugridge, comp., *Civil War Photographs* (1961).

Brady, Samuel, 1758–95, American frontiersman. He fought in several battles of the American Revolution but earned his name as a scout in the Ohio country under Daniel Brodhead and Anthony Wayne. His exploits were the subject of much frontier legend.

bradycardia: see ARRHYTHMIA

Braga, Teófilo (tə'fəloō brā'ga), 1843–1924, Portuguese intellectual and political leader, b. Ponta Delgada in the Azores. At the Univ. of Coimbra he was a member of the positivist circle of Quental. In 1871 he began to teach at the Univ. of Lisbon, writing voluminously on many subjects. He tried to apply the positivist principles of Comte in his general history of Portuguese Literature (10 vol., 1870–81). A republican and an anticlerical in politics, he was chosen as first president of the new republic of Portugal (1910–11) and served again briefly in 1915. His teaching had a great effect on Portuguese intellectual life, and his writing stimulated interest in Portuguese history and literature. Several collections of his poetry were published during his lifetime.

Braga, city (1970 municipal pop. 101,877), capital of Braga dist., NW Portugal, in Minho. It is an agricultural trade center with minor industry. The ancient Bracara Augusta, it had considerable importance in Roman days, but was of much more importance in the Middle Ages as the see of the bishop of Braga, who rivaled the bishop of Toledo in power. As the seat of Portugal's titular primate, the city is still a religious center. In the old cathedral is the tomb of Henry of Burgundy. Nearby is a summer resort with the well-known Church of Bom Jesus do Monte.

Bragança (bragan'sə) or **Braganza** (–zə), town (1970 municipal pop. 33,928), capital of Bragança dist., NE Portugal, in Trás-os-Montes. It is of interest because of its castle, seat of the Braganza family, long the royal family of Portugal.

Braganza (brāgān'zā), royal house that ruled Portugal from 1640 to 1910 and Brazil from 1822 to 1889. It took its name from the castle of Braganza or Bragança. The line was descended from Alfonso, the natural son of John I of Portugal, who married the daughter of Nun'Alvares Pereira, the duke of Braganza. Although Alfonso's grandson, Ferdinand, was

executed for alleged treason by John II, the family steadily increased its possessions. John, 6th duke of Braganza, married a niece of King John III, and when the Portuguese threw off Spanish rule in 1640, their grandson became king as John IV. The house of Braganza ruled Portugal until the establishment of a republic in 1910. After Brazil declared (1822) its independence, it was ruled as an empire under Pedro I, son of John VI of Portugal, and Pedro II until a revolution made it a republic in 1889.

Bragg, Braxton, 1817–76, Confederate general in the U.S. Civil War, b. Warrenton, N.C. A graduate of West Point, he fought the Seminole and in the Mexican War was promoted to lieutenant colonel for distinguished service at Buena Vista. He resigned from the army in 1856 and lived on his Louisiana plantation until the outbreak of the Civil War, when he was appointed a Confederate brigadier general and assigned to command the coast from Pensacola, Fla., to Mobile, Ala. Shortly after being promoted to major general (Jan., 1862), he assumed command of Gen. A. S. Johnston's 2d Corps, leading it in the battle of Shiloh (April). With Johnston's death, Bragg was made a general, and he succeeded (June) General Beauregard in command of the Army of Tennessee. His invasion of Kentucky (Aug.–Oct., 1862) was unsuccessful, ending in retreat to Tennessee after Gen. D. C. BUELL caught up with him at PERRYVILLE. A reorganized Union army under Gen. W. S. ROSECRANS was then sent against him and at MURFREESBORO (Dec. 31, 1862–Jan. 2, 1863) forced him to withdraw again. In the CHATTANOOGA CAMPAIGN, Bragg, victorious in the battle of Chickamauga, laid siege to the Union army in Chattanooga, but in Nov., 1863, Gen. U. S. Grant thoroughly defeated him and forced him to retire into Georgia. Gen. J. E. JOHNSTON took over his command (December) and Bragg went to Richmond, where he became military adviser to Jefferson Davis, with nominal rank as commander in chief of Confederate armies. After the war he was chief engineer of Alabama and later lived in Texas, where he died. See biography by D. C. Seitz (1924, repr. 1971), study by Grady McWhiney (Vol. I, 1969).

Bragg, Sir William Henry, 1862–1942, English physicist, educated at King William's College, Isle of Man, and Trinity College, Cambridge. He served on the faculties of the Univ. of Adelaide in Australia (1886–1908), the Univ. of Leeds (1909–15), and the Univ. of London (1915–23). From 1923 he was Fullerian professor of chemistry in the Royal Institution and director of the Davy-Faraday research laboratory. He shared with his son W. L. Bragg the 1915 Nobel Prize in Physics for their studies, using the X-ray spectrometer, of X-ray spectra and of crystal structure. He became a Fellow of the Royal Society in 1906 and served as president of the society from 1935 to 1940. In 1920 he was knighted. Among his works are *The World of Sound* (1920), *Concerning the Nature of Things* (1925), *An Introduction to Crystal Analysis* (1929), and *The Universe of Light* (1933). With W. L. Bragg he wrote *X Rays and Crystal Structure* (1915, 5th ed. 1925). See biography by Sir Kerr Grant (1952).

Bragg, Sir William Lawrence, 1890–1971, English physicist, b. Adelaide, Australia, educated in Australia and at Trinity College, Cambridge, son of W. H. Bragg. He was professor of physics at Victoria Univ., Manchester, from 1919 to 1937. From 1938 to 1953 he was professor of experimental physics at Cambridge and director of the Cavendish Laboratory. In 1954 he was made head of the Royal Institution. He shared with his father the 1915 Nobel Prize in Physics for their studies, with the X-ray spectrometer, of X-ray spectra and of crystal structure. In 1941 he was knighted. Among his works are *The Structure of Silicates* (1930, 2d ed. 1932) and *Atomic Structure of Minerals* (1937). With his father he wrote *X Rays and Crystal Structure* (1915, 5th ed. 1925).

Brahe, Tycho (tī'kō brā), 1546–1601, Danish astronomer. The most prominent astronomer of the late 16th cent., he paved the way for future discoveries by improving instruments and by his precision in fixing the position of planets and stars. From Brahe's exact observations of the planets, Kepler devised his laws of planetary motions (see KEPLER'S LAWS). Brahe's achievements included the study of a supernova (first observed in 1572 and now known as Tycho's star) in the constellation Cassiopeia and the discoveries of a variation in the inclination of the lunar orbit and of the fourth inequality of the moon's motion. He never fully accepted the Copernican system but made a compromise between that and the Ptolemaic system. In the Tychonic system, the earth was the immobile body around which the

sun revolved, and the five planets then known revolved around the sun. Given funds by the Danish king Frederick II, Brahe built on the island of Ven a castle, Uraniborg, and an observatory, Stjerneborg. He was deprived of his revenues by Christian IV in 1596 and left Ven (1597) and in 1599 settled near Prague under the patronage of the German emperor Rudolf II. He published (1588) *De mundi aetherii recentioribus phaenomenis*, the second volume of a projected three-volume work on his astronomical observations, from an incomplete manuscript and notes Kepler edited. Volume I, *Astronomiae instauratae progymnasmatia* (1602). Brahe's *Astronomiae instauratae mechanica* (1598) contained his autobiography and a description of his instruments. See biographies by J. L. Dreyer (1890, repr. 1963) and J. A. Gade (1947).

Brahm, Otto (ô'tô bram), 1856-1912, German theatrical director, manager and critic. Inspired by the work of Antoine in Paris, he founded a theater, the Freie Bühne, in Berlin in 1889. There he devoted his efforts to eliminating from the German stage old-fashioned techniques by employing the theories and methods of the naturalists. In 1894 he became director of the larger DEUTSCHES THEATER and the acknowledged leader of the modern German theater movement.

Brahma (bra'mâ), one of the three supreme gods of HINDUISM, the others being VISHNU and SHIVA. In the late Vedic period he was called Prajapati, the primeval man, whose sacrifice permitted the original act of creation. Although worshiped until Gupta times, his popularity declined, and today only a single temple near modern Ajmer is devoted to him. He is regarded as the creator and is reborn periodically in a lotus that grows from the navel of the sleeping Vishnu. His consort is Sarasvati, patroness of art, music, and letters, and the traditional inventor of the Sanskrit language. A basic unit in the Hindu chronology is the *kalpa*, or "day of Brahma," which is equal to 4,320,000,000 earthly years. The neuter form of the masculine name Brahma is Brahman.

Brahmagupta (bra'măgôp'tă), c. 598-c. 660, Hindu mathematician and astronomer. He wrote in verse the *Brahma-sphuta-siddhanta* [improved system of Brahma], a standard work on astronomy containing two chapters on mathematics that were translated into English by H. T. Colebrooke in *Algebra from the Sanskrit of Brahmagupta* (1817). A shorter treatise, *The Khandakhadyaka* (tr. 1934), expounded the astronomical system of Aryabhata.

Brahman: see VEDANTA

Brahman or Brahmin (both bra'man), member of the highest, or priestly, caste of the Hindus. The Brahmins alone may interpret the VEDAS and perform the Vedic sacrifice. The vast majority of Brahmins today are in occupations unrelated to religion, but they retain their social prestige and many caste conventions. The Brahmins of India are divided into 10 territorial subcastes, 5 in the north and 5 in the south.

Brahman cattle, breed of beef cattle developed in the S United States in the early 1900s by combining several breeds or strains of ZEBU cattle of India. Brahman cattle have a very distinctive appearance with a hump over the shoulders, loose skin under the throat, and large drooping ears; they are generally light to medium gray in color. Much of the contribution of this breed to beef production has been through crossing with European cattle, e.g., Hereford and Angus. These hybrid cattle exhibit hybrid vigor, i.e., they generally exhibit growth and reproductive rates greater than either of the parental types. Several new breeds of cattle have been developed in the United States based on Brahman-European crosses, some important ones being the Beefmaster (Brahman combined with SHORTHORN CATTLE and HEREFORD CATTLE), Brangus (Brahman combined with ANGUS CATTLE), Charbray (Brahman combined with CHAROLAIS CATTLE), and Santa Gertrudis (Brahman combined with Shorthorn). Brahman cattle have been extensively exported.

Brahmanism: see HINDUISM

Brahmaputra (brâmăpô'tră) [Sanskrit, = son of Brahma], river, c. 1,800 mi (2,900 km) long, rising in the Kailas range of the Himalayas, SW Tibet (China), and flowing through NE India to join with the Ganges River in central Bangladesh to form a vast delta, navigable for large craft c. 800 mi (1,290 km) upstream. In Tibet, where it is called the Tsangpo, the river flows c. 700 mi (1,130 km) east in a wide navigable channel and forms an important east-west transport route. In SE Tibet the river turns south and flows swiftly through deep, narrow gorges into In-

dia. In Assam state it takes the name Brahmaputra and flows c. 450 mi (725 km) through the broad, fertile Assam valley. Entering Bangladesh, where it is called the Jamuna, the river continues south to the Bay of Bengal via the Ganges-Brahmaputra delta. The river's lower course is sacred to Hindus. Tea, rice, and sugarcane are the main crops of its fertile valley.

Brahmin: see BRAHMAN

Brahmo Samaj (bra'mô sâmaj') [Hindi, = society of God], Indian religious movement, founded in Calcutta in 1828 by Rammohun ROY. It promoted a monotheistic, reformed Hinduism with strong Islamic and Christian overtones, support for the rights of women, and opposition to such aspects of Hinduism as idolatry and animal sacrifice. Under Roy the organization attained considerable importance in E India until his death in 1833. After a decade of decline, it was revived by Debendranath Tagore in 1843. A schism divided the organization in 1865, when Keshub Chunder Sen split with Tagore and formed the Adi Brahmo Samaj, and in 1878 Sen's group itself divided. Sen's followers formed a new church, the Nava-Vidhana, while the dissidents founded the Sadharan Brahmo Samaj, which became dominant. The Brahmo Samaj movement had great influence in the 19th cent., but, although it still exists, it has had little impact on 20th-century Hinduism. See P. K. Sen, *Biography of a New Faith* (2 vol., 1950-54), K. C. Sen, *The Voice of Keshub* (1963), P. V. Kanai, *An Introduction to Dev-Samaj* (1965).

Brahms, Johannes (brâmz, Ger. yôhan'nēs brams), 1833-97, German composer, b. Hamburg. Brahms ranks among the greatest masters of the romantic period. The son of a musician, he early showed astonishing talent in many directions; he chose as a boy to become a pianist. As accompanist to the violinist Eduard Remenyi he attracted the notice of Johann Joachim, who introduced him to leading musical circles. Brahms became the devoted friend of Robert and Clara Schumann, both of whom admired his compositions. His later activities as pianist and as choral conductor were not very successful, but after he settled in Vienna his compositions brought him enough money to support himself in simple comfort. Brahms never married, although he had several love affairs and remained deeply attached to Clara Schumann for many years after her husband's death. His extreme self-criticism led him to destroy much of what he composed, thus limiting the number of his existing works but ensuring a uniformly high quality. In his music the romantic impulse is restrained by a reverence for the forms of the past. This blend of romantic feeling and classical spirit is exemplified in such works as his *Variations on a Theme by Handel* (1861), for piano, and the orchestral composition *Variations on a Theme by Haydn* (1873). In his day, Brahms's conservative romanticism was contrasted with Richard Wagner's dramatic romantic style, and a controversy raged between supporters of Brahms and the followers of the "neo-German" school led by Liszt and Wagner. Brahms wrote four symphonies, which are considered among the greatest in symphonic music. Major choral works include *Ein deutsches Requiem* [a German requiem] (1866) and *Schicksalslied* [song of destiny] (1868), both for chorus and orchestra. The Violin Concerto in D (1878), the Piano Concerto in B-flat (1878-81), and the Piano Quintet in F Minor (1864) are staples of the concert repertory. Brahms also composed sonatas, capriccios, intermezzos—works in almost every genre except opera. Throughout his life he devoted attention to chamber music and to songs, which vary from simple accompaniments for folk songs to solemn compositions such as *Vier ernste Gesänge* [four serious songs] (1896). Many of his exquisite romantic lieder, in which the words, melody, and piano accompaniment are inseparably blended, are favorites among professional and amateur singers alike, and his lullaby has long been a familiar melody throughout the world. See his letters, ed. by Max Kalbeck (1909), biographies by Karl Geiringer (rev. ed. 1947) and Hans Gal (tr. 1963), study by Burnett James (1972).

Brahui (brahō'ē), Dravidian language of Baluchistan. See DRAVIDIAN LANGUAGES

Braid, James, 1795?-1860, English surgeon and writer on hypnotism and magic. The first to use the term *hypnotism* instead of *mesmerism* or *animal magnetism*, he also demonstrated that it was achieved by suggestion. His writings prepared the way for investigations into what was later called the unconscious mind.

Braidwood, Thomas, 1715-1806, English educator; grad. Univ. of Edinburgh. He established (1760) a school in Edinburgh the first school in Great Britain for deaf mutes, moving it to London in 1783.

Brăila (brăē'la), city (1969 est. pop. 122,000), SE Rumania, in Walachia, on the Danube River. The chief grain-shipping port of Rumania, it is also a major industrial and commercial city. Machinery, metal foodstuffs, and textiles are the principal products. Brăila probably dates from Greek times. It was burned by the Turks in 1462 and by Stephen the Great of Moldavia in 1470. Taken by the Turk c. 1550, it played an important role in the Russo-Turkish Wars (18th cent.) and was captured several times by Russian forces. The Treaty of Adrianopol (1829) awarded the city to the Rumanian principality of Walachia. The Cathedral of St. Michael, a state theater, and an art museum are in Brăila.

Braille, Louis (brāl, Fr. lwē bri'ya), 1809?-1852, French inventor of the Braille system of printing and writing for the blind. Having become blind from an accident at the age of 3, he was admitted at 10 to the Institution nationale des Jeunes Aveugles in Paris. Later he taught there. In order to make his instruction easier, he chose Charles Barbier's system of writing with points, evolving a much simpler one from that system. He was interested in music as well and for a time played the organ in a church in Paris. The Braille system consists of six raised points or dots used in 63 possible combinations. It is in use, in modified form, for printing, writing, and musical notation for the blind. See also BLINDNESS.

Brain, Dennis, 1921-57, British horn player. Brain studied with his father, Aubrey, at the Royal Academy of Music in London. He played principal horn with the Royal Philharmonic and then the Philharmonia orchestras. He was killed in an automobile accident. Brain's extraordinary artistry has been preserved on many orchestral and solo recordings. Works were written for him by Hindemith, Britten, and other composers.

brain, the supervisory center of the NERVOUS SYSTEM in all vertebrates. It is also the site of emotions, memory, self-awareness, and thought. Occupying the SKULL cavity (cranium), the adult human brain normally weighs from 2¼ to 3¼ lb (1-1.5 kg). Differences in weight and size do not signify corresponding differences in mental ability. An elephant's brain weighs more than four times that of a human and a whale's brain, seven times, however, neither animal has the intelligence of the orangutan, whose brain weighs one third as much as man's. Sensory nerve cells feed information to the brain from every part of the body, external and internal. The brain evaluates the data, then sends directives through the motor nerve cells to muscles and glands, causing them to take suitable action. Alternatively, the brain may inhibit action, as when a person forces himself not to flinch from a blow, or it may simply store the

Bram

information for later use. Both incoming information and outgoing commands traverse the brain and the rest of the nervous system in the form of electrochemical impulses. By means of these impulses, the brain directly controls conscious or voluntary behavior, such as walking and thinking. It also controls, through feedback circuitry, most involuntary behavior, i.e., connections with the autonomic nervous system enable the brain to adjust heartbeat, blood pressure, fluid balance, and similar functions. The brain even influences apparently fully automatic activities such as those of the internal organs. Essentially the human brain consists of some 10 billion interconnected nerve cells with innumerable extensions. This interlacing of nerve fibers and their junctions allows a nerve impulse to follow any of a virtually unlimited number of pathways. The effect is to give man his seemingly infinite variety of responses to sensory input. What pathway a brain actually chooses for an impulse depends on many factors. Among them are (1) the particular brain's physical characteristics, (2) temporary physical conditions, such as fatigue or malnourishment, (3) information previously implanted by experience and learning, (4) intensity of the stimulus producing the impulse, and (5) emotional states such as anger or melancholy. The billions of nerve cells in the brain are structurally supported by the hairlike filaments of glial cells. Smaller than nerve cells and ten times as numerous, the glia account for an estimated half of the brain's weight. They are thought to constitute the blood-brain barrier, stopping waste products and other poisons from reaching nerve cells through the network of cranial blood vessels. Nerve fibers in the brain are sheathed in a near-white substance called myelin and form the white matter of the brain. Nerve cell bodies, which are not covered by myelin sheaths, form the gray matter. Anatomically the brain has three major parts, the hindbrain (including the CEREBELLUM and the BRAINSTEM), the midbrain, and the forebrain (including the diencephalon and the cerebrum). Every brain area has an associated function, although no one area is completely responsible for any single function. The cerebellum coordinates muscular movements and, along with the midbrain, monitors posture. The brainstem, which incorporates the medulla and the pons, monitors involuntary activities such as breathing and vomiting. The THALAMUS, which forms the major part of the diencephalon, receives incoming sensory impulses and routes them to the appropriate higher centers. The HYPOTHALAMUS, occupying the rest of the diencephalon, regulates heartbeat, body temperature, and fluid balance. Above the thalamus extends the corpus callosum, a neuron-rich membrane underlying the cerebrum. The cerebrum, occupying the topmost portion of the skull, is by far the largest sector of the brain. Split vertically into left and right hemispheres, it is deeply fissured and grooved. Its upper surface, the cerebral cortex, contains most of the master controls of the body. In the cortex ultimate analysis of sensory data occurs, and motor impulses originate that initiate, reinforce, or inhibit the entire spectrum of muscle and gland activity. The parts of the cerebrum intercommunicate through association tracts consisting of connector neurons. Found profusely in the corpus callosum, these tracts account for approximately half of the total number of nerve cells in the brain. The tracts are believed to be the seats of reasoning, learning, and perhaps memory. The left half of the cerebrum controls the right side of the body, the right half controls the left side. Other important parts of the brain are the PITUITARY gland, the basal ganglia, and the reticular activating system (RAS). The pituitary is involved in growth regulation. The basal ganglia, located just above the diencephalon in each cerebral hemisphere, are thought to handle coordination and habitual but acquired skills like chewing and playing the piano. The RAS is a special system of nerve cells linking the medulla, pons, midbrain, and cerebral cortex. There is evidence that the RAS functions as a sentry. In a noisy crowd, for example, the RAS alerts a person when a friend speaks and enables that person to ignore other sounds. During both sleep and consciousness, the ceaseless electrochemical activity in the brain generates brain waves that can be electronically detected and recorded (see ELECTROENCEPHALOGRAPHY). The entire brain is enveloped in three protective sheets known as the MENINGES, continuations of the membranes that wrap the SPINAL CORD. The two inner sheets enclose a shock-absorbing cushion of cerebrospinal fluid. Few if any pain receptors exist in brain tissue. A headache is felt because of sensory

impulses coming chiefly from the meninges or scalp. In invertebrates a group of ganglia or even a single ganglion may serve as a rudimentary brain. See Edwin Clarke and Kenneth Dewhurst, *An Illustrated History of Brain Function* (1973).

Braine, John, 1922-, English novelist, b. Bedford, Yorkshire. He was able to leave his job as a librarian after the success of his first novel, *Room at the Top* (1957). Ranked as one of the major works of England's ANGRY YOUNG MEN, this novel bitterly chronicles the rise of a young working-class man into the upper middle class of an English factory town. In its penetrating analysis of the English class structure and of psychological relationships, *Room at the Top* is representative of all Braine's novels. His other works include *Life at the Top* (1962), *The Jealous God* (1964), and *Writing a Novel* (1974).

Brainerd, David, 1718-47, missionary to the American Indians, b. Haddam, Conn. Licensed to preach in 1742, he spent his brief years among the Indians, first in New York and later in New Jersey and Pennsylvania. His diary was widely read and influenced many to enter the mission field. Parts of the diary were published during Brainerd's lifetime, and in 1749, Jonathan Edwards published the hitherto unpublished portion.

Brainerd, city (1970 pop. 11,667), seat of Crow Wing co., central Minn., on the Mississippi River, in a pine-forested and lake region, inc. 1881. Founded (1870) by the Northern Pacific RR, it is still a railroad center with repair shops. Lumbering and related enterprises (such as paper manufacturing) are its economic mainstays. A junior college is in the city.

brainstem, lower part of the BRAIN, adjoining and structurally continuous with the spinal cord. The upper segment of the human brainstem, the pons, contains nerve fibers that connect the two halves of the CEREBELLUM. It is vital in coordinating movements involving right and left sides of the body. Below the pons and continuous with the spinal cord is the medulla, which transmits ascending and descending nerve fibers between the spinal cord and the brain. The medulla also directly controls many involuntary muscular and glandular activities, including breathing, heart contraction, artery dilation, salivation, vomiting, and probably laughing. The nuclei of some of the nerves that originate in the brain are also located in the brainstem. Nerve fibers in the brainstem do not readily regenerate, hence injury may result in permanent loss of function. See also NERVOUS SYSTEM.

Braintree, town (1970 pop. 35,050), E. Mass., a suburb of Boston, inc. 1640. Abrasives and rubber goods are among its manufactures. Braintree included Quincy (birthplace of John Adams and John Quincy Adams) until 1792 and Randolph until 1793. John Hancock and Gen. Sylvanus Thayer, superintendent of West Point from 1817 to 1833, were born in Braintree. The Thayer Academy, founded by the general, is in the town.

Braintree and Bocking, urban district (1971 pop. 24,839), Essex, E. England, between the Pant (Blackwater) and Brain river valleys. There are textile, plastic, and metal-product industries. Bricks from ancient Roman roads (the district is on the line of the Roman Stone Street) were used in the church in Braintree.

Brain Trust, the group of close advisers to Franklin Delano Roosevelt when he was governor of New York state and during his first years as President. The name was applied to them because the members of the group were drawn from academic life. This informal advisory group on the New Deal included Columbia University professors Raymond MOLEY, Adolf A. BERLE, Jr., and Rexford G. TUGWELL and expanded to include many more academicians. It soon disintegrated, but the term has remained in common usage for similar groups. See study by Rexford G. Tugwell (1968).

brain wave. see ELECTROENCEPHALOGRAPHY

brake, in botany see BRACKEN

brake, in technology, device to slow or stop the motion of a mechanism or vehicle. Friction brakes, the most common kind, operate on the principle that friction can be used to convert the mechanical energy of a moving object into heat energy, which is absorbed by the brake. The essential components of a friction brake are a rotating part, such as a wheel, axle, disk, or brake drum, and a stationary part that is pressed against the rotating part to slow or stop it. The stationary part usually has a lining, called a brake lining, that can generate a great amount of friction yet give long wear, it most often contains asbestos. The principal types of friction brake are the block brake, the band brake, the internal-shoe

brake, and the disk brake. The block brake consists of a block, the stationary part, that is shaped to fit the contour of a wheel or drum. For example, a

Shoe brake

wooden block applied to the rim of a wheel has long been used to slow or stop horse-drawn vehicles. A simple band brake consists of a metal band, the stationary part, that can be tightened around a drum by means of a lever. It is found on hoists and excavating machinery. The internal-shoe brake has a drum that contains two stationary semicircular pieces, or shoes, which slow or stop the motion of the drum by pressing against its inner surface. This is the type of brake most often found on automobiles, with an internal-shoe brake drum located on the central part of each wheel. A disk brake of the type used on automobiles has a metal disk and pistons with friction pads that can close on the disk and slow it. A manually operated brake pedal or handle is used to activate a brake. With low-power machinery or vehicles the operator can usually apply sufficient force through a simple mechanical linkage from the pedal or handle to the stationary part of the brake. In many cases, however, this force must

Disk brake

be multiplied by using an elaborate braking system. One such system, called the air brake system, or air brake, was invented by American manufacturer George Westinghouse and was first used on passenger trains in 1868. It is now widely used on railroad trains. The fundamental principle involved is the use of compressed air acting through a piston in a cylinder to set block brakes on the wheels. The action is simultaneous on the wheels of all the cars in the train. The compressed air is carried through a strong hose from car to car with couplings between cars, its release to all the separate block brake units at the same time is controlled by the engineer. An automatic feature provides for the setting of all the block brakes in the event of damage to the brake hose, leakage, or damage to individual brake units. The air brake is used also on subway trains, trolley cars, buses, and trucks. The hydraulic brake system, or hydraulic brake, is used on almost all automobiles (see HYDRAULIC MACHINE). When the brake pedal of an automobile is depressed, a force is applied to a piston in a master cylinder. The piston forces hydraulic fluid through metal tubing into a cylinder in each wheel where the fluid's pressure moves two pistons that press the brake shoes against the drum. The vacuum brake system, or vacuum brake, depends upon the use of a vacuum to force a piston in a cylinder to hold a brake shoe off a drum, when the vacuum is destroyed, the shoe is released and presses on the drum. In an automotive power brake system, extra pressure can be exerted on the hydraulic master cylinder piston by a vacuum brake's piston. A machine that is driven by an electric motor can sometimes use its motor as a brake

Because inertia keeps the machine's shafts moving after the current to the electric motor has been shut off, the machine keeps the motor's armature turning. While this is happening, if the motor's action can be changed to that of a generator, the electric current produced will be drawing its energy from the machine, thus slowing it. However, since such a braking method is not suitable for bringing the machine to a quick stop, it is usually supplemented by friction brakes.

Brakelond, Jocelin de see JOCELIN DE BRAKELOND

Brakpan (brāk'pān), city (1970 pop 113,115), Transvaal prov., NE South Africa. It is a gold- and coal-mining center and has an ironworks. There is also a technical college in the city.

Bramah, Joseph (brām'ə, brā'-), 1748-1814, English inventor. In 1784 he took out his first patent on a safety lock, and in 1795 he patented his hydraulic press, known as the Bramah press (see under HYDRAULIC MACHINE). He devised a numerical printing machine for bank notes and was one of the first to suggest the practicability of screw propellers and of hydraulic transmission.

Bramante, Donato (dōnā'tō braman'tā), 1444-1514, Italian Renaissance architect and painter, b. near Urbino. His buildings in Rome are considered the most characteristic examples of High Renaissance style. In 1477 he painted frescoes in the municipal palace at Bergamo. In Milan and neighboring cities including Pavia and Vigevano, he executed paintings that recall works by Piero della Francesca and Mantegna. Bramante designed much of the Church of Santa Maria presso San Satiro in Milan, its famous choir, painted in perspective, gives an illusion of great depth, although it is extremely shallow. He may also have planned the east end of Santa Maria delle Grazie, a spacious domed appendage to an older Gothic church. After 1499 he left for Rome, where he designed the simple but graceful cloister for Santa Maria delle Pace and the exquisitely proportioned circular Tempietto in the courtyard of San Pietro in Montorio. His other works in Rome include the Belvedere courtyard at the Vatican, designs for a massive Palace of the Tribunals, the choir of Santa Maria del Popolo and other churches, and his own large house with Doric columns rhythmically disposed above a massive rusticated ground floor. His most important work, however, was his plan for St. Peter's, probably conceived as a centrally planned (Greek cross) and domed structure of enormous size and impressiveness. He favored central plans and a sense of noble severity especially in his Roman period. Although St. Peter's was later remodeled into a longitudinal structure, Bramante is responsible for the essential proportions of the east end, and his design influenced the appearance of many smaller churches. See study by G. Chierici (Am ed 1960).

Bramantino (bramantē'nō), c 1465-c 1535, Lombard painter and architect. His real name was Bartolomeo Suardi. He took the name of his master Bramante, whose style he followed closely. He became court painter to Francesco Maria Sforza. His works are noted for their fine architectural background. Examples of his art are the *Madonna and Angels* and *St. Martin* (both Brera, Milan), and several paintings in the Metropolitan Museum and the National Gallery of Art, Washington, D.C. As an architect, Bramantino designed the Trivulzio Chapel (San Nazzaro, Milan). He also wrote a treatise on perspective, parts of which have been preserved.

bramble, name for plants of the genus *Rubus* [Lat., =red, for the color of the juice]. This vast genus of the family Rosaceae (ROSE family), with representatives in many parts of the world, includes the blackberries, raspberries, loganberries, boysenberries, and dewberries. The plants are typically shrubs with prickly stems (called "canes") and edible fruits that botanically are not berries but aggregates of drupelets (see FRUIT). The underground parts of brambles are perennial and the canes biennial, only second-year canes bear flowers and fruits. Innumerable horticultural varieties have been bred. The native American black raspberry, or blackcap (*R. occidentalis*), and red raspberry (*R. strigosus*) as well as the European red raspberry (*R. idaeus*) are all cultivated in North America, chiefly in the Northeast. Numerous blackberry species and varieties are cultivated in many regions, particularly in the south-central states. Closely resembling the blackberries, except for a more trailing or prostrate habit and a larger fruit, are the dewberries, the most common North American species (*R. procumbens*) is sometimes called running blackberry. The loganberries and boysenberries, with tart purplish fruits, are

thought to be strains of either a variety of the Pacific dewberry (*R. ursinus*) or a hybrid between it and the red raspberry, the original plant appeared in the California orchard of Judge J. H. Logan in 1881. Bramble berries were eaten by the Indians. Berries are grown commercially in Europe and North America for sale as fresh, canned, and frozen fruit and for use in numerous types of preserves and fruit-flavored beverages and liqueurs. In England the name bramble is applied chiefly to the common wild blackberry. Other thorny shrubs are sometimes also called brambles. Brambles are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rosales, family Rosaceae.

Brameld, Theodore, 1904-, American educator, b. Neillsville, Wis., grad. Ripon College, 1926, Ph.D. Univ. of Chicago, 1931. After teaching philosophy at Long Island Univ. and Adelphi College, he was professor of the philosophy of education at the Univ. of Minnesota (1939-47), New York Univ. (1947-58), and Boston Univ. (1958-69). Brameld's theory of reconstructionism has received widespread attention in educational circles. This philosophy holds that a system of public education that is aware of the findings of the behavioral sciences can bring about fundamental changes in the social and economic structure of society. His writings include *Ends and Means in Education* (1950), *Philosophies of Education in Cultural Perspective* (1955), *Toward a Reconstructed Philosophy of Education* (1956), and *The Climactic Decades* (1970).

Brampton, town (1971 pop 41,211), S. Ont., Canada, NW of Toronto. It is noted for its greenhouses. Automobiles, optical goods, and other products are made.

bran, outer coat of a cereal grain—e.g., wheat, rye, and corn—mechanically removed from commercial flour and meal by bolting or sifting. Wheat bran is extensively used as feed for farm animals. Bran is used as food for humans (in cereals or mixed with flour in bread) to add roughage (i.e., cellulose) to the diet. It is also used in dyeing and calico printing.

Brancovan, Constantine (bran-kō'vān'), 1654-1714, prince of Walachia (1688-1714). A skillful politician who secured domestic peace, he furthered Walachia's economic and cultural development. Under his rule, the "Brancovan" artistic style was created, an example of which can be seen in the palace at Mogosoaia, near Bucharest. In 1709 he negotiated with Czar Peter I of Russia an alliance against his suzerain, Sultan Ahmad III, but he later withdrew. Accused of treason, he was deposed and, with his four sons, was beheaded at Constantinople.

Brancusi, Constantin (brankyōō'zē, Rum. bran-kōōsh), 1876-1957, Rumanian sculptor. Brancusi is considered one of the foremost of modern artists. In 1904 he went to Paris, where he worked under Mercie. He declined Rodin's invitation to work in his studio. Because of his radical, economic style, his abstract sculptures, *The Kiss* (1908), *Sleeping Muse* (1910), and the portrait of Mlle. Pogany (1923), Musée d'Art moderne, Paris, have been the subjects of much controversy. He altered his technique from modeling to carving. c 1910. In 1927 Brancusi won a lawsuit against the U.S. customs authorities who attempted to value his sculpture as raw metal. The suit led to legal changes permitting the importation of abstract art free of duty. Brancusi's work is notable for its extreme simplification of form, its organic and frequently symbolic character, and its consummate craftsmanship. He had a profound understanding of materials, working primarily in metal, stone, and wood. *Bird in Space* (1919, Mus. of Modern Art, New York City) is a characteristic work. Others are in the Solomon R. Guggenheim Museum, New York City, and in the museums of Chicago, Cleveland, and Philadelphia. See catalog by Sidney Geist (1969), biography by Ionel Jianu (1963), studies by Sidney Geist (1967) and A. T. Spear (1969).

Brand, Sir John Henry, or Jan Hendrik Brand (yan hēn' drak brant'), 1823-88, South African politician, president of the Orange Free State, b. Cape Town. He was called to the English bar in 1849 and practiced law in South Africa. In 1863 he was elected president of the struggling Orange Free State and immediately made war (1864-69) on the Basutos. Reelected in 1869 (and at each election until his death), Brand refused (1871) to become president of both the Orange Free State and the Transvaal because of the Transvaal's anti-British policy. He was knighted for his mediation services in the British-Transvaal disputes.

Brandeis, Louis Dembitz (brān'dīs), 1856-1941, Associate Justice of the U.S. Supreme Court (1916-39), b. Louisville, Ky., grad. Harvard law school, 1877. A

successful Boston lawyer (1879-1916), Brandeis distinguished himself by investigating insurance practices and by establishing (1907) Massachusetts savings-bank insurance. After defending (1900-1907) the public interest in Boston utility cases, he served (1907-14) as counsel for the people in proceedings involving the constitutionality of wages and hours laws in Oregon, Illinois, Ohio, and California. In *Muller vs. Oregon* (1908) he persuaded the U.S. Supreme Court that minimum-hours legislation for women was reasonable—and not unconstitutional—with a brief primarily consisting of statistical, sociological, economic, and physiological information. This "Brandeis brief," as it came to be called, revolutionized the practice of law. He opposed (1907-13) the monopoly of transportation in New England and successfully argued (1910-14) before the Interstate Commerce Commission against railroad-rate increases. In 1910 as one of the counsel in the congressional investigation of Richard A. Ballinger, he exposed the anticongressionalist views of President Taft's Secretary of the Interior. As an arbitrator (1910) of a strike of New York garment workers, (mostly Jewish), he became acutely aware of Jewish problems and afterward was a leader of the Zionist movement. An enemy of industrial and financial monopoly, he formulated the economic doctrine of the New Freedom that Woodrow Wilson adopted in his 1912 presidential campaign. Over the protests of the vested interests that Brandeis had alienated as "people's attorney," Wilson appointed (1916) him to the U.S. Supreme Court. Long an advocate of social and economic reforms, he maintained a position of judicial liberalism on the bench. With Oliver Wendell Holmes, he often dissented from the majority. After Franklin Delano Roosevelt became (1933) President, Brandeis was one of the few justices who voted to uphold most of Roosevelt's New Deal legislation. He retired from the bench in 1939. Brandeis Univ. is named after him. He wrote *Other People's Money* (1914) and *Business, a Profession* (1914). For selections of his writings, see Alfred Lief, ed., *The Social and Economic Views of Mr. Justice Brandeis* (1930), O. K. Fraenkel, ed., *The Curse of Bigness* (1935), Solomon Goldman, ed., *The Words of Justice Brandeis* (1953). See his letters, ed. by M. I. Urofsky and D. W. Levy (1971), biography by A. T. Mason (1946, repr. 1956), studies by S. J. Konefsky (1956, repr. 1974) and M. I. Urofsky (1971), A. M. Bickel, *The Unpublished Opinions of Mr. Justice Brandeis* (1957).

Brandeis University, at Waltham, Mass., coeducational, chartered and opened 1948. Although Brandeis was founded by members of the American Jewish community, the university operates as an independent, nonsectarian institution. Its graduate school of arts and sciences was established in 1953. The university's Florence Heller Graduate School for Advanced Studies in Social Welfare is well known, as is its Wien International Scholarship Program. Adjoining the campus is the American Jewish Historical Society.

Brandenburg (bran'dānbōōrk), former state, c 10,400 sq mi (26,940 sq km), central East Germany. Potsdam was the capital, other leading cities included Cottbus, Frankfurt-an-der-Oder, and Brandenburg. As constituted in 1947 under Soviet military occupation, Brandenburg consisted of the former Prussian province of Brandenburg minus those parts of the province lying E of the Oder and Neisse rivers (see GERMANY). It became (1949) one of the states of the German Democratic Republic, but it finally was abolished as an administrative unit in 1952. BERLIN was situated in, but was administratively separate from, Brandenburg. Drained by the Havel, Spree, and Oder rivers, the region encompassed by the former state has many lakes and pine forests. The Spree Forest, in Lower LUSATIA, is inhabited by Slavic-speaking WENDS, remnants of the population that inhabited Brandenburg at the time of its acquisition (12th cent.) by ALBERT THE BEAR. The Slavic principalities had been previously subdued by Charlemagne but had regained their independence. In the 10th cent. the German kings organized the North March, a small area on the Elbe, which was bestowed on Albert the Bear in 1134. Albert expanded his territory, and in 1150 he inherited the principality of Brandenburg from his last Wendish prince. The March of Brandenburg, as Albert's lands were called, were colonized by Germans and became Christianized. Albert's descendants, the Ascanians, ruled Brandenburg until their extinction in 1320. Emperor Louis IV, a Wittelsbach, gave (1323) the vacant fief to members of his own house, but Emperor CHARLES IV (who confirmed the margraves of Brandenburg as

ELECTORS of the Holy Roman Empire) forced the Wittelsbachs to surrender it and conferred (1373) it on his son Wenceslaus. When Wenceslaus became (1378) German king, Brandenburg went to his brother, later Emperor SIGISMUND, who in 1417 formally transferred it to FREDERICK I of the house of HOHENZOLLERN. Among Frederick's early successors were ALBERT ACHILLES (reigned 1470-86), who introduced primogeniture as the law of inheritance of the Hohenzollern family, and Joachim II (reigned 1535-71), who accepted the Reformation in 1539. In the 17th cent. the electors of Brandenburg acquired (1614) the duchy of CLEVELAND and other W. German territories and (1618) the duchy of Prussia (roughly, the later EAST PRUSSIA). Although it suffered heavily in the Thirty Years War (1618-48), Brandenburg emerged as a military power under FREDERICK WILLIAM, the Great Elector (reigned 1640-88), who acquired E. Pomerania and freed Prussia from Polish suzerainty. His son, Elector Frederick III, in 1701 took the title "king in Prussia" as FREDERICK I. The later history of Brandenburg is that of PRUSSIA.

Brandenburg, city (1970 pop. 93,660), Potsdam district, central East Germany, a port on the Havel River. It is an industrial center and rail junction. Manufactures include steel, textiles, machinery, and motor vehicles. Brandenburg was founded as a Slavic settlement called Brennabor or Brennaburg. It was conquered (12th cent.) by Albert the Bear and gave its name to the margraviate (later the province) of Brandenburg. Noteworthy buildings of the city include a 12th-century Romanesque church and the city hall (13th-14th cent.).

Brandes, Georg Morris Cohen (brän' das), 1842-1927, Danish literary critic. His invigorating influence brought the wide currents of contemporary European thought to Danish, Icelandic, and other Scandinavian literatures. He wrote and lectured in many languages and was conceded to be the greatest critic since Taine. Yet he was refused the chair in aesthetics at the University of Copenhagen in 1870 because he was a Jew, an atheist, and a radical. He was granted the same chair in 1902. After finishing *Critiques and Portraits* (1870), he traveled on the Continent, meeting, among others, Taine and Renan, who influenced his ideas and work. On his return he wrote *Main Currents in Nineteenth-Century Literature* (6 vol., 1872-90, tr. 1901-5), an attack on provincialism and reaction. An opponent of romanticism, Brandes helped direct the Scandinavian literatures toward realism and concern with social issues. He introduced feminism to Denmark. His review, the *Nittende Aarhundrede*, was discontinued after three years. Brandes spent some time in Berlin, where he came under the influence of Nietzsche. He was attacked during the war for maintaining total neutrality. Among his later works are *William Shakespeare* (1895-96, tr. 1898), *Goethe* (1915, tr. 1924), *Voltaire* (1916, tr. 1930), and *Jesus, a Myth* (1925, tr. 1926), a work which gained him many enemies.

Brando, Marlon, 1924-, American film actor, b. Omaha, Nebr. Noted for his mumbling delivery and understated naturalism, Brando has been acclaimed as both a great actor and an exciting Hollywood sex symbol. He starred on Broadway as the primitive, brutal Stanley Kowalski in Tennessee Williams's *A Streetcar Named Desire* (1947) and in the filmed version of the play (1952). His movies include *Viva Zapata!* (1952), *Julius Caesar* (1953), *On the Waterfront* (1954), *One-Eyed Jacks* (1960, also directed), *The Godfather* (1971), and *Last Tango in Paris* (1972). See Tony Thomas, *The Films of Marlon Brando* (1973).

Brandon, Saint, see BRENDAN, SAINT

Brandon, Charles, see SUFFOLK, CHARLES BRANDON, 1ST DUKE OF

Brandon, city (1971 pop. 31,150), SW Man., Canada, on the Assiniboine River. The business center of the wheat-raising area of SW Manitoba, Brandon has an extensive trade in farm products and machinery. It is the seat of the annual provincial exhibition and of the Manitoba Winter Fair. A dominion experimental farm adjoins the city. Brandon Univ. is in the city. Brandon is named for the old Hudson's Bay Company post, Brandon House, built in 1793.

Brandon, uninc. village (1970 pop. 12,749), Hillsborough co., W. Fla., a suburb just E. of Tampa. Chiefly residential, it is also a retail and service center. Citrus fruits and vegetables are grown in the area, and there are many cattle and dairy farms.

Brandon University, at Brandon, Manitoba, Canada, nondenominational, coeducational, founded 1899 as Brandon College. The school gained university status in 1967. It has faculties of arts, science, and education.

Brandt, Willy (vîl'ē brant), 1913-, German political leader. His name originally was Herbert Ernst Karl Frahm. He early became active in the Social Democratic party. Soon after Adolf Hitler came to power (1933), Brandt fled to Norway and began a journalistic career. He continued political activities there and became a Norwegian citizen. When Norway was invaded (1940), he was imprisoned briefly by the Germans but escaped to Sweden. Returning to Germany after World War II, he resumed (1947) German citizenship and served (1949-57) in the Bundestag. In 1957 he was elected mayor of West Berlin. In 1961 and 1965, he was the unsuccessful Social Democratic candidate for chancellor of the German Federal Republic. As chairman of the Social Democratic party, he was named (Dec., 1966) foreign minister in the Christian Democratic-Social Democratic coalition government headed by Kurt Kiesinger. After Brandt's party won the federal elections in Sept., 1969, he became (Oct.) chancellor with the support of the Free Democratic party. His government initiated peace talks with Eastern European countries and with East Germany. Nonaggression treaties were signed (1971) with the USSR and Poland, and a treaty with East Germany was signed in Dec., 1972. Brandt was awarded the 1971 Nobel Peace Prize for his efforts toward peace. He resigned on May 6, 1974, following the revelation that one of his close aides was an East German spy.

brandy [for brandywine, from Du. = burnt, i.e., distilled, wine], strong alcoholic spirit distilled from wine or from marc, the residue of the wine press. The most noted brandy is cognac, made from white grapes in the Charente district of France. The label *Cognac, fine champagne* denotes the finest type of cognac, which comes from a small area around Cognac. Brandy is manufactured commercially in other districts of France, notably Armagnac, and in Spain, Portugal, Australia, Italy, South Africa, and the United States. Most fine brandies are distilled in pot stills constructed to retain the volatile ingredients. The product is blended and flavored, then stored in casks (preferably oak), where it mellowes and takes on a yellow color; it acquires a deeper tint from long storage or the addition of caramel syrup. Brandy marketed in the United States must be matured in cask for at least four years. Brandy made from marc is very potent and is inferior to wine brandy. Liquor distilled from fermented beets, grains, or sugarcane is sometimes called brandy. The term, qualified by the name of a fruit, is applied to spirits distilled from the fermented juice of fruits other than the grape, e.g., peach brandy, cherry brandy, and plum brandy (slivovitz), which is extensively manufactured in the Balkans.

Brandy Station, small trading center, Culpeper co., Va. It was the scene of the greatest cavalry engagement of the Civil War (also called the battle of Fleetwood Hill), fought June 9, 1863. Gen. Alfred Pleasonton's Union cavalry surprised Confederate Gen. Jeb Stuart's cavalry and fought a hard battle before the approach of Confederate infantry forced a withdrawal across the Rappahannock. This engagement was followed by the GETTYSBURG CAMPAIGN.

Brandywine, battle of, in the American Revolution, fought Sept. 11, 1777, along Brandywine Creek. The creek, formed by two small branches in SE Pennsylvania, flows southeast to join, near Wilmington, Del., the Christina River, which empties into the Delaware. The British under Sir William Howe were advancing on Philadelphia from Elkton, Md., and General Washington, realizing that they would cross the stream, placed most of his army at Chadds Ford. Howe sent General Knyphausen to feint an attack at Chadds Ford, while he himself, with General Cornwallis, struck the American right flank, where Gen. John Sullivan could not check the attack. Washington ordered a retreat to Chester, Pa. The British continued their advance and took Philadelphia (Sept. 27, 1777). See H. S. Canby, *The Brandywine* (1941).

Branford, town (1970 pop. 20,444), New Haven co., S. Conn., on Long Island Sound, settled 1644, inc. as a town 1930. Formerly a shipping and fishing center, the town is now mainly residential and manufactures prestressed concrete forms, automotive parts, wire, and other products.

Brangus cattle: see BRAHMAN CATTLE

Brannan, Samuel, 1819-89, California pioneer, b. Saco, Maine. Converted to Mormonism, he edited a Mormon paper in New York City before leading a party of Mormons by sea from New York to California. In 1847 he founded the first newspaper in San Francisco, the *California Star*. Later he began a mer-

chandising business at Sutter's Fort and soon gained extensive landholdings. Returning to San Francisco, he was active in the move to bring order to the lawless city and was an organizer and the first president (1851) of the Committee of Vigilance. See biographies by P. D. Bailey (1943, rev. ed. 1953, repr. 1959) and L. J. Stellman (1953).

Branner, Hans Christian, 1903-66, Danish writer. Branner's early novels, often concerned with the irrational fears of childhood, include *The Child Playing on the Shore* (1937). With *The Riding Master* (1949, tr. 1951) he turned to more complex Freudian themes, expressed in an increasingly symbolic vein. Later works include the plays *Siblings* (1952, tr. *The Judge*, 1955) and *Nobody Knows the Night* (1955), and a volume of poems, *Arrel* (1963). See study by T. L. Markey (1973).

Brant, Joseph, 1742-1807, chief of the Mohawk Indians. His Indian name is usually rendered as Thayendanegea. He served under Sir William Johnson in the French and Indian War, and Johnson sent him (1761) to Eleazar Wheelock's Indian school in Lebanon, Conn. Brant served (1763) under Johnson again in Pontiac's Rebellion. In the American Revolution he did much to bind the Indians to the British and Loyalist side. He fought (1777) at Oriskany in the Saratoga campaign. In 1778, leading the Indian forces, he joined Walter Butler, and together they raided Cherry Valley, where they massacred the defenseless inhabitants. He was an able leader in other raids. After the Revolution, failing to get a settlement of the Indian land question in the United States, he got lands and subsidies for his people in Canada around the present Brantford, Ont. A zealous Christian, he preached Christianity, translating the Book of Common Prayer and the Gospel of Mark into the Mohawk language. See biographies by J. W. Jakes (1969) and H. C. Robinson (1971).

Brant, Sebastian (sābās'tyān brānt), 1457-1521, German humanist and moralist. He taught law at the Univ. of Basel and in 1503 became town clerk of Strasbourg. His verse allegory *Das Narrenschiff* [ship of fools] (1494) became world famous. Illustrated with woodcuts, it went through six editions in Brant's lifetime alone. The story tells of 112 fools—each representing a fashionable foible—who sail out to sea and die because of their folly. An English translation by Alexander Barclay appeared in 1509. See verse translation (with the woodcuts) by E. H. Zeydel (1944). The poem inspired the novel *Ship of Fools* (1962) by Katherine Anne Porter.

brant or brant goose, common name for a species of wild sea goose. The American brant, *Branta bar-nicla*, breeds in arctic regions and winters along the Atlantic coast. The head, neck, and tail are black, the back brownish gray, and the under parts grayish white. Hunters find the birds easy prey and their flesh palatable. Eelgrass (*zostera marina*) is their staple food, although of necessity they may seek other nourishment. The Old World barnacle goose, *B. leucopsis*, so named because it was thought to grow out of barnacles attached to driftwood, is very similar to the brant and is an occasional visitor to North America. The black brant migrates from its arctic breeding grounds to the Pacific coast. White brant is an alternate name for the snow goose, which belongs to the same family, and gray, or prairie, brant refers to the American white-fronted goose. Brants are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Anseriformes, family Anatidae.

Brantford, city (1971 pop. 64,421), S. Ont., Canada, on the Grand River. It is a leading manufacturing city, noted particularly for its large farm implement factories. The city was named for the Mohawk chieftain Joseph BRANT, who led the Six Nations of the Iroquois to the region after the American Revolution and who is buried in the old Mohawk Church near the city. The Mohawk Institute, an Indian residential school, is nearby. Alexander Graham Bell was living in Brantford in 1876 when he made his first successful experiment in the transmission of sound by electric wire. A museum, formerly his home, exhibits the first telephone.

Branting, Hjalmar (yāl'mār brānt'īng), 1860-1925, Swedish premier. A leader of the Social Democratic party, he was finance minister in 1917. As premier (1920, 1921-23, 1924-25) he was responsible for social reforms and for welfare legislation. Branting supported the League of Nations and shared the 1921 Nobel Peace Prize with Christian Louis Lange.

Brantôme, Pierre de Bourdeille, seigneur de (pyēr də bōōrdā'yā sānyōr' də brāntōm'), 1540?-1614, French courtier, soldier, and author of memoirs. He accompanied Mary Stuart to Scotland,

served in the Spanish army in Africa, and joined the expedition of the Knights of St John against the sultan. His *Vies des hommes illustres et des grands capitaines* and his *Livre des dames* (tr., *Lives of Fair and Gallant Ladies*, 1933) give a racy and vivid account of his time.

Braque, Georges (zhôrzh brak), 1882–1963, French painter. He joined the artists involved in developing FAUVISM in 1905, and at l'Estaque c 1909 he was profoundly influenced by Cézanne. He met Picasso, and the two simultaneously explored form and structure with results that led to the development of CUBISM. In works such as the monumental *Nude* (1907–8, Cuttoli Coll., Paris) Braque exemplified the analytical phase of the movement with his keen sense of structure and orderly method of decomposing an object. In 1911 he introduced typographical letters into his canvases, thus leading the way to COLLAGE. After World War I, in which he was badly wounded, Braque veered away from the angularity of early cubism and developed a more graceful, curvilinear style, predominantly painting still life. His works showed restraint and subtlety both in design and color (e.g., *The Table*, Pulitzer Coll., St. Louis). Braque is represented in leading galleries in Europe and the United States. See his notebooks (tr. 1971), studies by Werner Hofmann (1961), E. B. Mullins (1969), and Francis Ponge et al. (tr. 1971).

Bras d'Or Lake (bra dôr), arm of the Atlantic Ocean, c 360 sq mi (930 sq km), indenting deeply into Cape Breton Island, N S., SE Canada, and occupying much of the interior. A narrow channel links it with the sea. The region was the scene of important experiments in the early history of aviation. In 1907, Alexander Graham Bell founded at Baddeck the Aerial Experiment Association, and on Feb. 23, 1909, J. A. D. McCurdy piloted his airplane, the *Silver Dart*, a distance of half a mile.

Brasília (brazêl'ya), capital city and federal district (1970 pop. 538,351) of Brazil, 2,264 sq mi (5,864 sq km), an enclave in the southwestern portion of Goiás state. One of the newest cities of the world, it was inaugurated in 1960. It is situated in the highlands of central Brazil, and its ultramodern public buildings (designed by Oscar NIEMEYER) dominate the sparsely settled countryside. The removal of the capital from Rio de Janeiro to the interior, to encourage the development of central Brazil, was long advocated, but not until President Juscelino Kubitschek instituted such legislation (1956) was the project activated. The city was laid out (1957) in the unconventional shape of an airplane by the Brazilian architect Lucio Costa. Highways connecting the new capital with Belém, Belo Horizonte, Fortaleza, Porto Alegre, Rio de Janeiro, and São Paulo are completed or under construction.

Braşov (brashôv'), Hung. *Brassó*, Ger. *Kronstadt*, city (1969 est. pop. 175,000), central Rumania, in Transylvania, at the foot of the Transylvanian Alps. The administrative center of the Braşov region, the city is a road and rail junction and a major industrial center. Tractors, trucks, machinery, chemicals, and textiles are among the chief manufactures. The city is also a noted resort and winter sports center. Founded in the 13th cent. by the Teutonic Knights, Braşov was a major center of trade and industry in the Middle Ages. It enjoyed considerable autonomy under the Hapsburg empire. After World War I the city, along with Transylvania, was ceded by Hungary to Rumania. There are sizable German and Hungarian minorities. From 1950 to 1960, Braşov was called Stalin or Oraşul-Stalin (city of Stalin). It has a large 14th-century church (called the Black Church because of fire damage in 1689), the 13th-century St. Bartholomew Church, and the 14th-century St. Nicholas Church (rebuilt 1751). Parts of the medieval town wall and the 17th-century citadel remain intact. There is also a polytechnic institute.

brass, ALLOY having copper (55%–90%) and zinc (10%–45%) as its essential components. The properties of brass vary with the proportion of copper and zinc and with the addition of small amounts of other elements. In general brass can be forged or hammered into various shapes, rolled into thin sheets, drawn into wires, and machined and cast. Its ductility reaches a maximum with about 30% zinc and its tensile strength with 45%—although this property varies greatly with the mechanical and heat treatment of the alloy. Cartridge brass (70% copper, 30% zinc) is used for cartridge cases, plumbing and lighting fixtures, rivets, screws, and springs. Aluminum brass (not exceeding 3% aluminum) has greater resistance to corrosion than ordinary brass. Brass containing tin (not exceeding 2%) is less liable to corrosion in sea water, it is sometimes called naval brass

and is used in naval construction. Dutch metal (80%–85% copper, 15%–20% zinc) is used as a substitute for gold leaf. When iron is added to brass it produces hard, tough alloys. One of these is delta metal (55% copper, 41% zinc, 1%–3% iron, and fractional percentages of tin and manganese), which can be forged, rolled, or cast and is used for bearings, valves, and ship propellers.

brasses, monumental, or sepulchral brasses, memorials to the dead, in use in churches on the Continent and in England in the 13th cent. and for several centuries following. They are usually set in the pavement but occasionally are placed upright against a wall or stand free upon a plinth. Some, called palimpsests, are incised on brasses that have been used before on the opposite face. The engraving usually presents a figure of the deceased. Historical interest centers around the contemporary costumes, armor, heraldic designs, genealogy, and paleography revealed. Such brasses still exist in Belgium, especially in Bruges, in the Netherlands, and in Germany, where there are some exceptional 13th-century examples. In England the churches of Ipswich, Norwich, London, Bristol, and elsewhere disclose more than 7,000 examples covering the different periods of their use. Tens of thousands of brasses were destroyed during the Tudor dissolution of the monasteries. The majority of those that remain are of native design and craftsmanship and of the inset type, incised examples usually indicate Flemish origin. A few brasses are in Glasgow and Edinburgh churches. The image of the brass can be transferred to paper by rubbing with a black gum called cobbler's heel-ball or with crayon. Rubbing brasses has been a popular activity in England for many decades. See James Mann's *Monumental Brasses* (1957), A. C. Bouquet, *European Brasses* (1968), H. W. Macklin, *Monumental Brasses*, ed. John P. Phillips (repr. 1969).

brasses, ornamental. Brass, a copper-zinc alloy produced since imperial Roman times, is closely associated in art with bronze, a copper-tin alloy (see BRONZE SCULPTURE). Brass was generally fashioned into utilitarian objects such as bowls, pots, and jugs. In the Middle East, China, and Japan, brass was beaten and hollow-cast, and in India an excellent decorated brass known as Benares ware is still produced. In Europe, the Meuse valley became the center of ornamental work in copper and its alloys during the 11th cent. Although production spread to most of Western Europe, the work was known well into the 16th cent. as *dinanderie*, after Dinant, a Belgian town long the leader in this work. Early *dinanderie* included ecclesiastical objects such as fonts, tabernacles, and lecterns, and domestic articles such as the distinctive aquamanile, a vessel, often in the form of an animal, used for pouring water. The brass chandeliers of Norway, Sweden, and Holland were widely exported. In the 17th and 18th cent. small objects for domestic use, such as candlesticks, utensils, and hearth equipment were produced. Ormolu, a gilded or varnished brass or bronze, was often used in the fashioning of these objects and later for covering the wooden parts of furniture. Machine production killed the brass and bronze art industries in the late 19th cent.

Brassó, Rumania. see BRAŞOV

Brasstown Bald, peak, 4,784 ft (1,458 m) high, N. Ga., in the Blue Ridge of the Appalachian Mts., near the N. C. line, highest point in Georgia.

brass wind instrument: see WIND INSTRUMENT

Brathwaite, Richard, 1588?–1673, English poet. His *Bamabae luterarium*, a doggerel travelogue of provincial England, was written first in Latin (1636) and later published with an English translation (*Bamabee's Journal*, 1638). Because the book was published under the pseudonym Corymbaeus, its true authorship was not discovered until 1818. His other works include *The English Gentleman* (1630) and *The English Gentlewoman* (1631), books that emphasized the honorable and generous behavior of the landed gentry.

Brătianu (bratîa'nōō) or **Brătiano** (–nō), Rumanian family. **Ion Brătianu**, 1821–91, was prominent in the Revolution of 1848 and helped to secure (1866) the election of Prince Carol of Hohenzollern-Sigmaringen (Carol I of Rumania) to the throne. Brătianu headed (1876–88, except for April–June, 1881) a ministry that declared (1878) the full independence of Rumania from Turkey, which was secured in the treaty of San Stefano. His son, **Ion Brătianu**, 1864–1927, succeeded him as leader of the Liberals and was premier (1909–11, 1914–18). He resigned early in 1918 rather than accept the humiliating peace terms offered by the Central Powers but regained his posi-

tion in Dec., 1918, and represented Rumania at the Paris Peace Conference (1919). In 1920 he resigned in protest against the minority clauses of the Treaty of Trianon with Hungary and the division of the Banat with Yugoslavia. From 1922 until his death (except for an interlude in 1926–27) Brătianu was premier, ruling Rumania as a virtual dictator, he prevented the accession of Carol II in 1927. He was succeeded briefly as premier by his brother, Vintila Brătianu. **Constantin Brătianu**, also called **Dinu Brătianu**, 1889–1950?, another member of the family, led the National Liberal party from 1934 and opposed both the dictatorship of Ion Antonescu and the Communist regime. He was reported to have died in prison.

Bratislava (bra'tēsla'va'), Ger. *Pressburg*, Hung. *Pozsony*, city (1970 pop. 283,539), S. Czechoslovakia, on the Danube River and near the Austrian and Hungarian borders. It is Czechoslovakia's third largest city and the traditional capital of Slovakia. Bratislava is also an important road and rail center and a leading Danubian port. Industries include mechanical engineering, machine building, oil refining, food processing, and the manufacture of chemicals, textiles, electrical equipment, paper, wood products, and beer. Forests, vineyards, and large farms surround the city, which has an active trade in agricultural products. It is also a popular tourist center. A Roman outpost called *Posonium* by the 1st cent. A.D., Bratislava became a stronghold of the Great Moravian Empire in the 9th cent. After the death of Ottocar II (1278), Bratislava and much of S and E Slovakia fell under Hungarian rule. From 1541, when the Turks captured Buda, until 1784, Bratislava served as Hungary's capital and the residence of Hungarian kings and archbishops. The kings continued to be crowned there until 1835, and Bratislava was the meeting place of the Hungarian diet until 1848. Inhabited largely by German traders before the 19th cent., the city then became predominantly Magyar. In the 19th cent. it was the center of the emerging Slovak national revival, and after the union of the Czech and Slovak territories in 1918 it was incorporated into Czechoslovakia. From 1939 until 1945, Bratislava was the capital of a nominally independent Slovak republic that was governed by a pro-German regime. The Univ. of Jan Comenius (1919), the Slovak Academy of Sciences, a polytechnic university, a national theater, and several museums are in the city. The 9th-century castle, above the Danube, was rebuilt in the 13th cent. St. Martin's Cathedral, the Franciscan convent and church, and the old town hall are also 13th-century buildings. The new town hall occupies an 18th-century palace, formerly the residence of the primates of Hungary; the Treaty of PRESSBURG was signed there in 1805.

Brattleboro, town (1970 pop. 12,239), Windham co., SE Vt., on the Connecticut River, chartered 1753. The town grew near Fort Dummer, which was established in 1724 to protect the settlers from Indians. Once an artists' colony, Brattleboro is now a center for winter sports. Its manufactures include optical goods, paper and wood products, books, and purses. Rudyard Kipling married a native of Brattleboro, and they lived nearby. John Humphrey Noyes was born in Brattleboro. Mark Hopkins College is in the town.

Braun, Eva (ä'va), 1912–45, mistress and later wife of the German dictator Adolf Hitler. She was a shop assistant to a Nazi photographer, through whom she met Hitler. She entered his household in 1936, although their relationship was kept secret. She had no influence on the government. Hitler married her in the last days of his life, and she joined him in suicide.

Braunschweig: see BRUNSWICK, Germany

Brauer, Adriaen: see BROUWER ADRIAN

Brawley, city (1970 pop. 13,746), Imperial co., SE Calif., inc. 1908. It is situated in an agricultural area of the Imperial Valley, SE of the Salton Sea. Cattle feeding and the production of beet sugar are the major industries. Nearly half the population is Mexican-American. The Imperial Valley Rodeo and Brawley Cattle Call is an important event in the city.

Braxton, Carter, 1736–97, political leader in the American Revolution, signer of the Declaration of Independence, b. King and Queen co., Va. He lived (1757–60) in England, returned to America, and served in the house of burgesses (1761–71, 1775) and in the Continental Congress (1775–76, 1777–83, 1785).

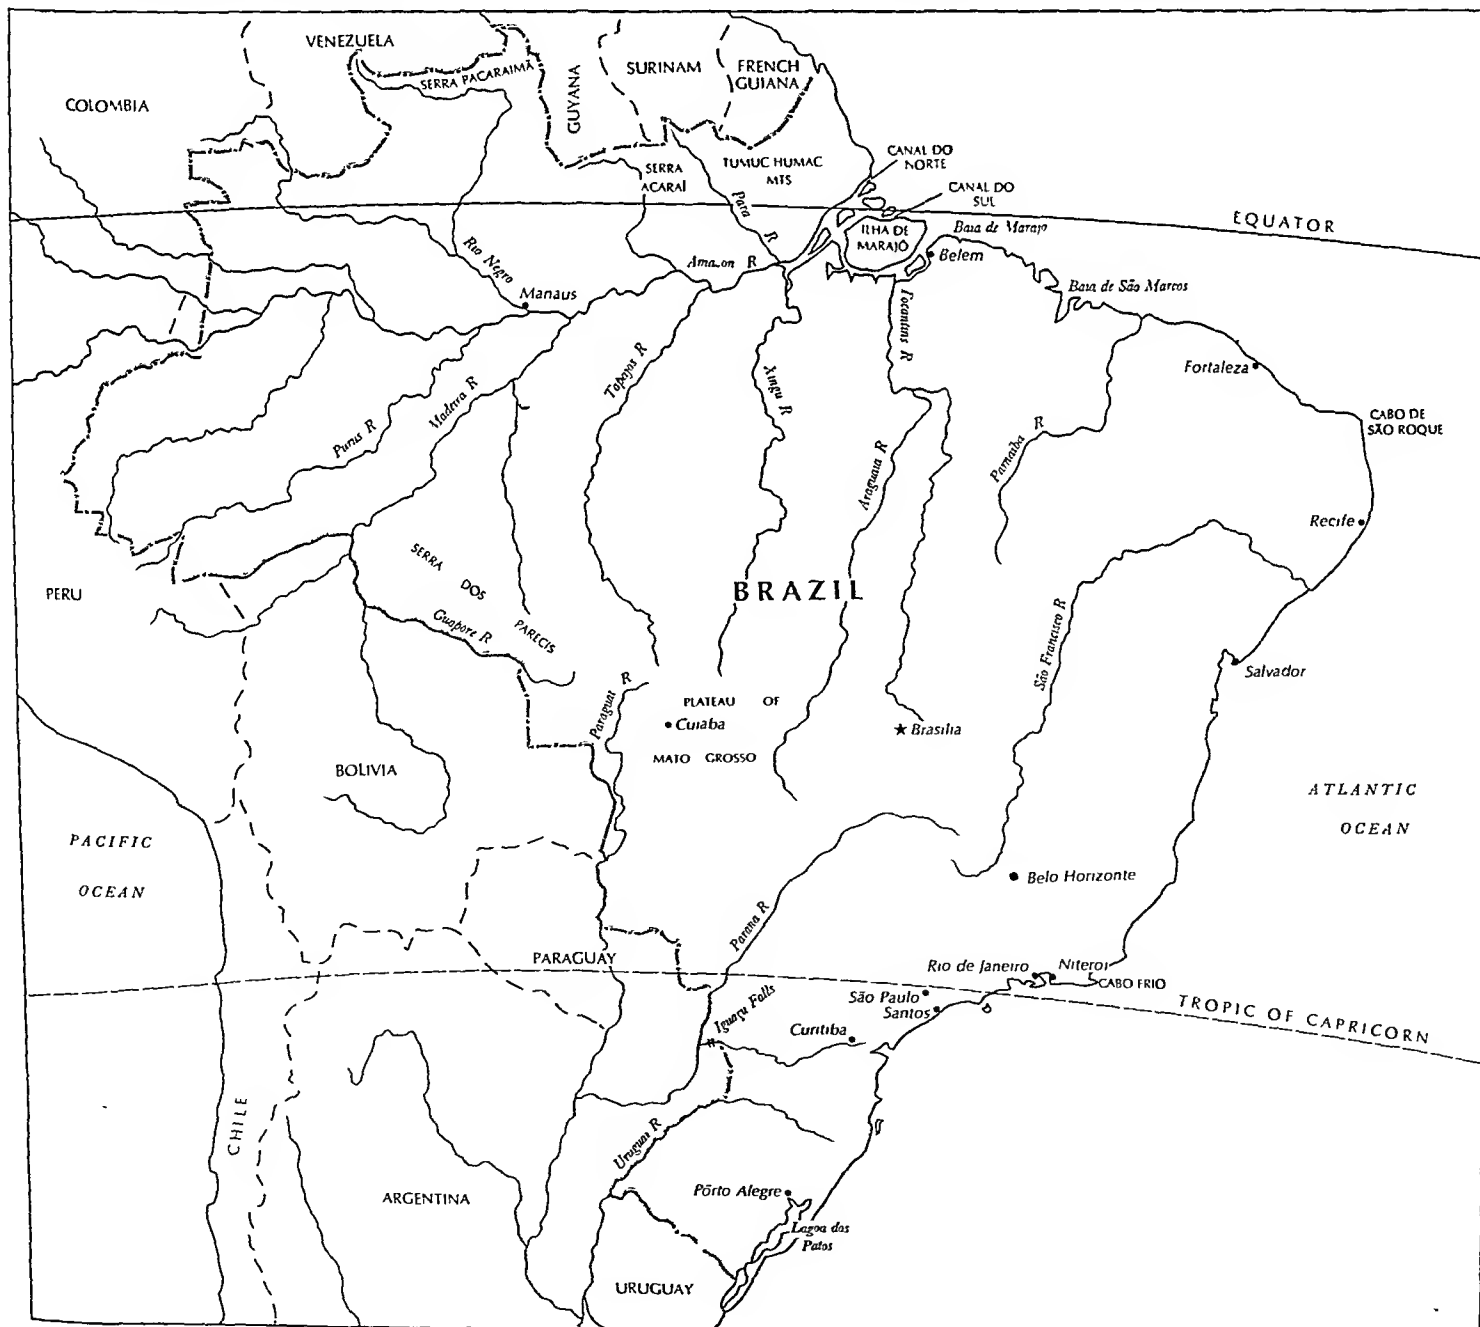

Bray, Thomas, 1656–1730, English clergyman and philanthropist. In 1696 he was selected by the bishop of London as his commissary to establish the Anglican church in Maryland. Bray recruited mis-

sionaries and assembled parochial libraries for North America. He sent out more than 30 parish libraries, which also served in many cases as circulating libraries. He established similar libraries in England and Wales. He founded (1699) the Society for Promoting Christian Knowledge to carry on his work. Bray visited Maryland in 1700 and was instrumental in the passage of a revised provincial Church Act (1702). He secured the charter (1701) for the noted Society for the Propagation of the Gospel in Foreign Parts. Rector of St Botolph Without, Aldgate, London, from 1706 until his death, he was interested in many religious and charitable enterprises, among them the relief of prisoners in England, with which James Oglethorpe was also concerned. In 1723 a charity society, "Dr Bray's Associates," was founded, which in 1730 was concerned in a petition for the charter of Georgia. His major written work was *A Course of Lectures Upon the Church Catechism* (9 vol, 1696). See biography by E. L. Pennington (1934), C. T. Laugher, *Thomas Bray's Grand Design* (1974).

Brazil (brázil'), Port *Brasil*, republic (1973 est pop 99,000,000), 3,286,470 sq mi (8,511,965 sq km), E South America. It is a federation of 22 states, four territories, and BRASÍLIA, the federal district and site of the capital city of the same name. By far the largest of the Latin American countries, Brazil occupies nearly half the continent of South America, stretching from the Guiana Highlands in the north to the plains of Uruguay and Paraguay in the south. In the west it spreads to the equatorial rain forest, border-

ing on Bolivia, Peru, and Colombia, in the east it juts far out into the Atlantic toward Africa. Its vast extent covers a great variety of land and climate, for although Brazil is mainly in the tropics (the equator crosses it in the north and the Tropic of Capricorn crosses it in the south), the southern part of the great central upland is cool and yields the produce of temperate lands. The people are also diverse in origin, and Brazil boasts that the new "race" of Brazilians is a successful amalgam of Indian, Negro, and European strains. Portuguese is the official language, and a large part of the population is at least nominally Roman Catholic. Most of the estimated 150,000 Indians (chiefly of Tupi or GUARANÍ linguistic stock) are found in the rain forests of the Amazon River basin, which occupies all the north and north central portions of Brazil. Most of Brazil's great cities are on the Atlantic coast or the banks of the great rivers. The chief city within the Amazon region is MANAUS. Wild rubber, once of great economic importance, and other forest products are gathered in the region, but the states of AMAZONAS, PARA, and ACRE, and the territories of AMAPÁ, RORAIMA, and RONDÔNIA are still largely of potential rather than actual economic value. At the mouth of the Amazon is the city of BELÉM, chief port of N Brazil. Southeast of the Amazon mouth is the great seaward outthrust of Brazil, the region known as the Northeast. The states of MARANHÃO and PIAUÍ form a transitional zone noted for its many babassu and carnauba palms. The Northeast proper—including the states of CEARÁ, RIO GRANDE DO NORTE, PARAÍBA, PERNAMBUCO,

ALAGOAS, SERGIPE, and the northern part of BAHIA—was the center of the great sugar culture that for centuries dominated Brazil. The Northeast has also contributed much to the literature and culture of Brazil. In these states the general pattern is a narrow coastal plain (formerly supporting the sugarcane plantations and now given over to diversified subtropical crops) and a semiarid interior, or SERTÃO, subject to recurrent droughts. This region has been the object of vigorous reclamation efforts by the government in recent years. The "bulge" of Brazil reaches its turning point at the Cape of São Roque. To the northeast lie the islands of FERNANDO DE NORONHA territory, and to the south is the important port and airport of NATAL. South of the "corner" of Brazil, the characteristic pattern of Brazilian geography becomes notable: the narrow and interrupted coastal lowlands are bordered on the west by an escarpment, in some places, however, the escarpment actually reaches the sea. Above the escarpment is the great Brazilian plateau, which tapers off in the southernmost state, Rio Grande do Sul, where it is succeeded by the plains of the Rio de la Plata country. The escarpment itself appears from the sea as a mountain range, generally called the Serra do Mar [coast range], and the plateau is interrupted by mountainous regions, such as that in Bahia, which separates E Bahia from the valley of the São Francisco River. The chief cities of the Northeast are the ports of RECIFE in Pernambuco and SALVADOR in Bahia. There are a number of excellent harbors farther south: VITÓRIA in Espírito Santo, RIO DE JANEIRO, the

former capital, one of the most beautiful and most capacious harbors in the world, SANTOS, the port of São Paulo and the greatest coffee port in the world, and PORTO ALEGRE in Rio Grande do Sul. In the east and southeast is the heavily populated region of Brazil—the states that in the 19th and 20th cent. received the bulk of European immigrants and took hegemony away from the old Northeast. The states of GUANABARA and RIO DE JANEIRO, with the great steel center of VOLTA REDONDA, are heavily industrialized. Neighboring SÃO PAULO state has even more industry (50% of all of Brazil's industry) and a well-developed agriculture. The city of SÃO PAULO on the plateau has continued the vigorous and aggressive development that marked the region in the 17th and 18th cent., when the paulistas went out in the famed bandeiras (raids), searching for Indian slaves and gold and opening the rugged interior. They were largely responsible for the development of the gold and diamond mines of MINAS GERAIS state, the second most populous state in Brazil, and for the building of its old mining center of Vila Rica (OURO PRÉTO), now succeeded by BELO HORIZONTE as capital. Minas has some of the finest iron reserves in the world, as well as other mineral wealth, and is becoming industrialized. Settlement also spread from São Paulo southward, particularly in the 19th and early 20th cent. when coffee from São Paulo's terra roxa [purple soil] had become the basis of Brazilian wealth, and coffee growing spread to PARANÁ. That state, in the west, runs out to the "corner" where Brazil, Argentina, and Paraguay meet at the natural marvel of the Iguazu Falls in the Parana River. The more southern states of SANTA CATARINA and RIO GRANDE DO SUL, developed to a large extent by German and Slavic immigrants, are primarily cattle-growing areas with increasing industrial importance. Frontier development is continuing in central Brazil. The state of MATO GROSSO is still largely devoted to stock raising. The transcontinental railroad from Bolivia spans the southern part of the state. The federal district of Brasília was carved out of the neighboring plateau state of GOIÁS, to the east. The national capital was transferred to the planned city of Brasília in 1960. Despite a high annual growth rate and recent industrialization Brazil is still an agricultural country. Agriculture employs about 60% of the labor force and accounts for 70% of the exports. The major commercial crops are coffee, cocoa, cotton, sugarcane, oranges, bananas, and beans. Cattle, pigs, and sheep are the most numerous livestock. Besides iron, Brazil is an important producer of coal, manganese, chrome, industrial diamonds, quartz crystal, and many other minerals. The leading manufacturing industries produce cotton textiles, paper, fertilizer, and asphalt. Motor vehicle production is increasing. Brazil is the world's leading coffee exporter. Other exports are iron, cotton, and sugar. Manufactured goods and raw materials head the imports. Most trade is with the United States, the European Common Market countries, and Argentina. Brazil is governed by the 1967 constitution, which has been amended frequently. Authority is vested in the president, who is elected for five years by an electoral college consisting of members of congress and the state legislatures. The bicameral congress is popularly elected. The 66 senators serve for eight years and are elected in rotation. The 310 deputies serve for four years. The president may unilaterally intervene in state affairs, although each state has its own governor and legislature. There are two legal parties, the pro-government National Renovating Alliance and the opposition Brazilian Democratic Movement. About 70% of the population is literate. There are more than 40 universities in the country. *History.* Whether or not Brazil was known to Portuguese navigators in the 15th cent. is still an unsolved problem, but the coast was visited by the Spanish mariner Vicente Yáñez Pinzón (see under PINZÓN, MARTÍN ALONSO) before the Portuguese under Pedro Álvares CABRAL in 1500 claimed the land, which came within the Portuguese sphere as defined in the Treaty of Tordesillas (1494). Little was done to support the claim, but the name Brazil is thought to derive from the Portuguese word for the red color of brazilwood [brasa=glowing coal], which the early visitors gathered. The first permanent settlement was not made until 1532, and that was at SÃO VICENTE in São Paulo. Development of the Northeast was begun about the same time under Martim Afonso de SOUSA as first royal governor. Salvador was founded in 1539, and 12 captaincies were established, stretching inland from the Brazilian coast. Portuguese claims, somewhat lackadaisically administered, did not go unchallenged. French Huguenots established themselves (1555) on an island in Rio de

Janeiro harbor and were routed in 1567 by a force under Mem de Sá, who then founded the city of Rio de Janeiro. The Dutch made their first attack on Salvador (Bahia) in 1624, and in 1633 the vigorous Dutch West India Company was able to capture and hold not only Salvador and Recife but the whole of the Northeast, the region was ably ruled by JOHN MAURICE OF NASSAU. No aid was forthcoming from Portugal, which had been united with Spain in 1580 and did not regain its independence until 1640. It was a naval expedition from Rio itself that drove out the Dutch in 1654. The success of the colonists helped to build up self-confidence among the settlers. Farther south, the bandeirantes from São Paulo had been trekking westward since the beginning of the 17th cent., thrusting far into Spanish territory and extending the western boundaries of Brazil, which were not delimited until the negotiations of the Brazilian diplomat RIO BRANCO in the late 19th and early 20th cent. The Portuguese also had ambitions to control the Banda Oriental (present Uruguay) and in the 18th cent. came into conflict with the Spanish there, the matter was not completely settled even by the independence of Uruguay in 1828. Meanwhile the sugar culture had come to full flower in the Northeast, where the plantations were furnishing most of the sugar demanded by Europe. The native Indians were not adaptable to the back-breaking labor of the cane fields, and Negro slaves were imported in large numbers. Dependence on a one-crop economy was lessened by the development of the mines in the interior, particularly those of Minas Gerais, where gold was discovered late in the 17th cent. Mining towns sprang up, and Ouro Preto became in the 18th cent. a major intellectual and artistic center boasting such artists as the sculptor ALFRED DINHO. The center of development began to swing south, and Rio de Janeiro, increasingly important as an export center, supplanted Salvador as the capital of Brazil in 1763. Ripples from intellectual stirrings in Europe that preceded the French Revolution and the successful American Revolution brought on an abortive plot for independence among a small group of intellectuals in Minas, the plot was discovered and the leader, TIRADENTES, was put to death. When Napoleon's forces invaded Portugal, the king of Portugal, JOHN VI, fled (1807) to Brazil, and on his arrival (1808) in Rio de Janeiro that city became the capital of the Portuguese Empire. The ports of the colony were freed of mercantilist restrictions, and Brazil became a kingdom, of equal status with Portugal. In 1821 the king returned to Portugal, leaving his son behind as regent of Brazil. New policies by Portugal toward Brazil, tightening colonial restrictions, stirred up wide unrest. The young prince eventually acceded to popular sentiment, and advised by the Brazilian JOSE BONIFÁCIO, on Sept. 7, 1822, on the banks of the little Ipiranga River, uttered the fateful cry of independence. He became PEDRO I, emperor of Brazil. Pedro's rule, however, gradually kindled increasing discontent in Brazil, and in 1831 he had to abdicate in favor of his son, PEDRO II. The reign of this popular emperor saw the foundation of modern Brazil. Ambitions directed toward the south were responsible for involving the country in the war (1851-52) against the Argentine dictator, Juan Manuel de Rosas, and again in the War of the Triple Alliance (1865-70) against Paraguay. Brazil drew little benefit from either, far more important were the beginnings of the large-scale European immigration that was to make SE Brazil the economic heart of the nation. Railroads and roads were constructed, and today the region has an excellent transportation system. The plantation culture of the Northeast was already crumbling by the 1870s, and the growth of the movement to abolish slavery, spurred by such men as Antônio de CASTRO ALVES and Joaquim NABUCO, threatened it even more. The slave trade had been abolished in 1850, and a law for gradual emancipation was passed in 1871. In 1888 while Pedro II was in Europe and his daughter ISABEL was governing Brazil, slavery was completely abolished. The planters thereupon withdrew their support of the empire, enabling republican forces, aided by a military at odds with the emperor, to triumph. By a bloodless revolution in 1889 the republic was established with Manuel Deodoro da FONSECA as first president. The rivalry of the states and the power of the army in government, especially under Fonseca's unpopular successor, Floriano PEIXOTO, caused the political situation to remain uneasy. The expanding market for Brazilian coffee and more particularly the wild-rubber boom brought considerable wealth as the 19th cent. ended, but the creation of rubber plantations in the Far East brought the wild-rubber boom to a halt and

hurt the economy of the Amazon region after 1912. Brazil sided with the Allies in World War I, declaring war in Oct., 1917, and shared in the peace settlement, but later (1926) it withdrew from the League of Nations. Measures to reverse the country's growing economic dependence on coffee were taken by Getúlio VARGAS, who came into power through a revolution in 1930. By changing the constitution (notably in 1937) and establishing a type of corporative state he centralized government (the *Estado Novo*—new state) and began the forced development of basic industries and diversification of agriculture. His dictatorial rule, although it aroused much opposition, reflected a new consciousness of nationality. The Brazilian spirit, which had been unconsciously represented in folk art and folk music, now was consciously expressed, particularly in the paintings of Cândido PORTINARI and the music of Heitor VILLA-LOBOS. World War II brought a new boom (chiefly in rubber and minerals) to Brazil, which joined the Allies on Aug. 22, 1942, and under foreign minister Oswaldo Aranha took a large part in inter-American affairs. In 1945 the army forced Vargas to resign, and Gen. Eurico Gaspar Dutra was elected president. Brazil's economic growth was plagued by inflation, and this issue enabled Vargas to be elected in 1950. His second administration was marred by economic problems and corruption, and in 1954 he resigned and committed suicide. He was succeeded by João Café Filho. Juscelino KUBITSCHKEK was elected president in 1955. Under Kubitschke the building of Brasília and an ambitious program of highway and dam construction were undertaken. The inflation problem persisted. In 1960 Jânio QUADROS was elected by the greatest popular margin in Brazilian history. But his autocratic manner and reform program aroused great opposition, and he resigned within seven months. Vice President João GOULART was the legal successor. Military leaders and conservatives opposed to him forced constitutional changes creating a parliamentary government and weakening the presidency (1961). In 1963, however, full presidential powers were restored by plebiscite. Weakened by political strife and seemingly insurmountable economic chaos, the leftist administration of Goulart demanded radical constitutional changes. In 1964 a military insurrection deposed Goulart. Congress elected General CASTELO BRANCO to fill out his term. Goulart's supporters and other leftists were removed from power and influence throughout Brazil, and the president was given far-reaching powers. In 1965, after anti-military forces won elections in two states, the president's extraordinary powers were extended, and all political parties were dissolved. A new constitution was adopted in 1967. Marshall COSTA E SILVA succeeded Castelo Branco in March. In 1968, in the face of student protests and criticism from the church against the military regime, Costa e Silva recessed Congress and assumed one-man rule. In 1969 Gen. Emílio GARRASTAZÚ MÉDICI succeeded Costa e Silva. Terrorism of the right and left (several diplomats were captured by leftist guerrillas) became a feature of Brazilian life but abated somewhat in the mid-1970s. Gen. Ernesto Geisel succeeded Garrastazu Médici as president in March, 1974. See Gilberto Freyre, *The Mansions and the Shanties* (tr. 1963) and *Order and Progress, Brazil from Monarchy to Republic* (tr. 1970), C. H. Haring, *Empire in Brazil* (1958, repr. 1968), R. M. Levine, *The Vargas Regime* (1970), R. M. Schneider, *The Political System of Brazil* (1971), Fernando de Azevedo, *Brazilian Culture* (tr. 1950, repr. 1971), E. B. Burns, *A History of Brazil* (1971), Charles Wagley, *An Introduction to Brazil* (rev. ed. 1971), T. E. Weil and others, *Area Handbook for Brazil* (1971), T. L. Smith, *Brazil People and Institutions* (4th ed. 1972) and with Alexander Marchant, ed., *Brazil, Portrait of Half a Continent* (1951, repr. 1972), Philip Raine, *Brazil, Awakening Giant* (1974).

Brazilian literature. Soon after the discovery of Brazil, the Portuguese began to describe the wonders of the new land. Brazilian literature began with the letter of Pedro Vaz de Caminha announcing the discovery to the king of Portugal. That descriptive trend was continued in the 16th and 17th cent. in the works of the missionaries José de ANCHIETA wrote in Portuguese about Brazil and is considered the first Brazilian writer. The dualism of European tradition and New World feeling continued. Many consider the 17th-century Jesuit priest Antônio VIRA (brought to Brazil as a child) the true master of the Portuguese prose in the classic style. In the late 17th cent. the first native Brazilian writer of note, Gregório de Matos Guerra, wrote poetry satirizing the society of his time. During the 18th cent. poetic

"academies" sprang up in various parts of Brazil. The most famous was in Minas Gerais, it included José Basilio da Gama, author of the epic poem *Uruguai*, and Tomas Antônio Gonzaga, best known for his pastoral love poem *Marília de Dirceu* (1792). This group had helped introduce revolutionary ideas from France into Brazil. Independence from Portugal in 1822 fostered national feeling and ushered in the romantic era, which is generally dated from the appearance in 1836 of volumes of poetry by Domingos José Gonçalves de Magalhães, visconde de Araguaia, and by Manuel de Araújo Porto-Alegre. The two major Brazilian romantic poets were Antônio Gonçalves Dias, who glorified the Indian and the native soil, and Antônio de Castro Alves, a leader in the fight for the abolition of slavery. His social awareness introduced a new dimension into the nascent "Brazilianism." A more introspective mood was created by Álvares de Azevedo. The romantic era also witnessed the birth of the novel in Brazil, notably *O Guarani* (1857) by José de Alencar and the later *Iracema*. A realist note was sounded by Alfredo d'Escagnolle Taunay in his novel *Inocência* (1872) and in *Memórias de um sargento de milícias* (2 vol., 1854-55) by Manuel Antônio de Almeida. The works of the man generally considered the greatest of Brazilian writers, Joaquim Maria Machado de Assis, were in the same realist vein. His novels and short stories are noted for their psychological depth and classic purity of style. Contemporary with Machado de Assis were the Parnassian poets, headed by Olavo Bilac, but theirs was an isolated trend. Seven years before the appearance of Bilac's *Poesias*, Aluizio de Azevedo had published *O Mulato* (1881), a novel that dealt in naturalistic fashion with the Brazilian scene and characters. In 1902, Euclides da Cunha wrote his masterly description of an uprising in the Brazilian northeast, *Os sertões* (tr. *Rebellion in the Backlands*, 1944). Concern with the native soil and with social problems was henceforth to predominate in Brazilian literature. Canaan, a pessimistic novel of ideas by José Pereira da Graça Aranha, appeared in the same year, and the stories of José Bento Monteiro Lobato also became popular. Even the Paris-born "art for art's sake" movement, called modernism, had a strong nativist and sociological bias. It began in Brazil as a poetic movement led by Mario de Andrade (whose prose work, *Macunaíma*, made pioneer use of the vernacular in 1928), and it was soon joined by other poets of stature, including Manuel Bandeira. The naturalistic novel came into its own in the 1930s with the works of Graciliano Ramos, José Lins do Rego, and Jorge Amado. Their concern with the Brazilian northeast has been continued by writers such as João Guimarães Rosa, whose poetic novel *Grande sertão veredas* appeared in 1958. The chief trend of the 20th cent., inspired by the writings of the great jurist Ruy Barbosa at the turn of the century and by the sociological works of Gilberto Freyre (begun in the 1930s), is toward critical and scholarly works. At the same time, the more subjective trend continues with, among others, novelists Rachel de Queiroz, José Américo de Almeida, and Érico Lopes Veríssimo, poets Jorge de Lima, Guilherme de Almeida, Vinícius de Moraes, Augusto Frederico Schmidt, and Cecília Meireles, dramatists Nelson Rodrigues and Aníbal Suassuna, and short-story writer Clarice Lispector. See Samuel Putnam, *Marvelous Journey* (1948), D. S. Loos, *The Naturalistic Novel of Brazil* (1963), Alfrânio Coutinho, *An Introduction to Literature in Brazil* (tr. 1969), Elizabeth Bishop, ed., *An Anthology of Twentieth-Century Brazilian Poetry* (1972).

Brazil nut, common name for the Lecythidaceae, a family of tropical trees. It includes the anchovy pear (*Gras cauliflora*), a West Indian species with edible fruit used for pickles, and several lumber trees of South America, e.g., the cannon-ball tree, some species of *Barringtonia*, and the Brazil nut trees (genus *Bertholletia*). The latter are found chiefly in Brazil along the Amazon and Orinoco rivers. The edible Brazil nuts grow clumped together in large, round, woody and extremely hard seed pods the size of a large apple. The meat of the seed (the "nut") is very rich in oil. The Brazil nut family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Lecythidales.

brazilwood, common name for several trees of the family Leguminosae (PULSE family) whose wood yields a red dye. The dye has largely been replaced by synthetic dyes for fabrics, but it is still used in high-quality red inks. The bright red wood, which takes a high polish, is used in cabinetwork and for making violin bows. The East Indian redwood, or

sapanwood (*Caesalpinia sappan*), was called "bresil wood" when it was first imported to Europe in the Middle Ages. Portuguese explorers used this name for a similar South American tree (*C. brasiliensis*), from which the name Brazil for its native country purportedly derives. Brazilwoods are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

brazing, method of joining metal parts. The parts are cleaned and then heated above the melting point of the brazing metal, which is then applied, on cooling, it solidifies and serves to bond the parts together. Brazing metal is generally harder and has a higher melting point than common SOLDER.

Brazos (bráz'as), river, 870 mi (1,410 km) long (1,210 mi/1,947 km long with its main tributary), rising in E N Mex. From its source it flows SE across Texas to enter the Gulf of Mexico at Freeport. The Brazos flows through the fertile farming area of N Texas, where it is used for irrigation. The river supplies water to nearby cities, several dams provide flood control and hydroelectric power. The river is navigable upstream.

Brazza, Pierre Paul François Camille Savorgnan de (pyër pöl frānswä' kamé'ya sävörnän' də bráz'ä'), 1852-1905, Franco-Italian empire builder. He was born Pietro Paolo Savorgnan di Brazza but adopted the French form of his name in 1874, when he became a French citizen. After visiting (1874) Gabon he returned (1875) on the orders of the French government to explore West Africa. In 1879, in an attempt to forestall the efforts of Henry M. Stanley to annex the Congo basin for Belgium, Brazza explored the upper Congo. He founded (1880) Franceville (now in Gabon) and Brazzaville (now in the Congo Republic) and established a protectorate over the kingdom of Makoko. Although he failed to deter Stanley, he added c. 193,000 sq mi (499,900 sq km) to the French empire in central Africa. He served as a French colonial official from 1883 and was commissioner general of the French Congo (1886-98). See Richard West, *Brazza of the Congo* (1972).

Brazza: see BRAČ, Yugoslavia

Brazzaville (bráz'avil, Fr. brázavêl'), city (1972 est. pop. 184,000), capital of the People's Republic of the Congo, on Stanley (Malebo) Pool of the Congo River. It is the nation's largest city and its administrative, communications, and economic center. The chief industries are beverage processing, tanning, and the manufacture of construction materials, matches, and textiles. There are also machine shops. An important port on the Congo River, Brazzaville receives wood, rubber, agricultural products, and other items and sends them by railroad to POINTE NOIRE, a port on the Atlantic Ocean. Motorboats connect Brazzaville with KINSHASA, Zaire, across Stanley Pool. The city was founded in 1880 by Savorgnan de BRAZZA, the French explorer. It was the capital of FRENCH EQUATORIAL AFRICA from 1910 to 1958 and was the center of Free French forces in Africa during World War II. The city's main growth began after 1945. It houses a Center for Higher Studies (1961), a teachers college, and an art school. At a conference in Brazzaville in 1944, African leaders from French West and Equatorial Africa for the first time publicly called for reforms in French colonial rule, thus starting the colonies on the road to independence. In late 1960 leaders of newly independent French-speaking African nations met in the city, the "Brazzaville group" of states, which adopted a moderate political stance on most African and international issues of the time, took its name from this meeting.

Brea (brä'a), city (1970 pop. 18,447), Orange co., S Calif., inc. 1917. It is an industrial, commercial, and residential community in an oil and citrus-fruit area. Most industries are related to the production and processing of oil. Other manufactures include rubber products, tools, and chemicals. The city developed during an oil boom in the early 1900s. Points of interest include the campsite of the Spanish explorer Don Gaspar de Portola, the first European to visit the area.

Breadalbane, John Campbell, 1st earl of (brädöl'-bîn, bräd-), 1635?-1717, Scottish nobleman. He took part in the royalist rising of 1654 and helped George Monck to further the restoration (1660) of Charles II. In 1688 he privately supported James II, but he did not commit himself openly and took advantage of the Act of Indemnity to swear allegiance to William III (1689). His strong position among the highland clans made him a useful intermediary in negotiating the submission of the chiefs in 1691. He has been blamed for instigating the massacre of the MacDon-

alds of Glencoe (1692), allegedly using their failure to submit on time as a pretext for settling old scores with that clan. However, there is no evidence that he was personally involved in that episode. He took no active part in negotiating the Act of Union (1707), but he was a representative peer in the united Parliament (1713-15). He gave nominal support only to the Jacobite rebellion of 1715.

Breadalbane (brädöl'bîn), mountainous district, Perthshire, central Scotland. The district, picturesque and little cultivated, is the site of Breadalbane power scheme (118,000-kw capacity).

breadfruit: see MULBERRY

breadroot or Indian breadroot, perennial plant (*Psoralea esculenta*) of the family Leguminosae (PULSE family), native to the American prairies and valued by the Indians for the starchy tuberous root that was much used for food, eaten raw or roasted or dried for winter use. The breadroot has bluish pealike blossoms and in general resembles the lupine. The plant was the prairie turnip or *pomme de prairie* of Western pioneers. Other species of *Psoralea* have also supplied food. Breadroot is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

breaker. see WAVE, in oceanography

Breakspear, Nicholas: see ADRIAN IV

breakwater, offshore structure to protect a harbor from waves. When it also serves as a pier, it is called a quay, when covered by a roadway it is called a mole. In the United States a breakwater commonly consists of a long mound of stone rubble. The flow of waves up its slope and the formation of swirls by its rough surface dissipate wave energy. In Europe the typical breakwater is a vertical wall, usually of concrete, built on a rock base, it reflects the waves without dissipating their energy. A pneumatic breakwater consists of perforated pipes discharging air bubbles. A similar hydraulic breakwater has underwater pipes that direct streams of water against approaching waves. Under the right conditions both types cause waves to break. The Chesapeake breakwater was the first built in the United States. See COAST PROTECTION.

Bréal, Michel Jules Alfred (mëshêl' zhul älf'rêd' brääl'), 1832-1915, French philologist. He is best known for his *Essai de sémantique* (1897), which gave great impetus to scientific interest in the field of semantics.

Bream, Julian (Alexander), 1933-, English guitarist and lutenist. Bream was first taught guitar by his father and studied piano and cello at the Royal College of Music. He made his debut at the age of 12. An outstanding performer, Bream has a repertory ranging from Dowland to Henze. Many compositions have been written for him.

bream: see SUNFISH

breast: see MAMMARY GLAND

Breasted, James Henry (brës'tîd), 1865-1935, American Egyptologist, b. Rockford, Ill., grad. North Central College, 1888, M.A. Yale, 1891, Ph.D. Univ. of Berlin, 1894. He began teaching at the Univ. of Chicago in 1894 and was (1905-33) professor of Egyptology and Oriental history there. Breasted was also director of the Haskell Oriental Museum (1895-1901) and after 1919 director of the Oriental Institute of the Univ. of Chicago. He made archaeological discoveries of great importance in Egypt and directed researches in Mesopotamia. Besides many reports and monographs, he wrote some general works, including *The Development of Religion and Thought in Ancient Egypt* (1912) and *The Dawn of Conscience* (1933). Two of his textbooks were *History of Egypt from the Earliest Times to the Persian Conquest* (rev. ed. 1928) and *Ancient Times* (rev. ed. 1944). Breasted translated and edited Egyptian historical sources in *Ancient Records of Egypt* (5 vol., 1906-27). His son, Charles Breasted, wrote a memoir of him, *Pioneer to the Past* (1943).

breathing: see RESPIRATION

Brébeuf, Jean de (zhāN də bräbōf'), 1593-1649, French Roman Catholic missionary, one of the Jesuit Martyrs of North America. A Norman, he was sent (1625) to Quebec and did missionary work among the Huron Indians. The warfare of the Huron and Iroquois caused the abandonment of his mission in 1628, and in 1629 on the surrender of Quebec to the English he went back to France. In 1633 he returned to Canada and carried on his work among the Indians, enduring great hardships. In 1649 the Iroquois took the Huron village and the mission. Father Brébeuf and his colleague, Gabriel Lalemant, were tortured to death. He was canonized in 1930. Feast Sept. 26 or (among the Jesuits) March 16. See his

Travels and Sufferings of Father Jean de Brébeuf among the Hurons of Canada, ed by Theodore Besterman (tr 1938), biography by F X Talbot (1949)

breccia: see CONGLOMERATE

Brèche de Roland (brësh də rôlân'), narrow gorge (alt 9,200 ft/2,804 m), Hautes-Pyrenees dept., SW France, in the Pyrenees. It leads into the Cirque de Gavarnie, a natural amphitheater. According to legend Roland, one of Charlemagne's knights, created the breach with his sword

Brecht, Bertolt (originally 8erthold) (both bër'tôlt brëkht), 1898-1956, German dramatist and poet. His brilliant wit, his outspoken Marxism, and his revolutionary experiments in the theater have made Brecht a vital and controversial force in modern drama. His early plays were realistic, in them the downtrodden struggled for survival in a disorganized world, and violence and disaster were recurrent. In the later 1920s Brecht turned to expressionism, as in *Mann ist Mann* [man is man] (1926), and began to develop his so-called epic theater, in which narrative, montage, self-contained scenes, and rational argument were used to create a shock of realization in the spectator. Sets and lighting were designed to prevent the illusion of the theater from gaining sway, and Brecht revealed elements of the staging process itself. Songs played an important part—for these Brecht wrote the lyrics for music by Hindemith, Kurt Weill, Hanns Eisler, and others. *Die Dreigroschenoper* [the threepenny opera] (1928), with music by Kurt Weill, is based on John Gay's *Beggar's Opera*; it reveals Brecht's continued hostility toward the capitalist social structure as well as his bittersweet compassion for humanity. Under National Socialism Brecht went into exile (1933), settling in Denmark and later in the United States. Works written in his most mature phase include *Mutter Courage und ihre Kinder* [Mother Courage and her children] (1941) and *Der gute Mensch von Sezuan* (tr *The Good Woman of Setzuan*, 1943), both concerned with ethical conduct. An outstanding example of epic theater is *Der kaukasische Kreidekreis* [the Caucasian chalk circle] (1955). From 1948, Brecht lived in East Berlin, where he directed the state-supported Berliner Ensemble. Notable English translations of Brecht's plays are those by Eric Bentley, which include *Seven Plays by Bertolt Brecht* (1961). See his collected plays ed by Ralph Manheim and John Willett (tr 1970), biographies by F Ewen (1967) and M Esslin (rev ed 1971), studies by J Willett (rev ed 1968), W Haas (tr 1970), and John Fugeri (1972).

Breck, James Lloyd, 1818-76, American Episcopal clergyman and missionary, b Philadelphia. In 1841 he established a seminary at Nashotah, Wis., with which he was connected until 1850, when he turned to missionary work among the Ojibwa Indians in Minnesota. In 1858, with Bishop Henry B Whipple, he founded at Faribault, Minn., the Seabury Divinity School and church schools for boys and girls. See T I Holcombe, *An Apostle of the Wilderness* (1903).

Breckinridge, John, 1760-1806, American statesman, b Augusta co., Va., grandfather of John Cabell Breckinridge. After he was admitted (1785) to the bar, he practiced law in Charlottesville, Va. Elected (1792) to the U.S. Congress, he soon resigned and moved to Lexington, Ky. He was (1795-97) attorney general of the new state, and as a member (1798-1801) of the state legislature he secured (1798) the enactment of the Kentucky Resolutions (see KENTUCKY AND VIRGINIA RESOLUTIONS). Breckinridge also prepared the stronger resolutions passed in the Kentucky legislature the next year in answer to criticisms of the earlier resolutions. In the U.S. Senate (1801-5) he was a leading spokesman of Western interests and played an important role in the passage of legislation bringing about the Louisiana Purchase. He was appointed U.S. Attorney General by President Jefferson in 1805 and died in office.

Breckinridge, John Cabell, 1821-75, Vice President of the United States (1857-61) and Confederate general, b Lexington, Ky. A lawyer, Breckinridge served in the Kentucky legislature (1849-51) and in the House of Representatives (1851-55). He was chosen by the Democrats in 1856 as a Southern running mate for Buchanan. As Vice President in a difficult period he distinguished himself by dignified and impartial presiding over the Senate. When a division within the Democratic ranks occurred in 1860, he became the presidential candidate of the Southern faction. Breckinridge claimed that no power existed in the Federal or local government to restrict slavery in any area while it was in territorial status. Believing in secession as a right, he nevertheless disapproved of such a course at that time. He received 72 elec-

toral votes in the November election. During the remainder of his term as Vice President, he attempted to secure the adoption of some compromise. As Senator (elected 1859) in the special session that began in July, 1861, he consistently opposed the administration's war measures. He failed in efforts to have Kentucky call a convention to act on secession. When the state declared for the Union in Sept., 1861, Breckinridge offered his services to the Confederacy. Appointed brigadier general in Oct., 1861, he served with distinction throughout the war, mostly in the West. On Feb. 4, 1865, he was made secretary of war for the Confederacy. When the South surrendered, Breckinridge fled to Europe via Cuba but was permitted to return (1869) by an amnesty proclamation issued in 1868. See biography by Lucille Stillwell (1936).

Breckinridge, Sophonisba Preston, 1866-1948, American pioneer social worker, educator, and author, b Lexington, Ky., grad Wellesley, 1888, Ph.D. Univ. of Chicago, 1901. She was the first woman to be admitted (1897) to the bar in Kentucky, but abandoned the practice of law to enter social work at Hull House, Chicago. After 1902 she taught at the Univ. of Chicago, where later she was professor of social economy (1925-29) and then professor of public welfare (1929-33). In 1934 she was president of the American Association of Schools of Social Work. As a delegate to the Pan-American Conference at Montevideo, Uruguay, in 1933, she was the first woman to represent the United States at an international conference. Her published works include *The Delinquent Child and the Home* (with Edith Abbott, 1912), *Family Welfare in a Metropolitan Community* (1924), *Public Welfare Administration in a Metropolitan Community* (1927), and *Women in the Twentieth Century* (1933).

Brecknock (brëk'nök, -nak) or **Brecon** (brëk'an), municipal borough (1971 pop 6,283), county town of Breconshire, S Wales, at the junction of the Honddu and Usk rivers. It is a market for the surrounding agricultural and cattle-raising area. Brecknock was founded by the Normans c 1091. In the town are fragments of an 11th-century castle, Christ College, founded by Henry VIII in 1542, and the 11th-century priory church of St. John, which became a cathedral in 1923. In 1974, Brecknock became part of the new nonmetropolitan county of Powys.

Brecknockshire, Wales. See BRECONSHIRE.

Brecon: see BRECONSHIRE, BRECKNOCK.

Breconshire (brëk'an-shîr), or **Brecon**, county (1971 pop 53,234), S Wales. The region is mountainous, rising to its greatest height in the Brecon Beacons (2,907 ft/886 m). In the Usk and Wye river valleys sheep (for mutton and wool) and beef cattle are grazed. Oats, barley, and wheat are Breconshire's major crops. Forestry is also important. Some coal is mined in the south, and limestone is quarried. Brecon Beacons National Park, in the southern part of the county, consists of 519 sq mi (1,344 sq km) of scenic land. Breconshire, in a region that may have been inhabited during the Stone and Bronze ages, gets its name from Brychan, a native prince who ruled after the Romans left c 400 A.D. The county was seized from the Welsh princes by the Normans in 1092. In 1974, Breconshire became part of the new nonmetropolitan counties of Gwent, Mid Glamorgan, and Powys.

Breda (brä'dä'), city (1971 pop 122,068), North Brabant prov., S Netherlands, at the confluence of the Mark and Aa rivers. It is an industrial and transportation center; its manufactures include machinery, textiles, and canned foods. Breda was founded by the 11th cent. The city was successfully besieged (1624-25) by the Spaniards under Ambrogio Spinola; the surrender of its heroic garrison is the subject of a famous painting by Velazquez. Points of interest in the city include a 13th-century Gothic church (Groote Kerk) and a castle (now a military academy).

Breda, Compromise of, 1566. See GUEUX.

Breda, Declaration of, 1660. See RESTORATION, in English history.

Breda, Treaty of, 1667. See DUTCH WARS.

Bredero, Gerbrand Adriaenszoon (hër'bränt adreän'zôn brä'dërō), 1585-1618, Dutch dramatist and poet. He is considered the major Dutch poet of his generation, particularly for his spontaneous love sonnets. The first Dutch master of comedy, Bredero was an important innovator; he drew upon classical elements as well as Renaissance models. His masterpiece, *De Spaansche Brabander* [the Spaniard from Brabant] (1617), is a realistic comedy of Amsterdam

life and reveals the influence of Spanish romanticism. Bredero's work was collected in three volumes in 1890.

breeder reactor. See NUCLEAR REACTOR.

breeding of plants and animals refers to the purposeful selection of certain parent organisms for propagation in order to improve the breed, variety, or strain. Selective breeding has been carried on by man to some extent since the domestication of plants and animals in the Neolithic period. In early Chinese civilizations rice crops were improved by selection, and in the early Indian civilizations of North and South America corn was thus improved. Cattle, horses, dogs, and other useful animals were long bred by selection. Breeding began to be established on a more scientific basis after the rediscovery of the laws of inheritance of Gregor Mendel. Among plants, pure lines are established by self-pollinating a plant and planting the seed it produces. The choice plants are then self-pollinated, and the process is repeated through a number of generations until a strain is developed that shows little variation. In recent years it has been found that by making crosses between such established pure lines, pure-line hybrids can be developed that have greater vigor than the pure lines and still retain uniformity of characteristics. In the United States much of the corn is produced from pure-line hybrid seed. Animals are said to be pure bred if in the breeding strain desirable characteristics are transmitted through generations with a uniformity approaching that shown by pure-line plants. The strains result from a series of crosses that involve considerable inbreeding. To prevent loss of vigor and reproductivity it is necessary to avoid too many crosses between very closely related animals. Crosses are therefore made between strains within a breed and sometimes between certain breeds. New breeds and varieties of established breeds are developed chiefly by hybridization and by breeding individuals in which mutations occur by chance. ARTIFICIAL INSEMINATION also plays an important role in the breeding of livestock. See GENETICS, HEREDITY, HYBRID.

Breed's Hill. See BUNKER HILL, BATTLE OF.

Bregenz (brä'gents), city (1971 pop 22,800), capital of Vorarlberg province, extreme W Austria, on the Lake of Constance (Bodensee). It is a lake port and a winter sports center and has industries that manufacture cotton and silk textiles, food products, and machinery. There is a large hydroelectric plant located on a site settled in the Bronze Age. Bregenz was chartered c 1200 and in 1726 became the administrative center of Vorarlberg. Nearby is the Bregenz Forest, a densely wooded highland noted for its scenic beauty.

Breidafjörður (brä'thafyör'thur), large inlet of the Denmark Strait, c 75 mi (120 km) long and 45 mi (70 km) wide, W Iceland, between the Vestfjörða and Snaefellsnes peninsulas. Hvammsfjörður and Gilsfjörður are eastern arms.

Breisach (brî'zakh), town (1970 est. pop 5,000), Baden-Württemberg, SW West Germany, on the Rhine River. Its manufactures include wine and paper. An old town, it has long been coveted because of its strategic location. It was fortified by the Romans, who called it *Mons Brisacius*. It became an imperial town in 1275. BERNHARD OF SAXE-WEIMAR took the town in 1638. Louis XIV secured it for France in the Peace of Westphalia (1648) and ceded it back to the emperor in the Treaty of Ryswick (1697), but built a new fort, Neuf-Breisach (Ger. Neu Breisach), on the opposite side of the Rhine. The French repeatedly captured Breisach during the 18th cent. but gave it to Baden in 1805.

Breisgau (brîs'gau), region, Baden-Württemberg, SW West Germany, including the Rhine plain and the western slopes of the Black Forest. Freiburg is the chief city. Fruit and wine are the main products. After the extinction (1218) of the first house of Zähringen, it was divided among various heirs. Most of it passed to the Hapsburgs in 1368. France held the region at various times in the 17th-18th cent. In 1805 the Breisgau was divided between Baden and Württemberg, the latter gave its share to Baden in 1810.

Breitenfeld (brî'tänfêl'), village, Leipzig dist., S central East Germany. It gave its name to two battles of the Thirty Years War. Gustavus Adolphus of Sweden there defeated the imperial forces under Count Johannes Tilly and Marshal Gottfried Pappenheim in 1631, and the Swedes under General Lennart Torstensson there routed the imperial troops under Archduke Leopold William in 1642.

Bremen (brä'man), city (1970 pop 582,277), capital of the state of Bremen, N West Germany, on the Weser River. Known as the Free Hanse City of Bremen.

men (Ger. *Freie Hansestadt Bremen*), it is West Germany's largest port after Hamburg and is a commercial and industrial center trading in cotton, wool, tobacco, and copper. Manufactures include ships, steel, machinery, electrical equipment, textiles, beer, and foodstuffs, including roasted coffee. Bremen is Germany's oldest port city. It was made an archbishopric in 845, and under Archbishop Adalbert (1043–72) it included all of Scandinavia, Iceland, and Greenland. The archbishops held temporal sway over a large area between the Weser and Elber rivers, but the city of Bremen itself remained virtually independent as its importance grew. In 1358 it became one of the leading members of the HANSEATIC LEAGUE. It accepted the Reformation in 1522, and in 1646 it was made a free imperial city. It stubbornly fought to preserve this status after the archbishopric had been assigned to Sweden by the Peace of Westphalia and later was ceded (1719) by Sweden to the elector of Hanover (George I of England). Bremen was occupied by France from 1810 to 1813. The city's overseas trade—from the late 18th cent. particularly with the United States—grew in the 19th cent., partly because of the founding (1827) of nearby Bremerhaven and the establishment (1857) of Norddeutscher Lloyd (North German Lloyd), a large shipping company. The city joined the German Empire in 1871. After World War I there was a short-lived (1918–19) socialist republic of Bremen. The city was badly damaged by bombs during World War II, but numerous historic monuments remain, including the Gothic city hall (1405–9), the statue of Roland, the medieval hero, which was erected in 1404 as a symbol of the city's freedom, the cathedral (begun 1043), a blend of Romanesque and Gothic styles, and two noted churches—the Liebfrauenkirche (13th cent.) and the Johanneskirche (14th cent.). The city has a major art museum and a museum of overseas ethnology. The state of Bremen (1970 pop. 723,000, 156 sq mi (404 sq km), was formed in 1947 by combining Bremen and Bremerhaven.

Bremer, Fredrika (frēdrē'kə brāmər), 1801–65, Swedish writer and feminist, b. Finland. Her novels of everyday life include *The H Family* (1829), *The President's Daughters* (1834), and *The Home* (1839). She recorded impressions of travel in America (1849–51) in *Homes in the New World* (1853), letters from this book were translated as *America of the Fifties* (1924). Her later novels advocate the emancipation of woman. See study by S. A. Rooth (1955).

Bremerhaven (brāmər'hā'fən), city (1970 pop. 140,455), in the state of Bremen, N. West Germany, at the mouth of the Weser River, near the North Sea. It is one of the largest fishing ports in Europe and is a major passenger and freight port. Founded in 1827, Bremerhaven in 1939 was absorbed by Wesermünde, which had been formed in 1924 as the result of the merger of the cities of Geestemünde and Lehe. In 1947 the combined municipality was renamed Bremerhaven and returned to the state of Bremen. The first regular ship service between continental Europe and the United States was started in Bremerhaven in 1847.

Bremersdorp, Swaziland. See MANZINI.

Bremerton (brēm'ər-tən), city (1970 pop. 35,307), Kitsap co., NW Wash., an excellent harbor on an arm of Puget Sound, inc. 1901. The city was platted (1891) when the area was selected as the site for the U.S. Puget Sound Naval Shipyard, and today Bremerton's economy is centered around that great installation. All types of U.S. naval vessels (including Polaris submarines) are built and repaired in the six drydocks there. Auxiliary facilities include a naval torpedo station and a naval ammunition depot. Although the great majority of residents are employed by the U.S. government, there are some logging and wood-product enterprises, and tourism is important. Bremerton is the gateway to the Olympic peninsula, with easy access to the Cascade and Olympic mts. It is surrounded on three sides by water, and numerous ferries ply the inland seas of Puget Sound, linking the city to nearby resort islands. The U.S.S. *Missouri*, docked there, is a national shrine; it was the scene of the official Japanese surrender at the end of World War II. Bremerton has a junior college. Three state parks are nearby.

bremstrahlung (brēm'sht'ra'lang) see X RAY.

Brendan, Saint, d. 577?, Irish abbot of Clonfert, Co. Galway. A popular medieval story told how he traveled westward to wonderful islands—an Irish version of a widespread legend. His feast is May 16. A perhaps different St. Brendan (d. 573) was a friend of Columba and founder of the monastery at Birr. The name is often written Brandon.

Brennan, William Joseph, Jr., 1906–, Associate Justice of the U.S. Supreme Court (1956–), b. Newark, N.J. After receiving his law degree from Harvard, he was admitted (1931) to the bar and practiced law in Newark. During World War II he did legal work in the U.S. army. In New Jersey after the war he served as a superior court judge (1949–50), appellate division judge (1950–52), and justice of the state supreme court (1952–56). President Eisenhower appointed him to succeed Sherman Minton on the Supreme Court. A liberal on the bench, he supported individual liberties and a greater guarantee of justice to the poor.

Brenner Pass (brē'nər), Ital. *Brennero*, Alpine pass, 4,495 ft (1,370 m) high, connecting Innsbruck, Austria, with Bolzano, Italy. The lowest of the principal Alpine passes, it was an important Roman route through which many invasions of Italy were made. A long carriage road was built c. 1772, and the railroad was completed in 1867. The pass became the border between Italy and Austria after World War I. During World War II, Hitler and Mussolini held meetings there.

Brennus, fl. c. 389 B.C., legendary Gallic leader. He occupied Rome but failed to take the Capitol from MANLIUS (Marcus Manlius Capitolinus). According to legend, when the tribute that the Romans had agreed to pay was being weighed, a Roman complained, whereupon Brennus threw his sword on the scale, crying, "Vae victis!" [woe to the vanquished]. His historical existence is dubious.

Brennus, d. 279 B.C., Gallic leader. He was in command of the band of Gauls (or Galatians) who invaded Greece in 279 B.C. At first halted at Thermopylae, he later turned and took the pass into Doris. He was wounded in an unsuccessful attack on Delphi and is supposed to have committed suicide on the northward retreat after the Gauls were attacked by the Thessalians.

Brent, Margaret, 1600?–1671?, early American feminist, b. Gloucester, England. With her two brothers and a sister, she left England to settle (1638) in St. Marys City, Md., where she acquired an extensive estate, she was the first woman in Maryland to hold land in her own right. Under the will of Gov. Leonard Calvert, Margaret Brent was made executor of his estates. She also acted as attorney (i.e., agent) for Lord Baltimore. As an important woman of affairs in the colony, she demanded (1648) a place in the colonial assembly. Her claim was refused while the heirs contested her handling of the Calvert estates. Shortly thereafter she moved to Virginia but kept her Maryland property. See M. E. W. Ramey, *Chronicles of Mistress Margaret Brent* (1915), E. A. Dexter, *Colonial Women of Affairs* (1924, repr. 1972).

Brent, borough (1971 pop. 278,541) of Greater London, SE England. Brent was created in 1965 by the merger of the municipal boroughs of Wembley and Willesden. The area is a rail and industrial center. Its manufactures include automobile parts, clocks and watches, and electrical equipment. At Wembley is a large sports stadium that was originally built for the British Empire Exposition of 1924–25.

Brentano, Clemens (brēntā'nō), 1778–1842, German poet of the romantic school, brother of Bettina von Arnim. While studying at Halle and Jena he met Wieland, Herder, and Goethe, but his sympathies were with the younger German romantics. With Achim von Arnim he collaborated on *Des Knaben Wunderhorn* [the boy's magic horn] (1806–8), a folk-song collection that influenced Eichendorff, Heine, and the brothers Grimm. Brentano wrote plays, lyric poems, fairy tales, and such *Novellen* as *Geschichte vom braven Kasperl und dem schönen Annerl* (1817, tr. *Honor*, 1847). See study by J. F. Fetzer (1974).

Brentano, Franz (frānts), 1838–1917, German philosopher and psychologist. He was a teacher (1866–73) at Würzburg, and in 1874 he became professor of philosophy at Vienna. In 1880 he retired to write and study. His best-known book, *Psychologie vom empirischen Standpunkte* (1874), attempts to establish psychology as an independent science. Brentano believed that mental processes were the data of psychology and were to be regarded as acts rather than as passive processes. He influenced Edmund HUSSERL and Alexius MEINONG. See studies by Gustav Bergmann (1967) and A. C. Rancurello (1968).

Brentwood, urban district (1971 pop. 57,976), Essex, SE England. It is mainly residential but produces some agricultural equipment, film, and prefabricated concrete. Brentwood was on an important coach road from London to Colchester, the 15th-century White Hart Inn remains standing.

Brentwood. 1 City (1970 pop. 11,248), St. Louis co., E Mo., a residential suburb W of St. Louis, inc. 1919. Its manufactures include pencils, leather goods, women's apparel, hospital and pharmaceutical supplies, and plastic products. 2 Uninc. town (1970 pop. 27,868), Suffolk co., SE N.Y., on central Long Island, in the town of Islip. It is mainly residential, with some light industry. Josiah Warren led (1851) an experiment in communal living in Brentwood. 3 Borough (1970 pop. 13,732), Allegheny co., W Pa., a residential suburb of Pittsburgh, inc. 1915. There is some light industry.

Brescia (brā'shā), city (1971 pop. 210,067), capital of Brescia prov., Lombardy, N. Italy. It is a commercial and industrial center and a railroad junction. Manufactures include machinery, firearms, textiles, and processed food. A Gallic town, it later became a Roman stronghold (1st cent. B.C.) and then the seat of a Lombard duchy. In the 12th cent. it was made an independent commune. It subsequently fell under the domination of a long series of outside powers (including Verona, Milan, Venice, and Austria), until it united with Italy in 1860. In the 18th and 19th cent. Brescia was a revolutionary center, and in 1849 the city heroically resisted the Austrians for 10 days before it capitulated. Of note in Brescia are Roman remains, the Romanesque Old Cathedral (11th cent.), the baroque New Cathedral (17th cent.), the Lombard-Romanesque Church of San Francesco, and a Renaissance-style city hall. In the 16th cent. Brescia was the seat of a flourishing school of painting headed by G. B. Moroni and his pupil Moretto.

Breshkovsky, Catherine (brēshkōf'skē), 1844–1934, Russian revolutionary, called "the little grandmother" (*babushka*) of the Russian Revolution. Of a noble family, she began on her father's estates the education of the peasants and other social reforms. These, carried into a larger field, brought her over 30 years of imprisonment and exile in Siberia. Released from exile by Kerensky after the Revolution of 1917, she returned to Russia, but found herself out of sympathy with the Bolshevik regime and left the country. Her letters and memoirs were edited by Alice Stone Blackwell with the title *Little Grandmother* (1917). See her autobiographical *Hidden Springs of the Russian Revolution* (1931).

Breslau: see WROCLAW, Poland.

Bressanone (brās-sānō'nā), Ger. *Brixen*, town (1971 pop. 16,025), Trentino-Alto Adige, N. Italy, on the Brenner Road, and at the confluence of the Isarco and Rienza rivers. Bressanone and its surrounding territory were ruled by prince-bishops from the 11th cent. In 1803 the bishopric was secularized and passed to Austria as a part of the TYROL. The town passed to Italy with the S. Tyrol in 1919, it retains a mixed German and Italian population. Of note are the cathedral (13th cent., with a baroque interior) and the Palazzo Vescovile (17th cent.).

Bresse (brēs), region, in Burgundy, E. France, between the Ain and Saône rivers. Bourg-en-Bresse is the historic capital. A fertile farm area, it is famous for its chickens and wines. To the south is the Dombes, a region dotted with thousands of ponds, partially drained and reclaimed. Bresse was part of the duchy of SAVOY until 1601, when it was ceded to France along with Bugey (a district between the Ain and the Rhône) and the Territory of Gex. All three were added to Burgundy prov.

Bresson, Robert (rōbēr' brēsōn'), 1907–, French film director and scriptwriter, b. Bromont-Lamotte, France. Bresson's films tend to be austere and unadorned, concerned more with intellectual and spiritual values than plot or character. He prefers to use nonprofessional actors. His works include *Les Dames du Bois de Bologne* (1944), *Le Journal d'un cure de campagne* (1950), *Un condamné à mort s'est échappé* (1956), *Pickpocket* (1959), *Procès de Jeanne d'Arc* (1961), *Au Hazard*, *Balthazar* (1966), *Mouchette* (1966), *Une Femme douce* (1969), and *Lancelot of the Lake* (1974). See *The Films of Robert Bresson* (ed. by Ian Cameron, 1970).

Brest (brēs'), city (1968 pop. 159,857), Finistère dept., NW France, on an inlet of the Atlantic Ocean. It is a commercial port and an important naval station. There is a national engineering school in Brest. Electronics equipment and clothing are the chief manufactures. The city dates from Gallo-Roman times. The spacious, landlocked harbor was created in 1631 by Cardinal Richelieu as a military base and arsenal. In 1683, during the reign of Louis XIV, Marshal Vauban built the ramparts and a castle. The French repulsed the English in 1694 off Brest, in 1794 the English, under Lord Howe, defeated the French fleet. During World War II the Germans had a huge submarine base at Brest. Their heavily fortified subma-

rine pens showed few cracks under Allied air raids, but the city itself was almost completely destroyed. The German garrison capitulated to U.S. troops in 1944.

Brest (brĕst'), formerly **Brest-Litovsk** (-lĭtōfsk'), Pol *Brześć nad Bugiem*, city (1970 pop. 122,000), capital of Brest oblast, W European USSR, in Belorussia, at the confluence of the Western Bug and Mukhavets rivers near the Polish border. It is a major industrial, commercial, and transportation center. Industries include shipbuilding, food processing, and the production of metals, textiles, and electrical machinery. Founded by Slavs in 1017 as Bereste, the city was conquered by the Mongols in 1241 and by Lithuania in 1319. During the 14th cent. it was renamed Brest-Litovsk. In 1569 it became capital of the newly merged Polish and Lithuanian state. Brest passed to Russia in the third partition of Poland (1795). German forces took the city in 1915 and three years later signed the Treaty of Brest-Litovsk with Soviet Russia there. Held by Poland between the world wars, Brest was regained by the USSR in 1939, occupied by Germany from 1941-44, and finally liberated by the Soviet army.

Brest-Litovsk, Treaty of (brĕst-lĭtōfsk'), separate peace treaty in World War I, signed by Soviet Russia and the Central Powers, March 3, 1918, at Brest-Litovsk (now BREST, Belorussia). After the separate armistice of Dec. 5, 1917, long, bitter negotiations were conducted by Leon Trotsky for Russia, Richard von Kuhlmann for Germany, and Count Ottokar Czernin for Austria-Hungary (Turkey and Bulgaria were also represented). Trotsky at one point suspended negotiations, but Germany resumed warfare and the Soviets—on the insistence of Lenin—accepted the German ultimatum, which set conditions even harsher than at first. Russia recognized the independence of Ukraine and Georgia, confirmed the independence of Finland, gave up Poland, the Baltic states, and part of Belorussia to Germany and Austria-Hungary, and ceded Kars, Ardahan, and Batum to Turkey. Later, Germany demanded a large indemnity. The general armistice of Nov. 11, 1918, forced Germany to renounce the treaty, and Russia also declared it null and void. The western frontiers of Russia were later agreed upon by a series of separate treaties. See J. W. Wheeler-Bennett, *The Forgotten Peace* (1938, repr. 1966).

Brethren, German Baptist sect. They are popularly known as Dunkards, Dunkers, or Tunkers, from the German for "to dip," referring to their method of baptizing. The Brethren evolved from the Pietist movement in Germany. The first congregation was organized there in 1708 by Alexander Mack. Persecution drove them to America where, under Peter Becker, they settled (1719) in Germantown, Pa. From that and other settlements in Pennsylvania they spread westward and into Canada. The Brethren oppose war and advocate temperance, the simple life, plain dress, and "obedience to Christ rather than obedience to creeds and cults." The original group, at present the largest in the United States, is the Church of the Brethren (Conservative Dunkers), the local churches are united by an annual conference that elects a general board to supervise the national church program. From the Church of the Brethren there have been separations into the Seventh-Day Baptists, German (1728, see BEISSEL, JOHANN CONRAD), Church of God (New Dunkards, 1848), Old German Baptist Brethren (1881), and the Brethren Church (Progressive Dunkers, 1882). The Brethren baptize by trine immersion, the candidate being immersed once for each member of the Trinity. They practice foot washing and the love feast. See M. G. Brumbaugh, *A History of the German Baptist Brethren in Europe and America* (1899, repr. 1961), V. S. Fisher, *The Story of the Brethren* (1957). See RIVER BRETHREN (for Brethren in Christ, River Brethren, and Yorker Brethren), CHRISTADELPHIANS (for Brethren of Christ), HUTTERIAN BRETHREN, MORAVIAN CHURCH.

Brethren in Christ: see RIVER BRETHREN.

Bretigny, Treaty of (brĕtĭnyĕ'), 1360, concluded by England and France at Bretigny, a village near Chartres, France. It marked a low point in French fortunes in the HUNDRED YEARS WAR. After John II of France, who had been captured (1356), was set free by the English at the price of 3 million gold crowns, he ceded to Edward III (without exacting feudal homage) Poitou, Aunis, Saintonge, Angoumois, Guienne, Gascony, Calais, and other territories. Edward then abandoned his claim to the French throne. The peace did not last, however, and by 1373 all but the Bordeaux district had been reconquered by Bertrand DU GUESCLIN.

Breton, André (aNdṛā' brĕtōN'), 1896-1966, French writer, founder and theorist of the surrealist movement. He studied neuropsychology and was one of the first in France to publicize the work of Freud. At first a Dadaist, he collaborated with Philippe Soupault in automatic writing in *Les Champs magnétiques* (1921). He then turned to SURREALISM, writing three manifestos (1924, 1930, 1934) and opening a studio for "surrealist research." Breton helped to found several reviews: *Littérature* (1919), *Minotaure* (1933), and *VVV* (1944). His other works include *Nadja* (1928, tr. 1960), a semiautobiographical novel, *What is Surrealism?* (1934, tr. 1936), *Ode to Charles Fourier* (1946), and *L'Art Magique* (1957). See study by A. E. Balakian (1971).

Breton, Jules Adolphe Aimé Louis (zhul adōlf' āmā' lwe'), 1827-1906, French painter of rustic scenes and peasant life. Breton's *Peasant Girl Knitting* (Metropolitan Mus.) is well known. His works frequently reflect a social and humanitarian concern. Breton was the author of two autobiographies.

Breton, Nicholas (brĕt'ən), 1551?-c. 1623, English author, a prolific and versatile writer of verse and prose. His best work, written in a lyrical and pastoral vein, appeared in *The Arbor of Amorous Devices* (1597), *England's Helicon* (1600), and *The Passionate Shepherd* (1604). See his poems (ed. with biography by Jane Robertson, 1952), *A Mad World My Masters and Other Prose Works* (ed. by Ursula Kentish-Wright, 1929).

Breton literature (brĕt'ən), in the Celtic language of Brittany. Although there are numerous allusions in other literatures of the 12th to 14th cent. to the "matter of Brittany," which includes the stories of Tristan and King Arthur, no Breton texts remain from this period. The earliest ones date from the 15th cent. Until the 19th cent., texts included songs, stories, and plays, all popular and mostly of unknown authorship. The plays were imitations of late medieval French miracles. As elsewhere in Europe, serious collecting of Breton folk literature began in the 19th cent. Jean François Le Gonidec (1775-1838) pioneered with a dictionary of the language in 1821. Theodore Hersart de La Villemarqué assembled an anthology of folk poems but was attacked for his dubious scholarship. A more sophisticated collector was François Marie Luzel (1821-95). The mid-19th cent. saw the birth of a cultivated literature, mainly in stories and verse. Auguste Brizeux (1803-58) was the best known of the poets who wrote in their native Breton. Others were J. Guillome and Prosper Proux (1811-73). In the late 19th cent. an intensification of the campaign to revive local literary traditions resulted in the establishment of several folk theaters and in the expansion and modification of the vocabulary by writers. Among the leading writers of the late 19th and the 20th cent. are the poets Emil Ernault (b. 1852), Jean Pierre CALLOC'H, and Robert Le Masson, the storytellers Louis and Louise Hermeu, Louis Heno, and Jakez Riou, and the playwright Tanguy Malemanche. During the 19th and 20th cent. a large number of Breton folk tales and songs have been collected. The diversity and richness of this collection make it unique in world literature.

Bretonneau, Pierre (pyĕr brĕtōnō'), 1778-1862, French physician. He performed (1825) the first successful tracheotomy for laryngeal diphtheria, wrote a treatise (1826) distinguishing between scarlet fever and diphtheria (which he named), described typhoid fever, and stated (1855) the germ theory of disease (which later became established largely through Pasteur's work).

Breton Succession, War of the, 1341-65, an important episode of the HUNDRED YEARS WAR. Duke John III of Brittany died in 1341 without heirs. The succession was contested by his half brother, John de Montfort, who was backed by Edward III of England, and by CHARLES OF BLOIS, who had married Jeanne de Penthièvre, a niece of the late duke Charles and Jeanne were supported by Philip VI, John II, and Charles V of France. The resulting war continued through several truces. In the battle of Auray (1364), Charles of Blois was defeated and killed, despite the support of his faithful follower, Bertrand DU GUESCLIN. The issue was settled by the Treaty of Guérande in 1365, when the Montfort heir was recognized by France as ruler of Brittany. An attempt (1378-79) by Charles V to confiscate Brittany for the French crown met the resistance of the Bretons and of Jeanne de Penthièvre. Du Guesclin, who commanded the royal army, made no serious effort to subdue the Bretons, and the attempt failed.

Brett, Reginald Baliol, 2d Viscount Esher: see ESHER, REGINALD BALIOL BRETT, 2d VISCOUNT.

Bretton Woods Conference, name commonly given to the United Nations Monetary and Financial Conference, held (July 1-22, 1944) at Bretton Woods, N.H. The conference resulted in the creation of the International Monetary Fund, to promote international monetary cooperation, and of the International Bank for Reconstruction and Development. By Dec., 1945, the required number of governments had ratified the treaties creating the two organizations, and by the summer of 1946 they had begun operation.

Breuer, Josef (yō'zēf broi'ər), 1842-1925, Austrian physician. He was the first to use (1880-82) the cathartic method to cure hysteria. His therapy and theory, when developed by FREUD, became psychoanalysis. Together they wrote *Studies in Hysteria* (1895).

Breuer, Marcel Lajos (broi'ər), 1902-, American architect and furniture designer, b. Hungary. During the 1920s he was associated, both as student and as teacher, with the BAUHAUS in Germany. In 1925, Breuer won renown with his design of the first tubular steel and laminated plywood chair. He built only one private house (Wiesbaden, 1932) before leaving Germany to work in Switzerland and England. Breuer became associate professor of architecture at Harvard Univ. in 1937 and from 1937 to 1941 was a partner of Walter GROPIUS, with whom he designed several outstanding houses. He developed exterior sun shielding and made bold sculptural use of poured concrete. With Nervi and S. H. Zehruss he planned the Paris headquarters of the UN Educational, Scientific, and Cultural Organization (1958). Among Breuer's major later designs are St. John's Abbey, Collegeville, Minn. (1953-61), the U.S. embassy at The Hague, the Whitney Museum of American Art, New York City (1966), and the New York Univ. Technology I and II buildings (1969), New York City. See his *Sun and Shadow*, ed. by Peter Blake (1955), *Buildings and Projects*, ed. by Cranston Jones (1962), and *New Buildings and Projects*, ed. by Tician Papachristou (1970).

Brueghel, family of painters: see BRUEGEL.

Breuil, Henri (aNdṛē' bro'ya), known as **Abbé Breuil**, 1877-1961, French archaeologist, paleontologist, and cleric. He taught at the Institut de Paléontologie Humaine, Paris, after 1910. He was one of the first to record and interpret Paleolithic art and the rock carvings and paintings in Europe and Africa. His principal work is *Four Hundred Centuries of Cave Art* (tr. 1952). See biography by A. H. Brodrick (1963).

Breviary of Alaric (ā'lārĭk), Visigothic code of Roman law issued (506) by King Alaric II for his Roman subjects in Spain and S. Gaul. It is also known as the *Lex Romana Visigothorum*. Based largely on the THEODOSIAN CODE and accompanied by valuable commentaries, it was a compilation of contemporary Roman law for the Roman element of the population, the Germanic element was under the authority of the earlier code issued by EURIC. Although both codes were later superseded by the *Forum judicum* of King RECCESWINTH, the Breviary remained influential in preserving Roman law in the S and E of France. See GERMANIC LAWS.

brevium: see PROTACTINIUM.

brewer's yeast: see YEAST.

brewing: see BEER.

Brewster, Sir David, 1781-1868, Scottish physicist and natural philosopher. He is noted especially for his research into the polarization of light (the invention of the kaleidoscope was one result of his studies). He improved the spectroscope and persuaded the British government to adopt his dioptric system of lighthouse illumination. For 21 years Brewster was principal of the United College of St. Salvador and St. Leonard, in St. Andrews, Scotland, and in 1859 he became principal of the Univ. of Edinburgh. He was a steady contributor to scientific publications. Included in his numerous writings are *A Treatise on Optics* (1831) and *Memoirs of the Life, Writings, and Discoveries of Sir Isaac Newton* (1855).

Brewster, Kingman, Jr., 1919-, American educator, b. Longmeadow, Mass., grad. Yale (A.B., 1941) and Harvard (LL.B., 1948). He was a professor of law at Harvard from 1950 to 1960. From 1961 to 1963 he was provost of Yale. In 1963 he became president of Yale. Among his writings are *Antitrust and American Business Abroad* (with M. Katz, 1959) and *Law of International Transactions and Relations* (1960).

Brewster, William, 1567-1644, English separatist and Plymouth colonist. After studying briefly at Cambridge he became the chief member of the congregation at Scrooby that broke away, or "sepa-

rated, from the Anglican Church in 1606, the members, after their migration to Holland in 1608, were known as Pilgrims. On his press at Leiden, Brewster printed a number of religious books and tracts that were distributed throughout England. Returning to England in 1617, he helped make arrangements for the Pilgrim migration to America and in 1620 embarked on the *Mayflower* with his wife, two sons, and two indentured boys. Brewster, an elder of the church from the time he lived in Leiden, was the sole religious leader of the Plymouth Colony until 1629, but because he was not ordained, he confined his ministry to services of prayer and praise only. Although he held no lay offices, he was very influential, being one of the eight who undertook (1627) to discharge the debt to the colony's backers. See biographies by Ashbel Steele (1857, repr 1970) and Dorothy Brewster (1970).

Brezhnev, Leonid Ilyich (lāyō'nēd īlyēch' brēzh'-nēf), 1906-, Soviet leader. He joined the Communist party in 1931 and rose steadily in the party hierarchy. In 1952 he became a secretary of the Communist party central committee. After suffering a slight political setback following Joseph Stalin's death in 1953, Brezhnev filled a number of party posts. In 1957, as protégé of Nikita Khrushchev, he became a member of the presidium (later politburo) of the central committee. From 1960 to 1964, he was chairman of the presidium of the Supreme Soviet, or titular head of state. Following Nikita Khrushchev's fall from power in Oct., 1964, which Brezhnev helped to engineer, he was named first secretary (later general secretary) of the Communist party. Although sharing power with Alexei KOSYGIN, Brezhnev emerged as the chief figure in Soviet politics. In 1968, in support of the Soviet invasion of Czechoslovakia, he enunciated the "Brezhnev doctrine," which asserted that the USSR could intervene in the domestic affairs of any Soviet bloc nation if Communist rule were threatened. While maintaining a tight rein in Eastern Europe, he favored closer relations with the Western powers, and he helped (1972-74) bring about a détente with the United States.

Březina, Otakar (ō'tōkar brēzh'-zīnā), 1868-1929, Czech lyric poet, leader of the Czech SYMBOLISTS, whose original name was Václav Jěbavý. The first collection of his poetry, *Tajemné dálky* [mysterious distances], appeared in 1895. It was followed by four more volumes of mystic, highly imaginative verse, and by one of essays, *Hudba pramenů* (the music of the springs) (1903). Březina is considered one of the greatest of Czech poets.

Brian Boru or Brian Boroimhe (both brī'an, brēn, bārōō', bārō'), 940?-1014, king of Ireland. A clan prince, he succeeded his brother Mathghamhain, who had seized the throne of Munster from the Eogharcht rulers (963). Brian subjugated all Munster, then extended his power over all S. Ireland, and in 1002 became high king of Ireland by right of conquest. As his power increased, relations with the Norse rulers on the Irish coast grew steadily worse. Sitric, king of the Dublin Norse, formed against Brian a coalition of Norse of Ireland, the Hebrides, the Orkneys, and Iceland as well as Brian's Irish enemies. On Good Friday (April 23), 1014, Brian's forces met and annihilated the allies at Clontarf, near Dublin. Soon afterward he was murdered in his tent. Brian's victory broke the Norse power in Ireland forever, but Ireland fell into anarchy.

Briand, Aristide (ārēstēd' brēā'n'), 1862-1932, French statesman. A lawyer and a Socialist, he entered (1902) the chamber of deputies and helped to draft and pass the law (1905) for separation of church and state. Made (1906) minister of education and minister of religion to execute the law, he was ejected from the Socialist party for participating in the bourgeois cabinet of premier Jean Sarrien. In 1909 he became premier for the first of 10 times. In World War I, Briand headed (1915-17) two successive coalition cabinets and made the decision to hold VERDUN at any cost. His government fell in March, 1917, attacked by Georges Clemenceau for attempting to negotiate a peace with Germany in 1917. Briand retired. After the war he emerged as a leading advocate of international peace and cooperation, and he is best remembered for his devotion to this cause. The cabinet he headed in 1921 fell because of his unpopular criticism of the Treaty of Versailles and his moderate demands at international conferences, where he worked for a reconciliation with Germany without the sacrifice of French security. As foreign minister from 1925 to 1932 he was the chief architect of the LOCARNO PACT (1925) and the KELLOGG-BRIAND PACT (1928), and he

shared the 1926 Nobel Peace Prize with Gustav Stresemann. An impressive orator, Briand was a prominent figure in the League of Nations. He advocated a plan for a United States of Europe.

briar: see SPIER.

Briard (brēārd'), breed of muscular, wiry WORKING DOG whose origins may be traced back to 12th-century France. It stands from 22 to 27 in (55.9-68.6 cm) high at the shoulder and weighs between 70 and 80 lb (31.8-36.3 kg). Its moderately long, stiff, slightly wavy coat is usually black, tawny, or gray, although any solid color except white is acceptable. Raised for centuries to herd and protect sheep, the Briard has more recently been trained as a police and war dog. It is also kept as a pet. See DOG.

Brice, Fanny, 1891-1951, American comedienne, b. New York City as Fanny Borach. Brice appeared in burlesque and vaudeville from 1906. She starred in the Ziegfeld "Follies" from 1910 onward, and in Broadway shows, emphasizing her plainness by means of a comic awkwardness. In 1937 she created for radio the popular role of Baby Snooks. She appeared in the films *My Man* (1928), *The Great Ziegfeld* (1936), and *Ziegfeld Follies* (1944). Three films have been based on her life, including *Funny Girl* (1968). See biography by Norman Katkov (1953).

Brices Cross Roads National Battlefield Site: see NATIONAL PARKS AND MONUMENTS, table.

brick, ceramic structural material that, in modern times, is made by pressing clay into blocks and firing them to the requisite hardness in a kiln. Bricks in their most primitive form were not fired but were hardened by being dried in the sun. Sun-dried bricks were utilized for many centuries and are used even today in regions with the proper climate. Examples from approximately 5,000 years ago have been discovered in the Tigris-Euphrates basin, and the ancient races occupying this region may have been the first users of brick. In Babylonia there was a lack of both timber and stone, and the thick clay deposited by the overflowing rivers was the only material adaptable to building. The Persians and the Assyrians used sun-dried blocks of clay for walls of great thickness, facing them with a protective coating of fired bricks. The Egyptians and the Greeks used bricks only to a limited extent, as they had access to plentiful supplies of stone and marble. The Romans manufactured fired bricks in enormous quantities and gave them an important role as a basic structural material in buildings throughout the Roman Empire. Bricks played an important part in

early Christian architecture until the decline of the empire. Whereas the Romans had usually concealed their brickwork beneath a decorative facing of stone or marble, the Byzantines devised a technique for exposing the bricks and giving them a full decorative expression. This technique influenced the Romanesque style and brought especially good results in Lombardy and in Germany, where bricks came to be arranged in immensely varied patterns. Since the Middle Ages, brickwork has been in constant use everywhere, adapting itself to every sort of construction and to every change of architectural style. At the beginning of the 19th cent. mechanical brick-making processes began to be patented and by the latter half of the century had almost entirely replaced the ancient hand-fashioning methods. Contemporary American building bricks are rectangular blocks with the standard dimensions of about 2¼ by 3¼ by 8 in (5.7 by 9.5 by 20.3 cm). Good bricks are resistant to atmospheric action and high temperatures and are more durable than stone. Where heat resistance is especially important, fire bricks are used; these are made of special refractory clays called fire clays and are fired at very high temperatures.

bridal wreath: see SPIRAEA.

Bride, Saint: see BRIDGET, SAINT.

bride price: see MARRIAGE.

Bridewell (brīd wəl), district in London, England, between Fleet St. and the Thames River. The Bridewell house of correction, demolished in 1863, was on the site of a palace built by Henry VIII and given by Edward VI to the City of London in 1553 for use as a training school for homeless apprentices. The building later became a prison as well. *Bridewell* thus came to be used as a general term for a prison or house of correction.

bridge, structure built over water or any obstacle or depression to allow the passage of pedestrians or vehicles. In ancient times and among primitive peoples a log was thrown across a stream, or two vines or woven fibrous ropes (the upper for a handhold and the lower for a footwalk) were thrown across, to serve as a bridge. Later, arched structures of stone or brick were used, traces of these, built from 4000 to 2000 B.C., have been found in Palestine. The Romans built long, arched spans, many of which are still standing. In England the rather crude arched stone bridges had heavy piers (intermediate supports) that were a great obstruction to river traffic, and the roadway was often lined with small shops. In the early days in the United States, since wood

Bridges

was abundant and cheap, the arched type of bridge did not develop. Wood is now seldom used, since a wooden bridge may be destroyed by rot or fire. In the middle part of the 19th cent. many bridges were built of cast and wrought iron. Robert Stephenson, an English engineer, designed and built a bridge of this type across Menai Strait in North Wales (1850). Another is Victoria Bridge across the St. Lawrence at Montreal. The disadvantage of cast iron for bridges is its low tensile strength. The development of the Bessemer process for converting cast iron into steel revolutionized bridgebuilding. It became possible to design framed structures with greater ease and flexibility. Single-piece, rolled steel beams can support spans of 50 to 100 ft (15.2–30.5 m), depending on the load. Larger, built-up beams are made for longer spans. The truss can span even greater distances and carry heavy loads, it is therefore commonly used for railroad bridges. A large truss span may have a length of about 300 ft (90 m). Longer spans are those of arch bridges, the Bayonne Bridge between New York and New Jersey and the Sydney Harbor Bridge in Australia are the longest, at 1,652 ft (504 m) and 1,650 ft (503 m), respectively. The CANTILEVER, however, is more common for spans of such lengths. The cantilevered Forth Bridge (1890) in Scotland was the first major structure built entirely of steel, the material that made possible its two record-setting spans of 1,710 ft (521 m) each. They remained the longest in existence until 1917, when the Quebec Bridge was built, it has an 1,800-ft (549-m) span. Today, however, the suspension bridge is used for the longest spans. It has a roadway suspended by vertical cables that are attached to two or more main cables. The main cables are hung on two towers and have their ends anchored in bedrock or concrete. The earliest suspension bridges built in America were those constructed by the American builder James Finley. The design of suspension bridges advanced when J. A. Roebling, a German-born engineer who emigrated to the United States, developed the use of wire cables and stiffening trusses. He completed a suspension bridge over the Niagara River in 1854. He also designed the Brooklyn Bridge across the East River (completed 1883), which was the world's longest suspension bridge at the time of its construction, having a main span of 1,595.5 ft (487 m). Today the 20 longest spans in the world are suspended. Eleven of them are in the United States. Ten of the 20 have been built since 1960. The eight longest main spans are the VERRAZANO-NARROWS BRIDGE, New York City, 4,260 ft (1,298 m), GOLDEN GATE BRIDGE, San Francisco, 4,200 ft (1,280 m), Mackinac Straits Bridge, Mich., 3,800 ft (1,158 m), Bosphorus Bridge, Istanbul, Turkey, 3,524 ft (1,074 m), GEORGE WASHINGTON BRIDGE, New York City, 3,500 ft (1,067 m), SALAZAR BRIDGE, Lisbon, Portugal, 3,323 ft (1,013 m), the Forth Road Bridge, Queensferry, Scotland, 3,300 ft (1,006 m), and the Severn Bridge, Bristol, England, 3,240 ft (988 m). The SAN FRANCISCO-OAKLAND BAY BRIDGE is noted for its three long spans, of which two are suspension spans and the third a cantilever. The CHESAPEAKE BAY BRIDGE-TUNNEL has two 1-mi (1.6-km) tunnels along its 18-mi (28-km) length. Movable bridges are generally constructed over waterways where it is impossible to build a fixed bridge high enough for water traffic to pass under it. The most common types of movable bridge are the lifting, bascule, and swing bridges. The lifting bridge, or lift bridge, consists of a rigid frame carrying the road and resting abutments, over each of which rises a steel frame tower. There is no center pier. The bridge is hoisted vertically. The bascule bridge follows the principle of the ancient drawbridge. It may be in one span or in two halves meeting at the center. It consists of a rigid structure mounted at the abutment on a horizontal shaft, about which it swings in a vertical arc. The lower center span of the famous Tower Bridge in London is of the double-leaf bascule type. Bascule bridges are sometimes built to swing back on a heavy steel quadrant frame, there being suitable tracks on which it rolls. There are several forms of the swing bridge, generally it is mounted on a pier in mid-stream and is swung into a position parallel to the stream. In the transportation of men and equipment during wartime, where the means of crossing a stream or river is lacking or has been destroyed by the enemy, military bridges play a vital role. Standard types of military bridge include the trestle, built on the spot by the engineering corps from any available material, and the floating bridge made with portable PONTOONS. See VIADUCT, PIER. See D. B. Steinman and S. R. Watson, *Bridges and Their Builders* (rev. ed. 1957), D. B. Steinman, *Famous Bridges*

of the World (rev. ed. 1961), H. Shirley-Smith, *The World's Great Bridges* (rev. ed. 1965), Robert Silverberg, *Bridges* (1966), H. J. Hopkins, *A Span of Bridges: An Illustrated History* (1970).

bridge, card game derived from WHIST, played with 52 cards by four players in two partnerships. The game probably originated in the Middle East in the 19th cent. Auction bridge, one form of the game, was developed by the British in India and later was popular in England and the United States. It is still played but has largely been supplanted by contract bridge, which achieved popularity after important innovations were made in 1925 by Harold S. Vanderbilt. Its phenomenal popularity owed much to the activities of Ely CULBERTSON. The craze subsided but was later revived, books, tournaments, and newspaper columns on bridge abound. The cards in contract bridge rank from ace down to two, in bidding, suits rank spades, hearts, diamonds, and clubs. After all cards are dealt, so that each player holds 13 cards, the dealer begins the auction, which proceeds in rotation to the left. Each player must bid, pass, double (increase the value of the previously stated contract), or redouble (only after a double, further increasing the point value of the contract). A bid is an offer to win a stated number of tricks over six with a named suit as trump or with no-trump. The lowest bid is one, the highest seven. Each bid, i.e., "one diamond," "one no-trump," "four hearts," must be higher than the preceding bid, with no-trump ranking above spades. Artificial bids are those that convey certain information to a partner and are not meant to be taken literally. The highest bid of the auction becomes the contract after three consecutive passes end the bidding. The player who first named the suit (or no-trump) specified in the winning bid becomes the declarer. The player to the left of the declarer leads any card face up, and the next hand, that of the declarer's partner, is placed face up on the table, grouped in suits. This is known as the dummy, and the declarer selects the cards to be played from this hand. The object of the game for both partnerships is to win as many tricks as possible, a trick being the three cards played in rotation after the lead. Suits must be followed, if a player has no cards in the suit led, he may play any card. Highest trump or, if no trump card is played, highest card of the suit led wins. Points are awarded for the number of tricks won. Culbertson devised the honor count system to evaluate a hand for bidding. The point count (or standard American) system introduced by Charles H. Goren in the 1940s has generally replaced honor count. Numerous conventions are used in bridge, but the four standard ones are Blackwood, Gerber, Stayman, and grand-slam force. Duplicate bridge, in which the same prearranged hands are played by individuals, pairs, or teams of four, is the main form of competitive bridge. The laws of contract bridge are promulgated in the Western Hemisphere by the American Contract Bridge League, which holds various bridge tournaments. In international contract bridge matches the Bermuda bowl, the trophy for victory, is the emblem of the world championship. In Olympic years an olympiad championship is held by the World Bridge Federation and replaces the team tournament for the Bermuda bowl. See Charles H. Goren, *Bridge Complete* (rev. ed. 1971), Terence Reese and Albert Dormer, *The Complete Book of Bridge* (1974).

Bridge of Sighs, covered stone bridge in Venice, Italy, built in the 16th cent. to connect the ducal palace with the state prison. The prisoners were led over the bridge directly to prison after trial in the ducal palace.

Bridgeport, city (1970 pop. 156,542), Fairfield co., SW Conn., on Long Island Sound, inc. 1836. It is a port of entry and the chief industrial city in the state. Its manufactures include electrical appliances and equipment, firearms, ammunition, helicopters, gas turbine engines, metal products, trucks, building materials, and aerosol products. Bridgeport was settled in 1639 and grew as a fishing community. The Barnum Institute of Science and History commemorates the showman P. T. Barnum, who lived in Bridgeport and whose circus wintered there. "General Tom Thumb" (Charles S. Stratton) was born in the city. *The Univ. of Bridgeport*, Sacred Heart Univ., and Housatonic Community College are in Bridgeport.

Bridger, James, 1804–81, American fur trader, one of the most celebrated of the MOUNTAIN MEN, b. Virginia. He was working as a blacksmith in St. Louis when he joined the Missouri River expedition of William H. Ashley in 1822. From that time until the fur trade declined in the 1840s he was a trader and

trapper in the mountains, becoming familiar with most of the country N. of Spanish New Mexico and E. of California. He was associated with Thomas Fitzpatrick and Jedediah Smith in many of their journeys, and he is generally credited with being the first white man to see (1825) Great Salt Lake. He was the guide for the party of Marcus Whitman, and in 1843 he and a partner, Louis Vasquez, opened Fort Bridger on the OREGON TRAIL. They later were forced by the Mormons to give up the post. Bridger was a guide, notably to Gen. A. S. Johnston on the Mormon campaign in 1857, to an expedition to the present Yellowstone Park (a region he did much to publicize), and to the surveying party of Gen. G. M. Dodge for the Union Pacific RR. He came to be famous for his talk, was a fine spinner of "tall tales," and was one of the most picturesque figures of the frontier. See biographies by J. C. Alter (1925, rev. ed. 1962, repr. 1967), Stanley Vestal (pseud. of W. S. Campbell, 1946, repr. 1970), and Gene Caesar (1961), Bernard De Voto, *Across the Wide Missouri* (1947).

Bridger, Fort, see FORT BRIDGER STATE PARK.

Bridges, Calvin Blackman, 1889–1938, American geneticist, b. Schuylers Falls, N.Y., grad. Columbia (B.S., 1912, Ph.D., 1916). In his research he collaborated with T. H. Morgan, A. H. Sturtevant, and H. J. Muller, the group that developed many of the concepts of modern genetics through their study of the fruit fly, *Drosophila*. He continued with the Morgan group as a research associate of the Carnegie Institution in Washington from 1919. His contributions to modern genetics include the proof of the chromosome theory of heredity, formulation of the theory of genic balance, and the detailed study of giant salivary chromosomes in relation to the positions of genes. He was co-author of *The Mechanism of Mendelian Heredity* (1915).

Bridges, Charles, fl. 1683–1740, English portrait painter, active (c. 1735–c. 1740) in Virginia. He was the most skillful practitioner of aristocratic portrait painting in the South at that time. Among the works attributed to him are *Mann Page the Second* (Col. lege of William and Mary) and *Maria Taylor Byrd* (Metropolitan Mus.).

Bridges, Harry (Alfred Renton Bridges), 1901–, American labor leader, b. Melbourne, Australia. Arriving (1920) as an immigrant seaman in San Francisco, he became a longshoreman and militant labor organizer. Bridges led (1934) the West Coast maritime workers' strike, which expanded into an abortive general strike, and in 1937 he set up the International Longshoremen's and Warehousemen's Union (ILWU), and became West Coast director of the Congress of Industrial Organizations (CIO). Proceedings in 1939 to deport him as a Communist alien ended when he was officially absolved of Communist affiliation. The U.S. House of Representatives passed (1940) a bill to deport him, but it was ruled (1945) illegal by the Supreme Court. He became a citizen in 1945. His support of Henry A. Wallace for President in 1948 resulted in his ouster as CIO regional head. He was convicted and sentenced (1950) to a five-year prison term for swearing falsely at his 1945 naturalization hearing that he had never been a member of the Communist party. In 1953, the U.S. Supreme Court dismissed the indictment for perjury against Bridges, thus voiding his prison sentence. He was reindicted on similar charges, but in 1955, a Federal district judge ruled that the government had failed to prove that he was a Communist or that he had concealed that fact when he was naturalized. Shortly thereafter the U.S. Justice Dept. announced it had given up its long fight to deport Bridges. In 1958 he was granted a U.S. passport. In 1971 and 1972 Bridges led the ILWU in a strike that tied up the West Coast waterfront for several weeks. See study by C. P. Larrowe (1972).

Bridges, Robert Seymour, 1844–1930, English poet. In 1882 he abandoned medical practice to devote himself to writing. An excellent metrist, he wrote many beautiful lyrics and longer poems, noted for their refined simplicity and perfection of form. Although not a well-known poet, in 1913 he was made poet laureate. In 1929, when Bridges was 85, he published *The Testament of Beauty*, a philosophical poem on the evolution of the human soul. It achieved immediate popularity and is considered his greatest work. Long interested in prosody, Bridges published two important works on the subject, *Milton's Prosody* (1893) and *John Keats* (1895). He also published the poems of his friend Gerard Manley Hopkins. See studies by Albert Guerard, Jr. (1942) and E. C. Wright (1951).

Bridget, Saint, 453?–523?, Irish holy woman. She is often called St. Brigid, St. Bride, or St. Bridget of

Kildare Little is known of her, but she did found a great monastery at Kildare. She is buried at Downpatrick with St. Patrick and St. Columba, and with them she is patron of Ireland, hence her nickname Mary of the Gael. St. Bridget is associated notably with charity and justice. Devotion to her was widespread in Great Britain before the Reformation, as witness many names, e.g., Bridewell, Kilbride, Kirkbride, and McBride. Feast Feb. 1. See study by Alice Curtayne (1954).

Bridget of Sweden, Saint, c. 1300–1373, Swedish nun, one of the great saints of Scandinavia. She was a noblewoman at court and the mother of eight children. After her husband's death she founded the Order of the Most Holy Savior (the Bridgettines). In 1349 she went to Rome and became famous for her holy life. She labored for the reform of religious life in Italy and for the return of the pope from Avignon to Rome. Her account of her numerous visions was widely read during the Middle Ages. St. Bridget is patron of Sweden. She is also called Birgitta. Feast Oct. 8. See biography by Johannes Jorgensen (2 vol., tr. 1954).

Bridgeton, 1. City (1970 pop. 19,992), St. Louis co., E Mo., on the Missouri River, settled c. 1765, inc. 1843. Refrigerators are among its manufactures. 2. City (1970 pop. 20,435), seat of Cumberland co., S N J., on the Cohansey River, settled 1686, inc. 1865. Once a rural farm center, it is now highly industrialized, with glassworks, fertilizer plants, and food-processing, textile, and garment industries. Bridgeton's downtown is highly Victorian in appearance, but the city has several 18th-century buildings, including Potter's Tavern (recently restored), a revolutionary center in colonial days, and a Presbyterian church (1792). The city's liberty bell, now in the county courthouse lobby, rang on July 7, 1776, for the reading of the Declaration of Independence. Bridgeton's zoo, the largest municipal zoo in the state, draws many visitors.

Bridgetown, city (1970 pop. 8,868), capital, commercial center, and chief port of BARBADOS, West Indies. It is, in addition, a tourist and health resort. Sugar, rum, and molasses are the leading exports, and Bridgetown also serves as an important transshipment point. The city, which was founded by the British in 1628, is the site of a college of the Univ. of the West Indies.

Bridge View, village (1970 pop. 12,522), Cook co., NE Ill., a residential suburb of Chicago, inc. 1947.

Bridgewater, town (1970 pop. 11,829), Plymouth co., E Mass., inc. 1656. Its iron foundry industry dates from colonial times. Bridgewater State College and a state prison are there.

Bridgman, Elijah Coleman, 1801–61, first American Protestant missionary to China, b. Belchertown, Mass. He served as a missionary in China from 1830 until his death. His *Chinese Chrestomathy* appeared in 1841, his Chinese translation of the Bible (in collaboration with M. S. Culbertson) was published posthumously in 1862.

Bridgman, Frederic Arthur, 1847–1927, American painter of genre and of scenes of Near Eastern antiquity, b. Tuskegee, Ala. He studied under Gérôme in Paris, where he remained as an important figure in the large American colony. Among his romantic, academic paintings are *The Procession of the Bull Apis* (Corcoran Gall.) and *Awaiting his Master* (Art Inst., Chicago). He also wrote several books, including *Winters in Algeria* (1890).

Bridgman, Laura, 1829–89, first blind deaf-mute to be successfully educated, b. Hanover, N.H. Under the guidance of Dr. S. G. Howe, of the Perkins Institution (now in Watertown, Mass.), she learned to read and write and to sew so well that she eventually became a sewing teacher at the school, where she remained until her death. See biography by L. E. Richards (1928).

Bridgman, Percy Williams, 1882–1961, American physicist, b. Cambridge, Mass., grad. Harvard (B.A., 1904, Ph.D., 1908). From 1910 he taught at Harvard, as professor from 1919. He won the 1946 Nobel Prize in Physics for his work in high pressures. He is known also for his studies of electrical conduction in metals and properties of crystals and for his writings on the philosophy of modern science. His works include *The Logic of Modern Physics* (1927), *The Nature of Physical Theory* (1936), and *Nature of Thermodynamics* (1941).

Bridgwater, municipal borough (1971 pop. 26,598), Somerset, SW England, on the Parrett River estuary. It is a port for seaborne traffic and a market town. Bridgwater is the only place in England that produces bathbricks, which are made from clay and

sand deposited by the river and are used for scouring metals. Other manufactures are bricks, tiles, furniture, and preserves. Admiral Robert Blake was born in Bridgwater.

Bridlington (brīd'lingtən, būr'-), municipal borough (1971 pop. 26,729), East Riding of Yorkshire, NE England. It has a well-protected harbor on Bridlington Bay, and its beaches and pavilions make it a popular holiday resort. The Royal Yorkshire Yacht Club has its headquarters there. The borough administers Flamborough Head and most of the intervening coast line. Bridlington is an ancient market town and port. An Augustinian priory founded during the reign of Henry I has been restored. Of interest are Roman and early British remains and Bayle Gate (14th cent.). In 1974, Bridlington became part of the new nonmetropolitan county of Humberside.

Brie (brē), region, Marne and Seine-et-Marne depts., N France, E of Paris. Rich in wheat and cattle, it is famous for Brie cheese. The smaller section of the region (*Brie française*) forms part of the Île-de-France and is very fertile. There, many of the huge farms are fortresslike in their imposing architecture. Meaux, the former capital and major commercial center, Melun, and Château-Thierry are the chief towns. The former county of Meaux (E Brie) was combined (11th cent.) with that of the Troyes to form the county (later province) of Champagne and Brie.

Brienne, Étienne Charles Loménie de: see LOMÉNIE DE BRIENNE, ÉTIENNE CHARLES

Brienze (brēnts'), town (1970 pop. 2,796), Bern canton, central Switzerland, on the northeast shore of the Lake of Brienz. A center of the Swiss woodcarving industry, it is also a resort. The Lake of Brienz (11 sq mi/28 sq km), traversed by the Aare River, is highly scenic.

brier or **brirar**, name sometimes given any thorny plant, more specifically the SWEETBRIER, and the greenbrier. French brier, or brierroot, is a name for the root of the European white HEATH so widely used in the manufacture of smoking pipes.

Briey (brēā'), town (1968 pop. 5,012), Meurthe-et-Moselle dept., in Lorraine, NE France. It is at the center of the huge Brie iron-ore basin (see LORRAINE) and has a chemical industry.

Brig (brēk), Fr. *Brigue*, town (1970 pop. 5,191), Valais canton, S Switzerland, on the Rhône River, at the north entrance of the Simplon Tunnel. Although it has a noted 17th-century palace, Brig is primarily known as the junction of the Simplon, Lötschberg, and Furka rail lines.

brig, two-masted sailing vessel, square-rigged on both masts. Brigs have been used as cargo ships and also, in the past, as small warships carrying about 10 guns. They vary in length between 75 and 130 ft (23–40 m), with tonnages up to 350. A brigantine is a somewhat smaller two-masted vessel, square-rigged on the foremast but with a fore-and-aft mainsail. In earlier times it carried a square topsail on the mainmast. A hermaphrodite brig is identical with the brigantine except that it carries no topsail on its mainmast, most U.S. brigs since 1860 have actually been of this type.

Briga: see BRIGUE AND TENDE

brigandage (brīg'əndij), robbery, blackmail, kidnapping, and plundering committed by armed bands. Laxity in administration, social and political demoralization, economic or political oppression, and racial or religious antagonisms may give rise to brigandage, especially if the terrain of the area provides suitable hiding places for the brigands. Inhabitants of an invaded state sometimes resort to brigandage, and those held under intolerable economic subjection adopt it as a means of retaliation. In such conditions, the bandit is often protected by a sympathetic public opinion, and, like the legendary Robin Hood, may become a popular hero, the symbol of resistance to tyranny. Brigandage then becomes a mixture of violent spoliation and patriotism or altruism. Brigandage more frequently flourishes during the disintegration of a state (as the decline of the Roman Empire), at a time of major economic and social change (as among the robber barons at the end of the feudal ages), after a great war, in the early stages of frontier settlement (as in early California and in the Australian bush), or in national borderlands (as on the Scottish border). When a strong centralized authority develops, when a disciplined constabulary is organized, or when public disapproval of brigandage becomes manifest, it disappears. The brigand leader, in a chaotic society, may extend his jurisdiction over a wide area, and although his ends may be selfish, he can contribute to

the social order by establishing a recognized authority. The lawless lives of brigands and highwaymen have often become legends. Stories of gallantry and heroism have gathered about many brigands, especially those who were the victims of social or political oppression, who were rebels rather than bandits. Ballads and folk tales have grown about many leaders, and the names of brigands are known to all. Dick Turpin, the highwayman, Hereward the Wake, Robin Hood, Stenka Razin, the Cossack, Fra Diavolo of Italy, and Jesse James of the United States. See C. J. Finger, *Highwaymen* (1925, rep. 1970), Danilo Dolci, *Outlaws* (1961), Christopher Hibbert, *Highwaymen* (1968), Eric Hobsbawm, *Bandits* (1969).

Briggs, Charles Augustus, 1841–1913, American clergyman, theologian, and educator, b. New York City, studied at the Univ. of Virginia, Union Theological Seminary, and the Univ. of Berlin. From 1875 until his death he was a member of the faculty of Union Theological Seminary, serving as professor of Hebrew and the cognate languages. In 1890 he was appointed to the chair of biblical theology. The address on the authority of Holy Scripture that he gave at that time caused his trial for heresy (1892) before the New York presbytery. Although acquitted, Dr. Briggs was suspended (1893) from the Presbyterian ministry by the General Assembly, thereupon Union Theological Seminary severed its relations with the Assembly. He later (1900) entered the Episcopal ministry. Among his many books are *A Critical and Exegetical Commentary on the Book of Psalms* (2 vol., 1906) and *Hebrew and English Lexicon of the Old Testament* (with Francis Brown and S. R. Driver, completed 1906). See his *Inaugural Address and Defense* (first printed in 1891 and 1893, repr. 1972), C. E. Hatch, *The Charles A. Briggs Heresy Trial* (1969).

Briggs, Clare A., 1875–1930, American cartoonist, b. Reedsburg, Wis. He won a national reputation with the contributions he made to the *Chicago Tribune* from 1907 to 1914. From 1914 until his death his cartoons appeared in the New York *Tribune* syndicate. Among his best-known creations are "Mr. and Mrs." and "In the Days of Real Sport." The droll simplicity of his drawings was characteristic of American graphic humor of the 1920s.

Briggs, Henry, 1561–1630, English mathematician. He was the first professor of geometry at Gresham College, London (1596–1619), and Savilian professor of astronomy at Oxford (from 1619). After publication of Napier's work on logarithms in 1614, Briggs suggested that the logarithms be tabulated to the base 10, and Napier agreed to the alteration. Briggs wrote *Arithmetica logarithmica* (1624), a work containing logarithmic tables for 30,000 natural numbers to 14 places. His logarithms are known today as common logarithms.

Briggs, Le Baron Russell, 1855–1934, American educator, b. Salem, Mass., grad. Harvard (B.A., 1875, M.A., 1882). As a teacher at Harvard he developed, with Barrett Wendell, a prescribed and widely imitated freshman English course. A number of able contemporary writers were influenced by his graduate course in creative writing. He became professor of English in 1890 and of rhetoric and oratory in 1904. In 1891 he was appointed dean of the college and from 1903 to 1923 served as president of Radcliffe. His works include *School, College, and Character* (1901), *Routine and Ideals* (1904), *Girls and Education* (1911), and *Men, Women, and Colleges* (1925). See R. W. Brown, *Dean Briggs* (1926).

Brigham, Albert Perry, 1855–1932, American geographer, b. Perry, N.Y., grad. Colgate Univ., 1879, M.A. Harvard, 1892. After nine years in the Baptist ministry (1882–91) he became professor of geology at Colgate, where he taught for 30 years. A founder of human geography, Brigham helped to shape the development of geographic thought in the United States by recognizing and expounding upon the influence of the earth on man. He published many articles and textbooks including *Geographic Influences in American History* (1903), a book that widely influenced history students and scholars.

Brigham City, city (1970 pop. 14,007), seat of Box Elder co., N Utah, inc. 1869. It is the center of a large farm area served by the Ogden River project. Sheep, cattle, wheat, sugar beets, garden crops, and orchard fruit are raised. The city has woolen mills, granaries, and food-processing plants, and a sugar refinery is nearby. It was founded as Box Elder in 1851, and its name was changed to honor Brigham Young in 1856. A U.S. Indian school is in the city, and just west is the Golden Spike National Historic Site, which marks the spot in which the last railroad spike was driven in 1869. A bird refuge is nearby.

Brigham Young University, at Provo, Utah, Latter-Day Saints, coeducational, opened as an academy in 1875 and became a university in 1903

Brighouse, municipal borough (1971 pop 34,111), West Riding of Yorkshire, N central England, on the Calder River. It is a center of woolen, cotton, and silk milling and produces carpets, leather goods, machinery, radio and television equipment, dyes, and soap. Stone quarries are nearby. Also in the vicinity is the traditional grave of Robin Hood. In 1974, Brighouse became part of the new metropolitan county of West Yorkshire.

Bright, John, 1811–89, British statesman and orator. He was the son of a Quaker cotton manufacturer in Lancashire. A founder (1839) of the Anti-Corn Law League, he rose to prominence on the strength of his formidable oratory against the CORN LAWS. A staunch laissez-faire capitalist, and, with RICHARD COBDEN, a bastion of the MANCHESTER SCHOOL of economics, he resented the protection given to landholders by these laws at the expense of manufacturing interests. After the repeal (1846) of the corn laws, Bright's principal concern was parliamentary reform, which he pursued relentlessly until passage of the third Reform Bill in 1884. A member of Parliament for Manchester (1847–57), he lost his seat because of his opposition to British involvement in the Crimean War, which he considered un-Christian and against Britain's economic interests. He represented Birmingham (1858–89) and served in William Gladstone's cabinets as president of the Board of Trade (1868–70) and chancellor of the duchy of Lancaster (1873–74, 1880–82). He supported Gladstone on the issues of disestablishment of the Church of Ireland (1869) and Irish land reforms, but he opposed Home Rule for Ireland. His laissez-faire views also made him oppose direct government intervention to improve the conditions of the poor. He resigned (1882) in protest against intervention in Egypt for the same reasons that had led him to oppose the Crimean War. See his speeches (ed by J. E. T. Rogers, 1868) and public addresses (also ed by J. E. T. Rogers, 1879), biographies by G. M. Trevelyan (2d ed 1925) and A. S. Turberville (1945).

Bright, Richard, 1789–1858, English physician. In London he was the leading consultant of his time, and he contributed many important clinical observations. He was the author of the significant *Reports of Medical Cases* (Vol. I, 1827). This contained his description of certain forms of NEPHRITIS, or kidney disease, known generally as Bright's disease and of dropsy resulting from kidney disease, as distinct from cardiac dropsy. Bright was a physician at Guy's Hospital.

bright-line spectrum: see SPECTRUM

Brighton, county borough (1971 pop 166,081), East Sussex, SE England. The largest and most popular resort in S England, Brighton also has engineering works and factories that manufacture office machinery, machine tools, electrical apparatus, vacuum cleaners, shoes, and paint. Formerly a small fishing village, it became a fashionable resort and was patronized, starting in 1783, by the Prince of Wales (later George IV), who built the Royal Pavilion. Entertainment is provided on the West Pier and the Palace Pier and in the Dome, formerly the royal stables and now a hall, these, together with the seaside promenade and the aquarium, are notable features. The Univ. of Sussex is in Brighton. In 1974 the borough became part of the new nonmetropolitan county of East Sussex.

Brighton, city (1971 pop 39,103), Victoria, SE Australia, part of the Melbourne urban agglomeration, on Port Phillip Bay. It is a residential area and resort.

Bright's disease: see NEPHRITIS

Brigid, Saint: see BRIDGET, SAINT

Brigue and Tende (brēg, tānd), Ital. *Briga e Tenda*, two small districts (1968 pop 2,726), Alpes-Maritimes dept., SE France, on the French-Italian border. With several smaller frontier areas in the Mont Cenis and Mont Blanc regions, they were ceded to France by Italy in 1947 after a referendum. Brigue and Tende are largely French-speaking. Before 1947 the strategic Col de Tende, a pass now situated on the border, was entirely within Italy.

Brill or Bril, Flemish painters, brothers. **Mattsy Brill** (ma'tis), 1550–83, went to Rome early in his career and executed frescoes for Gregory XIII in the Vatican. **Paul Brill**, 1554–1626, probably studied in Rome with his brother and succeeded him at the Vatican. His calm, well-observed landscapes exercised a great influence on Italian art. His works after 1600 show his mature style, the landscape elements are arranged like stage-set wings receding diagonally

into depth, his brushwork is broader, and his atmospheric effects refined. His frescoes and oils are found in many Roman churches. *Martyrdom of St. Clement* (Vatican), against a seascape, is perhaps his best-known work. He often painted small landscapes on copper.

Brill, Abraham Arden, 1874–1948, American psychiatrist, b. Austria, grad. New York Univ., 1901, M.D. Columbia, 1903. He came to the United States alone at the age of 13. After studies with C. G. Jung in Switzerland, he returned to the United States in 1908 to become one of the earliest and most active exponents of psychoanalysis, being the first to translate into English most of the major works of Freud as well as books by Jung. He taught at New York Univ. and Columbia, was a practicing psychoanalyst, and wrote *Psychoanalysis: Its Theories and Practical Application* (1912) and *Fundamental Conceptions of Psychoanalysis* (1921).

Brillat-Savarin, Anthelme (aŋtēlm' brēya'-sava-rān'), 1755–1826, French lawyer, economist, and gastronome, famous for his witty treatise on the art of dining, *La Physiologie du goût* (1825). It has been frequently republished and was translated into English as *The Physiology of Taste* (1925, rev. ed. 1971). An emigre during the Reign of Terror, Brillat-Savarin spent some time in the United States.

Brill's disease: see TYPHUS

brimstone: see SULFUR

Brindaban, India: see VRINDABAN

Brindisi (brēn'dēzē), Latin *Brundisium*, city (1971 pop 79,784), capital of Brindisi prov., in Apulia, S Italy. A modern port on the Adriatic Sea, it has been noted since ancient times for its traffic with the E Mediterranean. Manufactures include petrochemicals, plastics, and food products. Its excellent harbor was a Roman naval station, a chief embarkation point for the Crusaders (12th–13th cent.), and an important Italian naval base in World War I. One of the two columns marking the terminus of the Appian Way still stands. Brindisi also has Romanesque churches, a fine cloister, and a castle built (13th cent.) by Emperor Frederick II.

brine shrimp, common name for a primitive CRUSTACEAN that seldom reaches more than 1/2 in. (1.3 cm) in length and is commonly used for fish food in aquariums. Brine shrimp, which are not closely related to true shrimp, can be found almost everywhere in the world in inland salt waters, although they are completely absent from oceans. They can live in water having several times the salinity of sea water, but they can also tolerate water having only one tenth the marine salt concentration. Brine shrimp usually occur in huge numbers and can be seen in vast windblown lines in the Great Salt Lake. Their absence from the sea has been explained by their vulnerability to attack by predators and the absence of the latter in their inland saline habitat. Although brine shrimp are considered to be members of a single genus, *Artemis*, and possibly a single species, there are several varieties. Generally, they have stalked, compound eyes and tapered bodies with a trunk that bears 11 pairs of leaflike legs. Females have a brood pouch from which active young are liberated under favorable conditions. Otherwise eggs are laid parthenogenetically (unfertilized by sperm) or fertilized and can either hatch immediately or be dried and remain viable for many years. These eggs are remarkably resistant to adverse environmental conditions, which is why they can be hatched so easily in salt water and used for fish food, adult brine shrimp are also used as food in aquariums and are generally sold frozen. Brine shrimp are classified in the phylum ARTHROPODA, class Crustacea, subclass Branchiopoda, order Anostraca.

Brinker, Maureen Connolly: see CONNOLLY, MAUREEN

Brinkley, David, 1920–, American news broadcaster, b. Wilmington, N.C. He joined the National Broadcasting Company in 1943. Brinkley and Chef HUNTLEY developed documentary techniques for televised analyses of public affairs. Their *Huntley-Brinkley Report* series (1956–71) won several awards, including the Peabody, Sylvania, and "Emmy" awards. As a news analyst Brinkley is noted for his terse, biting comments and his dry wit.

Brinton, Crane (Clarence Crane Brinton), 1898–1968, American historian, b. Winsted, Conn. He received his Ph.D. from Oxford in 1923 and began teaching at Harvard the same year, becoming full professor in 1942. He wrote extensively on the history of Western political and moral philosophy and is considered an expert on the dynamics of revolutionary movements. His many books include *A Dec-*

ade of Revolution (1934), *The Anatomy of Revolution* (1938, rev. ed. 1965), *Ideas and Men* (1950, 2d ed. 1963), *A History of Western Morals* (1959), *The Shaping of Modern Thought* (1963), and *The Americans and the French* (1968).

Brion, Amiral de: see CHABOT, PHILIPPE DE

Briosco, Andrea (andrē'a brēōs'kō), 1470?–1532, Italian architect and sculptor, known also as Andrea Riccio [curly-headed], b. Padua. As an architect, he created models for the church of Santa Giustina and for a chapel in Sant' Antonio in Padua. His fame rests chiefly on his bronze sculpture. In close contact with Paduan humanists, he carried out involved allegorical programs in his Paschal candlestick (Sant' Antonio) and the Della Torre monument (Verona). Drawing upon mythological themes, he combined delightful fantasy with a first-rate knowledge of antiquity.

briquette (brīkēt'), a block of compressed coal dust, peat, or charcoal used for FUEL.

Brisbane, Albert (brīz'bān), 1809–90, American social theorist, b. Batavia, N.Y. After studying with Charles FOURIER in Paris, he returned to the United States as an enthusiastic advocate of Fourierism. His *Social Destiny of Man* (1840) aroused widespread interest, especially that of Horace Greeley, who gave him a column in the *Tribune*. Brisbane was instrumental in the founding of the phalanxes at BROOK FARM and Red Bank, N.J. The failure of most of the other communal experiments was disastrous for the Fourierist cause, but Brisbane reaffirmed his convictions in his *General Introduction to Social Science* (1876). His wife, Redelia Brisbane, edited and wrote an introduction to his autobiography, published posthumously as *Albert Brisbane: A Mental Biography* (1893, repr. 1969). His son, Arthur Brisbane (1864–1936), was editor of the *New York Evening Journal* and other Hearst papers. See biography by O. Carlson (1937).

Brisbane, Sir Thomas Makdougall (brīz'bān, -bān), 1773–1860, British soldier, astronomer, and colonial administrator in Australia, b. Scotland. From 1793 to 1814 he served in the army in Flanders, in the West Indies, in Spain, and in Canada, rising to the rank of brigadier general. In 1821 he was appointed governor of New South Wales, where he encouraged agriculture, land reclamation, exploration, and, most important, immigration, thus stimulating the transformation of New South Wales from a dependent convict outpost into a free, self-supporting colony. He had poor financial sense, however, and was recalled in 1825. Brisbane had an observatory built (1822) at Paramatta, near Sydney, where work was done (1822–26) resulting in the "Brisbane Catalogue" of 7,385 stars. After his return to Scotland, he founded an observatory at Makers-toun, where valuable observations on magnetism were started (1841); these were incorporated into three volumes in the transactions of the Royal Society of Edinburgh. He was made president of the society in 1833. The city of Brisbane and the Brisbane River in Australia were named for him.

Brisbane (brīz'bān), city (1971 pop 699,371, urban agglomeration pop 816,987), capital of Queensland, E Australia, on the Brisbane River above its mouth on Moreton Bay. It has shipyards, oil refineries, food-processing plants, textile mills, automobile plants, and railroad workshops. Principal exports are wool, meat, fruit, sugar, and coal and other minerals. The area was settled in 1824 as a penal colony, and the city was named in 1834 for Sir Thomas Brisbane, governor of New South Wales. In 1925 the Greater Brisbane Act unified the administration of 19 formerly separate localities. Brisbane is the seat of the Univ. of Queensland (1909), a national art gallery (1895), and a museum (1871). There are Anglican and Roman Catholic cathedrals.

Briseis: see ACHILLES, AGAMEMNON

Brissot de Warville, Jacques Pierre (zhāk pē'r brēsō' də varvē'l'), 1754–93, French revolutionary and journalist. A lawyer of humble origin, he began his career by writing numerous pamphlets and books. His *Théorie des lois criminelles* (1781) was a plea for penal reform. He was imprisoned briefly in the Bastille for writing a seditious pamphlet. Brissot visited the Netherlands, Switzerland, England, and the United States. He was interested in humanitarian schemes and founded the abolitionist Société des Amis des Noirs. After his return to France in 1789 he began to edit the *Patriote français*, which later became the organ of the GIRONDIS (at first called Brissotins). Brissot, feeling that war would

silver mine at Kimberley is the largest in the world, copper is mined principally at Princeton and Britannia, gold chiefly along the Bridge River and in Cariboo and Osoyoos dists., iron ore primarily on Vancouver and Texada islands. Lead and zinc are mined in many places, the world's largest deposits being at Kimberley. Other minerals found in the province include coal, crude petroleum, asbestos, natural gas, and sand and gravel. British Columbia ranks first among the provinces in fishing, the most important catches are salmon, halibut, and herring. Beef is also an important product. Cattle are raised along the Fraser River, the Texas longhorn, introduced there c 1870, is still thriving, and the area is known for its sprawling ranches. Other industries include food processing and the manufacture of chemicals, furniture, transportation equipment, and electrical items. British Columbia attracts millions of visitors annually, and the land is a hunting and fishing paradise. There are four national parks—Glacier, Mt. Revelstoke, Yoho, and Kootenay—and hundreds of provincial parks and camping grounds. The climate along the west coast, tempered by the warm Japan Current, has made that area, especially Vancouver and Victoria, very attractive to tourists. The area was originally inhabited by Indians of the Pacific Northwest (known especially for their totem poles and POTLACHES). Juan Perez was probably the first white man to sail (1774) along the coast, but he did not make a landing. In 1778, Capt. James Cook, on his last voyage, explored the coast in his search for the Pacific entrance to the elusive Northwest Passage and claimed the area for Great Britain. John Meeres established (1788) a fur-trading post on Nootka Sound and built a schooner, but he was driven out (1789) by a Spaniard, Estevan Jose Martinez. Rival British and Spanish claims for the area were resolved by the Nootka Convention in 1790 (see NOOTKA SOUND). The British sent George Vancouver to take possession of the land, and from 1792 to 1794 he explored and mapped the coast. In 1793, Sir Alexander Mackenzie reached the Pacific overland, he was followed early in the 19th cent. by fur traders and explorers of the NORTH WEST COMPANY who crossed the mountains to establish posts in New Caledonia, as the region was then called. After the HUDSON'S BAY COMPANY absorbed the North West Company in 1821, the region became a preserve of the new company. In 1843, Fort Victoria was established by James Douglas as a trading post for the company. Three years later rival British and American claims to the area were settled when the boundary was set at the 49th parallel (see OREGON, state). Further controversy resulted in the SAN JUAN BOUNDARY DISPUTE. Partly as protection against further American expansion, Vancouver Island was ceded (1849) by the Hudson's Bay Company and became a crown colony, of which Sir James Douglas was made governor in 1851. In 1858 gold was discovered in the sand bars of the Fraser River and additional deposits were found on many of its tributaries. The great gold rushes that resulted brought profound changes. Fort Victoria boomed as a supply base for the miners, and a town quickly sprang up around it. Officials of the crown came to keep order, and to supervise government projects and the building of roads. Some 30,000 miners moved into what was then unorganized territory, this led to the creation (1858) of a new colony on the mainland, called British Columbia, and the end of the Hudson's Bay Company's supremacy. In 1863 the newly settled territory about the Stikine River was added to British Columbia. In 1866, Vancouver Island and British Columbia were combined, and in 1871 this united British Columbia, lured by the promise of financial aid and a transcontinental railroad that would link it to the rest of Canada, voted to join the new Canadian confederation. The Canadian Pacific Railway finally reached Vancouver in 1885, and a new era began. By providing access to new markets, the railroads furthered agriculture, mining, and lumbering, steamship service with the Orient was inaugurated, and Vancouver grew as a busy port, serving many provinces. The opening (1914) of the Panama Canal was a further boost to trade and commerce. A long dispute with the United States over the Alaska boundary was finally settled by the Alaska Boundary Commission in 1903. Politically, the Conservatives and Liberals alternated in power from 1903 (when the national parties were first introduced into British Columbian politics) until 1941, when a wartime coalition was formed. The SOCIAL CREDIT party came into power in 1952, under the leadership of W. A. C. Bennett, and retained control until 1972, when the New Democratic party, led by David Barrett, won a

majority. British Columbia sends 6 senators (appointed) and 23 representatives (elected) to the national Parliament. The Univ. of British Columbia is at Vancouver. See F. H. Goodchild, *British Columbia* (1951); J. H. S. Reid, *Mountains, Men, and Rivers* (1954); R. E. Watters, ed., *British Columbia* (1958); M. A. Ormsby, *British Columbia* (1958, repr. 1971); J. L. Robinson, ed., *British Columbia* (1972).

British Columbia, University of, at Vancouver, British Columbia, Canada, provincially supported, coeducational, chartered 1908, opened 1915. It has faculties of arts, science, graduate studies, applied science, agricultural sciences, dentistry, commerce and business administration, education, law, forestry, medicine, and pharmaceutical sciences, as well as schools of architecture, home economics, librarianship, nursing, physical education and recreation, rehabilitation medicine, social work, and community and regional planning.

British Commonwealth of Nations: see COMMONWEALTH OF NATIONS.

British East Africa, inclusive term for several former British dependencies, especially Kenya, Uganda, Tanganyika, and Zanzibar.

British East India Company: see EAST INDIA COMPANY, BRITISH.

British Empire, overseas territories linked to Great Britain in a variety of constitutional relationships, established over a period of three centuries. The establishment of the empire resulted primarily from commercial and political motives and emigration movements, its long endurance resulted from British command of the seas and preeminence in international commerce, and from the flexibility of British rule. At its height in the late 19th and early 20th cent., the empire included territories on all continents, comprising about one quarter of the world's population and area. The origins of the empire date from the late 16th cent. with the private commercial ventures, chartered and encouraged by the crown, of CHARTERED COMPANIES. These companies sometimes had certain powers of political control as well as commercial monopolies over designated geographical areas. Usually they began by setting up fortified trading posts, but where no strong indigenous government existed the English gradually extended their powers over the surrounding area. In this way scattered posts were established in India and the East Indies (for spices, coffee, and tea), defying Portuguese and later Dutch hegemony, and in Newfoundland (for fish) and Hudson Bay (for furs), where the main adversaries were the French.

The First Empire. In the 17th cent. European demand for sugar and tobacco led to the growth of plantations on the islands of the Caribbean and in SE North America. These colonies, together with those established by Roman Catholics and Protestant dissenters in NE North America, attracted a considerable and diversified influx of European settlers. Organized by chartered companies, the colonies soon developed representative institutions, evolving from the company governing body and modeled on English lines. The need for cheap labor to work the plantations fostered the growth of the African slave trade. New chartered companies secured posts on the African coasts as markets for captured slaves from the interior. An integrated imperial trade arose, involving the exchange of African slaves for West Indian molasses and sugar, English cloth and manufactured goods, and American fish and timber. To achieve the imperial self-sufficiency required by prevailing theories of MERCANTILISM, and, more immediately, to increase British wealth and naval strength, the NAVIGATION ACTS were passed, restricting colonial trade exclusively to British ships and making England the sole market for important colonial products. Developments in the late 17th and early 18th cent. were characterized by a weakening of the Spanish and Dutch empires, exposing their territories to British encroachment, and by growing Anglo-French rivalry in India, Canada, and Africa. At this time the British government attempted to assert greater direct control over the expanding empire. In the 1680s the revision of certain colonial charters to bring the North American and West Indian colonies under the supervision of royal governors resulted in chronic friction between the governors and elected colonial assemblies. The early 18th cent. saw a reorganization and revitalization of many of the old chartered companies. In India, from the 1740s to 1763, the British EAST INDIA COMPANY and its French counterpart were engaged in a military and commercial rivalry in which the British were ultimately victorious. The political fragmentation of the Mogul empire permitted the absorption of one area after

another by the British. The Treaty of Paris (1763, see under PARIS, TREATY OF) firmly established the British in India and Canada, but the financial burdens of war involved the government in difficulties with the American colonies. The success of the AMERICAN REVOLUTION marked the end of the first British Empire.

The Second Empire. The voyages of Capt. James Cook to Australia and New Zealand in the 1770s and new conquests in India after 1763 opened a second phase of territorial expansion. The victories of the Napoleonic Wars added further possessions to the empire, among them Cape Colony, Mauritius, Ceylon, Trinidad and Tobago, St. Lucia, British Guiana, and Malta. During the second empire mercantilist ideals and regulations were gradually abandoned in response to economic and political developments in Great Britain early in the 19th cent. Britain's new industrial supremacy lent greater force to doctrines of FREE TRADE, which, as part of their critique of mercantilism, questioned the economic value of political ties between the colonies and the mother country. The plight of large nonwhite populations within the empire became a matter of concern to humanitarians. Abolition of the slave trade (1807) and of slavery (1833) was accompanied in the colonies by efforts to improve the lot of indigenous groups. Better communications and the establishment of a regular civil service facilitated the development of a more efficient colonial administration. But the growth, notably in the English-speaking colonies, of national identity and of relative national self-sufficiency, as well as a trend of opinion in Britain favoring colonial self-government, made the British, now engaged in liberalizing their own governing institutions, willing to concede certain powers of self-government to the white colonies. In 1839, Lord Durham, in response to unrest in Canada, issued his "Report on the Affairs of British North America." Durham stated that to retain its colonies Britain should grant them a large measure of internal self-government. The BRITISH NORTH AMERICA ACT of 1867 inaugurated a pattern of devolution followed in most of the European-settled colonies by which Parliament gradually surrendered its direct governing powers, thus Australia and New Zealand followed Canada in becoming self-governing dominions. On the other hand, the British assumed greater responsibility in Africa and in India, where the INDIAN MUTINY had resulted (1858) in the final transfer of power from the East India Company to the British government. To govern territories with large indigenous populations, the crown colony system had been developed. Such colonies, of which one of the most enduring has been Hong Kong, were ruled by a British governor and consultative councils composed primarily of his nominees; these, in turn, of ten delegated considerable powers of local government to local rulers. In the later decades of the 19th cent. there occurred a revival of European competition for empire in which the British acquired or consolidated vast holdings in Africa—such as Nigeria, the Gold Coast (later Ghana), Rhodesia, South Africa, and Egypt—and in Asia—such as Burma and Malaya. The size and wealth of the empire and the anxieties produced by European colonial competition stimulated a desire for imperial solidarity. The IMPERIAL CONFERENCE, begun in 1887, represented an attempt to strengthen Britain's ties with those colonies that had become self-governing territories.

From Empire to Commonwealth. World War I brought the British Empire to the peak of its expansion, but in the years that followed came its decline. Victory added, under the system of MANDATES, new territories, including Palestine, Trans-Jordan, Iraq, and several former German territories in Africa and Asia. Imperial contributions had considerably strengthened the British war effort (more than 200,000 men from the overseas empire died in the war, the dominions and India signed the Versailles Treaty and joined the League of Nations), but at the same time expectations were raised among advanced colonial populations that an increased measure of self-government would be granted. Nationalist agitation against economic disparities, often stimulated by acts of racial discrimination by British settlers, was particularly strong in India (see INDIAN NATIONAL CONGRESS) and in parts of Africa. Although loath to lessen its hold over countries it had done much to develop, and thereby to incur great economic and political loss, Britain gradually capitulated to the pressures of nationalist sentiment. Iraq gained full sovereignty in 1932, British privileges in Egypt were modified by treaty in 1936, and concessions were made toward self-government in India.

and later in the African colonies. In 1931 the Statute of Westminster (see WESTMINSTER, STATUTE OF) officially recognized the independent and equal status under the crown of the former dominions within a British COMMONWEALTH OF NATIONS, thus marking the advent of free cooperation among equal partners. After World War II self-government advanced rapidly in all parts of the empire. In 1947, India was partitioned and independence granted to the new states of India and Pakistan. In 1948 the mandate over Palestine was relinquished, and Burma gained independence as a republic. Other parts of the empire, notably in Africa, gained independence and subsequently joined the British Commonwealth. Probably the outstanding impact of the British Empire has been the dissemination of European ideas, and particularly of British political institutions and of English as a lingua franca throughout a large part of the world. At the start of 1975 Great Britain still administered, as colonies, protectorates, or trust territories, many dependencies throughout the world. They included Brunei and Hong Kong in E Asia, the Seychelles in the Indian Ocean, Gibraltar in the Mediterranean, the Falkland Islands, Bermuda, and St. Helena in the Atlantic, the Cayman Islands, British Virgin Islands, Turks and Caicos Islands, and several of the Leeward and Windward Islands in the West Indies, British Honduras (Belize) in Central America, and Pitcairn Island, the Solomon Islands, the New Hebrides Islands (jointly with France), and the Gilbert and Ellice Islands in the Pacific. These dependencies have varying degrees of self-government. Great Britain claims authority over the state of Rhodesia, which, however, unilaterally declared its independence in 1965. See IMPERIALISM. See Paul Knaplund, *The British Empire, 1815-1939* (1941, repr. 1969) and *Britain, Commonwealth and Empire, 1901-1955* (1956), A. L. Burt, *The Evolution of the British Empire and Commonwealth from the American Revolution* (1956), *The Cambridge History of the British Empire* (8 vol., 1929-59, 2d ed. 1963-), R. A. British Guiana: see GUYANA

British Honduras (hōndōō'as,-dyōō'-), British crown colony (1970 pop. 119,645), 8,867 sq mi (22,965 sq km), Central America, on the Caribbean Sea. It is also known as Belize. The capital is Belmopan, BELIZE, the capital until 1970, is the main port

British Honduras is bounded on the N by Mexico, on the S and W by Guatemala, and on the E by the Caribbean. The land is generally low, with mangrove swamps and cays along the coast, but in the south rises to Victoria Peak (c.3,700 ft/1,128 m high). The climate is subtropical. Although most of the area is heavily forested, yielding mahogany, cedar, and logwood, there are regions of fertile savannas and barren pine ridges. Only a small fraction of the land is cultivated. In addition to woods, the chief products are sugarcane, chicle, citrus fruits, and timber. The people are predominantly of black African ancestry, but there are large minorities of Mayan Indian descendants (in the interior) and Spanish-Americans. English is the official language, but Spanish is widely spoken. Once part of the Mayan civilization, the region was probably traversed by Cortes on his way to Honduras, but the Spanish made no attempt at colonization. British buccaneers, who used the cays to prey on Spanish shipping, founded Belize (early 17th cent.). British settlers from Jamaica began the exploitation of timber. Spain contested British pos-

session several times until defeated at the last battle of St. George's Cay (1798). From 1862 to 1884 the colony was administered by the governor of Jamaica. Since 1821, Guatemala has claimed the territory as part of its inheritance from Spain. As British Honduras has progressed toward independence, the tension between Britain and Guatemala over the issue has increased. In 1964 the colony gained complete internal self-government. It has a bicameral legislature, the main political organization is the People's United Party. The capital was moved to the new city of Belmopan in 1970 after a hurricane devastated Belize. See S. L. Cazier, *British Honduras, Past and Present* (1952), D. A. G. Wadell, *British Honduras* (1961), Norman Ashcraft, *Colonialism and Underdevelopment: Process of Political Economic Change in British Honduras* (1973).

British Isles: see GREAT BRITAIN, IRELAND

British Museum, the national repository in London for treasures in literature, science, and art. It has departments of manuscripts, of printed books, of antiquities, of prints and drawings, of coins and medals, and of ethnography. The museum was established by act of Parliament in 1753 when the collection of Sir Hans Sloane, begun in the previous century and called the Cabinet of Curiosities, was purchased by the government and was joined with the Cotton collection (see COTTON, SIR ROBERT BRUCE) and the Harleian Library (see HARLEY, ROBERT). In 1757 the royal library was given to the museum by George II. The institution was opened in 1759 under its present name in Montague House, but the acquisition of the library of George III in 1823 necessitated larger quarters. The first wing of the new building was completed in 1829, the quadrangle in 1852, and the great domed reading room in 1857. Later other additions were built. Sir Anthony Panizzi began the printing of the library's catalog. The library is vast and splendid, among its rarest manuscripts are included *Beowulf*, *Magna Carta*, the 4th-century Greek bible known as the Codex Sinaiticus, Froissart's *Chronicles*, and a unique papyrus of Aristotle. The library is increased partly by the copyright law requiring the deposit of each book printed in the United Kingdom. The museum's collection of prints and drawings is one of the finest in the world. The natural history collection was transferred (1881-83) to buildings in South Kensington and called the Natural History Museum. One of the major exhibits of the Egyptian department is the basalt slab known as the Rosetta Stone (see under ROSETTA). The Greek treasures include the Elgin Marbles and the Caryatid from the Erechtheum. The museum's special collections include a vast number of clocks and timepieces, ivories, and the Sutton Hoo treasure. See J. M. Crook, *The British Museum* (1972), *Treasures of the British Museum* (1972), Edward Miller, *That Noble Cabinet* (1974).

British North America Act, law passed by the British Parliament in 1867 that provided for the unification of the Canadian provinces into the dominion of Canada. The act also functions as the constitution of Canada, providing for a government similar to that of the United Kingdom. The act enumerates the powers of the provincial legislatures and gives the residual powers to the dominion, its interpretation by the privy council has somewhat nullified this design by giving a very extended scope to the provincial power of "property and civil rights," and a doctrine of "emergency powers" has been developed in order to give the dominion the authority needed by a national government in time of war. The power of amendment is still nominally vested in the British Parliament, which in practice, however, acts only on the request of the Canadian Parliament. Numerous attempts to make wide-ranging changes in the act have failed because of a lack of unanimity among Canada's provinces. See Edward Porritt, *Evolution of the Dominion of Canada* (1918, repr. 1972).

British North Borneo: see SABAH, Malaysia

British Somaliland: see SOMALI DEMOCRATIC REPUBLIC.

British South Africa Company: see RHODESIA.

British thermal unit, abbr. Btu, unit for measuring heat quantity in the customary system of ENGLISH UNITS OF MEASUREMENT, equal to the amount of heat required to raise the temperature of one pound of water at its maximum density [which occurs at a temperature of 39.1 degrees Fahrenheit (°F)] by 1°F. The Btu may also be defined for the temperature difference between 59°F and 60°F. One Btu is approximately equivalent to the following: 251.9 calo-

ries, 778.26 foot-pounds, 1055 joules, 107.5 kilogram-meters, 0.0002928 kilowatt-hours. A pound (0.454 kilogram) of good coal when burned should yield 14,000 to 15,000 Btu, a pound of gasoline or other fuel oil, approximately 19,000 Btu.

British Togoland: see TOGOLAND

British West Africa, former inclusive term for the British colonies of Camerouns, Gambia, Gold Coast, Nigeria, Sierra Leone, and Togoland.

British West Indies: see WEST INDIES

Britomartis (brīt'ōmār'tis), in ancient mythology, Cretan goddess, sometimes identified with Artemis. To escape the amorous pursuit of Minos, she jumped into the sea, but fishermen caught her in their nets and transported her to Aegina, where she was worshiped as Aphaea. According to another legend, she vanished in a grove sacred to Artemis and was deified as Dictynna.

Brittany (brīt'anē), Breton Breiz, Fr. Bretagne, region and former province, NW France. It is a peninsula between the English Channel on the north and the Bay of Biscay on the south and comprises five departments, Ille-et-Vilaine, Côtes-du-Nord, Finistère, Morbihan, and Loire-Maritime. The economy of the region is based on agriculture, fishing, and tourism. Apples, from which the distinctive Breton cider is made, are grown extensively inland. Industry includes shipbuilding at ST NAZAIRE and NANTES, food processing, and automobile manufacturing. There is a nuclear power plant in the Arree Mts. The coast, particularly at the western tip, is irregular and rocky, with natural harbors (particularly at BREST, LORIENT, and SAINT-MALO) and numerous islands. Important rivers include the Loire, the Odet, the Vilaine, and the Sèvre Nantaise. A part of ancient Armorica, the area was conquered by Julius Caesar in the GALIC WARS and became part of the province of Lugdunensis (see GAUL). It received its modern name when it was settled (c.500) by Britons whom the Anglo-Saxons had driven from Britain. Breton history is a long struggle for independence—first from the Franks (5th-9th cent.), then from the dukes of Normandy and the counts of Anjou (10th-12th cent.), and finally from England and France. In 1196, Arthur I, an ANGEVIN, was acknowledged as duke. King John of England, who presumably murdered him (1203), failed to obtain the duchy, which passed to Arthur's brother-in-law, Peter I (Peter Mauclerc). The extinction of his direct line led to the War of the BRETON SUCCESSION (1341-65), a part of the HUNDRED YEARS WAR (1337-1453). With the end of the Breton war, the dukedom was won by the house of Montfort. The dukes of Montfort tried to secure Brittany's neutrality between France and Britain during the remainder of the Hundred Years War. The unsuccessful rebellion of Duke Francis II against the French crown led to the absorption of Brittany into France after the accession of his daughter, Anne of Brittany, in 1488. King Francis I formally incorporated the duchy into France in 1532. Brittany's provincial PARLIAMENT met at Rennes, and its provincial assembly remained powerful until the French Revolution. The 16th and 17th cent. were generally peaceful in Brittany, but the region, never reconciled to centralized rule, became one of the early centers of revolt in 1789. However, its staunch Catholicism and conservatism soon transformed it into an anti-Revolutionary stronghold, the CHOUEANS (anti-Revolutionary peasants) were never fully subdued, and in S Brittany and the neighboring VENDEE the Revolutionary government resorted to ruthless reprisals. Breton nationalism grew in the 19th cent. and was fueled by the anticlericalism of the Third Republic. The Breton autonomists, long successfully repressed by the French government, nevertheless resisted German bids for collaboration in World War II. In more recent years the emigration of the young has resulted in a serious decline in the region's population. Brittany and the Breton people have retained many old customs and traditions. Breton, their Celtic language (akin to Welsh), is spoken in traditionalist Lower (i.e., western) Brittany outside the cities (see BRETON LITERATURE). Costumes featuring high lace head-dresses are distinctive in every community and are worn widely on Sundays and holidays. Religious festivals, at which ships, birds, and houses are blessed, are characteristic of Breton fetes, and there are formal religious processions and pilgrimages. Brittany has remarkable stone calvaries, some built at the close of the 16th cent. to ward off the plague. Many megalithic monuments, formerly ascribed to the DRUIDS, dot the Breton landscape, notably at CARNAC. See P. R. Giot et al., *Brittany* (1960), Nora K. Chadwick, *Early Brittany* (1969).

Brittany spaniel, breed of medium-sized SPORTING DOG whose origins may be traced back hundreds of years to France and Spain. It stands about 19 in (48.3 cm) high at the shoulder and weighs between 30 and 40 lb (13.6–18.1 kg). Its dense, flat or wavy coat is dark orange and white or liver and white. Many Brittany spaniels are born tailless or very short-tailed, and a tail that is more than 4 in (10.2 cm) long is docked to that length. Although it is a "leggy" spaniel, it has a compact body—its height at its shoulder often equals its body length. The Brittany is a first-rate hunter and may easily be trained to retrieve, both on land and water. It is the only spaniel that points its quarry. See DOG.

Britten, Benjamin, 1913–, English composer. Britten is considered the most significant British composer since Purcell. As a youth he showed facility in the composition of instrumental works, displaying technical brilliance and colorful orchestration. One example, *A Young Person's Guide to the Orchestra* (1945), written for a film, is based on a theme by Purcell. His most characteristic expression is achieved in vocal music. His many song cycles and choral works include *A Boy Was Born* (1933) and *A Ceremony of Carols* (1942). Britten's great *War Requiem* (1962), based on the bitter war poems of Wilfred Owen, was sung at the dedication in England of the reconstructed Coventry Cathedral, destroyed during World War II. In his operas, which include *Paul Bunyan* (1941), *Peter Grimes* (1945), *The Rape of Lucretia* (1946), *The Turn of the Screw* (1954), *A Midsummer Night's Dream* (1960), and *Death in Venice* (1973), he evinced a sensitivity to text and a fondness for variation technique, dynamic dissonance, and the use of ground basses. See biographies by P. M. Young (1968), Imogen Holst (2d ed. 1970), and E. W. White (new ed. 1970).

brittle star, common name for echinoderms belonging to the class Ophiuroidea. The name is derived from their habit of breaking off arms as a means of defense. New arms are easily regenerated. They are also called serpent stars because of the snakelike movements of the five mobile, slender arms. Brittle stars can be distinguished from SEA STARS, or starfish, by their rounded central disk, sharply set off from the arms. They have the water-vascular system and tube feet common to all echinoderms, unlike sea stars, brittle stars lack open grooves (ambulacral grooves) on the lower surface of the arms, and the tube feet serve as tactile organs. Also unlike sea stars, brittle stars walk with their arms, only some species use the tube feet for locomotion. Each arm contains a series of jointed bonelike plates, or ossicles, which determine the freedom of arm movements. Brittle stars can move quickly and in any direction. They are relatively small, usually less than 1 in (2.5 cm) across the central disk, although the arms may be quite long. They are inconspicuous and often nocturnal, living under rocks, among seaweed, or buried in the sand. All are marine species, feeding on detritus and small living or dead animals. The arms move the larger food masses to the mouth, where they are fragmented by a complex jaw apparatus. Tube feet move smaller particles to the mouth, and some species, like *Ophiocoma nigris* of the Pacific coast, can take tiny food particles like a filter-feeder, trapping them in mucus and using ciliary currents to deliver them to the mouth. As a rule, sexes are separate, and fertilization occurs in the open sea after gametes have been discharged. A characteristic armed larval stage, the ophiopluteus, undergoes a profound metamorphosis to produce the rayed adult form. About 2,000 species of ophiuroids are known, and a number are common along American coasts. Brittle stars are classified in the phylum ECHINODERMATA, class Ophiuroidea.

Britton, John, 1771–1857, English antiquary and topographer. The long list of his writings includes biographies, critical works on art and literature, and the descriptions of landscapes and buildings for which he is famous. *The Beauties of Wiltshire* (3 vol., 1801–25) was written with E. W. Brayley. The two friends wrote part of *Beauties of England and Wales* (18 vol., in 25, 1801–15), but because of difficulties with the publishers, they did not complete the series. Britton was influential in the movement to preserve ancient monuments. See his autobiography (3 parts, 1849–50).

Britton, Nathaniel Lord, 1859–1934, American botanist, grad. Columbia School of Mines, 1879. He taught geology and botany at Columbia, 1879–96. He was the New York Botanical Garden's first director and until his retirement in 1929 had a major part in its growth. His own contributions, chiefly in the field of tropical botany, include hundreds of thou-

sands of specimens, many of great rarity, gathered on his trips to the tropics. His chief works include *An Illustrated Flora of the Northern United States, Canada, and the British Possessions* (with Addison Brown, 1896–98), *The Bahama Flora* (with C. F. Millspaugh, 1920), and four volumes on cacti (with J. N. Rose, 1919–23).

Brixen: see BRESSANONE, Italy

Brixham: see TORBAY

Brno (bŭr'nŏ), Ger. *Brunn*, city (1970 pop. 335,918), central Czechoslovakia, at the confluence of the Svatka and Svitava rivers. It is the second largest city of Czechoslovakia and the chief city of Moravia. Brno is an industrial center, known particularly for its woolen industry and for its manufacture of textiles, machinery (notably tractors), machine tools, and armaments. The famous Bren gun, later made in Enfield, England, was developed in Brno. Tourism is also economically important, and the city holds a large annual international trade fair. Originally the site of a Celtic settlement, Brno grew between two hills, one of which, the Spielberg (Czech *Špilberk*), had a castle known in the 11th cent. The city became part of the kingdom of Bohemia, whose king, Ottocar I, confirmed Brno's ancient charter, a model of liberal town government, in 1229. King Wenceslaus I made it a free city by royal decree in 1243, and Brno flourished in the 13th and 14th cent. In the Hussite Wars it sided with the Roman Catholic Church. The city was besieged in 1645 by the Swedes and served as headquarters for Napoleon I during the battle of Austerlitz in 1805. The Spielberg castle, which was captured by Hapsburg forces during the Thirty Years War, became (1740–1855) their most notorious political prison. Franz von der Trenck and Silvio Pellico (who described it in *Le mie prigioni*) were its most celebrated inmates. In the 19th cent. Brno became one of the foremost manufacturing towns of the Austrian empire. Most Germans were expelled from the city after World War II. Brno's landmarks include the cathedral (15th cent.), the old and new town halls, and several fine Gothic and baroque churches. Masaryk Univ. (founded 1919), Beneš Technical College, a music conservatory, and several fine museums are also located in the city.

Broach (brŏch) or **Baroach** (bārŏch'), town (1971 pop. 92,263), Gujarat state, W India, on the Gulf of Cambay. A port at the mouth of the Namada River, Broach ships cotton and timber. Textiles are manufactured there. Broach was an important Buddhist center in the 7th cent. Under the Rajput dynasty (750–1300), it was the chief port of W India.

broaching: see QUARRYING

broadcasting, transmission of sound or images to a large number of receivers by radio or television. In the United States the first regularly scheduled radio broadcasts began in 1920 with the transmission of the Harding-Cox election returns by Frank Conrad over 8XK (later KDKA) in Pittsburgh. The sale of ADVERTISING was started in 1922, establishing commercial broadcasting as an industry. Radio became increasingly attractive as an advertising medium with the coming of network operation. A coast-to-coast hookup was tentatively effected early in 1924, and expansion of both audience and transmission facilities continued rapidly. By 1927 there were two major networks, and the number of stations had so increased that it caused serious overlapping in transmission channels. Legislation (see FEDERAL COMMUNICATIONS COMMISSION) designed to meet this problem was enacted, and the government has since maintained some control over the technical and business activities of the industry. By 1970 over 4,200 commercial radio stations were operating in the standard broadcasting (amplitude modulation, or AM) band. There were also over 2,000 frequency modulation (FM) stations on the air. Experiments in broadcasting television began in the 1920s, but were interrupted by World War II. After the war the number of commercial TV stations grew from 9 in 1947 to 672 by 1970. To offset the dominance of commercial broadcasting, the Corporation for Public Broadcasting was established in 1968 as a non-profit, non-governmental agency to finance the growth of non-commercial radio and television, by 1972 the network served over 200 stations. See RADIO, TELEVISION. See Eric Barnouw, *A History of Broadcasting in the United States* (3 vol., 1966, 1968, and 1971).

Broad Church: see ENGLAND, CHURCH OF

Broads, the, region, c. 5,000 acres (2,020 hectares), mainly in Norfolk, E England, extending inland to Norwich from the coast. It is composed of wide, interlocking shallow lakes, connected by the Wav-

eney, Yare, and Bure rivers, there are more than 200 mi (320 km) of navigable waterways. The Broads is a vacation center and wildlife sanctuary.

Broadstairs and Saint Peter's, urban district (1971 pop. 19,996), Kent, SE England. The district is in the region known as the Isle of Thanet. It is a residential area and resort and was once a retreat of Charles Dickens, whose residence there is now called Bleak House.

Broadview Heights, village (1970 pop. 11,463), Cuyahoga co., NE Ohio, a suburb of Cleveland, inc. 1926.

Broadway, famous thoroughfare of New York City. The longest street in the world, it extends 150 mi (241 km), from Bowling Green near the foot of Manhattan island N to Albany. Throughout its length within New York City, Broadway is chiefly a commercial street. At WALL ST. it runs through the financial center of the country, N of Union Square (14th St.) it passes a clothing and merchandising section with large department stores, entering the theater district at TIMES SQUARE (42d St.). There it becomes the noted "Great White Way," illuminated at night by a profusion of electric signs and lights. Points of interest along Broadway include Trinity Church (Wall St.), St. Paul's Chapel, built 1766 (near City Hall), the Woolworth Building (at Barclay St.), the Lincoln Center for the Performing Arts (64th–67th streets), COLUMBIA UNIV. (113th–121st streets), the Columbia-Presbyterian Medical Center (168th St.), and Van Cortlandt Park (at the north end of the city). Broadway was laid out by the Dutch and was the principal street of NEW AMSTERDAM, it was extended north as the colony grew.

Broca, Paul (pŏl brŏka'), 1824–80, French pathologist, anthropologist, and pioneer in neurosurgery. A professor in Paris at the Faculty of Medicine and at the Anthropological Institute, he was a founder of the Anthropological Society of Paris (1859) and of the *Revue d'anthropologie* (1872). An authority on aphasia, he localized the brain center for articulate speech in the convolution of Broca, or Broca's area (the third convolution of the left frontal lobe). He originated methods of classifying hair and skin color and of establishing brain and skull ratios.

brocade, fabric, originally silk, generally reputed to have been developed to a high state of perfection in the 16th and 17th cent. in France, Italy, and Spain. The fabric is characterized by a compact warp-effect background with one or more fillings used in the construction to make the motif or figure. The filling threads, often of gold or silver in the original fabrics of this name, float in embossed or embroidered effects in the figures. Motifs may be of flowers, foliage, scrollwork, pastoral scenes, or other design. Its uses include curtaining, hangings, pillows, portieres, evening wraps, and church vestments. Similar techniques are used in the manufacture of brocades made of cotton and synthetic fibers.

broccoli (brŏk'ŏlē) [Ital. = sprouts], variety of CABBAGE grown for the edible immature flower panicles. It is the same variety (*Brassica oleracea botrytis*) as the cauliflower and is similarly cultivated. Although known to the Romans, it has become generally popular in the United States only in this century. Broccoli is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Capparales, family Cruciferae.

Brocéliande, Forest of (brŏsālēāNd'), Ille-et-Vilaine dept., NW France, in Brittany. In Arthurian legend it was the home of Merlin. It is known today as the Forest of Paimpont.

Broch, Hermann (hĕr'man brŏkh), 1886–1951, Austrian novelist. His powerful trilogy *Die Schlafwandler* (1931–32, tr. *The Sleepwalkers*, 1932) is written in a complex style reminiscent of James Joyce. Dealing with three different classes and periods, it describes the disintegration of social values and of organic coherence in the modern world. Broch, also a successful mathematician and businessman, lived in the United States after 1938. See his *The Guiltless* (1950, tr. 1973).

Brock, Sir Isaac, 1769–1812, British general, Canadian hero of the War of 1812. A British army officer, he was sent to Canada in 1802 and was given command (1806) of Upper and Lower Canada. He strengthened defenses and made plans for a navy. In 1811 he was made major general and was appointed administrator of Upper Canada. At the outbreak of war, Brock joined forces with Tecumseh on the Western frontier and moved against Detroit. He captured Gen. William Hull's army (1812) and gained control of the upper lakes. For this he received a knighthood and the title "hero of Upper

Canada" After Detroit he successfully defended Queenston Heights on the Niagara frontier, but was killed while leading a charge See study by S H Adams (1957)

Brock, Sir Thomas, 1847-1922, English sculptor One of the leading sculptors under the reign of Victoria, he enjoyed a long and successful career He became an Academician in 1891 and was knighted in 1911 His work shows dignity and restraint His bust of Longfellow (Westminster Abbey), his colossal Victoria Memorial, in front of Buckingham Palace, and his equestrian statue, *Black Prince* (Leeds) are notable examples of his work

Brocken (bröck'an), granite peak, 3,747 ft (1,142 m) high, W East Germany, highest peak of the Harz mts Popular legend makes it the meeting place of the Walpurgis Night or Witches' Sabbath The "Brocken scene" in Goethe's *Faust* is set there

Brockton, industrial city (1970 pop 89,040), Plymouth co., E Mass., settled c 1700, set off from Bridge-water 1821, inc as a city 1881 It has a large shoe and leather products industry Textiles and clothing, machinery and machine tools, plastics, and electrical and electronic equipment are also produced A junior college, an art center, and a historic museum are in the city Brockton has an annual fair, which has been held since 1874 A state park is nearby

Brock University, at St Catharines, Ont., Canada, coeducational, founded 1964 It has a faculty of arts and science and a college of education The university has developed a special interest in administration and in urban and Asian studies

Brockville, city (1971 pop 19,765), SE Ont., Canada, on the St Lawrence River It is in a rich dairy region The city's manufactures include telecommunications equipment, power tools, and baby foods In summer it is a tourist resort

Brockway, Zebulon Reed, 1827-1920, American penologist, b Lyme, Conn As superintendent of the House of Correction in Detroit, he tried to introduce in 1869 the indeterminate sentence for first offenders His ideas were incorporated in a Michigan statute but were nullified by the courts He aided New York state legislation by organizing the first state reformatory for adult males, built at Elmira, and was its first superintendent (1876-1900) He introduced a system of military training, physical training, education, and trade instruction, with merits as incentives to good behavior The success of his Elmira experiments led to the introduction of the indeterminate sentence in other states He wrote *Fifty Years of Prison Service* (1912)

Brod, Max (max bröd), 1884-1968, Israeli writer and composer, b Prague Brod is best known for his historical novels, notably *The Redemption of Tycho Brahe* (1916, tr 1928) and *Reuben, Prince of the Jews* (1925, tr 1928) A lifelong friend of Franz Kafka, he wrote an excellent biography of Kafka (1937, tr 1947) and also edited Kafka's writings Brod's numerous other works include a biography of Heine (1934, tr 1956), an autobiography (1960), and plays, poems, novels, and essays His musical compositions include works for orchestra, notably Requiem Hebraicum, and for voice and piano Long an active Zionist, Brod left Prague for Palestine in 1939 where he directed the Habima Theater

Broderick, David Colbreth (brö'darik), 1820-59, American politician, b Washington, D C Brought up in New York City, he was active in Tammany Hall before moving to California in 1849 He became equally active in politics there, being a member of the state constitutional convention of 1849 He was elected to the state senate in 1850 and was chosen to preside over it in 1851 Broderick, who drew his support chiefly from Northerners, fought bitterly for control of the Democratic party in the state against US Senator William M GWIN, leader of the proslavery element Both were sent to the US Senate in 1857 under a compromise by which Broderick was to have control of the Federal patronage However, President Buchanan and Gwin ignored the understanding, and Broderick fiercely attacked them both He was killed by Chief Justice David S Terry of the California supreme court, a supporter of Gwin, in a famous duel near San Francisco An eloquent eulogy at his elaborate funeral and editorial reverberations throughout the land made him the martyr of the Union cause in California See biographies by Jeremiah Lynch (1911) and D A Williams (1969)

Brodhead, Daniel, 1736-1809, American Revolutionary officer and Indian fighter, b probably near Albany, N Y He was taken as an infant to Pennsylvania, where he later served as deputy surveyor general (1773-75) In the Revolution he commanded a

detachment of militia in the battle of Long Island, was sent (1778) to Pittsburgh, and became commandant there in 1779 In that year he led an expedition up the Allegheny River against the Indians, this was linked with the expedition of John Sullivan in New York When in 1781, the Delawares broke their treaty, he invaded their territory He was removed from his command but later was brevetted brigadier general For 11 years (1798-1809) he was surveyor general of Pennsylvania

Brodie, Steve, 1863-1901, Brooklyn bookmaker who gained immediate fame and a measure of immortality by allegedly jumping off the Brooklyn Bridge and surviving the fall, on July 23, 1886 It was claimed that Brodie had not, in fact, jumped from the bridge but that a dummy was used as he hid under a pier In any case he gained the publicity he was seeking, and a tavern he opened shortly after in the Bowery became a mecca for sightseers

brodiaea or **brodiaea** (both bräd'ë'a), any plant of the genus *Brodiaea*, herbs of the family Liliaceae (LILY family) with narrow leaves and blue or purple star-shaped flowers The many North American species include the golden brodiaea (*B. ixoides*) and the common, or white, brodiaea (*B. hyacinthina*), called also wild hyacinth Both are found in hilly regions of the Pacific states Temperate South American species include the spring starflower (*B. uniflora*), which is commonly cultivated The small onionlike bulbs of brodiaeas were eaten by American Indians and called "grass nuts" Brodiaea is classified in the division MAGNOLIOPHYTES, class Liliatae, order Liliales, family Liliaceae

Broederlam, Melchior (mël'khëôr brö'darlam), active c 1381-1409, Franco-Flemish painter Broederlam was among the first practitioners of the International Gothic style (see GOTHIC ARCHITECTURE AND ART) He was court painter after 1387 to Philip the Bold, duke of Burgundy Influenced by Italian painting, Broederlam attempted to place figures in perspective, as in his panels for *Baerze's Retable* (Musée de la Ville, Dijon)

Brogan, Denis William, 1900-1974, British historian and political scientist, b Glasgow, Scotland He was educated at the Univ of Glasgow, Oxford, and Harvard and was professor of political science at Cambridge from 1939 to 1968, in addition, he lectured at various American universities Brogan was best known as an interpreter of American history and politics for British readers, he also wrote widely on modern France His writings include *The American Political System* (1933), *France under the Republic* (1940), *Politics and Law in the United States* (1941), *The American Character* (1944), *The Era of Franklin D Roosevelt* (1950), *Politics in America* (1954), *America in the Modern World* (1960), *American Aspects* (1964), and *Worlds in Conflict* (1967) He was knighted in 1963

Broglie (brôglië'), French noble family of Piedmontese origin, who settled in France in the 17th cent Victor Maurice, comte de Broglie, 1647-1727, was marshal of France and fought in the wars of King Louis XIV His son François Marie, duc de Broglie, 1671-1745, marshal of France, fought at Malplaquet (1709), in the War of the Polish Succession, and in the War of the Austrian Succession King Louis XV conferred on him the ducal title inherited by his son Victor François, duc de Broglie, 1718-1804, marshal of France, who distinguished himself in the War of the Austrian Succession and the Seven Years War Holy Roman Emperor Francis I made him prince of the Holy Roman Empire (1757), a title that remained in the family In the French Revolution he emigrated and commanded (1792) the army of the princes against the revolutionary forces Charles François, comte de Broglie, 1719-81, brother of Victor François, was ambassador to Poland (1752) and later headed the so-called "secret cabinet" of Louis XV, the king's secret organization of political advisers and spies Achilles Charles Leon Victor, duc de Broglie, 1785-1870, grandson of Victor François, was a statesman and diplomat under Emperor Napoleon I and a leader of the moderate liberals after the Restoration He occupied several cabinet posts, including that of premier (1835-36), under King Louis Philippe, and was (1847-48) ambassador to London After the February Revolution (1848) he was elected (1849) to the assembly He opposed Emperor Napoleon III He married a daughter of Mme de Staël His son, Jacques Victor Albert, duc de Broglie, 1821-1901, was a historian and politician He was a member of the national assembly (1871), ambassador to London (1871-72), premier (1873-74, 1877), and a liberal monarchist leader in the senate He wrote *Histoire de l'église et de l'empire romain au IVe*

siècle (6 vol., 1856-66), an apologia for the Church as preserver of civilization in the late Roman period, *The King's Secret* (tr 1879), based on the career of his great-granduncle, Charles François de Broglie, *An Ambassador of the Vanquished* (tr 1896), and *Frederick the Great and Maria Theresa* (tr 1883) He also edited the memoirs of his father (tr 1887) He was the grandfather of the scientists Maurice, duc de Broglie, and Louis Victor, prince de Broglie (see separate articles)

Broglie, Louis Victor, prince de, 1892-, French physicist In 1932 he became professor in the faculty of sciences, Univ of Paris It was known from the earlier QUANTUM THEORY that waves sometimes exhibited a particlelike behavior De Broglie hypothesized (1924) that particles should also exhibit certain wavelike properties, a prediction that led to the development of wave mechanics, a form of quantum mechanics The existence of these matter waves was confirmed experimentally in 1927, and de Broglie received the 1929 Nobel Prize in Physics for his theory He was elected permanent secretary of the Academy of Sciences in 1942 and has been a member of the French Academy since 1944 His many works on physics and the philosophy of science include *An Introduction to the Study of Wave Mechanics* (1930, tr 1930), *Revolution in Physics* (tr 1953), and *Non-Linear Wave Mechanics* (1956, tr 1960)

Broglie, Maurice, duc de, 1875-1960, French physicist, brother of Louis Victor, prince de Broglie His contributions include notable work on X rays and in atomic physics, radioactivity, and electricity He became a member of the Academy of Sciences in 1924 and of the French Academy in 1934

Broken Arrow, city (1970 pop 11,787), Tulsa co., NE Okla., a suburb of Tulsa

Broken Hill, city (1971 pop 29,743), New South Wales, SE Australia, near the South Australia border Since 1884 it has been a principal center of zinc and silver mining in Australia

broker, one who acts as an intermediary in a sale or other business transaction between two parties Such a person conducts individual transactions only, is given no general authority by his employers, discloses the names of the principals in the transaction to each other, and leaves to them the conclusion of the deal He neither possesses the goods sold nor receives the goods procured, he takes no market risks and transfers no title to goods or to anything else He earns his commission, or brokerage, when the contract of sale has been made, regardless of whether the contract is satisfactorily executed He is paid by the party with whom he first negotiates In practice, merchants and other salesmen act as brokers at times Brokers are most useful in establishing trade connections in those large industries where a great many relatively small producers (e.g., farmers) compete for a wide market They operate in strategic cities and keep in active touch with the trade needs of their localities and with one another They are important in determining prices, routing goods, and guiding production, and in those functions play a part similar to the highly organized exchanges Brokers also negotiate trades in property not directly affecting production Such are stockbrokers and real estate brokers Employment agents are really brokers, as they bring together the buyers and sellers of labor Merchandise brokers arrange sales between manufacturers and wholesalers or retailers, between producers and users of raw materials, and sometimes between two manufacturers Small concerns use retail brokers instead of maintaining their own sales forces Insurance brokers bring together insurance companies and those who want insurance They are most useful to those needing several types of insurance protection and to those whose large risks must be divided among many companies Real estate brokers negotiate sales and leases of farms, dwellings, and business property and are often also insurance brokers Ship brokers keep informed of the movement of vessels, of cargo space available, and of rates for shipment and sell this information to shippers They serve tramp carriers in the main, inasmuch as the larger ship lines have their own agents Such brokers also serve as post agents, in which capacity they settle bills for stores and supplies, pay the wages of the crew, and negotiate insurance for the vessel and cargo They also arrange the sale of ships In the organized markets, such as grain and stock exchanges, commission merchants and straight selling displace brokerage in large part, but between cities and where there is no active exchange, brokers in grain and other commodities are active Members of organized ex-

changes usually act as commission merchants or trade on their own account. However, in the New York Stock Exchange a group of members called "floor brokers" perform the actual trading on the exchange floor for representatives of commission houses, taking no responsibility and receiving a small fee. In the United States, note brokers buy promissory notes from businessmen and sell them to banks. Traders in acceptances and foreign bills of exchange are known in the United States as acceptance dealers. Customs brokers are not actually brokers; they act as agents for importers in estimating duties and clearing goods. The PAWNBROKER is a private money lender. See Margaret Hall, *Distributive Trading* (1950); R. L. Kohls, *Marketing of Agricultural Products* (1961).

Bromberg; see BYDGOSZCZ, Poland

Brome, Richard (brōm, brōm), c. 1590–1652, English dramatist. He was the friend, servant, and disciple of Ben Jonson. Primarily a writer of realistic satiric comedy, picturing the life and manners of Caroline bourgeois London, he also produced several tragicomedies, but with much less success. The main features of his plays are the humour characters (see HUMOR), complicated comic intrigue, and an abundance of action. The majority of his comedies were performed between 1629 and 1642, the most noteworthy being *The Northern Lass*, *The City Wit*, and *The Jovial Crew*. See study by R. J. Kaufmann (1961).

brome grass, common name for any plant of the genus *Bromus*, chiefly large, coarse grasses of a weedy nature, some, however, are useful as forage, and others are cultivated for decoration. Some of the better-known bromes are the smooth brome (*B. inermis*, sometimes called awnless, or Hungarian brome), often cultivated for pasture or for holding banks, rescue grass (*B. catharticus*), a forage in the Southern states, and chess, or cheat (*B. secalinus*), a pest of grainfields, formerly believed by some to be degenerate wheat. Many species of brome grasses develop sharp-barbed fruits at maturity that are injurious to stock (whence the name ripgut grass for some), before maturity these are often used for forage. Brome grasses are classified in the division MAGNOLIOPHYTES, class Liliatae, order Cyperales, family Gramineae.

bromeliad, common name for plants of the family Bromeliaceae (PINEAPPLE family).

bromide, any of a group of compounds that contain BROMINE and a more electropositive element or radical. Bromides are formed by the reaction of bromine or a bromide with another substance; they are widely distributed in nature. Most metal bromides are water soluble, exceptions are bromides of copper, lead, mercury, and silver that are very slightly soluble in water. Potassium bromide, KBr, and sodium bromide, NaBr, are the familiar bromides used in medicine as sedatives; they should be used under a doctor's direction since they are habit-forming. Magnesium bromide, found in seawater, is a source of pure bromine. Silver bromide is one of the light-sensitive silver salts used in films, plates, and printing papers for photography. Hydrobromic acid is a water solution of hydrogen bromide, a gas. The presence of a bromide in a water solution can be detected by adding chlorine and carbon disulfide, CS₂, the bromine is displaced from its compound and dissolves in the CS₂, giving it a characteristic orange color.

bromine (brō'mēn, -in) [Gr. =stench], volatile, liquid chemical element, symbol Br, at no 35, at wt. 79.904, m p -7.2°C, b p 58.78°C, sp gr of liquid 3.12 at 20°C, density of vapor 7.14 grams per liter at STP (see separate article), valence -1, +1, +3, +5, or +7. At ordinary temperatures bromine is a brownish-red liquid that gives off a similarly colored vapor with an offensive, suffocating odor. It is a member of the HALOGEN family in group VIIA of the PERIODIC TABLE. It is the only nonmetallic element that is liquid under ordinary conditions. It is soluble in water to some extent, the aqueous solution, called bromine water, acts as an oxidizing agent. It is also soluble in alcohol, ether, and carbon disulfide. Bromine is less active chemically than CHLORINE or FLUORINE but is more active than IODINE. It forms compounds similar to those of the other halogens (see BROMIDE). Oxides of bromine are unstable, but two acids, hypobromous acid, HBrO, and bromic acid, HBrO₃, are known with their salts. Hydrobromic acid is the aqueous solution of hydrogen bromide, HBr. Bromine does not occur uncombined in nature but is found in combination with other elements, notably sodium, potassium, magnesium, and silver. In compounds it is present in seawater, in

mineral springs, and in common salt deposits, e.g., those at Stassfurt, Germany. It occurs in the United States, principally in Michigan, Ohio, and West Virginia. Bromine for commercial purposes is obtained by treating brines (from salt wells or seawater) with chlorine, which displaces the bromine. It is important in the preparation of organic compounds, such as ethylene dibromide, which is used in conjunction with an antiknock compound in gasoline. Bromine has a powerful corrosive action on the skin, destroying the tissue, and the vapor is strongly irritating to the eyes and the membranes of the nose and throat. The element was discovered in seawater by Antoine Jérôme Balard in 1826.

Bromley, borough (1971 pop. 304,357) of Greater London, SE England. The borough was created in 1965 by the merger of the former municipal boroughs of Bromley and Beckenham, the urban districts of Orpington and Penge, and part of the urban district of Chislehurst and Sidcup. It is the largest of the 32 Greater London boroughs. Bromley is mainly residential. The Crystal Palace, site of the 1951 Great Exhibition, was within the borough until fire destroyed it in 1936. William Pitt the younger, the statesman, and H. G. Wells, the writer, were born in what is now Bromley.

Bromsgrove, urban district (1971 pop. 40,669), Worcestershire, central England. Bromsgrove is an ancient market town and road junction. It is predominantly residential but has some industry, including a large forging works. In 1974, Bromsgrove became part of the new nonmetropolitan county of Hereford and Worcester.

bronchitis, inflammation of the mucous membrane of the bronchial tubes. It can be caused by viral or bacterial infections or by allergic reactions to irritants such as tobacco smoke. The disease is characterized by low-grade fever, chest pains, hoarseness, and productive cough. Acute bronchitis is rarely serious in otherwise healthy adults, but it can be dangerous in infants, children, or adults who suffer from underlying respiratory disease, especially emphysema. It may subside or, particularly with continued exposure to irritants, may persist and progress to chronic bronchitis or pneumonia. The more prolonged chronic bronchitis is frequently secondary to a serious underlying disorder. Bronchial inflammation can be severe, cough and bronchial spasms are treated with antihistamines, cough suppressants, and bronchodilators. Antibiotics are used if there is evidence of bacterial invasion.

bronchopneumonia; see PNEUMONIA

bronchoscope, long, tubular instrument with a light at the tip that is inserted through the windpipe and bronchial tubes to examine these structures. By passing other instruments through it, foreign bodies and obstructions can be removed and tissue or secretions may be removed for microscopic observation. Gustav Killian, German laryngologist, in Freiburg, Germany, was the first to experiment with such a device in 1895. Chevalier Jackson adapted the bronchoscope to serve as an aid to the breathing of a patient during surgery in 1903, and he improved the system of illumination in the instrument; he is regarded as the father of bronchoscopy.

bronchus; see LUNGS

bronco; see MUSTANG

Brongniart, Adolphe Theodore (adōlf' tādōr' brōn'yar'), 1801–76, French botanist, son of Alexandre Brongniart. He was a pioneer in the study of vegetable physiology and was author of an important work on vegetable fossils (1828–37) and of a valuable first account of pollen. His classification of plants in the natural history museum at Paris was the basis of the system now used in Germany. He helped establish the *Annales des sciences naturelles* and founded the Société botanique de France.

Brongniart, Alexandre (älēksān'drā), 1770–1847, French geologist, mineralogist, and chemist. As director of the Sevres porcelain factory from 1800, he was responsible for its international fame. Brongniart established basic principles of ceramic chemistry that are incorporated in his *Traité des arts céramiques et des poteries* (1844). With Georges Cuvier he wrote *Essai sur la géographie minéralogique des environs de Paris* (1811), in which a system of stratigraphy was developed that relied on the use of fossils for the precise dating of strata. He also devised a system for the classification of reptiles.

Bronk, Delfev Wulf, 1897–, American biologist and administrator, b. New York City, grad. Swarthmore College (B.A., 1920), Ph.D. Univ. of Michigan, 1926. He was professor of medical physics at the Univ. of Pennsylvania from 1929 to 1949 and also director of

the Institute of Neurology (1936–40, 1942–49). From 1949 to 1953 he was president of Johns Hopkins. In 1953 he became president of the Rockefeller Institute for Medical Research (now Rockefeller Univ.), New York City. Bronk has also served as president and chairman of many important scientific societies. In his lectures he has asked for an understanding of science in terms of human values.

Bronte, Charlotte (brōn'tē), 1816–55, English novelist, Emily Jane Bronte, 1818–48, English novelist and poet, and Anne Bronte, 1820–49, English novelist. They were daughters of Patrick Bronte (1777–1861), an Anglican clergyman of Irish birth, educated at Cambridge. In 1820 he became incumbent of Haworth, West Riding of Yorkshire. The next year his wife died, and her sister, Elizabeth Branwell, came to the parsonage to care for the six Bronte children, five girls and one boy, Branwell. Maria and Elizabeth, the two oldest girls, were sent to the Cowan Bridge school for the daughters of poor clergymen. In spite of the harsh conditions there, Charlotte and Emily were also sent in 1824, but were brought home after Maria and Elizabeth contracted tuberculosis and died. At home for the next five years, the children were left much to themselves, and they began to write about an imaginary world they had created. This escapist writing, transcribed in tiny script on small pieces of paper, continued into adulthood and is a remarkable key to the development of genius in Charlotte and Emily. In 1831, Charlotte was sent to Miss Wooler's school at Roe Head. She became a teacher there in 1835, but in 1838 she returned to Haworth. At home she found the family finances in wretched condition. Branwell—talented as a writer and painter, on whom his sisters' hopes for money and success rested—had lost three jobs and was declining into alcoholism and opium addiction. To increase their income Charlotte and her sisters laid ill-considered plans to establish a school. In order to study languages Emily and Charlotte spent 1842 at the Pensionnat Heger in Brussels, but returned home at the death of their aunt, who had willed them her small fortune. Both girls were offered positions at the pensionnat, but only Charlotte returned in 1843. She went home the following year, because, it is thought, she was in love with M. Heger and had aroused the jealousy of Mme. Heger. Mr. Bronte's failing eyesight and the rapid degeneration of Branwell made this an unhappy period at home. When Charlotte discovered Emily's poetry in 1845, Anne revealed hers, and the next year the collected poems of the three sisters, published at their own expense, appeared under the pseudonyms Currer, Ellis, and Acton Bell. In 1847, Emily's novel *Wuthering Heights* and Anne's *Agnes Grey* were published as a set, and although *The Professor* by Charlotte was rejected, her *Jane Eyre* (1847) was accepted and published with great success. The identity of the sisters as authors was at first unknown even to their publishers. It was not until after the publication of Charlotte's *Shirley* in 1849 that the truth was made public. By then tragedy had all but destroyed the Brontë family. In September, 1848, Branwell died, Emily caught cold at his funeral and, refusing all medical aid, died of tuberculosis the following December. Anne, whose Tenant of Wildfell Hall appeared in 1848, also died of tuberculosis in May, 1849. Now that the people who had occupied most of her life were gone, Charlotte began to make trips to London where she was lionized. Her *Villette* appeared in 1853. In 1854 she married her father's curate, Arthur Bell Nichols, with whom she seems to have been happy. She died, however, of pregnancy toxemia complicated by the Bronte susceptibility to tuberculosis, after only a year of marriage. *The Professor* was published posthumously in 1857. Of the three Bronte sisters Anne was the least talented. Still her novels have been praised for their realism, integrity, and moral force. *Agnes Grey* is the unadorned story of a governess's life and *The Tenant of Wildfell Hall* tells of a young girl's marriage to a rake. Charlotte Bronte was the most professional of the sisters, consciously trying to achieve financial success from the family's literary efforts. Her novel *Jane Eyre*, the story of a governess and her passionate love for her Byronic employer, Mr. Rochester, is ranked among the great English novels. Strong, violently emotional, somewhat melodramatic, *Jane Eyre* brilliantly articulates the theme found in all Charlotte's work—the need of women for both love and independence. The undisputed genius of the family was Emily Brontë. An unyielding and enigmatic personality, she produced only one novel and a few poems, yet she is ranked among the giants of English literature. Her masterpiece, *Wuthering Heights* is the wild, passionate story of the intense, almost

demonic, love between Catherine Earnshaw and the gypsy founding Heathcliff. The action of the story is chaotic and unremotely violent, its characters are less people than forces. Indeed, the novel would be extraordinarily difficult to read were it not for the power of Emily Brontë's vision and the beauty and energy of her prose. Some of her powerful lyrics are counted with the best of English poetry. The early (1857) biography of Charlotte by Mrs. Gaskell is still valuable, as are the books on the Brontës by Clement K. Shorter. The poems of Emily have been edited by C. W. Hatfield (1941), the Brontë letters by Muriel Spark (1954). See the reconsideration of Mrs. Gaskell's *Life* by Margaret Lane (1953, repr. 1973), biographies of each of the Brontës by Winifred Gerin Anne (1959), Charlotte (1967), Branwell (1961, repr. 1972), and Emily (1972), biographies of the family by Lawrence and Elizabeth Hanson (4th ed. 1967) and Phyllis Bentley (1947, repr. 1973). See also F. E. Ratchford, *The Brontës' Web of Childhood* (1941, repr. 1964), *Emily Brontë: Her Life and Work*, Part 1 (biographical), by Muriel Spark, Part 2 (critical), by Derek Sanford, *Charlotte Brontë: Style in the Novel*, by Margot Peters (1973), *The Brontës and Their Background*, by Tom Winnifrid (1973).

Brontosaurus (brōntəsōr'əs) [Gr., =thunder lizard], formerly the genus name of a quadruped herbivorous DINOSAUR, probably over 70 ft (21 m) long and over 30 tons in weight, with a long neck and tail and a brain weighing about one pound. The genus name of this semiaquatic group has been officially changed to *Apatosaurus*. The eyes and nostrils of these amphibious dinosaurs were located toward the top of the skull, permitting them to see and breathe with only the top of the head above water. Bones of the brontosaurus and other sauropods have been found in the Morrison formation of the late Jurassic and early Cretaceous strata in Colorado, Wyoming, and other Western states. The brontosaurus is classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Saurischia.

Bronx, the, borough of New York City, coextensive with Bronx co. (1970 pop. 1,472,216), land area 41 sq mi (106 sq km), SE N.Y., settled 1641 by Jonas Bronck (a Dane acting for the Dutch West India Company), chartered as a part of Greater New York City 1898. The only mainland borough of New York City, it comprises the southern part of a peninsula bordered on the W by the Hudson River, on the SW by the Harlem River (which separates it from Manhattan), on the S by the East River, and on the E by Long Island Sound. To the north is Westchester co., of which the Bronx was a part until its southern portion was annexed by New York City in 1875 and the remainder in 1898. Among the many bridges linking the borough to Manhattan and Queens are the Henry Hudson across Spuyten Duyvil (where the Harlem River joins the Hudson) to Manhattan, the Triborough to Manhattan and Queens, and the Bronx-Whitestone and the Throgs Neck to Queens. It is also connected to Manhattan by subway lines. Although chiefly a crowded, residential borough, some of the more than 80 mi (129 km) of waterfront is given over to shipping, warehouses, factories, and an enormous wholesale produce market. Large areas of the borough are set aside for parks, notably Bronx Park, with the outstanding New York Zoological Park (Bronx Zoo) and the New York Botanical Garden, Van Cortlandt Park, containing the Van Cortlandt House (1748), and Pelham Bay Park, with Orchard Beach on Long Island Sound. Among the institutions of higher learning in the Bronx are Fordham Univ., Manhattan College, Albert Einstein College of Medicine (of Yeshiva Univ.), the New York State Maritime College, Herbert H. Lehman College, and Bronx Community College. Other points of interest are Yankee Stadium and the Edgar Allan Poe cottage (1812) City Island, in Long Island Sound, is a boating center.

Bronx, river, c. 20 mi (30 km) long, issuing from Kensico Reservoir, SE N.Y., and flowing SW through the Bronx into the East River. The Bronx River Parkway, one of the first landscaped superhighways in the New York City area, parallels a portion of the river.

bronze, in art. see BRONZE SCULPTURE

bronze, in metallurgy, alloy of copper, tin, zinc, phosphorus, and sometimes small amounts of other elements. Bronzes are harder than brasses. Most are produced by melting the copper and adding the desired amounts of tin, zinc, and other substances. The properties of the alloy depend on the proportions of its components. Bronzes with different properties have different uses. Aluminum bronze has high strength and resists corrosion, it is used for bearings, valve seats, and machine parts. Lead-

bronze, containing from 10% to 29% lead, is cast into heavy duty bushings and bearings. Silicon bronze is used for telegraph wires and chemical containers. Phosphor bronze is used for springs. Bronze is used for coins, medals, steam fittings, and GUNMETAL and was formerly employed for cannon. Because of its particularly sonorous quality, bell metal, containing from 20% to 24% tin, is used for casting bells. Bronze has long been used in art, e.g., for castings, engravings, and forgings.

Bronze Age, period in the development of technology when metals were first used regularly in the manufacture of tools and weapons. Pure copper and bronze, an alloy of copper and tin, were used indiscriminately at first; this early period is sometimes called the Copper Age. The earliest use of cast metal can be deduced from clay models of weapons. CASTING was certainly established in the Middle East by 3500 B.C. Following the NEOLITHIC PERIOD, the development of a metallurgical industry coincided with the rise of urbanization. The organized operations of mining, smelting, and casting undoubtedly required the specialization of labor and the production of surplus food to support a class of artisans, while the search for raw materials stimulated the exploration and colonization of new territories. This process culminated in the civilizations of MESOPOTAMIA and SUMER. Later, the MINOAN CIVILIZATION and the MYCENAEAN CIVILIZATION opened extensive trade routes in central Europe, where tin and copper were mined. This activity fostered native industries and political unification, especially in Hungary, Austria, and the Alpine region. It laid the foundations of the IRON AGE civilization, which was to follow under Greek, Etruscan, and Scythian influences. In the New World the earliest bronze was cast in Bolivia A.D. c. 1100. The INCA civilization used bronze tools and weapons but never mastered iron. See V. G. Childe, *The Prehistory of European Society* (1958, repr. 1962), J. W. Alsop, *From the Silent Earth* (1964), Grahame Clark, *World Prehistory: An Outline* (2d ed. 1969).

bronze sculpture. Bronze is ideal for casting art works; it flows into all crevices of a mold, thus perfectly reproducing every detail of the most delicately modeled sculpture. It is most susceptible to the graver's tool and admirable for REPOUSSÉ work. Bronze, used in early times for objects later made of other materials, constitutes a record of ancient arts and life. The Egyptians used bronze, cast and hammered, for utensils, armor, and statuary far in advance of the BRONZE AGE in Europe. The Greeks were unexcelled in bronze sculpture. Among the few surviving examples of their work are two masterpieces: *The Zeus of Artemisium* (National Mus., Athens) and *The Delphic Charioteer* (Delphi Mus.). Examples of Etruscan artisans' work include a bronze chariot found at Monteleone (Metropolitan Mus.) and the celebrated Capitoline Wolf (Palazzo dei Conservatori, Rome). The Romans took quantities of bronze statues from Greece and made thousands themselves. They employed bronze for doors and for furniture, utensils, and candelabra, of which some were recovered at Pompeii and Herculaneum. Early medieval bronzes consisted mainly of utensils and domestic and ecclesiastical ornaments. During the Renaissance, Italian sculptors wrought magnificent bronzes of many sorts, outstanding among which are Ghiberti's doors to the baptistry of Florence and the sculptures of Donatello, Verrocchio, Giovanni Bologna, Pollaiuolo, and Cellini. The work of Peter Vischer was influential in Germany. A series of monumental effigies of the monarchs are among the finest English bronzes. France was known in the 18th cent. for gilded bronze furniture mounts. In the Orient bronzes of superb quality have been produced since ancient times. Major modern sculptors who have worked in bronze include Rodin, Epstein, Brancusi, and Lipchitz. The classic description of Renaissance bronze casting is given in Cellini's *Autobiography* (1558-62). See D. G. Mitten and S. F. Doeringer, *Master Bronzes from the Classical World* (1968), George Savage, *A Concise History of Bronzes* (1968).

Bronzino, Il (ēl brōntse'nō), 1503-72, Florentine painter, an important mannerist, whose real name was Agnolo di Cosimo di Mariano Bronzino was a pupil and adopted son of Jacopo da Pontormo. Continuing the tradition of his master, he specialized and excelled in portraiture. He depicted many elegant and celebrated men and women of the time; his portraits included *Cosimo I de' Medici* and his wife *Eleanor of Toledo* (both Uffizi), *Lodovico Capponi* (Frick Coll., New York City), and *Portrait of a Boy* (Metropolitan Mus.). In 1540 he became court

painter to Cosimo I. Bronzino's sophisticated portraits are cold, unemotionally analytical and painted in a superbly controlled technique. The long, chilly faces and postures of his aristocratic subjects express an undisguised arrogance popular in the mannerist period. Bronzino's work had an influence on court portraiture throughout Europe and extended even to Elizabethan England. His *Venus, Cupid, Folly, and Time* (Uffizi) conveys a covert eroticism beneath a moralizing allegory. Of his religious works, *The Descent of Christ into Limbo* (Uffizi) is the most famous. See study by C. H. Smyth (1972).

Brook, Alexander, 1898-, American painter, b. Brooklyn, N.Y. Brook's paintings, which are consistently realistic, include portraits, still-life subjects, landscapes, and figures. His color is subtle and reserved. A deep respect for human personality characterizes much of his work, often with overtones of wry humor or irony. Among his major works are *Amalia* (Toledo Mus. of Art), *Peggy Bacon and Metaphysics* (Univ. of Nebraska), and *The Sentinel* (Whitney Mus., New York City). Brook was married (1920-40) to the artist Peggy BACON and later to the painter Gina Klee.

Brook, Peter, 1925-, English theatrical director. An innovative and controversial figure, Brook mounts energetic productions in which the stage is utilized totally; he often has his actors singing, playing musical instruments, and performing acrobatics. His first production was *Dr. Faustus* in 1943, which was followed by such productions as *The Infernal Machine*, *The Respectful Prostitute*, *The Beggar's Opera*, *Marat/Sade*, *A Midsummer Night's Dream*, and *King Lear*. He has also directed films, such as *Moderato Cantabile* (1960) and *Lord of the Flies* (1963), and operas, including *Faust* and *Eugene Onegin*. See his *The Empty Space* (1969), biography by J. C. Trewin (1971).

Brooke, Alan Francis: see ALAN BROOKE, ALAN FRANCIS BROOKE, 1ST VISCOUNT

Brooke, Sir Charles Anthony Johnson: see BROOKE, SIR JAMES

Brooke, Sir Charles Vyner: see BROOKE, SIR JAMES

Brooke, Edward William, 1919-, U.S. Senator (1967-), b. Washington, D.C. Admitted to the bar in 1948, he served (1963-66) as attorney general of Massachusetts, where he gained a reputation as a vigorous prosecutor of organized crime. Elected (1966) as a Republican to the U.S. Senate, he became the first black Senator since Reconstruction. Brooke served (1967) on the President's Commission on Civil Disorders, which investigated the causes of race riots in American cities, and played (1970) a major role in the successful fight against confirmation of the nomination of G. Harrold Carswell to the U.S. Supreme Court. He is the author of *The Challenge of Change* (1966). See biography by J. H. Cutler (1972).

Brooke, Fulke Greville, 1st Baron, 1554-1628, English author and statesman. A favorite of Queen Elizabeth I, he held many official positions during his lifetime. His *Life of Sir Philip Sidney* (1652) was more a historical and personal commentary than a biography. The bulk of his work (published posthumously) reflects his concern with the degeneration of the monarchy, foreshadowed by the death of Elizabeth. Many young poets of the time were indebted to him for his patronage. See his *Poems and Dramas* ed. by Geoffrey Bullough (1939) and selected writings ed. by Joan Rees (1973), biographies by Joan Rees (1971) and R. A. Rebholz (1971).

Brooke, Henry, c. 1703-1783, Irish author. Educated at Trinity College, Dublin, he studied law in London before returning to Ireland permanently. In 1735 he published his long philosophical poem, *Universal Beauty*. His discursive novel, *The Fool of Quality* (5 vol., 1767-70), which was inspired by the theories of Rousseau, reveals Brooke's acute awareness of the political and social situation of his day.

Brooke, Sir James, 1803-68, rajah of Sarawak on Borneo, b. India, of English parents. After active service in Burma (1825-26), he retired (1830) from the army of the East India Company and, during a voyage to the East Indies, conceived a plan to suppress piracy. He sailed (1838) for Borneo, and on the west coast there he assisted (1840) Muda Hassim, uncle of the reigning sultan, to suppress rebel Dyak tribes. For his services he was made (1841) rajah by the sultan of Brunei and proceeded to create a government and to put down head-hunting and piracy. He revised the tax system and administered justice personally. He was given a baronetcy by the British government and entrusted with the governorship (1847-57) of Labuan. Chinese traders in opium pre-

capitated an uprising (1867), in which Kuching, the capital of Sarawak, was burned. Brooke was engaged sporadically in suppressing many tribal rebellions. He was succeeded by his nephew, Sir Charles Anthony Johnson Brooke, 1829-1917. Sir Charles extended the authority of the government to all parts of the country, and by the abolition of slavery and other reforms he made the country productive and the people prosperous. He was succeeded by his son, Sir Charles Vyner Brooke, 1874-1963. Sir Charles was forced out of Sarawak in 1942 by the Japanese invasion. In spite of the fact that his nephew, Anthony W. D. Brooke, acted as his heir apparent and head of the provisional government during the war, Sir Charles ceded Sarawak to the British government as a crown colony in 1946. See Sir Steven Runciman, *The White Rajahs* (1960), Robert Pringle, *Rajahs and Rebels* (1970), Nicholas Tarling, *Britain, the Brookes and Brunei* (1972).

Brooke, Rupert, 1887-1915, English poet. At the outbreak of World War I he joined the Royal Naval Division, served at Antwerp, and was in the Dardanelles expedition when he died of blood poisoning at the island of Skiros. Handsome and athletic, Brooke was also charming, intellectual, and witty, and was universally sought in society. His early fame and tragic death have made him an almost legendary figure. He wrote two small volumes of poetry, *Poems* (1911) and *1914 and Other Poems* (1915). His verse is exuberant and charming, the romantic patriotism of his war sonnets contrasting sharply with the bitter, disillusioned poetry of Owen and Sassoon. See his letters, ed. by Geoffrey Keynes (1968), biographies by Arthur Stringer (1948, repr. 1972) and Christopher Hassall (1964, repr. 1972), bibliography by Geoffrey Keynes (1954).

Brookeborough, Basil Stanlake Brooke, 1st Viscount, 1888-1973, Northern Irish politician. After serving in the cavalry in World War I he was elected to the Senate of the first Northern Ireland Parliament (1921). He resigned the following year to lead the Ulster special constabulary against the Irish Republican Army's border raids in Fermanagh. Reelected (1929) as a Unionist member of Stormont, he served as minister of agriculture (1933-41), minister of commerce (1941-45), and prime minister (1943-63). A staunch advocate of Protestant dominance in Ulster, he remained opposed to any reconciliation with the Republic of Ireland. Created Viscount Brookeborough in 1952, he continued to sit at Stormont until 1968.

Brook Farm, 1841-47, an experimental farm at West Roxbury, Mass., based on cooperative living. Founded by George Ripley, a Unitarian minister, the farm was initially financed by a joint-stock company with 24 shares of stock at \$500 per share. Each member was to take part in the manual labor in an attempt to make the group self-sufficient. Intellectual life was stimulating, with such members as Nathaniel Hawthorne, John S. Dwight, Charles A. Dana, and Isaac Hecker, and such visitors as Ralph Waldo Emerson, W. H. Channing, Margaret Fuller, Horace Greeley, and Orestes Brownson. Brook Farm was mainly an outgrowth of UNITARIANISM, although most of the members had left that church and were advocates of the literary and philosophical movement known as TRANSCENDENTALISM. Economically, the community's excellent school was the most successful part of the venture (anticipating John Dewey's progressive-education ideas of learning from experience), agriculture showed little profit because of the sandy soil and the inexperience of the farmers. The popularity of the doctrines of Charles FOURIER led, especially through the efforts of Albert Brisbane, to Brook Farm's conversion to a phalanx in 1844. The group, however, did not long survive the financial disaster of the burning (1846) of the uncompleted central building. *The Harbinger* (1845-49), printed at Brook Farm and edited by Ripley, was rather a Fourierist weekly newspaper than the organ of Brook Farm and was continued in New York City with Parke Godwin as editor after 1847. See E. R. Curtis, *A Season in Utopia* (1961, repr. 1971).

Brookfield, 1 Village (1970 pop. 20,284), Cook co., NE Ill., a residential suburb of Chicago, inc. 1893. The noted Chicago Zoological Park (Brookfield Zoo) is there. 2 City (1970 pop. 32,140), Waukesha co., SE Wis., a suburb of Milwaukee, inc. 1954. It has iron foundries and light manufacturing.

Brookhaven, city (1970 pop. 10,700), seat of Lincoln co., SW Miss., inc. 1859. It is situated in a dairy, timber, and farm area, nearby are oil and gas fields. The city's manufactures include textiles, mobile homes, electronic equipment, lawnmowers, and thermometers.

Brookhaven National Laboratory, scientific research center, Upton, Long Island, N.Y. It was founded in 1947 by Associated Universities Inc., which is a management corporation sponsored by nine eastern U.S. universities. This corporation runs the laboratory under a contract with the U.S. Atomic Energy Commission. At Brookhaven an international staff conducts multidisciplinary scientific work, e.g., fundamental studies of atomic nuclei, investigations of the effects and uses of nuclear radiation, and research and development in nuclear technology. Among the laboratory's equipment are a number of highly sophisticated nuclear reactors, particle accelerators, and electronic computers. The facilities also include a medical research center for work in nuclear medicine. Science students are drawn from universities throughout the world to work at the laboratory as part of their training.

Brookings, Robert Somers, 1850-1932, American businessman and philanthropist, b. Cecil co., Md. He earned a fortune in business in St. Louis, Mo., and retired in 1897 to devote himself to philanthropy. As chairman of the corporation of Washington Univ. from 1897 to 1914 he was primarily responsible for the rebuilding of that institution. He founded the Brookings Institution in Washington, D.C. See biography by Hermann Hagedorn (1936).

Brookings, city (1970 pop. 13,717), seat of Brookings co., S.D., on the Big Sioux River, inc. 1883. A trade center in a livestock and grain region, the city is an important seed-processing point. Other industries produce medical and dental equipment, aluminum windows, doors, and awnings, concrete products, and fabricated structural steel. In the city is South Dakota State Univ., whose campus houses an agricultural experiment station. The South Dakota Memorial Art Center is in Brookings.

Brookings Institution, at Washington, D.C., chartered 1927 as a consolidation of the Institute for Government Research (est. 1916), the Institute of Economics (est. 1922), and the Robert S. Brookings Graduate School of Economics and Government (est. 1924). It provides statistics, general information, and personnel for research to the U.S. government. The institution also helps trained scholars to study contemporary economic, governmental, and international problems by financing research projects and publishing their findings.

Brookline (brōōk'lin), town (1970 pop. 58,886), Norfolk co., E. Mass., a residential suburb adjacent to Boston, settled 1630s, set off from Boston and inc. 1705. It was known as "Muddy River" when part of Boston. The birthplace of President John F. Kennedy in Brookline is a national historic site. Other points of interest are Amy Lowell's home and an antique auto museum. Brookline is the site of Hebrew College.

Brooklyn, 1 Uninc. city (1970 pop. 13,896), Anne Arundel co., central Md. 2 Borough of New York City (1970 pop. 2,601,852), 71 sq. mi. (184 sq. km), co-extensive with Kings co., SE N.Y., at the southwestern extremity of Long Island, settled 1636, chartered as a part of Greater New York 1898. Brooklyn is a residential and industrial region, with the largest population of the city's five boroughs, among its manufactures are machinery, textiles, paper products, and chemicals. The borough is the center of an important foreign and domestic commerce and has extensive waterfront facilities. The Brooklyn, Manhattan, and Williamsburg bridges span the East River, connecting Brooklyn with Manhattan, beneath the river are the Brooklyn-Battery Tunnel (for vehicular traffic) and subway tunnels. The Verrazano-Narrows Bridge (completed 1964) connects the borough with Staten Island. Hollanders and Walloons settled about Gowanus and Wallabout bays in 1636 and 1637, about nine years later Dutch farmers established the hamlet of Breuckelen, near the present borough hall. Becoming Brooklyn under the English, it was incorporated as a village (Brooklyn Ferry) in 1816 and was chartered as a city in 1834. As it grew, Brooklyn absorbed many settlements and villages, such as Flatbush, New Utrecht, and Gravesend (all settled in the 17th cent.). Williamsburg was absorbed in 1855, and Brooklyn became the third largest city in the United States. In 1898, when it became a borough of New York City, its population was about one million. Among the numerous educational institutions in the borough are Brooklyn College, Polytechnic Institute of New York, Pratt Institute, St. Joseph's College, Packer Collegiate Institute, and Long Island Univ. The New York Naval Shipyard (popularly known as the Brooklyn Navy Yard) was located on the East River from 1801 until its closing in the late 1960s, at which time the instal-

lation was turned over to private enterprise. Fort Hamilton (built 1831 as a harbor defense) overlooks the Narrows of New York Bay. Near beautiful Prospect Park, the scene of fierce fighting in the Revolution (see LONG ISLAND, BATTLE OF) is the main building of the Brooklyn Public Library. Also in that area are the Brooklyn Museum, with noted collections of Egyptian, Oriental, and primitive art, the Brooklyn Botanic Garden, and the Brooklyn Children's Museum—these, along with the Brooklyn Academy of Music, are under the direction of the Brooklyn Institute of Arts and Sciences. Among the many structures that give the borough its appellation "City of Churches" are the Reformed Protestant Dutch Church of Flatbush (first built 1654, rebuilt 1796), St. Ann's Episcopal Church (est. 1784), and Plymouth Church of the Pilgrims, where Henry Ward Beecher preached. Other points of interest in the borough include CONEY ISLAND, with its beach and amusement park, Sheephead Bay, a fishing and boating center, the invaluable historical library of the Long Island Historical Society, the New York Aquarium (at Coney Island), Brooklyn Heights Historic District, and the Lefferts Homestead (1777). Manne Park and parts of Jamaica Bay are included in Gateway National Recreation Area. The *Daily Eagle*, a noted newspaper published in Brooklyn from 1841 until 1959, had Walt Whitman as one of its editors. See H. C. Syrett, *The City of Brooklyn, 1865-1898* (1944, repr. 1968), R. F. Weld, *Brooklyn is America* (1950, repr. 1967) and *Brooklyn Village, 1816-1834* (1932, repr. 1970), Walt Whitman, *Walt Whitman's New York* (1861, repr. 1972). 3 City (1970 pop. 13,142), Cuyahoga co., NE Ohio, a residential suburb of Cleveland, inc. 1867.

Brooklyn Bridge, vehicular suspension bridge, New York City, southernmost of the bridges across the East River, between lower Manhattan and Brooklyn, built 1869-83. The achievement of J. A. Roebling and his son W. A. Roebling, it has a span of 1,595 ft (486 m). It was the first steel-wire suspension bridge in the world and was the world's longest suspension bridge at the time of its completion. See David McCullough, *The Great Bridge* (1972).

Brooklyn Center, city (1970 pop. 35,173), Hennepin co., SE Minn., a residential suburb of Minneapolis, inc. 1911. It has some light industry.

Brooklyn College of the City University of New York, coeducational, opened 1930 by merging the Brooklyn branches of City and Hunter colleges. The baccalaureate program is tuition-free to New York City residents. See NEW YORK, CITY UNIVERSITY OF.

Brooklyn Institute of Arts and Sciences, cultural institution founded in 1823 as the Brooklyn Apprentices Library Association. The scope was broadened in 1843 and the name changed to The Brooklyn Institute. In 1890 the institution was reorganized and reincorporated under its present name. It includes the Brooklyn Museum (designed by McKim, Mead, and White and begun in 1895), a Children's Museum, the Brooklyn Academy of Music, and a botanical garden, opened in 1911. The Brooklyn Museum is famous for its large collection of Egyptian art and its Egyptological library. Other important features are the collections of primitive arts, Oriental art, American and European costumes, American decorative arts, including 25 completely furnished rooms, a comprehensive collection of American painting and sculpture of the 18th to 20th cent., and the print collection. The Children's Museum, opened in 1899, was the first in the country, it contains natural history and ethnological collections. The Brooklyn Academy of Music, in operation since 1859, presents concerts, plays, ballets, and lectures.

Brooklyn Park, city (1970 pop. 26,230), Hennepin co., SE Minn., a suburb of Minneapolis, chartered as a city 1969. Potatoes are grown and wood products are made in Brooklyn Park. North Hennepin State Junior College is there.

Brook Park, city (1970 pop. 30,774), Cuyahoga co., NE Ohio, a suburb of Cleveland, inc. 1914. The Cleveland municipal airport is there.

Brooks, Gwendolyn, 1917-, American poet, b. Topeka, Kansas. She grew up in the slums of Chicago. Brooks's poems deal with the experience of being black in America. She won the 1950 Pulitzer Prize for poetry for *Annie Allen* (1949), becoming the first black woman to win this award. Her verse was collected in *The World of Gwendolyn Brooks* (1970), which also includes an earlier novelette, *Maud Martha* (1953). The poems in *Riot* (1970) are written in street dialects. See her autobiography (1972).

Brooks, Maria Gowen, 1795?-1845, American poet, b. Medford, Mass. Her first collection of verse, *Jubith, Esther, and Other Poems* (1820), was praised by Southey, who named her "Maria del Occidente."

which she later used as a pseudonym. While living in Cuba she wrote the epic *Zophiel, or, The Bride of Seven* (1833) and *Idomen, or, The Vale of Yumuri* (1843). Her poetry, especially the *Ode to the Departed* (1843), was esteemed both in America and abroad.

Brooks, Phillips, 1835–93, American Episcopal bishop, b. Boston. After rectorships (1859–69) in Philadelphia, he began (1869) his memorable ministry at Trinity Church, Boston, where he became one of the most influential ministers of his time. In 1891 he was consecrated bishop of Massachusetts. His lectures at Yale were published as *Lectures on Preaching* (1877), and his Bohlen lectures in Philadelphia as *The Influence of Jesus* (1879). The Christmas hymn "O Little Town of Bethlehem" was included in his *Christmas Songs and Easter Carols* (1903). See *Life and Letters* (ed. by A. V. Allen, 2 vol., 1900), biographies by William Lawrence (1930) and R. W. Albright (1961).

Brooks, Preston Smith, 1819–57, U.S. Congressman (1852–57), b. Edgefield District, S.C. A lawyer and the nephew of Senator Andrew Pickens Butler, he is remembered as the man who in 1856 caned Charles Sumner after Sumner had bitterly criticized Senator Butler. The slander in Sumner's speech and the brutality in Brooks's action showed how the rift was widening between North and South. Resigning, Brooks was promptly reelected.

Brooks, Van Wyck, 1886–1963, American critic, b. Plainfield, N.J., grad. Harvard, 1908. His first book, *The Wine of the Puritans* (1909), presented the thesis that American culture has been so pervaded by puritanism with its materialistic emphasis that the artistic side of the nation's life has been profoundly neglected. Although this theme was developed in such subsequent books as *America's Coming-of-Age* (1915), *The Ordeal of Mark Twain* (1920), and *The Pilgrimage of Henry James* (1925), later works, including *Emerson and Others* (1927), indicate his growing respect for American literature. In 1937 he won the Pulitzer Prize in history for *The Flowering of New England* (1936). Other volumes followed in the series he called *Makers and Finders*: *New England*, *Indian Summer* (1940), *The World of Washington Irving* (1944), and *The Times of Melville and Whitman* (1947). In this series, his masterwork, Brooks interprets American literary history, it is a vivid, varied chronicle, rich in anecdote and infused with the author's humanism. Among Brooks's innumerable other books are such autobiographical works as *Days of Phoenix* (1957), *From a Writer's Notebook* (1958) and *An Autobiography* (1965). See *The Van Wyck Brooks-Lewis Mumford Letters*, ed. by R. E. Spiller (1970).

Brooks Range, mountain chain, northernmost part of the Rocky Mts., extending about 600 mi (970 km) from east to west across N. Alaska. Mt. Chamberlin 9,020 ft (2,749 m) high, near the Canadian border, is the highest peak. Rugged, barren, snow-covered, and uninhabited, Brooks Range separates the oil-rich Arctic Ocean coastal plain from the Yukon River basin.

broom, common name for plants of two closely related and similar Old World genera, *Cytisus* and *Genista*, of the family Leguminosae (PULSE family). They are mostly twiggily leguminous shrubs with abundant yellow or white (in *Cytisus*, purple also) pea-like blossoms. The common, or Scotch, broom (*Cytisus scoparius*) is naturalized in parts of North America; the tops have been much used as a diuretic. The Canary broom, or so-called genista of florists, is *Cytisus canariensis*, a yellow-flowered evergreen shrub. Species of the genus *Genista* include *Genista tinctoria*, called also dyer's-greenweed, which yields yellow-to-green dyes. Other plants are also called broom. Broom is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

broomcorn: see SORGHUM

broom rape, common name for plants of the Orobanchaceae, the broom rape family. The broom rapes are parasitic on the roots of other plants; they have small leaves and little or no green color. In some species the leaves are absent entirely. Most species are found in dry sandy areas of the Old World. Broom rapes are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Scrophulariales.

Brosamer, Hans (häns brō'zämər), c. 1500–1554, German painter and engraver. His work shows the influence of Cranach, Dürer, and Holbein. Recent scholarship has attempted to reattribute a large body of works bearing the signature HB which are

no longer thought to be by Brosamer. Among works accepted as his are many portraits.

Broschi, Carlo: see FARINELLI, CARLO BROSCHI

Brosse, Salomon de (sälōmōn' də brōs), 1571–1626, French architect, trained by his grandfather, Jacques du Cerceau, the elder. Designing in terms of mass, rather than surface decoration, he paved the way for the next generation in the use of classicism as the style which denoted royalty. In Paris his works include the Luxembourg Palace (1615–20) built for Marie de' Medici and the facade of Saint-Gervais (1616). At Rennes he built the Parliament House (1618), now the Palais de Justice. Also attributed to him are the château of Blérancourt and the hunting château erected for Louis XIII at Versailles.

Brotherhood of the New Life: see HARRIS, THOMAS LAKE

Brothers, Richard, 1757–1824, English religious fanatic, b. Newfoundland. A naval officer, he traveled widely and moved to London in 1787. Shortly afterward he proclaimed himself a descendant of David, prince of the Hebrews, and ruler of the world. He gained a small following. After demanding that King George III turn over his crown to him, Brothers was confined as a criminal lunatic. Later moved to a private asylum, he was released in 1806. He wrote *A Revealed Knowledge of the Prophecies and Times* (2 vol., 1794).

Brothers of the Sword: see LIVONIAN BROTHERS OF THE SWORD

Brough, John (brūf), 1811–65, Civil War governor of Ohio (1864–65), b. Marietta, Ohio. In 1844, after publishing newspapers in Marietta and Lancaster, he became owner and editor of the Cincinnati *Enquirer*, which he made one of the leading Democratic organs in the West. Brough served in the state legislature, and as state auditor (1839–45) he thoroughly reorganized Ohio's financial system. Although a Democrat, Brough so vigorously supported the Union during the Civil War that the Republicans nominated him for governor in 1863, and he soundly defeated the Copperhead leader, Clement L. Vallandigham. He was one of the most effective state leaders of the period. See W. B. Hesseltine, *Lincoln and the War Governors* (1948).

Brougham, Henry Peter, 1st Baron Brougham and Vaux (brōm, vōz, vōks), 1778–1868, British statesman, b. Edinburgh. As a young lawyer in Scotland he helped to found (1802) the *Edinburgh Review* and contributed many articles to it. He went to London, was called (1808) to the English bar, and entered (1810) Parliament as a Whig. Brougham took up the fight against the slave trade and opposed the restrictions on trade with the Continent. In 1820 he won popular renown as chief attorney to Queen Caroline (see CAROLINE OF BRUNSWICK), and in the next decade he became a liberal leader in the House of Commons. He not only proposed educational reforms in Parliament, but also was one of the founders of the Society for the Diffusion of Useful Knowledge (1825) and of the Univ. of London (1828). As lord chancellor (1830–34) he effected many legal reforms to speed procedure and established the central criminal court. In later years he spent much of his time in Cannes, which he established as a popular resort. See Arthur Aspinall, *Lord Brougham and the Whig Party* (1927, repr. 1972), biography by F. R. Hawes (1957).

Brown, Heywood Campbell (brōn), 1888–1939, American newspaper columnist and critic, b. Brooklyn, N.Y. He worked on the *New York Tribune* (1912–21) and the *New York World* (1921–28), where his syndicated column, "It Seems to Me," began. In 1928 he transferred it to the Scripps-Howard newspapers, including the *New York World-Telegram*, where it appeared until he moved it to the *New York Post* just before his death. In his column Brown constantly championed the underdog, criticized social injustice, and backed emerging labor unions. A founder of the American Newspaper Guild, he was its first president from 1933 until his death. In 1930, Brown ran unsuccessfully for congress as a Socialist. His books include *The A. E. F.* (1918), *The Boy Grew Older* (1922) and *Gandle Follows His Nose* (1926), novels, and a biography of Anthony Comstock (with Margaret Leech, 1927). *It Seems to Me* (1935) and *Collected Edition* (ed. by H. H. Brown, 1941) give the best of his column.

Broussel, Pierre (pyèr brōsēsē'), c. 1575–1654, councillor of the Parlement of Paris under Louis XIII and Louis XIV. His opposition to the tax program proposed by Cardinal MAZARIN made him popular. The uprising after his arrest in 1648 caused his early release and was the start of the first FRONDE. In July,

1652, the Parisians chose him provost of the merchants, i.e., virtual mayor. He resigned in September in order to facilitate the reconciliation between the rebels and the court, and he died in obscurity.

Brouwer or Brauwer, Adriaen (both adrēän' brōu'wər), c. 1606–1638, Flemish painter who worked in Haarlem. He studied with Hals at the same time as did the young Ostade, and the influence of their two styles, as well as that of Rubens, is apparent in his paintings. Brouwer is noted for his depictions of peasant life, particularly of drinking scenes and humorously treated single figures sleeping or smoking. Brouwer's early canvases were richly colored, in the Flemish style, while his later works (1631–38) were often monochromatic, a characteristic of the contemporary Dutch fashion. His lively canvases were popular in his own time. Brouwer was also an important master of landscape and a superb draftsman. His *Drinkers at a Table* (Brussels) and *The Smokers* (Metropolitan Mus.) are characteristic. See study by G. Knuttel (tr. 1962).

Browder, Earl Russell, 1891–1973, American Communist, b. Wichita, Kansas. He became converted to socialism as a boy, and after imprisonment (1917–18, 1919–20) for opposing the draft he joined the Communist party. Following his return from a trip to China for the party, he was secretary-general of the party (1930–44) and president of the Communist political association (1944–45), which briefly replaced the party. He was the Communist party's candidate for President (1936, 1940) and editor in chief of the *Daily Worker* (1944–45). In 1940 he was convicted of passport fraud, and he was imprisoned in 1941, but he was freed by President Franklin D. Roosevelt in 1942. During World War II he advocated greater cooperation between the Soviet Union and the West. When the war ended, this policy was repudiated by the leaders of the USSR and resulted in his removal from all party offices (1945) and from the party (1946). Among his works are *Communism in the United States* (1935), *What Is Communism?* (1936), *The People's Front* (1938), *War or Peace with Russia?* (1947), and *Marx and America* (1958).

Browere, John Henri Isaac, 1792–1834, American sculptor, b. New York City, studied painting in New York under Archibald Robertson and sculpture in Europe. He is known for his life masks, many of famous Americans, which he produced in hopes of establishing a national gallery of bronze busts. Among his subjects were John Adams, John Quincy Adams, Thomas Jefferson, De Witt Clinton, and James and Dolley Madison (N.Y. State Historical Assoc., Cooperstown). The artistry of Browere's work lies in the choice of expression and the manipulation of facial details and hair, all his portraits are singularly strong in effect. See C. H. Hart, *Browere's Life Masks of Great Americans* (1899).

Brown, Benjamin Gratz, 1826–85, U.S. Senator (1863–67) and governor of Missouri (1871–73), b. Lexington, Ky. An able lawyer in St. Louis, Brown was a leader in the Free-Soil movement in Missouri and later helped form the Republican party there. In the memorable Missouri election of 1870, Brown and his supporters defeated the radical Republicans, and he thus became prominent in the rise of the national LIBERAL REPUBLICAN PARTY. He was the party's candidate for Vice President on the unsuccessful ticket headed by Horace GREELEY in 1872. He later became a Democrat. See biography by Norma L. Peterson (1965).

Brown, Charles Brockden, 1771–1810, American novelist and editor, b. Philadelphia, considered the first professional American novelist. After the publication of *Alcuin A Dialogue* (1798), he wrote such novels as *Edgar Huntly* (1799), *Arthur Mervyn* (2 vol., 1799–1800), and *Ormond* (1799), in which he presented arguments for social reform. *Wieland* (1799) was by far his most popular work and foreshadowed the psychological novel. To support himself after 1800 he became a merchant but also edited successively three periodicals, wrote political pamphlets, and projected a compendium on geography. See critical biographies by L. R. Wiley (1950) and D. L. Clark (1952), study by D. A. Ringe (1966).

Brown, Elmer Ellsworth, 1861–1934, American educator, b. Chautauque co., N.Y., grad. Illinois State Normal Univ., 1881, and studied at the Univ. of Michigan and in Germany. He taught education at the Univ. of Michigan (1891–93) and at the Univ. of California (1893–1906). After directing the reorganization of the Bureau of Education as U.S. commissioner of education (1906–11), he became chancellor of New York Univ., retiring in 1933. He wrote *The Making of Our Middle Schools* (1903) and *A Few Remarks* (1933).

Brown, Ford Madox, 1821-93, English historical painter, b Calais, France. Although closely affiliated with the Pre-Raphaelites in London, he never joined the brotherhood. Examples of his paintings are *Work* (1852-63, Manchester Art Gall), *The Last of England* (1855, Birmingham Gall), and his series of 12 frescoes in the town hall of Manchester, depicting the history of that city. He was the grandfather of Ford Madox Ford.

Brown, George, 1818-80, Canadian statesman and journalist, b Scotland. In 1837 he emigrated to the United States, but after five years in New York City, he settled in Toronto, Ont. There he founded (1844) the *Toronto Globe*, which under his editorship became the most powerful political journal in Upper Canada. He wholeheartedly supported Robert Baldwin and the movement for responsible government. Elected in 1851 as a Reform member of the Canadian legislative assembly, Brown in time became leader of the "Clear Grits" faction, which opposed the influence of the French Canadians in the assembly. He urged the secularization of the Clergy Reserves (lands reserved for the Protestant churches), a national school system, the purchase of the Northwest Territories, and representation by population instead of the equal representation for Quebec and Ontario as established by the Act of Union (1840). Brown played an important role in the movement for confederation. Despite his personal and political hatred for Sir John A. Macdonald, he joined (1864) "the great coalition" ministry and with Macdonald and others went to England in 1865 to urge Canadian confederation. He resigned that year from the government because of his inability to work with Macdonald and left Parliament in 1867. He later (1873) accepted appointment to the Canadian Senate, serving until he was shot to death by an insane employee. See biography by J. M. S. Careless (2 vol., 1959-1963).

Brown, George Alfred, 1914-, British politician. The son of a prominent trade union official, he worked as a salesman (1931-36) and an organizer for the Transport and General Workers Union (1936-42). The union sponsored his parliamentary candidacy for Belper, Derbyshire, which he represented from 1945 to 1970. A member of the right wing of the Labour party and a supporter of Hugh Gaitskell, Brown succeeded (1960) Aneurin Bevan as deputy leader of the party. Harold Wilson defeated him in the 1963 election for Gaitskell's successor as party leader, but Brown remained deputy leader until 1970. In Wilson's Labour government he was secretary of state for economic affairs (1964-66) and foreign secretary (1966-68). He was not reelected in 1970 and was made a life peer taking the title Baron George-Brown. See his memoirs, *In My Way* (1971), biography by W. N. Connor (1964).

Brown, George Douglas: see DOUGLAS, GEORGE

Brown, Helen Gurley, 1922-, American writer and editor, b Green Forest, Ark. The Depression taught her to develop competitive attributes, and she rose from secretarial jobs to advertising copywriter and account executive. In 1962 she published the best-selling *Sex and the Single Girl*—sequel *Sex and the New Single Girl* (1970)—which advised unmarried women on ways to maximize their potential. In 1966 she became editor of *Cosmopolitan*, reviving the faltering magazine by directing it toward single young career women.

Brown, Henry Kirke, 1814-86, American sculptor, b Leyden, Mass. He studied portrait painting with Chester Harding and later turned to sculpture, which he studied in Italy. Returning to America in 1846, he settled in New York City. His early sculptures show the influence of Italian neoclassicism. Several works reflect his interest in American Indians. His finest achievement is the bronze equestrian statue of Washington in Union Square, New York City (1856). Among his later works are four statues in the Capitol, Washington, D.C.

Brown, Jacob Jennings, 1775-1828, American general, b Bucks co., Pa. In the War of 1812 he defeated (May, 1813) a British attempt to take Sacket's Harbor, N.Y., and the next year became commander of the Niagara frontier. Brown crossed the Niagara, took Fort Erie, and drove the British back toward York (now Toronto). On July 25, 1814, he fought the battle of Lundy's Lane, in which he was wounded. From 1821 to 1828 he was general-in-chief of the U.S. army.

Brown, Jimmy, 1936-, American football player, b St. Simon Island, Ga. A high school and college star in all sports, but particularly in football, he joined the Cleveland Browns of the National Football League in 1957. Considered one of the greatest full-

backs in the history of the sport, Brown, who retired from the game in 1965 to pursue a career as a film actor, holds the lifetime records for most touchdowns (126), most yards gained rushing (12,312), and highest rushing average (5.22). He was elected to the Professional Football Hall of Fame in 1971.

Brown, John, 1800-1859, American abolitionist, b Torrington, Conn. He spent his boyhood in Ohio. His life was a succession of business failures, in Ohio, Pennsylvania, Massachusetts, and New York, before he became prominent in the 1850s. An ardent abolitionist (he once kept a station on the UNDERGROUND RAILROAD at Richmond, Pa.), Brown in 1855 settled with five of his sons in Kansas to help win the state for freedom. He became "captain" of the colony on the Osawatimie River. The success of the proslavery forces, particularly their sack of LAWRENCE, aroused Brown, and in order "to cause a restraining fear" he, with four of his sons and two other men, deliberately murdered five proslavery men living on the banks of the Pottawatomie River. In this he asserted he was an instrument in the hand of God. His exploits as a leader of an antislavery band received wide publicity, especially in abolitionist journals, and as Old Brown of Osawatimie he became nationally known. Late in 1857 he began to enlist men for a project that he apparently had had in mind for some time and that took definite form at a convention of his followers held at Chatham, Ont., the next spring. He planned to liberate the slaves through armed intervention by establishing a stronghold in the Southern mountains to which the slaves and free Negroes could flee and from where further insurrections could be stirred up. Early in 1859, Brown rented a farm near Harpers Ferry, Va. (now W. Va.), and there collected his followers and arms. On the night of Oct. 16, with 21 followers, he crossed the Potomac and without much resistance captured the U.S. arsenal at Harpers Ferry, made the inhabitants prisoners, and took general possession of the town. Strangely enough, he then merely settled down, while the aroused local militia blocked his escape. That night a company of U.S. marines, commanded by Col. Robert E. Lee, arrived, and in the morning they assaulted the engine house of the armory into which Brown's force had retired. In the resulting battle, 10 of Brown's men were killed, and Brown himself was wounded. News of the raid aroused wild fears in the South, and to the North it came as a great shock. On Dec. 2, 1859, Brown was hanged at Charles Town. His dignified conduct and the sincerity of his calm defense during the trial won him sympathy in the North and led him to be regarded as a martyr. The standard contemporary account is contained in *The Life, Trial and Execution of Captain John Brown* (1859, repr. 1969). See biographies by O. G. Villard (rev. ed. 1965), S. H. Oakes (1970), and J. Abels (1971), Allan Keller, *Thunder at Harper's Ferry* (1958), J. C. Malin, *John Brown and the Legend of Fifty-Six* (1942, repr. 1970), R. O. Boyer, *The Legend of John Brown* (1973).

Brown, John, 1810-82, Scottish essayist. He was a physician. His writing was collected in *Horae Subsecivae* (3 vol., 1858-82), which included his unique picture of a dog, *Rab and His Friends* (1859), and a memoir of that gifted child known to Walter Scott's circle as "Pet Marjorie," *Marjorie Fleming* (1863). See his letters (ed. by his son and D. W. Forrest, 1907).

Brown, John Carter, 1797-1874, American book collector and philanthropist, b Providence, R.I., son of Nicholas Brown. In about 1840 he began collecting books printed before 1800 relating to America, and the result was a remarkable library of 5,600 volumes. These were catalogued by John Bartlett (4 vol., 1865-71). Several thousand volumes were added to the library before Brown's death. After his son, John N. Brown, died, the library was donated to Brown Univ. (named for Nicholas Brown) with funds and endowment for a special building on the campus to house it. It is known as the John Carter Brown Library.

Brown, Joseph Emerson, 1821-94, U.S. public official, b Pickens District, S.C. As governor of Georgia during the Civil War, Brown quarreled with Jefferson Davis over conscription and the suspension of the writ of habeas corpus despite their common secessionist stand. After the war Brown briefly became a Republican but returned to the Democratic fold, and in 1880 he was appointed to the U.S. Senate seat of John B. Gordon, which he retained until his retirement in 1891. Along with Gordon and Alfred H. Colquitt, Brown controlled Georgia politics for many years. See studies by L. B. Hill (1939, repr. 1972) and D. C. Roberts (1973).

Brown, Moses, 1738-1836, American manufacturer and philanthropist, b Providence, R.I. He was associated with his brothers John, Joseph, and Nicholas in the family's mercantile activities before establishing (1790), with Samuel Slater, the first water-powered cotton mill in the United States. Largely because of Brown's influence, Rhode Island College (later renamed Brown Univ. in honor of his brother Nicholas) was moved in 1770 from Warren to Providence. Brown contributed generously to the college. Moses Brown School in Providence, a leading preparatory institution for boys, was established (1819) by Quakers on land donated by him. See biography by Mack Thompson (1962).

Brown, Nicholas, 1769-1841, American manufacturer and philanthropist, b Providence, R.I., grad Rhode Island College (renamed Brown Univ. in 1804 for him), 1786. He extended the internationally known mercantile business of his father, Nicholas Brown. Later his own firm, Brown and Ives, came to control most of the waterpower on the Blackstone River, where his uncle, Moses Brown, and Samuel Slater had pioneered in the cotton textile industry. He was the treasurer (1796-1825) and, for a long period of time, the benefactor of his alma mater Butler Hospital was founded (1847), in Providence, by his bequest for the care of the mentally ill. See J. B. Hedges, *Browns of Providence Plantations* (2 vol., 1952, repr. 1968).

Brown, Norman O., 1913-, American scholar and social critic, b El Oro, Mexico, grad Oxford, 1936. A classicist influenced by Freud, Brown thinks that the degree to which sexuality has been inhibited in America has led, not only to the stifling of instincts, but also to a perversion of human drives from life and art to money and death. His works include *Life Against Death: The Psychoanalytical Meaning of History* (1959), *Love's Body* (1966), *Hermes the Thief* (1969), and *Closing Time* (1973).

Brown, Olympia, 1835-1926, American Universalist minister and woman-suffrage leader, b Prairie Ronde, Mich., grad Antioch College, 1860, and the theological school of St. Lawrence Univ., 1863. She was one of the first women in America to be ordained (1863) to the ministry. For 30 years she was president of the Wisconsin Woman's Suffrage Association. In 1873 she married Henry Willis, but retained her own name.

Brown, Robert, 1773-1858, Scottish botanist and botanical explorer. In 1801 he went as naturalist on one of Matthew Flinders's expeditions to Australia, returning (1805) to England with valuable collections. In his *Prodromus florae Novae Hollandiae et Insulae Van Diemen* (1810) he described Australian flora. A leading botanist of his day, he served as librarian to the Linnaean Society and to Sir Joseph Banks and later as curator at the British Museum. He observed BROWNIAN MOVEMENT in 1827 and discovered the cell nucleus in 1831. His studies of several plant families and of pollen were also notable.

Brown, Samuel Robbins, 1810-80, American missionary and educator, b East Windsor, Conn. As missionary (1839-47) to China, he took charge of a school founded by the Morrison Educational Association. When he returned (1847) to the United States, three students accompanied him, the first Chinese to come to America to be educated. Brown had an important part in the founding of Elmira College. From 1859 to 1879 he worked as a missionary in Japan.

Brown, Walter Folger, 1869-1961, American cabinet officer, b Massillon, Ohio. A lawyer of Toledo, Ohio, he became prominent in Republican politics and was (1927-29) Assistant Secretary of Commerce. As Postmaster General (1929-33) under President Hoover, Brown secured a reduction of air mail rates and a consolidation of air mail routes—policies that aided the development of commercial aviation.

brown algae: see PHAEOPHYTA

brown coal: see LIGNITE

Brown Deer, village (1970 pop. 12,582), Milwaukee co., SE Wis., on the Milwaukee River, inc. 1955. It is a residential suburb N of Milwaukee. The major industry is the manufacture of meters.

Browne, Charles Farrar: see WARD, ARTEMUS

Browne, Hablot Knight, pseud. **Phiz**, 1815-82, English illustrator. At 21 he was chosen by Charles Dickens to illustrate *Pickwick Papers*. His success was immediate, and in due course he illustrated many of Dickens's novels as well as works of Harrison Ainsworth and Charles Lever. Browne also contributed popular cartoons to *Punch* and painted numerous watercolors and several oils.

Browne, Robert, c. 1550-1633, English clergyman and leader of a group of early separatists popularly

known as Brownists Browne conceived of the church as a self-governing local body of experiential believers in Christ Preaching without a license, Browne attacked the forms of government and the discipline of the Established Church, he gathered a congregation at Norwich c 1580 In 1581 he and his followers sought refuge in Holland There he published (1582) several treatises that are generally regarded as the first expression of the principles of CONGREGATIONALISM Circulation in England of these tracts was punishable by death Upon his return to England in 1584, Browne was imprisoned and later excommunicated But by 1586 he was sufficiently reconciled with the Church of England to be made master of the Stamford grammar school, and in 1591 he submitted to episcopal ordination and became rector of Adchurch, Northamptonshire See biographies by Champlin Burrage (1906) and F J Powicke (1910)

Browne, Sir Thomas, 1605-82, English author and physician, b London, educated at Oxford and abroad, knighted (1671) by Charles II His *Religio Medici*, in which Browne attempted to reconcile science and religion, was written about 1635 After circulating in manuscript, it was first published in a pirated edition (1642), an authorized edition followed (1643) Inspired by the discovery of funeral urns near Norwich, he wrote *Hydriotaphia, Urn Burial* (1658), a solemn reflection on death and immortality, in which he expressed a belief in the futility of things here on earth Published with *Urn Burial* was the more optimistic *The Garden of Cyrus*, a work devoted to the mystic symbolism of the number five Browne's philosophy is now primarily of historical interest It is the quality of his faith and, particularly, his mode of expression that make him one of the outstanding figures in the history of English literature His other notable works are *Pseudodoxia Epidemica* (1646), commonly known as *Vulgar Errors*, and *Christian Morals* (1716) See edition of his works (ed by Geoffrey Keynes, 6 vol., 1928-31), biographies by Edmund Gosse (1905) and J S Finch (1950), studies by W P Dunn (1950), Joan Bennett (1962), and Leonard Nathanson (1967)

Browne, Thomas, d 1825, Loyalist commander in the American Revolution A resident of Augusta, Ga, he was the victim of colonist violence in 1775, when he was tarred and feathered for ridiculing the Continental Congress Later he organized (1778) a Loyalist troop in Florida and raided settlements in S Georgia In 1780 he captured Augusta, in 1781 he was forced to surrender to Andrew Pickens and Henry Lee After his exchange he was a colonel in the Queen's Rangers in South Carolina and was defeated (May, 1782) by Anthony Wayne Browne, who was fiercely hated by the colonists, escaped and lived out his life in the British West Indies

Browne, Thomas Alexander, pseud **Rolf Boldrewood**, 1826-1915, Australian author A squatter, a magistrate, and a commissioner in the gold fields, he wrote many books of life in Australia, such as *Robbery under Arms* (1888) and *Ghost Camp* (1902)

Browne, William (William Browne of Tavistock) (tāv'istōk), 1591?-1645?, English poet An imitator of Spenser, he did his finest work in pastoral poetry, of which *Britannia's Pastorals* (1613, 1616, 1825) and *The Shepherd's Pipe* (with George Wither and others, 1614) are the best examples

Brownell, Herbert, Jr., 1904-, U S Attorney General (1953-57), b Peru, Nebr Admitted to the bar in 1927, he practiced law in New York City and served in the New York state legislature (1933-37) He managed Thomas E Dewey's campaigns for the governorship of New York in 1942 and for the presidency in 1944 and 1948 From 1944 to 1946 he was chairman of the Republican national committee In 1952, Brownell helped bring about the nomination and election of Dwight D Eisenhower as President As Eisenhower's Attorney General, Brownell figured prominently in the administration's controversial loyalty-security program

brown hematite: see LIMONITE

Brownian movement or motion, zigzag, irregular motion exhibited by minute particles of matter when suspended in a fluid The effect has been observed in all types of colloidal suspensions (see COLLOID)—solid-in-liquid, liquid-in-liquid, gas-in-liquid, solid-in-gas, and liquid-in-gas It is named for the botanist Robert Brown who observed (1827) the movement of plant spores floating in water The effect, being independent of all external factors, is ascribed to the thermal motion of the molecules of the fluid These molecules are in constant irregular motion with a velocity proportional to the temperature Small particles of matter suspended in the fluid

are buffeted about by the molecules of the fluid Brownian motion occurs for particles about 0.001 mm in diameter, these are small enough to share in the thermal motion, yet large enough to be seen with a microscope or ultramicroscope The first satisfactory theoretical treatment of Brownian motion was made by Albert Einstein in 1905 Jean Perrin made a quantitative experimental study of the dependence of Brownian motion on temperature and particle size that provided verification for Einstein's mathematical formulation Perrin's work is regarded as one of the most direct verifications of the KINETIC-MOLECULAR THEORY OF GASES

brownie, in Celtic folklore, household spirit associated with farmsteads Brownies help with chores, but, if criticized, they will make mischief, such as spoiling crops If payment other than food is offered a brownie, he vanishes from a farm forever

Browning, Elizabeth Barrett, 1806-61, English poet, b Durham A delicate and precocious child, she spent a great part of her early life in a state of semi-invalidism She read voraciously—philosophy, history, literature—and she wrote verse In 1838 the Barrett family moved to 50 Wimpole St, London Six years later Elizabeth published *Poems*, which brought her immediate fame The volume was a favorite of the poet Robert Browning, and he began to correspond with her The two fell in love, but their courtship was secret because of the opposition of Elizabeth's tyrannical father They married in 1846 and traveled to Italy, where most of their married life was spent and where their one son was born Mrs Browning threw herself into the cause of Italian liberation from Austria "Casa Guidi," their home in Florence, is preserved as a memorial Happiness in her marriage, Mrs Browning recovered her health in Italy, and her work as a poet gained in strength and significance Her greatest poetry, *Sonnets from the Portuguese* (1850), was inspired by her own love story *Casa Guidi Windows* (1851), on Italian liberty, and *Aurora Leigh* (1857), a novel in verse, followed During her lifetime Mrs Browning was considered a better poet than her husband Today her life and personality excite more interest than her work Although as a poet she has been criticized for diffuseness, pedantry, and sentimentality, she reveals in such poems as "The Cry of the Children" and some of the *Sonnets from the Portuguese* a highly individual gift for lyric poetry See *The Letters of Robert Browning and Elizabeth Barrett Browning, 1845-46* (1899, new ed 1930), Rudolph Besier, *The Barretts of Wimpole Street* (1930), the most popular dramatization of the Brownings's love story, biographies by F Winwar (1950), G B Taplin (1957), and Isabel C Clarke (1929, repr 1970), study by Alethea Hayter (1963), bibliography by Warner Barnes (1967)

Browning, Orville Hickman, 1806-81, U S Secretary of the Interior (1866-69), b Harrison co, Ky One of the organizers of the Republican party in Illinois, Browning helped secure his friend Lincoln's nomination (1860) for President, but later, as U S Senator from Illinois (1861-63), he opposed Lincoln on the emancipation question After Lincoln's death Browning supported Andrew Johnson's Reconstruction policy in opposition to the radical Republicans He joined Johnson's cabinet in Sept, 1866, and was one of the President's closest friends and advisers during the impeachment struggle His diary, edited by T C Pease and J G Randall (2 vol., 1927-33), is an important and detailed source for the Lincoln and Johnson administrations See biography by M G Baxter (1957)

Browning, Robert, 1812-89, English poet His remarkably broad and sound education was primarily the work of his artistic and scholarly parents—in particular his father, a London bank clerk of independent means *Pauline*, his first poem, was published anonymously in 1833 In 1834 he visited Italy, which eventually became his second homeland He won some recognition with *Paracelsus* (1835) and *Sordello* (1840) In 1837, urged by William Macready, the Shakespearean actor, Browning began writing for the stage Although not especially successful, he wrote eight verse plays during the next nine years, two of which were produced—*Strafford* in 1837 and *A Blot in the 'Scutcheon* in 1843 The narrative poem *Pippa Passes* appeared in 1841, it and subsequent poems were later published collectively as *Bells and Pomegranates* (1846) Included were "My Last Duchess" and "Soliloquy of the Spanish Cloister," both dramatic monologues, this form proved to be the ideal medium for Browning's poetic genius Other notable poems of this kind are "Fra Lippo Lippi," "Andrea del Sarto," and "The

Bishop Orders His Tomb" In 1846, after a romantic courtship, Browning secretly married the poet Elizabeth Barrett and took her to Italy, where they lived for 15 happy years There he wrote *Christmas Eve and Easter Day* (1850) and *Men and Women* (1855) In 1861, after the death of his wife, he returned to England, where he wrote *Dramatis Personae* (1864) This was followed by what is considered his masterpiece, the murder story *The Ring and the Book* (4 vol., 1868-69) Set in 17th-century Italy, the poem reveals, through a series of dramatic dialogues, how a single event—a murder—is perceived by different people Browning gained recognition slowly, but after the publication of this work he was acclaimed a great poet Societies were instituted for the study of his work in England and America His later works include *Dramatic Idyls* (2 vol., 1879-80) and *Asolando* (1889) Browning's thought is persistently optimistic He believed in commitment to life His psychological portraits in verse, ironic and indirect in presentation, and his experiments in diction and rhythm have made him an important influence on 20th-century poetry He was buried in Westminster Abbey See variously published volumes of his letters, biographies by Maisie Ward (vol 1, 1967, vol II, 1969), Betty Miller (1952, repr 1973), and William Irvine and Park Honan (1974), studies by Robert Langbaum (1963), Philip Drew (1966 and 1970), R E Gridley (1972), and Thomas Blackburn (1967, repr 1973), W C DeVane, *A Browning Handbook* (2d ed 1955)

Brownists: see BROWNE, ROBERT

Brownlow, William Gannaway (broun'lō), 1805-77, U S politician, governor of Tennessee (1865-69), known as the "Fighting Parson," b Wythe co, Va Brownlow won a large following in E Tennessee as an itinerant preacher, editor of the Jonesboro *Whig*, and, after 1849, editor of the influential Knoxville *Whig* Along with Andrew Johnson, whom Brownlow despised, he shared the Unionist leadership in E Tennessee, although he did not oppose slavery In Oct, 1861, his paper was suppressed by the Confederates, and Brownlow was imprisoned until March, 1862 Early in 1865 he became governor of Tennessee and instituted a destructive Reconstruction regime that proclaimed martial law and persecuted Confederate elements in the state He was reelected in 1867 and served as U S Senator from 1869 to 1873 See the narrative of his experiences during the Civil War, *Rise, Progress, and Decline of Secession* (1862), biography by E M Coulter (1937, repr 1971)

Brown-Séguard, Charles Edouard (broun-sākār', -sākwār'), 1817-94, physiologist, b Mauritius, of French and American parents He taught at Harvard (1864-68), practiced medicine in New York City (1873-78), and succeeded (1878) Claude Bernard at the Collège de France He was known for his research on the functions of the sympathetic nervous system and the spinal cord, he also studied the physiological effects of the injection of genital gland extracts and of the application of heat to the cortex His most important work was on internal secretions He is considered a founder of endocrinology, especially organotherapy

Brownson, Orestes Augustus, 1803-76, American author and clergyman, b Stockbridge, Vt Largely self-taught, he became a vigorous and influential writer on social and religious questions He was a Presbyterian, but left that church to become first a Universalist and then a sort of free-lance minister, working for such socialistic schemes as the short-lived Workingmen's party Later he was a Unitarian minister until in 1836 he started his own church, the Society for Christian Union and Progress As founder and editor of the *Boston Quarterly Review* (1838-42) and as editor of the *Democratic Review* (1842-44), he condemned social inequalities At this time he was one of the transcendentalists and was so interested in BROOK FARM as to send his son there He entered the Roman Catholic Church in 1844, and later, as editor of the new *Brownson's Quarterly Review*, he attacked non-Catholic beliefs Among his books are *New Views of Christianity, Society, and the Church* (1836), two autobiographical novels, *Charles Elwood, or, The Infidel Converted* (1840) and *The Convert* (1857), and *The American Republic* (1865) See biography by his son, Henry F Brownson (3 vol., 1898-1900), who also edited his works (20 vol., 1882-87, repr 1966), biographies by Arthur Schlesinger, Jr (1939, repr 1966), Theodore Maynard (1943, repr 1971), and A D Lapati (1965), studies by Lawrence Roemer (1953) and Leonard Gilhooly (1972)

brownstone, red to brown variety of SANDSTONE Its unusual color is caused in some instances by the

presence of red iron oxide which acts as a cement, binding the sand grains together. Vast thicknesses (up to 20,000 ft/6,096 m) of brownstone were deposited in the present-day Connecticut River valley region of Massachusetts and Connecticut and in central New Jersey during the latter part of the TRIASSIC PERIOD. Quarries in these regions were the source for much of the building stone used in the late 19th and early 20th cent. in the construction of the many brownstone houses in New York City. Similar, but more brightly colored, sandstones also were deposited in the Rocky Mt. region during the Triassic period and JURASSIC PERIOD. These deposits are called "redbeds" and make up the colorful landscapes of the Painted Desert of Arizona.

Brownsville, city (1970 pop. 52,522), seat of Cameron co., extreme S Texas, on the Rio Grande c. 17 mi (30 km) from its mouth at the Gulf of Mexico, inc. 1850. It is an important port of entry across the river from Matamoros, Mexico, a deepwater channel (completed 1936) accommodates ocean vessels. Brownsville is a trade, processing, and distributing point for the rich, irrigated lower Rio Grande valley, and has many industries, especially those connected with oil and natural gas. Other products include shrimp, electronic equipment, and aircraft parts. The establishment of Fort Texas there by Gen. Zachary Taylor in 1846 invited a Mexican attack that precipitated the Mexican War. Taylor later fought the battles of Palo Alto and Resaca de la Palma in coming to the fort's relief. The fort was renamed (1846) for Major Jacob Brown, killed while commanding its defense. Active until 1944, Fort Brown was held briefly by Union forces in the Civil War, the last battle of that war was fought 14 mi (23 km) east of the fort at Palmito Hill on May 13, 1865. The town of Brownsville grew around the fort and was a cattle-shipping point in the late 19th cent. In 1906 a group of black soldiers stationed at Fort Brown were blamed for a night gun raid on the town that resulted in the death of an innocent citizen, although interrogations of the soldiers produced no evidence, President Theodore Roosevelt, in a highly controversial directive, ordered the dishonorable discharge of 167 of the black soldiers. In 1972 the Secretary of the Army reversed the order, changing the discharges to honorable. Brownsville has a junior college, an international airport, and a notable zoo. Nearby recreational areas include Padre Island National Seashore.

Brown Swiss cattle, one of the oldest breeds of cattle, originating in Switzerland where the cows were used as triple-purpose animals (dairy, beef, and draft). They are large, fleshy, and slow-maturing, with body color ranging from gray or light brown to dark brown. Introduced in the United States in 1869, they have been used mainly as a dairy breed.

browntail moth, common name for a moth, *Nygmia phaeorrhoea*, of the tussock moth family. It is a serious pest of forest and shade trees, especially oak. It was introduced from Europe about the same time as the related gypsy moth in the late 19th cent. Browntail moth adults are white, with a tuft of brownish hairs at the tip of the abdomen, the abdomen of the male is rust colored. The female, with a wingspread of 1½ in. (3.8 cm) is slightly larger than the male. The dark, red- and white-mottled larvae, or caterpillars, may completely defoliate trees. They have netting hairs that cause a skin rash if touched. Young larvae overwinter in small clumps of leaves fastened together with silk, emerging in early spring. In early summer they pupate in a cocoon in the soil, and the nocturnal adult emerges in about three weeks. An introduced fungus has helped keep this pest in check, and it has not spread in North America beyond New England. However, it is still a serious pest in parts of Eurasia. Good pruning of overwintering leaf nests and spraying are important control measures. The browntail moth is classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Liparidae.

brown thrush: see MIMIC THRUSH

Brown University, at Providence, R.I., for men, chartered 1764 as Rhode Island College at Warren, opened 1765. It moved to Providence in 1770 and was renamed for Nicholas BROWN in 1804. Pembroke College, a separate though affiliated college for women, was established in 1891. The John Carter Brown Library (see BROWN, JOHN CARTER) is especially significant for its early Americana.

Brown vs. Board of Education of Topeka, Kansas, case decided by the U.S. Supreme Court in 1954. Linda Brown was denied admission to her local elementary school in Topeka, Kansas, because she was black. When the case came before the Su-

preme Court, the court, in an opinion by Chief Justice Earl Warren, unanimously overruled the separate but equal doctrine of PLESSY VS. FERGUSON and held that de jure segregation in the public schools was unconstitutional. The court stressed that the badge of inferiority stamped on minority children by segregation hindered their full development no matter how equal the physical facilities. The unequal treatment of children violated the equal protection clause of the Fourteenth Amendment to the U.S. Constitution. After hearing arguments on implementation, the court declared in 1955 that schools must be integrated "with all deliberate speed." Restricted in application to de jure segregation, the decision was applied mainly to Southern systems. After strong resistance, Southern states slowly began integration under Federal court orders and the threat of loss of Federal funds. The decision provided a tremendous impetus to the civil rights movement of the 1950s and 60s and immeasurably hastened the end of segregation in all public facilities and accommodations. In 1973 the doctrine was applied to the school system of Denver, Colo., where segregation had until then been achieved through the gerrymandering of school districts.

Brownwood, city (1970 pop. 17,368), seat of Brown co., central Texas, inc. 1876. It is an industrial community, its products include brick, clothing, glass, furniture, leather products, mobile homes, plastic pipe, food products, beverage cartons, concrete mixers, reflective products, sportswear, cable, and wire. Brownwood processes and ships pecans, peanuts, cattle, wool, poultry, and meat from the surrounding agricultural area. Nearby Lake Brownwood is a large reservoir used for irrigation as well as for fishing and boating. In the city is Howard Payne College. The Douglas MacArthur Academy of Freedom is on its campus.

Bruay-en-Artois (bruā'-aN-artwa'), town (1968 pop. 28,628), Pas-de-Calais dept., NE France, on the Loire River. Primarily a coal-mining center, the town also produces fuels, boilers, clothing, beer, and candy.

Brubeck, Dave, 1920-, American pianist and composer, b. Concord, Calif. Brubeck began studying piano at the age of four and later studied composition with Milhaud and Schoenberg. In 1951 he organized a modern jazz quartet. His music, influenced by modern classical composers, is distinguished by complex harmony and the use of meters not typical in jazz. He has made numerous recordings and foreign tours.

Bruce, Scottish royal family descended from an 11th-century Norman duke, Robert de Brus. He aided William I in his conquest of England (1066) and was given lands in England. His son was granted fiefs in Scotland, and the family therefore rendered homage in both kingdoms. The 5th Robert the Bruce was married to Isobel, second daughter of David, earl of Huntingdon, brother of the Scottish kings Malcolm IV and William the Lion. The son of that marriage, the 6th Robert the Bruce, was a claimant to the Scottish throne after the death of Margaret Maid of Norway in 1290. The crown, however, was awarded by EDWARD I to John de BALIOL, grandson of the eldest daughter of David of Huntingdon. A grandson of this Robert was the famous Robert Bruce or Robert the Bruce who became king of Scotland as ROBERT I. The brother of Robert I, Edward BRUCE, was crowned king of Ireland in 1316. The young son of Robert I succeeded his father as David II and was in turn succeeded by his nephew, ROBERT II, son of Robert I's daughter Marjory and the first king of Scotland of the STUART family.

Bruce, Sir David, 1855-1931, British bacteriologist, b. Melbourne, Australia. He isolated (1887) the bacterium of Malta fever, the disease was renamed brucellosis after him, and the genus of bacteria causing it, *Brucella*. Bruce also discovered the cause and mode of transmission of nagana (a disease of horses and cattle) and (with David N. Nabarro and Sir Aldo Castellani) of African sleeping sickness. He was head of the Royal Society's commission to study sleeping sickness in Uganda (1903, 1908-10) and Malta fever in Malta (1904-6).

Bruce, Edward, d. 1318, Scottish king of Ireland, brother of ROBERT I of Scotland. He aided his brother in the war for independence from England and in 1315 was declared heir to Robert's throne. With Robert's approval he then invaded Ulster, to which he had some hereditary claim. He was crowned king of Ireland in 1316 and found many Irish allies against the Anglo-Irish rulers. However, he failed to consolidate his gains and was killed in battle in 1318.

Bruce, James, 1730-94, Scottish explorer in Africa. He explored Roman ruins in N. Africa (1755) from Tunis to Tripoli and visited Crete, Rhodes, and Asia Minor. In 1768 he traveled down the Red Sea as far as the straits of Bab el Mandeb. From Massawa he struck inland for Gondar, then the capital of Ethiopia. He rediscovered (1770) the source of the Blue Nile, which he followed (1771) to its confluence with the White Nile. He wrote *Travels to Discover the Source of the Nile, 1768-73* (3d ed. 1813). For his travels in Barbary, see R. L. Playfair, *Travels in the Footsteps of Bruce* (1877). See biography by J. M. Reid (1968).

Bruce, James, 8th earl of Elgin: see ELGIN, JAMES BRUCE, 8TH EARL OF

Bruce, Lenny, 1925-66, American comedian, b. Long Island, N.Y., as Leonard Alfred Schneider. Possessed of a cynical, surreal, and intensely comic view of the world, Bruce brutally satirized such sensitive areas of American life as sex, religion, and race relations. His comedy left no group unscathed, and his routines were replete with four-letter words. Consequently Bruce was continually being arrested and tried for obscenity and forbidden to perform. He was also arrested for narcotics violations. In Aug., 1966, he died of an overdose of narcotics at the age of 41. After his death Bruce became a cult figure, considered by many to be a martyr to the cause of free speech. His autobiography, *How to Talk Dirty and Influence People* (1965), sold well, and his nightclub routines were collected and published as *The Essential Lenny Bruce* (1966). *Lenny*, a musical based on his life and including much of his comic material, was a hit on Broadway in 1971. After his cult popularity had diminished, he was still regarded as a seminal figure in American culture, whose influence could be seen in the work of important novelists, playwrights, and filmmakers of the 1970s. See biography by Albert Goldman (with Lawrence Schiller), *Ladies and Gentlemen, Lenny Bruce!* (1974).

Bruce, Stanley Melbourne (mël'børn), 1883-1967, Australian political leader. Educated at Cambridge, he was called to the bar (1906) in England. After service in World War I, he entered the commonwealth legislature in 1918, was treasurer (1921-23) in the cabinet of W. M. Hughes, and served (1923-29) as prime minister. He was notable for promoting the closest relations of Australia with the empire compatible with Australian self-government, and he also advocated international cooperation. Bruce served as Australian delegate to the League of Nations and in 1936 was president of the council. From 1933 to 1945 he was high commissioner for Australia in London. In 1947 he was made Viscount Bruce of Melbourne.

Bruce, Thomas, 7th earl of Elgin: see ELGIN, THOMAS BRUCE, 7TH EARL OF

Bruce, Victor Alexander, 9th earl of Elgin: see under ELGIN, JAMES BRUCE, 8TH EARL OF

Bruce, William Speirs, 1867-1921, Scottish explorer and authority on the polar regions. He first went to the Antarctic as ship's surgeon in 1892 and later did survey work in Franz Josef Land and oceanographic work in the Arctic Ocean. He led (1902-4) the Scottish National Antarctic Expedition in the *Scotia*, performing much valuable scientific research in the Weddell Sea and discovering Coats Land. Bruce established a meteorological station on Laurie Island (in the South Orkney group). He edited the reports of the expedition (6 vol.) and wrote *Polar Exploration* (1911). Bruce made a number of voyages to Spitsbergen and became an authority on the islands. See R. N. Rudmose Brown, *A Naturalist at the Poles* (1923).

brucellosis (brōō'sələ'sis) or **Bang's disease**, in febrile disease of farm animals that is sometimes transmitted to humans. In humans the disease is also known as undulant fever, Mediterranean fever, or Malta fever. In susceptible animals, primarily cattle, swine, and goats, brucellosis causes sterility and death. The symptoms are spontaneous abortion and inability to conceive in females and inflammation of sex organs in male animals. Animal brucellosis is transmitted by contact or by such mechanical vectors as contaminated food, water, and excrement. The disease is caused by three species of *Brucella* bacteria, and the causative organism is present in aborted fetuses and uterine secretions, antibodies to the bacteria are present in the blood or milk, an important diagnostic factor. Measures for prevention and control of brucellosis include vaccination of calves, blood tests of adults, and slaughtering of infected animals. Human brucellosis is an occupational disease among farmers, slaughterhouse work.

ers, and others who come in direct contact with infected animals or their products (raw meat or unpasteurized dairy products). The most prominent symptoms are weakness and intermittent fever. The disease persists for months if left untreated but is seldom fatal in humans. There is no effective vaccine for human brucellosis, and antibiotics are the usual treatment.

Bruce of Melbourne, Stanley Melbourne Bruce, Viscount* see BRUCE, STANLEY MELBOURNE

Bruch, Max (maks brö'kh), 1838-1920, German composer. He conducted the Liverpool Philharmonic Orchestra (1880-83) and taught at the Berlin Hochschule (1892-1910). His Violin Concerto in G Minor (1868) and his variations on the *Kol Nidre* (1881) for cello and orchestra are his best-known compositions.

brucine (bröō'sēn), alkaloid similar to STRYCHNINE. See NUX VOMICA

Bruck an der Mur (bröök än dēr mōōr), city (1971 pop 16,400), in Styria prov., E central Austria, at the confluence of the Mur and the Mürz rivers. Manufactures include metal products and paper. Bruck was founded in 1263 by King Ottocar II of Bohemia. There is a 15th-century Gothic church in the city.

Brücke, Die [Ger., =the bridge], German expressionist art movement, lasting from 1905 to 1913. Influenced by the art of *Jugendstil* (the German equivalent of art nouveau), Van Gogh, and the primitive sculpture of Africa and the South Seas, the *Brücke* group developed an art of fervent emotionalism. Founded in Dresden by Kirchner, Schmidt-Rottluff, and Heckel, the group invited Nolde and Pechstein to join in 1906 and Otto Mueller in 1910. They lived and worked communally, periodically issuing portfolios of their graphic art, which at first bore a rather communal style. By 1911 most of them had gone to Berlin. In their exhibitions they displayed brutally deformed, boldly colored portraits, landscapes, and city themes. Like their French contemporaries developing FAUVISM, the art of the *Brücke* expressionists was intense and violent but more inclined toward primitivistic and demonic qualities, symbolism, and introspection. Their uncomfortable art was essentially a reaction against impressionism and realism but lacked a coherent definition. The members fell out in 1913 over a statement of their aims formulated by Kirchner.

Bruckner, Anton (än'tōn bröök'när), 1824-96, Austrian composer. He taught himself to play the organ, and in 1856 he was appointed organist at the Linz cathedral. He became court organist in Vienna in 1867, and later he taught at the Vienna Conservatory and at the university there. He established a reputation as a virtuoso organist on trips to France in 1869 and to England in 1871, but as a composer he gained recognition slowly. In his composition he was influenced by the chromatic harmony and orchestral grandeur of Wagner's music. At the same time, Bruckner's work is marked by contrapuntal complexity and extended melodies, in the formal tradition of Beethoven and Schubert. His outstanding works are the Masses in D Minor (1864), in E Minor (1866), and F Minor (1867-71), a *Te Deum* (1881-84), and nine symphonies, of which the Fourth or *Romantic* (1874), the Eighth, or *Apocalyptic* (1884-87), and the Ninth (1895-96) are best known. He also wrote motets, cantatas, chamber music, piano and organ pieces, and pieces for male chorus. See studies by H. F. Redlich (1955), Erwin Doernberg (1960, repr 1968), and R. Simpson (Am. ed., 1968).

Brudenell, James Thomas* see CARDIGAN, JAMES THOMAS BRUDENELL, 7TH EARL OF

Bruegel, Brueghel, or Breughel (all brö'gäl), outstanding family of Flemish genre and landscape painters. The foremost, Pieter Bruegel, the Elder, c 1525-1569, called Peasant Bruegel, studied in Antwerp with his future father-in-law, Pieter Coecke van Aelst, but was influenced primarily by Bosch. In 1551 he became a member of the Antwerp Guild. Bruegel visited Italy in the early 1550s. However, he remained close to the Flemish tradition and employed his native powers of minute observation in depicting the whole living world of field and forest and of sturdy peasants at work and play. He was, himself, a learned city-dweller and friend of humanists. His paintings of genre subjects have allegorical or moralizing significance. In his tremendous range of invention, Bruegel approached Bosch in creating nightmarish fantasies in such works as *The Fall of the Rebel Angels* (Brussels). He also painted cheerful, acutely perceived scenes of daily life, e.g., *Peasant Wedding* (Vienna), for which he is best known. *The Fall of Icarus* (versions in Brussels and New

York) is his only mythological subject. He painted religious histories—*Numbering at Bethlehem* (Brussels), *Way to Calvary* (Vienna), with figures clothed in contemporary Flemish dress, parables—*The Sower* (Antwerp), *The Blind Leading the Blind* (Naples), genre scenes—*Children's Games*, *Peasant Dance* (both Vienna), and landscapes showing the activities of the months—(several in Vienna, *Harvesters in the Metropolitan Mus*), and other works. A skilled draftsman and etcher, Bruegel uses a delicate line to define his figures. His people are stubby in proportion, but lively and solid. His color is remarkably sensitive, as is his feeling for landscape. His compositions are often based on diagonal lines, creating gentle rhythms and allowing planes of landscape to unfold into the distance. See studies by Ludwig Münz (1961), Wolfgang Stechow (1971), and Fritz Grossmann (3d ed 1973). His son, Pieter Bruegel, the Younger, 1564-1637, often copied his father's works. Two of his paintings are in the Metropolitan Museum. His brother, Jan Bruegel, 1568-1625, called Velvet Bruegel, specialized in still life, rendered with extreme smoothness and finesse. He was a friend of Rubens, and occasionally supplied floral ornament for works from Rubens's shop. He was also adept at landscape. Representative works are in Brussels and Berlin.

Bruges (brööz, fr brüz), Flemish *Brugge*, city (1970 pop 51,300), capital of West Flanders prov., NW Belgium, connected by canal with Zeebrugge (on the North Sea), its outer port. It is a commercial, industrial, and tourist center and a rail junction. Manufactures include lace, textiles, ships, railroad cars, communications equipment, chemicals, and processed food. Bruges was founded on an inlet of the North Sea in the 9th cent. and became (11th cent.) a center of trade with England. In the 13th cent. it flourished as the major entrepôt port of the HANSEATIC LEAGUE and as one of the chief wool-processing centers of Flanders. New ports (notably SLUIS) were founded to help accommodate its increasing trade. At its zenith (14th cent.), Bruges was one of the great commercial hubs of Europe. An early COMMUNE of the Low Countries, the city held extensive political privileges and often played a part in the chronic struggle between England, France, and the counts of Flanders. Its government, at first in patrician hands, gradually passed to the trade guilds of the wool industry. When Philip IV of France annexed Flanders in 1301, Bruges led the rebellion against him. The French garrison was massacred (1302), and shortly afterward the citizen-army of Bruges was led to victory in the BATTLE OF THE SPURS. Despite frequent political disturbances, Bruges continued to prosper until the Flemish wool industry declined (early 15th cent.) as a result of foreign competition. In addition, the North Sea inlet on which Bruges was located silted up completely by 1490, and the city lost its access to the sea and to its outer ports. By c 1500, Antwerp had replaced Bruges as the major entrepôt of N Europe. The commercial and industrial revival of Bruges began only in 1895, with the start of extensive repairs to its port, in 1907 the Zeebrugge canal was opened. The city was occupied by the Germans in World Wars I and II. Bruges was the cradle of FLEMISH ART during the rule (14th-15th cent.) of the Burgundian dukes in Flanders. Jan van Eyck, Gerard David, and many other masters are richly represented in the churches, public buildings, and museums of the city. Among its noted structures are the Hospital of St. John (12th cent.), containing several masterpieces by Hans Memling, the 13th-century market hall or cloth-workers hall, with its famous carillon, the city hall (14th cent.), the Church of Notre Dame (13th-15th cent.), with the tombs of Charles the Bold and Mary of Burgundy and with Michelangelo's *Virgin*, the Cathedral of Saint-Sauveur (begun 10th cent.), and the Chapel of the Precious Blood (begun 12th cent.), a major place of pilgrimage.

Brugmann, Karl (kär'l bröök'män), 1849-1919, German philologist. A professor at Leipzig, Brugmann believed that scientific rules of linguistics do not admit of exceptions. With the help of others, notably Hermann Osthoff, Wilhelm Scherer, and Berthold Delbrück, he did much work in Indo-European linguistics and issued a large comparative grammar of Indo-European languages that is still a standard reference.

Brühl, Heinrich, Graf von (hän'rikh gräf' fən brul), 1700-1763, Saxon statesman. He was adviser to Augustus II, king of Poland and elector of Saxony, and gained control of both governments after the accession (1733) of AUGUSTUS III. Brühl advanced the economic and cultural development of Saxony but did

not succeed in making the Polish crown hereditary with the Saxon rulers. An able diplomat, he neglected Saxon military potential and sought powerful allies. When King Frederick II of Prussia made (1756) a surprise attack on Saxony, initiating the SEVEN YEARS WAR in Europe, Brühl fled with his king to Poland. There he remained throughout the war, while Frederick exploited Saxony. Charges that Brühl amassed his fortune through fraud have not been proved.

Bruhn, Erik (ēr'ik bröön), 1929-, Danish ballet dancer, b. Copenhagen. Bruhn joined the Royal Danish Ballet in 1947 and became a soloist there in 1949. He is widely regarded as one of the world's foremost dancers, combining dramatic flair with a subtle precision of style. Best-known for his roles in *La Sylphide*, *Giselle*, and *Swan Lake*, he has appeared throughout the world as guest artist and director with many companies, including the American Ballet Theatre.

Brulé, Étienne (ätyēn' brülä'), c 1592-1632, French explorer in North America. He arrived (1608) in the New World with Samuel de Champlain, who sent him (1610) into the wilderness to learn about the Indians and the land. He lived with the Huron Indians and accompanied (c 1612) a group of them to Georgian Bay of Lake Huron. In 1612 he guided Champlain to that lake, and on the return journey they were, so far as is known, the first white men to see Lake Ontario. Brulé was then sent to the headwaters of the Susquehanna River and followed it to Chesapeake Bay. On his way back he was captured by the Iroquois and tortured, but he escaped (1618). He lived with the Huron once again, making many explorations of which no definite record remains. He probably visited Lake Superior and thus saw all the Great Lakes except Lake Michigan, being the first white man to do so. In 1629 he piloted the English vessels that captured Quebec and his old commander, Champlain. Then he retired to live an increasingly dissolute life among the Huron. He was killed in an Indian quarrel, and his remains were eaten. See C. W. Butterfield, *History of Brulé's Discoveries and Explorations, 1610-1626* (1898).

Brumaire (brümär'), second month of the FRENCH REVOLUTIONARY CALENDAR. The coup d'état of 18 (actually 18-19) Brumaire (Nov. 9-10, 1799), engineered chiefly by Sieyès, overthrew the DIRECTORY and established the CONSULATE under Napoleon. It nearly failed because of Napoleon's inept conduct at the Council of Five Hundred, but the situation was saved by his brother Lucien BONAPARTE.

Brummell, Beau (George Bryan Brummell) (brüm'-əl), 1778-1840, English dandy and wit. Brummell was greatly admired for his fastidious appearance and confident manner. He was an intimate of the prince regent (later George IV), and as such influenced men of society to wear dark, simply cut clothes and elaborate neckwear. He is also credited with having set the fashion for trousers rather than breeches. Having quarreled with the prince, and deeply in debt from gambling, Brummell fled to France, where, ironically, he lived for 14 years in poverty and squalor. He died insane in a hospital at Caen. See biographies by C. M. Franzero (1958) and Samuel Tenenbaum (1967).

Brunanburh, battle of (bröō'nənbürg), A.D. 937, a victory won by ÆTHELSTAN, king of the English, over a coalition of Irish, Scots, and Britons (or Welsh) of Strathclyde. The site of the battle is not known. The battle is celebrated in a poem in the *Anglo-Saxon Chronicle*. See translation by Dorothy Whitelock and others (1962).

Brundisium: see BRINDISI, Italy

Brunehaut* see BRUNHILDA

Brunei (bröōnī'), sultanate (1971 pop 135,665), 2,226 sq mi (5,765 sq km), NW Borneo, on the South China Sea, a British protectorate since 1888. Its two sections are surrounded by SARAWAK, Malaysia. Oil is Brunei's main export. Rubber is also produced, and cassava, pineapples, bananas, rice, and other crops are raised. A majority of the population are Malays, but the small Chinese community (c 35,000) dominates the economy. Islam is the predominant religion. A native sultanate was established on Brunei in the 15th cent. At one time the sultan controlled nearly all of Borneo, but by the 19th cent. his power had declined and Brunei had become a haven for pirates. In 1888 the British established a protectorate over Brunei, administered by a British resident, although the sultan retained formal authority. The Japanese overran the area during World War II. In 1959 a written constitution went into effect. Under it, as amended in 1965, the sultanate remains and

the protectorate is governed by a chief minister, council of ministers, and elected legislative council. There was a leftist revolt in 1962. The Federation of Malaysia was planned to include Brunei, but at the last moment the sultan refused to join. The capital and major port of Brunei is Bandar Seri Begawan (formerly Brunei, 1971 pop. 36,574).

Brunel, Sir Marc Isambard (brōōnēl'), 1769-1849, British engineer and inventor. Born in France, he came to the United States in 1793 as a royalist refugee. He became chief engineer of New York City, and his projects included building the old Bowery theater (burned in 1821) and constructing a canal between Lake Champlain and the Hudson. In 1799 he went to England, where he patented machinery for making ships' blocks and later invented many other mechanical labor-saving devices. In 1825, Brunel began the construction of the Thames Tunnel (the first in which a shield was used, see TUNNEL). In 1841 he was knighted. See biography by Paul Clements (1970), study by Peter Hay (1973). In the work on the tunnel Sir Marc was assisted by his son, Isambard Kingdom Brunel, 1806-59, British civil engineer and an authority on railway traction and steam navigation. He was engineer of the Great Western Railway, building bridges and docks. Later he constructed railways in Italy and was a consulting engineer in Australia and India. He is best known, however, for his designing and construction of the three ocean steamships the *Great Western* (1838), which was the first transatlantic steam vessel, the *Great Britain* (1845), the first ocean screw steamship, and the *Great Eastern* (1858), the largest steam vessel of its time. See biographies by his son, Isambard Brunel (1870, repr. 1972), and L. T. Rolt (1959), Celia Brunel Noble, *The Brunels: Father and Son* (1938).

Brunelleschi, Filippo (fēlēp'pō brōōnēl-lēs'kē), 1377-1446, first great architect of the Italian Renaissance, a Florentine by birth. Trained as sculptor and goldsmith, he designed a trial panel, *The Sacrifice of Isaac* (1401, Bargello, Florence) for the bronze doors of the Florence baptistery. The commission, however, was won by Lorenzo Ghiberti. Thereafter, Brunelleschi became more interested in architectural planning. He made several trips to Rome, where he devoted himself to the study of classical buildings. About 1420 he drew two panels in perspective (now lost) that had important consequences for both architectural and art theory. The Church of San Lorenzo, Florence, reveals his systematic use of perspective in the careful proportioning of the interior structure and in the articulation of spatial volumes. In the Ospedale degli Innocenti (founding hospital, 1419-45), Brunelleschi introduced a motif that was widely imitated during the Renaissance—a series of arches supported on columns. In 1420 he began to build the dome for the cathedral in Florence. This octagonal ribbed dome is one of the most celebrated and original domical constructions in architectural history. Brunelleschi's other works include the churches of Santa Maria degli Angeli and Santo Spirito and the Pazzi Chapel, all in Florence. His designs exhibit beauty of detail and elegance, as well as mastery of construction. See studies by A. Man-tonio (1970), F. D. Prager (1970), and Isabelle Hyman, ed. (1973).

Brunetière, Ferdinand (fērdēna' brunatyēr'), 1849-1906, French literary critic. An opponent of naturalism, he believed that literature should reflect a moral order. His vast learning is evident in the masterly *Manuel de l'histoire de la littérature française* (1897) and in the history of French literature from 1515, most of which was published (1904-17) posthumously from his notes. See study by Elton Hocking (1936).

Brunhild (brōōn'hīld), **Brunnehilde** (brun'ähild'a), or **Brynhild** (brīn'hīld), mighty female warrior of Germanic mythology and literature. In the Nibelungenlied, a medieval German epic poem (see under NIBELUNGEN), she is the warlike queen of Iceland, whom Siegfried defeats in combat and wins for his brother-in-law, Gunther. Hating Siegfried, Brunhild contrives his death at the hands of Gunther's henchman, Hagen. In the Icelandic version of the story, the VOLUNCASAGA, as Brynhild, she is the chief of the Valkyries. Sigurd (Siegfried) saves her from an enchanted stronghold, and the two fall in love. Later, Gudrun makes him forget Brynhild by means of a magic potion and takes him as her husband. Sigurd then wins Brynhild for Gunnar (Gunther). After bringing about Sigurd's death, Brynhild destroys herself on his funeral pyre. Wagner in his opera cycle *The Ring of the Nibelungs*, in which she is Brünnehilde, makes her a Valkyrie who defies her father, the god Wotan (see WODEN), to help the lov-

ers Siegmund and Sieglinde. Wotan places her sleeping on a mountaintop surrounded by fire, from which she is rescued by Siegfried. He is made by magic to forget her, and for his unfaithfulness she brings about his death, her own death on his pyre, and the burning of Valhalla.

Brunhilda (branhīld'a) or **Brunehaut** (brun'ō'), d. 613, Frankish queen, wife of SIGEBERT I of the East Frankish kingdom of Austrasia, daughter of Athanagild, the Visigothic king of Spain. After the murder (567) of her sister Galswintha, who was the wife of Sigebert's brother Chilperic I of the West Frankish kingdom of Neustria, and Chilperic's marriage to his mistress FREDEGUNDE, Brunhilda was the major instigator in the war against Neustria. The struggle continued between Brunhilda and Fredegunde after the death (575) of Sigebert and the murder (584) of Chilperic. Throughout the reigns of her son, Childbert II, and of two grandsons, Brunhilda was the actual ruler of Austrasia and of Burgundy, when by her design that country was united with Austrasia after the death (592) of King GUNTAM. She was endowed with the gifts of a great statesman, but her unscrupulousness in the execution of her plans earned her the fierce hatred of the nobles, whom she nonetheless controlled. She was finally betrayed by them to Fredegunde's son, CLOTAIRE II of Neustria. He put her to a horrible death.

Brunig Pass (bru'nīkh), 3,396 ft (1,035 m) high, ancient route between the Forest Cantons and the Bernese Alps, central Switzerland. It is crossed by a highway and a railroad.

Bruning, Heinrich (hīn'rīkh brun'īng), 1885-1970, German chancellor. Elected to the Reichstag in 1924, he was a leader of the Catholic Center party and a fiscal expert. In 1930 he was appointed chancellor of the Reich to put German finances in order. The Reichstag, which failed to support him, was dissolved (1930), and new elections were ordered. The new Reichstag was equally unable to produce a working majority, but Bruning continued to govern by decree. His drastic deflationary measures were very unpopular. In foreign policy he attempted to gain equality for Germany among the great powers and to persuade the former Allied powers to rescind German arms limitation. Bruning was forced to resign in 1932 by President Hindenburg, who appointed Franz von Papen as the new chancellor. Bruning left Germany in 1934 and from 1937 to 1952 was a member of the faculty at Harvard. In 1951 he resumed residence in Germany and became a professor of political science at the Univ. of Cologne. From 1955 until his death he was professor emeritus there.

Brunn: see BRNO, Czechoslovakia

Brunnehilde: see BRUNHILD

Brunner, Emil (āmēl brōōn'ēr), 1889-1966, Swiss Protestant theologian. The clearest and most systematic thinker of the school of dialectical theology, he was a professor of theology at the Univ. of Zürich (1924-53) and Christian Univ., Tokyo (1953-55). He several times visited and lectured in the United States. Like Karl BARTH he challenged the leaders of modern rational and liberal Christian theology and proclaimed a theology of revelation. The Christian faith, he maintained, arises from the encounter between man and God as He is revealed in the Bible. Brunner, in attempting later to leave a place for natural theology in his system, came into conflict with Barth over the question of natural revelation—Brunner refusing to separate theology completely from the general consciousness of man. His more important works include *Die Mystik und das Wort* (1924), *Der Mittler* (1927, tr. *The Mediator*, 1934), *Das Gebot und die Ordnungen* (1932, tr. *The Divine Imperative*, 1937), *Der Mensch in Widerspruch* (1937, tr. *Man in Revolt*, 1939), *Wahrheit als Begegnung* (1938, tr. *The Divine-Human Encounter*, 1943), and *Christianity and Civilization* (2 vol., 1948-49). See studies by P. K. Jewett (1954) and C. W. Kegley, ed. (1962), Cornelius Van Til, *The New Modernism* (1946).

Brunnich's murre: see MURRE

Bruno, Saint, 925-965, German churchman and statesman, brother and chief adviser of the first Holy Roman emperor, Otto I, whose chancellor he was from c.950. He was made (953) archbishop of Cologne and in the same year became duke of LOTHARINGIA. He organized the civil service, led the revival of learning, and reformed the monasteries according to the pattern laid down by the Cluniac reform. He is also known as St. Bruno the Great. Feast: Oct. 11.

Bruno, Saint, c.1030-1101, German monk, founder of the CARTHUSIANS, b. Cologne. He studied and

taught at Rheims. In 1084 he took six companions and founded a little monastery in the Alps, which became the mother house of the Carthusian order (see CHARTREUSE, GRANDE). In 1090, Pope Urban II, whom Bruno had taught, called him to Rome as a counselor. He died in Italy in retirement at a monastery he had founded. Feast: Oct. 6.

Bruno, Giordano (jōrda'nō brōō'nō), 1548-1600, Italian philosopher, b. Nola. He entered the Dominican order early in his youth but was accused of heresy and fled (c.1576) to take up a career of study and travel. He taught briefly at Toulouse, Paris, Oxford, and Wittenberg, but, personally restless and in constant opposition to the traditional schools, he found no permanent post. His major metaphysical works, *De la causa, principio, et uno* (1584, tr. *The Infinite in Giordano Bruno*, 1950) and *De l'infinito, universo et mondi* (1584), were published in France. Further works appeared in England and Germany. Bruno also wrote satire and poetry. In 1591 he returned to Venice, where he was tried for heresy by the Inquisition. After imprisonment at Rome, he was burned to death. Bruno challenged all dogmatism, including that of the Copernican cosmology, the main tenets of which, however, he upheld. He believed that our perception of the world is relative to the position in space and time from which we view it and that there are as many possible modes of viewing the world as there are possible positions. Therefore we cannot postulate absolute truth or any limit to the progress of knowledge. He pictured the world as composed of individual elements of being, governed by fixed laws of relationship. These elements, called monads, were ultimate and irreducible and were based on a pantheistic infinite principle, or cause, or Deity, manifest in us and in all the world. He was the first to state what has now become the cosmic theory. Bruno's influence on later philosophy, especially that of Spinoza and Leibniz, was profound. See D. W. Singer, *Giordano Bruno: His Life and Thought*, with annotated trans. of his "On the Infinite Universe and Worlds" (1950, repr. 1968), I. L. Horowitz, *The Renaissance Philosophy of Giordano Bruno* (1952), Ksenija Atanasijevic, *The Metaphysical and Geometrical Doctrine of Bruno* (tr. 1972), P. H. Michel, *The Cosmology of Giordano Bruno* (tr. 1973).

Bruno the Great, Saint: see BRUNO, SAINT (d. 965)

Brunschvicg, Léon (lāōn' brun'shvēk'), 1869-1944, French philosopher, b. Paris. From 1909 until his death he taught at the Sorbonne. Brunschvicg's philosophy, which has had considerable influence on modern European thought, is usually called critical idealism. He extended the teachings of Kant and Hegel and also drew upon Plato, Descartes, Spinoza, and Pascal. He regarded mathematics as the highest level yet reached by human thought, and maintained that judgment preceded all other activities of the mind. For Brunschvicg, God was whatever enables us to live the life of the spirit. His principal works are *La Modalité du jugement* (1897), *Les Étapes de la philosophie mathématique* (1912), *Le Progres de la conscience dans la philosophie occidentale* (2 vol., 1927), and *La Raison et la religion* (1939).

Brunswick, dukes of: see CHARLES WILLIAM FERDINAND, FERDINAND, FREDERICK WILLIAM

Brunswick, Ger. Braunschweig, former state, E. West Germany—W. East Germany, surrounded by the former Prussian provinces of Saxony, Hanover, and Westphalia. In 1946 it was included (except for several small territories placed in East Germany) in the West German state of Lower Saxony. Braunschweig (the former capital), Goslar, Helmstedt, and Wolfenbützel were the chief towns. The region of Braunschweig is situated on the North German plain and in the northern foothills of the Harz mts. The land is drained by the Leine and Oker rivers. The duchy of Braunschweig emerged (13th cent.) from the remnants of the domains of Henry the Lion, the duke of Saxony, to whom Emperor Frederick I had left only the territories of Braunschweig and Lüneburg (roughly modern Braunschweig and Hanover). The Guelphic house repeatedly divided into several branches, the main ones being Braunschweig-Wolfenbützel and Braunschweig-Lüneburg. In 1692 the duke of Braunschweig-Lüneburg became elector of Hanover. The Braunschweig-Wolfenbützel line (itself a cadet branch of the Lüneburg line since 1634) ruled over Braunschweig and had, among its dukes, the famous generals Charles William Ferdinand (1735-1806) and Frederick William (1771-1815). Frederick William recovered (1813) the duchy, which Napoleon I had incorporated (1807) in the

kingdom of Westphalia. The line became extinct in 1884, and Braunschweig was ruled by regents until 1913, when Ernest Augustus of Cumberland, grandson of King George V of Hanover, was made duke. A member of the North German Confederation from 1866 and of the German Empire from 1871, Braunschweig became a republic in 1918 and then joined the Weimar Republic.

Brunswick or Braunschweig (broun'shvik), city (1970 pop 223,700), Lower Saxony, E West Germany, on the Oker River. It is an industrial and commercial center, its manufactures include pianos, optical equipment, food products, and printed materials. Motor vehicles are assembled there. Reputedly founded c861 and chartered in the 12th cent., Braunschweig became (13th cent.) a prominent member of the Hanseatic League. In 1753 the residence of the dukes of Braunschweig was shifted there from Wolfenbüttel. In 1830 the duke was deposed and the city became a self-governing municipality. The city has a 12th-century Romanesque cathedral, which contains the tombs of Henry the Lion (d 1195) and Emperor Otto IV (d 1218), several Gothic churches, and a famous fountain representing Till Eulenspiegel, the legendary prankster. The city is the site of a technical university and an art museum. The philosopher and dramatist Gotthold Lessing (1729-81) is buried in Brunswick.

Brunswick, 1 City (1970 pop 19,585), seat of Glynn co., SE Ga., on St. Simon's Sound near the Atlantic coast, laid out 1771-72, inc 1856. It is a port of entry, and its sheltered harbor is used by coastal freighters and fishing and shrimp fleets. The gateway to offshore resort islands (see SEA ISLANDS), Brunswick has a large seafood-processing industry and a great variety of manufactures, based principally upon forest products (e.g., naval stores, turpentine, pine oil, pulp, paper, lumber). The city was named for George III of the house of Brunswick (Hanover). It has a junior college, and a large U.S. naval training station for radar operators is nearby. 2 Town (1970 pop 16,195), Cumberland co., S Maine, on the Androscoggin River and Casco Bay, in a resort area, settled as a trading post in 1628, inc 1738. It is a growing commercial center for S Maine, with plants that make footwear, clothing, and paint brushes. Bowdoin College (1794) and a U.S. naval air station are in Brunswick. Nathaniel Hawthorne and Henry Wadsworth Longfellow were students at Bowdoin College during the 1820s, and Longfellow later taught there. A house dating from 1808 was once his home. Hawthorne's first novel, *Fanshawe* (1828) was printed in the town. In 1851, Harriet Beecher Stowe, then a Bowdoin faculty wife, wrote *Uncle Tom's Cabin* there; her house is a national landmark. In the first half of the 19th cent. Brunswick enjoyed prosperity based on shipbuilding. After the Civil War, textiles became the chief industry. The town's textile mill closed in 1955. 3 City (1970 pop 15,852), Medina co., N Ohio, a suburb of Cleveland, settled 1815 as part of the Connecticut Western Reserve, inc 1960. A small farm community for many years, its population burgeoned with the housing boom after World War II. It has a tire retread plant and a factory that makes powdered metals for roof coatings.

Brusa, Turkey see BURSA

Brush, George de Forest, 1855-1941, American painter, b. Shelbyville, Tenn., studied in New York City at the National Academy of Design and with Gérôme in Paris. His early, scrupulously realistic paintings of Indians gave way, in later work, to Italianate figure compositions. Examples of his work are *Mother and Child* (Mus. of Fine Arts, Boston) and *Mother and Child* (Corcoran Gall.).

brush turkey: see MEGAPODE

brush wolf: see COYOTE

Brusilov, Aleksey Alekseyevich (alyk'syā'alyk'syā'evich brōōsē'laif), 1853-1926, Russian general. As a commander in World War I, he won victories in Galicia. In 1916 he organized the Russian offensive against Austria, which relieved the pressure on the Allies. The offensive, successful at first, cost Russia at least a million lives. Brusilov was briefly commander in chief under the Kerensky provisional government set up after the Russian Revolution (1917), and in 1920 he joined the Soviet army's staff in directing the war against Poland.

Brussels (brū'salz), Fr. *Bruxelles*, Flemish *Brussel*, city (1970 pop 161,080), capital of Belgium and of Brabant prov., central Belgium, on the Senne River and at the junction of the Charleroi-Brussels and Willebroek canals. The city is officially bilingual (French and Flemish). Brussels is an important commercial, financial, industrial, administrative, and cultural center and a major rail junction. Among its varied

manufactures are pharmaceuticals, electronics equipment, machine tools, rubber, processed food, and lace. It is the seat of the Council of Ministers and of the Commission of the European Communities, of the Economic and Social Committee of the European Economic Community, and of the North Atlantic Treaty Organization. Brussels was inhabited by the Romans and later (7th cent. A.D.) by the Franks; an oratory was founded there (c 600) by the bishop of Cambrai on an island in the Senne. The city was fortified (c 1100) and became (late 12th cent.) a commercial center on the trade route from Bruges and Ghent to the Rhineland. It developed into a center of the wool industry in the 13th cent. In the 15th cent. the arts flourished there and many stately mansions (some still standing) were built. Brussels became (1430) the seat of the dukes of Burgundy and later (1477) of the governors of the Spanish (after 1714, Austrian) Netherlands. In 1561 the Willebroek Canal, connecting Brussels with the Scheldt River, was completed. Renowned for the luxury and gaiety of its life, the city became (late 16th cent.) the center of the duke de Alba's grim reign of terror. The city suffered heavily in the wars fought in the Low Countries in the 16th to 18th cent. Brussels changed hands several times in the French Revolutionary Wars, later, during the Waterloo campaign (1815), it was Wellington's headquarters. From 1815 to 1830 it was, with The Hague, the alternate meeting place of the Netherlands parliament; in 1830 it became the capital of independent Belgium. Brussels was occupied by the Germans in World Wars I and II. The historical nucleus of the city, the medieval and Renaissance Grand' Place, a large square, is the site of the Gothic city hall (15th cent.), the Renaissance-style Maison du Roi or Broodhuis (13th cent.), meeting place of the old States-General of the Netherlands, and a number of rebuilt Gothic guildhalls. Near the Grand' Place is the famous fountain of a small boy urinating, *Manneken-Pis* (1619). The rest of Brussels is mostly modern, with contemporary style office buildings and broad boulevards that circle the city along its former ramparts. Other noteworthy buildings include the Collegiate Church of St. Michael and St. Gudule (founded in the 11th cent. and rebuilt in the 13th-15th cent.), which contains many noted Flemish paintings, the late-18th-century Palais de la Nation (parliament building), the Palais de Justice (late 19th cent.), and the Palais du Roi (royal palace). Brussels is the seat of a university (founded 1834), a noted conservatory, and academies of art, science, and medicine. There are also excellent art museums and a botanical garden. In 1958 Brussels was the site of a world's fair.

Brussels carpet: see CARPET

Brussels griffon, breed of sturdy TOY DOG developed in Belgium in the 18th and 19th cent. It stands about 8 in. (20.3 cm) high at the shoulder and weighs from 6 to 12 lb (2.7-5.5 kg). There are two varieties, the wirehaired and the smooth. The coat of the former is dense and wiry with a fringe of hair around the eyes, nose, cheeks, and chin. Its color is reddish brown, black, or a combination of these two. The smooth variety, called Brabançon, has a short, finely textured coat and may be reddish brown or black marked with reddish brown, but not solid black. Believed to have been produced by crossing affenpinschers with the pug, and possibly the toy spaniels, the Brussels griffon is popular as a companion and house pet. See DOG.

Brussels sprouts, variety (*gemmifera*) of CABBAGE producing small edible heads (sprouts) along the stem. It is cultivated like cabbage and was first developed in Belgium and France in the 18th cent. Brussels sprouts are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Capparales, family Cruciferae.

Brustein, Robert, 1927-, American educator and drama critic, b. New York City, grad. Columbia (Ph.D., 1957). Since 1966 he has been Dean of the Yale Drama School. An exacting critic of American theater, he brings great knowledge of the medium and moral vision to his work. He has written drama criticism for such periodicals as the *New Republic* and the *New York Review of Books*. His books include *The Theatre of Revolt* (1964), *Seasons of Discontent* (1965), and *Revolution as Theatre* (1971).

Brut, Brute (both brōōt), or **Brutus** (brōō'tas), a Trojan, legendary founder of the British race, descendant of Aeneas. His story appears in Nennius and in Geoffrey of Monmouth, and his name gives the titles to long poems by Wace and Layamon.

Bruttium (brū'tēam), ancient region, S Italy, roughly occupying the present CALABRIA, the "toe" of the

Italian peninsula. Bruttium faced Sicily across the Strait of Messina. Inhabited in the interior by the Brutii (whose chief town was Cosenza) and by the Lucani, it was settled (8th cent. B.C.) along the coast by Greek colonists SYBARIS and CROTONA were among the most prosperous towns of the colonies of MAGNA GRAECIA. The Romans conquered Bruttium in the 3d cent. B.C. RHEGIUM and VIBO VALENTIA were important Roman cities of Bruttium. The region passed to Byzantium after the fall of Rome and became known as Calabria.

Brutus (brōō'tas), in ancient Rome, a surname of the Junian gens Lucius Junius Brutus, fl. 510 B.C., was the founder of the Roman republic. He feigned idiocy to escape death at the hands of Lucius Tarquinius Superbus (see under TARQUIN). Roman historians tell how he led the Romans in expelling the Tarquins after the rape of Lucretia, how he became one of the first praetors (there were no consuls), and how he executed his sons for plotting a Tarquinian restoration. *Decimus Junius Brutus Gallaeus*, fl. 138 B.C., consul, consolidated the province of Farther Spain and stopped the encroaching Lusitanian tribesmen. Marcus Junius Brutus, d. c. 77 B.C., was a partisan of LEPIDUS (d. 77 B.C.) in the struggle with CATULUS (d. 60 B.C.); POMPEY had him murdered. His wife Servilia was the half sister of Cato the Younger. Their son was Marcus Junius Brutus, 85? B.C.-42 B.C. He and Caius Cassius Longinus (see under CASSIUS) were the principal assassins of Julius CAESAR. He had sided with Pompey, but after the battle of PHARSALA, Caesar pardoned him, made him governor of Cisalpine Gaul (46 B.C.), and, in 44 B.C., urban praetor. Nevertheless, he joined Cassius in the plot against Caesar. After the murder of Caesar, Brutus went east and, in the republican cause, joined Cassius and held Macedonia with him. Late in 42 B.C., Octavian (later AUGUSTUS) and Antony arrived, and a battle was fought at Philippi. When it went against the republicans, Brutus committed suicide. Brutus' wife Portia was the daughter of Cato the Younger. Brutus had a contemporary reputation as a Stoic philosopher, and his admirers have regarded him as a second Cato, driven reluctantly to commit murder in order to save the republic. His detractors, on the other hand, have considered his friendship with the self-seeking Cassius as indicative of his true character. A lesser member of the conspiracy was *Decimus Junius Brutus*, d. 43 B.C., a partisan of Caesar against Pompey and a favorite of the dictator. Caesar gave him command in Gaul and appointed him to be his heir in case of Octavian's death. After Caesar's death, Brutus refused to surrender Cisalpine Gaul. In 43 B.C., Antony, to whom the senate had assigned the province, besieged Brutus at Mutina (modern Modena). He tried to escape and was killed.

Brux: see MOST, Czechoslovakia

Bruyn, Barthel Bartholomaeus (bār'tal bār'tōlōmā'ōos broin), 1493-1555, German Renaissance painter, active in Cologne from 1515. Known especially for his portraits, which combine Northern realism with Italian-inspired monumentality and breadth, Bruyn also painted religious works such as the high altar at Essen Cathedral (1522). A portrait of a man and three religious works are in the Philadelphia Museum; many of his works are in Germany.

Bruyn, Cornelis de (kōrnā'lis də), 1652-c 1726, Dutch portrait painter and traveler. He painted for some years in Italy, where he was known, in Rome, as Adonis. Bruyn is remembered chiefly for the records of his extensive travels in Egypt, Persia, India, and other countries, illustrated with his own designs.

Bry, Théodore de (tēōdōr' də brē, brī), 1528-98, Flemish engraver and publisher, b. Liege. He spent most of his life in Frankfurt-am-Main. He visited London, where he executed a series of 12 plates, *The Procession of the Knights of the Garter*, and another of 34 plates, *The Funeral of Sir Philip Sidney*. The British geographer Hakluyt assisted him in obtaining materials for an illustrated collection of voyages and travels, *Collectiones peregrinationum* (1590-1634). Bry also published a series of portraits of famous men and illustrated the works of Thomas Hariot and J. J. Boissard. His son John Théodore de Bry, 1561-1623, assisted him and continued or completed several of his works.

Bryan, William Jennings, 1850-1925, American political leader, b. Salem, Ill. He practiced law at Jacksonville, Ill., and in 1887 he moved to Lincoln, Nebr. Bryan was a U.S. Representative from 1891 to 1895 but was defeated for the U.S. Senate in 1894. The next two years he spent as editor in chief of the Omaha *World-Herald*. Having ardently identified

himself with the FREE SILVER forces in Congress, he became their most popular speaker in a pre-convention drive to control the Democratic national convention at Chicago in 1896. At the convention his famous "Cross of Gold" speech so swayed the delegates that his nomination for President was assured, even though he was only 36 years old. The POPULIST PARTY also nominated him, but the conservative, gold Democrats ran John M. Palmer. The chief issue of the campaign was Bryan's proposal for free and unlimited coinage of silver, which he thought would remedy the economic ills then plaguing farmers and industrial workers. He lost the bitterly fought contest to Republican William MCKINLEY, whose campaign was skillfully managed by Marcus A. HANNA. Bryan controlled the Democratic convention in 1900 and saved the silver plank from removal by Eastern gold factions, but he agreed to put the campaign emphasis on anti-imperialism. Defeated again by McKinley, Bryan in 1901 started the *Commoner*, a widely read weekly that kept him in the public eye. His reduced party power in 1904 resulted in the compromise nomination of Alton B. PARKER, a conservative New Yorker, upon a platform dictated by Bryan Parker, however, disavowed the silver plank, and Bryan unwillingly acquiesced. Parker's overwhelming defeat by Theodore Roosevelt turned the Democrats again to Bryan, who in 1908 was nominated a third time Roosevelt's candidate, William H. TAFT, defeated him. The last Democratic convention in which Bryan played an important role was that of 1912, where his switch to Woodrow WILSON helped gain Wilson the nomination. Upon his election Wilson named Bryan Secretary of State. Bryan was influential in holding the Democrats together during the first 18 months of Wilson's administration, when unity was essential to the enactment of the President's reform legislation. He had little previous experience in foreign affairs but studied international questions conscientiously. With some 30 nations he negotiated treaties providing for investigation of all disputes. Antiwar leanings made Bryan more conciliatory than Wilson toward Germany. His Latin American policies, particularly those involving Nicaragua, caused a good deal of friction. Disliking the strong language of the second *Lusitania* note drafted by Wilson, he resigned on June 9, 1915, rather than sign it. However, he supported Wilson in the 1916 election and after war was declared. In the 1920 Democratic convention at San Francisco he fought in vain for a prohibition plank, and in 1924 at New York City he supported William G. McAdoo against Alfred E. Smith, but he was no longer the party's leader. In his later years Bryan, a Presbyterian, devoted himself to the defense of fundamentalism. He addressed legislatures urging measures against teaching evolution and appeared for the prosecution in the famous SCOPES TRIAL in Tennessee. Although he won the case in the trial court, Bryan's beliefs were subjected to severe ridicule in a searching examination by opposing counsel, Clarence DARROW. Five days after the trial, Bryan died in his sleep. Although the nation consistently rejected him for the presidency, it eventually adopted many of the reforms he urged—the income tax, popular election of Senators, woman suffrage, public knowledge of newspaper ownership, and prohibition. See the memoirs (1925, repr. 1971), begun by Bryan and finished by his widow, biographies by W. C. Williams (1936), P. W. Glad (1960), P. E. Coletta (3 vol., 1964–69), and L. W. Koenig (1971), studies by L. W. Levine (1965) and P. W. Glad, ed. (1968). His brother, Charles Wayland Bryan, 1867–1945, b. Salem, Ill., was for many years W. J. Bryan's political secretary and business agent. He was publisher and associate editor of the *Commoner*, mayor of Lincoln, Nebr., and governor of Nebraska.

Bryan, city (1970 pop. 33,719), seat of Brazos co., E central Texas, inc. 1872. Settled in the early 19th cent. in an area of large plantations, Bryan was long a cotton center. Farms producing alfalfa, truck crops, dairy goods, and poultry now occupy much of the land. Bryan's manufactures include aluminum products, furniture, building materials, agricultural chemicals, business forms, loose-leaf binders, shoe soles, electronic components, gravel extractions, and laboratory research equipment. The Research and Development Center of Texas A & M Univ. is in Bryan.

Bryansk (brěānsk'), city (1970 pop. 1,582,000), capital of Bryansk oblast, central European USSR, on the Desna River. The city is a transportation hub, and it forms an important industrial district with nearby Bezhitsa, with which it was incorporated in 1956.

There are ironworks and locomotive, machine, and cement plants. Bryansk is also a major distributing center for natural gas. Originally called Brinyu and later Debryansk, the city was first known in 1146. For a time it was the capital of a principality. Bryansk later passed to Lithuania and in the 16th cent. was annexed by Muscovy. It served as a fortress until the 19th cent.

Bryant, William Cullen, 1794–1878, American poet and newspaper editor, b. Cummington, Mass. The son of a learned and highly respected physician, Bryant was exposed to English poetry in his father's vast library. As a boy he became devoted to the New England countryside and was a keen observer of nature. In his early poems such as "Thanatopsis," "To a Waterfowl," "Inscription for the Entrance to a Wood," and "The Yellow Violet," all written before he was 21, he celebrated the majesty of nature in a style that was influenced by the English romantics but also reflected a personal simplicity and dignity. Admitted to the bar in 1815 after a year at Williams and private study, Bryant practiced law in Great Barrington, Mass., until 1825, when he went to New York City. By that time he was already known as a poet and critic. He became associate editor of the *New York Evening Post* in 1826, and from 1829 to his death he was part owner and editor in chief. An industrious and forthright editor of a highly literate paper, he was a defender of human rights and an advocate of free trade, abolition of slavery, and other reforms. He also holds an important place in literature as the earliest American theorist of poetry. In his *Lectures on Poetry* (delivered 1825, published 1884) and other critical essays he stressed the values of simplicity, original imagination, and morality. During his later career Bryant traveled widely, made many public speeches, and continued to write a few poems (e.g., "The Death of the Flowers," "To the Fringed Gentian," and "The Battle-Field"). His blank verse translation of the *Iliad* appeared in 1870, that of the *Odyssey* in 1872. See biographies by Parke Godwin (2 vol., 1883, repr. 1967), John Bigelow (1890, repr. 1970), H. H. Peckham (1950, repr. 1971), and C. H. Brown (1971).

Bryaxis (brīāk'sis), 4th cent. B.C., Greek sculptor. With Scopas, Leochares, and Timotheus, he worked on the sculptures of the Mausoleum at Halicarnassus (c. 350 B.C.). Among other works attributed to him were several statues, including one of Apollo in the grove of Daphne, near Antioch. In 1891 at Athens his signature was discovered on a base for a tripod. The base is sculptured in relief with figures of horsemen.

Bryce, James Bryce, Viscount, 1838–1922, British historian, statesman, and diplomat, b. Belfast. After his education at the Univ. of Glasgow and at Oxford, he practiced law in London for a short time before becoming professor of civil law at Oxford. He wrote monumental works in several fields, the first of these was his *History of the Holy Roman Empire* (1864), a book still widely used. He entered politics and became a leader of the Liberal party, occupying a variety of posts, including the presidency of the Board of Trade and the chief secretaryship of Ireland. His interest in sociology and philosophy is evident in the second of his great treatises, *The American Commonwealth* (1888), a classic that is still read and used. Bryce was ambassador to the United States from 1907 to 1913; he was one of the most popular ever to be in Washington, since his knowledge of Americans, as revealed in his writings, was profound. He was created a peer in 1914. His other major works were *Studies in History and Jurisprudence* (1901) and *Modern Democracies* (1921). See biography by H. A. L. Fisher (2 vol., 1927, repr. 1973), *Bryce's American Commonwealth* (1939, abr. ed. 1959), E. S. Ions, *James Bryce and American Democracy 1870–1922* (1968, repr. 1970).

Bryce Canyon National Park, 36,010 acres (14,573 hectares), SW Utah, est. 1924. The Pink Cliffs of the Paunsaugut Plateau, c. 2,000 ft (610 m) high, were formed by water, frost, and wind action on alternate strata of softer and harder limestone; the result is colorful and unique erosional forms, including miniature cities, cathedrals, and spires. The BASKET MAKERS were probably the first Indians to inhabit the area, many of their artifacts are exhibited.

Bryhtnoth see BYRHTNOTH

Brynhild see BRUNHILD

Bryn Mawr (brīn mār), uninc. village (1970 pop. 5,737), Montgomery co., SE Pa., a suburb of Philadelphia. It is the seat of Bryn Mawr College (for women), opened in 1885 by the Society of Friends. A junior college is also in Bryn Mawr.

Bryn Mawr College, at Bryn Mawr, Pa., undergraduate for women, graduate coeducational, opened 1885 by the Society of Friends, with a bequest from Joseph W. Taylor of Burlington, N.J. Modeled on a group curriculum plan at Johns Hopkins Univ., Bryn Mawr was one of the first women's colleges in the United States to offer graduate degrees. The library is especially noted for its collection of rare books and medieval incunabula. The school maintains a cooperative program with Haverford College and Swarthmore College.

bryony, see GOURD

Bryophyta, division of green land plants that includes the MOSSES (class Bryopsida), the LIVERWORTS (Marchantiopsida), and the hornworts (Anthocerotopsida). Bryophytes differ from ferns, cone-bearing plants, and flowering plants in that they lack a vascular system for the transportation of water. Since their cells must absorb water directly from the air or the ground, nearly all bryophytes grow in moist places. The conspicuous green plant body of a bryophyte is the haploid, or GAMETOPHYTE, generation of the plant life cycle. It consists of a small stem with leaflike projections, as in all mosses and most liverworts, or a leafless, flattened body (thallus), as in some liverworts and all hornworts. The plant is anchored by means of threadlike structures called rhizoids. The leaflike structures and the rhizoids lack the complex internal anatomy found in the leaves and roots of plants with vascular systems. The gametophyte reproduces sexually, giving rise to a diploid, or sporophyte, generation, the sporophyte is a structure that grows directly out of the gametophyte and is at least partly dependent on the gametophyte for nourishment (see ALTERNATION OF GENERATIONS). In mosses, germinating spores (haploid) produce a green filamentous structure on the surface, called a protonema, the first stage of the gametophyte. Erect branches arise out of the protonema. After the branches produce rhizoids, the protonema dies. Antheridia (or sperm-producing structures) and archegonia (egg-producing structures) are borne in clusters on the tips of the branches of the gametophytes; these structures are usually microscopic. The different sex organs may be in a single cluster, in separate clusters on the same branch, or on separate branches, depending on the species. In the hornworts, antheridia and archegonia are borne either on the same thallus or, in some species, on separate thalli, the antheridia are borne either singly or in small groups, and the archegonia are borne singly. In the liverworts, the gametophyte may be a thallus or may be leafy, the antheridia and archegonia are borne on special branches that arise from the leafy stem. In all bryophytes fertilization is dependent on water—usually a film of water or the splashing of raindrops—for the transfer of sperm to the egg. Chemical stimuli direct the motile flagellate sperm to the archegonium. The fertilized egg (zygote) grows out of the gametophyte, which is also the source of its nourishment. Typically the sporophyte is a slender stalk from 1 to 2 in. (2.5–5 cm) long, with a capsule at the tip, in some species it may be green and manufacture some of its own food. Cells within the capsule undergo meiosis (reduction division) to produce haploid spores. In many mosses the capsule has a lid, the operculum, which is shed, releasing spores. In other bryophytes the mature capsule ruptures in other ways to release spores. The liverworts and hornworts are generally inconspicuous plants, common liverworts include species of the genera *Porella* and *Marchantia*. *Anthoceros* is the most familiar temperate-zone hornwort genus. The mosses are generally divided into three orders, with the order Bryales most prominent. The bryophytes are important because they are pioneer plants and soil builders on surfaces lacking other vegetation. SPHAGNUM moss (order Sphagnales) has been economically important as packing material and as PEAT. It is now believed that the bryophytes descended from green algae by way of now extinct ancestors (the RHYNIOPHYTES).

Bryozoa (brī'azō'a), name of a phylum, in older systems of classification, that included the invertebrate animals now classified in the phyla ECTOPROCTA and ECTOPROCTA. The term bryozoan (or moss animal) is still commonly used for members of the Ectoprocta.

Bryson, Lyman, 1888–1959, American educator, b. Valentine, Nebr., grad. Univ. of Michigan (B.A. 1910, M.A. 1915). He taught there from 1913 to 1917. From 1918 to 1924 he was active in Red Cross work. He was appointed professor at Teachers College, Columbia, in 1935, and during World War II he

worked in the Office of War Information Consultant on public affairs for the Columbia Broadcasting System, he was instrumental in popularizing such forms of adult education as the public forum. Among his books are *Adult Education* (1936), *Which Way America?* (1939), *The New Prometheus* (1941), *Science and Freedom* (1946), and *The Next America* (1952).

Brythonic (brīthōn'ik), group of languages belonging to the Celtic subfamily of the Indo-European family of languages. See **CELTIC LANGUAGES**.

Bryusov, Valery Yakovlevich (vəlyě'rē ya'kav-lyivich brēō'saf), 1873–1924, Russian poet, novelist, and critic. He was the spearhead of the **SYMBOLIST** movement and wrote highly polished and esoteric verse celebrating sensual pleasures. Of his poetry, *Stephanos* (1906) is perhaps the best known. His two novels are *The Fiery Angel* (1903), concerning 16th-century German mystics, and *Altar of Victory* (1913). Bryusov was revered for his scholarly criticism. He also translated a number of works by French, American, and Armenian poets.

Brześć nad Bugiem: see **BREST**, U55R

Btu: see **BRITISH THERMAL UNIT**

Bubastis (byōōbās'tis), ancient city, NE Egypt, in the Nile delta, near the modern Az Zagaziq. Capital of Egypt in the XXII and XXIII dynasties, it began to decline after the second Persian conquest (343 B C). Bubastis was the center of the worship of the lion-headed (or cat-headed) goddess Bast. In the time of Herodotus it had an annual Saturnalia, an orgiastic festival honoring the god SATURN. As Pi-beseth, Bubastis is mentioned in Ezek. 30:17. Excavations were made in 1886, 1887, and 1906. Among the finds were a chapel of the VI dynasty (proving that the site dates back to the Old Kingdom) and a great temple built in the 8th cent. B C.

bubble chamber, device for detecting charged particles and other radiation by means of tracks of bubbles left in a chamber filled with liquid hydrogen or other liquefied gas. It was invented in 1952 by Donald Glaser. The bubble chamber consists essentially of a sealed chamber to be filled with a liquefied gas and constructed so that the pressure inside can be reduced quickly. The liquid is originally at a temperature just below its **BOILING POINT**. When the pressure is reduced, the boiling point becomes lowered so that it is less than the temperature of the liquid, leaving the liquid superheated. When a charged particle passes through this superheated liquid, it leaves a trail of tiny gas bubbles that can be illuminated and photographed. The track of a charged particle can be used to identify the particle and to analyze complex events in which it may be involved. If a magnetic field is present, the tracks of the particles will be curved, positively charged particles curving in one direction and negatively charged particles curving in the opposite direction. The degree of curvature depends on the mass, speed, and charge of the particle. Neutral particles can be detected indirectly by applying various **CONSERVATION LAWS** to the events recorded in the bubble chamber or by observing their decay into pairs of oppositely charged particles. The bubble chamber is particularly useful for studying high-energy particles that would pass through a **CLOUD CHAMBER** too quickly to leave a detailed enough track but which pass more slowly through the bubble chamber because of the greater density of the liquid. Liquid hydrogen and helium are commonly used in bubble chambers, with special equipment needed to maintain these gases in their liquid state (see **LOW TEMPERATURE PHYSICS**). For experiments requiring very dense liquids, a variety of organic compounds may be used. See **ELEMENTARY PARTICLES**, **PARTICLE ACCELERATOR**, **SPARK CHAMBER**.

Buber, Martin (bōō'bēr), 1878–1965, Jewish philosopher, b. Vienna. Educated at German universities, he was active in Zionist affairs, and he taught philosophy and religion at the University of Frankfurt-am-Main (1924–33). From 1938 to 1951 he held a professorship in the sociology of religion at the Hebrew University in Jerusalem. Greatly influenced by the mysticism of the **HASIDIM**, which he interpreted in many of his works, and by the Christian existentialism of Søren Kierkegaard, Buber evolved his own philosophy of religion, especially in his book *I and Thou* (1923, 2d ed. 1958). Conceiving the relations between God and man not as abstract and impersonal, but as an inspired and direct dialogue, Buber has also had a great impact on contemporary Christian thinkers. He worked to permeate political Zionism with ethical and spiritual values and strongly

advocated Arab-Israeli understanding. Among his writings are *Jewish Mysticism and the Legends of Baalshem* (1931), *Mamre* (tr. 1946, repr. 1970), *Moses* (1946), and *The Origin and Meaning of Hasidism* (2 vol., tr. 1960). See his *A Believing Humanism: My Testament, 1902–1965* (tr. 1967) and his *Meetings*, ed. by Maurice Friedman (1973), Aubrey Hodes, Martin Buber. *An Intimate Portrait* (1971).

bubonic plague: see **PLAGUE**

Buçaco: see **BUSSACO**, Portugal

Bucaramanga (bōō'karamang'ga), city (1968 est. pop. 250,000), capital of Santander dept., N central Colombia, in the eastern highlands of the Andes. A leading commercial city, Bucaramanga is in the center of Colombia's rich coffee and tobacco area. Founded in 1622, the city still preserves many monuments from the colonial period. Bucaramanga also has a huge sports arena.

Bucareli y Ursua, Antonio María (antō'nyō marē'a bōōkarā'lē ē ōrsōō'a), 1717–79, Spanish colonial administrator. He served in the Spanish army and as governor of Cuba before succeeding (1771) the marqués de Croix as viceroy of New Spain (Mexico). His administration, which lasted until his death, brought peace and prosperity, and Bucareli was widely popular. See B. E. Bobb, *The Viceregency of Antonio María Bucareli in New Spain, 1771–1779* (1962).

buccaneer: see **PIRACY**

Bucephalus (byōōsē'fələs), favorite horse of Alexander the Great. There are legends of his speed and the wondrous deeds that Alexander performed while riding him. He died in 326 B C after the battle on the Hydaspes River. The city Bucephala was founded there by Alexander in his honor.

Bucer or Butzer, Martin (byōō'sər, bōōt'sər), 1491–1551, German Protestant reformer. His original name was Kuhlhorn [cow's horn], of which Bucer is a Greek translation. At 14 years of age he joined the Dominican order, and he studied at Heidelberg, where he heard (1518) Luther in his public disputation on the doctrine of free will. Influenced by the reformist thought, Bucer left the order and accepted a pastorate at Landstuhl. In 1523 he entered upon the work of the Reformation in Strasbourg—preaching, writing, and helping to lay the foundations of the Protestant educational system. Many of his activities were devoted to attempts to reconcile the differences in regard to the Eucharist (see **LORD'S SUPPER**) which divided the Lutherans from the Swiss and 5 German reformers. Bucer's position was closer to that of the Swiss leader, Zwingli, and in this as in other doctrinal matters he is credited with a spiritual kinship to Calvin. In spite of his desire for unity, Bucer rejected the Augsburg Confession (see **CREED**), drawn up in 1530 in the hope of achieving religious peace. It was not until a personal meeting with Luther in 1536 that, in the Wittenberg Concord, Bucer was successful in securing agreement on the Eucharist among himself, Luther, and the reformers of S. Germany. When Bucer failed to subscribe to the Augsburg Interim (1548)—a compromise between Roman Catholics and Protestants proposed by Holy Roman Emperor Charles V—he found it expedient to accept the invitation of Cranmer and moved to England. There, highly honored, he taught at Cambridge and tutored Edward VI, at whose request he wrote *De regno Christi*. See Hastings Fells, *Martin Bucer* (1931), Constantin Hopf, *Martin Bucer and the English Reformation* (1946).

Buch, Christian Leopold, Freiherr von (krīs'tyan lā'ōpōlt frī'hēr fən bōōkh), 1774–1853, German geologist and paleontologist, graduate of the mining academy, Freiberg, Germany. One of the most influential geologists of his age, he is noted especially for his study of volcanism. In addition to a valuable geological map of Germany, his works include geological and paleontological studies of several areas in Europe.

Buchan, John, 1st Baron Tweedsmuir (būk'an, twēdz'myōōr), 1875–1940, Scottish author and statesman. Included among his works are a four-volume history (1921–22) of World War I, biographies of Julius Caesar (1932), Scott (1932), and Cromwell (1934), and adventure novels, including *The Thirty-nine Steps* (1915), *The Path of the King* (1921), and *Mountain Meadow* (1941). Elected to Parliament in 1927, he was appointed governor general of Canada in 1935 and was raised to the peerage. His administration of Canada was popular, and he promoted good relations with the United States. See his autobiography, *Pilgrim's Way* (1940), biography by Janet Smith (1965).

Buchanan, Franklin (byōōkā'nan), 1800–1874, American naval officer, b. Baltimore. Appointed a midshipman in 1815, Buchanan rose to be a commander in 1841. He was chief adviser to Secretary of the Navy George BANCROFT in planning the U S Naval Academy at Annapolis and was its first superintendent (1845–47). In Sept., 1861, he took the rank of captain in the Confederate navy, commanding the *Virginia* (formerly the *Merrimack*) against the Union blockading squadron in Hampton Roads (March 8, 1863). Wounded in that engagement, he took no part in the battle of the *MONITOR* and *MERRIMACK* the next day. Promoted to ranking officer in the Confederate navy, he was forced to surrender to David G. FARRAGUT in the battle of Mobile Bay (Aug. 5, 1864). See biography by C. L. Lewis (1929).

Buchanan, George, 1506–82, Scottish humanist. Educated at St. Andrews and Paris, he became (1536) tutor to James V's illegitimate son James Stuart (later earl of Murray). He was imprisoned (1539) for satirizing the Franciscans but escaped to the Continent. He taught at Bordeaux, where Montaigne was among his pupils, and at Coimbra and became highly regarded as a Latin poet. Returning to Scotland in 1560, Buchanan declared himself a Protestant. He became an opponent of Mary Queen of Scots after the murder (1567) of Lord Darnley and in 1571 published the *Detectio Mariae Reginae*, a bitter attack on the queen. From 1570 to 1578 he was tutor of the young king James VI (later James I of England). Buchanan's *Rerum Scotticarum historia* (1582) is a useful source for his time, but his most influential work was the *De jure regni apud Scotos* (1579), which argued that the king rules by popular will and for the general good. See biographies by P. Hulme Brown (1890) and Donald Macmillan (1906).

Buchanan, James, 1791–1868, 15th President of the United States (1857–61), b. near Mercersburg, Pa., grad. Dickinson College, 1809. He studied law at Lancaster, Pa., and in practice there gained a considerable reputation for his wide learning and brilliant oratory. Thus prepared, he went into state politics, then entered the national scene as Congressman (1821–31), and was later minister to Russia (1832–33) and Senator (1834–45). A Federalist early in his career, he was later a conservative mainstay of the Democratic party. He served (1845–49) as Secretary of State under President Polk and although Polk exercised a strong personal hand in foreign affairs, Buchanan ably seconded his efforts. The quarrel with Great Britain over Oregon was settled peacefully. That with Mexico, which followed the annexation of Texas and the failure of the mission of John SULLIVAN, led to the Mexican War and the Treaty of Guadalupe Hidalgo (1848). Under President Pierce, Buchanan served (1853–56) as minister to Great Britain. He collaborated with Pierre SOULÉ, minister to Spain, and John Y. MASON, minister to France, in drawing up the **OSTEND MANIFESTO** (1854), which was promptly repudiated by the U.S. Dept. of State. His open advocacy of purchasing Cuba (which would presumably have come into the Union as a slaveholding state) won him the hatred of the abolitionists, whom he in turn despised as impractical troublemakers. He was nominated as a Democratic candidate for the presidency in 1856, with John C. BRECKINRIDGE as his running mate, and he won the election over John C. Fremont, the candidate of the newly formed Republican party, and Millard Fillmore, candidate of the Whig and Know-Nothing parties. Buchanan did not have the majority of the popular vote, and his moderate views were disliked and mistrusted by extremists both in the North and in the South. Although he attempted to keep the "sacred balance" between proslavery and antislavery factions, in his administration the United States plunged toward the armed strife of the Civil War. Buchanan, who disapproved of slavery as morally wrong, felt that under the Constitution slavery had to be protected where it was established and that the inhabitants of a new territory should decide whether that territory should be free or slave. He angered many in the North by renewing efforts to purchase Cuba and by favoring the proslavery Leecompton Constitution in KANSAS. As his administration drew to a close, after the election (1860) of Abraham Lincoln to succeed him as President, Buchanan was faced with the secession of the Southern states. Very learned in constitutional law, he maintained that no state had the right to secede, but he held, on the other hand, that he had no power to coerce the erring states. He believed that the Federal government was authorized to use force only in protecting Federal property and in collecting customs. Therefore the question of the Federal forts in

Southern states became of great importance, particularly in South Carolina. Buchanan tried desperately to keep peace and promised South Carolina Congressmen that no hostile moves would be made as long as negotiations were in progress. When Major Robert Anderson moved U.S. troops from Fort Moultrie to Fort Sumter, there was an outcry from South Carolina that the President's promise had been broken. Buchanan defended Anderson but, reluctant to act, sent supplies to Fort Sumter only belatedly. He was battered with criticism from North and South, and shortly after his administration ended, gunfire at Fort Sumter precipitated the war. John Bassett Moore edited his works (12 vol., 1909–11). See biographies by G. T. Curtis (1883, repr. 1969) and P. S. Klein (1962).

Buchans, town (1971 pop. 2,338), central N.F., Canada, on Red Indian Lake. It has a large mine that yields lead, silver, zinc, and copper.

Bucharest (bōō'karēst, byōō'-), Rum. *București*, city (1969 est. pop. 1,526,000), capital and largest city of Rumania, SE Rumania, in Walachia, on the Dâmbovița River, a tributary of the Danube. It is Rumania's chief industrial and communications center. Machine-building, metalworking, engineering, oil refining, food processing, and the manufacture of textiles, chemicals, automobiles, and footwear are the chief industries. The city, probably founded in the late 14th cent., was first known as *Cetatea Dambovitei* [Dambovita citadel] and was a military fortress and commercial center astride the trade routes to Constantinople. It became (1459) a residence of the Walachian princes and changed its name (15th cent.) to Bucharest. In 1698 the city became the capital of Walachia under Constantine Brancovan, after the union (1859) of Walachia and Moldavia it was made (1861) the capital of Rumania. The Treaty of Bucharest (1913) stripped Bulgaria of its conquests in the Second Balkan War (see BALKAN WARS). During World War I, Bucharest was occupied (1916–18) by the Central Powers. After Rumania's surrender to the Allies (Aug., 1944) in World War II, German planes severely bombed the city. Soviet troops entered on Aug. 31, by which time a coalition of leftist parties had seized power. Bucharest served as headquarters of the Cominform from 1948 to 1956. Today it is a modern city, with fine parks, libraries, museums, and theaters, and is the seat of the patriarch of the Rumanian Orthodox Church. Landmarks include the Metropolitan Church (1649), the 17th-century St. George Church, the Radu Voda (1649) and Stavropoleos (1724–30) churches, and the Athe-naeum, devoted to art and music. Among the city's educational institutions are the old university (founded 1864), the new university (1935), an engineering college, and several academies and scientific institutes.

Buchenwald (bōō'khānvalt'), village, Erfurt dist., SW East Germany, in the Buchenwald forest, near Weimar. It was the site of a CONCENTRATION CAMP established by the National Socialist (Nazi) regime.

Buchman, Frank Nathan Daniel (bōōk'mān), 1878–1961, American evangelist, b. Pennsylvania, Pa. The international movement he founded has been variously called First Century Christian Fellowship, the Oxford Group, Moral Re-Armament (often known as MRA), and Buchmanism. Buchman was ordained in the Lutheran ministry in 1902. He was head (1905–15) of religious work at Pennsylvania State College. In 1921, Buchman, after five years of extension lecturing for the Hartford Theological Foundation, visited England. There he preached "world-changing through life-changing" among the students at Oxford, hence the name Oxford Group. In 1938 he instituted a campaign known as Moral Re-Armament. The work of evangelism for personal and national spiritual reconstruction is conducted informally and intimately in groups gathered in educational institutions, in church congregations, or in homes. "House parties" take the place of conferences, and religious experiences are shared in personal confessions. The evangelists stress absolute honesty, purity, love, and unselfishness. Moral Re-Armament has always been a controversial organization, resulting from its strident anti-Communist positions as well as from Buchman's open admiration of Adolf Hitler. See his speeches, *Remaking the World* (new and rev. ed. 1961), Peter Howard, *Frank Buchman's Secret* (1962), Gösta Ekman, *Experiment with God*, *Frank Buchman Reconsidered* (tr. 1972).

Buchner, Eduard (ä'dōōärt bōōkh'när), 1860–1917, German chemist. He taught at Berlin, Breslau, and, from 1911, at Würzburg. He discovered (1896) that alcoholic fermentation of sugars is caused by yeast enzymes and not by the yeast cells themselves. Zy-

mase, part of the enzyme system causing fermentation, was discovered by him in 1903. For this work he received the 1907 Nobel Prize in Chemistry.

Buchner, Georg (gä'örk bukh'när), 1813–37, German dramatist. He was a student of medicine and a political agitator. He died at the age of 24, leaving a powerful drama, *Danton's Death* (1835, tr. 1928), a fragmentary tragedy, *Wozzeck* (1850, tr. 1928), which Alban Berg adapted for his opera, and a comedy, *Leonce and Lena* (1850, tr. 1928). Buchner greatly admired the poet J. M. R. Lenz, whom he made the hero of a novella, *Lenz* (1838, tr. 1955), which he never completed. See collections of his plays ed. by Victor Price (tr. 1971) and Michael Hamburger (tr. 1972), studies by A. H. J. Knight (1951) and Ronald Hauser (1974).

Buck, Carl Darling, 1866–1955, American philologist, b. Orlando, Maine. Buck taught at the Univ. of Chicago from 1892 to 1933. His *Grammar of Oscan and Umbrian* (1904) is still authoritative.

Buck, Pearl (Sydenstricker), 1892–1973, American author, b. Hillsboro, W. Va., grad. Randolph-Macon Women's College, 1914. Pearl Buck was awarded the 1938 Nobel Prize in Literature. Until 1924 she lived principally in China, where she, her parents, and her first husband, John Lossing Buck, were missionaries. She is famous for her vivid, compassionate novels about life in China. *The Good Earth* (1931, Pulitzer Prize), considered her finest work, describes a Chinese peasant's rise to wealth and brilliantly conveys a sense of the daily life of ordinary Chinese people. Among her other novels of China are *East Wind West Wind* (1930), *Dragon Seed* (1942), *Peony* (1948), *Imperial Woman* (1956), and *Mandala* (1971). In 1935, Pearl Buck married her publisher Richard J. Walsh, president of the John Day Company. In 1949 she founded Welcome House, which provided care for the children of Asian women and American soldiers, the Pearl Buck Foundation of Philadelphia, to which she consigned most of her royalties, aids in the adoption of Amerasian children. During her lifetime Buck produced more than 85 books, including works for children, plays, biographies—such as those of her parents, *The Exile* (1936) and *Fighting Angel* (1936)—and many works of nonfiction, such as *China As I See It* (1970) and *The Kennedy Women* (1972). See her autobiography, *My Several Worlds* (1954), biography by T. F. Harris (2 vol., 1969–71).

Buckingham, George Nugent Temple Grenville, 1st marquess of: see GRENVILLE, GEORGE NUGENT TEMPLE, 1ST MARQUESS OF BUCKINGHAM

Buckingham, George Villiers, 1st duke of (vīl'yärz, bük'īng'am), 1592–1628, English courtier and royal favorite. He arrived (1614) at the English court as JAMES I was tiring of his favorite, Robert Carr, earl of Somerset. Villiers was made a gentleman of the bedchamber (1615) and, after Somerset's disgrace, rose rapidly, becoming earl of Buckingham (1617), marquess, (1618), and lord high admiral (1619). In 1620 he married Lady Katherine Manners, daughter of the Roman Catholic earl of Rutland. By this time Buckingham controlled dispensation of the king's patronage, which enabled him to grant lucrative monopolies to his relatives. In 1621, Parliament began to investigate abuses of these monopolies, but Buckingham prevented action against himself (though not against his friend Sir Francis Bacon) by joining in the condemnation of his relatives. Buckingham favored the proposed marriage of Prince Charles (later CHARLES I) with the Infanta Maria of Spain and in 1623 went with Charles to Madrid. There his arrogance contributed to the final breakdown of the long deadlocked marriage negotiations. Buckingham, now a duke, returned to England, advocating war with Spain, which made him the hero of Parliament. He lost that popularity rapidly by negotiating (1624) the marriage of Charles with another Catholic princess, Henrietta Maria, sister of Louis XIII of France. He was also blamed for the disastrous failure (Feb.–March, 1625) of an English expedition, under Graf von Mansfeld, to recover

the Palatinate for FREDERICK THE WINTER KING. Buckingham failed to supply it adequately. By this time Charles had become king, and Buckingham was more powerful than ever, a fact that enraged Parliament. After the complete failure (Oct., 1625) of an expedition against Cadiz, Buckingham was impeached (1626), and Charles dissolved Parliament to prevent his trial. The following year Buckingham himself led an expedition (another failure) to relieve the HUGUENOTS of La Rochelle, and Parliament delivered another remonstrance against him. The duke was at Portsmouth preparing another expedition for La Rochelle when he was killed by John Felton, a discontented naval officer. The romantic aspects of the duke's career figure largely in Alexander Dumas's historical novel, *The Three Musketeers*. See biographies by C. R. Cammell (1939) and Hugh Ross Williamson (1940).

Buckingham, George Villiers, 2d duke of, 1628–87, English courtier, son of the 1st duke. Brought up with the royal family and educated at Cambridge, he was a strong royalist in the English civil war. In 1648 he escaped to the Continent, where he became a privy councillor of the exiled CHARLES II. He accompanied Charles to Scotland in 1650 and fought at Worcester (1651), but later intrigues with Oliver Cromwell's government estranged him from Charles. In 1657, Buckingham returned to England and married Mary, the daughter of the Puritan general Thomas Fairfax of Cameron. He hoped thereby to recover his estates, which had been confiscated in 1651, but instead he was imprisoned until 1659. After the Restoration (1660) he regained the favor of Charles II and was one of the most powerful courtiers of the reign. Vain and ambitious, he was known for his recklessness, quarrelsome temper, and lack of principle. He was a member of the CABAL and a bitter rival of his fellow minister, the earl of ARLINGTON. He was furious when he was kept in ignorance of the provisions of the secret Treaty of Dover (1670) with Louis XIV. Attacked by the House of Commons for misusing public funds and conducting secret negotiations with France and by the House of Lords for his open liaison with the countess of Shrewsbury (whose husband he had killed in a duel in 1668), he was dismissed from office in 1674. He joined the enemies of the duke of York (later James II) and participated vigorously in the outcry against Roman Catholics in the furor over Titus Oates's Popish Plot (1678), although he had earlier been much in favor of religious tolerance. He did not vote for exclusion of the duke of York from succession to the throne, however, and in 1684 was restored to favor and retired from politics. Buckingham showed the good as well as the bad aspects of the Restoration courtier: he patronized science and literature, had refined tastes, wrote poetry, religious tracts, and plays, and dabbled in chemistry. He was producer and partial author of a celebrated satire on heroic drama, *The Rehearsal* (1671, ed. by Montague Summers, 1914). See biographies by R. P. T. Colfin (1931), H. W. Chapman (1949), and J. H. Wilson (1954).

Buckingham Palace (bük'īng'am), residence of British sovereigns from 1837, Westminster metropolitan borough, London, England, adjacent to St. James's Park. Built (1703) by the duke of Buckingham on the site of a mulberry grove, it was purchased (1761) by George III and was remodeled (1825) by John Nash, the eastern facade was added in 1847. The great ballroom was added in 1856, and in 1913 Sir Aston Webb designed a new front. The palace has nearly 600 rooms and contains a collection of paintings, including many royal portraits, by noted artists.

Buckinghamshire (bük'īng'amshīr), Buckingham, or Bucks, county (1971 pop. 586,211), central England. The county town is AYLESBURY. The Thames River forms the southern boundary of the county. In S Buckinghamshire are the chalky Chiltern Hills with their beech forests, furniture made from beech wood is the county's most notable manufacture. The area is mostly agricultural, barley, wheat, oats, and beans are the chief crops of the fertile Vale of Aylesbury in N Buckinghamshire. Cattle, pigs, sheep, and poultry are raised farther south. In ancient times Icknield Street and Watling Street crossed the county, which has extensive Roman and pre-Roman remains. Thomas Gray is buried at Stoke Poges, in the country churchyard that inspired his "Elegy." The poet John Milton had a cottage for a time at Chalfont St. Giles, and William Cowper spent many years at Olney. Also in Buckinghamshire are Hughenden Manor, home of the statesman Benjamin Disraeli, Chequers, a historic Tudor mansion and resi-

dence of British prime ministers since 1921, and Eton College, England's most famous public school. In 1974, Buckinghamshire was reorganized as a non-metropolitan county.

Buck Island Reef National Monument· see NATIONAL PARKS AND MONUMENTS (table)

Buckland, William, 1784–1856, English geologist. He was dean of Westminster from 1845. First to note in England the action of glacial ice on rocks, he did much to bring physical and natural science into high repute and was responsible for giving Oxford (where he was a student and later a fellow) an international name in science. He wrote *Reliquiae Diluvianae* (1823) and *Geology and Mineralogy Considered with Reference to Natural Theology* (1836). Francis T. Buckland, English surgeon and naturalist, was his son.

Buckle, Henry Thomas, 1821–62, English historian. Contemptuous of the historical writing of his day with its intense concern with politics, wars, and heroes, Buckle undertook the ambitious plan of writing a history of civilization, treating all men in their relation with each other and with the natural world around them. At the time of his early death he had completed only two volumes of his panoramic *History of Civilization in England* (1857–61, new ed. in 1 vol., 1904). Attempting to make history a genuine science, Buckle arrived at various "laws" of history by an inductive process. It is easy to point out that these "laws"—e.g., the law of climate, by which he demonstrated that only in Europe could men reach high levels of civilization—were to a large extent only rationalizations of his own progressive and liberal views. Yet the effect that the book had in shaping English liberal thought was immediate and huge. It profoundly influenced later scientific historians, and it helped to fasten attention on masses rather than individuals, on the wide levels of all life rather than politics, and on the interrelations of man and nature rather than man and morals. See G. R. St. Aubyn, *A Victorian Eminence: Life and Works of Henry Thomas Buckle* (1964).

Buckley, William F., Jr., 1925–, American editor, author, and lecturer, b. New York City, grad. Yale, 1946. Buckley is a popular, eloquent, and witty spokesman for the conservative point of view. Editor of *American Mercury* (1951–52), he founded the *National Review* in 1955. In 1965 he was an unsuccessful candidate for mayor of New York City. He has hosted the weekly television show "Firing Line" since 1966 and writes a syndicated newspaper column. His books include *God and Man at Yale* (1951), *The Unmaking of a Mayor* (1966), and *Four Reformists—A Guide for the Seventies* (1973). His experience as a delegate to the 29th session of the UN General Assembly is recounted in *United Nations Journal: A Delegate's Odyssey* (1974).

Bucknell University, at Lewisburg, Pa., coeducational, founded 1846 as the Univ. of Lewisburg. Its present name was adopted in 1886.

Buckner, Simon Bolivar, 1823–1914, Confederate general, b. Hart co., Ky., grad. West Point, 1844. In 1860, Buckner, a Louisville businessman, secured passage of a bill creating a large Kentucky militia and as inspector general trained it. Although he attempted to keep Kentucky neutral during the Civil War, when the legislature became strongly Unionist he took a commission as Confederate brigadier general (Sept., 1861). At FORT DONELSON (Feb., 1862) he surrendered to Grant and was taken prisoner but was soon exchanged and promoted to major general. He fought in Bragg's invasion of Kentucky (Oct., 1862), Mobile (Dec., 1862–63), and Chattanooga (Sept., 1863), and commanded the Dept. of East Tennessee (May–Aug., 1863) and Louisiana from 1864 to the end of the war. Later he was editor of the Louisville *Courier* and governor of Kentucky (1887–91). See biography by A. M. Stickles (1940).

Bucks, see BUCKINGHAMSHIRE

buckthorn, common name for some members of the Rhamnaceae, a family of woody shrubs, small trees, and climbing vines widely distributed throughout the world. The buckthorns (several species of the genus *Rhamnus*) and the jujube (*Zizyphus jujuba*) are cultivated for their ornamental foliage. The jujube was also used locally and exported for use in confectionery and as a flavoring, now largely replaced by artificial flavorings. The lotus of Tennyson's "Lotus-Eaters" is thought to have been the jujube. Other members of the family yield dyes and a limited amount of lumber, e.g., cogwood, a hardwood. Other American species of *Rhamnus* are the redberry, the Indian cherry, and, in California, *Rhamnus purshiana*, which yields the purgative cas-

cara sagrada. Buckthorn is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rhamnales.

buckwheat, common name for certain members of the Polygonaceae, a family of herbs and shrubs found chiefly in north temperate areas and having a characteristic pungent juice containing oxalic acid. Species native to the United States are most common in the West. The largest genus of the family, *Polygonum* (or *Persicaria*), contains the knotweeds and the smartweeds, found in many parts of the world. The common smartweed (*P. hydropiper*) is an annual sometimes called water pepper for its acrid quality. Several species of the dock genus (*Rumex*) are sorrels (the common name used also for the similarly acrid but unrelated *OXALIS*). The garden, or green, sorrel (*R. acetosa*) and the sheep, red, or field sorrel (*R. acetosella*) have long been used in Europe for salads and greens. Among the plants used as potherbs are the patience or spinach dock (*R. patens*) and the tanner's dock (*R. hymenosepalus*), the latter is the source of canaigre, a substance used for tanning. Economically the important members of the family are of the rhubarb genus (*Rheum*) and the buckwheat genus (*Fagopyrum*), both native to Asia. Most of the rhubarb cultivated for the edible thick, fleshy leafstalks is *R. rhaponticum*, called also pieplant and wine plant. Medicinal rhubarb is obtained from this and other species of the genus. The cultivated buckwheat (*F. esculentum*) has been grown in the Old World since the Middle Ages as a honey plant and for its characteristic three-cornered grain, which is utilized for poultry and stock feed. Buckwheat flour is used in the United States, Japan, and eastern Europe; the plant is sown as a cover crop and is a food staple. The genus *Eriogonum* includes the wild, or yellow, buckwheat (*E. allenii*), restricted to the Appalachian shale barrens, and many Western species, e.g., the desert trumpet (*E. inflatum*), a desert flower of arid plains and plateaus. The interesting genus *Koenigia* has only one species, but it is found in arctic regions, in the Himalayas, and in Tierra del Fuego. Buckwheat is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Polygonales, family Polygonaceae.

București: see BUCHAREST

Bucyrus (byōōs'ras), city (1970 pop. 13,111), seat of Crawford co., N. central Ohio, on the Sandusky River, in a farm area, settled 1818, inc. 1886. It is a trade and industrial center and has varied manufactures.

bud, in lower plants and animals, a protuberance from which a new organism or limb develops, in seed plants, a miniaturized twig bearing compressed rudimentary lateral stems (branches), leaves, or flowers, or all three, and protected in cold climates by overlapping bud scales. In warm climates buds grow all year, in temperate climates they grow in summer and remain dormant in the winter. The winter buds (particularly the larger terminal buds on twigs) of trees and shrubs are almost always so characteristic that they serve to identify the species. The "eyes" of a potato are undeveloped buds. See BUD DING, STEM.

Budaëus: see BUDÉ, GUILLAUME

Budapest (bōō'dapēst'), city (1970 pop. 1,940,212), capital of Hungary, N. central Hungary, on both banks of the Danube. The largest city of Hungary and its industrial, cultural, and transportation center, Budapest has varied manufactures, notably machinery, iron and steel, chemicals, pharmaceuticals, and textiles. Together with its industrial suburbs (particularly Csepel, Kispest, Pestszenterzsebet, Pestszentlőrinc, and Úpest, all joined to Budapest in 1949), the city accounts for about half of Hungary's total industrial production. Budapest was formed in 1873 by the union of Buda (Ger. *Ofen*) and Óbuda (Ger. *Alt-Ofen*) on the right bank of the Danube River with Pest on the left bank. Buda, situated among a series of hills, was traditionally the center of government buildings, palaces, and villas belonging to the landed gentry. Pest, a flat area, has long been a commercial and industrial center. The area around Budapest may have been settled as early as the Neolithic era. Aquincum, the Roman capital of Lower Pannonia, was near the modern Óbuda, and Pest developed around another Roman town. Both cities were destroyed by Mongols in 1241, but in the 13th cent. King Bela IV built a fortress (Buda) on a hill around there, and in the 14th cent. Emperor Sigismund built a palace for the Hungarian rulers. Buda became the capital of Hungary in 1361, reach-

ing its height as a cultural center under Matthias Corvinus. Pest fell to the Turks in 1526, Buda in 1541. When Charles V of Lorraine conquered them for the Hapsburgs in 1686, both Buda and Pest were in ruins. They were resettled, Buda with Germans, Pest with Serbs and Hungarians. Buda, a free royal town after 1703, had a renaissance under Maria Theresa, who built a royal palace and in 1777 transferred to Buda the university founded in 1635 by Peter Pazmany at Nagyszombat. The university was later moved (1784) to Pest. In the 19th cent. Pest flourished as an intellectual and commercial center, after the flood of 1838, it was rebuilt on modern lines. Buda became largely a residential sector. After the union of Buda and Pest in 1873, the united city grew rapidly as one of the two capitals of the Austro-Hungarian monarchy. The city was by 1917 Hungary's leading commercial center and was already ringed by industrial suburbs. Also a beautiful city, Budapest became famed for its literary, theatrical, and musical life and attracted tourists with its mineral springs, its historic buildings, and its parks. Especially notable is the large municipal park and the showplace of Margaret Island (Hung. *Margit Sziget*), in the Danube, where St. Margaret, daughter of Bela IV, had lived in a convent. With the collapse of the Austro-Hungarian monarchy (Oct., 1918), Hungary, under Count Michael Karolyi, was proclaimed an independent republic. Budapest became its capital. When Karolyi resigned (March, 1919) the Communists, led by Bela Kun, gained temporary control of the city and established a Soviet republic in Hungary, but his troops were defeated in July, and Budapest was occupied and looted by Rumanian forces in Nov., 1919. Budapest was seized by forces of Admiral Horthy, who in March, 1920, was proclaimed a regent of Hungary. In Oct., 1944, Horthy announced Hungary's withdrawal, as Germany's ally, from World War II, and that same month German troops occupied Budapest. After a 14-week siege the city fell (Feb., 1945) to Soviet troops. Almost 70% of Buda was destroyed or heavily damaged, including the royal palace and the Romanesque Coronation Church. When Hungary was proclaimed a republic (Jan., 1946), Budapest became its capital. In 1948 the Hungarian Communists, backed by Soviet troops, seized control of Hungary and proclaimed it (Aug., 1949) a people's republic. Budapest was the center of a popular uprising against the Hungarian Communist regime in Oct.–Nov., 1956 (see HUNGARY). Educational and cultural institutions in the city include Roland Eötvös Univ. (1635), the Hungarian Academy of Sciences, the National Széchenyi Library, the National Museum, the National Theater, and the State Opera House.

Budaun (bādoun'), town (1971 pop. 72,109), Uttar Pradesh state, N. India, on the Sot River. An administrative center, it trades in grain, cotton, sugarcane, and oilseed. It was an important military outpost under the Mogul empire. The Great Mosque (the Jama Masjid), which dates from 1223, is in Budaun.

Buddha (bōō'dā, bōō-) [Skt., =the enlightened One], usual title given to the founder of BUDDHISM. He is also called the Tathagata [he who has come thus], Bhagavat [the Lord], and Sugata [well-gone]. He probably lived from 563 to 483 B.C. The story of his life is overlaid with legend, the earliest written accounts dating 200 years after his death (see BUDDHIST LITERATURE). His given name was Siddhartha and his family name Gautama (or Gotama). He was born the son of a king of the Sakya clan of the Kshatriya, or warrior, caste (hence his later epithet Sakyamuni, "the sage of the Sakyas"), in the Himalayan foothills in what is now S. Nepal. It was predicted at his birth that he would become either a world ruler or a world teacher, therefore his father, King Suddhodana, who wished Siddhartha to succeed him as ruler, took great pains to shelter him from all misery and anything that might influence him toward the religious life. Siddhartha spent his youth in great luxury, married, and fathered a son. The scriptures relate that at the age of 29, wishing to see more of the world, he left the palace grounds in his chariot. He saw on successive excursions an old man, a sick man, a corpse, and a mendicant monk. From the first three of these sights he learned the inescapability of suffering and death, and in the serenity of the monk he saw his destiny. Forsaking his wife, Yashodhara, and his son, Rahula, he secretly left the palace and became a wandering ascetic. He first studied yogic meditation under the teachers Alara Kalama and Udraka Ramaputra, and after mastering their techniques, decided that these did not lead to the highest realization. He then undertook fasting and extreme austerities, but after six years gave these up fearing that they might cause his

death before he attained illumination. Taking moderate food, he seated himself under a pipal tree at Bodh Gaya and swore not to stir until he had attained the supreme enlightenment. On the night of the full moon, after overcoming the attacks and temptations of Mara, "the evil one," he reached enlightenment, becoming a Buddha at the age of 35. Leaving what was now the Bodhi Tree, or Tree of Enlightenment, he proceeded to the Deer Park at Sarnath, N of Benares (Varanasi), where he preached his first sermon to five ascetics who had been with him when he practiced austerities. They became his first disciples. The first sermon, known as "the setting into motion of the wheel of the dharma," contained the basic doctrines of the "four noble truths" and the "eightfold path." For the remainder of his life he traveled and taught in the Gangetic plain, instructing disciples and giving his teaching to all who came to him, regardless of caste or religion. He spent much of his time in monasteries donated to the sangha, or community of monks, by wealthy lay devotees. Tradition says that he died at the age of 80. He appointed no successor but on his deathbed told his disciples to maintain the sangha and achieve their own liberation by relying on his teaching. He was cremated and his relics divided among eight groups, who deposited them in shrines called stupas. See E. J. Thomas, *The Life of Buddha as Legend and History* (3d ed. 1952, repr. 1960), A. C. A. Foucher, *The Life of the Buddha* (1963, repr. 1972), Trevor Ling, *The Buddha* (1973).

Buddh Gaya, India see BODH GAYA

Buddhism (bōōd'izəm), religion and philosophy founded in India in the 6th to 5th cent. B.C. by Siddhartha Gautama, called the BUDDHA. One of the great Asian religions, it is divided into two main schools: the Theravada, or Hinayana, which predominates in Sri Lanka (formerly Ceylon), Burma, and SE Asia, and the Mahayana, found in China, Korea, and Japan. A third school, the Vajrayana, is confined largely to Tibet (see TIBETAN BUDDHISM). Buddhism has largely died out in the country of its origin, India, except for the presence there of many refugees from the Communist Chinese regime in Tibet.

Early Buddhism India during the lifetime of the Buddha was in a state of religious and cultural ferment. Sects, teachers, and wandering ascetics abounded, espousing many different philosophical views and religious practices. Some of these sects derived from the Brahmanical tradition (see HINDUISM), while others opposed the Vedic and Upanishadic ideas of that tradition. Buddhism, which did not recognize the efficacy of Vedic ritual and did not accept the caste system, and which spread its teachings in the dialects of the people, was by far the most successful of the heterodox or non-Vedic systems. Buddhist tradition tells how Siddhartha Gautama, born a prince and raised in luxury, renounced the world at the age of 29 to search for an ultimate solution to the problem of the suffering innate in the human condition. After six years of spiritual discipline he achieved the supreme enlightenment and spent the remaining 45 years of his life teaching and establishing a community of monks, the sangha, to continue his work. The basic doctrines of early Buddhism, which remain common to all Buddhism, include the "four noble truths": Existence is suffering (*dukkha*), suffering has a cause, namely craving and attachment (*trishna*), there is a cessation of suffering, which is NIRVANA, and there is a path to the cessation of suffering, the "eightfold path" of right views, right resolve, right speech, right action, right livelihood, right effort, right mindfulness, and right concentration. Buddhism characteristically describes reality in terms of process and relation rather than entity or substance. Experience is analyzed into five aggregates (*skandhas*). The first, form (*rupa*), refers to material existence, the following four, feelings (*vedana*), ideas (*samjna*), volitions (*samskara*), and consciousness (*vijnana*), refer to psychological processes. The central Buddhist teaching of non-self (*anatman*) asserts that in the five aggregates no independently existent, immutable self, or soul, can be found. All phenomena arise in interrelation and in dependence on causes and conditions and thus are subject to inevitable decay and perishing. The casual conditions are defined as a 12-membered chain called dependent origination (*pratityasamutpada*), its links are ignorance, predisposition, consciousness, name-form, the senses, contact, craving, grasping, becoming, birth, old age and death, whence again ignorance. With this distinctive view of cause and effect, Buddhism accepts the doctrine common to other Indian religions of samsara, or bondage in the repeating cycles of birth-and-death,

the momentum to rebirth being afforded by one's actions, both physical and mental (see KARMA). The release from this cycle of rebirth and suffering is the total transcendence called nirvana. The ideal of early Buddhism was the perfected saint, arahant or arhat, who had attained liberation by purifying himself of all defilements and desires. From the beginning, meditation and observance of moral precepts were the foundation of Buddhist practice. There are 10 major precepts for monks, of which laymen keep the first five. The ten are: no taking of life, no stealing, no unchaste acts, no false speaking, no drinking of intoxicants, no eating at improper times, no seeing of secular entertainments, no use of garlands, perfumes, and other adornments, no high and wide beds, and no receiving of money. The monastic order (sangha) is venerated along with the dharma, or religious teaching, and the Buddha as one of the "three jewels." Lay practices such as the worship of stupas (burial mounds containing relics) were probably present from earliest times, giving rise to later ritualistic and devotional practices. After the Buddha's death his teachings were transmitted at first by oral tradition and later written down in the 2d and 1st cent. B.C. (see BUDDHIST LITERATURE, PALI LITERATURE). Different sects arose probably very quickly, with varying views on a number of religious and philosophical issues, the latter concerning primarily the analyses of experience elaborated as the systems of ABHIDHARMA. Knowledge of early differences is limited, however, because the earliest extant written version of the scriptures is the Pali canon (1st cent. A.D.) of the Theravada school of Ceylon. Although Theravada [doctrine of the elders] is known to be only one of many early schools of Buddhism (traditionally numbered at 18), its beliefs are generally accepted as representative of early Buddhist doctrine as described above.

Mahayana Buddhism From other of the early schools of Buddhism developed the lines of thought that led toward the positions advocated by Mahayana [great vehicle] Buddhism, it gave itself this name in polemical writings to distinguish itself from what it called the Hinayana [lesser vehicle], Theravada, and related schools. Mahayana is identifiable as a definable movement through the appearance, beginning in the 1st cent. B.C., of a new class of literature, the Mahayana sutras. The main philosophical tenet of the Mahayana is that all things are empty, or devoid of self-nature (see SUNYATA). Its chief religious concept was that of the BODHISATTVA, who replaced the arahant as the ideal and was distinguished from him by his vow to postpone entry into nirvana (although meriting it) until all others may be similarly enlightened and saved. The state of bodhisattva was an actual goal of both lay and monastic Buddhists; it was also the name of a class of celestial beings who were worshiped along with the Buddha. The Mahayana developed doctrines of the eternal and absolute nature of the Buddha, of which the historical Buddha was regarded as a temporary manifestation. Teachings that consciousness is intrinsically pure developed into ideas of potential Buddhahood innate in all beings. The chief philosophical schools of Indian Mahayana were the MADHYAMIKA, founded by Nagarjuna (2d cent. A.D.), and the YOGACARA, founded by the brothers Asanga and Vasubandhu (4th cent. A.D.). In this later Indian period, authors in different schools wrote specialized treatises, Buddhist logic was systematized, and the practices of TANTRA came into prominence.

The Spread of Buddhism In the 3d cent. B.C. the Indian emperor ASOKA greatly strengthened Buddhism by his support and sent Buddhist missionaries as far afield as Syria. In the succeeding centuries, however, Buddhism began to decline in India itself, losing adherents to Hinduism. The destruction of Buddhist centers by the invasions of the White Huns (6th cent.) and the Muslims (11th cent.) were other major factors leading to the virtual extinction of Buddhism in India by the 13th cent. In the meantime, however, its beliefs had spread widely. Ceylon was converted to Buddhism in the 3d cent., and Buddhism has remained its national religion up to the present. The Indian Buddhist scholar Buddhaghosa (5th cent. A.D.) produced some of Theravada Buddhism's most important scholastic writings after taking up residence in Ceylon. Buddhism entered Tibet in the 7th cent. A.D. and flourished there, its main philosophy being that of the Madhyamika and its practices those of the Tantra. The religion reached SE Asia in the first five centuries A.D. Both Mahayana and Hinayana were established, but today the surviving forms are mostly Hinayana. About the 1st cent. A.D. Buddhism entered China along trade routes from central Asia. There followed a four-cen-

tury period of assimilation. In the 3d and 4th cent. Buddhist concepts were interpreted by analogy with native philosophy, mostly Taoism, but the work of the great translators KUMARAJIVA and HSIUAN TSANG established a basis for better understanding of Buddhist concepts. The 6th cent. saw the development of the great philosophical schools, each centering on a certain scripture and having a lineage of teachers. Two such schools, the T'ien-t'ai and the HUA YEN, made a synthesis of the widely varying scriptures and doctrines that had come to China from India and arranged them in hierarchical order. Branches of Madhyamika and Yogacara were also founded. The two great nonacademic sects were Ch'an Buddhism, or ZEN BUDDHISM, whose chief practice was sitting in meditation to achieve "sudden enlightenment," and PURE LAND BUDDHISM, which advocated repetition of the name of the Buddha Amitabha to attain rebirth in his paradise. Buddhism in China encountered opposition from Confucianism and Taoism and resistance from government threatened by the growing power of the sangha, which was tax-exempt. The great persecution by the emperor Wu-tsung in 845 dealt Chinese Buddhism a blow from which it never fully recovered. The only schools that retained vitality were Zen and Pure Land. These increasingly fused with one another and with the native religion, and after the decline of Buddhism in India, neo-Confucianism rose to intellectual and cultural dominance. From China and Korea, Buddhism was imported into Japan. Its schools, with the exception of the nationalistic Nichiren sect, established by Nichiren (1222-82), were those of Chinese Buddhism. The philosophical schools were transmitted first, and Buddhism until the 12th cent. was centered in the life of the nobility. Zen and Pure Land grew to become popular movements after the 13th cent. After World War II new sects arose in Japan such as the Soka Gakkai, a branch of Nichiren, and the Rissho koseikai. They have attracted a large following. See T. W. Rhys Davids, *Buddhism, Its History and Literature* (1896, 5th ed. 1962), H. C. Warren, *Buddhism in Translations* (1896, repr. 1963), C. N. E. Eliot, *Japanese Buddhism* (1935, repr. 1969), K. P. Landon, *Southeast Asia, Crossroads of Religion* (1949, repr. 1969), E. A. Burtt, ed., *The Teachings of the Compassionate Buddha* (1955, repr. 1963), Christmas Humphreys, *A Popular Dictionary of Buddhism* (1962), Edward Conze, *Buddhism: Its Essence and Development* (1953, repr. 1959) and *Buddhist Thought in India* (1962, repr. 1967), Erik Zürcher, *Buddhism* (1962), K. S. S. Ch'en, *Buddhism in China* (1964, repr. 1972), and *Buddhism: The Light of Asia* (1968), R. H. Robinson, *The Buddhist Religion* (1970), M. E. Spiro, *Buddhism and Society* (1970), D. A. Fox, *The Vagrant Lotus* (1973), Trevor Ling, *The Buddha* (1973).

Buddhist literature. During his lifetime the Buddha taught not in Vedic Sanskrit, which had become unintelligible to the people, but in his own NE Indian dialect; he also encouraged his monks to propagate his teachings in the vernacular. After his death, the Buddhist canon was formulated and transmitted by oral tradition, and it was written down in several versions in the 2d and 1st cent. B.C. Its main divisions, called *pitakas* [baskets], are the Vinaya or monastic rules, the Sutra (Pali Sutta) or discourses of the Buddha, and the ABHIDHARMA (Pali *Abhidhamma*) or scholastic metaphysics. Also included are the Jataka, stories about the previous births of the Buddha, many of which are non-Buddhist in origin. The only complete Indian version of the canon now extant is that of the Ceylonese Theravada school, in the Pali language, written 29-17 B.C. (see PALI LITERATURE). North Indian Buddhist texts were written in a type of Sanskrit influenced by the vernaculars. Mahayana Buddhism produced its own class of sutras, and all schools of Buddhism generated a considerable body of commentary and philosophy. The entire corpus of Buddhist writings was translated into Chinese over a period of a thousand years, beginning in the 1st cent. A.D. This was a collaborative effort of foreign and Chinese monks. Its most recent edition, the *Taisho Daizokyo* (1922-33), is in 45 volumes of some 1,000 pages of Chinese characters. Each translation of Buddhist texts into Tibetan was begun in the 7th cent. The final reduction of the canon was by the Buddhist historian Butson (1290-1364) and is in two sections, the *Kanjur* (translation of the Buddha's words) and the *Tanjur* (translation of treatises), consisting altogether of about 320 volumes of Tibetan script. The Tibetan translation is extremely literal, following the Sanskrit almost word for word and based on standardized Sanskrit Tibetan equivalences for Buddhist terms, thus it is

particularly useful for scholars. See Lucien Stryk, ed., *World of the Buddha* (1968)

budding, type of GRAFTING in which a plant bud is inserted under the bark of the stock (usually not more than a year old). It is best done when the bark will peel easily and the buds are mature, as in spring, late summer, or early autumn. Budding is a standard means of propagating roses and most fruit trees in nurseries.

buddleja or **buddleia**: see LOGANIA.

Budé, Guillaume (gēyōm' būdā'), 1467-1540, French humanist, b. Paris. Bude, known also by the Latinized form of his name, Budaeus, was a towering figure of the Renaissance. He was secretary to Louis XII, coming to power and prestige under Francis I. With the latter's patronage he established the study of classical works. Budé persuaded Francis to found the COLLÈGE DE FRANCE and to amass a library at Fontainebleau, which became the nucleus of the BIBLIOTHÈQUE NATIONALE. Acquainted with nearly all the great minds of his age, Bude carried on a voluminous correspondence in several languages. His treatises on language helped to establish the discipline of philology. He translated and commented on Greek literature.

Budenny, Semyon Mikhailovich (sīmyōn mēkhīr-lāvich būdyō'nē), 1883-1973, Russian marshal. A sergeant major in the czarist cavalry, he joined the Communist party in 1919, helped to organize the Soviet cavalry, and served in the Russian civil war (1918-20). He was made marshal in 1935. He commanded in the war against Finland (1940) and was made deputy commissar for defense. In World War II, he was placed in command of the southwest Soviet forces. His gross incompetence was a major cause of the severe defeat inflicted by the Germans on the Russian forces at Kiev in 1941. Budenny was shifted to the rear.

Budge, John Donald (Don Budge), 1915-, American tennis player, b. Oakland, Calif. He won the U.S. and British (Wimbledon) singles titles in 1937 and 1938. Budge also was a member of the 1937 U.S. team that won the Davis Cup from Great Britain. In 1938 he scored the grand slam of tennis by winning the U.S., Australian, French, and British singles championships (the first person to do so), in the same year Budge and Gene Mako won the U.S. doubles crown. He turned professional in 1939. He wrote *How Lawn Tennis is Played* (1937) and *On Tennis* (1939).

Budgell, Eustace (būj'əl), 1686-1737, English essayist. He was a cousin of Addison, through whose aid he obtained several public offices. Budgell contributed to the *Tatler*, the *Spectator*, and the *Guardian*, and wrote pamphlets against the ministry in the *Craftsman*. He lost a fortune in the collapse of the South Sea Bubble and later became involved in the losing end of a controversy over a sum of money left him by Matthew Tindal. He ended his life by committing suicide.

budgetigar (būj'arēgār') see PARAKEET

budget, inclusive list of proposed expenditures and expected receipts of any person, enterprise, or government for a definite period, usually one year. Budget estimates are based on the expenditures and receipts of a similar previous period, modified by any expected changes. The governmental budget originated during the late 18th cent. in England. In the United States an annual Federal budget was not required until the passage (1921) of the Budget and Accounting Act. According to the act, the President must annually submit to Congress a budget that shows the condition of the Treasury at the end of the last completed fiscal year, its estimated condition at the end of the current fiscal year, and its estimated condition at the end of the ensuing year if the budget proposals are carried out, the revenues and expenditures during the last completed year and the estimates thereof for the current year, recommendations of provisions for meeting the revenues and expenditures for the ensuing year, and any other data considered helpful to Congress in its determination of the government's financial policy. No other administrative officer is allowed to make revenue recommendations unless asked to do so by Congress. To help the President, the Budget and Accounting Act also created the Bureau of the Budget, under the Treasury Dept., to receive, compile, and criticize estimates of expenditure needs submitted by the various governmental services and to study in detail all government services and recommend to the President any changes that will increase their economy and efficiency. The bureau was transferred (1939) to the executive office of the President. The national budget is often regarded as one of the ma-

jor policy statements of a presidential administration. Since the beginning of World War II the national budget has grown immensely, mainly because of increased defense expenditures. Revenues, however, have not always kept pace with expenditures, often leading to annual budget deficits. Thus, the 1972 Federal budget, with a deficit of some \$22 billion, was about 25 times as large as the \$9.1 billion budget of 1940. Every state in the United States has some form of budget system. See B. F. Davie, *Modern Political Arithmetic* (1970), R. D. Lee, *Public Budgeting Systems* (1973).

Budweis: see ČESKÉ BUDĚJOVICE, Czechoslovakia

Buell, Abel (byūō'al), 1742-1822, American silversmith, engraver, and type founder, b. Killingworth, Conn. He engraved a number of maps, including maps of the Florida coast and a large wall map of the United States, the first produced in America after the Treaty of Paris in 1783. He experimented in type founding, cast the first font of native-made American type (1769), and later supplied type to Connecticut printers. He invented machinery for cutting and polishing precious stones, for coining money, and for a period produced copper coins for the state. He also established in 1795, at New Haven, one of the first cotton mills in the country (which soon failed), and was involved in many other projects. See biography by L. C. Wroth (rev. ed. 1958).

Buell, Don Carlos, 1818-98, Union general in the Civil War, b. near Marietta, Ohio, grad. West Point, 1841. Buell was appointed brigadier general of volunteers in the Civil War (May, 1861), helped organize the Army of the Potomac, and took command of the Dept. of Ohio (Nov., 1861). He supported Grant's move up the Tennessee and Cumberland rivers by marching on Bowling Green, and after the fall of Fort Donelson he pursued the retreating Confederates to Nashville. In March, 1862, he was placed under Gen. H. W. Halleck and made major general of the Army of the Ohio, in which service he played a decisive role at Shiloh (see SHILOH, BATTLE OF). He forced the Confederates to retreat from Kentucky at Perryville (Oct. 8, 1862) but was dilatory in his pursuit. He was replaced by Gen. W. S. Rosecrans; subsequently he was investigated by the military and discharged. See B. J. Fry, *The Army under Buell* (1886).

Buena Park (bwā'nā), city (1970 pop. 63,646), Orange co., S. Calif., inc. 1953. Food is processed, and tourism is an important industry. Knott's Berry Farm, a re-created gold rush town with many additional features and activities, a movieland wax museum, and a Japanese village surrounding a deer compound are there.

Buenaventura (bwā'nāvēntō'rā), city (1968 est. pop. 78,700), W. Colombia, a port on the Pacific Ocean. The city, located on Cascajal Island in Buenaventura Bay, is the shipping point for the tobacco and sugar of the Cauca valley. Coffee, platinum, gold, and hides are also exported. The original settlement was founded in 1545 and was burned by Indians at the end of the 16th cent. Buenaventura's importance as a port came with the opening of the Panama Canal and with the improvement of communications inland in the 1930s.

Buena Vista, battle of, military engagement in the Mexican War, fought Feb. 22-23, 1847. The battle site was just S. of Saltillo, Coahuila, in Mexico. Gen. Zachary Taylor, disobeying orders from the U.S. government, had advanced here. Gen. Santa Anna, having gathered a Mexican army, made a long march north and, attacking Taylor's forces furiously, outflanked them. The fighting was hard and at the end of the second day seemed a drawn battle, but on the night of Feb. 23 the Mexican army withdrew, leaving Taylor in control of the north of Mexico.

Buenos Aires (bwā'nās īrēs, -ār'ēs, Span. bwā'nōs īrās), city and federal district (1970 pop. 2,972,453, metropolitan area 8,352,900), the capital of Argentina, E. Argentina, on the Rio de la Plata. One of the largest cities of Latin America, Buenos Aires is Argentina's chief port and its financial, industrial, commercial, and social center. Located on the eastern edge of the Pampa, Argentina's most productive agricultural region, and linked with Uruguay, Paraguay, and Brazil by a great inland river system, the city is the distribution hub and trade outlet for a vast area. The historical importance of its port, one of the world's busiest, has led the citizens of Buenos Aires to call themselves *porteños* [people of the port]. Meat, meat products, grain, dairy products, hides, wool, flax, and linseed oil are the chief exports. Buenos Aires, the most heavily industrialized city of Argentina, is a major food-processing center, with huge meat-packing and refrigeration plants

and flour mills. Other leading industries are metalworking, automobile manufacturing, oil refining, printing and publishing, machine building, and the production of textiles, chemicals, paper, clothing, beverages, and tobacco products. Buenos Aires is a modern city of great wealth. In its center are the Plaza de Mayo, a square whose buildings include the Casa Rosada [pink house], office of the national president, and the *cabildo*, former meeting place of the colonial town council and now the home of a national museum. The Avenida de Mayo extends from the square to the Palace of the National Congress, c. 1 mi (1.6 km) away. Other famous streets are the Avenida 9 de Julio (commemorating the date of Argentina's independence from Spain, July 9, 1816), said to be the world's widest boulevard, Calle Florida, the main shopping thoroughfare, and the Avenida de Corrientes, which is the nucleus of the theater and nightclub district, often called the Broadway of Argentina. Buenos Aires also has many beautiful parks, including Palermo Park. The cathedral (completed 1804) is a well-known landmark containing the tomb of Jose de San Martin. Among the numerous educational, scientific, and cultural institutions are the Univ. of Buenos Aires (est. 1821), several private universities, the National Library, and the Teatro Colon, one of the world's most famous opera houses. *La Prensa* and *La Nacion* are daily newspapers famous throughout the Spanish-speaking world. The city has a modern subway system and is a railroad hub, as well as a center of inland seaborne traffic. Nearby, at Ezeiza, is a large international airport. Buenos Aires is inhabited mostly by people of Spanish and Italian extraction, but there are many residents of French, British, German, and Syrian background and some communities of Paraguayans and other Latin Americans. The city was first founded in 1536 by a Spanish royal gold-seeking expedition under Pedro de Mendoza. However, Indian attacks forced the settlers in 1539 to move Asuncion (now the capital of Paraguay), and in 1541 the old site was burned by Indians. A second and permanent settlement was planted in 1580 by Juan de Garay, who set out from Asuncion. Although Spain long neglected Buenos Aires in favor of the riches of Mexico and Peru, the settlement's growth was enhanced by the development of trade, much of it contraband. In 1617 the province of Buenos Aires, or Rio de la Plata, was separated from the administration of Asuncion and was given its own governor, a bishopric was established there in 1620. During the 17th cent. the city ceased to be endangered by Indians, but French, Portuguese, and Danish raids were frequent. Buenos Aires remained subordinate to the Spanish viceroy in Peru until 1776, when it became the capital of a newly created vice-royalty of the Rio de la Plata, including much of present-day Argentina, Uruguay, Paraguay, and Bolivia. Prosperity increased with the gradual removal of restrictions on trade, which formerly had to pass through Lima, Peru. The creation of an open port at Buenos Aires by Charles III of Spain, however, only made the *porteños* more desirous of separation from the Spanish Empire. In 1806, when Spain was allied with France during the Napoleonic Wars, British troops invaded Buenos Aires, their expulsion by the colonial militia without Spanish help further stimulated the drive for independence from Spain. Another British attack was repelled the following year. On May 25, 1810 (now celebrated as a national holiday), armed citizens of the *cabildo*, or town council, successfully demanded the resignation of the Spanish viceroy and established a provisional representative government. This action inaugurated the Latin American revolt against Spanish rule. Argentina's official independence (July 9, 1816) was followed by a long conflict between the unitarians, strongest in Buenos Aires prov., who advocated a centralized government dominated by the city of Buenos Aires, and the federalists, mostly from the interior provinces, who supported provincial autonomy and equality. In 1853 the city and province of Buenos Aires refused to participate in a constituent congress and seceded from Argentina. National political unity was finally achieved when Bartolomé Mitre became Argentina's president in 1862 and made Buenos Aires his capital. Bitterness between Buenos Aires and the province continued, however, until 1880, when the city was detached from the province and federalized. A new city, La Plata, was built as the provincial capital. Argentine railroad construction in the second half of the 19th cent. stimulated settlement and cultivation of the pampas, whose products Buenos Aires marketed and exported. The city's spectacular economic development attracted immigration from all over the world.

Buero Vallejo, Antonio (antō'nyō bwā'rō valyā'-hō), 1916-, Spanish playwright, b. Guadalajara His plays are highly serious with a strong moral vein, and they often depict characters consumed by despair and frustration His best-known works, of paramount importance to the revitalization of the contemporary Spanish theater, include *Historia de una escalera* [the story of a staircase] (1949), *La tejedora de sueños* [the weaver of dreams] (1952), and *El tragaluz* [the skylight] (1967) See study by M. T. Halsey (1973)

Buffalo, city (1970 pop. 462,768), seat of Erie co., W N.Y., on Lake Erie and the Niagara and Buffalo rivers, inc. 1832 With more than 37 mi (60 km) of waterfront, it is an important port of entry and one of the largest grain-distributing ports in the United States It is also a major railroad hub Buffalo is a great flour-milling center and has an enormous steel mill, many automobile plants, some of the world's largest electrochemical and electrometallurgical industries, and numerous other diversified manufactures In 1803 a village was laid out on the site of modern Buffalo by Joseph Ellicott for the Holland Land Company The village was almost destroyed by fire (1813) in the War of 1812 and recovered slowly until the opening of the Erie Canal in 1825 Transportation was a primary factor in the city's growth, and Buffalo became a major Great Lakes port Its educational institutions today include the State Univ. of New York at Buffalo, State Univ. College of Arts and Science at Buffalo, Canisius College, D'Youville College, and Rosary Hill College Of interest are the Albright-Knox Art Gallery, the Buffalo Museum of Science, the county historical museum, and the Buffalo Zoological Gardens Notable buildings include the city hall (1932), the Prudential Building (1895-96), designed by Louis Sullivan, and the Larkin office building, designed by Frank Lloyd Wright Buffalo has a music hall and a philharmonic orchestra A state mental hospital and a state institute for the study of malignant diseases are also located there The Peace Bridge (1927) connects Buffalo with Fort Erie, Canada The city also has an international airport Grover Cleveland became mayor of Buffalo in 1882 There in 1901, at the Pan-American Exposition, President McKinley was assassinated, Theodore Roosevelt took the presidential oath in Buffalo The McKinley monument and the Theodore Roosevelt Inaugural National Historic Site (see NATIONAL PARKS AND MONUMENTS, table) commemorate the two events Millard Fillmore's home was in Buffalo

buffalo, name commonly applied to the American BISON but correctly restricted to certain related African and Asian mammals of the cattle family The water buffalo, or Indian buffalo, *Bubalus bubalis*, is found in S Asia It is a large, extremely strong, dark gray animal, standing nearly 6 ft (180 cm) at the shoulder and weighing up to 2,000 lb (900 kg) Its widely spread horns curve out and back in a semicircle and may reach a length of 6 ft (180 cm) For many centuries it has been domesticated as a draft animal, but wild forms still exist in Borneo and herds descended from domesticated animals live in a wild state elsewhere Water buffalo live in swampy areas and near rivers, where they wallow in the mud Wild water buffalo are extremely fierce and have been known to kill fully grown tigers The domestic forms are somewhat more docile They are used throughout S Asia to pull plows and carts, they are of little importance as dairy animals, as their milk is scant Their diet consists chiefly of grass The anoa, *Anoa depressicornis*, also called dwarf buffalo or wood buffalo, is the smallest of the buffalo, standing only 40 in (100 cm) high at the shoulder, it is found in the Celebes Its slightly larger relative, the tamarou, *Anoa mindorensis*, is found in the Mindoro region of the Philippines Both are forest dwellers The large, fierce CAPE BUFFALO is found in Africa Buffalo are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae See D. A. Dary, *The Buffalo Book* (1974)

Buffalo Bill, 1846-1917, American plainsman, scout, and showman, b. near Davenport, Iowa His real name was William Frederick Cody His family moved (1854) to Kansas, and after the death of his father (1857) he set out to earn the family living, working for supply trains and a freighting company In 1859 he went to the Colorado gold fields, and in 1860 he rode briefly for the Pony Express His adventures on the Western frontier as an army scout and later as a buffalo hunter for railroad construction camps on the Great Plains were the basis for the

stories later told about him Ned BUNTLINE in 1872 persuaded him to appear on the stage, and, except for a brief period of scouting against the Sioux in 1876, he was from that time connected with show business In 1883 he organized Buffalo Bill's Wild West Show, and he toured with it throughout the United States and Europe for many years Wyoming granted him a stock ranch, on which the town of Cody was laid out He died in Denver and was buried on Lookout Mt. near Golden, Colo. The exploits attributed to him in the dime novels of Buntline and Prentice Ingraham are only slightly more imaginative than his own autobiography (1920) See R. J. Walsh and M. Salsbury, *The Making of Buffalo Bill* (1928), biographies by D. B. Russell (1960, repr. 1969) and John Burke (1973)

buffalo bur: see NIGHTSHADE

buffalo clover: see LUPINE

buffalo fish: see SUCKER

buffalo grass, low perennial grass (*Buchloe dactyloides*) of the plains regions, one of the most important range grasses Its dense matted growth is valuable also in erosion control Buffalo grass usually grows together with the grama, or mesquite, grasses (genus *Bouteloua*), especially blue grama and side-oats grama These taller grasses have the same distribution as buffalo grass, but none of them produce a continuous sod, as prairie grasses do Buffalo grass is classified in the division MAGNOLIOPHYTA, class Liliatae, order Cyperales, family Gramineae

Buffalo Grove, village (1970 pop. 11,799), Cook and Lake counties, NE Ill., inc. 1958

Buffalo National River, Ark. see NATIONAL PARKS AND MONUMENTS, table

buffer, solution that can keep its relative acidity or alkalinity constant, i.e., keep its pH constant, despite the addition of strong acids or strong bases Buffer solutions are frequently solutions that contain either a weak acid and one of its salts or a weak base and one of its salts Many acid-base reactions take place in living organisms However, for organisms to perform certain vital functions, the body fluids associated with these functions must maintain a constant pH For example, blood must maintain a pH of close to 7.4 in order to carry oxygen from the lungs to cells, blood is therefore a powerful buffer

Buffet, Bernard (bērnar' bufā'), 1928-, French painter Buffet's melancholy paintings are characterized by a prominent black line and grayed, muddled colors His subjects include still life, city scenes, and figures Buffet illustrated Jean Cocteau's *La Voix Humaine* (1957)

Buffon, Georges Louis Leclerc, comte de (zhōrhzh lwē lāklerk' kōntē dā bufōn'), 1707-88, French naturalist and author From 1739 he was keeper of the Jardin du Roi (later the Jardin des Plantes) in Paris and made it a center of research during the Enlightenment He devoted his life to his monumental *Histoire naturelle* (44 vol., 1749-1804), a popular and brilliantly written compendium of data on natural history interspersed with Buffon's own speculations and theories Of this work, the volumes *Histoire naturelle des animaux* and *Époques de la nature* are of special interest His famous *Discours sur le style* was delivered (1753) on his reception into the French Academy See study by O. E. Fellows and S. F. Miliken (1972)

Bug (bōōg, būg, Rus bōōk), Ukr *Buh*, river, c. 480 mi (770 km) long, rising in the Volhynian-Podolian hills, the Ukraine, W European USSR It flows N along the Polish-Ukrainian and Polish-Belorussian borders past Brest and then NW through Poland to join the Vistula River near Warsaw It is linked with the Dnepr by the Dnepr-Bug Canal via the Pina River and with the Niemen by the Augustov Canal via the Narva River The Bug is also known as the Western Bug

Bug or Southern Bug, Rus *Yuzhny Bug*, Ukr *Privdnyy Buh*, river, c. 490 mi (790 km) long, rising in the Volhynian-Podolian hills, the Ukraine, W European USSR The Bug, flowing generally SE into the Black Sea, is navigable for c. 100 mi (160 km) from Voznesensk to its mouth

bug, common name correctly applied to insects belonging to the order Hemiptera (suborder Heteroptera), although members of the order Homoptera (e.g., MEALYBUG) are sometimes referred to as bugs, as are other insects in general The true bugs (Hemipterans) have a characteristic pair of front wings that are partially thickened and darkened at the base and partially membranous at the apex Development is gradual through an incomplete METAMORPHOSIS with a number of nymphal stages before the reproductively mature adult stage is reached

Most bugs are terrestrial, but many are aquatic (e.g., various WATER BUGS) Although bugs vary greatly in size, color, and physical appearance, they all have piercing-sucking mouthparts in the form of a jointed beak Most species suck plant juices (e.g., the SQUASH BUG and CHINCH BUG), however, some suck the blood of other insects and spiders (e.g., the ASSASSIN BUG and BACKSWIMMER) Others, such as the BEDBUG, feed on man and other animals Many of these insects characteristically secrete defensive substances (e.g., the STINK BUG) The true bugs are classified in the phylum ARTHROPODA, class Insecta, order Hemiptera

Buganda, kingdom, E Africa see UGANDA

Bugayev, Boris Nikolayevich: see BELY, ANDREI

bugbane, any plant of the genus *Cimicifuga*, tall north-temperate perennials of the family Ranunculaceae (BUTTERCUP family) The white spirelike bloom has a rank odor that attracts flies, which pollinate the plant Common in woodlands of E North America is *C. racemosa*, black snakeroot, or black cohosh, sometimes gathered for its medicinal root Other plants are also called bugbane and snakeroot, most plants called cohosh belong to the related BANEERRY genus Bugbane is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales, family Ranunculaceae

Bugeaud de la Piconnerie, Thomas Robert (tōma' rôbēr' buzhō' dā la pēkōnārē'), 1784-1849, marshal of France, duc d'Isly, general and administrator in Algeria He served in the army of the French emperor Napoleon I until forced into retirement in 1815 Returning to public life after the July Revolution of 1830, he became a deputy Sent twice (1836, 1837) to Algeria on special missions, he returned again in 1841 to undertake the pacification of Algeria as governor general His celebrated victory at Isly (1844) finally broke the power of ABD AL-KADIR Bugeaud attempted to cooperate with the Arabs, to promote military colonization, and to encourage French settlers, but the unpopularity of his policies forced his resignation in 1847 He was named commander of the troops in Paris by Louis Philippe during the February Revolution of 1848 A strong general, he was feared in France as a potential dictator He wrote on colonial, military, and economic subjects

Bugenhagen, Johann (yō'han bōō'ganha'gan), 1485-1558, German Protestant reformer Born in Pomerania, he is sometimes called Dr. Pomeranus Bugenhagen, an ordained priest, was attracted to the reform movement by Martin Luther's writings In 1521 he went to Wittenberg and entered upon a lasting friendship with Luther and Melancthon He was a lecturer in the university and pastor of the principal church in Wittenberg Much of Bugenhagen's attention was devoted to ecclesiastical and educational organization in Brunswick, Hamburg, Lubeck, Pomerania, and Denmark Bugenhagen helped Luther in his translation of the Bible Of his own literary works the most important is *Interpretatio in librum Psalmorum* (1523) See biography by W. M. Ruccius (1924)

Bugge, Sophus (sō'fōōs bōō'ga), 1833-1907, Norwegian philologist He made a notable edition of the Old Norse runes, and his was the first critical edition (1881-89, 2d series 1896) of the poems of the *Eddas*

bugle, brass wind musical instrument consisting of a conical tube coiled once upon itself, capable of producing five or six harmonics It is usually in G or B flat Its principal use is for military and naval bugle

Bugle

calls, such as taps and reveille, and, in earlier times, for hunting calls In the early 19th cent., keyed bugles were made in order to obtain a complete scale

Buisson, Ferdinand Édouard (fērdīnān' ādwār' būsōn'), 1841-1932, French educator and Nobel Peace Prize winner He studied at the Sorbonne and later taught (1866-70) in Switzerland After 1870 he served in the French department of education, first as an inspector of schools and later as a director of

primary education, resigning in 1886 to become professor of pedagogy at the Sorbonne. He produced the *Dictionnaire de pedagogie* (1882-93). From 1902 to 1914 and again from 1919 to 1924, he was a member of the chamber of deputies and was also active in working for civil rights. An ardent pacifist, he attended (1867) the first congress of the International Peace League, with Ludwig Quidde of Germany he received the 1927 Nobel Peace Prize.

Buitenzorg: see BOGOR, Indonesia

Bujumbura (bōō'jəm'bōō'rā), city (1971 est. pop. 57,000), capital of Burundi and of Bujumbura prov., W Burundi, a port on Lake Tanganyika. Formerly known as Usumbura, it is Burundi's largest city and its administrative, communications, and economic center. Manufactures include food products, cement and other building materials, textiles, soap, shoes, and metal goods. Livestock and agricultural produce from the surrounding region are traded in the city. Bujumbura is Burundi's main port and ships most of the country's chief export, coffee, as well as cotton, skins, and tin ore, via Lake Tanganyika to Tanzania and Zaïre. The city attracts many tourists. A small village in the 19th cent., Bujumbura grew after it became (1899) a military post in German East Africa. After World War I it was made the administrative center of the Belgian Ruanda-Urundi League of Nations mandate. Its name was changed from Usumbura to Bujumbura when Burundi became independent in 1962. The Univ. of Bujumbura (1960) is there. The city has an international airport.

Bukavu (bōō'ka'vōō), city (1970 pop. 135,000), capital of Kivu region, E Zaïre, a port on Lake Kivu. It is an administrative, commercial, and transportation center. Hides and coffee are processed. The city was founded in 1901 and was formerly known as Costermansville. In 1967, Bukavu was briefly held by rebel Katangan and mercenary forces. A school of mines is there.

Bukhara (bakā'rā), city (1970 pop. 112,000), capital of Bukhara oblast, S Central Asian USSR, in Uzbekistan, in the Zeravshan River valley. The name is also spelled Bokhara. On the Shkhrud irrigation canal system, it is the center of a large cotton district and has textile mills as well as cotton-ginning industries and the largest karakul skin processing plant in the USSR. First mentioned in Chinese chronicles in the 5th cent. A.D., Bukhara is one of the oldest trade and cultural centers in central Asia. It came under the Arab caliphate in the 8th cent. and became a major center of Islamic learning. During the 9th and 10th cent. it was the capital of the Samanid state. From the 16th cent. to 1920 it was the capital of the khanate of Bukhara, which was ceded to Russia in 1868. From 1920 to 1924 it was the capital of the Bukhara People's Republic. There are many monuments, including the mausoleum of Ismail Samanid (892-907), the minaret of Kalyan (1127), the mosque of Magoki-Attari (12th cent.), the Ulugbek (1417-18) and Mir-Arab (1535-36) medreses (schools), and the medresah of Abdylazizkhana (1651-52). The population is mainly Uzbek, with Arab, Afghan, and Jewish minorities.

Bukhara, emirate of, former state, central Asia, in TURKISTAN, in the Amu Darya River basin. Part of ancient Sogdiana, it was ruled (A.D. 709-874) by the Umayyad Arabs and played an important role under the Samanid dynasties (875-1000). It was a trade, transport, and cultural center of the Islamic world. The Seljuk Turks ruled from 1004 to 1133, later, the realm was conquered by Jenghiz Khan (1220) and in the 14th cent. by Tamerlane. The Timurid dynasties ruled until the invasion of Uzbek tribes early in the 16th cent. The Bukhara emirate was founded by the Uzbek Khan Sheybani, who between 1500 and 1507 conquered the Timurid domains in Transoxania. In 1555, Abdullah Khan transferred the capital from Samarkand to Bukhara, from which the state then took its name. Internal feuds weakened Bukhara, it split into a number of principalities, and in 1740 it was conquered by Nadir Shah of Persia. In 1753, Bukhara again became an independent emirate but did not recover its supremacy over Khorezm, Merv, Badakhshan, Tashkent, and the Fergana Valley. Bukhara's population consisted principally of Uzbeks (who remained politically dominant), Sarts, and Tadzhiks. Defeated by Russia in 1866, the emirate became a Russian protectorate in 1868. In 1920, after a prolonged battle with Bolshevik forces, the last emir was driven into Afghanistan. The Bukhara People's Soviet Republic was established (1920) and lasted until 1924. In the same year it was proclaimed a socialist republic and was included in the USSR, a few months later, however, it was dismembered and divided between Uzbekistan, Tadzhikistan, and Turkmenistan.

Bukhari, al- (bōōk-harē'), d. 870, Arabic scholar and Muslim saint, b. Bukhara. He traveled widely over Muslim regions and made a tremendous collection of the traditional sayings of the Prophet. It is regarded in ISLAM as the commentary par excellence and the law book second only to the Koran. The tomb of al-Bukhari, near Samarkand, is a noted place of pilgrimage.

Bukharin, Nikolai Ivanovich (nyī'kalī' ēva'nāvīch bōōkhar'ēn), 1888-1938, Russian Communist leader and theoretician. A member of the Bolshevik wing of the Social Democratic party, he spent the years 1911-17 abroad and edited (1916) the revolutionary paper *Novy Mir* [new world] in New York City. He took part in the Bolshevik Revolution in Nov., 1917 (Oct., 1917, O.S.) in Russia and became a leader in the COMINTERN and editor of the Soviet newspaper *Pravda* [truth]. In 1924 he was made a full member of the politburo. As STALIN rose to power in the 1920s, Bukharin first allied with him against KAMENEV and ZINOVIEV. An advocate of slow agricultural collectivization and industrialization (the position of the so-called right opposition), Bukharin lost (1929) his major posts after that position was defeated by the Stalinist majority in the party. He edited *Izvestia* [news] briefly in 1934 but was dismissed. In 1938 he was tried publicly for treason and was executed. He wrote and translated many works on economics and political science. See study by S. F. Cohen (1973).

Bukidnon (bōōkīd'nōn, Sp. bōōkēdh'nōn), province (1970 pop. 400,307), N central Mindanao, the Philippines. Malaybalay is the provincial capital. Much of the area is on a high plateau (alt. c. 2,000 ft/610 m). With very fertile soil and a heavy, evenly distributed annual rainfall, Bukidnon is of great importance agriculturally. Intensely cultivated, it is the nation's major pineapple-producing region and a center of coffee production. A great variety of fruits is also grown, primarily for canning and export. The province has a high percentage of owner-operated farms. Central Mindanao Univ. is at Musuan.

Bukki (bū'kī) 1. Descendant of Aaron. 1 Chron. 6:5, 51, Ezra 7:4. 2. Danite. Num. 34:22.

Bukkiāh (bak'ā), Levite. 1 Chron. 25:4, 13.

Bukovina (bōō'kavē'nā), Rum. *Bucovina*, Ukr. *Bukovyna*, historic region of E Europe, in W Ukraine and NE Rumania. Traversed by the Carpathian Mts. and the upper Prut and Siret rivers, it is heavily forested. [Bukovina means "beechwood" in Rumanian] and produces timber, textiles, grain, and livestock. Petroleum and salt are produced in quantity, other mineral resources include manganese, iron, and copper. CHERNOVTSY, in the Ukraine, is the chief city. The population is largely Rumanian, in S Bukovina and Ukrainian in the north. Most of the region's Jews were exterminated during World War II. A part of the Roman province of Dacia, Bukovina was overrun after the 3d cent. A.D. by the Huns and other nomads. It later (10th-13th cent.) belonged to the Kievan state (see KIEV) and the Galich and Volhynia principalities. After the Mongols withdrew from Moldavia, Bukovina became (14th cent.) the nucleus of the Moldavian principality. The term *Bukovina* was first mentioned in an agreement concluded in 1412 between King Ladislaus II of Poland and Sigismund of Hungary. In 1514, Bukovina, then part of Moldavia, became tributary to the Turkish sultans. Ceded by the Ottoman Empire to Austria in 1775, it was at first a district of Galicia but in 1848 was made, as a titular duchy, a separate Austrian crownland. The region won limited autonomy from Austria, and in 1861 Chernovtsy was made the seat of a provincial diet. Bukovina became an object of irredentism when Rumania achieved full independence in 1878. The country's boundaries encompassed SUCEAVA, the ancient capital of Moldavia, but Chernovtsy was incorporated into Austria. With the dissolution of the Austrian empire in 1918, the Ukrainian national council at Chernovtsy voted the incorporation of N Bukovina into the West Ukrainian Democratic Republic. The Treaty of Saint-Germain (1919) gave only the southern part of Bukovina to Rumania, but the subsequent Treaty of Sevres awarded Rumania the entire region. Self-government was suppressed in N Bukovina. In a treaty of June, 1940, Rumania ceded the northern part of Bukovina (c. 2,140 sq mi/5,540 sq km) to the USSR, which incorporated it into the Ukrainian SSR. Although Rumanian troops reoccupied N Bukovina during World War II, the Rumanian peace treaty of 1947 confirmed Soviet possession of the area. N Bukovina now forms part of the Chernovtsy oblast in the Ukraine. The remainder of the area (c. 1,890 sq mi/4,895 sq km) forms one of the historical prov-

inces of Rumania and is part of the administrative region of Suceava.

Bulawayo (bōō'lāwā'yō), city (1970 est. pop. 70,000), SW Rhodesia. It is the second largest city of Rhodesia and an important industrial, commercial, and railroad center. Among its manufactures are textiles, motor vehicles, metal products, and cement. Founded by the British in 1893, it was the scene (1896) of a Matabele revolt. Nearby are the 18th-century African ruins of Khami.

bulb, thickened, fleshy plant bud, usually formed under the surface of the soil, which carries the plant over from one blooming season to another. It may have layers (as in the onion and hyacinth) or scales (as in some lilies)—both of which are highly modified leaves. Many popular outdoor and house plants, such as the tulip and the narcissus, are grown from bulbs, some of them out of their usual flowering season by forcing. Not true bulbs, but often so called, are the CORM of the crocus and the gladiolus, the TUBER of the dahlia and the potato, and the RHIZOME of certain irises. All such organs are specialized subterranean stems serving for food storage and asexual reproduction. See Marc Reynolds and W. L. Meachem, *The Complete Book of Garden Bulbs* (1972).

bulbul, antelope. See HAPTEBEEST.

bulbul (bōō'l'bōōl), bird, common name for members of the family Pycnonotidae, comprising 119 species of medium-sized, dull-colored passerine birds with short necks and wings, native to Africa and S Asia. Bulbuls are famed as songsters and are popular as cage birds in the Orient, frequently mentioned in Persian poetry, the word *bulbul* is often mistranslated "nightingale." Bulbuls range in size from 6 in. (15 cm) to about 12 in. (30.5 cm). They inhabit grasslands and shrubby countrysides, from sea level to 10,000 ft (3,050 m) in the Himalayas. A common Asian species, the red-whiskered bulbul, *Pycnonotus jocosus*, is easily tamed and is popular as a cage bird. Bulbuls feed mainly on fruits and berries and sometimes do crop damage. They build cleverly concealed cup-shaped grass nests, in which the female lays from three to five eggs per clutch. Both parents brood the nestlings. Bulbuls are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Pycnonotidae.

Bulfinch, Charles, 1763-1844, American architect, b. Boston. A member of the Boston board of selectmen in 1791, he was chosen chairman in 1799—an office equivalent to mayor and held by Bulfinch for 19 years. Of the numerous structures that he designed in Boston, most have long been demolished, including the Federal Street Theater (1794), the first theater in New England. His chief monumental works remain—the statehouse in Boston (1799), University Hall at Harvard (1815), and the Massachusetts General Hospital (1820). From 1818 to 1830 Bulfinch carried to completion the CAPITOL at Washington, of his own contributions there remains the west portico, with the terraces and steps forming the approach to it. In this work and in the Massachusetts statehouse he evolved an architectural composition that has been used for state capitols throughout the country. He designed a memorial column on Beacon Hill (1789), Massachusetts State Prison (1803), a number of Massachusetts courthouses, and Franklin Crescent in Boston (1793). The last was a long curved row of 16 residences, inspired by the continuous block of houses that had been erected by Robert Adam and others in England. The First Church of Christ in Lancaster, Mass. (1816-17), one of the few remaining churches of the many that he designed, is one of his finest works. While Bulfinch's works fall into the general category of "early American" architecture, they bear a distinctive stamp of his own. Their elegance, repose, and refinement of detail rank them among the best products of the nation's early years. See H. Kirker, *The Architecture of Charles Bulfinch* (1969).

Bulfinch, Thomas, 1796-1867, American author, b. Newton, Mass., grad. Harvard, 1814. He wrote a series of works popularizing fable and legend, including *The Age of Fables* (1855), *The Age of Chivalry* (1858), *Legends of Charlemagne* (1863), and *Oregon and Eldorado* (1866).

Bulgakov, Mikhail Afanasyevich (mēkhayēl' āfa-nā'syavīch bōōlgā'kaf), 1891-1940, Russian novelist and playwright. He wrote satirical stories (*The Devil*, 1925, tr. 1972) and comedies (*Zoe's Apartment*, 1926) and the long novel *The White Guard* (1925, tr. 1971), in which a Kievan family hostile to the revolution is sympathetically and realistically portrayed. He condensed and dramatized this as *The Days of the Turbines* (1926, tr. 1934). The novel *The Master*

and Margarita (tr 1967), which he worked on intermittently from 1928 until his death, is considered his most important work. His other novels include *The Heart of a Dog* (1925, tr 1968). Bulgakov was officially criticized for several of his works. See *The Early Plays of Mikhail Bulgakov 1926-1936* (tr 1972).

Bulganin, Nikolai Aleksandrovich (ny'kālī'alyik'sān'drāvich boōlgā'nīn), 1895-, Soviet military and political leader. He held posts in industrial management, was mayor of Moscow (1931-37) and chairman of the state bank (1937-41), and served on a military council in World War II. Made a marshal and a deputy premier in 1947, and a full member of the politburo in 1948, he was also defense minister under Joseph Stalin and later under Georgi Malenkov. With the support of Nikita KHRUSHCHEV, who was then head of the Communist party, Bulganin succeeded Malenkov as premier (Feb, 1955). In 1958, however, he was forced from office by Khrushchev, who took over the post of premier. Bulganin was accused of having sided with the "antiparty faction" that opposed Khrushchev in 1957, he was expelled from the central committee of the Communist party in Sept, 1958.

Bulgari: see BULGARS, EASTERN

Bulgaria (būlgā'ēə), republic (1973 est pop 8,620,000), 42,823 sq mi (110,912 sq km), SE Europe, on the E Balkan Peninsula. It is bounded by the Black Sea on the east, by Rumania on the north, by Yugoslavia on the west, by Greece on the south, and by European Turkey on the southeast. SOFIA is the capital. Other important cities are VARNA and BURGAS (the main Black Sea ports of Bulgaria), PLOVDIV and RUSE. Central Bulgaria is traversed from east to west by ranges of the Balkan Mts. A fertile plateau runs north of the Balkans to the Danube River, which forms most of the northern border. In the southwest is the Rhodope range, which includes Bulgaria's highest point, Musala mt (9,592 ft/2,923 m). The Thracian plain lies south of the Balkans and east of the Rhodope. The Danube, the Iskūr, the Maritsa, and the Struma are the principal rivers. Bulgaria's mineral resources include brown coal (lignite), bauxite, iron ore, lead, zinc, and oil and natural gas. There are many mineral springs. Traditionally an agricultural country, Bulgaria has been considerably industrialized since World War II. The leading industries are engineering, metallurgy, and the production of chemicals and fertilizers. Agriculture, however, remains the chief occupation, the principal crops are wheat, corn, barley, and sugar beets. Grapes and other fruit, as well as roses, are grown, and much stock is raised. Most of the land was collectivized by 1958. The chief exports are foodstuffs and attar of roses, manufactured goods and fuels are the leading imports. The population consists chiefly of Bulgars (85%) and Turks (8%), with small minorities of Macedonians and Gypsies. About 27% belong to the Orthodox Eastern Church, and 7% are Muslims. In 1953 the Bulgarian patriarchate was reestablished, it had been disestablished in 1946. Institutions of higher education include the universities of Sofia, Plovdiv, and Varna. Ancient Thrace and Moesia, which modern Bulgaria occupies, were settled (6th cent AD) by Slavic tribes. In 679-80, Bulgar tribes from the banks of the Volga (see BULGARS, EASTERN) crossed the Danube, subjugated the Slavs, and settled permanently in the territory of Bulgaria. The language and culture remained Slavic, and by the 9th cent the Bulgars had fully merged with the Slavs. The first Bulgarian empire (681-1018), established by Khan Asparuh, or Isperikh (ruled 680-701), and his successor, Terrel (ruled 701-718), soon emerged as a significant Balkan power and a threat to Byzantium. In 809 the khan Krum (ruled 803-814) captured Sofia from the Byzantines, defeated (811) Emperor Nicephorus I, besieged Constantinople, and withdrew only after obtaining yearly tribute. In the 9th cent Bulgaria became the arena of political

and cultural rivalry between Constantinople and Rome. In 865, BORIS I adopted Christianity, and in 870 Constantinople recognized the independence of the Bulgarian church. Bulgaria received Byzantine culture through the Slavic literary language developed by St Cyril and St Methodius in Moravia and brought to the Balkans by their disciples. The first Bulgarian empire reached its height under SIMEON I (893-927), who took the title of czar. After his death the country was rent by the heresy of the BOGOMILS. In the 10th cent Bulgaria crumbled under the attacks of a reinvigorated Byzantium, and in 1018 it was annexed by Emperor BASIL II. Byzantine domination was weakened by the invasions of the PECHENEGS and CUMANS and by internal disorders at Constantinople. The second Bulgarian empire (1186-1396) rose in 1186 when Ivan Asen (Ivan I) was crowned czar at TRNOVO. His son, Kaloyan, crowned in 1204 with the approval of the pope, defeated (1205) Emperor Baldwin I of Constantinople. The height of Bulgar power was reached under Ivan II (Ivan Asen), whose rule (1218-1241) extended over nearly the whole Balkan Peninsula except Greece. His successors could not maintain his empire. In 1330, Macedonian Bulgaria was conquered by Serbia. After the battles of KOSOVO (1389) and NIKOPOL (1396) Bulgaria was absorbed into the Ottoman Empire. Turkish rule was often oppressive, and rebellions were frequent. By recognizing the authority of the Orthodox Eastern Church in Constantinople over all Christians in their empire, the Turks undermined the basis of Bulgarian culture. A determined effort was made to destroy Bulgarian Christianity and the Bulgarian language. The role of the Phanariots (see PHANAR) was particularly resented. Although the administration (1864-69) of MIDHAT PASHA made Bulgaria briefly a model province, by then Bulgarian nationalism was strong. The Mount Athos monastery had continued to use Bulgarian, there, in 1762, a monk had written a history, the first modern literary work in Bulgarian. Bulgarian schools were allowed to open in 1835. In 1870 the Bulgarian Church was reestablished. In 1876 a rebellion, led by Stefan STAMBULOV, broke out. The subsequent Turkish reprisals (famous as the "Bulgarian atrocities") provided a reason for the Russians to liberate (1877-78) their neighbors (see RUSSO-TURKISH WARS). The Treaty of San Stefano created a large autonomous Bulgaria within the Ottoman Empire—a Bulgaria that Russia expected to dominate. In order to avert the expansion of Russian influence in the Balkans, a European congress was called to revise the treaty (see BERLIN, CONGRESS OF). By the new terms Bulgaria was reduced to the territory between the Danube and the Balkans, while present-day S Bulgaria—then called Eastern RUMELIA—became a separate autonomous province, and Macedonia remained under direct Turkish rule. ALEXANDER (Alexander of Battenberg), first prince of Bulgaria, annexed (1885) Eastern RUMELIA and repulsed a consequent Serbian attack. His successor, Prince FERDINAND of Saxe-Coburg-Gotha, profiting from the revolution of the Young Turks in the Ottoman Empire in 1908, proclaimed Bulgaria independent with himself as czar. Bulgaria was victorious against Turkey in the first (1911-12) of the BALKAN WARS, but claims to Macedonia involved it in the Second Balkan War with its former allies Greece and Serbia, and it was soon defeated. By the Treaty of Bucharest (1913), Bulgaria lost S DOBRUJA and a large part of Macedonia. The Macedonian issue was largely responsible for the entry in 1915 of Bulgaria into World War I on the side of Germany and Austria-Hungary. There was much domestic opposition to the war, and when Bulgaria's military position crumbled, Ferdinand fled and BORIS III succeeded (1918). In the peace (see NEUILLY, TREATY OF) Bulgaria was forced to pay reparations and lost its outlet to the Aegean Sea to Greece and some territory to Yugoslavia, S Dobruja was confirmed in Rumanian possession. The Agrarian party cabinet established (1919) by STAMBULSKI held power until overthrown (1923) in a bloody coup. An era of political confusion ensued, dominated by the violent activities of an irredentist Macedonian terrorist group. The world economic crisis of 1929 had a disastrous impact on impoverished Bulgaria as markets for agricultural exports shrunk. In 1934, Kimon Georgiev became premier with the help of the army and ended constitutional government, but he was ousted in 1935 by Boris III, who established his personal dictatorship. Bulgaria saw in an alliance with Germany in World War II an opportunity to satisfy its territorial claims. In 1940, Germany forced Rumania to restore to Bulgaria S Dobruja. In 1941, Bulgaria occupied parts of Yugoslavia and Greece (including Macedonia), and declared war on Great

Britain and the United States—but not the Soviet Union, because the populace was pro-Russian. The child SIMEON II succeeded when Boris died mysteriously (1943). In 1944 the Soviet Union declared war on Bulgaria, and Soviet troops entered the country (September). Pro-Allied political forces (Communists, Agrarians, and the pro-Soviet army officers), headed by Georgiev, seized power immediately. Bulgaria declared war on Germany, and an armistice with the USSR followed (October). After a short period of coalition rule, the Communists succeeded in taking over the government. The monarchy was abolished, and in 1946 Bulgaria was proclaimed a republic with Georgi DIMITROV as premier. The peace treaty with the Allies (1947) allowed Bulgaria to keep S Dobruja, but no gains were made in Macedonia. Dimitrov proceeded to eliminate possible opponents. The Agrarian leader Nikola Petrov was executed (1947). A new constitution was enacted, and Bulgaria became a one-party state. Industry was nationalized and farms collectivized. Bulgaria closely followed the Soviet Union in its domestic and foreign policies, after the expulsion of Yugoslavia from the Cominform in 1948, Bulgaria sided with the USSR. Dimitrov's successor, Vulko Chervenkov, massively purged the Communist party (1950). In 1951-52, Bulgaria deported to Turkey some 160,000 citizens of Turkish origin. Relations with Greece and Turkey improved somewhat after 1954. Bulgaria joined (1949) the Council for Economic Mutual Assistance and in 1955 became a member of the Warsaw Treaty Organization and the United Nations. In the mid-1950s the government loosened its grip somewhat. Stalinists fell from power and purge victims were rehabilitated (posthumously in some cases). In 1965 army officers and party officials unsuccessfully attempted a coup. Bulgaria aided the USSR in the invasion of Czechoslovakia in 1968. A new constitution was adopted in 1971. It provided for a unicameral national assembly to be elected every five years. The assembly elects a council of state and the cabinet of ministers. But actual power resides in the Communist party, which heads the Fatherland Front, a grouping of organizations that support the regime. See W S Monroe, *Bulgaria and Her People* (1914), Steven Runciman, *A History of the First Bulgarian Empire* (1930), L A D Dellin, ed., *Bulgaria* (1957), Mercia MacDermott, *A History of Bulgaria, 1393-1885* (1962), J F Brown, *Bulgaria under Communist Rule* (1970), Ferdinand Schevill, *A History of the Balkan Peninsula* (1922, repr 1971).

Bulgarian languages, member of the South Slavic group of the Slavic subfamily of the Indo-European family of languages (see SLAVIC LANGUAGES). Bulgarian is the native tongue of more than eight million people, most of whom live in Bulgaria, where it is the official language. It is also spoken to some extent in bordering and nearby countries. Although the Bulgars were originally a Turkic-speaking people from Asia, they merged with the Slavic tribes whom they conquered in the 7th cent AD in the territory of present-day Bulgaria and took over their Slavic language. Old Bulgarian is an alternate name for the literary and liturgical language of the 9th to 11th cent AD that is usually called Old Church Slavonic (see CHURCH SLAVONIC). From Old Church Slavonic, in Bulgaria, a later local form known as Bulgarian Church Slavonic evolved, which was current from the 12th to 15th cent. The Turkish conquest of Bulgaria in 1396 seriously hampered the development of the Bulgarian language for several centuries. After the Bulgarians threw off the Turkish yoke in 1878, a modern literary language based on the vernacular came into its own. Modern Bulgarian, which is generally said to date from the 16th cent, borrowed many words from Greek and Turkish during the period of Turkish domination, more recently it has borrowed words from Russian, French, and German. The Bulgarian language lacks definite rules for stress, therefore, the accent of every word must be learned individually. Unlike most other Slavic tongues, Bulgarian has a definite article. This is in the form of a suffix joined to the noun. Another difference between Bulgarian and most other Slavic languages is that Bulgarian has almost completely dropped the numerous case forms of the noun. It uses position and prepositions (like English) to indicate grammatical relationships in a sentence instead of cases (like Russian). Despite these differences, Bulgarian closely resembles the other Slavic languages, especially with regard to grammar. A modified form of the Cyrillic alphabet is used for writing Bulgarian. See S B Bernshtein, *Short Grammatical Sketch of the Bulgarian Language* (tr 1952), H I Aronson, *Bulgarian Inflectional Morphophonology* (1968).

Bulgarian literature. For early ecclesiastical writings, see OLD CHURCH SLAVONIC. Modern Bulgarian literature stems from the work of Father Paisi, who in 1762 began his history of the Slav Bulgarians, in an effort to inspire national feeling and to stimulate the use of the Bulgarian language. There was not at that time even a single printing press in Bulgaria. His imitators continued the effort to make Bulgarian a literary language, but the period of struggle for political and ecclesiastical independence (1840-75) saw the real beginnings of a national literature in the work of the poets Sava Rakovski (1821-67) and Petko Rachev Slaveykov (1827-95), the story writer Lyuben Karavelov (1837-79), the dramatist Vasil Drumev (1841-1901), and the great national poet Khristo BOTEV, who died fighting the Turks. Ivan VAZOV was the first professional man of letters, writing plays, novels, poetry, and short stories. After Bulgaria's liberation from Turkish rule (1876), the literature of the country became less revolutionary. A group of regional writers of the late 19th cent. included Todor Genchov Vlaykov (1865-1943), Georgi P. Stamatov (1869-1942), Anton Strashimirov (1872-1937), the satirist Stoyan Mikhaylovski (1856-1927), and Aleko Konstantinov (1863-97), whose humorous *Bay-Ganyu* is one of the most popular of Bulgarian novels. The poet Pencho Slaveykov (1866-1912), a son of P. R. Slaveykov, led in introducing other European literatures and literary trends into Bulgaria, his *Song of Blood* (1911-13) is an epic of the struggle against the Turks. Others of his period were the symbolist poet Peyo K. Yavorov (1878-1914), the poet and dramatist Petko Y. Todorov (1879-1916), and the story writer Elin Pelin (1878-1949). Bulgaria's losses in the Balkan Wars and World War I gave rise to a poetry whose chief quality was mysticism. Among the poets of this period are the symbolist Nikolay Liliyev, Dora Gabe and Elisaveta Bagryans, and Dimcho Debelyanov (1887-1916). The prose writers of the early 20th cent. include the novelists of peasant life Jordan Iovkov (1884-1938) and Dobri Nemirov (1882-1945), and the psychological novelist Georgi Raichev. After 1945, the writers most admired include the poets Khristo Smymenski (1898-1923), Khristo Radevski, and Nikola Vaptsarov (1909-42), and the prose writers Lyudmil Stoyanov, Georgi Karaslavov, and Dimiter Dimov, author of the popular novel *Tobacco*. Recent Bulgarian literature has undergone Soviet influence. Although there was a relaxation of the pressure to conform to SOCIALIST REALISM after Stalin's death (1953), controls were reintroduced in 1957. See Vivian Pinto, *Bulgarian Prose and Poetry* (1957), Clarence Manning and Roman Smal-Stocki, *The History of Modern Bulgarian Literature* (1960), C. A. Moser, *A History of Bulgarian Literature* (1972).

Bulgarian, Faddey Venediktovich (fadyā' vīnyā-dyēkt'ovich böölga'rēn), 1789-1859, Russian journalist and novelist, b. Poland. Bulgarian's original name was Tadeusz Bulharyn. In 1825 he and Nicholas Grech founded the influential conservative daily *Northern Bee*, in which he inveighed against liberal writers, notably Pushkin. He wrote several historical novels, including *Ivan Vyzhigin* (1830, tr. 1831).

Bulgars, Eastern, Turkic-speaking people, who possessed a powerful state (10th-14th cent.) at the confluence of the Volga and the Kama, E. European Russia. The Bulgars appeared on the Middle Volga by the 8th cent. and became known as the Eastern, Volga, or Kama Bulgars. Another branch of the same people moved west into present Bulgaria and merged with the Slavs. The Eastern Bulgars accepted Islam in the 10th cent. From the 10th to the 12th cent. the Bulgar state was at the height of its power. Its chief city, the Great Bulgar, was a prosperous trade center. Destroyed by the Mongols in 1237, the state flourished again until it was conquered by Tamerlane in 1361. It finally disappeared after its capture by the grand duke of Moscow in 1431. The modern Tatars and Chuvash may be descended from the Eastern Bulgars. The Great Bulgar and the Bulgars themselves are sometimes called Bulgari or Bolgari.

Bulge, Battle of the see BATTLE OF THE BULGE

Bull, Olaf (ō'laf bööl), 1883-1933, Norwegian lyric poet. The son of a successful writer, Bull began his career as a journalist. His poetic brilliance was revealed by the publication of his collection *Digte* [poems] (1909). He is noted for a style characterized by flawlessness of form and the use of daring imagery. Among his other major collections is *Metope* (1927).

Bull, Ole Bornemann (ō'la böör'nāman), 1810-80, Norwegian violinist. After his debut in Paris (1832) he toured in Europe and in the United States, play-

ing mainly his own compositions and Norwegian folk music. He founded a theater for national drama at Bergen (1849), and in 1852 he attempted to found a Norwegian settlement in Pennsylvania. See biography by Mortimer Smith (1943, repr. 1973).

bull [Lat. *bullo*=leaden seal], apostolic letter containing some important pronouncement of the pope. The papal bull is more solemn than the papal brief or ENCICLICAL. The letter, traditionally sealed with lead, but in special circumstances with silver or gold, begins with the name of the pope and his title as *servus servorum Dei* [servant of the servants of God]. Today only the consistorial bull, the most solemn of all papal pronouncements, carries the leaden seal, all other bulls and lesser documents have a red ink seal. Famous bulls include *Clericis laicos* (1296) and *Unam sanctam* (1302) issued by Boniface VIII in his struggle with Philip IV of France, the Bull of Demarcation (1493) by Alexander VI, *Exsurge Domine* (1520) by Leo X against Martin Luther, *Unigenitus* (1713) by Clement XI, against Jansenism, *Dominus ac Redemptor* (1773) by Clement XIV, suppressing the Jesuits, *Quanta cura* (1864) by Pius IX, introducing the *Syllabus errorum*, *Pastor aeternus* (1871) by Pius IX, on papal infallibility, and *Munificentissimus Deus* (1950) by Pius XII, defining the dogma of the Assumption of the Virgin Mary. Pope John XXIII issued a consistorial bull, *Humanae Salutis* in 1961 to convoke the 21st ecumenical council. The papal bull is used to proclaim the canonization of a saint. A bullarium is a collection of papal bulls, the most famous bullaria are the Roman Bullarium (1733-62) and the Turin Bullarium (1857-85).

Bull, The, English name for TAURUS, a CONSTELLATION. **bullbaiting**, 17th-century amusement, particularly popular in England, in which trained dogs (bull-dogs) attacked a tethered bull. Bullbaiting, along with bullrunning (in which the bull was run down and killed by humans), bearbaiting, cockfighting, and dogfighting, was prohibited in Great Britain by an act of Parliament in 1835.

bull bat: see GOATSUCKER

bulldog, breed of thick-set NONSPORTING DOG developed in the British Isles many centuries ago. It stands from 13 to 15 in (33-38.1 cm) high at the shoulder and weighs from 40 to 50 lb (18.1-22.7 kg). Its short, straight, flat-lying coat is a glossy brindle, white, red, or fawn in color. The low-slung body, broad chest, large skull, and undershot jaw of the bulldog give it an appearance of stubbornness and defiance, two qualities necessary to its original role as a bullbaiter and pit fighter. These "sports" also required a high degree of ferocity, but after 1835, when such contests were made illegal, viciousness and intractability were progressively eliminated from the breed. Today the bulldog makes a gentle, devoted companion and pet. See DOG.

Buller, Sir Redvers Henry, 1839-1908, British general. His military career began in China, and he later took part in the suppression of the Red River Rebellion (1870) in Canada. In Africa he fought in the Kafir and Zulu wars (1878-79), against the Boers in the Transvaal (1881), and against the Mahdists in the Sudan (1884-85). As adjutant general (1890-97), Buller reorganized the army's supply and transport services. He was made commander in chief of troops in the South African War in 1899, but his initial failure to relieve the besieged town of Ladysmith led to his supersession (1899) by Lord Roberts of Kandahar. See memoir by Lewis Butler (1907), biography by C. H. Melville (1923), study by Julian Symons (1963).

bullfighting, national sport and spectacle of Spain. Called *corrida de toros* in Spanish, the bullfight takes place in a large outdoor arena known as the *plaza de toros*. The object is for one of the bullfighters, the matador, to kill a wild bull, or toro, with a sword. The matador is assisted by five other toreros, two picadors, mounted on armored horses, and three peones, or capemen on foot, also called *banderilleros* because they plant in the bull the short barbed sticks known as *banderillas*. An early type of bullfighting was practiced by the Minoans, Greeks, and Romans. The Moors probably introduced the sport to Spain (c. 11th cent.), whence it spread to S. France and Morocco. Originally the central figure in the Spanish bullfight was the mounted torero, Francisco Romero is generally credited with being the first (c. 1726) torero to fight on foot. A modern bullfight consists of three stylized parts, sometimes likened to the three acts of a drama, preceded by the color and pageantry of a grand ceremonial parade (*paseillo*) in which the matadors and other toreros take part. After the parade, the president, the official who supervises the proceedings, signals for the first

bull to be sent out. The toreros then wave capes (*capas*) at the bull, forcing the animal to make a charge, this is known as "running" the bull. In this first part the picadors administer four *pica* (lance) thrusts, there may be more or fewer thrusts depending on the condition of the animal. In the second part, which is brief, the *banderilleros* come out and, while on the run, plant the *banderillas* on the withers of the bull behind the neck muscle, these sting the bull and often spur him into making a livelier charge in the third part. Then comes the matador. He holds the *muleta*, a small cloth cape, in one hand, and his sword in the other. Using the *muleta*, he makes daring passes at the bull that are often of great grace and beauty. He thus works at dominating the animal until the latter stands with his four feet square on the ground and his head hung low, according to ritual and law, the matador must then kill the bull by thrusting his sword between the animal's shoulder blades and into the heart. If the matador has performed well he may be awarded an ear or the tail of the bull as a token of his craftsmanship. In the typical bullfight program there are six bulls and three matadors. Each matador contests two bulls, chosen by lot on the morning of the fight. A matador's performance requires great skill and courage, and successful matadors such as Pedro ROMERO (grandson of Francisco Romero), Juan BELMONTE, JOSE LITO, MANOLETE, Carlos Arzuza, and Manuel Benítez (El Cordobes) reaped immense awards of praise and money. The fighting bulls are bred and selected for spirit and strength. They must weigh not less than 542 kg (1,194 lb) and are usually from four to five years old. Bullfighting is also popular in the Latin American countries of Mexico, Peru, Colombia, Venezuela, and Ecuador, and in S. France. Critics contend that it is an inhumane spectacle of animal torture. Aficionados say it is an important part of Spanish culture and ritual. The Portuguese practice a style of bullfighting from horseback (*rejoneo*) in which the bull is not killed. See Ernest Hemingway, *Death in the Afternoon* (1932, repr. 1971), Kenneth Tynan, *Bull Fever* (1955, rev. ed. 1966), Rex Smith, ed., *Biography of the Bulls* (1957), Angus MacNab, *Fighting Bulls* (1959), Barnaby Conrad, *La Fiesta Brava* (1953) and *Barnaby Conrad's Encyclopedia of Bullfighting* (1961), Larry Collins and Dominique Lapierre, *Or I'll Dress You in Mourning* (1968), Adolfo Bollain et al., *Bulls and Bullfighting* (1970), John Fulton, *Bullfighting* (1971).

bullfinch: see FINCH

bullfrog, common name of the largest North American frog, *Rana catesbeiana*. Native to the E. United States, this species has been successfully introduced in the West and in other parts of the world. The body length is 4 to 8 in. (10-20 cm), and the legs may be up to 10 in. (25 cm) long. An aquatic form with fully webbed toes, the bullfrog can close its nostrils and lie at the bottom of a pond for some time. Males have a loud, booming call. Bullfrog tadpoles require two or three years to become adults. The bullfrog is the only frog whose legs are marketed in quantity for food in the United States. Several other large frogs of the genus *Rana* are called bullfrogs in other regions. Bullfrogs are classified in the phylum CHORDATA, subphylum Vertebrata, class Amphibia, order Anura, family Ranidae.

bullhead, common name for several species of fish. See CATFISH, SCULPIN.

Bullinger, Heinrich (hīn'rikh bööl'ing-ər), 1504-75, Swiss Protestant reformer. After the death of Zwingli in 1531, Bullinger became pastor of the principal church in Zurich and a leader of the reformed party in Switzerland. He played an important part in compiling the first Helvetic Confession (1536), a creed based largely on Zwingli's theological views as distinct from Lutheran doctrine. In 1549 the Consensus Tigurinus, drawn up by Bullinger and Calvin, marked the departure of Swiss theology from Zwinglian to Calvinist theory. His later views were embodied in the second Helvetic Confession (1566), which was accepted in Switzerland, France, Scotland, and Hungary and became one of the most generally accepted creeds of the reformed churches. He wrote a life of Zwingli and edited his complete works.

Bullitt, William Christian (bööl'it), 1891-1967, American diplomat, b. Philadelphia. A member of the American delegation to the Paris Peace Conference following World War I, he was sent by President Wilson on a secret mission to Russia. When his report favoring recognition of the Communist government was rejected, he resigned and later bitterly attacked the Versailles Treaty before the Senate. After 12 years of private life, he was made spe-

cial assistant to Cordell Hull and served (1933-36) as first U S ambassador to the USSR. Later he was ambassador to France (1936-40), ambassador at large in the Middle East (1941-42), and special assistant to the Secretary of the Navy (1942-43). He served (1944-45) as a major in the Free French army under Charles De Gaulle. See his *The Great Globe Itself* (1946), *For the President*, selections from his diplomatic correspondence with President Franklin Delano Roosevelt, ed by O H Bullitt (1972), biography by Beatrice Farnsworth (1967).

bull mastiff (mäst'f), breed of powerful WORKING DOG developed in England in the second half of the 19th cent. It stands from 24 to 27 in (61-68.6 cm) high at the shoulder and weighs from 100 to 130 lb (45.4-59 kg). Its dense, short coat may be fawn, red, or brindle, with a darker shading on the ears and muzzle. Because of the increasing need to protect game preserves and large estates from poachers, English gamekeepers began to cross existing breeds in an attempt to produce a dog that would possess the required speed, strength, aggressiveness, good night vision, and the capacity to remain silent at the approach of the poacher. It would be the task of the desired dog to knock down the intruder and keep him down until he was captured, rather than simply alarming him into running away. After many breeds were tried, mastiff and bulldog stock were crossed, producing a dog with all the necessary qualities, the bull mastiff. Today it is raised as a guard and show dog and as a pet. See DOG.

bull nettle. see NIGHTSHADE

Bull Run, small stream, NE Va., c. 30 mi (50 km) SW of Washington, D.C. Two important battles of the Civil War were fought there on July 21, 1861, and Aug. 29-30, 1862. The first battle of Bull Run (or first battle of Manassas) was the first major engagement of the war. On July 16, 1861, the Union army under Gen. Irvin McDowell began to move on the Confederate force under Gen. P. G. T. Beauregard at Manassas Junction. Gen. Robert Patterson's force at Martinsburg, which was to prevent the Confederate army under Gen. Joseph E. Johnston at Winchester from uniting with Beauregard, failed, and by July 20 part of Johnston's army had reached Manassas. On July 21, McDowell, turning Beauregard's left, attacked the Confederates near the stone bridge over Bull Run and drove them back to the Henry House Hill. There Confederate resistance, with Gen. Thomas J. Jackson standing like a "stone wall," checked the Union advance, and the arrival of Gen. E. Kirby Smith's brigade turned the tide against the Union forces. The unseasoned Union volunteers retreated, fleeing along roads jammed by panicked civilians who had turned out in their Sunday finery to watch the battle. The retreat became a rout as the soldiers made for the defenses of Washington, but the equally inexperienced Confederates were in no condition to make an effective pursuit. The South rejoiced at the result, while the North was spurred to greater efforts to win the war. See R. H. Beatie, *Road to Manassas*. The second battle of Bull Run (or second battle of Manassas) was also a victory for the Confederates. In July, 1862, the Union Army of Virginia under Gen. John Pope threatened the town of Gordonsville, a railroad junction between Richmond and the Shenandoah valley. Gen. Robert E. Lee sent Stonewall Jackson to protect the town, and on Aug. 9, 1862, Jackson defeated Nathaniel Banks's corps, the vanguard of Pope's army, in the battle of Cedar Mt. (or Cedar Run). When George McClellan's army was gradually withdrawn from Harrison's Landing on the James River (where it had remained after the SEVEN DAYS BATTLES) to reinforce Pope, Lee concentrated his whole army at Gordonsville. He planned to strike before Pope could be reinforced. Pope withdrew to the north side of the Rappahannock River. Lee followed to the south side and on Aug. 25 boldly divided his army. By Aug. 28, Jackson had marched to the Union right and rear, destroyed Union communications and supplies, and stationed his troops just west of the first Bull Run battlefield, where he awaited the arrival of James Longstreet with the rest of Lee's army. Pope was attacking Jackson when Longstreet came up on Aug. 29. The attack was repulsed, but Pope, mistaking a re-formation of Jackson's lines for a retreat, renewed it the next day. After the Union troops were again driven back, Lee ordered Longstreet to counterattack. Longstreet, supported by Jackson, swept Pope from the field. The Union forces retreated across Bull Run, badly defeated. Lee's pursuit ended at Chantilly, where the Union forces stopped Jackson on Sept. 1, 1862. Pope then withdrew to Washington. Both battle-

fields are included in Manassas National Battlefield Park (est. 1940). See E. J. Stackpole, *From Cedar Mountain to Antietam* (1959), Allan Nevins, *The War for the Union* (Vol. II, 1960).

bull terrier, breed of large, muscular TERRIER originating in England around 1835. It stands from 19 to 22 in (48.3-55.9 cm) high at the shoulder and weighs from 30 to 36 lb (13.6-16.3 kg). Its short, flat-lying, harsh coat is glossy white or, in the colored variety, most popularly brindle with white markings. Developed for dogfighting from a cross of bulldog and a now extinct English terrier, the bull terrier was renowned for its courage, strength, and intelligence. However, down through the years English breeders placed increasing emphasis on the breed's overall disposition and less on its aggressiveness. As a result, the bull terrier of today is a friendly, gentle dog that makes a responsible and devoted companion. See DOG.

Bulnes, Manuel (manwél' bööl'näs), 1799-1866, president of Chile (1841-51). He served in the revolt against Spain and commanded the victorious Chilean forces at the battle of Yungay (1839), where the Peru-Bolivia confederation of Andrés Santa Cruz was destroyed. Bulnes, a conservative, was elected president and, through stern and repressive measures, fostered economic and educational progress.

Bulow, Bernhard Heinrich Martin, Fürst von (bär'n'hart hīn'rīkh mar'fīn fūrst fən bu'lö), 1849-1929, German chancellor. He held many diplomatic posts before he became, through the influence of Friedrich von Holstein, foreign secretary in 1897 and succeeded Hohenlohe-Schillingsfürst as chancellor in 1900. He inadvertently increased German isolation by his failure to gain the friendship of England and by his aggressive foreign policy. He antagonized France by his actions in the Moroccan crisis of 1905 (see MOROCCO). Bulow later alienated Russia in the Bosnian crisis of 1908 by thwarting Russian goals for the opening of the Dardanelles and supporting Austria-Hungary's annexation of Bosnia and Herzegovina. As a result he strengthened the Triple Entente between Great Britain, France, and Russia (see TRIPLE ALLIANCE AND TRIPLE ENTENTE). Bulow lost the confidence of Emperor William II in the *Daily Telegraph* affair (Oct., 1908) in which William indiscreetly revealed his foreign policy toward Britain in an interview with the London newspaper; the interview caused a national uproar. Bulow had approved the text of William's remarks, but had not read them. Bulow subsequently lost support in the Reichstag over a proposed tax and was forced to resign in 1909. He later (1914-15) was ambassador to Italy. See his memoirs (tr. 4 vol., 1931-32).

Bulow, Friedrich Wilhelm, Freiherr von (frē'drīkh vī'hēlm frī'hēr), 1755-1816, Prussian general in the Napoleonic Wars. After his victories (1813) over the French at Gross Beeren and at Dennewitz, he was created count of Dennewitz. In 1815 he played a conspicuous part in the Waterloo campaign.

Bulow, Hans Guido, Freiherr von (hans gē'dō), 1830-94, German pianist and conductor. After hearing Wagner's *Lohengrin* in 1850 at Weimar under Liszt's direction, he studied piano with Liszt and later conducted the premieres of several of Wagner's operas. In 1857 he married Liszt's daughter Cosima, who left him in 1869 and later became the wife of Wagner. While retaining his admiration of Wagner's music, Bulow became the most ardent champion of Brahms. He framed the aphorism that Bach, Beethoven, and Brahms are the three 8's of music. One of the first pianists to be concerned with stylistically proper performances, Bulow made critical editions of the works of many composers. The first of the modern virtuoso conductors, he achieved his greatest distinction as conductor (1880-85) of the ducal orchestra at Meiningen.

bulrush: see SEDGE

Bultmann, Rudolf Karl (bööl't'män), 1884-, German existentialist theologian, educated at the universities of Tübingen, Berlin, and Marburg. He taught at the universities of Breslau and Gießen and from 1921 to 1950 was professor at the Univ. of Marburg. Strongly influenced by the existentialist philosophy of Martin Heidegger, Bultmann is best known for his work on the New Testament, which he reduced—with the exception of the Passion—to basic elements of myth, which then have application to contemporary concerns. His approach is termed "demythologization." His classic work is *Theology of the New Testament* (tr. 1951). Other writings in English translation include *Essays, Philosophical and Theological* (1952, tr. 1955), *Primitive Christianity in its Contemporary Setting* (1949, tr.

1963), *Jesus and the World* (1951, tr. 1958), *The Gospel of John* (1953, tr. 1971), *The History of the Synoptic Tradition* (1957, 2d ed. tr. 1968), see also his selected shorter writings, *Existence and Faith* (tr. 1960), studies by E. T. Lang (1968), Walter Schmithals (tr. 1968), and Andre Malet (tr. 1969).

Bulwer, William Henry Lytton Earle, Baron Dalling and Bulwer (bööl'wār, lit'an), 1801-72, English diplomat and author, brother of the novelist Edward Bulwer-Lytton. He was known most of his life as Sir Henry Bulwer. Although he sat in Parliament for some years (1830-37, 1868-71), he was most prominent as a diplomat. As secretary of the embassy in Constantinople (1837-38) he secured a commercial treaty with Turkey. He was ambassador to Spain (1843-48) during the affair of the Spanish Marriages (see ISABELLA II) but was ordered to leave by the dictator Ramon Narvaez, whom he offended. As minister to Washington (1849-52), he concluded the important CLAYTON-BULWER TREATY of 1850. Among his later diplomatic posts were Florence, Bucharest, and, again, Constantinople (1858-65). He was created a baron in 1871. His writings include *An Autumn in Greece* (1826), *France, Social, Literary, and Political* (1834-36), *Historical Characters* (1867), and biographies of Lord Byron (1835) and Viscount Palmerston (1870-74, unfinished).

Bulwer-Lytton, Edward George Earle Lytton, 1st Baron Lytton, 1803-73, English novelist. The son of Gen. William Bulwer and Elizabeth Lytton, he assumed the name Bulwer-Lytton in 1843 when he inherited the Lytton estate "Knebworth." He was created Baron Lytton of Knebworth in 1866. His varied and highly derivative novels won wide popularity. Many of his early novels of manners—*Falkland* (1827), *Paul Clifford* (1830), and *Eugene Aram* (1832)—reflect the influence of his friend William Godwin. Bulwer-Lytton, however, is best remembered for his extremely well-researched historical novels, particularly *The Last Days of Pompeii* (1834) and *Rienzi* (1835). In 1849, with *The Caxtons*, he began a series of humorous domestic novels, which had recently become the vogue. His utopian novel, *The Coming Race*, prefigured the works of Wells and Huxley. A member of Parliament from 1831 to 1841, Bulwer-Lytton was a reformer, but in 1852 he returned to Parliament as a Conservative. In 1858 he was appointed colonial secretary. He was also a successful dramatist. His plays include *The Lady of Lyons* (1838), *Richelieu* (1839), and *Money* (1840). See study by S. B. Liljegen (1957), Charles Shattuck, ed., *Bulwer and Macready* (1958).

Bulwer-Lytton, Edward Robert, 1st earl of Lytton, pseud. Owen Meredith, 1831-91, English diplomat and poet, son of the novelist, Bulwer-Lytton. He was in the diplomatic service from 1850 to 1875, when Disraeli appointed him viceroy of India, for his services in the Afghan wars he was created (1880) an earl. He was ambassador to France from 1887 until his death. His poems, written at first under his pseudonym, include *The Wanderer* (1858), a collection of lyrics, *Lucile* (1860) and *Glenavon* (1885), long narrative poems, and *King Poppy* (1892), an epic fantasy. His verse has been criticized for its affectation and prolixity. He also wrote a biography of his father, which appeared in 1883. See his letters (1937), studies by Lady Betty Balfour (1899) and A. B. Harlan (1946).

Buna rubber (böō'nā, byōō'-) see RUBBER

Bunau-Varilla, Philippe Jean (fēlēp' zhān būnō'-varēyā'), 1859-1940, French engineer, prominent in the PANAMA CANAL controversy. An engineer after 1884 in the original French company for building the canal, he was chief engineer before the company went bankrupt in 1889 and was the organizer (1894) of the new company that took over the rights of the old one. Unable to develop his plans in France, he undertook to sell the company to the United States, converting (1901) Mark Hanna and President McKinley, who had been interested in the Nicaragua route, to the Panama project. After new opposition developed, he persuaded the French directors to reduce the price of the company, and President Theodore Roosevelt was won over to the Panama plan. When difficulties arose with the Colombian government, Bunau-Varilla conspired with insurrectionists in Panama and touched off (1903) a successful revolution. As minister from the new Panamanian republic to the United States, he negotiated the Hay-Bunau-Varilla Treaty, which gave the United States control of the Panama Canal. In World War I a water chlorination process that he had de-

veloped was used at the battle of Verdun. See his *Panama* (tr 1913) and *From Panama to Verdun* (tr 1940).

bunchberry: see DOGWOOD

Bunche, Ralph Johnson, 1904-71, U.S. government official and United Nations diplomat, b. Detroit. He taught political science at Howard Univ. from 1928, becoming a full professor in 1938. He also did worldwide research in colonial administration and race relations. In government service after 1941, he worked under the joint chiefs of staff and was a chief research analyst in the Office of Strategic Services. The first Negro to be a division head in the Dept. of State (July-Oct., 1945), he entered the United Nations in 1946 as director of the Trusteeship Division. He became (Dec., 1947) principal secretary of the UN Palestine Commission and helped to bring peace to the Holy Land. For his work there he was awarded the 1950 Nobel Peace Prize. He served as undersecretary general for special political affairs from 1958 until his retirement due to poor health shortly before his death.

Bundaberg, city (1971 pop. 27,394), Queensland, E. Australia, on the Burnett River. It is a sugar-refining center and a port.

Bundestag (bōōn'dēstāh") [Ger., = federal parliament], lower house of the parliament of the Federal Republic of Germany (West Germany). It succeeded the REICHSTAG. It is a popularly elected body that elects the chancellor, passes all legislation and ratifies the most important treaties. It can remove the chancellor by a vote of no confidence, but only if it simultaneously elects a new chancellor. In the German Democratic Republic (East Germany), the Volkskammer [people's chamber] according to the constitution exercises similar powers. The upper house of the West German parliament, the Bundesrat [federal council], represents the states. It must approve certain laws.

bundling, courtship custom, thought to have originated in Holland and the British Isles. It was extended to America, particularly to New England, and most widely practiced in the years prior to the Revolution of 1776. Engaged or courting couples, dressed or partially dressed, traditionally lay together on a bed pursuing their romance. They were sometimes separated by a board, or the girl's legs were tied together, or the couple was in some other way constrained from completing the sexual act. As a formal custom the practice was abandoned in the early 19th cent. because of widespread social disapproval.

Bundy, McGeorge, 1919-, U.S. educator and government official, b. Boston. An intelligence officer in the U.S. army during World War II, he joined (1949) the Harvard faculty and later became (1953) the youngest dean of the faculty of arts and sciences there, serving until 1961. As the special assistant to Presidents Kennedy and Lyndon B. Johnson for national security affairs (1961-66), Bundy supervised the staff of the National Security Council and played a major role in making foreign policy. He supported (1961) the Bay of Pigs invasion, helped determine (1962) strategy during the Cuban missile crisis, and strongly advocated the increasing U.S. military involvement in Vietnam. He resigned from government service to become (1966) president of the Ford Foundation. Bundy is the author of *The Strength of Government* (1968).

bungalow [from Indian *bangla*, = house], dwelling built in a style developed from that of a form of rural house in India. The original bungalow typically has one story, few rooms, and a maximum of cross drafts, with high ceilings, unusually large window and door openings, and verandas on all sides to shade the rooms from the intense light and tropical heat. Dwellings of this general type became popular in S. California, with numerous differences in plan and materials, and were termed bungalows. The word thus came to be used for a cottage or for any small house with verandas covered by low, wide eaves.

Bunin, Ivan Alekseyevich (bōō'nin, Rus. ēvān' āl'īksē'yevich bōō'nin), 1870-1953, Russian writer. Born of a poor aristocratic family, he was encouraged in his literary precocity. His first volume of verse was published in 1891. He traveled extensively, writing while working as a librarian and statistician. Bunin won the Pushkin Prize in 1903 for his own verse and for his translations of "works by Byron and Longfellow." *The Village* (1910, tr. 1923), a novel in the Turgenyev tradition, won him international fame. It depicts the ugliness of peasant life before the Revolution of 1905. The story "Dry Valley" describes the decline of the country gentry. Bunin is best

known for his short stories, particularly for the title story of the collection *The Gentleman from San Francisco* (1916, tr. 1923), which treats powerfully the themes of vanity and death. His autobiographical novel *The Well of Days* (1930, tr. 1933) is equally celebrated. Bunin's *Memoirs and Portraits* (1950, tr. 1951) contains reminiscences of famous contemporaries. His elegant style, descriptive genius, and choice of themes place Bunin among the classic Russian authors. A nostalgia for the aristocracy contributed to his reactionary political stance, which compelled him to leave Russia in 1919. His last years were spent in France. Bunin was awarded the 1933 Nobel Prize in Literature. See study by Serge Kryzyski (1971).

bunion, swelling or thickening around the first joint of the big toe. The toe is forced inward and compresses the other toes. The fluid-filled sac, or bursa, in the toe joint becomes inflamed (a condition called bursitis), which may lead to pain, deformity, and an inability to wear ordinary shoes. Bunions may arise from years of wearing ill-fitting shoes. However, congenital bone deformities are usually indicated when they occur on both feet. Proper foot care, especially in selecting shoes, is the most important aspect of treatment and prevention. The toes can often be straightened by pads or splints, and orthopedic shoes are generally prescribed. Serious cases may require surgery.

Bunker Hill, battle of, in the American Revolution, June 17, 1775. Detachments of colonial militia under Artemas WARD, Nathaniel Greene, John STAFF, and Israel PUTNAM laid siege to Boston shortly after the battles of Lexington and Concord. However, Thomas Gage, British commander in the city, made no attempt to break the siege until he was reinforced (in May) by troops led by William HOWE, Sir Henry Clinton, and John Burgoyne. The Continental forces learned of the British plan to take the heights of Dorchester and Charlestown, and William PRESCOTT was sent to occupy Bunker Hill outside Charlestown. Prescott instead chose the neighboring Breed's Hill to the southeast, but the engagement that ensued has become known as the battle of Bunker Hill. Howe was ordered to attack the American position, and after two slaughterous failures a third charge dislodged the Americans, who had run out of powder. The British victory failed to break the siege, and the gallant American defense heightened colonial morale and resistance. See T. J. Fleming, *Now We Are Enemies: The Story of Bunker Hill* (1950), R. M. Ketchum, *The Battle for Bunker Hill* (1962).

Bunni (būnī), Levitical name mentioned in confusing passages Neh. 10:15, 11:15. In one case the name seems to be an alternative of BUNUT.

Bunsen, Christian Karl Josias, Freiherr von (krī'st'yan kār'l yōzē'ās frī'hēr fən bōōn'zan), 1791-1860, Prussian diplomat and scholar. He studied theology at the Univ. of Göttingen. He was a friend of King Frederick William IV and urged him to accept liberal ideas. Bunsen was minister to the papal court at Rome (1824-33) and ambassador to Bern (1839-41) and to London (1842-54), but he was recalled from London because he supported alliance with the Western powers in the Crimean War. A scholar of note, Bunsen wrote on religion, language, literature, history, and law.

Bunsen, Robert Wilhelm (būn'sən, Ger. rō'bērt vīlhēlm bōōn'zan), 1811-93, German scientist, educated at the Univ. of Göttingen, where he received his doctorate in 1830. He served on the faculties of several universities and was at Heidelberg from 1852 to 1859. His first important contribution to chemistry came with his investigation of certain organic compounds of arsenic, in the process of which he discovered that ferric oxide could be used as an antidote to arsenic poisoning. From his studies of the gaseous products of blast furnaces he evolved a method of gas analysis, presented in his book *Gasometrische Methoden* (1857). With Kirchhoff at Heidelberg he discovered by spectroscopy the elements cesium and rubidium. Bunsen wrote many articles and collaborated with Kirchhoff on *Chemische Analyse durch Spektralbeobachtungen* (1869). His important contributions to petrology and chemico-geology include the explanation of GEYSER action. He invented and improved various kinds of laboratory equipment, including the Bunsen cell (see CELL, in electricity), the Bunsen photometer (see PHOTOMETRY), and the BUNSEN BURNER.

Bunsen burner, gas burner, commonly used in scientific laboratories, consisting essentially of a hollow tube which is fitted vertically around the flame and which has an opening at the base to admit air. A

smokeless, nonluminous flame of high temperature is produced. The underlying principle of the Bunsen burner is basic to common gas stoves and lamps.

Bunshaft, Gordon, 1909-, American architect, b. Buffalo, N.Y. As chief designer for the architectural firm of SPIDROPE, O'NEALS, AND McEPPIELL, Bunshaft was responsible for Lever House, New York City's first glass curtain-wall skyscraper (1952), which has been widely imitated. Among his other works are the Manufacturers Trust Company building on Fifth Ave. at 43d St. in Manhattan, New York City, a complex of buildings near Hartford for the Connecticut General Life Insurance Company, the Albright-Knox Art Gallery, Buffalo, and the Banque Lambert, Brussels (1965).

bunt: see SMUT

hunting, common name for small, plump birds of the family Fringillidae (FINCH family). Among the American buntings are the indigo bunting, in which the summer plumage of the male reflects sunlight as a rich, metallic blue, the painted bunting, or nonpareil (*Passerina ciris*), with showy red, blue, and green plumage, the hardy snow bunting (*Plectrophenax nivalis*), whose winter plumage is white marked with light brown on the head and sides, and the lazuli bunting of the West, turquoise above with a chestnut breast and white wing bars. European buntings include the corn, snow, and civil buntings, the yellowhammer, and the ortolan (*Emberiza hortulana*), which is caught and fattened as a table delicacy. Buntings are also called sparrows in the United States. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Fringillidae.

Buntline, Ned, pseud. of Edward Zane Carroll Judson, 1823-86, American adventurer and writer. In 1845 he founded in Nashville *Ned Buntline's Own*, a sensational magazine. After being lynched (1846) for a murder, not secretly cut down alive and released, he went to New York City, where he resumed the magazine. He led a mob in the Astor Place riot of 1849 against the English actor Macready. In the '50s he turned up in St. Louis as an organizer of the Know-Nothing movement. After 1846 Buntline wrote more than 400 action novels, forerunners of the dime novels. Typical are *The Mysteries and Miseries of New York* (1848) and *Stella Delorme, or, The Comanche's Dream* (1850). In 1872 he persuaded W. F. Cody (Buffalo Bill) to act in his play, *The Scouts of the Plains*, which started Cody on his stage career. See biography by James Monaghan (1952).

Buñuel, Luis (lūōēs' būnyūdōē'), 1900-, Spanish film director, working in France, Mexico, and Spain. He joined Dali to make some early surrealist films, notably *Un Chien andalou* (1929). His powerful and realistic *Las hurdes* (1932) is a documentary about Spanish agrarian poverty. *Los olvidados* (1949), made in Mexico, brutally portrays his view of human corruption and cruelty. Harshly critical of the church and of crusading morality, Buñuel continued to examine social hypocrisy and turpitude in *Viridiana* (1961), *Diary of a Chambermaid* (1964), *Belle de Jour* (1966), *Isitana* (1970), *The Discreet Charm of the Bourgeoisie* (1972), and *The Phantom of Liberty* (1974).

bunya-bunya (būn'yā-būn'yā) see MONKEY-PUZZLE TREE

Bunyan, John, 1628-88, English author, b. Elstow, Bedfordshire. After a brief period at the village free school, Bunyan learned the tinker's trade, which he followed intermittently throughout his life. Joining the parliamentary army in 1644, he served until 1647. The reading of several pious books and a constant study of the Bible intensified Bunyan's religious beliefs, and in 1653 he began acting as lay preacher for a congregation of Baptists in Bedford. In this capacity he came into conflict with the Quakers led by George FOX and turned to writing in defense of his beliefs. In 1660 agents of the restored monarchy arrested him for unlicensed preaching, and he remained in prison for the next 12 years. During this period Bunyan wrote nine books, the most famous of which is *Grace Abounding to the Chief of Sinners* (1666), a fervent spiritual autobiography. Soon after his release in 1672 he was reimprisoned briefly and wrote the first part of his masterpiece *The Pilgrim's Progress from This World to That Which Is to Come*, published in 1678. A second part appeared in 1684. By the time Bunyan was released from his second imprisonment, he had become a hero to the members of his sect, and he continued preaching and writing until his death. The principal works of these later years are *The Life and Death of Mr. Badman* (1692) and *The Holy War* (1692). *Pilgrim's Progress* is

an allegory recounting Christian's journey from the City of Destruction to the Celestial City, the second part describes the manner in which Christian's wife, Christiana, makes the same pilgrimage. Remarkable for its simple, biblical style and its vivid presentation of character and incident, *Pilgrim's Progress* is considered one of the world's great works of literature. Bunyan's continued popularity rests on the spiritual fervor that permeates his works and on the compelling style in which they are written. His prose unites the eloquence of the Bible with the vigorous realism of common speech. See biography by O. E. Winslow (1961), studies by H. A. Talon (1951), W. Y. Tindall (1934, repr. 1964), David E. Smith (1966), and Roger Sharrock (rev. ed. 1968).

Bunyan, Paul, legendary American lumberjack. He was the hero of a series of "tall tales" popular through the timber country from Michigan westward. Bunyan was known for his fantastic strength and gigantic size. He is said to have ruled his gargantuan lumber camp between the winter of the blue snow and the spring that came up from China. His prized possession was Babe the Blue Ox, the distance between whose horns measured 42 ax handles and a plug of tobacco. In Southern lumber camps a similar legendary figure is known as Tony Beaver. See collections of legends by Louis Untermeyer (1945) and H. W. Felton (1947), study of the legend by D. G. Hoffman (1952, repr. 1966).

Buonaparte: see BONAPARTE and NAPOLEON I

Buonarroti, Michelangelo: see MICHELANGELO BUONARROTI

Buoninsegni, Duccio di: see DUCCIO DI BUONINSEGNA

Buononcini, Italian musicians: see BONONCINI

buoy (boi, bö'ē), float anchored in navigable waters to mark channels and indicate dangers to navigation (isolated rocks, mine fields, cables, and the like). The shape, color, number, and marking of the buoy are significant, but unfortunately the significance varies in different countries, and the color-code system devised by the International Maritime Conference at Washington, D.C., in 1889 was not adopted. Although the spar buoys (upright posts) used in northern latitudes are usually wooden, large buoys are generally made of steel or iron. Nun buoys have conical tops, can buoys, flat tops. Buoys may be fitted with bells or whistles (usually operated by motion of the waves), and battery-powered light buoys are much used; radio buoys came into use in 1939. There are also mooring buoys, used for the anchoring of ships. In 1972 the United States launched the first of a series of 100-ton data buoys, which, it was planned, would encircle the globe transmitting oceanographic and meteorological data via satellite.

buoyancy, upward force exerted by a fluid on any body immersed in it. Buoyant force can be explained in terms of ARCHIMEDES PRINCIPLE.

bur or **burr**, popular name for fruits that have barbed, pointed, or rough outgrowths. By clinging to the fur or hair of animals and the clothing of man they are transported from the parent plant, often great distances. Some common burs include those of the chestnut, burdock, bur marigold, and cocklebur. Burs are particularly obnoxious to sheep growers because of the difficulty of removing them from wool.

Buraimi (bö'ri'mē), group of small oases, SE Arabia, on the border between Abu Dhabi and Oman. In the 1950s the area, rich in oil, was claimed by Saudi Arabia, causing a dispute with Great Britain, which at the time was the protector of Oman and Abu Dhabi.

Burano (bö'ra'nō), former town, now part of Venice, in Venetia, NE Italy, built on four islets in the lagoon of Venice. It is a fishing center and has been famous for its lace since the 15th cent.

Burage, Richard, 1567?-1619, first great English actor. The leading tragedian of the CHAMBERLAIN'S MEN, he originated the title roles in Shakespeare's *Hamlet*, *Lear*, *Othello*, and *Richard III*. He also appeared in many of the first productions of plays by Thomas Kyd, Beaumont and Fletcher, Ben Jonson, and John Webster. His name came to symbolize acting of the highest quality. Burbage's father, James Burbage, had built the first permanent theater in London in 1576, called the Theatre. In 1598 the building was removed to Bankside and set up as the GLOBE THEATRE by Richard's brother, Cuthbert, on the death of their father. The brothers also inherited shares in the Blackfriars Theatre, built by their father in 1596, which became the winter home of the company.

Burbank, Luther, 1849-1926, American plant breeder, b. Lancaster, Mass. He experimented with

thousands of plant varieties and developed many new ones, including new varieties of prunes, plums, raspberries, blackberries, apples, peaches, and nectarines. Besides the Burbank potato, he produced new tomato, corn, squash, pea, and asparagus forms, a spineless cactus useful in cattle feeding, and many new flowers, especially lilies and the famous Shasta daisy. His methods and results are described in his books—*How Plants Are Trained to Work for Man* (8 vol., 1921) and, with Wilbur Hall, *Harvest of the Years* (1927) and *Partner of Nature* (1939)—and in his descriptive catalogs, *New Creations*. After 1875 his work was done at Santa Rosa, Calif. See D. S. Jordan and Vernon Kellogg, *The Scientific Aspects of Luther Burbank's Work* (1909), E. B. Beeson, *The Early Life and Letters of Luther Burbank* (1927), W. L. Howard, *Luther Burbank* (1945), Ken Kraft, *Luther Burbank* (1967).

Burbank, city (1970 pop. 88,871), Los Angeles co., S Calif., inc. 1911. Aircraft manufacturing is the major industry. Several motion-picture and television studios are in Burbank.

burbot (bü'r'bat): see COD

Burchfield, Charles, 1893-1967, American painter, b. Ashtabula, Ohio, studied at the Cleveland School of Art. From 1921 to 1929 he worked as a wallpaper designer. His paintings, predominantly in watercolor, fall into three periods: from 1916 to the early 1920s, poetic evocations of nature, from the early 1920s to the early 1940s, bold, somber landscapes and urban scenes, and after 1943, a return to lyric expressions of nature. Burchfield is widely known for his depiction of crumbling Victorian mansions, false-front stores, and other relics of the late 19th cent. Weather and sunlight effects are important in all his work. Among his many works in museums are *Setting Sun through the Catalpas* (Cleveland Mus. of Art), *October* (Columbus Gall. of Fine Art, Ohio), *Freight Cars Under a Bridge* (Detroit Inst. of Arts), and *An April Mood* (Whitney Mus., New York City). See *The Drawings of Charles Burchfield* with text by the artist (1968), study by John Baur (1956).

Burckhardt, Jacob Christoph (ya'köp krīs'tōf böör'hart), 1818-97, Swiss historian, one of the founders of the cultural interpretation of history. Of patrician background, he studied under Ranke at the Univ. of Berlin and taught (1844-53, 1858-93) art history and history at the Univ. of Basel. His best-known work is *Die Kultur der Renaissance in Italien* (1860, *The Civilization of the Renaissance in Italy*, available in many English editions). It remains the great classic on the subject, although its primarily political and cultural interpretation of the Renaissance period is a controversial issue among historians. Believing in a pattern of culture peculiar to each age, Burckhardt found the shift from corporate medieval society to the modern spirit in the history of Italy in the 14th and 15th cent. The strife between empire and papacy had created a political and moral vacuum, which resulted in the birth of the modern self-conscious state and in the liberation of the creative individual. Burckhardt saw Renaissance humanism as the revival of classical antiquity, and he conceived the era as one of man's joyous new discovery of himself and the world about him. He profoundly influenced his friend Nietzsche, and the work of J. A. Symonds is based largely on Burckhardt's synthesis. In *The Age of Constantine the Great* (1852, tr. 1949), Burckhardt analyzed the transition from classical times to the Middle Ages. Among his other works on history and art is *Cicerone* (1855), a guide to Italian art. Burckhardt feared that the spiritual and aesthetic human values were doomed to submersion by the rise of industrial democracy.

Burckhardt, John Lewis, 1784-1817, explorer, b. Switzerland, educated in Germany. Supported by an English association for promoting African discovery, he visited Egypt and Syria (1809-13), rediscovered PETRA (1812), then, posing as a learned Muslim, he became the first Christian to reach Medina. He died while preparing to set out from Upper Egypt for his original goal, the Niger River. Included in his *Travels in Arabia* (1829) is a notable account of Mecca. His journals, published by the African Association, include *Travels in Nubia* (1819), *Travels in Syria and the Holy Land* (1822), *Notes on the Bedouin and Wahabys* (1830), and *Arabic Proverbs* (1830). See biography by Katharine Sim (1969).

Burckmair, Hans: see BURCKMAIR, HANS

burdock, common name of any plant of the genus *Arctium* of the family Compositae (COMPOSITE family), coarse biennials indigenous to temperate Eurasia and mostly weedy in North America. The flowers, usually purple, are followed by roundish many-

seeded burs. The great burdock (*A. lappa*) has been used medicinally and (in Japan) cultivated as a vegetable called gobo. The common burdock is *A. minus*. The cocklebur is sometimes confused with burdock. Burdock is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Asterales, family Compositae.

Burdwan (bärdwan'), town (1971 pop. 144,970), West Bengal state, E central India. It has cutlery and tool industries but is chiefly known for its 108 linga temples dedicated to Siva. Rice is the chief product of the surrounding area. Burdwan is a district administrative center and the seat of Burdwan Univ. A hydroelectric project on the nearby Damodar River has aided the town's growth.

bureaucracy, the administrative structure of any large organization, public or private. Ideally bureaucracy is characterized by hierarchical authority relations, defined spheres of competence subject to impersonal rules, recruitment by competence, and fixed salaries. Its goal is to be rational, efficient, and professional. Max WEBER, the most important student of bureaucracy, described it as technically superior to all other forms of organization and hence indispensable to large, complex enterprises. However, because of the shortcomings that have in practice afflicted such large administrative structures, the terms *bureaucracy* and *bureaucrat* in popular usage usually carry a suggestion of probation and imply incompetence, a narrow outlook, duplication of effort, and application of a rigid rule without due consideration of specific cases. Bureaucracy existed in imperial Rome and China and in the national monarchies, but in modern states complex industrial and social legislation has called for a vast growth of administrative functions of government. The power of permanent and nonselective officials to apply and even initiate measures of control over the national administration and economy has raised the bureaucracy to critical importance in the life of the state, and critics object that it is largely unresponsive to control by the people or their elected representatives. The institution of the OMBUDSMAN has been one means adopted in an attempt to remedy this situation. Administrative bureaucracies in private organizations have also grown rapidly, especially since the development of the corporation. See CIVIL SERVICE. See H. H. Gerth and C. Wright Mills, *From Max Weber: Essays in Sociology* (1946, repr. 1958), Marshall Dimock, *Administrative Vitality: The Conflict with Bureaucracy* (1959), M. Crozier, *The Bureaucratic Phenomenon* (1964), Martin Albrow, *Bureaucracy* (1970), P. M. Blau, *Bureaucracy in Modern Society* (2d ed. 1971).

Bureya (bö'ra'ä), mountain range, Khabarovsk Krai, SE Far Eastern USSR, extending into NE China as the Lesser Khingan range. The site of the Bureya coal basin, it rises to 7,150 ft (2,180 m) and yields iron and coal. The Bureya River, c. 445 mi (720 km) long, rises in the N Bureya range and flows southwest to join the Amur River.

Burgas (bö'rgas'), city (1968 est. pop. 126,500), SE Bulgaria, on the Black Sea. It rivals Varna as the chief export port of Bulgaria and is an important commercial center. Fishing and fish canning, flour milling, sugar refining, copper mining, and soap making are carried on in Burgas, which also has engineering works and an oil refinery. The city was founded (18th cent.) on the site of a 14th-century fortified town.

Burgdorf (bö'örk'dörf), Fr. *Berthoud*, town (1970 pop. 15,888), NW Switzerland, on the Emme River. It is a manufacturing and cheese-trading town. There is a 12th-century castle in which J. H. Pestalozzi, the educational reformer, held (1799-1804) his first school.

Burgenland (böör'ganlant), province (1971 pop. 272,000), 1,530 sq mi (3,963 sq km), E Austria. The capital is EISENSTADT. It is a narrow, hilly region bordering Czechoslovakia in the northeast and Hungary in the east, and it is indented by Neusiedler Lake. It is primarily agricultural, but industry and tourism are being developed. A battleground for nearly 1,000 years, Burgenland has many castles, fortified churches, and walled villages. It is the newest of the Austrian provinces, its territory was transferred from Hungary by the treaties of Saint Germain (1919) and Trianon (1920). SOPRON, the region's leading town, was returned (1921) to Hungary after a plebiscite.

Burger, Gottfried August (gōt'frīt ou'gōst bū'gar), 1747-94, German poet. He is best known for his ballads in folk song style, the famous *Lenore* (1773) was widely translated and had far-reaching influence. Bürger edited and wrote for the *Göttinger*

gen *Musenalmanach* and taught aesthetics at the Univ. of Göttingen. He translated many works of Homer, Shakespeare, and others, as well as the famous stories of Baron Munchausen. His unconventional approach to poetry was severely criticized by Schiller. See study by W. A. Little (1974).

Burger, Warren Earl, 1907–, American jurist, fourteenth Chief Justice of the United States (1969–), b. St. Paul, Minn. After receiving his law degree in 1931 from St. Paul College of Law (now Mitchell College of Law), he was admitted to the Minnesota bar and taught and practiced law in St. Paul. He was (1953–56) assistant attorney general in charge of the civil division of the Department of Justice before becoming judge of the U.S. Court of Appeals for the District of Columbia. He was appointed to the Supreme Court by President Nixon. A conservative and an advocate of judicial restraint, Burger led the court in halting and sometimes reversing the liberal decisions of the court headed by his predecessor Earl Warren, particularly in criminal cases.

Burges, William (būr'jiz), 1827–81, English architect. An ardent proponent of medievalism, he was prominent in the GOTHIC REVIVAL. Burges is known for his designs for Cork Cathedral (1862) and Trinity College, Hartford, Conn., and for the rebuilding of Cardiff Castle (1865).

Burgess, Anthony (būr'jis), 1917–, English novelist, b. Manchester, grad. Manchester Univ., 1940. He taught school in England and in the Far East and pursued an early interest in music. His many novels are marked by an adroit use of language and a surreal, darkly comic imagination. Burgess's best-known work is *A Clockwork Orange* (1962), a thriller set in a classless, futuristic society, in which an intelligent young hoodlum asserts his individuality by deliberately choosing to do evil. His other works include the novels *Inside Mr. Enderby* (1961), *MF* (1971), and *Napoleon Symphony: A Novel in Four Movements* (1974), and *Here Comes Everybody* (1955), a study of James Joyce.

Burgess, Gelett (Frank Gelett Burgess), 1866–1951, American humorist, b. Boston. His ability as an illustrator led him into magazine work, and he was soon writing humorous articles and stories to accompany his illustrations. His best-known poem, "The Purple Cow," first appeared in the San Francisco periodical *The Lark* (1895–97), of which he was an editor and steady contributor. Among his books are *Goops and How to Be Them* (1900) and *Are You a Bromide?* (1907).

Burgess, John William, 1844–1931, American educator and political scientist, b. Tennessee. He served in the Union army in the Civil War and after the war graduated from Amherst (1867). He was admitted to the Massachusetts bar in 1869, but did not practice. That same year he joined the faculty of Knox College. In 1871 he went to Germany, where he studied at the universities of Göttingen, Leipzig, and Berlin. He returned in 1873 to teach history and political science at Amherst. In 1876 he began his long association with Columbia, where he was professor of political science and constitutional law until 1912. Burgess, with Nicholas Murray BUTLER, was a major influence in the creation (1880) of a faculty and school of political science, the first such faculty organized for graduate work in the country and the chief step in changing Columbia College into a university. He was dean of the Faculty of Political Science from 1890 until his retirement. In 1906–7 he served as first Roosevelt professor at the Univ. of Berlin. Burgess's fundamental political philosophy was expressed in *Political Science and Comparative Constitutional Law* (1890–91), the more permanently valuable portions of which were republished as *The Foundations of Political Science* (1933). He interpreted American history in *The Middle Period, 1817–1858*, *The Civil War and the Constitution, 1859–1865*, and *Reconstruction and the Constitution, 1866–1876*, a trilogy published between 1897 and 1902, to which was added *The Administration of Rutherford B. Hayes* (1915). In *Recent Changes in American Constitutional Theory* (1923) he protested against the encroachment of the Federal government upon state and individual rights and immunities. He founded the *Political Science Quarterly*. See his autobiography, *The Reminiscences of an American Scholar* (1934). R. G. Hoxie, *A History of the Faculty of Political Science, Columbia University* (1955).

Burgh, Hubert de, d. 1243, chief justiciar of England under kings John and HENRY III. Having served as a royal minister and commander in France, he was appointed justiciar by John in 1215. He continued in this position after John's death (1216) and in 1217 took part in the defeat of the French fleet at

Sandwich that led to the withdrawal of Prince Louis (later LOUIS VII of France) from England. Thereafter the justiciar rapidly became the most powerful man in the government of the young Henry III. His administration temporarily strengthened the position of the crown against the unruly barons, but his own territorial acquisitions made him many enemies. After 1227, when Henry was declared of age, relations between Hubert and the king deteriorated. Hubert tried to prevent the king's disastrous expedition to France (1230), he also apparently approved the widespread English movement to resist the drain of money to the papacy. In the meantime the justiciar's longtime rival Peter des ROCHES intrigued against him, and finally in 1232 Hubert was deprived of office on charges of disloyalty to the crown. He was imprisoned but eventually became reconciled with Henry and successfully withstood a revival of the old charges in 1239. See biography by Clarence Ellis (1952).

Burgh, Ulick de, earl of Clanricarde: see CLANRICARDE. ULICK DE BURGH, 5TH EARL OF.

Burghers, in the 18th cent., a party of the Secession Church of Scotland, resulting from one of the "breaches" in the history of Presbyterianism. To qualify as a burgher in certain burghs one was required to take an oath accepting the "true religion presently professed within this realm." Opinion differed as to whether this referred to the Protestant religion in general or to the Established Church. Those in the Secession Church who understood the oath in the former sense were the "Burghers," or the Associate Synod. Opposed to them were the Anti-Burghers, or the General Associate Synod, who refused to take the oath. The two bodies mutually excluded each other in 1747. By the end of the century both divisions were further split apart into "Old Light Anti-Burghers" and "Old Light Burghers" and "New Lights" in each division, over questions of civil magistracy. In 1820 Old Lights and New Lights were brought together again in the United Secession Church.

Burghley or Burleigh, William Cecil, 1st Baron (both būr'lē), 1520–98, English statesman. He first rose to prominence during the protectorate of Edward Seymour, duke of Somerset, and he served as secretary of state (1550–53) during the ascendancy of John Dudley, duke of Northumberland. He avoided direct involvement in Northumberland's seizure (1553) of the throne for Lady Jane Grey and thus did not lose favor when Mary I succeeded. Although he held no office during her reign, he was sent on several diplomatic missions and sat in Parliament. He was reappointed to office by ELIZABETH I, whom he served faithfully for 40 years—as secretary (1558–72) and as lord treasurer (1572–98). He continued to sit in Parliament, as a commoner until 1571 and as Lord Burghley thereafter, and was Elizabeth's chief spokesman there, as well as administrative head of her government. One of his greatest skills was his ability to function as a liaison, representing royal policy to Parliament and keeping Elizabeth in touch with its feelings. His personal religious sympathies were with the Puritans, but politically he considered the interests of the country best served by a middle-of-the-road Anglican church, which he supported against both Protestant and Roman Catholic extremes. He urged Elizabeth to marry and perpetuate a Protestant Tudor house, and he supported the cause of the Scottish Protestants against the Roman Catholic Mary Queen of Scots. He was not able to maintain a policy of moderation, however. A succession of Catholic plots against Elizabeth led to increasing harshness toward Catholics generally and finally the execution of Mary Queen of Scots. In the privy council Burghley took a decisive role in the suppression of the Catholic revolts, but he was opposed to the entrance of England into European wars on behalf of the Protestants. This policy was defeated (1585) by the Puntan wing of the council under Robert Dudley, earl of Leicester, and Sir Francis Walsingham. Although Elizabeth's favorites often opposed Burghley's influence, his role as chief adviser was never seriously challenged. See biography by B. W. Beckingsale (1967), Conyers Read, *Secretary Cecil and Queen Elizabeth* (1955) and *Lord Burghley and Queen Elizabeth* (1960).

Burgis, William (būr'jis), fl. 1717–31, American engraver and publisher of maps and views, b. London. His name appears as publisher on the views *South Prospect of ye Flourishing City of New York* (1717, copy, N.Y. Historical Society), *The New Dutch Church in New York City, A Prospect of the Colledges in Cambridge in New England* (only known copy, Massachusetts Historical Society, Boston), A

South East View of the Great Town of Boston, and *Plan of Boston in New England* (copy, Lib. of Congress, Washington, D.C.). The mezzotint *The Boston Light House* is the only plate which contains Burgis's name as engraver (copy, U.S. Lighthouse Board, Washington, D.C.).

Burgkmair or Burckmair, Hans (both hāns bōrk'mīar), 1473–1531, German engraver, woodcut designer, and painter. Having learned woodcutting from Schongauer, he settled in 1498 in his native Augsburg. His work shows the influence of his friend Dürer, whose enthusiasm for the Italian Renaissance he shared. Among his well-known paintings are the *Rosary Altar* (Augsburg) and *Holy Family* (1511, Berlin). After c.1508 he executed designs for woodcuts for Emperor Maximilian I, among these prints a series of episodes in the emperor's life is notable. Among his other works of graphic art are *Death as Destroyer* (1520) and *Virtues and Vices*.

burglary, at COMMON LAW, the breaking and entering of a dwelling house of another at night with the intent to commit a FELONY, whether the intent is carried out or not. This definition has been generally adopted with some modifications in the criminal law of the various states of the United States. At common law burglary is primarily an offense against the security of habitation, not against the property as such, but today by statute burglary usually includes breaking into places other than dwellings. Breaking as well as entering is essential to commission of the crime, to constitute a breaking, the use of physical force is necessary and sufficient, even though the amount of force may be slight, e.g., turning a key, opening a partly closed window, pushing out a windowpane. Entry through FRAUD (as by posing as a guest), through THREAT, or through CONSPIRACY with servants is deemed by the law equivalent to breaking and is called "constructive breaking." By statute most states do not restrict burglary to action at night, as the common law does. Burglary under common law requires that the intent be to commit a felony, but some statutes declare that the intent need only be "to commit some crime." See ROBBERY.

Bürglen (bürk'lan), town (1970 pop. 3,401), Uri canton, central Switzerland. It is the legendary birthplace of William TELL. A 16th-century chapel stands on the supposed site of Tell's house.

Burgos (bōr'gōs), city (1970 pop. 119,915), capital of Burgos prov., N Spain, in Old Castile, on a mountainous plateau c.2,800 ft (850 m) above sea level, near the Arlanzon River. It is an important trade center with a large tourist industry. It was one of the ancient capitals of Castile but is chiefly known for its outstanding architecture and great historic tradition. Founded c.855, it was the seat of the county of Castile under the kings of León and became the capital of the kingdom of Castile under Ferdinand I (1035). The royal residence was moved (1087) to Toledo, and Burgos lost some of its cultural importance. In the civil war of 1936–39, Burgos was the capital of Franco's regime. Its most notable building is the cathedral of white limestone, begun in 1221, one of the finest examples of Gothic architecture in Europe, its lofty, filigree spires dominate the city. The Cid, a native of Burgos, is buried in the cathedral. Among the many other landmarks are the castle, atop a hill overlooking the city, the Gothic Church of San Esteban, and the Arco de Santa Maria, a 16th-century gateway leading to the cathedral.

Burgoyne, John (bārgoin'), 1722–92, British general and playwright. In the Seven Years War, his victory over the Spanish in storming (1762) Valencia de Alcántara in Portugal made him the toast of London. He was elected to Parliament in 1761 and took his seat in 1763. In 1772 his attack on the East India Company helped bring about some reform of the company in the Regulating Act of that year. As the American Revolution was beginning, he was sent (1775) with reinforcements to support General Gage at Boston. Burgoyne witnessed the battle of Bunker Hill and returned home in disgust (Dec., 1775). He joined (1776) Sir Guy Carleton in Canada and served at Crown Point, but, critical of Sir Guy's inaction, Burgoyne returned to England to join Lord George Germain in laying the plans that resulted in the SARATOGA CAMPAIGN. In the summer of 1777, Burgoyne began the ill-fated expedition with an army poorly equipped, untrained for frontier fighting, and numbering far less than he had requested. After minor initial success, stiffened American resistance coupled with the failure of Barry ST. LEGER and Sir William HOWE to reach Albany led to his surrender at Saratoga (Oct. 17, 1777). He returned to England, was given (1782) a command in Ireland, and managed the impeachment of Warren HASTINGS. Bur-

goyne wrote several plays, of which *The Heiress* (1786) is best known. See biographies by Showell Styles (1962) and N. B. Gerson (1973). His illegitimate son Sir John Fox Burgoyne (1782-1871) served with distinction in the Peninsular War. In the Crimean War his advice was followed in attacking Sevastopol from the south—an action that led to a long and hard siege. He was created field marshal in 1868.

bur grass: see SANDBUR

Burgundians, medieval French political faction. see ARMAGNACS AND BURGUNDIANS

Burgundy (bûr'gændē), Fr. *Bourgogne* (bōrgō'nyā), historic region, E. France. The name once applied to a large area embracing several kingdoms, a free county (see FRANCHE-COMTÉ), and a duchy. The present region is identical with the province of Burgundy of the 17th and 18th cent. It is now administratively divided into the departments of Yonne, Côte-d'Or, Saône-et-Loire, Ain, and Nièvre. Burgundy west of the Saône River is generally hilly, the southeast includes the southern spurs of the Jura mts., the center is a lowland, extending south almost to the junction of the Saône and Rhône rivers (see BRESSE). A rich agricultural country, Burgundy is especially famous for the wine produced in the Chablis region, the mountains of the Côte d'Or, and the Saône and Rhône valleys. Dijon is the historic capital, other cities are Autun, Auxerre, Beaune, Bourg-en-Bresse, Chalon-sur-Saône, and Mâcon. The territory, conquered by Caesar in the GALLIC WARS, was divided first into the Roman provinces of Lugdunensis and Belgic Gaul, then into Lugdunensis and Upper Germany (see GAUL). It prospered, and Autun became a major intellectual center. In the 4th cent. Roman power dissolved, and the country was invaded by Germanic tribes. It was finally conquered (c. 480) by the Burgundii, a tribe from Savoy. The Burgundii accepted Christianity, established their *Lex Burgundionum*, and formed the First Kingdom of Burgundy, which at its height covered SE France and reached as far south as Arles and W. Switzerland. Conquered (534) by the FRANKS, it was throughout the Merovingian period subjected to numerous partitions. Burgundy nevertheless survived as a political concept, and after the partitions of the Carolingian empire two new Burgundian kingdoms were founded, Cisjurane Burgundy, or PROVENÇE, in the south (879) and Transjurane Burgundy in the north (888). These two were united (933) in the Second Kingdom of Burgundy (see ARLES, KINGDOM OF). A smaller area, corresponding roughly to present Burgundy, was created as the duchy of Burgundy by Emperor Charles II in 877. In 1002, King Robert II of France made good his claim to the duchy, but his son, Henry I, gave it in 1031 as a fief to his brother Robert, whose line died out in 1361. The golden age of Burgundy began (1364) when John II of France bestowed the fief on his son, PHILIP THE BOLD, thus founding the line of Valois-Bourgogne. Philip and his successors, JOHN THE FEARLESS, PHILIP THE GOOD, and CHARLES THE BOLD, acquired—by conquest, treaty, and marriage—vast territories, including most of the present Netherlands and Belgium, the then extensive duchy of Luxembourg, Picardy, Artois, Lorraine, S. Baden, Alsace, the Franche-Comté, Nivernais, and Charolais. In the early 15th cent. the dukes of Burgundy, through their partisans in France, dominated French politics (see ARMAGNACS AND BURGUNDIANS). England, at first supported by Burgundy in the HUNDRED YEARS WAR, suffered a crucial setback when Philip the Good withdrew that support in the Treaty of Arras (1435). A great power, Burgundy at that time had the most important trade, industry, and agriculture of Europe. Its court, a center of the arts, was second to none. The wars of ambitious Charles the Bold, however, proved ruinous. Charles, opposed by the determined and resourceful Louis XI of France, was defeated by the Swiss at Grandson, Morat (1476), and Nancy (1477), where he lost his life. His daughter, MARY OF BURGUNDY, by marrying Emperor Maximilian I, brought most of the Burgundian possessions (but not the original French duchy) to the house of Hapsburg. The duchy itself was seized by Louis XI, who incorporated it into the French crownlands as a province, to which Gex, Bresse, and Charolais were added later by Henry IV and Louis XIV. See studies by Richard Vaughan (1962, 1966, and 1970), Otto Cartellieri, *The Court of Burgundy* (1929, repr. 1972).

Burgundy mixture: see BORDEAUX MIXTURE

Burhanpur (bûr'hanpōr'), town (1971 pop. 105,349), Madhya Pradesh state, W. central India, on the Tapi River. It trades in cotton and oilseed, and

is known for its gold and silver embroidery. Founded c. 1400, Burhanpur has a partially ruined palace (c. 1610) of Akbar.

burial, disposal of a corpse in a GRAVE or TOMB. The first evidence of deliberate burial was found in European caves of the Paleolithic period. Prehistoric discoveries include both individual and communal burials, the latter indicating that pits or ossuaries were unsealed for later use or that servants or members of the family were slain to accompany the deceased. Both practices have been followed by various peoples into modern times. The ancient Egyptians developed the coffin to keep bodies from touching the earth, this burial practice was continued by the Greeks and Romans when they used the burial form of disposal. The word *burial* has been applied to funerary practices other than interment, such as sea burial, or tree burial (which usually precedes later interment). Secondary burial frequently occurs to terminate a period of mourning (see FUNERAL CUSTOMS). See also CEMETERY.

Buriat-Mongolia: see BURYAT AUTONOMOUS SOVIET SOCIALIST REPUBLIC

Buridan, Jean (byōō'rīdān, Fr. zhaN burēdāN'), d. c. 1358, French scholastic philosopher. Rector of the Univ. of Paris, he was a follower of William of Ockham and a nominalist. His theory of the will was that choice is determined by the greater good and that the freedom man possesses is the power to suspend choice and reconsider motives for action. Traditionally but almost certainly erroneously he is supposed to have used the simile of "Buridan's ass"—an unfortunate animal midway between two identical bundles of hay and starving to death because it cannot choose between them.

Burkburnett (bûrkbernēt'), city (1970 pop. 9,230), Wichita co., N. Texas, near the Okla. line, inc. 1913. A shipping center for livestock, cotton, and wheat, it also has many oil wells and refineries. The area's first big gusher (1918) brought a boom that transformed the quiet little community into one of the wildest and roughest of all the oil towns, at one time its population approached 30,000.

Burke, Edmund, 1729-97, British political writer and statesman, b. Dublin, Ireland. The son of a Protestant father and a Roman Catholic mother and himself a Protestant, he never ceased to criticize the stupidity of the English administration in Ireland and the galling discrimination against Catholics. After graduating (1748) from Trinity College, Dublin, he began the study of law in London but abandoned it to devote himself to writing. His satirical *Vindication of Natural Society* (1756) attacked the political rationalism and religious skepticism of Henry St. John, Viscount Bolingbroke, and his *Philosophical Enquiry into the Origin of Our Ideas of the Sublime and Beautiful* (1757) was a study in aesthetics. In 1759 he founded the *Annual Register*, a periodical to which he contributed until 1788. Burke was a member of Samuel Johnson's intimate circle. His political career began in 1765 when he became private secretary to the marquess of ROCKINGHAM, then prime minister, and formed a lifelong friendship with that leader. He also entered Parliament in 1765 and there strove for a wiser treatment of the American colonies. In 1766 he spoke in favor of the repeal of the Stamp Act, although he also supported the Declaratory Act, asserting Britain's constitutional right to tax the colonists. In his famous later speeches on American taxation (1774) and on conciliation with the colonies (1775), he did not abandon that position, rather he urged the imprudence of exercising such theoretical rights. At a time when political allegiances were based largely on family connections and patronage and political opposition was generally regarded as factionalism, Burke, in his *Thoughts on the Cause of the Present Discontents* (1770), became the first political philosopher to argue the value of political parties. He called for a limitation of crown patronage (so-called "economical reform") and as postmaster general (1782-83) in the second Rockingham ministry was able to enact some of his proposals. He was also interested in reform of the East India Company and drafted the East India Bill presented (1783) by Charles James Fox. Influenced by Sir Philip FRANKS, he also instigated the impeachment and long trial of Warren HASTINGS. Hastings was acquitted, but Burke's speeches created some new awareness of the responsibilities of empire and of the injustices perpetrated in India and previously unpublicized in England. Although he championed many liberal and reform causes, Burke believed that political, social, and religious institutions represented the wisdom of the ages. He feared political reform beyond limitations on the

power of the crown. Consequently, his *Reflections on the Revolution in France* (1790) made him the spokesman of European conservatives. His stand against the French Revolution—and, by implication, against parliamentary reform—caused him to break with Fox and his Whigs in 1791. Burke's *Appeal from the New to the Old Whigs* (1791) shows how closely he approached the Tory position of the younger William PITT. Burke left, in his many and diverse writings a monumental construction of British political thought that had far-reaching influence among conservatives in England, America, and France for many years. He held unrestricted rationalism in human affairs to be destructive and affirmed the utility of habit and prejudice and the importance of continuity in political experience. He withdrew from political life in 1795. See his correspondence (9 vol., 1958-70), selections ed. by W. J. Bate (1960), biography by P. M. Magnus (1939, repr. 1973), studies by T. W. Copeland (1949, repr. 1970), Charles Parkin (1956, repr. 1968), C. B. Cone (2 vol., 1957-64), P. J. Stanlis (1958, repr. 1965), G. W. Chapman (1967), Russell Kirk (1967), and B. T. Wilkins (1967).

Burke, John, 1787-1848, Irish genealogist. He issued (1826) *A Genealogical and Heraldic Dictionary of the Peerage and Baronetage of the United Kingdom*. He published the guide irregularly until 1847, after which it became an annual, commonly called *Burke's Peerage*. It was edited from 1847 to 1892 by his son, Sir John Bernard Burke, 1814-92, who was knighted (1854) and appointed (1855) keeper of the state papers in Ireland. As a companion to Burke's *Peerage*, he established the regular publication of another work begun by his father, commonly called *Burke's Landed Gentry*. His other works include *The Romance of the Aristocracy* (1855) and *Vicissitudes of Families* (1859-63).

Burke, Kenneth, 1897-, American critic, b. Pittsburgh, Pa. He was music critic for *The Dial* (1927-29) and *The Nation* (1934-36). A profound thinker whose writings have influenced other critics, Burke sees literature as "symbolic action"—man must view everything through a haze of symbols (language). Among his works are *Counter-Statement* (1931), *Attitudes Towards History* (1937), *A Grammar of Motives* (1962), *Collected Poems* (1968), and *The Complete White Oxen* (1968), short fiction.

Burke, Robert O'Hara, 1820-61, Irish explorer of Australia. After service in the Belgian and Austrian armies he went (1853) as inspector of police to Melbourne. In 1860, with W. J. Wills and eight other whites, he left Menindee, on the Darling River, to cross the continent. Dissensions broke up the party, but the leaders reached the estuary of the Flinders River, in the Gulf of Carpentaria. On the return journey both Burke and Wills died from famine and exposure. Although the geographical achievements of the expedition itself were few, rescue parties seeking it added much to the knowledge of central Australia. See C. G. D. Roberts, *Discoveries and Explorations in the Century* (1906), Max Colwell, *The Journey of Burke and Wills* (1971).

Burlamaqui, Jean Jacques (zhaN zhak bōrlā make'), 1694-1748, Swiss jurist. His chief works are *Principes du droit naturel* [principles of natural law] (1747) and *Principes du droit politique* [principles of political law] (1751). He attempted to demonstrate the reality of natural law by tracing its origin in God's rule and in human reason and moral instinct. He believed that both international and domestic law were based on natural law.

Burleigh, Henry Thacker (bûr'lē), 1866-1949, American baritone and composer, b. Erie, Pa., pupil of Dvořák at the National Conservatory, New York, where he later taught. He was soloist at St. George's Church, New York City, from 1892 to 1946 and also at Temple Emanu-El for 25 years. His concert arrangements of Negro spirituals such as *Deep River*, employing chromatic harmonies in the style of art songs, are widely used.

Burleigh, William Cecil, 1st Baron: see BURGLEY
Burleson, Albert Sidney (bûr'lē'son), 1863-1937, US Postmaster General (1913-21), b. San Marcos, Texas, grandson of Edward Burleson. He was a lawyer of Austin, Texas, and a member of the US House of Representatives (1899-1913) before resigning to take a cabinet post under President Wilson. His methods of administering communications in World War I angered many businessmen, who charged him with inefficiency and interference with private business, labor unions, because he forbade strikes of postal employees, and liberals whose antiwar periodicals he banned from the mails. Bur-

leson continued to exercise strict control and to advocate government ownership of communications. In 1918 he established airmail service.

Burleson, Edward, 1798-1851, pioneer of Texas, b. Buncombe co., N.C. After living in Tennessee and serving under Andrew Jackson in the war against the Creek Indians (1813-14), he moved to Texas. He distinguished himself in the Texas Revolution and was later (1840) successful in the warfare against the Cherokee in East Texas. Burleson was a senator, then vice president of the Republic of Texas, but was defeated for the presidency in 1844. He also served in the Mexican War.

burlesque (bûrlĕsk') [Ital., = mockery], form of entertainment differing from comedy or farce in that it achieves its effects through caricature, ridicule, and distortion. It differs from satire in that it is devoid of any ethical element. The word first came into use in the 16th cent. in an opera of the Italian Francesco Bemini, who called his works *burleschi*. Early English burlesque often ridiculed celebrated literary works, especially sentimental drama. Beaumont and Fletcher's *Knight of the Burning Pestle* (1613), Buckingham's *The Rehearsal* (1671), Gay's *Beggar's Opera* (1728), Fielding's *Tom Thumb* (1730), and Sheridan's *Critic* (1779) may be classed as dramatic burlesque. In the 19th cent. English burlesque depended less on parody of literary styles and models. H. J. Bryon was a major writer of the new, pun-filled burlesque. The extravaganza and burletta were forms of amusement similar to burlesque, the latter being primarily a musical production. They were performed in small theaters in an effort to evade the strict licensing laws that forbade major dramatic productions to these theaters. American stage burlesque (from 1865), often referred to as "burleycue" or "leg show," began as a variety show, characterized by vulgar dialogue and broad comedy, and uninhibited behavior by performers and audience. Such stars as Al Jolson, W. C. Fields, Mae West, Fannie Brice, Sophie Tucker, Bert Lahr, and Joe Weber and Lew Fields began their careers in burlesque. About 1920 the term began to refer to the "strip-tease" show, which created its own stars, such as Gypsy Rose Lee, in c. 1937 burlesque performances in New York City were banned. With the increase in popularity of nightclubs and movies, the burlesque entertainment died. See studies by C. V. Clinton-Baddeley (1952, repr. 1974), R. P. Bond (1932, repr. 1964), and J. D. Jupp (1972).

Burlin, Natalie Curtis, 1875-1921, American writer and musician, b. New York City, studied music in France and Germany. She was one of the leading transcribers of the primitive music of America and Africa, and it was through her efforts that Indian music was encouraged, rather than forbidden by law, in government schools. She visited the Navaho, Zuni, Hopi, and other Indian tribes, recording words and music with fidelity. Songs of African tribes and American Negroes are also included in her works—*Songs of Ancient America* (1905), *The Indians' Book* (1907), *Hampton Series Negro Folk-Songs* (4 vol., 1918-19), and *Songs and Tales from the Dark Continent* (1920).

Burlingame, Anson (bûrl'ing-gām), 1820-70, American diplomat, b. New Berlin, N.Y. He became a lawyer in Boston and later (1855-61) a Congressman. Defeated for reelection, he was made (1861) minister to China. By his tact and understanding of Chinese opposition to the autocratic methods of foreigners in the treaty ports, he won a place as adviser to the Chinese government. In 1867, China sent him as head of a mission to visit foreign lands in order to secure information and sign treaties of amity. He visited Washington, London, and capitals on the Continent. One result was a treaty between China and the United States, supplementary to the 1858 treaty. This, usually called the Burlingame Treaty, was signed in 1868. It was a treaty of friendship based on Western principles of international law. One clause encouraged Chinese immigration—laborers were then much in demand in the West, later the heavy influx of Chinese under its provisions caused friction on the West Coast and led to the exclusion of Chinese immigrants (see CHINESE EXCLUSION). See biography by F. W. Williams (1912, repr. 1972).

Burlingame, city, (1970 pop. 27,320), San Mateo co., W. Calif., on San Francisco Bay, founded 1868, inc. 1908. Burlingame is mainly residential, with some commercial and light industries. The city is named for U.S. diplomat Anson Burlingame.

Burlingame Treaty. see under BURLINGAME ANSON

Burlington, Richard Boyle, 3d earl of, 1694-1753, English patron and architect of the Neo-Palladian

movement. Even before age 21, when he became a member of the Privy Council and Lord High Treasurer of Ireland, he showed an interest in architecture. In 1714, Burlington made a tour of Italy and also subscribed to the *Vitruvius Britannicus* of Colin Campbell. He employed Campbell to remodel the Burlington House in London (c. 1717). In 1719, Burlington was again in Italy, specifically to study the architecture of Palladio. Through his patronage of other artists, notably William Kent, and in his own buildings, he furthered the revival of an architecture based on the styles of Palladio and Inigo Jones. The most important of Burlington's own works are the villa for his estate at Chiswick (begun 1725) and the Assembly Room, York (1730).

Burlington, town (1971 pop. 87,023), SE Ont., Canada, on Lake Ontario. It is a suburb of Hamilton.

Burlington, 1 City (1970 pop. 32,366), seat of Des Moines co., SE Iowa, on four hills overlooking the Mississippi (spanned there by rail and highway bridges), inc. 1836. It is a farm, shipping, and manufacturing center with railroad shops and docks. Zebulon Pike selected this spot for a fort in 1805. An Indian village, Sho-quo-quon ("Flint Hills") was there. White settlement began in 1833. Burlington was the temporary capital of Wisconsin Territory (1837) and of Iowa Territory (1838-40). One of the oldest newspapers in the state, the *Burlington Hawk-Eye*, is still published. The city has a junior college and several parks along the Mississippi. 2 Town (1970 pop. 21,980), Middlesex co., E. Mass., a residential suburb of Boston, in a farm area, settled 1641, inc. 1799. Its pre-Revolutionary meetinghouse, remodeled, still stands. 3 City (1970 pop. 11,991), Burlington co., W. N.J., on the Delaware (bridged there to Bristol, Pa.) between Trenton and Camden, in a rich farm area, settled 1677 by Friends, inc. 1733. A shipping point for farm and dairy products, it also has varied manufactures. Burlington grew mainly as a port, it was capital of West Jersey from 1681 until the union of East and West Jersey (1702), and thereafter until 1790 was alternate capital with Perth Amboy. It was on a Philadelphia-New York coach line, and railroad tracks were laid down Broad St. in 1834. The first colonial money was printed there by Benjamin Franklin in 1726, and the first newspaper in New Jersey appeared in 1777. G. W. Doane, for many years rector of old St. Mary's (built 1703), founded St. Mary's Hall for girls there (1837). The newer St. Mary's church was designed by Richard Upjohn. The Friends' school (1792, now the Y.W.C.A.) and meetinghouse (1784) still stand. The birthplaces of James Fenimore Cooper and of James Lawrence are preserved. 4 City (1970 pop. 35,930), Alamance co., N. C., on the Haw River, settled c. 1700, inc. 1866. It is a great textile center in a heavily industrialized area, with plants manufacturing textiles, hosiery, and yarn. In May, 1771, 2,000 colonial "Regulators" clashed with British troops c. 5 mi (8 km) south of Burlington, the site is in Alamance Battleground State Park. In the city are a notable wildlife museum and the Technical Institute of Alamance. Elon College is to the west. 5 City (1970 pop. 38,633), seat of Chittenden co., NW Vt., on Lake Champlain, settled 1773, inc. 1865. The largest city in the state, it is a port of entry and a major industrial center. Missile and ordnance parts, data-processing machinery, textiles, canned goods, and wood and steel products are its chief manufactures. Battery Park, famous for sunset views, was the scene of an abortive British naval attack (Aug. 3, 1813) during the War of 1812. The city is the seat of the Univ. of Vermont, Trinity College, and Champlain College (a junior college). American Revolutionary hero Ethan Allen spent his last years near Burlington village (part of his farm is included in Ethan Allen Park) and is buried nearby. The *Burlington Free Press* (founded 1827) became Vermont's first daily newspaper in 1847. The philosopher John Dewey was born in the city.

Burma, Union of, republic (1969 est. pop. 26,980,000), 261,789 sq. mi. (678,033 sq. km), SE Asia. The capital is RANGOON. Burma is bounded on the W by Bangladesh, India, and the Bay of Bengal, on the N and NE by China, on the E by Laos and Thailand, and on the S by the Andaman Sea. The most densely populated part of the country is the valley of the Irrawaddy River, which, with its vast delta, is one of the main rice-growing regions of the world. MANDALAY, the country's second largest city, is on the Irrawaddy in central Burma. The Irrawaddy basin is inhabited by the Burmans proper, a Mongoloid race who came down from Tibet by the 9th cent. The valley is surrounded by a chain of mountains that stem from the E Himalayas and spread out roughly

in the shape of a giant horseshoe, the ranges and river valleys of the Chindwin (a tributary of the Irrawaddy) and of the Sittang and the Salween (both to

the E of the Irrawaddy) trend from north to south. In the mountains of N Burma (rising to more than 19,000 ft/5,791 m) and along the India-Burma frontier live various Mongoloid peoples, the most important are the Kachins (in the Kachin State in the north) and the Chins (in the Chin Special Division in the west). These peoples practice shifting cultivation (taungya) and cut teak in the forests. Between the Bay of Bengal and the hills of the Arakan Yoma is the ARAKAN, a narrow coastal plain with the port of SITTAWE. In E Burma on the Shan Plateau is the SHAN STATE, home of the Shans, a Tai race closely related to the Siamese. South of the Shan State are the mountainous Kayah State and the Kawthle State, the Karens, who inhabit this region, are of Tai-Chinese origin, and many are Christians. South of the Kawthle State is the TENASSERIM region, a long, narrow strip of coast extending to the Isthmus of Kra. At its northern end is the port of MOULMEIN, Burma's third largest city. Most of Burma has a tropical, monsoon climate, however, N of the Pegu Hills around Mandalay is the so-called Dry Zone with a rainfall of 20 to 40 in. (51-102 cm). On the Shan Plateau temperatures are moderate. Burma suffered extensive damage in World War II, and some sectors of its economy have not yet fully recovered. Most of the population work in agriculture and forestry, and rice accounts for about half of the agricultural output. (Until 1964 Burma was the world's largest rice exporter.) Other important crops are sugarcane, groundnuts, and pulses. Burma's forests, which are government-owned, are the source of teak and other hardwoods. The country is rich in minerals. Petroleum is found E of the Irrawaddy in the Dry Zone. Tin and tungsten are mined in E Burma, the Mawchi mines in Kayah State are also rich in tungsten. In the Shan State, NW of Lashio, are the Bawdwin mines, the source of lead, silver, and zinc. Coal and iron deposits have also been found in Burma. Gems (notably rubies and sapphires) are found near MOGOK. Since the 13th cent., Burma has exported to China jade from the Hunkawng valley in the north. Aside from food-processing establishments, there are few manufacturing industries in Burma. The country's chief trade partners are Japan, Great Britain, West Germany, and India. Rice and teak are the leading exports, and machinery, transportation equipment, and textiles are the chief imports. Hinayana Buddhism is the religion of about 85% of the population. Burmese (the tongue of the Burmans) is the official language, but the Shans, Kachins, and Karens speak their own languages in all, over 100 languages

are spoken in Burma. There are colleges and universities in Rangoon and Mandalay.

History Burma's early history is mainly the story of the struggle of the Burmans against the Mons, or Talaings (of Mon-Khmer origin, now assimilated). In 1044, King Anawratha established Burman supremacy over the Irrawaddy delta and over Thaton, capital of the Mon kingdom. Anawratha adopted Hinayana Buddhism from the Mons. His capital, Paga, "the city of a thousand temples," was the seat of his dynasty until it was conquered by Kublai Khan in 1287. Then Shan princes predominated in upper Burma, and the Mons revived in the south. In the 16th cent the Burman Toungoo dynasty unified the country and initiated the permanent subjugation of the Shans to the Burmans. In the 18th cent the Mons of the Irrawaddy delta overran the Dry Zone. In 1758, Alaungapaya rallied the Burmans, crushed the Mons, and established his capital at Rangoon. He extended Burman influence to areas in present-day India (Assam and Manipur) and Thailand. Burma was ruled by his successors (the Konbaung dynasty) when friction with the British over border areas in India led to war in 1824. The Treaty of Yandabo (1826) forced Burma to cede to British India the Arakan and Tenasserim coasts. In a second war (1852) the British occupied the Irrawaddy delta. Fear of growing French strength in the region, in addition to economic considerations, caused the British to instigate the third Anglo-Burman War (1885) to gain complete control of Burma. The Burman king was captured, and the remainder of the country was annexed to India. Under British rule rice cultivation in the delta was expanded, an extensive railroad network was built, and the natural resources of Burma were developed. Exploitation of the rich oil deposits of Yenangyaung in central Burma was begun in 1871, the export of metals also became important. Until the 20th cent, however, Burma was allowed no self-government. In 1923 a system of "dyarchy," already in effect in the rest of British India, was introduced, whereby a partially elected legislature was established and some ministers were made responsible to it. In 1935 the British gave Burma a new constitution (effective 1937), which separated the country from British India and provided for a fully elected assembly and a responsible cabinet. During World War II, Burma was invaded and quickly occupied by the Japanese, who set up a nominally independent Burman regime under Dr. Ba Maw. Disillusioned members of the Burmese Independent Army (which the Japanese had formed secretly before the war to assist in expelling the British) under Aung San formed an anti-Japanese resistance movement, the Anti-Fascist People's Freedom League (AFPFL). Allied forces drove the Japanese out of Burma in April, 1945. In 1947 the British and Aung San reached agreement on full independence for Burma. Most of the non-Burman peoples supported the agreement, although the acquiescence of many proved short-lived. Despite the assassination of Aung San in July, 1947, the agreement went into effect in Jan., 1948. Burma became an independent republic outside the British Commonwealth of Nations. The new constitution provided for a bicameral legislature with a responsible prime minister and cabinet. Non-Burman areas were organized as the Shan, Kachin, Kachin, Kachin, and Kayah states and the Chin Special Division, each possessed a degree of autonomy. The government, controlled by the socialist AFPFL, was soon faced with armed risings of Communist rebels and of Karen tribesmen, who wanted a separate Karen nation. International tension grew over the presence in Burma of Chinese Nationalist troops who had been forced across the border by the Chinese Communists in 1950 and who were making forays into China. Burma took the matter to the United Nations, which in 1953 ordered the Nationalists to leave Burma. In foreign affairs Burma has followed a generally neutralist course. It refused to join the Southeast Asia Treaty Organization and was one of the first countries to recognize the Communist government in China. In the elections of 1951-52 the AFPFL triumphed. The AFPFL leaders intended to socialize the country rapidly, but lower rice prices after the Korean War and a shortage of trained personnel forced the abandonment of most of the plans. In 1958 the AFPFL split into two factions, with a breakdown of order threatening. Premier U Nu invited General Ne Win, head of the army, to take over the government (Oct., 1958). After the 1960 elections, which were won by U Nu's faction, civilian government was restored. However, as rebellions among the minorities flared and opposition to U Nu's plan to make Buddhism the state

religion mounted, conditions deteriorated rapidly. In March, 1962, Ne Win staged a military coup, discarded the constitution, and established a Revolutionary Council, made up of military leaders who ruled by decree. While the federal structure was retained, a hierarchy of workers' and peasants' councils was created. A new party, the Burma Socialist Program party, was made the only legal political organization. The Revolutionary Council fully nationalized the industrial and commercial sectors of the economy. Discussions were entered into with the minority peoples in 1963, but no agreement was reached. Insurgency became a major problem of the Ne Win regime. Pro-Chinese Communist rebels—the "White Flag" Communists—were active in the northern part of the country, where, from 1967 on, they received aid from Communist China, the Chinese established links with the Shan and Kachin insurgents as well. The deposed U Nu, who managed to leave Burma in 1969, also used minority rebels to organize an anti-Ne Win movement, the National Liberation Council, among the Shans, Karens, and others in the east. However, in 1972, U Nu split with minority leaders over their assertion of the right to secede from Burma. By the early 1970s the various insurgent groups controlled about one third of Burma. Ne Win and other top leaders resigned from the military in 1972 but continued to retain power. A new constitution, providing for a unicameral legislature and one legal political party, took effect in Mar., 1974, and the Revolutionary Council was disbanded. Ne Win continued as prime minister. See J. F. Cady, *A History of Modern Burma* (1958), F. N. Trager, *Burma From Kingdom to Republic* (1966), M. Htin Aung, *A History of Burma* (1967), Hugh Tinker, *The Union of Burma* (4th ed. 1967), F. S. Donison, *Burma* (1970), Norma Bixler, *Burma: A Profile* (1971), J. W. Henderson et al., *Area Handbook for Burma* (1971).

bur marigold or **sticktight**, common name for any species of *Bidens*, a genus of chiefly weedy North American plants of the Compositae (COMPOSITE family) with two-pronged burlike fruits (achenes) that have gained various species such additional names as beggar-ticks, Spanish needles, tickseed, and boot-jacks. A few showy yellow-flowered species are occasionally cultivated. Many of the common names are also used for other weeds with burs. Bur marigold is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Asterales, family Compositae.

Burma Road, in China and Burma, extending from the Burmese railroad of Lashio to K'un-ming, Yunnan prov., China. About 700 mi (1,130 km) long and constructed through rough mountain country, it was a remarkable engineering achievement. Undertaken by the Chinese after the start of the Sino-Japanese war in 1937 and completed in 1938, it was used to transport war supplies landed at Rangoon and shipped by railroad to Lashio. This traffic increased in importance to China after the Japanese took effective control of the Chinese coast and of Indochina. The Ledo Road (later called the Stilwell Road) from Ledo, India, into Burma was begun in Dec., 1942. In 1944 the Ledo Road reached Myitkyina and was joined to the Burma Road. Both roads have lost their former importance and are in a state of disrepair. See study by Leslie Anders (1965).

Burmese, language belonging to the Tibeto-Burman subfamily of the Sino-Tibetan family of languages (see SINO-TIBETAN LANGUAGES). It is spoken by about 18 million people in the Union of Burma, where it is both the principal and the official language. Burmese can be described as monosyllabic because root words generally consist of a single syllable. Context, word order, and the use of musical pitch or tones, of which Burmese has three, help to differentiate the meanings of the many homonyms. Syllables are often used in combination, thereby increasing the number of ideas that can be expressed. Burmese has its own alphabet, which is ultimately descended from an old script from S. India. There is a great difference between the spoken and written forms of the language. See John Okell, *Reference Grammar of Colloquial Burmese* (1969), William S. Cornyn, *Spoken Burmese* (1971).

Burmese cat see CAT

burn, injury resulting from exposure to heat, electricity, radiation, or caustic chemicals. Three degrees of burn are commonly recognized. In first-degree burns the outer layer of skin, called epidermis, becomes red, sensitive to the touch, and often swollen. Medical attention is not required but applica-

tion of an ointment may relieve the pain. Second-degree burns are characterized by the variable destruction of epidermis and the formation of blisters; nerve endings may be exposed. The more serious cases should be seen by a physician and care should be taken to avoid infection. Local therapy includes application of a chemical such as silver nitrate to produce a soft crust, reduce the threat of infection, and relieve the pain. Third-degree burns involve destruction of the entire thickness of skin and the underlying connective tissue. In the more severe cases underlying bones are also charred. The surface area involved is more significant than the depth of the burn. SHOCK must be prevented or counteracted; blood transfusion may be required to replace lost body fluids. Invasion of various bacteria must be prevented or cured by administering antibiotics and other drugs. Morphine may be employed to ease pain. Long-term treatment may include TRANSPLANTATION of skin tissue from other parts of the body.

Burne-Jones, Sir Edward, 1833-98. English painter and decorator, b. Birmingham. Expected to enter the Church, he went to Exeter College, Oxford, where he met William Morris, who became his lifelong friend. He left Oxford to study painting with Rossetti in London and joined the PRE-RAPHAELITES. Burne-Jones's early work shows Rossetti's strong influence, which was later replaced by his emulation of Botticelli and Mantegna. Burne-Jones rose to success in 1877 with the opening of the Grosvenor Gallery. Among his well-known paintings are *King Co. phetua* and *The Beggar Maid* (1884, Tate Gall., London), *Depths of the Sea*, and *Star of Bethlehem* (Birmingham Gall.). His works described a dream like, medieval world, a vision popular with his contemporaries. His designs for stained glass, executed by Morris and Company, may be seen in churches throughout England. Burne-Jones also created the woodcut illustrations for the Kelmscott Press edition of the works of Chaucer. In his day he received many honors, and his delicate, though mannered, work continues to be admired. See his drawings, studies, and paintings, ed. by Piccadilly Gallery (1971), studies by L. D. Cecil (1960) and Martin Harrison and Bill Waters (1973).

Burnes, Sir Alexander, 1805-41, British traveler in India. As an army officer in India, he studied Oriental languages. In 1832 he left Lahore in Afghan dress and traveled by way of Peshawar and Kabul across the Hindu Kush to Balkh and from there by Bukhara, Asterabad, and Teheran to Bushire. On his return to England (1833) he was honored. In 1839 he was appointed political resident at Kabul, where he was assassinated two years later. See his *Narrative of a Visit to the Court of Scinde* (1830), *Travels into Bokhara* (1834), and *Cabool* (1842). See also biography by J. D. Lunt (1969).

Burnet, David Gouverneur, 1788-1870, provisional president of Texas (1836), b. Newark, N.J., son of William Burnet (1730-91). He went to Texas c. 1817, and his legal training enabled him to become a spokesman for the American settlers there as dissension with the Mexican government grew. Appointed (1834) a district judge, he opposed the measures of the Mexican government and was gradually led to favor the independence of Texas from Mexico. In 1836 he drew up the declaration of independence at the convention at Washington-on-the-Brazos, where he was made president ad interim of Texas. His eight-month administration in the chaotic times during and after the revolution (see TEXAS) was not effective. He quarreled bitterly with Sam Houston and thereafter opposed him in politics. Burnet was vice president under Mirabeau B. Lamar, was defeated by Houston for the presidency in 1841, and was chosen in 1866 (because he had opposed secession) U.S. Senator from Texas in the Reconstruction era, but was denied his seat. See biography by Mary Clarke (1969).

Burnet, Gilbert (börn't), 1643-1715, British bishop and writer. He studied abroad, held (1665-69) the living of Saltoun in Scotland, and was appointed (1669) professor of divinity at Glasgow Univ. He went to London in 1673 and was lecturer at St. Clements until his defense of his friend Lord William Russell made it unsafe for him in England after the Rye House Plot executions. During James II's reign Burnet's anti-Catholic writing and preaching barred him from court, and he found favor and friendship with William of Orange at The Hague. Accompanying William to England, he was a trusted adviser to William III and Mary II and was made bishop of Salisbury. His celebrated *History of My Own Times* (published only 1723-24, ed. by M. I. Routh, 6 vol., 1833) is fiercely biased against James II.

II, but it is also an informative contemporary source for the period Burnet made a translation of Sir Thomas More's *Utopia*. He also wrote *History of the Reformation in England* (3 vol., 1679-1714, abridged ed. 1719), notable for its understanding of the economic, social, and cultural causes and effects of the Reformation, and many lesser works on history and theology. See biography by T. E. S. Clarke and H. C. Foxcroft (1907).

Burnet, Sir Macfarlane, 1899-, Australian virologist and physician. He was resident pathologist (1923-24) at the Royal Melbourne Hospital and a Beit fellow (1926-27) at the Lister Institute, London. He became assistant director (1928) and director (1944) of the Walter and Eliza Hall Institute at the Royal Melbourne Hospital. From 1944 he was professor of experimental medicine at the Univ. of Melbourne. He lectured at several universities in the United States, including Harvard (1944), Johns Hopkins (1950), and Vanderbilt (1958). An expert on viruses and virus diseases, Burnet made important contributions to the understanding of influenza and the development of immunity against it. He shared the 1960 Nobel Prize in Medicine and Physiology with P. B. Medawar for their work in immunological tolerances, specifically the reactions of the body to the transplantation of foreign living tissues. His writings include *Natural History of Infectious Disease* (3d ed. 1962) and *Viruses and Man* (2d ed. 1955). See his autobiography (1969).

Burnet, Thomas, c. 1635-1715, English cleric and scientist, b. Croft, in Yorkshire, England. He was educated at Northallerton and Cambridge. Following travels in Europe, Burnet published in 1681 the first two parts of his theory of the formation of the earth under the title *Telluris theoria sacra* (English version *Sacred Theory of the Earth*, 1684), in which he held that at the time of the Deluge the earth was crushed like an egg, the fragments of the shell becoming mountains. Burnet's book attracted much attention, and his description of the creation of mountains and his stress on the account of creation in Genesis influenced the new science of geology for a hundred years. In his *Archaeologiae philosophicae* (1692) he treated the account of the fall of man as an allegory. See M. H. Nicolson, *Mountain Gloom and Mountain Glory* (1963).

Burnet, William, 1688-1729, English colonial governor in America, son of Gilbert Burnet. As governor of New York and New Jersey (1720-28), he advocated extending the trade with the Indians, thereby seeking to bind the Iroquois to the British and keep them from French influence—a move that was to be of great significance in the French and Indian Wars. He had the first English fort on the Great Lakes built at Oswego. His efforts to regulate trade were opposed by Albany merchants who made great profit in selling English goods to French traders. Burnet was embroiled in arguments with the assembly over policies and finance. After he dissolved the assembly in 1727, he was transferred to govern Massachusetts and New Hampshire.

Burnet, William, 1730-91, political leader in the American Revolution, b. near the present Elizabeth, N.J., father of David G. Burnet. A physician practicing in Newark, Burnet was chairman of the Revolutionary committee of safety there. He set up (1775) a military hospital and helped to furnish troops and supplies for the Continental army. He became surgeon general of the army for the eastern district and was also a member of the Continental Congress in 1776 and in 1780.

burnet, hardy perennial herb of the family Rosaceae (ROSE family) found in temperate regions, usually with white or greenish flowers. The European species are sometimes cultivated for the leaves, which are used in salads, for flavoring, and formerly as a poultice to stop bleeding—hence the botanical name *Sanguisorba* [from Lat. =absorbing blood]. Burnet is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rosales, family Rosaceae.

Burnett, Frances Eliza Hodgson, 1849-1924, American author, b. Manchester, England. In 1865 she went to Knoxville, Tenn., with her family. She is famous for her children's books, particularly *Little Lord Fauntleroy* (1886, successfully dramatized by the author in 1888), *Sara Crewe* (1888), and *The Secret Garden* (1911). See biography by Ann Thwaite (1974).

Burnett, James: see MONBODDO JAMES BURNETT LORD

Burney, Charles, 1726-1814, English music historian, composer, and organist. His *General History of*

Music (1776-89, 2d ed., 1935) was one of the first important music histories in English. He wrote *The Present State of Music in France and Italy* (1771) and *The Present State of Music in Germany* (1773). They were published together as *Dr. Burney's Musical Tours in Europe* (1959). The work describes European society, life, and customs as well as music and important musicians. His daughter, the novelist Fanny Burney, compiled his memoirs (1832). See biographies by P. A. Scholes (1848) and R. H. Lonsdale (1965).

Burney, Fanny, later **Madame D'Arblay** (därbli'), 1752-1840, English novelist, daughter of Charles Burney, the composer and organist. Although she received no formal education, she read prodigiously and had the benefit of conversation with her father's famous friends, including David Garrick and Samuel Crisp. Her first novel, *Evelina* (1778), was published anonymously, but Miss Burney soon acknowledged its authorship and achieved literary prominence. She became an intimate friend of Samuel Johnson and his circle. Her second novel, *Cecilia*, appeared in 1782, *Camilla* in 1796, and *The Wanderer* in 1814. The theme of her books is the entry into society of a virtuous, but inexperienced young girl, her mistakes and her gradual coming of age. Miss Burney spent five unhappy years (1786-91) as a member of Queen Charlotte's household. In 1793 she married General D'Arblay, a French emigré. Her diary and letters give an excellent account of English culture and society from 1768 to 1840. See biography by Emily Hahn (1950), studies by Joyce Hemlow (1958) and M. E. Adelstein (1969).

Burnham, Daniel Hudson, 1846-1912, American architect and city planner. b. Henderson, N.Y., d. Heidelberg, Germany. He was trained in architects' offices in Chicago. With John W. Root he established in Chicago a partnership (1873) which gained many of the most important architectural commissions of the day. Their Chicago works included the Monadnock Building, the 20-story Masonic Temple Building (1892), the first important skeleton skyscraper, the Reliance Building, and the "Rookery" offices, the first suitably planned modern office building. Other works were the Flatiron Building and the Wanamaker store in New York City, the Union Passenger Station in Washington, and buildings in Cleveland, Buffalo, and San Francisco. Burnham and Root designed the general plan for the Columbian Exposition at Chicago (1893), exerting through it an enormous influence upon contemporary civic design. In 1901, Burnham served with C. F. McKim, F. L. Olmsted, Jr., and Augustus Saint-Gaudens on the Senate Park Commission in planning for the future beautification of Washington, D.C. With E. H. Bennett he created a civic improvement plan of great importance for Chicago (1907), much of which has since been put into execution. He also prepared plans for Baltimore, Duluth, and San Francisco and was commissioned by the U.S. government to design plans for Manila and other cities in the Philippines, including Baguio, the summer capital.

Burnham, Forbes, 1923-, prime minister of Guyana (1964-), formerly British Guiana. His full name is Linden Forbes Sampson Burnham. Of black African descent, he received a law degree (1947) from the Univ. of London. Returning to his homeland, he founded (1950), with Cheddi Jagan, a political party devoted to gaining independence from Great Britain. He broke with Jagan in 1955 to form a more moderate party. In the 1964 elections his party trailed Jagan's, but Burnham, overcoming Jagan's plurality by uniting with a small third party, was named prime minister. He led his country to independence within the British Commonwealth (1966), and, despite vigorous opposition from Jagan, was reaffirmed in his position as prime minister in elections in 1968 and 1973. With enormous U.S. aid, he furthered public works and decreased the country's high unemployment rate. He promoted the nationalization of natural resources and attempted to ease racial tensions between Negroes and East Indians by opening government positions to the East Indians.

Burnham, Sherburne Wesley, 1838-1921, American astronomer, b. Thetford, Vt. After serving as observer at Dearborn Observatory, Chicago (1877-81, 1882-84), and as astronomer at Lick Observatory (1888-92), he was from 1893 astronomer at Yerkes Observatory and professor of astronomy at the Univ. of Chicago. Although his interest in astronomy had begun with amateur observations, he became outstanding in the field, especially through his discoveries of double stars. He wrote *General Cata-*

logue of Double Stars (1906) and *Measures of Proper Motion Stars* (1913).

burning bush, name for a North American plant of the family Celastraceae (STAFF-TREE family). The scriptural burning bush not consumed by fire (Ex. 3:2) is sometimes associated with a bramble or thorn and was adopted by the Presbyterian Church as an emblem of its early persecution. Burning bush is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Celastrales, family Celastraceae.

Burnley, county borough (1971 pop. 76,483), Lancashire, NW England. Coal mining and cotton weaving, the keys to Burnley's growth, are still important industries. Associated with cotton-cloth production are calico printing and the manufacture of textile machinery. Other products of Burnley are electrical heating appliances, kitchen equipment, and gas turbines.

Burns, Arthur F., 1904-, American economist, b. Austria, grad. Columbia Univ. (A.B., 1925, A.M., 1925, Ph.D., 1934). He taught economics at Rutgers Univ. (1927-44), and then joined (1944) the faculty of Columbia, where he became John Bates Clark professor of economics in 1959. A member of the National Bureau of Economic Research from 1933, he was director of research (1945-53) and president (1957-67) of that organization. Under President Eisenhower, Burns was chairman (1953-56) of the Council of Economic Advisers. He returned to government service as economic counselor (1969-70) to President Nixon and as chairman (1970-) of the board of governors of the Federal Reserve System.

Burns, John, 1858-1943, British union leader and politician. A factory worker as a child, he was largely self-educated and was led by his reading to radical socialism. Burns became an outstanding orator, and in 1889 he was one of the leaders of the London dock strike, an attempt to organize the ill-paid unskilled laborers. Burns was elected (1892) to Parliament among the first labor representatives, but he quarreled with James Kier Hardie and soon abandoned both socialism and the trade union movement. Henceforth associated with the Liberals, he was president of the local government board (1905-14), but resigned from the cabinet in protest against Britain's entry into World War I. He retired from Parliament in 1918. See biographies by G. D. H. Cole (1943) and William Kent (1950).

Burns, Otway, c. 1775-1850, American privateer, b. Onslow co., N.C. At the outbreak of the War of 1812, he outfitted the Baltimore clipper *Snap-Drum* as a privateer and began one of the most spectacular privateering careers in American history. He destroyed and captured millions of dollars worth of British shipping and had a \$50,000 price set on his head by the British. After the war Burns turned to shipbuilding and later served (1821-35) in the North Carolina legislature. See biography by W. F. Burns (1905).

Burns, Robert, 1759-96, Scottish poet. The son of a hard-working and intelligent farmer, Burns was the oldest of seven children, all of whom had to help in the work on the farm. Although always hard pressed financially, the elder Burns, until his death in 1784, encouraged his sons with their education. As a result, Burns as a boy not only read the Scottish poetry of Ramsay and the collections compiled by Hailes and Herd, but also the works of Pope, Locke, and Shakespeare. By 1781, Burns had tried his hand at several agricultural jobs without success. Although he had begun writing, and his poems were circulated widely in manuscript, none were published until 1786. At this time he had already begun a life of dissipation, and he was not only discouraged but poor and was involved simultaneously with several women. He decided to marry Mary Campbell and migrate to Jamaica. To help finance the journey, he published at Kilmarnock *Poems, Chiefly in the Scottish Dialect* (1786), which was an immediate success. Mary Campbell died before she and Burns could marry, and Burns changed his mind about migration. He toured the Highlands, brought out a second edition of his poems at Edinburgh in 1787, and for two winters was socially prominent in the Scottish city. In 1788 he married Jean Armour, who had borne him four children, and retired to a farm at Ellisland. By 1791 Burns had failed as a farmer, and he moved to nearby Dumfries, where he held a position as an exciseman. He died at 37 after a severe attack of rheumatic fever. Burns's art is at its best in songs such as "Flow Gently, Sweet Afton," "My Heart's in the Highlands," and "John Anderson My Jo." Two collections contain 268 of his songs—George Thomson's *Select Collection of Original Scottish Airs for the Voice* (6 vol., 1793-1811) and

James Johnson's *Scots Musical Museum* (5 vol., 1787-1803). Some of these, such as "Auld Lang Syne" and "Comin' thro' the Rye," are among the most familiar and best-loved poems in the English language. But his talent was not confined to song, two descriptive pieces, "Tam o' Shanter" and "The Jolly Beggars," are among his masterpieces. Burns had a fine sense of humor, which was reflected in his satirical, descriptive, and playful verse. His great popularity with the Scots lies in his ability to depict with loving accuracy the life of his fellow rural Scots, as he did in "The Cotter's Saturday Night." His use of dialect brought a stimulating, much-needed freshness and raciness into English poetry, but Burns's greatness extends beyond the limits of dialect. His poems are written about Scots, but, in tune with the rising humanitarianism of his day, they apply to man's universal problems. See his poems (ed. by J. L. Robertson, 1953), biographies by Maurice Lindsay (2d ed., 1968) and R. T. Fitzhugh (1970), studies by David Daiches (rev. ed. 1967, and 1971).

Burnside, Ambrose Everett, 1824-81, Union general in the U.S. Civil War, b. Liberty, Ind. He saw brief service in the Mexican War and remained in the army until 1853, when he entered business in Rhode Island. In the Civil War, Burnside commanded a brigade at the first battle of Bull Run and was made (Aug., 1861) a brigadier general of volunteers. His expedition to the North Carolina coast (1862), resulting in the capture of Roanoke Island, New Bern, Beaufort, and Fort Macon, won him a major generality and much prestige. He commanded under G. B. McClellan in the ANTIETAM CAMPAIGN and shortly afterward succeeded that general in command of the Army of the Potomac. After a costly defeat at the battle of Fredericksburg (see FREDERICKSBURG, BATTLE OF) in Dec., 1862, Burnside asked President Lincoln either to sustain him in dismissing Joseph HOOKER and several other generals who opposed his plans, or to remove Burnside himself. Lincoln relieved him in favor of Joseph Hooker. As commander of the Dept. of the Ohio (March-Dec., 1863), he occupied E. Tennessee, took Knoxville, and repulsed James Longstreet's attempt to recapture the town. In 1864 he commanded under generals Meade and Grant in Virginia. Held partially responsible for the fiasco at PETERSBURG, he was relieved. Burnside was elected governor of Rhode Island in 1866 and was reelected in 1867 and 1868. From 1875 to his death he was a U.S. Senator. He originated the fashion of wearing long side whiskers, thus the term *burnsides* or *sideburns*. See biography by B. P. Poore (1882), K. P. Williams, *Lincoln Finds a General* (Vol. II, 1950).

Burr, Aaron, 1756-1836, American political leader, b. Newark, N.J. A brilliant law student, he interrupted his study to serve in the American Revolution and proved himself a valiant soldier in the early campaigns of the war for independence. In 1779 ill health forced him to leave the army. Upon admission (1782) to the bar, he plunged with characteristic energy into the practice of law and of politics. He served as member (1784-85, 1797-99) of the New York assembly, as state attorney general (1789-91), and as U.S. Senator (1791-97). Defeated for reelection to the assembly in 1799, he set about organizing the Republican (see DEMOCRATIC PARTY) element in New York City for the election of 1800, for the first time making use of the Tammany Society for political purposes. The result was an unexpected victory for the Republicans, who gained control of the state legislature. Since the legislature named the presidential electors and New York was the pivotal state, Burr's victory insured the election of a Republican President. The intention of the party was to make Thomas JEFFERSON President and Burr Vice President, but confusion in the ELECTORAL COLLEGE resulted in a tie vote. This threw the election into the House of Representatives, dominated by the Federalist Alexander HAMILTON. Hamilton, who regarded Jefferson as the lesser evil of the two Republicans, helped to secure Jefferson the presidency, and on the 36th ballot Burr became Vice President. Burr presided over the Senate with a dignity and impartiality that commanded respect from both sides, and in 1804 his friends nominated him for the governorship of New York. Hamilton again contributed to his defeat, in part by statements reflecting on Burr's character. Burr challenged Hamilton to a duel and mortally wounded him. The circumstances of Hamilton's death brought Burr's political career to an end. Soon after, he left Washington on a journey to New Orleans, at that time a center of Spanish conspirings for possession of the lower Mississippi valley. Burr, unaware that Gen. James Wilkinson was in the pay

of the Spanish, laid plans with him, what exactly Burr's plans were has never been made clear. Speculation ranges from the establishment of an independent republic in the American Southwest to seizure of territory in Spanish America. With money secured from Harman BLENNERHASSETT, Burr acquired the Bastrop grant on Washita River to serve as a base of operations. In the autumn of 1806, he and his party of 60-odd colonists, well-armed and supplied, began the journey downstream from Blennerhassett Island. Burr's earlier trip to New Orleans had brought him under suspicion, now distrust became widespread. Wilkinson, in an effort to save himself, turned against Burr, fanned the distrust, and in dispatches to Washington accused Burr of treason. Burr was arrested. He was tried for treason in the U.S. Circuit Court at Richmond, Va., Chief Justice John MARSHALL presiding, and found not guilty. Popular opinion nonetheless condemned him, and his remaining years were spent out of public life. He was married in 1833 to the famous Madame Jumel, they were divorced in 1834. See his correspondence with his daughter, Theodosia (ed. by Mark Van Doren, 1929), biographies by Nathan Schachner (1937, repr. 1961), S. H. Wandell and Meade Minnerode (1925, repr. 1971), H. M. Alexander (1937, repr. 1973) and Philip Vail (1974), H. C. Syrett and J. G. Cooke, ed., *Interview in Weehawken* (1960), Jonathan Daniels, *Ordeal of Ambition* (1970).

Burrillville, town (1970 pop. 10,087), Providence co., NW R.I., inc. 1806. Its manufactures include textiles and plastics.

Burritt, Elihu, 1810-79, American reformer, b. New Britain, Conn. A blacksmith, he studied mathematics, languages, and geography and became known as "the learned blacksmith." Profoundly idealistic, he supported many reform causes—antislavery, temperance, and self-education—and he pleaded for them when he edited (1844-51) the weekly *Christian Citizen* at Worcester, Mass. Most of all, however, he worked to promote world peace, organizing world peace congresses. Burritt argued for cheaper international postal rates and greater intellectual exchange among nations. Among his much-read books were *Sparks from the Anvil* (1846) and *Ten Minute Talks* (1873). See Merle Curti, ed., *The Learned Blacksmith* (his letters and journals, 1937, repr. 1973), biography by Peter Tolis (1968).

burro* see ASS

Burroughs, Edgar Rice, 1875-1950, American novelist, creator of the character Tarzan. He is the author of *Tarzan of the Apes* (1914) and numerous other jungle and science fiction thrillers.

Burroughs, John, 1837-1921, American naturalist and author, b. Roxbury, N.Y., son of a farmer. He became in turn a journalist, a treasury clerk in Washington, and a bank examiner and in 1874 settled on a farm near Esopus, N.Y., where he devoted his time to fruit culture and literature. In his first book, *Walt Whitman, Poet and Person* (1867), he was the first to give adequate recognition to the genius of his poet friend. In the bulk of his prose he made widely popular the type of nature essay that Thoreau had written. His best-known books are *Wake Robin* (1871), *Locusts and Wild Honey* (1879), *Fresh Fields*, a travel book (1884), *Signs and Seasons* (1886), and his one volume of poems, *Bird and Bough* (1906). A growing interest in philosophy and in science is evident in *Time and Change* (1912), *The Summit of the Years* (1913), *The Breath of Life* (1915), and *Accepting the Universe* (1922). "The Sage of Slabsides" became the friend of John Muir, Theodore Roosevelt, Edison, Ford, and other important men of his day. Although attached to his farm home, he traveled to the Pacific coast, the South, the West Indies, Europe, and (with the Harriman expedition) Alaska, observing natural phenomena everywhere and recording them in simple, expressive prose. See his autobiography, *My Boyhood* (1922), biographies by Elizabeth Burroughs Kelley (1959) and P. G. Westbrook (1974).

Burroughs, William S., 1914- American novelist, b. St. Louis, Mo., grad. Harvard, 1936. A narcotics addict from age 30 to age 45, Burroughs has lived most of his life abroad. *Junkie* (1953), published under the pseudonym William Lee, is an autobiographical account of his experiences as a drug addict. Burroughs's best-known work is the novel *Naked Lunch* (1959), a grim and horrifying depiction of the addict's existence with surrealistic portrayals of the drug experience. His other works include *Nova Express* (1964), *The Soft Machine* (1966), *The Ticket That Exploded* (1967), and *Exterminator!* (1973).

Bursa (İzörsä') city (1970 pop. 275,917), capital of Bursa prov., NW Turkey. The market center of a rich

agricultural region, Bursa is a commercial and industrial center, noted for its silk textiles. Founded at the end of the 3d cent. B.C. by the king of Bithynia, Prusias I, it was called Prusia ad Olympium. It was captured by the Seljuk Turks in 1075, taken by the Crusaders in 1096, and in 1204 passed to the Byzantines. Captured in 1326 by the Ottoman Turks under Sultan Orkhan, it became the Ottoman capital and was embellished with mosques, baths, and a caravanserai. It was sacked by Tamerlane in 1402, and Adrianople (now Edirne) became (1413) the new capital of the Ottomans. There are many fine old mosques, notably the Green Mosque (1421) and the mosque of Beyazid I (1399). The town is sometimes called Brusa.

bursa (bür'sä), closed fibrous sac lined with a smooth membrane that produces a viscous lubricant called synovial fluid. Bursas are found wherever muscles or tendons rub against other muscles, tendons, or bones. The bursas function in two ways: they lubricate points of friction, and they dissipate force by distributing it through a fluid medium. Normally the bursas produce just enough synovial fluid to reduce friction, but constant irritation may lead to an oversecretion and consequent enlargement of the bursa, a condition known as *BURSITIS*. In the hand and foot the bursa assumes a tubular form, called the synovial sheath, and encloses the tendons along their entire length.

bursitis (bärs'itäs), acute or chronic inflammation of a BURSA, or fluid sac, located close to a joint. Sacs of fluid may develop about a joint in response to irritation or injury, as in a bunion, and may become inflamed, causing pain, restricting motion, and producing more fluid than can be absorbed readily. An attack of bursitis usually causes great pain and tenderness in the affected area. It is treated with rest, antibiotics, X-ray therapy, diathermy, or cortisone, depending upon the cause and the degree of involvement. Superficial bursas, not necessary to the function of a joint, or bursas that have become calcified, may be excised.

Burton, Ernest De Witt, 1856-1925, American biblical scholar, b. Granville, Ohio. From 1882 to 1923 he served as professor of New Testament literature and interpretation at the Univ. of Chicago, of which he became president in 1923. He wrote *A Short Introduction to the Gospels* (rev. by H. R. Willoughby, 1926), with E. J. Goodspeed, *Harmony of the Synoptic Gospels* (1917) and *Harmony of the Synoptic Gospels in Greek* (1920), and, with Shailer Mathews, *The Life of Christ* (rev. ed. 1927). See biography by T. W. Goodspeed (1926).

Burton, Harold Hitz, 1888-1964, Associate Justice of the U.S. Supreme Court (1945-58), b. Jamaica Plain (now part of Boston), Mass. Admitted to the bar in 1912, he built a prosperous law practice in Cleveland and taught law (1923-25) at Western Reserve Univ. (now Case Western Reserve Univ.). He later served as a representative (1929-31) in the Ohio state assembly and as a reform mayor (1935-40) of Cleveland. As U.S. Senator (1941-45), Burton vigorously pressed for U.S. participation in the United Nations. Appointed by President Harry S. Truman to the Supreme Court, he firmly supported the decisions overturning racial segregation in schools and public transportation.

Burton, Richard, 1925-, British actor, b. Pontrhydfen, Wales, his original name was Richard Jenkins. A dark, somber actor with a splendid speaking voice, Burton specializes in heavily dramatic roles. He appeared with the Old Vic in *Henry V* and *Othello* and on Broadway in *Camelot* (1961) and *Hamlet* (1961). His films include *The Robe* (1953), *Cleopatra* (1962), *Becket* (1964), *The Spy Who Came in from the Cold* (1965), *Who's Afraid of Virginia Woolf?* (1966), and *The Klansman* (1974). His second wife was the actress Elizabeth TAYLOR.

Burton, Sir Richard Francis, 1821-90, English explorer, writer, and linguist. He joined (1842) the service of the East India Company and, while stationed in India, acquired a thorough knowledge of the Persian, Afghan, Hindustani, and Arabic languages. In 1853, in various disguises, he made a famous journey to Mecca and Medina, about which he wrote the vivid *Personal Narrative of a Pilgrimage to El Medinah and Meccah* (3 vol., 1855-56). With John Speke he took a party to Somaliland, he alone disguised as an Arab merchant, made the journey to Harar, Ethiopia, where he met with the local ruler. He went with Speke to uncharted Central Africa to discover the source of the Nile, he found Lake Tanganyika (1858) but abandoned the attempt to reach Lake Nyasa. After a visit to the United States, Burton published an account of the Mormon settlement at

Utah in his *City of the Saints* (1861) While consul (1861-65) at Fernando Po, off W Africa, he explored the Bight of Biafra and conducted a mission to Dahomey, Benin, and the Gold Coast He explored Santos, in Brazil, while consul (1865) there, and after crossing the continent wrote *Explorations of the Highlands of Brazil* (1869) After a short period (1869-71) as consul at Damascus he was consul (1872-90) at Trieste, where he died His last years were devoted chiefly to literature He published remarkable literal translations of Camões and of the *Arabian Nights* (16 vol., 1885-88) See annotated bibliography by N M Penzer (1923), biographies by Lady Burton (2 vol., 1893, repr 1973), G M Stisted (1893, repr 1970), Seton Dearden (rev ed 1953), Alfred Bercevic (1962), and F M Brodie (1966)

Burton, Robert, 1577-1640, English clergyman and scholar, b Leicestershire, educated at Oxford He served as librarian at Christ Church, Oxford, all his life, in addition he was vicar of St Thomas, Oxford, and later was rector of Seagrave, Leicestershire A bachelor, he led an uneventful, scholarly life His famous work, *The Anatomy of Melancholy*, appeared in 1621 under the pen name Democritus Junior Enlarged and revised several times before his death, this treatise originally set out to explore the causes and effects of melancholy, but it eventually covered many areas in the life of man, including science, history, and political and social reform The work is divided into three main portions The first defines and describes various kinds of melancholy, the second puts forward various cures, and the third analyzes love melancholy and religious melancholy Burton's prose style is informal, anecdotal, and thoroughly idiosyncratic, and he includes quotations from a wide range of literature—the Bible, the classics, the Elizabethan authors See studies by W R Mueller (1952) and Lawrence Babb (1959)

Burton upon Trent, county borough (1971 pop 50,175), Staffordshire, W central England, on the Trent River and the Grand Trunk Canal Brewing, begun there by Benedictine monks, is the most famous industry From the 11th cent to the Reformation, the area's history was closely connected with the Benedictine abbey (founded 1002), of which there are remains Other industries in the borough manufacture foundry products, tires, footwear, chemicals, and locomotives

Buru or Boeroe (both böör'ōō), island (c 3,500 sq mi/9,065 sq km), E Indonesia, in the Moluccas, W of Ceram Namlea is the chief town and port Forest products, including cajeput oil, gums and resins, and timber, are exported

Burundi (bārūn'dē), republic (1973 est pop 3,725,000), 10,747 sq mi (27,834 sq km), E central Africa, bordering on Rwanda in the north, on Tanzania in the east, on Lake Tanganyika in the southwest, and on Zaïre in the west BUJUMBURA is the capital and Gitega is the only other major town The country falls into three main geographic regions The narrow area in the west, which includes the Ruzizi River and Lake Tanganyika, is part of the western branch of the Great Rift Valley and includes some lowland To the east of this region are mountains, which run north-south and reach an altitude of c 8,800 ft (2,680 m) Further east is a region of broken plateaus with somewhat lower elevations (c 4,500-6,000 ft/1,370-1,830 m), where most of the population lives The inhabitants of Burundi are divided among three eth-

nic groups the Hutu (about 85% of the population), who are mostly agriculturalists, the Tutsi (about 14%), who dominate the government of the country, and the Twa (about 1%), who are Pygmies For the most part the Tutsi and the Hutu have a lord-serf relationship, with the Hutu tending the farmlands and cattle owned by the Tutsi French and Kirundi (a Bantu language) are both official languages About half the people are Christian, mostly Roman Catholic, the rest follow traditional beliefs Burundi's poor transportation system and its distance from the sea have tended to limit economic growth The economy is almost entirely agricultural Most persons are engaged in subsistence farming, growing beans, cassava, maize, and plantains Coffee (Burundi's chief export), cotton, and tea are also cultivated Large numbers of cattle, goats, and sheep are raised Especially among the Tutsi, a person's status is determined by the number of cattle he owns, however, the animals play a small role in the economy The country's few manufactures include basic consumer goods, such as processed food, beverages, clothing, and footwear Bastnaesite, cassiterite, kolin, and gold are mined in small quantities Burundi's imports usually considerably exceed the value of its exports The United States, Belgium, Luxembourg, and Great Britain are the chief trade partners Most exports are sent by ship to Kigoma in Tanzania and then by railroad to Dar es Salaam on the Indian Ocean There is a university in Bujumbura

History The Twa were the original inhabitants of Burundi and were followed (c 1200), and then outnumbered, by the Hutu Probably in the 15th cent, the Tutsi migrated into the area from the northeast, gained dominance over the Hutu, and established several states By the 19th cent, the country was ruled by the mwami (king)—a Tutsi who controlled the other Tutsi of the region in a vassal relationship In 1890, Burundi (along with Rwanda) became part of GERMAN EAST AFRICA, but the Germans began to govern the area only in 1897 During World War I, Belgian forces occupied (1916) Burundi, and in 1919 it became part of the Belgian League of Nations mandate of RUANDA-URUNDI (which in 1946 became a UN trust territory) Under the German and Belgian administrations Christianity was spread, but the traditional social structure of Burundi was not altered, and there was little economic development On July 1, 1962, the country became an independent kingdom ruled by the mwami of Burundi The mid-1960s were marked by fighting between the Tutsi and Hutu and by struggles for power among the Tutsi In 1965 a coup attempted by the Hutu failed, and the Tutsi retaliated by executing most Hutu political leaders and many other Hutu In July, 1966, Mwambutsa IV was deposed by his son, who became Ntare V In Oct, 1966 The new ruler was deposed by a military coup in Nov, 1966 A republic was established and Michel Micombero, a Tutsi, became president Following an attempted coup in 1969, Micombero concentrated power in his hands and headed the country's only legal political party, the Unity and National Progress party, a new constitution was adopted in 1970 Renewed fighting between the Tutsi and Hutu in the early 1970s resulted in the death of many thousands of Hutu In 1972 a rebellion attempting to return Ntare V to power was crushed by the government, Ntare was executed and the Hutu were further repressed See J B Webster, *The Political Development of Rwanda and Burundi* (1966), J A Nguin, *Contributions to the Study of the Prehistoric Cultures of Rwanda and Burundi* (1967), G C McDonald et al, *Area Handbook for Burundi* (1969), Rene Lemarchand, *Rwanda and Burundi* (1970)

Bury, John Bagnell (bāg'nəl byōō'rē), 1861-1927, Irish historian, an authority on the East Roman Empire He was professor at the Univ of Dublin from 1893 to 1902 and at Cambridge from 1902 Bury considered history a science—"not less, and not more" He stressed historical continuity, and he thought that accident was a frequent determinant in the history of premodern societies His breadth of viewpoint is reflected in his attention to administration, institutions, topography, and the arts, which contributed to his unrivaled knowledge of late Roman and Byzantine times *History of the Eastern Empire from the Fall of Irene to the Accession of Basil I, A.D. 802-867* (1912) is but one of his many outstanding studies Bury also wrote authoritatively on ancient Greece, and his works include as well *History of Freedom of Thought* (1913), *The Idea of Progress* (1920), and a scholarly *Life of St Patrick* (1905) His edition (7 vol., 1896-1900) of Gibbon's *Decline and Fall* was masterful Bury edited Pindar's Nemean and

Isthmian odes and was an editor of and contributor to *The Cambridge Ancient History*

Bury, Richard de: see RICHARD DE BURY

Bury (bē'rē), county borough (1971 pop 67,776), Lancashire, NE England, on the Irwell River and linked by canal with Bolton and Manchester A textile city since the time of Edward III, when wool weaving was introduced by the Flemings, Bury has factories for the spinning, weaving, and bleaching of cotton Hats, paper, machines, and boilers are among its other manufactures Sir Robert Peel, the statesman, and John Kay, inventor of the "flying shuttle," were born in Bury In 1974, Bury became part of the new metropolitan county of Greater Manchester

Buryat Autonomous Soviet Socialist Republic (bōōryāt'), autonomous republic (1970 pop 812,000), c 135,600 sq mi (351,200 sq km), SE Siberian USSR, N of Mongolia, extending between Lake Baykal and the Yablonovy mts ULAN-UDE is the capital The republic is mountainous and heavily forested and has rivers and lakes that are rich in fish and that provide hydroelectric power In the mountains are valuable deposits of coal, iron ore, tungsten, molybdenum, gold, wolfram, nickel, bauxite, and manganese The Buryat ASSR is one of Siberia's most prosperous areas The chief sectors of the economy are mining, lumbering, and livestock raising Agriculture, found mainly in the Selenga River valley, is based on spring wheat and fodder crops There are fisheries and fish-canning plants on Lake Baykal Fur breeding and trading are important in the north, where nomads also keep reindeer herds Major manufactures of the Buryat ASSR include machinery (notably locomotives for the Trans-Siberian RR, which traverses the republic), metal products, pulp, paper, and textiles The Buryats, former nomads who have largely adopted a sedentary existence, are descended from the Huns, Mongols, Evenki, and Turks They speak a Mongolian language and generally adhere to Lamaist Buddhism or to Russian Orthodoxy Buryats constitute about 35% of the republic's population and engage mostly in stock raising Russians make up a majority of the population, and there are Evenki, Tuvian, Tatar, and Ukrainian minorities Russian penetration of the region began in the 1620s and advanced for a century in the face of Buryat resistance until annexation occurred in 1727, followed by intensive Russian colonization The Buryat-Mongol ASSR was formed in 1923 and retained that name until 1958

Bury St. Edmunds, municipal borough (1971 pop 25,629), administrative center of West Suffolk, E central England It is the market and processing center for the surrounding rich farm region The borough also has engineering works, a brewery, timber yards, and a beet-sugar factory In 903 the remains of King Edmund were interred here in a monastery, founded c 630, which later became a famous shrine and Benedictine abbey founded by Canute In 1214, English barons struggling against King John took an oath in the abbey to compel him to accept their demands The result was the MAGNA CARTA (1215) Among the buildings of historical interest in the borough are a Norman gate, ruins of St James Cathedral, and a 15th-century church Moyses Hall, a Norman residence, is now a museum In 1974, Bury St. Edmunds became part of the new nonmetropolitan county of Suffolk

bus [from Lat *omnibus*=for all], large public conveyance A horse-drawn urban omnibus was introduced in Paris in 1662 by Blaise Pascal and his associates, but it remained in operation for only a few years The omnibus reappeared c 1812 in Bordeaux, France, and afterward in Paris (c 1827), London (1829), and New York City (1830) It often carried passengers both inside and on the roof Buses were motorized early in the 20th cent, motorbus transportation increased rapidly and is now used in most countries A number of railroad companies operate subsidiary lines A network of bus lines links all parts of the United States Bus lines have grown at the expense of railroads in intercity travel and of street railways in local travel Buses are powered usually by gasoline or diesel engines, but in a few cities electric motors fed from overhead wires are used The construction of small buses is similar to that of heavy automobiles, while the construction of large buses is similar to that of heavy trucks Some large buses can seat more than 60 passengers

Busaco: see BUSSACO, Portugal

Busch, Adolf (ā'dōlf böōsh), 1891-1952, German-Swiss violinist He studied at the Cologne Conservatory From 1919 to 1935 he headed outstanding chamber music groups, and with his brother Her-

mann Busch, cellist, and his son-in-law Rudolf Serkin, pianist, he played many trio recitals. In his early compositions he was influenced by his friend Max Reger. Another brother, Fritz Busch, 1890-1951, was musical director of the opera in Stuttgart (1919-22) and in Dresden (1922-33), afterward conducting in Europe, particularly at the Glyndebourne Festivals in England, and later at the Metropolitan Opera in New York City (1945-50).

Busch, Wilhelm, 1832-1908, German cartoonist, painter, and poet. After studying at the academies of Antwerp, Düsseldorf, and Munich, he joined the staff of the *Fliegende Blätter*, to which he contributed highly popular humorous drawings from 1859 to 1871. His humorous, illustrated poems for children, such as *Max and Moritz* (1865, tr by Christopher Morley, 1932), are simply drawn, yet highly spirited. Busch's delightful series of wordless pictures were highly influential in the development of the comic strip.

Busching, Anton Friedrich (an'tōn frē'drīkh bush'īng), 1724-93, German geographer and educator. He was professor of philosophy in Göttingen, was a Protestant minister, and was director of a Gymnasium in Berlin. He advocated the collection of data similar to the kind of data now used in political and economic geography. The most important of his many works is *Neue Erdbeschreibung* (10 vol., 1754-92, Vol. XI was written after his death), six volumes of which, describing the geography of Europe, were translated into English as *A New System of Geography* (1762).

Bush, Vannevar, 1890-1974, American electrical engineer and physicist, b. Everett, Mass., grad. Tufts College (B.S., 1913). He went to Massachusetts Institute of Technology (MIT) in 1919, there he was professor (1923-32) and vice president and dean of engineering (1932-38). During this period at MIT he designed the differential analyzer, one of the earliest computers. From 1939 until 1955 he was president of the Carnegie Institution, and from 1941 to 1945 he was also the director of the U.S. Office of Scientific Research and Development. In this later position he administered the U.S. war effort to utilize and advance military technology. He directed such programs as the development of the first atomic bomb, the perfection of radar, and the mass production of sulfa drugs and penicillin. In 1955 he returned to MIT, retiring in 1971.

bush baby, name for several small, active nocturnal primates of the LORIS family, found in forested parts of Africa. Bush babies, also called galagos, form the subfamily Galaginae. The smallest are about 1 ft (30 cm) long, including the long, furry tail. All have fluffy fur, small pointed faces with large eyes, and naked, highly mobile ears. Their pupils contract so as to be almost invisible. The long hind legs are specialized for jumping, the fingers and toes are long and slender, with fleshy terminal pads, and the thumb and big toe are opposable. Extremely swift and agile, bush babies leap like squirrels from branch to branch and hop on their hind legs on the ground. They feed on insects and vegetable matter. Senegal bush babies (*Galago senegalensis*) are familiar as pets. They are gregarious and spend much time grooming each other with their front teeth. Bush babies are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Lorisidae.

bushbuck, small, delicate, spiral-horned ANTELOPE, *Tragelaphus scriptus*, of tropical Africa. Bushbucks live in pairs in thick forest, browsing on leaves and shrubs by night and resting during the day. Their chief predator is the leopard. Adult males stand less than 3 ft (90 cm) high at the shoulder and weigh about 100 lb (45 kg). The horns, borne only by the male, are about 16 in (40 cm) long. The coat is reddish brown with scattered white markings. Other species of the genus *Tragelaphus* are known as nyalas and situngas, although animals of this genus are sometimes referred to collectively as bushbucks. All are retiring, largely nocturnal antelopes, and in all the female is hornless. The nyala, *T. angasi*, is a medium-sized antelope that inhabits the bush country and thickets of central Africa. The mountain nyala, *T. buxtoni*, is a very large antelope of the highlands of Ethiopia, the male may stand 4½ ft (135 cm) high. The situnga, or marsh buck, *T. spekei*, is a large antelope found in swampy forests in central Africa, it is a good swimmer, but it is awkward on land. Bushbucks are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

Bushehr (bōō'shēr') or **Bushire** (-shīr'), city (1971 est. pop. 40,000), SW Iran, on the Persian Gulf. It is

one of the chief ports of Iran and is the terminus of a trade route from Shiraz, Esfahan, and Tehran. Its harbor provides good protective anchorage, but it is too shallow to allow oceangoing vessels to approach the shoreline. Carpets, agricultural products, cotton, and wool are exported. Bushehr was founded in 1736 by Nadir Shah. It was used by the British as a base for their Persian Gulf fleet in the 18th cent and became a major commercial port in the 19th cent.

bushel. see ENGLISH UNITS OF MEASUREMENT

Bushey, urban district (1971 pop. 23,729), Hertfordshire, SE England. Bushey is a residential district just N of Greater London. The local church contains windows by William Morris.

bushido (bōō'shēdō, bōōshēdō') [Jap. = way of the warrior], code of honor and conduct of the Japanese nobility. Of ancient origin, it grew out of the old feudal bond that required unwavering loyalty on the part of the vassal. It borrowed heavily from Zen Buddhism and Confucianism. In its fullest expression the code emphasized loyalty to one's superior, personal honor, and the virtues of austerity, self-sacrifice, and indifference to pain. For the warrior, commerce and the profit motive were to be scorned. The code was first formulated in the Kamakura period (1185-1333) and put into writing in the 16th cent., the term itself, however, did not come into use until the 17th cent. It became the standard of conduct for the DAIMYO and SAMURAI under the Tokugawa shoguns and was taught in state schools as a prerequisite for government service. After the Meiji restoration (1868), it was the basis for the cult of emperor worship taught until 1945.

Bushire. see BUSHEHR, city, Iran

bushmaster, large venomous snake, *Lachesis muta*, of Central America and N. South America. It is a member of the PIT VIPER family, which also includes the rattlesnake. The largest New World snake, it reaches a length of 8 to 12 ft (2.5-3.5 m). It is gray and brown, with a diamond pattern. Unlike most pit vipers, which bear live young, the bushmaster lays eggs. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Squamata, family Crotalidae.

Bushmen: see SAN

Bushnell, Horace (bōōsh'nāl), 1802-76, American Congregational minister, b. Bantam, Conn. Bushnell became (1833) pastor of the North Church, Hartford, Conn. He wrote *Christian Nurture* (1847) and *God in Christ* (1849). Because of certain views of the Trinity allegedly expressed in the latter, unsuccessful attempts were made to bring him to trial for heresy. Bushnell's dignified reply was made in *Christ in Theology* (1851). His repudiation of the austerity of Calvinism and his stress on the presence of the divine in humanity and nature had profound influence in shaping liberal Protestant thought. Ill health obliged him to retire from the active ministry in 1859, but he continued to write. His works include *The Vicarious Sacrifice* (1866), in which he developed the well-known "moral influence theory" of the atonement, *Sermons on Living Subjects* (1872), and *Forgiveness and Law* (1874). See the *Life and Letters*, ed. by his daughter, Mrs. M. B. Cheney (1880, 1903, repr. 1969), biographies by T. T. Munger (1899) and William R. Adamson (1966), studies by A. J. W. Myers (1937), B. M. Cross (1938), and William A. Johnson (1963).

bushrangers, bandits who terrorized the bush country of Australia in the 19th cent. The first bushrangers (c. 1806-44) were mainly escaped convicts who fled to the bush and soon organized gangs. Their crimes were checked effectively by various Bushranging Acts passed after 1830. With the discovery of gold, however, bushrangers of a new type appeared and flourished from 1850 to 1870, largely brigand-adventurers who attacked gold convoys. The last of the bushrangers were the men of the Kelly gang. This band of desperadoes was exterminated in 1880 when three members were trapped and killed at a hotel in Glenrowan, Victoria, and Edward (Ned) Kelly was hanged at Melbourne. See studies by W. F. Wannon (1963) and T. A. Prior (1966).

Busia, Kofi Abrefa (kō'fē ābrā'fā bōōsē'ā), 1913-, political leader in Ghana. He was educated in Africa and in England and taught sociology in African, American, and European universities in the 1950s and 60s. He served (1951-59) in Ghana's national assembly, where he was opposition leader. In 1969 he became prime minister when his Progress party triumphed in the elections. Busia was overthrown in 1972 and went into exile in Great Britain.

Buskerud (bōōs'karōōd), county (1972 est. pop. 201,000), c. 5,725 sq mi (14,830 sq km), SE Norway.

Drammen (the capital) and Ringerike are the chief towns. The county extends from the Oslofjord in the southeast to the Hardangervidda plateau in the northwest and includes the Hallingdal and Numedal valleys. Farming and the manufacturing of forest products and textiles are the main occupations.

Busoni, Ferruccio Benvenuto (fār-rōōt'chō bānvānōō'tō bōōzō'nē), 1866-1924, Italian pianist and composer. A child prodigy, he gave a concert in Trieste at the age of eight, which was followed by many appearances conducting and performing his own compositions. His style of piano playing was similar to that of Liszt, whom he greatly admired. He later taught at the conservatories in Helsinki and Moscow and from 1891 to 1894 at the New England Conservatory of Music, Boston. He transcribed for piano many of the organ works of J. S. Bach and edited his *Well-tempered Clavier*. Busoni's own compositions include piano pieces, a piano concerto, a violin concerto, and operas. His writings on musical and aesthetic subjects include his *Sketch of a New Esthetic* (tr. 1911). See his letters to his wife (tr. 1938), biography by H. H. Stuckenschmidt (tr. 1971).

Busra: see BASRA, Iraq

Bussaco or **Busaco**, Port. Buçaco (all bōōsā'kō), locality, W central Portugal, in Beira, near Coimbra and around Mt. Bussaco. Now a summer resort, it was formerly a place of seclusion and penitence for monks. At Bussaco in 1810, British and Portuguese troops under Wellington decisively defeated the French in the Peninsular War.

Bussora: see BASRA, Iraq

Bustamante, Alexander (būs'tāmān'tē), 1884-, prime minister of Jamaica (1962-67). The son of an Irish father and a Jamaican mother, he was adopted and taken to Spain as a child. He joined the Spanish army, then traveled extensively, working at a wide variety of jobs. Returning to Jamaica in 1932, he became active in the labor movement, gaining prominence with his flaming oratory, and founded the country's largest trade union. After being jailed (1941-42) as a rabble-rouser, he formed (1943) the Jamaica Labour party, a relatively conservative group that attracted right-wing support. He was chief minister (1953-55) and became prime minister in April, 1962, independence within the British Commonwealth was achieved that August. A flamboyant, demagogic leader, he maintained close relations with the United States and launched an ambitious five-year program of public works and land reform. Illness caused him to retire from politics in 1967. He was knighted by Queen Elizabeth II in 1955.

Bustamante, Anastasio (anasta'syō bōōstāmān'tā), 1780-1853, Mexican general and president (1830-32, 1837-41). He served in the royalist army against Hidalgo y Costilla and Morelos y Pavón, but his adherence to the Plan of Iguala in support of Agustín de Iturbide was a decisive factor in the latter's success. Vice president under Guerrero, he engineered a successful revolution (1829-30) with the aid of Santa Anna. At Bustamante's order Guerrero was captured and shot, but Bustamante in turn fell from power when Santa Anna seized the government (1832). When Santa Anna's failure to crush the Texas revolution temporarily weakened his political hold, Bustamante returned from exile in France and was again president. His regime was reactionary and was plagued by revolution, by trouble with the French, by the blockade of Veracruz (1838), and especially by Santa Anna, who had recovered popularity. Seizing control, Santa Anna forced Bustamante again into exile. Bustamante returned to serve in the Mexican War.

Bustamante, Antonio Sánchez de (antō'n'yō sán'-chās), 1865-1951, Cuban authority on international law, author of the Bustamante Code. A delegate to the Paris Peace Conference (1919), he was later justice of the Hague Tribunal (Permanent Court of Arbitration). He was also president of the Pan American Congress (1928), which ratified his monumental code of private international law, coordinating legislation applying to the international security of person and property.

Bustanai ben Haninar. see BOSTANAI BEN CHANINAI

bustard (būs'tard), a heavy-bodied, ground-running bird of the family Otididae. Various species are found throughout the arid regions of Africa, Asia, Australia, and S. Europe. Bustards range in length from 14½ to 52 in (37-132 cm) and include the heaviest birds capable of flight. The great bustard *Otis tarda*, of Europe and central Asia, is the largest European land-bird, the adult male may be 4 ft (10.2 m) long with an 8-ft (20.3 m) wingspread and may weigh 30 lb (13.6 kg). The Australian bustard, *Chio*

nctis australis, is of similar size. Bustards are stocky birds with long necks and strong legs, their feet are built for running, with flat toes, broad soles, and no hind toe. The species vary in color from gray to brown, and many are spotted or barred above and white, buff, or black below. Bustards live mainly on grassy plains or in brushlands. Although they are strong fliers, they seldom leave the ground. They wander about in flocks of a dozen or more birds, feeding on leaves, seeds, and insects, especially beetles. The males are polygamous and fight fiercely during the breeding season. The female lays and incubates from one to five eggs, according to the species, the chicks are able to fly at the age of six weeks. Bustards have been extensively hunted for food, they are extinct in Britain and are becoming scarce in the northern part of their range. They are classified in 16 genera and 23 species of the phylum CHORDATA, subphylum Vertebrata, class Aves, order Gruiformes, family Otidae.

bustard quail or **button quail**, any of the small ground-running Old World birds of the family Turnicidae. Also called a hemipode, it resembles a true quail in appearance and way of life but is more closely related to sandgrouse and pigeons. Bustard quails have short tails and rounded wings and lack a hind toe. They are secretive birds, inhabiting grass and brush country and open woodlands, and are found throughout Australia, S Asia, and Africa, with one species extending into S Spain. They travel singly, in pairs, in small family groups, or, in some species, in coveys of 15 to 30 birds. Their diet consists of seeds, shoots, and small insects. The bustard quail female is larger and more colorful than the male, and takes the lead in courtship, she has a specialized vocal organ for giving the booming mating call. The nest is on the ground and is constructed by both sexes. After the female has laid her clutch, typically of four eggs, the male incubates the eggs and rears the young. There are 15 species of bustard quail, classified in two genera of the phylum CHORDATA, subphylum Vertebrata, class Aves, order Gruiformes, family Turnicidae.

Busto Arsizio (bō'stō ars'ētsyō), city (1971 pop. 78,632), Lombardy, N Italy. It is a leading center of the Italian cotton industry, metal goods and shoes are also manufactured. The Church of Santa Maria di Piazza was designed (1515) by Bramante.

Butades of Sicily (bū'tadēs, sē'shēōn), fl c 600 B C, semilegendary Greek sculptor. He worked at Corinth and was supposed to have been the first to model in clay.

butadiene (byōōt'ād'ēn), colorless, gaseous hydrocarbon. There are two structural isomers of butadiene, they differ in the location of the two carbon-carbon double bonds in the butadiene molecule. One (1,2-butadiene) has the formula CH₂=C=CHCH₃. The other (1,3-butadiene), often called simply butadiene, has the formula CH₂=CHCH=CH₂. It is used in the manufacture of synthetic rubber, latex paints, and nylon and is obtained chiefly by dehydrogenation of butane and butene obtained by cracking petroleum. CHLOROPRENE and ISOPRENE are the 2-chloro- and 2-methyl- derivatives of 1,3-butadiene, they also are used in the synthesis of rubber.

butane (byōō'tān), C₄H₁₀, gaseous ALKANE, a hydrocarbon that is obtained from natural gas or by refining petroleum. It can be liquefied at room temperature by compression. There are two structural isomers of butane. In normal butane, or *n*-butane, the four carbon atoms are joined in a continuous, unbranched chain, in isobutane, or 2-methylpropane, three of the carbon atoms are joined to the fourth by single bonds, resulting in a branched structure. The two isomers differ in certain of their chemical and physical properties, e.g., liquid *n*-butane has a higher boiling point (−0.6°C) at atmospheric pressure than that of liquid isobutane (−10.2°C).

butanoic acid, IUPAC name for BUTYRIC ACID.

Butaritari (batārē'tarē), also known as Makin (mā'kin, mūg'in), triangular atoll, (4.5 sq mi/11.7 sq km), central Pacific, in the GILBERT ISLANDS. The town of Butaritari on the southernmost islet is a port of entry and the headquarters of a copra company. Butaritari became a part of the British colony of the GILBERT AND ELLICE ISLANDS in 1915. During World War II it was the first central Pacific island to be regained by the Allies (Nov., 1943). Butaritari was formerly called Pitt Island.

butcher bird· see SHRIKE

Bute, John Stuart, 3d earl of (byōōt), 1713–92, British politician. He was prominent as a friend of Frederick Louis, prince of Wales, as early as 1747 and became the tutor of Frederick's impressionable son,

the future GEORGE III. When George became king in 1760, Bute was appointed a privy counselor, first gentleman of the bedchamber, and (March, 1761) a secretary of state. George III's policies of destroying the Whig monopoly of political power, of making the monarch supreme over Parliament, and of ending the war with France were pursued largely under Bute's influence. After the resignation (Oct., 1761) of William Pitt (later earl of Chatham) from office, Bute became chief minister. Although he concluded the Treaty of Paris (1763), ending the increasingly unpopular war, he lacked parliamentary support and resigned shortly thereafter. George III rapidly outgrew his youthful dependence on his friend. See biography by J. A. Lovat Fraser (1912), Romney Sedgwick, ed., *Letters from George III to Lord Bute, 1756–1766* (1936), R. Pares, *George III and the Politicians* (1953).

Bute, island and county, Scotland. see BUTESHIRE

Buteshire (byōōt'shīr) or **Bute** (byōōt), county (1971 pop. 13,237), W Scotland. The county consists primarily of the islands of Bute (the most important island and seat of Rothesay, the county town), ARAN, and the Cumbraes. Agriculture (potatoes, oats, hay, and turnips), the main occupation of the county, is chiefly concentrated in the less hilly central and southern parts of Bute. Cattle and sheep raising and fishing (herring and whitefish) are also important. The scenery and bracing climate of the islands make them popular with tourists. In 1975, Buteshire became part of the Strathclyde region.

Butler, Alban, 1710–73, English Roman Catholic priest, compiler of lives of the saints. He was educated at Douai and was president of the English seminary at Saint-Omer. His monumental work, *The Lives of the Fathers, Martyrs, and Principal Saints* (4 vol. in 7, 1756–59), was the basis for the enlarged edition, *The Lives of the Saints* (12 vol., 1926–38), and for the completely revised work, *Butler's Lives of the Saints* (ed. by Herbert Thurston, 5), and Donald Attwater, 4 vol., 1956), which is a standard, popular reference book.

Butler, Benjamin Franklin, 1795–1858, American political leader and cabinet officer, b. Columbia Co., N.Y. Butler, like his former law associate, Martin Van Buren, was a member of the ALBANY REGENCY, and he devoted himself and his considerable power to reform politics. He was Attorney General (1833–37) under President Jackson and for a time held (1836–37) that post and the office of Secretary of War concurrently. He also served (1837–38) as Attorney General under President Van Buren, but he refused later cabinet appointments. He helped to revise (1825) the New York state statutes and organized what is today the law school of New York Univ.

Butler, Benjamin Franklin, 1818–93, American politician and Union general in the Civil War, b. Deerfield, N.H. He moved to Lowell, Mass., as a youth and later practiced law there and in Boston. He was elected to the state legislature in 1852 and 1858 and ran unsuccessfully for governor in 1859 and 1860. Butler was a Democrat but a strong Unionist. At the beginning of the Civil War his contingent of Massachusetts militia was one of the first to reach Washington. He restored order (May, 1861) in secessionist Baltimore and was given command at Fort Monroe. He commanded the troops that accompanied Admiral Farragut in taking New Orleans and was made military governor of the city. There his high-handed rule (May–Dec., 1862) infuriated the people of New Orleans and the South and earned him the name "Beast." The government, severely criticized both at home and abroad for his actions, finally removed him. In May, 1864, as commander of the Army of the James, Butler was defeated by Beauregard at DREWRY'S BLUFF and was bottled up at Bermuda Hundred until Grant crossed the James in June. After he failed to take FORT FISHER in Dec., 1864, he was removed from active command. From 1867 to 1875 Butler, by then a rabid radical Republican, was in Congress. He was one of the House managers who conducted the impeachment proceedings against President Andrew Johnson, and he ardently advocated the party's Reconstruction policy. He was said to have great influence with President Grant. Butler was (1877–79) an independent Greenbacker in Congress. After several unsuccessful attempts to secure the governorship of Massachusetts, he was elected by the Greenbackers and Democrats in 1882. In 1884 he received the nominations of the Anti-Monopoly and Greenback parties for President. Regarded by many as an unprincipled demagogue of great ability, Butler aroused intense antagonisms and was nearly always in controversy. See his autobiography (1892), biographies by R. S.

Holzman (1954), H. L. Trefousse (1957), R. S. West, Jr. (1965), and H. P. Wash, Jr. (1969).

Butler, James: see ORMONDE, JAMES BUTLER, 12TH EARL AND 1ST DUKE OF

Butler, John, 1728–96, Loyalist commander in the American Revolution, b. New London, Conn. He served in the French and Indian Wars and distinguished himself especially by leading the Indians in the successful British attack (1759) under Sir William Johnson against Niagara. Electing the British side after the Revolution broke out, he became a deputy to Guy Johnson at Niagara and worked to keep the Indians friendly to the British. In the Saratoga campaign (1777) he and Indian troops accompanied Gen. Barry St. Leger in the unsuccessful expedition down the Mohawk valley. Later he organized a Loyalist troop called Butler's Rangers, and with them he and his son, Walter BUTLER, attacked the frontier settlements. John Butler in 1778 raided the Wyoming Valley, defeated Zebulon BUTLER, took Forty Fort, and then was unable to keep his Indian allies from perpetrating the Wyoming Valley massacre. Later that year Walter Butler and Joseph Brant led a similar raid on Cherry Valley, and this also ended in a massacre. The name of Butler was thereafter anathema to the patriots. John Butler was defeated (1779) by the expedition of Gen. John SULLIVAN at Newtown near the present Elmira, N.Y., later in the war Butler joined with Sir John JOHNSON in frontier raids. See Howard Swiggett, *War out of Niagara* (1933, repr. 1963).

Butler, Joseph, 1692–1752, English bishop, theologian, and moral philosopher. He was preacher (1718–26) at the Rolls Chapel, London, his tenure there produced the noted *Fifteen Sermons* (1726), in which he set forth his moral philosophy. While rector of Stanhope (1725–40), he was also prebendary of Salisbury and, later, of Rochester. In 1738 he was made bishop of Bristol and in 1740 became dean of St. Paul's, London. In 1750 he was appointed to the see of Durham, one of the richest in England. He also served as clerk of the closet to Queen Caroline and later to King George II. It is as a writer that he is chiefly remembered. His great book, *The Analogy of Religion, Natural and Revealed, to the Constitution and Course of Nature* (1736) was aimed at combating the influence of deism in England by demonstrating the reasonableness of Christianity. See biographies by E. C. Mossner (1936, repr. 1971) and W. J. Norton (1940), study by A. E. Duncan-Jones (1952).

Butler, Nicholas Murray, 1862–1947, American educator, president of COLUMBIA UNIV. (1902–45), b. Elizabeth, N.J., grad. Columbia (B.A., 1882, Ph.D., 1884). Holding a Columbia fellowship, he studied at Paris and Berlin, specializing in philosophy. Beginning in 1885 he was made successively assistant, tutor, and adjunct professor of philosophy at Columbia. He became (1886) president of the Industrial Education Association, reshaped it into what is today Teachers College, Columbia, and was (1889–91) the institution's first president. He was intimately associated with John W. BURGESS in the struggle to create a university organization and was largely responsible for the expansion of Columbia College into Columbia Univ. In 1890 he became professor of philosophy and education and dean of the Faculty of Philosophy and in 1901 acting president of Columbia. The next year he formally succeeded Seth Low as president. He instituted the Summer Session, University Extension (now the School of General Studies), the School of Journalism, the Medical Center, and other units which have contributed to the magnitude of present-day Columbia. An advocate of peace through education, Butler helped to establish the Carnegie Endowment for International Peace, of which he was a trustee and later president (1925–45). His efforts in behalf of disarmament and international peace won him international prestige, and he shared with Jane Addams the 1931 Nobel Peace Prize. Prominent in national, state, and New York City politics, he remained a regular Republican party member despite differences with its platforms. Though a close friend of Theodore Roosevelt, he refused to join the Progressive movement of 1912, and that year Butler received the Republican electoral votes for Vice President after the death of Vice President James S. Sherman, the regularly nominated candidate. He later was the leading Republican advocate of the repeal of the Eighteenth Amendment, urged economy in government, and supported local reform movements. He was (1928–41) president of the American Academy of Arts and Letters. His books include *Education in the United States* (1910), *The International Mind* (1913), *The Meaning of Education* (rev. ed. 1915), *Scholarship and Service* (1921), *The Faith of a Liberal* (1924), *The Path to*

Peace (1930), *Looking Forward* (1932), *Between Two Worlds* (1934), and *The World Today* (1946). See his autobiography, *Across the Busy Years* (2 vol., 1939-40), Richard Whittemore, *Nicholas Murray Butler and Public Education* (1970), *Bibliography of Nicholas Murray Butler, 1872-1932* (1934).

Butler, Pierce, 1866-1939, Associate Justice of the U.S. Supreme Court (1923-39), b. Dakota co., Minn. Admitted (1888) to the bar, he practiced in St. Paul, specialized in railroad law, and became an expert in railroad-valuation cases, serving (1913-22) both the U.S. and Canadian governments. In the Supreme Court, to which he was appointed by President Harding, he was generally considered a conservative. See D. J. Danelski, *A Supreme Court Justice Is Appointed* (1964).

Butler, Richard Austen, 1902-, British statesman. Educated at Cambridge, he entered Parliament in 1929 as a Conservative. After holding various minor government offices, he became (1941) minister of education and piloted through Parliament the Education Act of 1944, which provided free primary and secondary education for all. He was briefly minister of labor in 1945 before the Conservatives lost power. As chancellor of the exchequer from 1951 to 1955, he led the country out of wartime austerity but opposed major reduction in social services. Leader of the House of Commons from 1955 to 1961, Butler also served as lord privy seal (1955-59), home secretary (1957-62), deputy prime minister and first secretary of state (1962-63), and foreign secretary (1963-64). Retiring from political life, he was given a life peerage as Baron Butler of Saffron Walden and became (1965) master of Trinity College, Cambridge.

Butler, Samuel, 1612-80, English poet and satirist. During the Puritan Revolution he served Sir Samuel Luke, a noted officer of Cromwell. After the restoration of Charles II, he wrote his famous mock-heroic poem *Hudibras* (pub. in 3 parts, 1663, 1664, 1678), an evened-out satire against the Puritans in which Luke was the model for the butt Sir Hudibras. He was also the author of other verse satires, some of them not published until the 20th cent. See the John Wilders edition of his *Hudibras* (1967).

Butler, Samuel, 1835-1902, English author. He was the son and grandson of eminent clergymen. In 1859, refusing to be ordained, he went to New Zealand, where he established a sheep farm and in a few years made a modest fortune. He returned to England in 1864 and devoted himself to a variety of interests, including art, music, biology, and literature. Besides exhibiting some of his paintings (1868-76) at the Royal Academy, he composed several works in collaboration with Henry Festings Jones, among them the *Handelian Narcissus: A Dramatic Cantata* (1888). His *Erewhon*, in which he satirized English social and economic injustices by describing a country in which manners and laws were the reverse of those in England, appeared in 1872. It brought Butler immediate literary fame. *Erewhon Revisited* was published in 1901. Butler opposed Darwin's explanation of evolution, finding it too mechanistic, and he expounded his own theories in *Evolution Old and New* (1879), *Unconscious Memory* (1880), and *Luck or Cunning as the Main Means of Organic Modification?* (1887). In his single novel, the autobiographical *The Way of All Flesh* (1903), he attacked the Victorian pattern of life, in particular the ecclesiastical environment in which he was reared. Brilliantly ironic and witty, *The Way of All Flesh* is ranked among the great English novels. Butler's notebooks were published in 1912. See selections from the notebooks ed. by Geoffrey Keynes and Brian Hill (1951). See also Arnold Silver, ed., *The Family Letters of Samuel Butler, 1841-1886* (1962), biographies by H. F. Jones (1921, repr. 1973), L. E. Holt (1964), and Philip Henderson (1953, repr. 1967), study by W. G. Becker (1925, repr. 1964).

Butler, Thomas: see OSSORY THOMAS BUTLER EARL OF

Butler, Walter, 1752?-1781, Loyalist officer in the American Revolution, b. New York state, son of John BUTLER. He was an officer in his father's Loyalist troop, Butler's Rangers. He was captured (1777) by the patriots and sentenced to death, but the sentence was commuted. He escaped and in 1778 led the Rangers in a raid. This ended with the Cherry Valley massacre, for which his Indian commander, Joseph BRANT, blamed Butler. Walter Butler was killed in a skirmish with patriot troops under Marinus WILLET in the Mohawk valley. See Howard Swiggert, *War out of Niagara* (1933, repr. 1963).

Butler, William Orlando, 1791-1880, American general and political leader, b. Carrollton, Ky. He served in the War of 1812 and distinguished himself

in the battle of New Orleans. He was a Congressman from 1839 to 1843. In the Mexican War he was a major general of volunteers and was second in command to Zachary Taylor at Monterrey, where Butler was wounded. After the fighting ended he succeeded Winfield Scott as commander in chief and superintended the evacuation of the U.S. soldiers from Mexico. In 1848 he was vice presidential candidate on the unsuccessful Democratic ticket headed by Lewis Cass. Although a slaveholder, he opposed secession and supported the Union cause in the Civil War.

Butler, Zebulon, 1731-95, American colonial leader, b. Ipswich, Mass. After serving in the French and Indian Wars, Butler led a group of Connecticut settlers to the WYOMING VALLEY in N. Pennsylvania. He was military leader of the Connecticut settlers in the Pennamite Wars and served as director of the SUSQUEHANNA COMPANY. Butler represented (1774-76) the Wyoming Valley in the Connecticut assembly. A colonel in the Revolution, he was defeated (1778) by Loyalists under John BUTLER and fled to Fort, the Wyoming Valley massacre followed. Butler escaped and later was military commandant of the region.

Butler, city (1970 pop. 18,691), seat of Butler co., W. Pa., inc. as a borough 1817, as a city 1917. It is located in an area rich in coal, natural gas, oil, and limestone. Among its manufactures are steel, railroad-car parts, copper tubing, machinery, and petroleum products. Moraine State Park and a community college are there.

Butlerov, Aleksandr Mikhailovich (alyiksan'dar mēkhil'ovich būōt'lyārōf), 1825-1886, Russian chemist. As professor at the Univ. of Kazan he founded the first school of Russian chemists and directed research designed to confirm the classical theory of chemical structure, which he helped to create. His later work included investigations of polymerization reactions and applications of the theory of chemical structure to organic chemistry.

Butler University, at Indianapolis, Ind., coeducational, chartered 1850 as North Western Christian Univ. Its present name was adopted in 1877.

Buto (byōō'tō), ancient city, N. Egypt, in the Nile delta. The precise location is uncertain. Capital of Lower Egypt in prehistoric times (before 3100 B.C.), it had a temple dedicated to the serpent goddess Buto. During the Saïte period (663-525 B.C.) it was revived as an important religious center.

Butor, Michel (mēshēl' būōr'), 1926-, French novelist and critic. As one of the chief exponents of the new novel, or antinovel, Butor is less interested in the outcome of action in his novels than he is in the action itself. His technique involves the use of shifting time sequences, strong visual images, and the interior monologue. He often focuses on one small area of experience to reveal the larger complexity of life. His novels include *Passage de Milan* (1954), *L'Emploi du Temps* (1956, tr. *Passing Time*, 1960), *La Modification* (1957, tr. *Second Thoughts*, 1958), *Degres* (1960, tr. 1962), *Mobile* (1962, tr. *Mobile Study for a Representation of the U.S.*, 1963), and *Niagara: A Stereophonic Novel* (tr. 1969). He has also written numerous critical pieces. See study by Michael Spencer (1973).

Bütschli, Otto (ō'tō būch'lē), 1848-1920, German zoologist. He was professor of zoology at the Univ. of Heidelberg. His researches on invertebrate animals advanced knowledge of the development of gastropods, insects, and other forms, the structure of nematode worms, and processes of division of the nucleus and cell. A significant contribution was his theory (1878) of the structure of protoplasm, which suggested that it is alveolar or foamlike, he helped to establish that it is fluid in nature.

Butt, Isaac, 1813-79, Irish politician and nationalist leader. A member of both the Irish and the English bar, he was a noted conservative lawyer and scholar and an opponent of Daniel O'CONNELL. After the Irish famine experience of the 1840s, however, he became increasingly liberal, defended participants in the abortive Young Ireland revolt (1848), and entered (1852) Parliament as a Liberal-Conservative. He continually urged land tenure reform, defended the Fenian leaders, and founded (1870) the Home Rule Society. By 1874 the parliamentary group, the Home Rule League, comprised 56 members under his leadership. He remained nominal leader of the HOME RULE movement until his death, although effective leadership gradually passed to Charles Stewart PARNELL. See L. J. McCaffrey, *Irish Federalism in the 1870s* (1962), David Thornley, *Isaac Butt and Home Rule* (1964).

Butte (byōōt), city (1970 pop. 23,368), seat of Silver Bow co., SW Mont., inc. 1879. It is a trade, distribution, and industrial center. The mining industry has dominated the city's economy since its establishment in 1862. Copper is the major product, and zinc, silver, manganese, gold, lead, and arsenic are also extracted from the numerous mines in the region. First a gold-mining camp, then a silver center, Butte gained importance when copper was discovered (c. 1880) and Marcus Daly with his Anaconda Copper Mining Company began to exploit the "richest hill on earth." The expansion of the open-pit copper mine within the city limits is forcing sections of the city to relocate. Butte's reputation as a "wide-open" town reached its height during the "War of the Copper Kings." The Montana College of Mineral Science and Technology is in the city. Local attractions include tours of the mines, a mining museum, and the Columbia Gardens recreational area, maintained for the public by the Anaconda Company. Butte is the headquarters of Deerlodge National Forest.

butte, an isolated hill with steep sides and a flat top, resulting from the more rapid erosion of the surrounding areas. Buttes are characteristic of the plains of the W. United States. See MESA.

butter, dairy product obtained by churning the fat from milk until it reaches a solidified form. In most areas the milk of cows is the basis, but elsewhere that of goats, sheep, and mares has been used. Butter was known by 2000 B.C., although in ancient times it was used less as a food than as an ointment, a medicine, or an illuminating oil. At first it was rudely churned in skin pouches thrown back and forth or swung over the back of trotting horses. As butter became a staple food, various sorts of hand churns were devised, including rotating, swinging, and rocking containers operated by plungers. Butter-making on the farm consists of allowing the milk to cool in pans, letting the cream rise to the top, skimming the cream off, and letting it ripen by natural fermentation, it is then churned. Exclusively farm-made until about 1850, butter has become increasingly a factory product. The centrifugal cream SEPARATOR, introduced into the United States c. 1880 and a method devised in 1890 by Stephen Moulton BABCOCK to determine the butterfat content of milk and cream gave impetus to large-scale production. The application of principles of chemistry and bacteriology facilitates the making of butter of uniform quality. The percentage of fat extraction and the time required for churning depend on the composition of the butterfat (see FATS AND OILS), the temperature, acidity, richness, and viscosity of the cream, the speed and motion of the churn, and the size of the fat globules. Commercial butter usually contains from 80% to 85% milk fat, from 12% to 16% water, and about 2% salt. Sweet, or unsalted, butter is favored in Europe, but other markets prefer at least 2% salt. Renovated or process butter is made from rancid or inferior butter, melted and refined, then re-churned. Whey butter, made from cream separated from whey, is usually oily and of inferior quality. The natural color of butter, derived from the carotene of green plant fodder, ranges from pale yellow to deep gold. Australia, France, West Germany, New Zealand, the Soviet Union, and the United States are the leading producers, Denmark, New Zealand, and Australia, the chief exporters, and Great Britain, a heavy importer. The major production centers in the United States are in the N. Middle West, especially Minnesota, Iowa, and Wisconsin. Clarified butter, butterfat with the milk solids removed, is useful in cooking and has good keeping qualities. It is made in quantity in Egypt and in India, where it is known as GHEE. The high dietary value of butter is due to its large proportion of easily digested fat and to its vitamin A and vitamin D content.

butter-and-eggs, common name for a plant of the family Scrophulariaceae (FIGWORT family) and sometimes for other yellow-and-orange flowers. Butter-and-eggs plants are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Scrophulariales, family Scrophulariaceae.

buttercup or crowfoot, common name for the Ranunculaceae, a family of chiefly annual or perennial herbs of cool regions of the Northern Hemisphere. Thought to be one of the most primitive families of dicotyledonous plants, the Ranunculaceae typically have a simple flower structure in which each flower part may be separate rather than fused into a single organ (see FLOWER). Some botanists believe that the preference of this family for swamps and wet places also indicates its low evolutionary position. The family includes numerous familiar wild flowers and

many cultivated ornamentals. Well-known representatives are the ACONITE, ANEMONE, BANEERRY, BUG-BANE, CLEMATIS (one of the few vine species), COLUM-

Common buttercup, *Ranunculus acris*

BINE, GLOBEFLOWER, HELLEBORE, HEPATICA, LARKSPUR, LOVE IN A MIST, MARSH MARIGOLD (the American cow-slip), MEADOW RUE, and PEONY. The largest genus, *Ranunculus*, comprises the buttercups and crowfoots, names often used interchangeably. Found throughout arctic, north temperate, and alpine regions, with species in the Andes and in subantarctic areas, this genus is characterized by glossy yellow flowers (hence the name buttercup) and deeply cut leaves (supposedly resembling crows' feet). Like some other members of the family, species of this genus contain an acid juice that makes them unpalatable for livestock and in some species poisonous. A dozen or more species are common in every part of the United States. Among those cultivated for garden and cut flowers are some double-blossomed Old World species, e.g., the turban, or Persian, buttercup (*R. asiaticus*), valued for the variety of its colors (all but blue), and the creeping buttercup (*R. repens*), native to both North America and Europe. *R. ficaria*, of Eurasia, is the lesser celandine—a name more commonly applied to some plants of the poppy family, which it resembles. Many buttercups are aquatic plants, hence the Latin name for the genus *Ranunculus* [little frog]. The buttercup family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales.

Butterfield, Herbert, 1900–, English historian. He was educated at Cambridge and became professor of modern history there in 1944. His works cover a variety of topics in modern European history, outstanding are his volumes on 18th-century English history and historiography and his *Origins of Modern Science* (1949). *The Whig Interpretation of History* (1931) showed that many accepted views of English history had grown from the bias of such Whig historians as T. B. Macaulay. In *George III, Lord North, and the People* (1948), Butterfield traced political reform ideas in England in the era of the American Revolution. A critic of the historical method of L. B. Namier, Butterfield emphasizes great ideas as being central to man's development. Other works include *The Englishman and His History* (1944), *Christianity and History* (1950), and *History and Human Relations* (1951). He was knighted in 1968.

Butterfield, John, 1801–69, American stagecoach proprietor and expressman, b. near Albany, N.Y. Beginning as a stage driver out of Albany, he rose to ownership of a large network of stage lines. He helped to merge his express company with others to form (1850) the American Express Company. In 1857, when Congress established the overland mail route to Los Angeles, Butterfield was awarded the mail contract. He organized the service on the 2,800-mi (4,500-km) southern route efficiently and continued it until 1861, when the stages were moved to the central route. He also promoted the development of telegraph lines and railroads, and in 1865 he was elected mayor of Utica, N.Y.

Butterfield, William, 1814–1900, English Gothic-revival architect. Favored by the Ecclesiological Society for his Pugin-like correctness in recalling Gothic forms, Butterfield rose to prominence in the middle

of the 19th cent. The brilliant polychromy that he created through his combinations of brick, stone, and tile (e.g., All Saints' Church, London, 1849–59) introduced the High Victorian Gothic manner. The softer hues of the interior and the variously textured stone of the church at Baldersby St. James near Beverley in Yorkshire (1856) mark what is perhaps Butterfield's finest church. General interest in polychromy soon waned, but Butterfield continued in this mode with Keble College, Oxford (1868–70), and several buildings at Rugby School (1868–72).

butterfish: see HARVEST FISH

butterfly, any of a large group of INSECTS found throughout most of the world, with the MOTHS, they comprise the order Lepidoptera. There are about 12 families of butterflies. Like moths, butterflies have coiled, sucking mouthparts and two pairs of wings that function as a single pair; the wings are covered with scales that come off as dust when the insect is handled. Butterflies can be distinguished from moths in several ways. The antennae of butterflies are knobbed at the tips, while those of moths almost never have terminal knobs and are often feathery; the body of a butterfly is more slender and usually smoother than that of a moth; butterflies are active by day, while most moths are nocturnal, when at rest most butterflies hold the wings vertically, while most moths flatten them against the surface on which they are resting. The skippers are intermediate in characteristics, but they are usually called butterflies. The Lepidoptera, especially the butterflies, are known for the beautiful colors and patterns of their wings. Red, yellow, black, and white pigments are found in the scales, the blues and greens, and the metallic, iridescent hues found especially in tropical species, are caused chiefly by refraction. Some butterflies are protectively colored to match the environment. Many conspicuously colored species are distasteful to birds, which learn to avoid them, and others are protected by their resemblance to the distasteful species (see MIMICRY). Most adult moths and butterflies feed on nectar sucked from flowers. In the process they may transfer pollen from one flower to another, and many plants depend on moths or butterflies for pollination. Metamorphosis is complete, that is, the insect goes through four stages: egg, LARVA, PUPA, and adult. The eggs, which hatch in 2 to 30 days, are usually laid on a plant that the larva (called a CATERPILLAR) uses for food. Most caterpillars eat leaves. After the last of several molts the larva is transformed into a pupa with a hard, often sculptured outer integument, within which it changes to the adult form. The butterfly pupa is called a chrysalis, or chrysalid. Most chrysalids (unlike the pupae of most moths) are not enclosed in a cocoon, however, they are usually suspended from some object by a silken thread and may have a partial covering. Except in those species which winter in the pupa stage, the adult usually emerges from the integument in two or three weeks. Members of some species winter in the egg stage, others as larvae or adults. The adults of most species, however, live only about a month. Some butterflies migrate, usually traveling toward the equator in the fall and away from it in the spring. The North American monarch butterfly makes mass migrations of several thousand miles. Among the most beautiful butterflies are the swallowtails, found all over the world, the monarchs, and the peacock and tortoiseshell butterflies. Butterflies are classified in the phylum Arthropoda, class Insecta, order Lepidoptera. The true butterflies form the superfamily Papilionoidea, and the skippers form the superfamily Hesperioidea. See L. G. Higgins and N. D. Riley, *A Field Guide to the Butterflies of Britain and Europe* (1970), Michael Dickens, *The World of Butterflies* (1973), H. L. Lewis, *Butterflies of the World* (1973).

butterfly fish, common name for certain members of the Chaetodontidae, a family of reef-dwelling tropical fishes that also includes the angelfishes and is closely allied to the spadefishes and the tangs. All have compressed bodies and small mouths and teeth. Butterfly fish are carnivorous, feeding on crabs, barnacles, and other invertebrates. The fast and aggressive common butterfly fish, 5 to 8 in. (12.5–20 cm) long, is marked by dark lines through the eyes and near the tail. The angelfishes have spines on their gill covers and long filaments on their dorsal fins. The queen angelfish, a good food fish that reaches 2 ft (60 cm) in length, is colored in blues and yellows, the smaller, more numerous common angelfish is similar. The French angelfish is black with yellow scale edgings, the black angelfish is solid black, and the bizarre rock beauty has a black body with yellow head, fins, and tail. The

spadefishes are larger (up to 3 ft/90 cm) and faster than the angelfishes and are valued both as food and as game fishes. They are barred in black and white. The tangs have variable coloration. They include the violet-brown doctorfish or surgeonfish, the 8-in. (20-cm) blue tang, and the larger and more abundant ocean tang of deep waters. The butterfly fishes are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Chaetodontidae.

butterfly flower, fringeflower, or poor-man's-orchid, any of the showy plants of the genus *Schizanthus* of the family Solanaceae (NIGHTSHADE family), native to Chile but grown elsewhere as garden or greenhouse annuals. The flowers resemble butterflies and are found in a variety of colors, usually mottled. Butterfly flowers are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Polemoniales, family Solanaceae.

butterfly weed: see MILKWEED

butternut: see WALNUT

butterwort, common name for several species of the plant genus *Pinguicula* of the north temperate zone and the mountains of tropical America. It is a member of the family Lentibulariaceae (BLADDERWORT family).

Buttle Lake, 11 sq mi (28 sq km), central Vancouver Island, SW British Columbia, Canada. It is the site of major zinc and copper deposits.

button quail: see BUSTARD QUAIL

buttons, knoblike appendages used on wearing apparel either for ornament or for fastening. Although buttons were sometimes used as fasteners by Greeks and Romans, they were more often merely ornamental disks. They first became widely used when fitted garments came into use in the 13th cent., and their popularity has varied with the changes in fashion. In the 16th cent. they were magnificent and were classed among the vanities, made of silver or gold and jeweled, they were often set in a long row touching one another. In the 17th cent. cloth-covered buttons with embroidered decoration were popular, buttons appeared on everything, even handkerchiefs. The Puritans, considering buttons a vanity, used hooks and eyes. Early settlers in North America often used buttons in trading with the Indians. The manufacture of buttons began in the United States c.1826. Buttons, originally made of bronze or bone, have also been made of materials such as metal, porcelain, paste, wood, ivory, horn, pearl, glass, and plastic. There are two main types, those made with holes and those with shanks. The latter have a loop of metal let in through a hole or soldered into place. See S. C. Luscombe, *The Collector's Encyclopedia of Buttons* (1967).

buttonwood: see PLANE TREE

buttress, mass of masonry built against a wall to strengthen it. It is especially necessary when a vault or an arch places a heavy load or thrust on one part of a wall. In the case of a wall carrying the uniform load of a floor or roof, it is more economical to buttress it at certain intervals than to make the entire wall thicker. Even when a wall carries no load, it is usually buttressed rather than uniformly thickened. For a load-bearing brick wall more than 8 ft (2 m) high a buttress is used every 20 ft (6 m). The decorative possibilities of the buttress were discovered in the ancient temples at Abu Shahrein in Mesopotamia (3500–3000 B.C.), where they were used both as utilitarian and decorative forms. The Romans employed buttresses, which sometimes projected from the exteriors of the walls and were then left as mere piles of masonry, without architec-

Types of buttresses

tural treatment But in the large structures, such as basilicas and baths, the buttresses that received the thrusts from the main vaulting were confined to the interior of the building, where they served also as partition walls The basilica of Constantine in Rome (A D 312) exemplifies this arrangement In the medieval church, the groined vaults, concentrating their great lateral thrusts at points along the exterior walls, required buttresses as an essential element to achieve stability Beginning with Romanesque architecture about A D 1000, a steady evolution of buttresses can be traced, from the simple, slightly projecting piers of the 11th cent to the bold and complex Gothic examples of the 13th, 14th, and 15th cent Builders in England, Germany, and N France achieved striking architectural effects They devised the flying buttress, an arch of masonry abutting against the wall of the nave, the thrust of the nave vault could thus be received and transferred to the vertical buttress built against the outside walls of the side aisles These flying arches, at first concealed beneath the roofs, began to be exposed outside the roofs in the mid-12th cent Later they were enriched with gables, stone tracery, and sculpture and were topped with pinnacles to give them extra weight They constitute, especially in such French cathedrals as Amiens, Beauvais, and Notre-Dame de Paris, the true expression of the elasticity and equilibrium which were the basic principles of the Gothic structural system

Butuan (bōōtōō'an), city (1970 est pop 116,900), capital of Agusan del Norte prov, NE Mindanao, the Philippines It is a port on the Agusan River near its mouth at Butuan Bay An outlet for the fertile Agusan River valley, it is one of the fastest growing cities in the Philippines

butyl rubber (byōō'tīl) see RUBBER

butyric acid (byōōtīr'ik) or **butanoic acid** (byōōtā-nō'tīk), $\text{CH}_3\text{CH}_2\text{CH}_2\text{CO}_2\text{H}$, viscous, foul-smelling, liquid carboxylic acid, m p about -5°C , b p 163.5°C It is miscible with water, ethanol, and ether It is a low molecular weight FATTY ACID that is present in butter as an ester of glycerol, the odor of rancid butter is due largely to the presence of free butyric acid Butyric acid is used in the manufacture of plastics Isobutyric acid, or 2-methylpropanoic acid, $(\text{CH}_3)_2\text{CHCO}_2\text{H}$, is a geometric ISOMER of the butyric acid described above, it has different physical properties but similar chemical properties

Butzer, Martin: see BUCER, MARTIN

Buxar or **Baxar** (both bəksar'), village (1971 pop 31,694), West Bengal state, E central India A British victory over the Nawab of Oudh at Buxar in 1764 assured British control of the Bengal area

Buxtehude, Dietrich (dē'trīkh bōōks'təhōō'də), 1637-1707, Swedish composer and organist From 1668 until his death he was organist at Lubeck, where he established a famous series of evening concerts that attracted musicians from all over northern Germany On one occasion J S Bach walked about 200 miles (320 km) to hear these concerts, and his own style was much influenced by Buxtehude's choral, orchestral, and organ music His best-known works are freely developed organ fugues and concerted choral music

Buxton, Sir Thomas Fowell, 1786-1845, British social reformer As a member of Parliament (1818-37) he began his reform activities immediately with the publication of *An Inquiry Whether Crime and Misery Are Produced or Prevented by Our Present System of Prison Discipline*, this work led to the establishment of the Society for the Reformation of Prison Discipline An abolitionist, Buxton succeeded William Wilberforce as leader of the anti-slavery group His efforts resulted in the passage of an act (1833) abolishing slavery in the British colonies He wrote *The African Slave Trade* (1839) and *The Remedy* (1840, 2d ed 1967) See his memoirs (ed by his son Charles Buxton, 1872)

Buxton, municipal borough (1971 pop 20,316), Derbyshire, central England, on the Wye River in Peak District National Park It is c 1,000 ft (305 m) high, the "old town" is on a hill above it There is limestone quarrying, but Buxton is primarily a year-round resort, with mineral springs and baths

Buys Ballot, Christoph Heinrich Diedrich (krīs'tōf hīn'rīkh dēd'rīkh bōis'-bālō'), 1817-90, Dutch meteorologist Director of the Dutch Royal Meteorological Institute after 1854, he strove to organize and standardize a system for representing meteorological findings and formulated (1857) Buys Ballot's law This states that, in the Northern Hemisphere, if one stands with his back to the wind, the area of low pressure is to his left In the Southern Hemisphere the reverse is true The explanation lies in the

deflection, caused by the earth's rotation, in the movement of air from areas of high pressure to areas of lower pressure A related law had been deduced earlier by the U S meteorologist William Ferrel

Buyuk Menderes, river, Turkey see MAEANDER

Buz (büz) 1 Son of Nahor and Milcah Gen 22:21 He was apparently the eponym of an Arabian tribe Jer 25:23 The term Buzite is probably derived from his name Job 32:2 2 Gadite 1 Chron 5:14

Buzău (bōōzū'ōō), city (1968 est pop 55,000), SE Rumania, in Walachia, on the Buzău River It is a district administrative center, an important railroad junction, and a market for petroleum, timber, and grain Buzău is also an active industrial city, with oil refineries, foundries, distilleries, and a textile industry Long the residence of an Orthodox bishop, it has an episcopal palace and a 16th-century cathedral, restored in 1740

Buzi (byōō'zī), father of Ezekiel Ezek 1:3

buzzard, common name for hawks of the genus *Buteo* and the genus *Pernis*, or honey buzzard, of the Old World family Accipitridae Honey buzzards feed on insects, wasp and bumblebee larvae, and small reptiles The name buzzard is also incorrectly applied to various hawks and New World vultures, such as the turkey vulture (*Cathartes aura*) and the black vulture (*Coragyps atratus*) of the family Cathartidae Buzzards are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Falconiformes, family Accipitridae

Buzzards Bay, inlet of the Atlantic Ocean, 30 mi (48 km) long, from 5 to 10 mi (8-16 m) wide, SE Mass, connected with Cape Cod Bay by the Cape Cod Canal and bounded on the SE by the Elizabeth Islands Its shores are very irregular The village of Buzzards Bay (1970 pop 2,422), seat of Cape Cod Canal administration, is in the town of Bourne on the shore of the bay

Byblos (bīb'lās), ancient city, Phoenicia, a port 17 mi (27 km) NNE of modern Beirut, Lebanon The principal city of Phoenicia during the 2d millennium B C, it long retained importance as an active port under the Persians Byblos was the chief center of the worship of Adonis Because of its papyrus, it was also the source of the Greek word for book and, hence, of the name of the Bible Excavations of Byblos, especially since 1922, have shown that trade existed between Byblos and Egypt as early as c 2800 B C A syllabic script found at Byblos dates from the 18th to the 15th cent B C The name of the modern town on the site, Jebail, preserves the form Gebal, the name given the city in the Old Testament (Ezek 27:9) The inhabitants are called Giblites (Joshua 13:5) The Gebal of Psalms B3:7 is almost certainly not the same city, it is otherwise unknown

Bydgoszcz (bīd'gōshch), Ger *Bromberg*, city (1970 pop 280,460), capital of Bydgoszcz prov, N central Poland, on the Brda River, a tributary of the Vistula One of Poland's major inland ports, it stands on the Bydgoszcz Canal (built 1773-74), which links the Brda and Noteć rivers and is part of the Vistula-Oder waterway The city is also an important railway junction Its chief industries produce machinery and machine tools, electrical equipment, metal goods, precision instruments, and chemicals Chartered in 1346, the city developed during the Middle Ages around the site of a prehistoric fort In the 15th and 16th cent it became an important commercial center It passed to Prussia in 1772 and was returned to Poland in 1919 Occupied by German forces from 1939 to 1945, the city suffered heavy damage in World War II The most notable surviving building is a 15th-century Gothic church

Byelo- For some names beginning thus, see BELO, e.g., for Byelorussia, see BELORUSSIA

Byles, Mather, 1707-88, American clergyman and poet, b Boston Famous minister of the Hollis St Congregational Church, Boston, from 1732, he was dismissed for his Tory sympathies after the British evacuation of Boston From his uncle, Cotton Mather, he inherited a valuable library, to which he added his own unique collection His poetry, imitative but witty, appeared in *Poems on Several Occasions* (1744) and other volumes, his prose includes sermons and *The Flourish of Annual Spring* (1741) See A W H Eaton, *The Famous Mather Byles* (1914, repr 1972)

byliny (bīl'ēnē) [Rus, = what has happened], Russian scholarly term first applied in the 1840s to a great body of narrative and heroic poems They are called by the folk *starny* [Rus, = what is old] Most *byliny* are loosely connected with historical events dating from the 11th to the 16th cent, particularly the siege

of Kazan (1552), and have been handed down by word of mouth by professional reciters The poems were first collected and studied in the 18th cent The largest of the *byliny* cycles is that from Kiev concerning Prince Vladimir, the Little Sun, and the warrior Ilya of Murom Of importance also is the Novgorod cycle, concerning the adventures of the merchant prince Sadko and Vasily Buslayevich A third cycle of Older Heroes relates tales of the strong plowman Mikula The characters of the *byliny* all possess supernatural powers Though modified by elements of Scandinavian, Byzantine, and Oriental folk tales, *byliny* are strikingly Russian and have had an enriching influence on Russian literature, music, and art See N K Chadwick, *Russian Heroic Poetry* (1932, repr 1964), L A Magnus, *The Heroic Ballads of Russia* (1921, repr 1967)

Byng, George: see TORRINGTON, GEORGE BYNG, VIS COUNT

Byng, John, 1704-57, British admiral, son of George Byng, Viscount Torrington Sent (1756) to prevent the French from taking Minorca, he arrived when the island was already under siege and, after an in decisive naval engagement, withdrew without relieving the siege His court-martial and execution for neglect of duty brought charges that he had been used as a scapegoat for ministerial failure and prompted Voltaire's suggestion (in *Candide*) that from time to time the British find it desirable to shoot an admiral "pour encourager les autres" [to encourage the others] See study by D B E Pope (1962)

Byng, Julian Hedworth George, 1st Viscount **Byng of Vimy**, 1862-1935, British general He served in India and South Africa and had several commands in World War I In April, 1917, Canadian troops under his command took Vimy Ridge, in N France For his distinguished services he was made a baron and, in 1926, a viscount He was governor general of Canada from 1921 to 1926

Bynkershoek, Cornelius van (kōrnā'līs vān bīng'-kars-hōōk), 1673-1743, Dutch writer on international law His *De dominio maris* [on the rule of the seas] (1702, tr 1923) is a classic on maritime law, and he also wrote on diplomatic rights and, in *Quaestiones juris publici* [questions of public law] (1737), on public law It was Bynkershoek who first proposed the "three-mile limit" rule, which states that a nation may claim sovereignty over territorial waters to a distance of 3 mi (4.8 km) from shore

Bynner, Witter (bīn'ər), 1881-1968, American poet, b Brooklyn, N Y, grad Harvard, 1902 As a poet Bynner had a remarkable facility for catching the cadences of other writers and cultures Under the pseudonym Emanuel Morgan he collaborated with Arthur Davidson Ficke in writing *Spectra* (1917), a book parodying contemporary poetic vogues such as imagism, *Spectra* was for a time considered a serious work (see LITERARY FRAUDS) With Dr Kaing Kung-Ho, Bynner translated 300 Chinese poems published in *The Jade Mountain* (1929) His other works include several plays and essays, a reminiscence of D H Lawrence, *Journey with Genius* (1951), and such volumes of poetry as *Greystone Poems* (1917), *Indian Earth* (1929), *Selected Poems* (1943), *Take Away the Darkness* (1947), and *New Poems* (1960)

Byrd, Harry Flood (būrd), 1887-1966, U S Senator from Virginia (1933-65), b Martinsburg, W Va, brother of Richard E Byrd Educated at Shenandoah Academy in Winchester, Va, he became publisher of the *Winchester Star* and an important figure in state Democratic politics His administration as governor (1926-30) was marked by the development of the state highway system Appointed Senator in 1933, he was continually reelected until his retirement in 1965 He was a leading conservative Democrat and opposed the New Deal and later progressive measures For many years he was chairman of the Senate Finance Committee, and he advocated government economy

Byrd, Richard Evelyn, 1888-1957, American aviator and polar explorer, b Winchester, Va He took up aviation in 1917, and after World War I he gained great fame in the air He commanded the naval air unit with the Arctic expedition of D B MacMillan in 1925, he and Floyd Bennett flew from Spitsbergen to the North Pole and back in 1926 (the first men to fly over the pole), and in 1927 he and three companions made one of the spectacular flights across the Atlantic A record of his flights was presented in *Skyward* (1928) Two years later he led a well equipped and efficiently organized expedition to Antarctica Establishing a base at LITTLE AMERICA, he discovered the Rockefeller Range and Marie Byrd

Land, and late in 1929 he and Bernt BALCHEN flew to the South Pole and back. The large party gathered much scientific information. In 1930, Byrd was promoted to rear admiral, and his *Little America* was published. His second large expedition was organized in 1933, and headquarters were established once again at Little America. As winter approached, he set up an advance base 123 mi (198 km) closer to the South Pole and stayed there alone for several months making observations. *Discovery* (1935) and *Alone* (1938) were records of this fruitful expedition. In 1939–40 he was again in the Antarctic commanding a government expedition, and in 1946–47 he headed the U.S. navy expedition, the largest yet sent to the region (see ANTARCTICA). In 1955, Byrd was placed in command of all U.S. Antarctic activities, and in 1955–56 he led his fifth expedition to the region. Due mainly to his efforts, the U.S. navy organized (1955–59) Operation Deep Freeze. Byrd's explorations form much of the basis for U.S. claims in Antarctica. See Martin Gladych, *Admiral Byrd of Antarctica* (1960), E. P. Hoyt, *The Last Explorer* (1968).

Byrd, William, 1543–1623, English composer, organist at Lincoln Cathedral and, jointly with Tallis, at the Chapel Royal. Although Roman Catholic, he composed anthems and services for the English Church in addition to his great Roman masses and Latin motets. He was highly esteemed by his contemporaries and was favored by Queen Elizabeth I, who, in 1575, granted to Byrd and Tallis a patent for the exclusive printing and selling of music. Byrd also composed music for the virginal and other instruments. See studies by E. H. Fellowes (2d ed. 1948), and Imogen Holst (1972).

Byrd, William, 1652–1704, English planter in early Virginia. He came to America as a youth and took up lands he had inherited on both sides of the James River, including the site that would later be Richmond. In 1691 he moved to "Westover," long famous as the Byrd family home. His landed fortune was increased by his interest in trade, and he served (1703) as president of the Virginia council. Byrd's wealth, culture, and character made him the ideal tidewater aristocrat. He was the father of William Byrd (1674–1744).

Byrd, William, 1674–1744, American colonial writer, planter, and government official, son of William Byrd (1652–1704). After being educated in England, he became active in the politics of colonial America. He served as member of the house of burgesses, as receiver-general of Virginia, as Virginia council member, and as colonial agent in England. Byrd inherited a great estate from his father and ultimately owned over 179,000 acres (72,000 hectares). In 1737 he had the city that was to be Richmond laid out on one of his estates. His service in 1728 as one of the commissioners to survey the North Carolina-Virginia boundary and his many trips into the backwoods provided the material for much of his writings. *A History of the Dividing Line, A Journey to the Land of Eden*, and *A Progress to the Mines* were all based on his diaries. Byrd's polished style and crisp wit, in addition to his valuable record of Southern life, have won him a reputation as one of the foremost colonial authors. At his death he left a library of some 4,000 volumes at his Westover estate. See his diaries and other writings (1941, 1942, 1970), biography by Pierre Marambaud (1971).

Byrde, William—see BYRD, WILLIAM

Byrhtnoth (bīrkht'noth) or **Bryhtnoth** (brīkht'noth), d. 991, alderman of the East Saxons. Leader of the English forces in the battle of Maldon, he was killed in the battle and was buried at Ely.

Byrnes, James Francis, 1879–1972, American public official, Secretary of State (1945–47), governor of South Carolina (1951–55), b. Charleston, S.C. He studied law while working (1900–1908) as a court reporter, owned and edited a newspaper in Aiken, S.C., and represented (1911–25) South Carolina in the House as Senator (1931–41). Byrnes, a Southern Democrat, became budgetary expert for the New Deal. He served as an Associate Justice of the Supreme Court (1941–42), but resigned and became director of economic stabilization (1942) and later (1943) director of war mobilization. As Secretary of State he tried to mend postwar differences with the USSR. He later became extremely anti-Soviet. An opponent of racial integration, he was elected governor of South Carolina, and opposed further Federal centralization. See his *Speaking Frankly* (1947) and *All in One Lifetime* (1958).

Byrom, John (bī'ram), 1692–1763, English shorthand expert and poet, educated at Trinity College, Cambridge. He devised an early shorthand system,

which he taught in Manchester. Although he copyrighted his system in 1742, his book, *The Universal English Shorthand*, was not published until after his death. He was a great admirer of William Law, and much information about Law is found in Byrom's *Private Journal and Literary Remains* (1854–57). He wrote *Seasonably Alarming and Humiliating Truths in a Metrical Version of Certain Select Passages Taken from the Works of William Law* (1774) and other facetiously rhyming, rather eccentric religious verse.

Byron, George Gordon Noel Byron, 6th Baron (bī'ran), 1788–1824, English poet and satirist, son of Capt. John ("Mad Jack") Byron and his second wife, Catherine Gordon of Gight. His father died in 1791, and Byron, born with a clubfoot, was subjected alternately to the excessive tenderness and violent temper of his mother. In 1798, after years of poverty, Byron succeeded to the title and took up residence at the family seat, "Newstead Abbey." He subsequently attended Dulwich school and Harrow (1801–5) and then matriculated at Trinity College, Cambridge. Although the academic atmosphere did nothing to lessen Byron's sensitivity about his lameness, he made several close friends while at school. His first volume, *Fugitive Pieces* (1806), was suppressed, revised and expanded, it appeared in 1807 as *Poems on Various Occasions*. This was followed by *Hours of Idleness* (1807), which provoked such severe criticism from the *Edinburgh Review* that Byron replied with *English Bards and Scotch Reviewers* (1809), a satire in heroic couplets reminiscent of Pope, which brought him immediate fame. He left England the same year for a grand tour through Spain, Portugal, Italy, and the Balkans. He returned in 1811 with Canto I and II of *Childe Harold* (1812), a melancholy, philosophic poem in Spenserian stanzas, which made him the social lion of London. It was followed by the verse tales *The Giaour* (1813), *The Bride of Abydos* (1813), *The Corsair* (1814), *Lara* (1814), *The Siege of Corinth* (1816), and *Parisina* (1816). Byron's name at this time was linked with those of several women, notably Viscount Melbourne's wife, Lady Caroline Lamb. In Jan., 1815, he married Anne Isabella Milbanke, a serious, rather cold, young woman with whom he had little in common. She gave birth to a daughter, Augusta Ada, the following December. In 1816 she secured a separation. Although her reasons for such an action remain obscure, evidence indicates that she discovered the existence of an incestuous relationship between Byron and his half-sister, Mrs. Augusta Leigh. Although his many attachments to women are notorious, Byron was actually ambivalent toward women. There is some evidence that he had several homosexual relationships. In April, 1816, a social outcast, Byron left England, never to return. He passed some time with Shelley in Switzerland, writing Canto III of *Childe Harold* (1816) and *The Prisoner of Chillon* (1816). With the party was Shelley's sister-in-law, Claire Clairmont, who had practically forced Byron into a liaison before he left England, and who, in Jan., 1817, bore him a daughter, Allegra. Settling in Venice (1817), he led for a time a life of dissipation, but produced Canto IV of *Childe Harold* (1818), *Beppo* (1818), and *Mazeppa* (1819) and began *Don Juan*. In 1819 he formed a liaison with the Countess Teresa Guiccioli, who remained his acknowledged mistress for the rest of his life. Byron was induced to interest himself in the cause of Greek independence from the Turks and sailed for Missolonghi, where he arrived in 1824. He worked unsparingly with Prince Alexander Mavrocordatos to unify the divergent Greek forces, but caught a fever and died the same year. Ranked with Shelley and Keats as one of the great Romantic poets, Byron became famous throughout Europe as the embodiment of romanticism. His good looks, his lameness, his flamboyant life style all contributed to the formation of the Byronic legend. By the mid-20th cent. his reputation as a poet had been eclipsed by growing critical recognition of his talents as a wit and satirist. Byron's poetry covers a wide range. In *English Bards and Scotch Reviewers* and in *The Vision of Judgment* (1822), he wrote 18th-century satire. He created the "Byronic hero," who appears consummately in the Faustian tragedy *Manfred* (1817)—a mysterious, lonely, defiant figure whose past hides some great crime. *Cain* (1821) raised a storm of abuse for its skeptical attitude toward religion. The verse tale *Beppo* is in the ottava rima (eight-line stanzas in iambic pentameter) that Byron later used for his acknowledged masterpiece *Don Juan* (1819–24), an epic-satire combining Byron's art as a storyteller, his lyricism, his cynicism, and his detestation of convention. See his letters and diaries, ed. by Les-

lie Marchand (2 vol., 1973, others planned), biographies by Andre Maurois (1930, repr. 1964), Leslie Marchand (3 vol., 1957, and 1 vol., 1970), studies by Peter Quennell (rev. ed. 1967, and 1941, repr. 1957), G. Wilson Knight (1952 and 1957), L. A. Marchand (1965), and Michael G. Cooke (1969).

Byron, John, 1723–86, British vice admiral and explorer. Sailing in 1740 with Admiral George Anson on a voyage around the world, he was shipwrecked off Chile. His *Narrative of Great Distresses on the Shores of Patagonia* (1768) is said to have been used by his grandson, the poet George Gordon, Lord Byron, in writing *Don Juan*.

Byström, John Niklas (bu'ström), 1783–1848, Swedish sculptor. He spent part of his life in Rome. Byström made colossal statues of kings of Sweden for Stockholm, but he was most successful in portraying women and children.

Bytom (bī'tôm), Ger. *Beuthen*, city (1970 pop. 186,993), SW Poland, in the Katowice mining region. An important industrial center, it has factories producing metal products and furniture. A Polish king built a fortress on the site in the 11th cent., and by the 12th cent. the lead and zinc mines of the region were being exploited. The city was chartered in 1254, and in the late 13th cent. served briefly as the capital of an independent principality that passed under the rule of Bohemia. The Hapsburgs held the city from 1526 until 1742, when it passed to Prussia. In a plebiscite after World War I a majority of the population voted to join Poland, but Germany held onto the city. It was finally incorporated into Poland in 1945. Bytom has an opera house and museum.

Bytown: see OTTAWA, Canada

Byzantine art and architecture include not only works produced in the city of Byzantium after Constantine made it the capital of the Roman Empire (A.D. 330) but also the work done under Byzantine influence, as in Venice, Ravenna, Norman Sicily, and in Syria, Greece, Russia, and other Eastern countries. For more than a thousand years, until the conquest of Constantinople by the Turks in 1453, Byzantine art retained a remarkably conservative orientation, the major phases of its development emerge from a background marked by adherence to classical principles. Artistic activity was temporarily disrupted by the iconoclastic controversy (726–843), which resulted in the wholesale destruction of figurative works of art and the restriction of permissible content to ornamental forms or to symbols like the cross. The pillaging of Constantinople by the Frankish Crusaders in 1204 was perhaps a more serious blow, but it was followed by an impressive late flowering of Byzantine art under the Paleologus dynasty. Byzantine achievements in mosaic decoration brought this art to an unprecedented level of monumentality and expressive power. Mosaics were applied to the domes, half-domes, and other available surfaces of Byzantine churches in an established hierarchical order. The center of the dome was reserved for the representation of the Pantocrator, or Christ as the ruler of the universe, whereas other sacred personages occupied lower spaces in descending order of importance. The entire church thus served as a tangible evocation of the celestial order; this conception was further enhanced by the stylized poses and gestures of the figures, their hieratic gaze, and the luminous shimmer of the gold backgrounds. Because of the destruction of many major monuments in Constantinople proper, large ensembles of mosaic decoration have survived chiefly outside the capital, in such places as Salonica, Nicaea, and Daphni in Greece and Ravenna in Italy. An important aspect of Byzantine artistic activity was the painting of devotional panels, since the cult of icons played a leading part in both religious and secular life. Icon painting usually employed the ENCAUSTIC technique. Little scope was afforded individuality, the effectiveness of the religious image as a vehicle of divine presence was held to depend on its fidelity to an established prototype. A large group of devotional images has been preserved in the monastery of St. Catherine on Mt. Sinai. The development of Byzantine painting may be seen also in manuscript illumination. Among notable examples of Byzantine illumination are a lavishly illustrated 9th-century copy of the Homilies of Gregory Nazianzus and two works believed to date from a 10th-century revival of classicism, the Joshua Rotulus (or Roll) and the Paris Psalter. Enamel, ivory, and metalwork objects of Byzantine workmanship were highly prized throughout the Middle Ages, many such works are found in the treasuries of Western churches. Most of these objects were reliquaries or devotional panels, although an important

series of ivory caskets with pagan subjects has also been preserved. Byzantine silks, the manufacture of which was a state monopoly, were also eagerly sought and treasured as goods of utmost luxury. The architecture of the Byzantine Empire was based on the great legacy of Roman formal and technical achievements. Constantinople had been purposely founded as the Christian counterpart and successor to the leadership of the old pagan city of Rome. The new capital was in close contact with the Hellenized East, and the contribution of Eastern culture, though sometimes overstressed, was an important element in the development of its architectural style. The 5th-century basilica of St John of the Studion, the oldest surviving church in Constantinople, is an early example of Byzantine reliance upon traditional Roman models. The most imposing achievement of Byzantine architecture is the Church of Holy Wisdom (see HAGIA SOPHIA). It was constructed in a short span of five years (532-37) during the reign of Justinian. Hagia Sophia is without a clear antecedent in the architecture of late antiquity, yet it must be accounted as culminating several centuries of experimentation toward the realization of a unified space of monumental dimensions. Throughout the history of Byzantine religious architecture, the centrally planned structure continued in favor. Such structures, which may show considerable variation in plan, have in common the predominance of a central domed space, flanked and partly sustained by smaller domes and half-domes spanning peripheral spaces. Although many of the important buildings of Constantinople have been destroyed, impressive examples are still extant throughout the provinces and on the outer fringes of the empire, notably in Bulgaria, Russia, Armenia, and Sicily. A great Byzantine architectural achievement is the octagonal church of San Vitale (consecrated 547) in Ravenna. The church of St Mark's in Venice was based on a Byzantine prototype, and Byzantine workmen were employed by Arab rulers in the Holy Land and in Ottonian Germany during the 11th cent. Secular architecture in the Byzantine Empire has left fewer traces. Foremost among these are the ruins of the 5th-century walls of the city of Constantinople, consisting of an outer and an inner wall, each originally studded with 96 towers. Some of these can still be seen. See Alexander van Millingen, *Byzantine Churches in Constantinople* (1912), Andre Grabar, *Byzantine Painting* (tr 1953), D Talbot Rice, *Art of Byzantium* (1959) and *Art of the Byzantine Era* (1963), William MacDonald, *Early Christian and Byzantine Architecture* (1963).

Byzantine Empire, successor state to the Roman Empire (see under ROME), also called Eastern Empire and East Roman Empire. It was named after Byzantium, which Emperor Constantine I rebuilt (A.D. 330) as CONSTANTINOPLE and made the capital of the entire Roman Empire. Although not foreseen at the time, a division into Eastern and Western empires became permanent after the accession (395) of HONORIUS in the West and ARCADIVS in the East. Throughout its existence the Byzantine Empire was subject to important changes in its boundaries. The core of the empire consisted of the Balkan Peninsula (i.e., Thrace, Macedonia, Epirus, Greece proper, the Greek isles, and Illyria) and of Asia Minor (present-day Turkey). The empire combined Roman political tradition, Hellenic culture, and Christian beliefs. Greek was the prevalent language, but Latin long continued in official use. The characteristic Oriental influence began with Constantine I, who also introduced Christianity. Orthodoxy triumphed over ARIANISM under Arcadius' predecessor, Theodosius I, but violent religious controversy was chronic. The reigns (395-527) of Arcadius, Theodosius II, Marcian, Leo I, Leo II, Zeno, Anastasius I, and Justin I were marked by the invasions of the Visigoths under ALARIC I, of the Huns of ATTILA, and of the AVARS, the SLAVS, the Bulgars (see BULGARIA), and the Persians. After the Western Empire fell (476) to ODOACER, Italy, Gaul, and Spain were theoretically united under Zeno but were actually dominated by, respectively, the Ostrogoths, the Franks, and the Visigoths, while Africa was under the Vandals. During this period arose the heresies of NESTORIANISM and MONOPHYSITISM and the political parties of BLUES AND GREENS to divide the Byzantines.

An Age of Revival Under the rule (527-65) of JUSTINIAN I and THEODORA, Byzantine power grew. Their great generals, BELISARIUS and NARSES, checked the Persians, repressed political factions, and recovered Italy and Africa, while TRIBONIAN helped the emperor to codify ROMAN LAW. During Justinian's reign a great revival of Hellenism took place in literature,

and Byzantine art and architecture entered their most glorious period. Much was lost again under his successors. The LOMBARDS conquered most of Italy, however, the Pentapolis, Rome, Sardinia, Corsica, Liguria, and the coasts of S Italy and Sicily long remained under Byzantine rule, and at RAVENNA the exarchs governed until 751. The Persians, under KHOSRU I, made great gains against the empire, though Emperor Maurice temporarily checked them in 591. The emperor Heraclius (610-41) defeated the Persians but was barely able to save Constantinople from the Avars. Muslim conquests soon afterward wrested Syria, Palestine, Egypt, Africa, and Sicily from the empire. Heraclius' attempt to reconcile

Monophysitism and orthodoxy merely led to the new heresy of MONOTHELETISM. His military reorganization of the provinces into *themes* proved effective and was continued by Constans II (641-48). Constantine IV (668-85) saved Constantinople from Arab attack. The 7th cent. was marked by increasing Hellenization of the empire, outwardly symbolized by the adoption of the Greek title *Basileus* by the emperors. The church, under the patriarch of Constantinople, became increasingly important in public affairs. Theology, cultivated by emperors and monks alike, was pushed to extremes of subtlety. Literature and art became chiefly religious. Under Justinian II and his successors the empire was again

Byzantine Empire (c 1000)

Cross references are indicated by small CAPITALS

menaced by Arabs and Bulgars, but the Isaurian emperors Leo III (717–41) and Constantine V stopped the Arab advance and recovered Asia Minor. The grave issue of ICONOCLASM, which they precipitated, led to the loss of Rome. In 800, during the reign of Irene, the Frank CHARLEMAGNE was crowned emperor of the West at Rome. Thus ended even the theoretical primacy of Byzantium over Europe.

The Oriental State The political division of East and West was paralleled by a religious schism, intensified by the patriarch PHOTIUS, between the Roman and the ORTHODOX EASTERN CHURCH, later culminating in a complete break (1054). In all aspects the Byzantine Empire, having lost its claim to universality, became a Greek monarchy, though Constantinople still remained the center of both Greek and Roman civilization. Compared with its intellectuals, artists, writers, and artisans, those of Western Europe were crude and barbarous, though sometimes more vigorous and original. In the empire the administrative machinery was huge, and competition among the courtiers was intense. Complex diplomacy, intrigue, and gross violence marked the course of events, yet moral decay did not prevent such emperors as Basil I, founder of the Macedonian dynasty, and his successors (notably Leo VI, Romanus I, Constantine VII, Nicephorus II, John I, and Basil II) from giving the empire a period of splendor and power (867–1025). The eastern frontier was pushed to the Euphrates River, the Bulgars were subjugated, and the Balkan Peninsula was recovered. Russia, converted to Christianity, became an outpost of Byzantine culture. In the unceasing struggle between the great landowners and the small peasantry, most of the emperors favored the peasants. Economic prosperity was paralleled by a new golden age in science, philosophy, and architecture.

The Ebb of Power With the rule of Zoe (1028–50) anarchy and decline set in. The Seljuk TURKS increased their attacks, and with the defeat (1071) of Romanus IV at Manzikert most of Asia Minor was permanently lost. The Normans under Robert GUISCARD and BOHEMOND I seized Sicily and attacked the Balkans. Venice ruled the Adriatic and challenged Byzantine commercial dominance in the East, and the Bulgars and Serbs reasserted their independence. Alexius I (1081–1118) took advantage of the First Crusade (see CRUSADES) to recover some territory in Asia Minor and to restore Byzantine prestige, but his successors of the COMNENUS dynasty were at best able to postpone the disintegration of the empire. After the death (1180) of Manuel I the Angelus dynasty unwittingly precipitated the cataclysm of the Fourth Crusade. In 1204 the Crusaders and the Venetians sacked Constantinople and set up a new empire (see CONSTANTINOPLE, LATIN EMPIRE OF) in Thrace, Macedonia, and Greece. The remainder of

the empire broke into independent states, notably the empires of NICAIA and of TREBIZOND and the despotate of EPIRUS. In 1261 the Nicaean emperor Michael VIII conquered most of the tottering Latin empire and reestablished the Byzantine Empire under the PALAEOLOGUS family (1261–1453). The reconstructed empire was soon attacked from all sides, notably by CHARLES I of Naples, by Venice, by the Ottoman Turks, by the new kingdoms of Serbia and Bulgaria, and by Catalanian adventurers under Roger de FLOR. At the same time, the empire began to break down from within—the capital was at odds with the provinces, ambitious magnates were greedy for land and privileges, religious orders fought each other vigorously, and church and state were rivals for power. Eventually the Turks encircled the empire and reduced it to Constantinople and its environs. Manuel II and John VIII vainly asked the West for aid, and, in 1453, Constantinople fell to Sultan MUHAMMAD II after a final desperate defense under Constantine XI. This is one of the dates conventionally accepted as the beginning of the modern age. The collapse of the empire opened the way for the vast expansion of the Ottoman Empire to Vienna itself and also enabled IVAN III of Russia, son-in-law of Constantine XI, to claim a theoretical succession to the imperial title. The classic, though biased, work on Byzantine history is Gibbon's *Decline and Fall of the Roman Empire*. More recent standard works are those of J. B. Bury, Charles Diehl, A. A. Vasil'ev, George Ostrogorsky, and N. H. Baynes. See Steven Runciman, *Byzantine Civilization* (1933, repr. 1959), J. M. Hussey, *The Byzantine World* (3d rev. ed. 1967), R. J. H. Jenkins, *Byzantium* (1967), Dimitri Obolensky, *The Byzantine Commonwealth* (1971).

Byzantine music, the music of the Byzantine Empire composed to Greek texts as ceremonial festival or church music. Long thought to be only a further development of ancient Greek music, Byzantine music is now regarded as an independent musical culture, with elements derived from Syrian and Hebrew as well as Greek sources. Its beginnings are dated by some scholars as in the 4th cent., after the founding of the Eastern Empire by Constantine I. Although two Greek instruments, the kithara and the aulos, were used, the principal instrument of Byzantium was the organ. No purely instrumental music is extant, however, and the exact nature of the instrumental accompaniment of vocal music is not certain. The eight Byzantine *echos* (singular *echos*) correspond roughly to the eight *MODES* of plainsong, but they were groups of melodies made of certain definite formulas. The Byzantine music that survives is all sacred, with the exception of some acclamations for the emperor. Byzantine chant was monodic, in free rhythm, and often attempted to depict melodically the meaning of the

words. The language was Greek. The Byzantine hymn, of which there were three types, was the greatest contribution of this culture. The *troparion*, a hymn, was inserted between the verses of the Psalms, and eventually the *troparia* overshadowed the Psalms. The origin of the *kontakion*, a hymn important in the 6th and 9th cent., is ascribed to Romanus, active during the reign of Anastasius I, it consisted of 18 or 24 strophes all in similar meter, with a contrasting introductory strophe. The subject matter was usually biblical. Often an acrostic is formed by the first letter of each stanza. The time of Romanus and of Sergius (fl. early 7th cent.) is called the golden age of Byzantine music. In the 8th cent. the outstanding hymn writers were St. John of Damascus and Cosmas of Jerusalem. The chief type of hymn was the *kanon*, a series of odes, theoretically nine but often only eight in number, referring to the nine canticles of the Old and New Testaments. Until the 9th cent., poet and composer were always one, later, hymns were set to already existing melodies. With the codification of the Greek liturgy in the 11th cent. there was a general decline in hymnody. Musical activity ceased with the fall of Constantinople (1453). Russian chant, the chant of the modern Greek Orthodox Church, and to a small extent Gregorian chant all owe something to Byzantine chant. Byzantine notation was originally only a system of *ekphonic* symbols serving to remind a singer of a melody he already knew. Neumes derived from the *ekphonic* notation were in use from c. 950 until 1200. From 1110 to 1450 a staffless notation indicating the *echos*, starting note, and subsequent intervals of a melody was in use. It is largely decipherable today. Signs were added to it in the centuries that followed, the notation used in the Greek Church today was devised in the 19th cent. by Chrysanthus, a Greek archimandrite, because of the confusion in deciphering the manuscripts of early Byzantine music. See Gustave Reese, *Music in the Middle Ages* (1940), studies of Byzantine music and hymnography by S. I. Savas (1965) and A. L. Burkhalter (1968).

Byzantine rite. see ORTHODOX EASTERN CHURCH

Byzantium (bīzăn'shēəm, -shəm, -tēəm), ancient city of Thrace, on the site of the present-day Istanbul, Turkey. Founded by Greeks from Megara in 667 B.C., it early rose to importance because of its position on the Bosphorus. In the Peloponnesian War it was captured and recaptured by the contending forces. It was taken (A.D. 196) by Roman Emperor Septimius Severus. Constantine I ordered (A.D. 330) a new city built there, this was CONSTANTINOPLE, later the capital of the Byzantine Empire. See Charles Diehl, *Byzantium: Greatness and Decline* (tr. 1957), Michael Maclagan, *The City of Constantinople* (1968).

C, third letter of the ALPHABET. In position and form, but not in meaning, it corresponds to Greek gamma (see G). In English it is pronounced variously, e.g., in *can*, *cent*, *church*, and *loch*. In MUSICAL NOTATION it symbolizes a note in the scale. In chemistry it is the symbol of the element CARBON. The capital letter is the Roman numeral for 100.

Ca, chemical symbol of the element CALCIUM.

Caaba: see KAABA.

Cabal (kabāl'), inner group of advisers to Charles II of England. Their initials form the word (which is, however, of older origin)—Clifford of Chudleigh, Ashley (Lord Shaftesbury), Buckingham (George Villiers), Arlington (Henry Bennet), and Lauderdale (John Maitland). Although they were never a working ministry, one or more of this group dominated court policy from 1667 through 1673. See study by Maurice Lee (1965).

cabala or **cabbala** (both káb'ala) [Heb., =tradition], esoteric system of interpretation of the Scriptures based upon a tradition claimed to have been handed down orally from Abraham. Despite that claimed antiquity, the system appears to have been given its earliest formulation in the 11th cent. in France, and from there spread most notably to Spain. There were undoubtedly precedents, however, cabalistic elements are discernible in Jewish Gnosticism, which has its roots in the early Christian era. Beyond the specifically Jewish notions contained within the cabala, some scholars believe that it reflects a strong Neoplatonic influence, especially in its doctrines of emanation and the transmigration of souls. In the late 15th and 16th cent., Christian thinkers found support in the cabala for their own doctrines, out of which they developed a Christian cabala. Cabalistic interpretation of Scripture was based on the belief that every word, letter, number, and even accent contained mysteries interpretable by those who knew the secret. The names for God were believed to contain miraculous power and each letter of the divine name was considered potent, cabalistic signs and writings were used as amulets and in magical practices. The two principal sources of the cabalists are the *Sefer Yezirah* (tr. *Book of Creation*, 1894) and the *Zohar* (tr. 1949). The first develops, in a series of monologues supposedly delivered by Abraham, the doctrine of the *Sefirot* (the powers emanating from God, through which the world is created and its order sustained), using the primordial numbers of the later Pythagoreans in a system of numerical interpretation. It was probably written in the 3d cent. The *Zohar* is a mystical commentary on the Pentateuch. It was written by Moses de León (13th cent.) but attributed by him to Simon ben Yohai, the great scholar of the 2d cent. Following the expulsion (1492) of the Jews from Spain, cabala became more messianic in its emphasis, as developed by the Lurianic school of mystics at Safed, Palestine. Cabala in this form was widely adopted and created fertile ground for the movement of the pseudo-Messiah SABBATAI ZEVÍ. It was also a major influence in the development of HASIDISM. Cabala still has adherents, especially among Hasidic Jews. See J. F. C. Fuller, *The Secret Wisdom of the Qabalah* (1937); J. L. Blau, *The Christian Interpretation of the Cabala in the Renaissance* (1944, repr. 1965); A. E. Waite, *The Holy Kabbalah* (1960); Gershom Scholem, *Major Trends in Jewish Mysticism* (3d ed. 1954, repr. 1965); and *On the Kabbalah and Its Symbolism* (1965); Herbert Weiner, *Nine and One Half Mystics: the Kabbalah Today* (1969).

Caballé, Montserrat (mönsérat' kabäl'yá'), 1933–, Spanish soprano. After voice study with Eugenia Kemény and Conchita Badia in Barcelona, she made her operatic debut in Basel, Switzerland, singing Mimi in Puccini's *La Bohème*. She became an overnight success with American audiences in 1965 after singing in Donizetti's *Lucrezia Borgia* at Carnegie Hall in New York City. That same year she made her debut at the Metropolitan Opera as Marguerite in Gounod's *Faust*. Her voice is noted for its purity and precise control. Caballé has sung over 40 operatic roles, including the Marchallin in Richard Strauss's *Der Rosenkavalier* and the title role in *Salomé*.

Caballero, Fernán (färnan' kabäl'yä'rö), pseud. of Cecilia Bohl de Faber (thäthē'lya bol dā fabär'), 1796–1877, Spanish novelist and folklorist. Born in Switzerland, she spent most of her adult life in Andalusia, where her novels are set. Although their tone is didactic and their plots sentimental, they successfully reflect contemporary regional life. The first, *La Gaviota* (1849, tr. *The Sea Gull*, 1864), effected the creation of the modern Spanish novel of customs. Others are *Lagrimas* [tears] (1858) and *Clemencia* (1862). Some of her folk tales were translated as *Spanish Fairy Tales* (1920). See biography by P. H. Klippe (1973).

cabbage, leafy garden vegetable of many widely dissimilar varieties, all probably descended from the wild, or sea, cabbage (*Brassica oleracea*) of the family Cruciferae (MUSTARD family), found on the coasts of Europe. It is used for food for man and stock, mostly in Europe and North America. Well-known varieties of the species include the cabbages, BROCCOLI, BRUSSELS SPROUTS, CAULIFLOWER, collards, KALE, and KOHLRABI. All grow best in cool, moist climates. They are attacked mostly by insect pests. The true cabbages (var. *capitata*) include the white and red types and the Savoy type (grown mostly in Europe), with curly, loose leaves. Inexpensive and easily stored, cabbage is important in the diet of many poorer peoples. Popular cabbage dishes include sauerkraut and slaw (raw cabbage). Chinese cabbage, or peitsai, chiefly a salad plant, is a separate species (*B. pekinensis*) grown in many varieties, especially in the Far East. Cabbages with multicolored leaves are becoming popular as ornamental border plants for flower gardens. Cabbages are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Capparales, family Cruciferae.

cabbage looper, moth larva, *Trichoplusia ni*, that feeds by night on the leaves of cabbage and related plants and is a serious agricultural pest. Like the inchworms (of another moth family), cabbage loopers lack walking appendages in the middle of the body and progress by drawing the rear end up to the front end and then straightening. A cabbage looper has a smooth green body with a white stripe along each side and reaches a length of 1¼ in. (3.2 cm). It pupates in a cocoon on the underside of a leaf. The adult moth is brown with a white spot on each wing. Cabbage loopers are classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Noctuidae.

cabbala: see CABALA.

Cabbon (kăb'ôn), town, SW Palestine. Joshua 15:40.

Cabell, Branch (James Branch Cabell) (kă'bal), 1879–1958, American novelist, b. Richmond, Va., grad. William and Mary, 1898. After various experiences as a journalist and a coal miner he began writing fiction. His early works, which are sophisticated novels deriding conventional history, include *Galantry* (1907), *Chivalry* (1909), and *The River in Grandfather's Neck* (1915). Many of Cabell's most popular novels are set in the imaginary medieval kingdom of Poictesme, among these are *The Cream of the Jest* (1917), *Jurgen* (1919)—Cabell's most famous work because of its attempted suppression on charges of obscenity—and *The Silver Stallion* (1926). Cabell's novels are usually pointedly anti-realistic, and many of them can be considered moral allegories. Although he was enormously popular in the 1920s, his highly artificial prose style and subject matter lost favor with critics and public alike by the 1930s. His nonfictional writing includes *Beyond Life* (1919), *The St. Johns* (with A. J. Hanna, 1943), and *Here Let Me Lie* (1947). See studies by Joe L. Davis (1962), Desmond Tarrant (1967), Hugh Walpole (1920, repr. 1973), and L. D. Rubin (1959, repr. 1973).

Cabet, Etienne (ätyēn' kabä'), 1788–1856, French utopian socialist. He was elected to the chamber of deputies in 1831, but his bitter attacks on the government resulted in his conviction for treason. He escaped prison by exiling himself to Great Britain (1834–39), where he developed a theory of communism influenced by Robert Owen. Cabet's *Voyage en Icarie* (1840) depicted an ideal society in which

an elected government controlled all economic activity and supervised social affairs, the family remaining the only other independent unit. The book was extremely popular, and Cabet gained many followers. A group of them attempted unsuccessfully (1848) to found an Icarian community on the Red River in Texas. The next year Cabet established a temporary colony at the old Mormon town of Nauvoo, Ill., but serious dissension arose in 1856, and he was not reelected president. He died soon after in St. Louis. Most of the Icarians moved to lands they had purchased near Corning, Iowa, where branch communities survived until 1898. Other works by Cabet include *Histoire populaire de la Révolution française* (4 vol., 1839–40), *Colonie icarienne aux États-Unis d'Amérique* (1856), and *Le vrai Christianisme suivant Jésus Christ* (1846). See Albert Shaw, *Icaria: A Chapter in the History of Communism* (1884); S. A. Piotrowski, *Etienne Cabet and the Voyage en Icarie* (1935).

Cabeza de Vaca, Álar Núñez (al'var nōō'nyāth kabä'tha dā va'ka), c. 1490–c. 1557, Spanish explorer in the American Southwest. Cabeza de Vaca [cow's head] was not actually a surname but a hereditary title in his mother's family; he is frequently called simply Álar Núñez. He came to the New World as treasurer in the expedition of Panfilo de Narváez that left Spain in 1527 and reached Florida (probably Tampa Bay) in 1528. When hardship and Indian hostility caused the end of the expedition, Cabeza de Vaca was one of the survivors whose barges were shipwrecked on an island on the Texas coast. Later scholars have argued extensively over the identification of that island, but Galveston Island and Mustang Island are popular as possibilities. The story is one of the most remarkable in the annals of exploration. After much suffering as slaves of the Indians inhabiting the island, Cabeza de Vaca and three other survivors escaped and started a long journey overland. His companions were Alonso del Castillo Maldonado, Andres Dorantes, and Estevanico (an Arab or possibly a Negro). They gained great repute among the Indians as healers since remarkable cures were attributed to their Christian prayers. Their route westward is disputed as much as the island of the shipwreck, but after much wandering they did reach W. Texas, and then probably New Mexico and Arizona, and possibly (some argue) even California before, turning south in 1536, they arrived in Culiacan in Mexico and told their story to Spaniards there. They were almost certainly the first white men to see the buffalo, and their stories about the Pueblo Indians gave rise to the legend of the Seven Cities of Cibola, later magnified by Fray Marcos de Niza, and brought explorers in search of El Dorado. Cabeza de Vaca's own account, *Los naufragios* [the shipwrecked men] (1542) is the chief document of the startling adventures of his party. An English translation (1851) by Thomas Buckingham Smith was reprinted in F. W. Hodges's *Spanish Explorers in the Southwestern United States* (1907) and in I. R. Blacker and H. M. Rosen's *The Golden Conquistadores* (1960). After returning to Spain, Cabeza de Vaca was appointed governor of the Rio de la Plata region and reached Asuncion after an overland journey from the Brazilian coast in 1542. His South American career was sadly different from that in North America. He got into much trouble with the popular Domingo Martinez de Irala. After he returned from a journey up the Paraná River to Bolivia, he was arrested, accused of high-handed practices, imprisoned for two years, and sent back to Spain. There he was found guilty but was pardoned by the king. Cabeza de Vaca wrote his own account of South American events in his *Comentarios* (1555). See Morris Bishop, *The Odyssey of Cabeza de Vaca* (1933); Cleve Hallenbeck, *Álar Núñez Cabeza de Vaca: The Journal and Route of the First European to Cross the Continent of North America, 1534–1536* (1940); J. U. Terrell, *Journey into Darkness* (1942); M. W. Rodman, *Odyssey of Courage* (1947); Hamel Long, *The Marvellous Adventures of Cabeza de Vaca* (1973).

Cross references are indicated by small CAPITALS.

cabildo (kābēl'dō), autonomous municipal council, the lowest administrative unit in the Spanish government. The institution was especially influential in Spanish America, where it was set up in the early 16th cent in imitation of the Castilian *ayuntamiento*, the name it was at first briefly called. Composed originally of elected administrative officials, usually local landowners, it was the only institution in which creoles could participate. It was presided over by the *alcalde mayor*, the administrator of a provincial division, who was assisted in judicial matters by *alcaldes ordinarios* (see *ALCALDE*). The cabildo exercised considerable executive, legislative, and judicial powers, it distributed lands, imposed taxes, provided for police service, and supervised trade and public facilities such as hospitals and jails. In case of emergency the council could choose a governor, lieutenant governor, or captain general. The cabildo steadily evolved in the course of the 16th and 17th cent into an appointive, proprietary, and hereditary body of generally 4 to 12 councilors. Corruption and inefficiency became common. The degree of local autonomy at first granted by the crown was soon hedged in by the increasing centralization of power in higher authorities, such as the *AUDIENCIA* and *vicerealty*. The cabildo regained importance during the independence movement of the early 19th cent. As the only self-perpetuating organ of local self-government with an ancient tradition of civil autonomy, it served as a convenient rallying place for voicing nationalistic ideas.

Cabinda (kabīn'da), Portuguese exclave (1960 pop 58,547), c.2,800 sq mi (7,300 sq km), W Africa, administered from Angola. The town of Cabinda is the chief population center. The territory is bounded on the N by the Congo Republic, on the E and S by Zaïre, and on the W by the Atlantic Ocean. Cabinda was once geographically part of Angola but was separated from it in 1885 when the Belgian Congo (now Zaïre) acquired a corridor to the sea along the lower Congo River. Largely tropical forest, the region produces hardwoods, coffee, cacao, crude rubber, and palm oil products. Petroleum production began in 1968 and increased dramatically in the early 1970s. In late 1974, Portugal planned to grant Cabinda independence within 2 years at most, but it was not decided whether the territory would become a separate state or remain attached to Angola.

cabinet, group of advisers to the head of the state who themselves are usually the heads of the administrative government departments. The nature of the cabinet differs widely in various countries. In Great Britain, where the cabinet system originated, it was at first a committee of the privy council and rose to its modern status only after the sovereignty of PARLIAMENT had been established by the Glorious Revolution of 1688 and the gradual emergence of party government in the 18th cent. The British cabinet is a body of ministers drawn from the party that possesses a majority in the House of Commons; it is responsible to the Commons for the conduct of the administration. The cabinet is chosen by the PRIME MINISTER, who is guided by the necessity of choosing a group that will represent the disparate elements in his party. The defeat in the Commons of an important ministerial measure or a general election adverse to the government results in the fall of the cabinet. In continental European countries, where the two-party system is not the rule, the coalition cabinet is more common. Cabinet members need not be selected from the majority party nor necessarily from the legislature, and they may speak in either house of the legislature. The US cabinet was not specifically established by the Constitution, it evolved through custom and is now defined by statute law. The members of the cabinet are not members of either house of Congress and are responsible, individually and not as a body, to the President, who appoints them with the approval of the Senate and may remove them at will. The cabinet member may not speak in Congress, though he is often called before congressional committees. As an advisory body, the US cabinet is generally a weak institution and is often overshadowed by a strong President and his staff. The first cabinet appointments (1789) were the secretaries of State, the Treasury, and War. Since then the size and composition of the cabinet has varied considerably. Presently the 11 executive departments whose heads sit in the cabinet are the departments of State, the Treasury, Defense, Justice, the Interior, Agriculture, Commerce, Labor, Health, Education, and Welfare, Housing and Urban Development, and Transportation. See Richard Fenno, Jr., *The President's Cabinet* (1959); Ivor Jennings, *Cabinet Government* (3d ed 1969).

Cabiri: see *KABEIROI*

Cable, George Washington, 1844-1925, American author, b New Orleans. He is remembered primarily for his early sketches and novels of Creole life, which established his reputation as an important local-color writer. Cable served as a Confederate soldier in the Civil War and afterwards was a writer and reporter for the New Orleans *Picayune*. His short stories of New Orleans culture began to appear in *Scribner's Monthly* in 1873; they were collected and published as *Old Creole Days* (1879). Among his novels are *The Grandissimes* (1880), *Madame Delphine* (1881), *Dr Sevier* (1884), and *Gideon's Band* (1914). Cable's works depict the picturesque life of Creoles in antebellum Louisiana with charm and freshness. Discernable in some of them is the author's moral opposition to slavery and class distinction. After 1884, Cable lived in Northampton, Mass. His later works, notably the essays collected in *The Silent South* (1885) and *The Negro Question* (1890), reveal his concern with social evils, particularly with the betrayal of the freed Negro. See his letters, ed by L. L. Leffingwell (1928, repr 1967), biographies by Arlin Turner (1956) and L. D. Rubin (1969), study by P. C. Butcher (1959).

cable, usually wire cordage of great strength or heavy metal chain used for hauling, towing, supporting the roadway of a suspension bridge, or securing a large ship to its anchor or mooring. A cable may also be a line used for the transmission of electrical signals. One type of electric cable consists of a core protected by twisted wire strands and suitably insulated, especially when it is used to cross oceans undersea, a message transmitted thus by cable is a cablegram or cable. The insulated wire that conducts electricity from generator to consumer is also called a cable; it often contains multiple conductors and must be of sufficient gauge to carry large currents. Its insulation must withstand high voltages. France and England were first successfully connected by submarine telegraphic cable in 1845. The first permanent transatlantic cable was laid in 1866 by Cyrus West Field, although demonstrations of its possibility had been made in 1858. A coaxial cable was first installed between New York City and Philadelphia in 1935, and in 1936 the first telephone message was transmitted over it. The coaxial cable, which is virtually immune to external electromagnetic noise, consists of a tube made of copper or other conducting material through the center of which extends a wire conductor separated from the outer conductor by an insulator. A number of such conducting units are held together by a covering of insulating material. By means of the coaxial cable a large number of telegraph and telephone messages and also television images can be transmitted simultaneously.

Cabochiens (kabōshyān'), popular faction in Paris in the early 15th cent. Composed largely of small tradespeople and members of the butchers' and skimmers' guilds, it was named after one of the leaders, Simon Leoustellier, called Caboche, a skinner. Opposed to the ruinous and corrupt fiscal practices of the government and the extravagance of the court, the Cabochiens espoused the cause of JOHN THE FEARLESS of Burgundy in the civil war (1411-13) between ARMAGNACS and BURGUNDIANS. In 1413 they rebelled, violently seized the government of Paris, and promulgated the so-called *ordonnance cabochienne*, containing radical reforms. The Cabochiens were soon suppressed by the victorious Armagnacs.

Cabot, George, 1752-1823, American merchant and politician, b Salem, Mass. He went to sea and became captain of one of the ships owned by his brothers John and Andrew Cabot of Beverly, who in 1777 took him into their firm. Cabot also helped develop the family's cotton mills in Beverly. A Federalist, he was (1791-96) one of Alexander Hamilton's most trusted followers in the US Senate. Made a director of the Bank of the United States in 1793, he became president of its Boston branch in 1803. In the Federalist discontent at the beginning of the 19th cent, Cabot was a leader of the ESSEX JUNTO and presided over the HARTFORD CONVENTION. See biography by his grandson, Henry Cabot Lodge (1877).

Cabot, John, fl 1461-98, English explorer, probably b Genoa, Italy. He became a citizen of Venice in 1476 and engaged in the Eastern trade of that city. This experience, it is assumed, was the stimulus of his later explorations. Like Columbus (though there is no evidence that either influenced the other), he apparently believed that the riches of the Far East might be more easily reached by sailing west. He

went to England, probably in the 1480s, and resided chiefly at Bristol, a port then promising as a base for discovery. Under a patent granted by Henry VII (March 5, 1496), Cabot sailed from Bristol in 1497 and discovered the North American coast touching at Cape Breton Island or Newfoundland. In 1498 he again sailed for America to explore the coast. The fate of the expedition is unknown, although there is presumptive evidence that it reached America and that some of its members returned. The English claims in North America were based on his discovery. His son was Sebastian Cabot. See H. P. Biggar, *The Precursors of Jacques Cartier* (1911); J. A. Williamson, *Voyages of the Cabots* (1929); C. R. Beazley, *John and Sebastian Cabot: The Discovery of North America* (1964); Richard C. Howard, *Bristol and the Cabots* (1967).

Cabot, Sebastian, b 1483-85?, d 1557, explorer in English and Spanish service, son of John Cabot. He may well have accompanied his father on the 1497 and 1498 voyages, and he was for many years given the credit for his father's achievements. In the 19th cent, scholars, finding discrepancies in the Sebastian stories, branded him an impostor and applied his accounts to the 1498 voyage of John Cabot. However, recent research indicates that the Sebastian narratives relate to a later voyage (1509) made in search of the Northwest Passage. He may have reached Hudson Bay. In 1512 he entered Spanish service and in 1518 became chief pilot. After the return of Magellan's ship *Victoria*, he sailed (1526) from Sanlúcar de Barrameda with the ostensible purpose of loading spices in the Moluccas. Instead he explored the Rio de la Plata country, spending several years along the Paraguay, Plata, and Parana rivers, but the hostility of the Indians and the scarcity of food forced him to leave the country. He returned to Spain in 1530, a distrusted and discredited man. In 1548 he reentered English service, and in 1553 he became governor of a joint-stock company (later the MUSCOVY COMPANY) organized to seek a Northeast Passage and open trade with China. Under his instructions an expedition sailed the same year under Sir Hugh Willoughby, who was lost in midvoyage and was replaced by Richard CHANCELOR. The expedition reached the White Sea, and a commercial treaty was negotiated with Russia, breaking the monopoly of the Hanseatic League. See J. A. Williamson, *The Voyages of the Cabots* (1929); C. R. Beazley, *John and Sebastian Cabot: The Discovery of North America* (1964); Richard C. Howard, *Bristol and the Cabots* (1967); Richard Biddle, *A Memoir of Sebastian Cabot* (repr 1970).

Cabral, Pedro Alvares (pē'drōō əlvā'rash kabrāl'), c 1467-c 1520, Portuguese navigator. A friend of Vasco da Gama, in 1500 he was sent out by Manuel I as head of a fleet destined for India. Bartolomeu DIAS was one of his officers. Cabral went far west of his course and reached the coast of Brazil, which he claimed for Portugal. Proceeding onward, he reached Madagascar, Mozambique, and the Indian coast. At Calicut, trouble arose over establishing a post for trade and for converting the Muslims. He bombarded the city but had to retreat in order to save his East Indian cargo. The ships returned to Portugal with rich cargoes, but his methods of diplomacy were severely criticized. The old story was that Cabral discovered Brazil because he had been driven off his course by storms. This has been questioned, and it has been urged that even before the Spaniard Vicente Yáñez Pinzón saw the Brazilian coast (Jan., 1500), Portuguese navigators had been there and that Portugal, wishing to obtain the land, had managed to secure a revision of the pope's original demarcation of the world into Spanish and Portuguese zones of exploration. Certainly the Treaty of Tordesillas (1494) adjusted the former line and put Brazil in the Portuguese zone, but the issue is still a subject of debate. See W. B. Greenlee, comp., *The Voyage of Pedro Alvares Cabral to Brazil and India: From Contemporary Documents and Narratives* (tr 1938, repr 1972).

Cabrera, Manuel Estrada: see *ESTRADA CABRERA*

Cabrera, Ramón, conde de Morella (rāmōn' kabrá'rā kōn'dā dā mō'rā'lyā), 1806-77, Spanish Carlist general. Noted for his valor and cruelty during the first Carlist war, he refused to accept the Carlist defeat in 1839 and continued the war in Valencia and Catalonia until driven into France in 1840. After a brief reappearance (1848-49) as the leader of Carlist guerrillas in Catalonia, he returned to France and then went to England. In 1875 he recognized Alfonso XII as king.

Cabrillo, Juan Rodríguez (hwān rōdrē'gāth kabré'lyō), d 1543, Spanish conquistador and discoverer of California, b Portugal. In 1520 he landed

in Mexico with Panfilo de Narváez and joined in the conquests of Mexico and Guatemala. Accompanying Pedro de ALVARADO up the west coast of Mexico, he assumed command of the expedition and continued the voyage after Alvarado's death. He discovered San Diego Bay on Sept. 28, 1542, landing at Point Loma Head, now in Cabrillo National Monument. He then sailed on to Northwest Cape beyond San Francisco Bay, which he did not find. Returning to winter on San Miguel Island off the Santa Barbara coast, he died Jan. 3, 1543.

Cabrillo National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Cabrini, Saint Frances Xavier (zā'vyər kəbrē'nē), 1850-1917, American nun, founder of the Missionary Sisters of the Sacred Heart of Jesus, b. near Lodi, Italy. Founded in Italy in 1880, her order was expressly for charitable and religious work among the very poor. She was sent by Pope Leo XIII to the United States (1889) to aid Italian immigrants arriving there. She lived mainly in New York City and Chicago, directing the establishment of hospitals, orphanages, nurseries, and schools in the United States and in Latin America. Her sanctity, highly regarded in her lifetime, became famous after her death. She was beatified by Pope Pius XI in 1938 and canonized in 1946 by Pius XII. Mother Cabrini was the first U.S. citizen to be canonized. Her principal shrine is the Mother Cabrini High School in New York City, where she is buried. Feast Dec. 22. See Pietro Di Donato, *Immigrant Saint: The Life of Mother Cabrini* (1960).

Cabul (kā'bəl), town, NW Palestine, the modern Kabul (Israel). Joshua 19:27, 1 Kings 9:13.

cacao (kā'kə, -kā'-), tropical tree (*Theobroma cacao*) of the family Sterculiaceae (STERCULIA family), native to South America, where it was first domesticated and was highly prized by the Aztec Indians. It has been extensively cultivated in the Old World since the Spanish conquest. The fruit is a pod containing a sweetish pulp in which are embedded rows of seeds, the cocoa "beans" of commerce. To obtain cocoa, the harvested pods are fermented by naturally occurring bacteria and yeasts to eliminate their bitter, astringent quality. The seeds are then cured and roasted. The clean kernels, called cocoa nibs, are manufactured into various products. Their large percentage of fat, removed by pressure, is the so-called cocoa butter used in fine soaps and cosmetics and in medicine for emollients and suppositories; the residue is ground to a powder (cocoa) and used for beverages and flavoring. CHOCOLATE is a product in which the cocoa butter has been retained. Cacao products have a high food value because of the large proportion of fat, carbohydrates, and protein. Cacao is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Malvales, family Sterculiaceae.

Caccini, Giulio (jōō'lyō kat-chē'nē), c. 1546-1618, Italian composer and singer. Some of his songs were included in Peri's *Dafne* (c. 1597), the first known opera. Both he and Peri composed settings of Ottavio Rinuccini's *Euridice* (1600), the earliest operas of which the music is extant. *Nuove musiche* (1601), a collection of his madrigals and arias, is the most important collection among the early examples of monodic style.

Cáceres, Andrés Avelino (andrās' avālē'nō ká'sārās), 1836?-1923, president of Peru (1886-90, 1894). He was a commander in the war with Chile (see PACIFIC WAR OF THE) and continued to wage guerrilla warfare long after Peru had been conquered. Bitterly opposed to the peace made by the government of Miguel Iglesias, Cáceres attempted to seize control in 1884, but failed. Gathering more troops, he entered Lima in 1885 and forced Iglesias to hold an election. Cáceres was chosen president. In 1894 his party forced congress to elect him president, but Nicolás de PIÉROLA soon overthrew the new government. Cáceres later held important diplomatic posts.

Caceres (ka'thārās), city (1970 pop. 56,064), capital of Cáceres prov., W central Spain, in Estremadura. Products of cork, leather, pottery, and cloth are made there. Cáceres was an important Roman colony. It fell to the Moors in the 8th cent. but was recaptured (1229) by Alfonso IX. The old town, on top of a hill and encircled by turreted walls, has many notable structures.

cachalot. see SPERM WHALE

Cachin, Marcel (marsēl' kashān'), 1869-1958, French Communist leader. An early leader of the Socialist party, he was instrumental in bringing many Socialists into the first French Communist party in 1920. Long the leader of the Communists in the

chamber of deputies and editor of the Communist daily *Humanité*, he became the first Communist senator in 1935. He was expelled from his seat after the German-Soviet nonaggression pact in Aug., 1939, and was subsequently arrested. In 1945 he was elected to the national assembly, where he sat until his death.

cacomistle (kāk'əmīs'əl), small New World mammal, genus *Bassariscus*, related to the RACCOON. There are two species, one found in Mexico and the SW United States, the other in Central America. The North American cacomistle, *B. astutus*, also known as ringtail, ring-tailed cat, and coon cat, ranges north to N Colorado and S Oregon and west to E Texas. Its body is slender and squirrellike, its face pointed and foxlike. The head and body are about 15 in. (38 cm) long, the bushy tail is of equal length. The body fur is yellowish gray, the tail ringed with dark brown and white. The face is marked with dark brown and white, but there is no mask like that of the raccoon. Swift, agile, and able climbers, cacomistles prefer regions with trees, but they live in a variety of habitats. They are nocturnally active and are seldom seen. They are usually found in pairs and make dens in hollow trees, caves, rock crevices, or abandoned buildings. Cacomistles feed primarily on small animals but also eat some vegetable matter. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Procyonidae.

cactus, any plant of the family Cactaceae, a large group of succulents found almost entirely in the New World. A cactus plant is conspicuous for its fleshy green stem, which performs the functions of leaves (commonly insignificant or absent), and for the spines (not always present) of various colors, shapes, and arrangements. Cactus flowers are notably delicate in appearance although usually large and showy, they are commonly yellow, white, or shades of red and purple. Cactus fruits are berries and the larger ones are sometimes edible. Cacti are sometimes used as a substitute for wood, as stock feed, and for hedges. The plants vary from small round globes to epiphytes, vines, and large treelike forms. The reduced leaf surface, the enlarged fleshy stem, which is well fitted to store water and to retain it, and the ramified and extensive root system (much reduced in cultivated cacti) make the plant particularly adapted to regions of high temperature and long dry periods. Cacti are not restricted to desert regions, however, for in America they range from the tropics into Canada. A cactus plant appears on the coat of arms of Mexico, and the blossom of the giant cactus, or saguaro (*Cereus giganteus*), is the state flower of Arizona. Most cacti bloom in the spring for a very short period, sometimes for only a few hours. The blossoms are noticeably sensitive to light, and often different species blossom only at specific times of the day. One of the most famous of the cacti is the night-blooming cereus usually classified as *Selenicereus* or *C. grandiflora* (several other night-blooming cactus species bear the same common name). Its fragrant blossoms unfold at a visible rate after sunset and last only a single night. In many of its native habitats the flowering of this cactus is celebrated with festivals. The largest cactus genus is *Opuntia*, jointed-stemmed species recognizable by the fleshy stems made up of either cylindrical (in the cane cacti and the chollas) or flattened (in the prickly pears) joints called pads. The large pear-shaped berries of several of these species are edible, e.g., the cultivated varieties of the Indian fig and the tuna. This fruit is common in Mexican markets, the plants have been widely naturalized in the Mediterranean countries, Australia, and elsewhere as a source of food. Most *Opuntias* grow so rapidly to a large and ungainly size that they are unsuitable for cultivation as ornamentals, and in the wild often become weeds. However, the major economic importance of the cactus family is in the florists' trade. Among those cultivated for their showy blossoms are the Christmas cactus (*Zygocactus*) and species of *Echinocereus* and of *Epiphyllum*, the orchid cactus. The pincushion cacti (*Mammillaria*), the golden ball cactus (*Echinocactus*), and the hedgehog cactus (*Echinopsis*) are among the many grown as oddities for their curious appearance. The nopal (*Nopalea coccinellifera*) is the cactus traditionally cultivated as a host for the COCHINEAL insect. The hallucinatory drug PEYOTE comes from a cactus of the same aboriginal name. Cactus is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Caryophyllales, family Cactaceae.

Cadalso Vazquez, Jose de (hōsā' dā káthal'sō vath'kāth), 1741-82, Spanish poet, critic, and satirist. Cadalso Vazquez's rhapsodic prose autobiography,

Noches lugubres (1798), probably suggested by Edward Young's *Night Thoughts*, heralded the Spanish romantic movement. However, he is best known for *Los eruditos a la violeta* (1772), a satire on contemporary pedantry, and *Cartas marruecas* [Moroccan letters] (1793), an analysis of Spanish social decadence.

Cadamosto, Luigi da (lōōē'jē da kadamō'stō), 1432?-1488, Venetian navigator in the service of Prince Henry the Navigator of Portugal. He seems to have entered Portuguese service in 1454, and he left a record of a voyage in 1455 that is valuable for the information it gives concerning Portuguese activity in the Canary Islands. He and a Genoese, Antonio de Nola, also in Prince Henry's service, went down the African coast to the Gambia River. In 1456 or 1457, Cadamosto reached the Cape Verde Islands, but the question of discovery of the islands is not settled. They may have been sighted by the Portuguese years before, they may have been discovered just a year before, they may have been first visited by Cadamosto. His name also appears as Alvise da Cadamosto.

cadaverine* see DECAY OF ORGANIC MATTER

Cadbury, Dame Elizabeth, 1858-1935, English social worker and philanthropist, b. Elizabeth Mary Taylor, studied in France and Germany, wife of George Cadbury. She became interested in social service and was active in many organizations working for improvement in education, housing, and peace. She was a member of the Birmingham Education Committee after 1911 and of the International Council of Women and was city councilor of Birmingham (1919-25), president (1925) of the National Council of Evangelical Free Churches, and a justice of the peace (1926). In 1934 she was made Dame Commander of the British Empire.

Cadbury, George, 1839-1922, English manufacturer and social reformer, husband of Elizabeth Mary Cadbury. In 1861, Cadbury and his brother Richard assumed control of their father's Birmingham cocoa and chocolate factory. Interested in housing problems, the brothers moved (1880) the plant to Bournville and laid out a garden village. The successful venture influenced European model housing and GARDEN CITY projects. Agitation for national old-age pensions and insurance was financed by Cadbury, who also worked to eliminate harsh labor conditions. See biography by A. G. Gardiner (1923).

caddis fly, any of various insects of the order Trichoptera, with four hairy wings usually held back rooflike over the abdomen, long antennae, and chewing mouthparts. The aquatic larvae, or caddis worms, which somewhat resemble caterpillars, are food for many freshwater fishes; they are called creepers when used as bait. The larvae build and inhabit underwater cases or nets made from a silken threadlike material they produce, or from materials such as twigs, sand, and leaves. Most larvae feed on plants and debris caught in the cases, among the net-building species some are predacious. Many seal their cases, and spin cocoons and pupate within. Caddis flies are classified in the phylum ARTHROPODA, class Insecta, order Trichoptera.

Caddo (kā'dō), North American Indians whose language belongs to the Caddoan branch of the Hoka-Siouan linguistic stock (see AMERICAN INDIAN LANGUAGES). These people gave their name not only to the linguistic branch but also to the Caddo confederacy, a loose federation of tribes that in prehistoric times occupied lands from the Red River valley in Louisiana to the Brazos River valley in Texas and N into Arkansas and Kansas. Members, besides the Caddo, included the Arikara, the Pawnee, the Wichita, and others. The culture of these loosely knit peoples was similar. Generally they were sedentary, living in villages of conical huts, although they did raise horses. The culture of the Caddo proper was marked by a clearly defined system of social stratification and by a religion that closely regulated daily life. Some 1,000 now reside on a reservation in Oklahoma. See J. T. Hughes, *Prehistory of the Caddoan-Speaking Tribes* (1968).

Cade, Jack, d. 1450, English rebel. Of his life very little is known. He may have been of Irish birth, some of his followers called him John Mortimer and claimed he was a cousin of Richard, duke of York. In 1450 he appeared as the leader of a well-organized uprising in the S of England, principally in Kent, usually known as Jack Cade's Rebellion. The protests were mainly political, not social, although the 14th cent. Statute of Labourers (which attempted to freeze wages and prices) was among the grievances. Others were the loss of royal lands in France, the extravagance of the court, the corrup-

tion of the royal favorites, and the breakdown of the administration of justice. The rebels defeated the royal army at Sevenoaks, entered London, executed Lord Saye and Sele (who was blamed for the losses in France), and sacked several houses. The government then offered pardon to Cade's men and so dispersed them. Cade himself was mortally wounded while resisting arrest. See E. N. Simons, *Lord of London* (1963).

cadence, in music, the ending of a phrase or composition. In singing the voice may be raised or may be lowered, or the singer may execute elaborate variations within the key. In instrumental music, with development of the theory of harmony, the cadence was made completely dependent on the change of chord. If the dominant chord comes before the tonic, the cadence is authentic, if the subdominant chord comes before the tonic, the cadence is plagal. If the dominant chord leads into another harmony, the cadence is called deceptive. The reverse order of tonic to dominant is a half cadence. See Walter Piston, *Harmony* (3d ed. 1962).

Cadillac, Antoine de la Mothe (Fr. *aNtwan' də la mot kadéyak'*), c. 1658–1730, French colonial governor in North America, founder of Detroit. Of the minor Gascon nobility, he came to America in 1683 to seek his fortune and lived for a time at Port Royal (now Annapolis Royal, N.S.) and then on a grant of land in present-day Maine. He became a favorite of Frontenac, the governor of New France, and in 1694 he was placed in charge of the frontier post at Mackinac. In 1699, Cadillac went to France to urge establishment of a post on the Detroit River, which he believed would offer a better strategic position against the English than Mackinac. Receiving a grant of land, trade privileges, and command of the new post, he set out with a band of colonists. Detroit was founded in 1701. Cadillac persuaded many of the Indian tribes to settle near the new colony. In 1711 he was appointed to the governorship of the vast territory of Louisiana. He reached his new post in 1713 to begin an administration that was remarkable only for the frequency and fierceness of internal quarrels. He was recalled in 1716 and spent his last years in Gascony. See biography by A. C. Laut (1931).

Cádiz (ka'déth), city (1970 pop. 135,743), capital of Cádiz prov., SW Spain, in Andalusia, on the Bay of Cádiz. Picturesquely situated on a promontory (joined to the Isla de León, just off the mainland), it is today chiefly a port exporting wines and other agricultural items and importing coal, iron, and foodstuffs. Shipbuilding and fishing are other industries. There is a Spanish naval base in Cádiz and a U.S. naval base at nearby Rota. The Phoenicians founded (c. 1100 B.C.) on the site the port of Gadir, which became a market for tin and the silver of Tarsish. It was taken (c. 500 B.C.) by the Carthaginians and passed late in the 3d cent. B.C. to the Romans, who called it Gades. It flourished until the fall of Rome, but suffered from the barbarian invasions and declined further under the Moors. After its reconquest (1262) by Alfonso X of Castile, its fortifications were rebuilt. The discovery of America revived its prosperity, as many ships from America unloaded their cargoes there. Columbus sailed from Cádiz on his second voyage (1495). In 1587, Sir Francis Drake burned a Spanish fleet in its harbor, and in 1596 the earl of Essex attacked and partly destroyed the city. But it continued to flourish and in 1718, after Seville's port had become partially blocked by a sandbar, Cádiz became the official center for New World trade. After Spain lost its American colonies, the city declined. During the siege by the French—which Cádiz resisted for two years (1810–12) until relieved by Wellington—the Cortes assembled in the city and issued the famous liberal constitution for Spain (March, 1812). The clean, white city has palm-lined promenades and parks. Its 13th-century cathedral, originally Gothic, was rebuilt in Renaissance style; the new cathedral was begun in 1722. Cádiz has several museums and an art gallery with works by Murillo, Alonso Cano, and Zurbarán. In the church of the former Capuchin convent hangs the *Marriage of St. Catherine* by Murillo, who was at work on this painting when he fell from a scaffold to his death. Manuel de Falla is buried in Cádiz.

Cadman, Charles Wakefield, 1881–1946, American composer, b. Johnstown, Pa. Although he is known to the public principally for two songs—*From the Land of the Sky-blue Water*, based on an Indian theme, and *At Dawning*—he composed operas, such as *Shanewis* (1918), *The Sunset Trail* (1925), and, the most successful of these, *A Witch of Salem* (1926). He also wrote orchestral music, including

Hollywood Suite (1932) and *Dark Dancers of the Mardi Gras* (1933), and piano music.

cadmium (kād'mēam) [from *cadmia*, Lat. for calamine, with which cadmium is found associated], metallic chemical element, symbol Cd, at no. 48, at wt. 112.4, m.p. 321°C, b.p. 765°C, sp. gr. 8.65 at 20°C, valence +2. Cadmium is a lustrous, silver-white, ductile, very malleable metal. It belongs to group IIB of the PERIODIC TABLE, and resembles ZINC in its chemical properties. Like zinc, it tarnishes in moist air. Cadmium oxide, a brown powder formed by burning the metal in air, is used in electroplating; it is also made by heating cadmium hydroxide. Cadmium forms a carbonate, a chloride, and several complex ions. Cadmium yellow (the sulfide) is a very durable yellow pigment used in paints. The major use of cadmium is as a coating that is electroplated on iron and steel to prevent corrosion; it is preferable to zinc for protection from alkalies. Cadmium is also used in so-called fusible metals, which are low-melting alloys such as Wood's metal, used in automatic fire sprinklers and alarm systems. Cadmium is used in alkaline nickel-cadmium electric storage cells, which have a greater storage capacity than an equal weight of lead-acid storage cells. It has also found some use in the control of nuclear reactions, since it absorbs neutrons. Cadmium does not occur uncombined in nature; greenochite, a cadmium sulfide mineral found near Greenoch, Scotland, is the only commercial ore. Cadmium is obtained principally as a by-product of the smelting and refining of ores of zinc, especially zinc sulfides, and of lead and copper. The element was discovered in 1817 by Friedrich Stromeyer.

Cadmus, in Greek legend, son of Agenor and founder of Thebes. Misfortune followed his family because he killed the sacred dragon that guarded the spring of Ares. Athena told him to sow the dragon's teeth, and from these sprang the Sparti (sown men), ancestors of the noble families of Thebes. Cadmus married Harmonia, daughter of Ares and Aphrodite. At their wedding he presented her with a sacred robe and necklace, made by Hephaestus, which later brought misfortune to their possessors (see AMPHIARAUS, ALCAEON). They had four daughters—Ino, Semele, Autonoe, and Agave. In their old age Cadmus and Harmonia were turned into serpents by Zeus and sent to live in the Elysian fields.

Cadogan, William Cadogan, 1st Earl (kadū'gan), 1675–1726, British general and diplomat. He is remembered chiefly as the faithful friend and brilliant subordinate of the 1st duke of MARLBOROUGH. In addition to serving (1702–11) as the latter's quartermaster general, he was the able commander of a dragoon regiment known as Cadogan's Horse and played a distinguished part in Marlborough's many victories in the War of the Spanish Succession. When the duke fell from power in 1711, Cadogan went into exile in the Netherlands. He conducted dealings with Hanover for the English Whigs, and after the Hanoverian George I ascended (1714) the British throne, he received new commands and honors. Cadogan helped to suppress the Jacobite uprising of 1715, was created earl in 1718, and was made commander in chief of the army after Marlborough's death in 1722. He also had high diplomatic duties in the settlements among Great Britain, France, the Netherlands, the Holy Roman Empire, and Spain in the years 1714–20.

Cadorna, Luigi (lōō'jē kadōr'na), 1850–1928, Italian field marshal. His father, Raffaele Cadorna, was a general in the wars of the Risorgimento and took Rome in 1870. Luigi Cadorna, a count, became the head of the army general staff and reorganized the Italian army before World War I. Until the Italian defeat at Caporetto in 1917 he was in fact commander of military operations, while King Victor Emmanuel III was nominally commander in chief. Cadorna wrote two military works on World War I and a biography of his father.

Cadoudal, Georges (zhōrzh kadōdāl'), 1771–1804, French royalist conspirator. A commander of the CHOUANS, he led the counterrevolutionists in the VENÉE. He fled to England in 1801 after the failure of an attempted assassination of Napoleon Bonaparte. In 1803 he returned as the leader of another conspiracy against Napoleon. Generals Charles PICHÉGRU and Jean Victor MOREAU were implicated in the plot. Insurrections were planned in Paris and in the provinces, but the conspiracy was uncovered by Joseph FOUCHÉ, the minister of police. Cadoudal was executed, and the duc d'ENGHIEN, unjustifiably linked with the plot, was kidnapped and summarily shot. The conspiracy, exaggerated in report, was used as a pretext to transform the Consulate into Napoleon's empire.

caduceus (kadyō'sēas), wing-topped staff, with two snakes winding about it, carried by Hermes, given to him (according to one legend) by Apollo. The symbol of two intertwined snakes appeared early in Babylonia and is related to other serpent symbols of fertility, wisdom, healing, and of sun gods. This staff of Hermes was carried by Greek heralds and ambassadors and became a Roman symbol for truce, neutrality, and noncombatant status. By regulation, it has since 1902 been the insignia of the medical branch of the U.S. army. The caduceus is much used as a symbol of commerce, postal service, and ambassadorial positions and since the 16th cent. has largely replaced the one-snake symbol of Asclepius as a symbol of medicine.

Cadwaladr or Cadwallader (both kādwal'adār), d. 664?, semilegendary Welsh king, leader of the Celtic resistance against the Anglo-Saxons. Later bards made him a national hero, and Welsh tradition deems him the last Welsh king to wear the crown of Britain.

caecilian (sēs'il'ēan), any of the legless, tailless tropical amphibians of the family Caeciliidae. Most adult caecilians resemble earthworms superficially but have vertebrate characteristics such as jaws and teeth. They range in size from 7 in. to 4.5 ft (18 cm–140 cm), most are about 1 ft (30 cm) long. Their bodies are ringed with grooves, which in some species contain small scales imbedded in the skin, possession of scales is a primitive amphibian trait. There is a groove on either side of the head, each containing a retractable sensory tentacle. The eyes of caecilians are nearly functionless, and some species are eyeless. Caecilians are found in swampy places in most tropical parts of the world, but are seldom seen because of their burrowing behavior. They eat small invertebrates such as termites and earthworms. A few species remain aquatic as adults and resemble eels. There are about 50 species of caecilians, divided into 16 genera. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Amphibia, order Gymnophiona (or Apoda), family Caeciliidae.

Cædmon (kād'man), fl. 670, English poet. He was reputed by Bede to be the author of early English versions of various Old Testament stories. According to Bede, Cædmon was an ignorant herdsman who received his poetic powers through a vision. During his later years he became a lay brother in the abbey of Whitby. In 1655, Franciscus Junius, a Dutch scholar, published the text of several Old English poems, including "Exodus" and "Daniel," and ascribed them to Cædmon; modern scholars dispute this conclusion. See E. V. K. Dobbie, *Cædmon's Hymn and Bede's Death Song* (1937), study by S. H. Curteen (1896, repr. 1969).

Cælian, hill. See *Rome before Augustus* under ROME.

Caen (kaN), city (1968 pop. 114,398), capital of Calvados dept., N France, in Normandy, on the Orne River. It is a busy port, canalized (by Napoleon I) directly to the sea. The commercial center of the rich CALVADOS region, it is highly industrialized, with a thermal power station and extensive steel works along the Orne; the nearby iron-ore mines are the second largest in France. The city's manufactures include automobiles, heavy equipment, electronic gear, and textiles (especially lace). Caen's importance dates from the 11th cent., when it was a favorite residence of William I of England (William the Conqueror). During the French Revolution it was a rallying place for the federalists; Charlotte Corday lived there. The town, an architectural gem, was largely destroyed in the fighting which raged there during the NORMANDY CAMPAIGN of World War II, the 14th-century Church of St. Peter's lost its famous spire, while the castle of William the Conqueror and the town hall (17th cent.) were destroyed beyond repair. However, three outstanding examples of 11th-century NORMAN ARCHITECTURE were preserved: the Abbaye aux Hommes [men's abbey], founded by William the Conqueror, who is buried there, the Abbaye aux Dames [women's abbey], founded by Queen Matilda, and the Church of St. Nicholas. The university (founded 1432 and also destroyed) has been rebuilt; in 1964 its technical institute became the National School of Advanced Electronics and Electromechanic Studies. A school of hydrography is also in Caen.

Caere (sērē), ancient city of Etruria, c. 30 mi. (50 km) N of Rome, Italy, at the site of the modern Cervetri. Although a few miles from the sea, it had ports at Alsum (near modern Palo) and Pyrgi (modern Santa Severa). During the 7th and 6th cent. B.C., Caere reached the period of its greatest prosperity. In recent times the cemeteries have been excavated, and

the monumental tumuli have yielded vases, pottery, and other art objects, revealing much about ETRUSCAN CIVILIZATION

Caerleon (karl'ē'an), urban district (1971 pop 6,235), Monmouthshire, SE Wales, on the Usk River. Militarily important during the Roman period, Caerleon has extensive remains of Isca, a Roman fortress, including an amphitheater, soldiers' quarters, walls, and baths. Stones, bronzes, pottery, and coins are exhibited in the Legionary Museum. Caerleon is also famous for its connection with Arthurian legend; it is often identified with CAMELOT. In 1974, Caerleon became part of the new nonmetropolitan county of Gwent.

Caernarvon (karnar'vən, kar-), municipal borough (1971 pop 9,253), county town of Caernarvonshire, NW Wales, on Menai Strait. Petroleum is imported and slate exported. Tourism is important. The castle, begun by Edward I c 1284, is a fine example of a medieval fortress. The Prince of Wales is invested at Caernarvon. In 1974, the borough became part of the new nonmetropolitan county of Gwynedd.

Caernarvonshire, county (1971 pop 122,852), NW Wales. The county town is Caernarvon. The region is largely mountainous except for the Llyn peninsula, which forms the northern boundary of Cardigan Bay, and a coastal section along Menai Strait in the northwest. Snowdon (3,560 ft/1,085 m) is the highest mountain in England and Wales. The Conway, chief river of the county, flows along Caernarvonshire's eastern boundary, separating it from Denbighshire. Sheep and cattle are raised, and slate quarrying and tourism are significant. There is an aluminum plant at Dolgarrog. Historical remains include evidence of considerable Roman settlement. In 1974, Caernarvonshire became part of the new nonmetropolitan county of Gwynedd.

Caerphilly (karfīl'ē), urban district (1971 pop 40,689), Mid Glamorgan, S Wales. In a coal area, it is also a market center and is noted for its cheese. Its 13th-century castle is the largest in Wales.

Caesalpinus, Andreas (än'drēas sēsālpī'nās), Latinized from **Andrea Cesalpino** (andrē'a chāzālpē'nō), 1519-1603, Italian botanist and physiologist. He was physician to Pope Clement VIII. He described, in part and as a theory only, the circulation of blood. His chief work, *De plantis* (1583), contains the first classification of plants according to their fruits, based on a comparative study of his large collection. Linnaeus considered him the first true systematist.

Caesar (sē'zār), ancient Roman patrician family of the Julian gens. There are separate articles on its two most distinguished members, Julius Caesar and Augustus. Another distinguished member of the family was Lucius Julius Caesar, d. 87 B.C., consul (90 B.C.). He proposed a law extending Roman citizenship to Roman allies that had not joined in the Social War against Rome (90 B.C.). He was killed in the beginning of the civil war by partisans of Marius. His brother Caius Julius Caesar Strabo Vopiscus, d. 87 B.C., is mentioned as an orator in Cicero's *De oratore*. He was killed with his brother. His name also appears as Vopiscus. The son of Lucius Julius Caesar, also named Lucius Julius Caesar, d. after 43 B.C., was one of Julius Caesar's legates in Gaul (52 B.C.). He accompanied the dictator into Italy during the civil war. After the assassination of Julius Caesar he was allied with Marc ANTONY, whose mother, Julia, was his sister. In 43 B.C. he and Antony fell out, and only the pleas of Julia to her son saved her brother in the proscription. When Octavius (later AUGUSTUS) was adopted (44 B.C.) into the Julian gens, he took the name Caesar. His successors as emperors took the name Caesar until HADRIAN, who kept the title Augustus for the emperor and allowed the heir apparent to be called Caesar. This became the custom afterward. The imperial use of the name Caesar was perpetuated in the German *kaizer* and the Russian *czar*.

Caesar, Julius (Caius Julius Caesar), 102? B.C.-44 B.C., Roman statesman and general. Although he was born into the Julian gens, one of the oldest patrician families in Rome, Caesar was always a member of the democratic or popular party, probably as a result of the example and patronage of his uncle by marriage, Caius Marius. In 87 B.C., Marius appointed him flamen Dialis (priest of Jove). Caesar made the most of their relationship, strengthening its political implications when he married (83 B.C.) Cornelia, the wealthy daughter of Lucius Cornelius CINNA, colleague of Marius and enemy of SULLA. In 82 B.C., Sulla ordered Caesar to divorce Cornelia. When he refused, he was proscribed, his property was confiscated, Cornelia's dowry was taken, and he was shorn of his priesthood. He fled from Rome (81

B.C.) and went to Asia to serve in the army. On Sulla's death, Caesar returned (78 B.C.) to Rome and began his political career as a member of the popular party. One of his first acts was to prosecute Cneius Cornelius Dolabella, a senatorial governor, for extortion in Macedonia. The case was unsuccessful, but it gained Caesar popularity with his party and repute for oratory. In 74 B.C. he went into Asia to repulse a Cappadocian army. After his return his role was that of the rising young statesman, agitating for the reform of the government on popular lines and helping to advance the position of POMPEY, who had become virtual head of the popular party. Caesar was made military tribune before 70 B.C. As quaestor in farther Spain in 69 B.C. he helped Pompey to obtain the supreme command for the war in the East. He returned to Rome in 68 B.C. and continued to support the enactment of popular measures and to prosecute senatorial extortionists. In Pompey's absence he was becoming the recognized head of the popular party. At the funerals of his wife, Cornelia, and his aunt (68 B.C.), he extolled Marius, the Julian gens, and Cinna. In 65 B.C. or 64 B.C., when he was curule aedile (superintendent of public works), Caesar had the trophies and statue of Marius set up secretly one night in the Capitol. These two incidents made him popular with the people but earned him the hatred of the senate. In 63 B.C. he was elected pontifex maximus, allegedly by heavy bribes. He then undertook the reform of the CALENDAR with the help of Sosigenes. The result was one of his greatest contributions to history, the Julian calendar. In Dec., 63 B.C., Caesar advocated mercy for CATILINE and the conspirators and thus increased the enmity of the senatorial party and its leaders, CATO THE YOUNGER and Quintus Lutatius Catulus (see CATULUS, family). In 62 B.C., CLAUDIUS and Caesar's second wife, Pompeia, were involved in a scandal concerning the violation of the secret rites of Bona Dea, and Caesar obtained a divorce, saying, "Caesar's wife must be above suspicion." Having served in farther Spain as proconsul in 61 B.C., he returned to Rome in 60 B.C., ambitious for the consulate. Against senatorial opposition he achieved a brilliant stroke—he organized a coalition, known as the First Triumvirate, made up of Pompey, commander in chief of the army, Marcus Licinius Crassus, the wealthiest man in Rome (see CRASSUS, family), and Caesar himself. Pompey and Crassus were jealous of each other, but Caesar by force of personality kept the arrangement going. In 59 B.C. he married CALPURNIA. In the same year, as consul, he secured the passage of an agrarian law providing Campanian lands for 20,000 poor citizens and veterans, in spite of the opposition of his senatorial colleague, Marcus Calpurnius BIBULUS. Caesar also won the support of the wealthy equites by getting a reduction for them in their tax contracts in Asia. This made him the guiding power in a coalition between people and plutocrats. He was assigned the rule of Cisalpine and Transalpine Gaul and Illyricum with four legions for five years (58 B.C.-54 B.C.). The differences between Pompey and Crassus grew, and Caesar again moved (56 B.C.) to patch up matters, arriving at an agreement that both Pompey and Crassus should be consuls in 55 B.C. and that their proconsular provinces should be Spain and Syria respectively. From this arrangement he drew an extension of his command in Gaul to 49 B.C. In the years 58 B.C. to 49 B.C. he firmly established his reputation in the GALIC WARS. In 55 B.C., Caesar made explorations into Britain, and in 54 B.C. he defeated the Britons, led by Cassivellaunus. Caesar met his most serious opposition in Gaul from VERGINGETORIX, whom he defeated in Alesia in 52 B.C. By the end of the wars Caesar had reduced all Gaul to Roman control. These campaigns proved him one of the greatest commanders of all time. In them he revealed his consummate military genius, characterized by quick, sure judgment and indomitable energy. The campaigns also developed the personal devotion of the legions to Caesar. His personal interest in the men (he is reputed to have known them all by name) and his willingness to undergo every hardship made him the idol of the army—a significant element in his later career. In 54 B.C. occurred the death of Caesar's daughter Julia, Pompey's wife since 59 B.C. She had been the principal personal tie between the two men. During the years that Caesar was in Gaul, Pompey had been gradually leaning more and more toward the senatorial party. The tribunate of Clodius (58 B.C.) had aggravated conditions in Rome, and Caesar's military successes could hardly have failed to arouse Pompey's jealousy. Crassus' death (53 B.C.) in Parthia ended the First Triumvirate and set Pompey and

Caesar face to face. The senate began to support Pompey, and in 52 B.C. he was made sole consul. Meanwhile, Caesar had become a military hero as well as a champion of the people. The senate feared him and wanted him to give up his army, knowing that he hoped to be consul when his term in Gaul expired. In Dec., 50 B.C., Caesar, who was in quarters in Ravenna, wrote the senate that he would give up his army if Pompey would give up his. The senate heard the letter with fury and, at the insistence of Quintus Caecilius Metellus Pius Scipio (see SCIPIO, family), demanded that Caesar disband his army at once or be declared an enemy of the people—an illegal bill, for Caesar was entitled to keep his army until his term was up. Two tribunes faithful to Caesar, Marc ANTONY and CASSIUS (Quintus Cassius Longinus), vetoed the bill and were quickly expelled from the senate. They fled to Caesar, who assembled his army and asked for the support of the soldiers against the senate. The army called for action, and on Jan. 19, 49 B.C., Caesar with the words "lacta alea est" [the die is cast] crossed the Rubicon, the stream bounding his province, to enter Italy. Civil war had begun. His march to Rome was a triumphal progress. The senate fled to Capua. Caesar proceeded to Brundisium, where he besieged Pompey until Pompey fled (March, 49 B.C.) with his fleet to Greece. Caesar set out at once for Spain, which Pompey's legates were holding, and pacified that province. Returning to Rome, Caesar held the dictatorship for 11 days in early December, long enough to get himself elected consul, and then set out for Greece in pursuit of Pompey. Caesar collected at Brundisium a small army and fleet—so small, in fact, that Bibulus, waiting with a much larger fleet to prevent his crossing to Epirus, did not yet bother to watch him—and slipped across the strait. He met Pompey at Dyrrhachium but was forced to fall back and begin a long retreat southward, with Pompey in pursuit. Near PHARSALA, Caesar camped in a very strategic location. Pompey, who had a far larger army, attacked Caesar but was routed (48 B.C.) and fled to Egypt, where he was killed. Caesar, having pursued Pompey to Egypt, remained there for some time, living with CLEOPATRA, taking her part against her brother and husband Ptolemy XII, and establishing her firmly on the throne. From Egypt he went to Syria and Pontus, where he defeated (47 B.C.) Pharnaces II with such ease that he reported his victory in the words "Veni, vidi, vici" [I came, I saw, I conquered]. In the same year he personally put down a mutiny of his army and then set out for Africa, where the followers of Pompey had fled, to end their opposition led by Cato. On his return to Rome, where he was now tribune of the people and dictator, he had four great triumphs and pardoned all his enemies. He set about reforming the living conditions of the people by passing agrarian laws and by improving housing accommodations. He also drew up the elaborate plans (which Augustus later used) for consolidating the empire and establishing it securely. In the winter of 46 B.C.-45 B.C. he was in Spain putting down the last of the senatorial party under Caius Pompeius, the son of Pompey. He returned to Rome in Sept., 45 B.C., and was elected to his fifth consulship in 44 B.C. In the same year he became dictator for life and set about planning a campaign against Parthia, the only real menace to Rome's borders. His dictatorial powers had, however, aroused great resentment, and he was bitterly criticized by his enemies, who accused him of all manner of vices. When a conspiracy was formed against him, however, it was made up of his friends and proteges, among them Cimber, Casca, Cassius, and Marcus Junius BRUTUS. On March 15 (the Ides of March), 44 B.C., he was stabbed to death in the senate house. His will left everything to his 18-year-old grandnephew Octavian (later AUGUSTUS). It is curious that Caesar probably knew of the conspiracy but made no attempt to defend himself. Caesar made the Roman Empire possible by uniting the state after a century of disorder, by establishing an autocracy in place of the oligarchy, and by pacifying Italy and the provinces. It should be noted that he had destroyed an oligarchy, not a democracy, to establish his dictatorship. His success in his dealings with other persons is a testimony to his social grace, and even Cicero (who hated him) said that he would rather spend an evening in conversation with Caesar than in any other way. Caesar has always been one of the most controversial characters of history. His admirers have seen in him the defender of the rights of the people against an oligarchy. His detractors have seen him as an ambitious demagogue, who forced his way to dictatorial power and destroyed the republic. That he was gifted and versatile there can be little doubt.

He excelled in war, in statesmanship, and in oratory. His literary works are highly esteemed. Of them his commentaries on the Gallic Wars (seven books) and on the civil war (three books) survive. They are masterpieces of clear, beautiful, concise Latin, and they are among the most reliable histories of antiquity as well as being classic military documents. Caesar wrote poetry, but the only surviving piece is a poem on Terence. A literary classic on Caesar is Shakespeare's tragedy *Julius Caesar*. Plutarch is the most famous ancient source. See biographies by Guglielmo Ferrero (tr 1933, repr 1962), A. L. Duggan (new ed 1966), J. P. V. D. Balsdon (1967), and Michael Grant (1969). T. R. Holmes, *The Roman Republic* (3 vol., 1923, repr 1967), L. R. Taylor, *Party Politics in the Age of Caesar* (1949, repr 1961).

Caesar, Lucius Julius: see under CAESAR, family

Caesarea: see CHERCHEL

Caesarea Libani, ancient city of Lebanon. see AR-RATE

Caesarea Mazaca (mā'zakā), ancient city of Asia Minor, also called Caesarea of Cappadocia. As Mazaca it was the residence of the Cappadocian kings. The city was renamed (c 10 B C) Caesarea by Archelaus, king of Cappadocia. It continued down the ages as a trade center and is the modern KAYSERİ, Turkey.

Caesarean section: see CESAREAN SECTION

Caesarea Palestinae (sēsārē'ā pālīstī'nē, sēzā-, sēzā-), old city, NW Palestine, c 20 mi (32 km) S of Mt Carmel. It was taken (104 B C) by Alexander Jannaeus, leader of the Maccabees, and was made (30 B C) the capital of Herod the Great. The Jewish citizens were massacred by the Romans in A D 66. There have been excavations since 1958.

Caesarea Philippi (fīlīp'ī), ancient city, N Palestine, at the foot of Mt Hermon. It was built by Philip the Tetrarch in the 1st cent. A D. Its site (Paneas) had long been a center for the worship of Pan. Jesus was in the vicinity (Mat 16:13), but there is no proof that he entered the city. The modern name is Banīyas.

Caesarian: see PTOLEMY XIV

Caetano, Marcello (marsē'lōō kāātā'nōō), 1906–, Portuguese lawyer and statesman. He received a doctorate in law (1931) from the Univ of Lisbon, where he taught after 1932, serving as professor (1940–68) and as rector (1959–62). A close associate of Antonio de Oliveira Salazar, he was instrumental in planning the dictator's corporate form of government, the *Estado Novo*, and from the 1930s held various positions in the regime. He served as minister for the colonies (1944–47) and deputy prime minister (1955–58). He became prime minister of Portugal in 1968 after Salazar had been incapacitated by a stroke. While adhering to the basic conservative policies of his predecessor, including retention of the Portuguese overseas colonies, suppression of dissent, and staunch anti-Communism, he initiated modest political and economic reforms. Caetano's government was overthrown by a military coup in April, 1974, and he was exiled to Madeira and later to Brazil, where he settled in a monastery.

cafeteria: see RESTAURANT

Caffa: see FEODOSIYA, USSR

caffeine, odorless, slightly bitter alkaloid found in COFFEE, TEA, kola nuts, ilex plants (the source of the Latin American drink yerba MATÉ), and, in small amounts, in cocoa (see COLA, CACAO). It can also be prepared synthetically from URIC ACID. When used in moderation, caffeine acts as a mild STIMULANT to the nervous system and is harmless to most persons. Caffeine increases the heart rate and rhythm, affects the circulatory system, and increases urination. It also stimulates secretion of stomach acids and is therefore harmful to individuals with ulcers. Excessive intake of caffeine can result in restlessness, insomnia, heart irregularities, and delirium.

Caffieri (Fr. kāfyārē', Ital. kāf-iyārē'), French family of artists. Philippe Caffieri (1634–1716) left Italy to enter the service of Louis XIV at the Gobelins factory. He and a son, Jacques Caffieri (1678–1755), were employed by the architect Le Brun to make adornments for the palace and gardens at Versailles. Philippe is recorded as having made carved wood decorations for the ambassadors' staircase in the palace. Jacques's superb creations were chiefly in the rococo style. He made bronzes for the king's chamber (1738) and for the council room. His son, Philippe Caffieri II (1714–74), worked with him, and together they produced an immense volume of metalwork, including sumptuous ormolu (imitation gold made of brass) mountings for furniture, adornments for several of the royal palaces, e.g., Fontainebleau and Chôisy, and casings for clocks—notably a celebrated

astronomical clock presented to Louis XV. Another son of Jacques, Jean Jacques Caffieri (1725–92), was a sculptor especially noted for statues and portrait busts. His *Père Pingré* is in the Louvre.

Cagayan (kāg'ān, kāgāyān'), river, c 220 mi (350 km) long, rising in the mountains of central Luzon, Philippines, and flowing N to the Pacific Ocean at Aparri. It is navigable to small oceangoing vessels for c 15 mi (20 km) upstream. Tobacco is the chief crop of the basin.

Cage, John, 1912–, American composer, b. Los Angeles, Calif. A controversial figure, Cage is famous for his unorthodox musical theories and experimental compositions. He attended Pomona College and later studied with Arnold Schoenberg, Adolph Weiss, and Henry Cowell. In 1943 he moved to New York City, where his concerts featuring percussion instruments attracted attention. For these performances he invented the "prepared piano," in which objects of such materials as metal, wood, and rubber were attached to a piano's strings, thus altering pitch and tone and producing sounds resembling those of a minuscule percussion group. Cage's *Bacchanale* (1938) and *Sonatas and Interludes* (1946–48) were composed for the "prepared piano." One of Cage's most innovative ideas is his theory of "total soundspace"—the concept that all sound, including nonmusical sound and the absence of sound, can be used in musical composition. *4'33"* (1952), probably his most famous piece, consists of 4 minutes and 33 seconds of silence punctuated only by whatever random environmental sounds happen to occur. Another of Cage's influential ideas is his concept of composition by chance, in which the notes and sounds of a musical composition are determined by such methods as the roll of dice or a consultation of the *I Ching* (see ALLEGORY MUSIC). For example, his famous *Imaginary Landscape No. 4* (1953) is scored for 12 radios tuned at random, whereas *Reunion* (1968) consists of the sounds made by the movement of pieces in a chess game played on an electrified board. For some years associated with Merce Cunningham, Cage has also written music for the dance, to be played independent of the choreography. He has also written several books, among them *Silence* (1961) and *A Year From Monday* (1968).

Cagliari (kā'lyārē'), city (1971 pop. 224,449), capital of Sardinia and of Cagliari prov., S Sardinia, Italy, on the Gulf of Cagliari (an arm of the Mediterranean Sea) and at the mouth of the Mannu River. It is the largest city in Sardinia and is a modern port and an industrial center. A flourishing Carthaginian city, it was taken by Rome in 238 B C. Cagliari endured Arab invasions in the 8th and 9th cent. A D. The city was a Pisan stronghold during the wars with Genoa (11th–14th cent.), its subsequent history is largely that of SARDINIA. Cagliari was the site of a submarine base in World War II and was heavily bombed by the Allies. Noteworthy structures include the Romanesque-Gothic cathedral (13th cent.), the Basilica of San Saturnino (5th cent.), a large Roman amphitheater, and the massive tower of St. Pancras (built by Pisans in 1304).

Cagliostro, Alessandro, Conte (ālēs-sān'drō kōn'-tā kālyō'strō), 1743–95. Italian adventurer, magician, and alchemist, whose real name was Giuseppe Balsamo. After early misadventures in Italy he traveled in Greece, Arabia, Persia, and Egypt. While in Italy, he married Lorenza Feliciani, who became his assistant on his trips to the cities of Europe, where he posed as a physician, alchemist, mesmerist, necromancer, and Freemason. He claimed the secret of the philosopher's stone and of miraculous philters and potions. As the Grand Copt of the order of Egyptian Masonry he organized many lodges. His reputation was amazing, particularly at the court of Louis XVI. Implicated in the Affair of the DIAMOND NECKLACE, he was imprisoned, acquitted, and banished. Cagliostro returned to Rome in 1789, where the Inquisition charged him with heresy and sorcery and condemned him to die. The sentence was commuted to life imprisonment, and he died in a dungeon. Cagliostro has fascinated later generations as well as his contemporaries, and he appears often in literary works. See biographies by Frank King (1929), W. R. H. Trowbridge (new ed 1961), and François Rebadeau Dumas (tr 1968), H. C. Schnur, *Mystic Rebels* (1949, repr 1971).

Cagney, James, 1904–, American movie actor, b. New York City. He worked on Broadway as an actor and dancer before appearing in films. He is best remembered as the brash, sadistic tough guy in such movies as *Public Enemy* (1930) and *The Roaring Twenties* (1939). His many other films include *Angels With Dirty Faces* (1936), *The Fighting Sixty-*

Ninth (1940), *Yankee Doodle Dandy* (1942), *White Heat* (1949), *Come Fill The Cup* (1951), *Love Me or Leave Me* (1955), *Man of a Thousand Faces* (1957), and *One Two Three* (1961).

Caguas (kā'gwās, kā'wās), city (1970 pop. 63,215), E central Puerto Rico. Largest of Puerto Rico's inland cities, Caguas is an industrial center. Sugar refining and varied manufacturing are carried on.

Cahan, Abraham (kān), 1860–1951, Russian-American journalist, Socialist leader, and author, b. Vilnius, Lithuania. He emigrated to New York City in 1882, entered journalism, and helped found the *Jewish Daily Forward* (1897), as editor in chief after 1902, he made it the most influential Jewish daily in America. He was a founder of the Social Democratic party in 1897 and after 1902 supported the Socialist party. Active in spreading socialist teachings among Jewish workers, he encouraged the unionization of East Side garment workers and supported them in their strikes. Cahan's writings in English, particularly *Yekl: A Tale of the New York Ghetto* (1896), *The Imported Bridegroom and Other Stories* (1898), and *The Rise of David Levinsky* (1917), have a high place in immigrant literature. He also wrote, in Yiddish, *Blätter von mein Leben* (5 vol., 1926–31), an autobiography.

Cahokia (kāhō'kēā), village (1970 pop. 20,649), St. Clair co., SW Ill., a residential suburb of East St. Louis, on the Mississippi River, inc. 1927. The first permanent settlement in Illinois, it was named for a tribe of the Illinois Indians. The French established a mission in 1699 and a fur-trading post later. With Kaskaskia, it became a leading center of French influence in the upper Mississippi valley. Cahokia was occupied by the British in 1765 and captured by the Americans under George Rogers Clark in 1778. The town has several buildings dating from the 18th cent. Parks College of Aeronautical Technology, a part of St. Louis Univ., is in the village. Nearby is Cahokia Mounds State Park.

Cahokia Mounds, approximately 85 Indian earthworks in Cahokia State Park, SW Ill., near East St. Louis, largest group of mounds N of Mexico. Monks' Mound, a rectangular, flat-topped earthwork, 100 ft (30 S m) high with a 17-acre (6.9-hectare) base, is the largest mound, it is named for Trappist monks who settled on top of it in the early 19th cent. Excavation has not answered all the questions concerning the people who constructed the mounds. They were village dwellers living in a fertile river-bottom area, their culture flourished from c 1300 to c 1700. The mounds, which were probably bases for temples and houses of the chiefs, constitute a national historic landmark.

Cahors (kāōr'), town (1968 pop. 17,775), capital of Lot dept., S central France, in Quercy, on the Lot River. A commercial center, it has canneries, distilleries, and factories making a great variety of products. It was an important Roman town, an early episcopal see, and the capital of Quercy. It was ruled by its bishops until the 14th cent. and was one of the major banking centers of medieval Europe, the Cahorsin money lenders were among the most famous. The Univ. of Cahors, founded in 1322 by Pope John XXII (who was born there), was united in 1751 with that of Toulouse. The old part of Cahors is of great architectural interest. Part of the medieval fortifications, including a fortified bridge, still stand. The Cathedral of St. Étienne (12th–15th cent.), with Byzantine cupolas, and the palace of John XXII (begun 14th cent., never completed) are among its many edifices.

Caiphas (Joseph Caiaphas) (kā'yāfās), high priest of the Jews, a Sadducee, son-in-law of Annas. He presided at the council that condemned Jesus to death. Later, he joined in the examination of Peter and John. Mat 26:57–68, John 11:47–54, 18:24, Acts 4:6.

Caicos Islands: see TURKS AND CAICOS ISLANDS

Caillaux, Joseph (zhōzēf' kāyō'), 1863–1944, French statesman. Son of a former cabinet minister, he entered the French civil service as inspector of finance. He later became finance minister in the cabinet of René Waldeck-Rousseau (1899–1902) and in the cabinet of Georges Clemenceau (1906–9), winning considerable unpopularity by introducing the income tax. As premier in 1911, he reached a peaceful settlement of the crisis over MOROCCO with Germany. However, he was severely attacked by the nationalists, and his cabinet fell in 1912. In 1913 he again became minister of finance. He resigned in 1914 to defend his wife, who had shot and killed Gaston Calmette, editor of *Le Figaro*, for attacking Caillaux's private life. Mme Caillaux was acquitted. Caillaux expressed pacifist sentiments during World War I and allegedly made contact with the Germans.

to discuss a negotiated peace. He was arrested (1917) and sentenced (1920) to three years imprisonment for involvement with the enemy. After his civil rights were restored under a general amnesty, Caillaux served as finance minister in the cabinets of Paul Painlevé (1925) and Aristide Briand (1926), but after each appointment a hostile chamber of deputies forced his resignation. He was subsequently elected to the senate. See Rudolph Binion, *Defeated Leaders: The Political Fate of Caillaux, Jouvenel, and Tardieu* (1960).

Caillié, René (ranā' kāyā'), 1799-1838, French explorer in Africa. He was the first European to visit Timbuktu and return. The son of poor French peasants, he was obsessed with the idea of seeing Timbuktu. After 11 years of preparation, he reached the desert city, disguised as a Muslim trader, and remained there two weeks. See Galbraith Welch, *The Unveiling of Timbuktu: The Astounding Adventures of Caillié* (1938).

caiman* see ALLIGATOR

Cain (kān) 1 Eldest son of Adam and Eve, a tiller of the soil in jealousy he killed his brother Abel and became a fugitive. Gen. 4:2. City, W. Palestine. Joshua 15:57.

Cain, James M., 1892-, American novelist, b. Annapolis, Md., grad. Washington College, 1910. He taught journalism at St. John's College (1924-25) and wrote political commentaries for the *New York World* (1924-31). His "hard-boiled" novels usually concern middle-class lovers who are driven to crime and violence. His novels include *The Postman Always Rings Twice* (1934), *Double Indemnity* (1936), *Mildred Pierce* (1941), *The Magician's Wife* (1966), and *Rainbow's End* (1974). Several of his novels have been made into successful movies.

Cainan (kā'nān), in the Gospel genealogy 1. The same as KENAN. 2. Son of Arphaxad. Luke 3:36.

Caine, Hall (Sir Thomas Henry Hall Caine), 1853-1931, English novelist. Secretary to Dante Gabriel Rossetti, he lived with him from 1881 until the poet's death and wrote *Recollections of Rossetti* (1882). His enormously popular novels, some of Manx life, others on biblical themes, include *The Shadow of a Crime* (1885), *The Deemster* (1887), *The Manxman* (1894), *The Christian* (1897), *The Prodigal Son* (1904), and *The Master of Man* (1921). See his autobiography, *My Story* (1908), study by C. F. Kenyon (1901, repr. 1974).

cairn, pile of stones, usually conical in shape, raised as a landmark or a memorial. In prehistoric times it was usually erected over a burial. A BARROW is sometimes called a cairn.

Cairnes, John Elliot (kārnz), 1823-75, Irish economist, a follower of John Stuart Mill. His *Slave Power* (1862), a defense of the North in the American Civil War, made a great impression in England. Among his works are *The Character and Logical Method of Political Economy* (1857) and *Some Leading Principles of Political Economy Newly Expounded* (1874). See Adelaide Weinberg, *John Elliot Cairnes and the American Civil War* (1970).

Cairngorms, group of mountains forming part of the Grampian system, central Scotland, between the Dee and the upper Spey rivers, they rise to c. 4,300 ft (1,310 m). The name *cairngorm* is given to an ornamental yellow or brown quartz found in the mountains. The group includes the peaks Ben Macdui, Braeriach, and Cairngorm. The region is being developed for winter sports.

Cairns, city (1971 pop. 30,059), Queensland, NE Australia, on Trinity Bay. It is a principal sugar port of Australia, lumber and other agricultural products are also exported. The city's proximity to the Great Barrier Reef has made it a tourist center.

cairn terrier, breed of small working TERRIER developed on the Isle of Skye in the 19th cent. It stands about 10 in. (25 cm) high at the shoulder and weighs about 14 lb (6.4 kg). The weather-resistant double coat consists of a soft, furry underlayer and a profuse, hard outercoat about 2 in. (5 cm) long. It may be any color except white, often with dark ears, muzzle, and tip of tail. Originally bred to rout fur-bearing vermin from the rocky crags and cliffs of its native island, the cairn was also bred as a water dog to hunt otters. At an early stage in its history it was accepted into the household as a companion and watchdog, the roles for which it is principally raised today. See DOG.

Cairo (kā'rō), Arab. Al Qahirah, city (1970 est. pop. 4,961,000), capital of Egypt and its Cairo governorate, N. Egypt, a port on the Nile River near the head of its delta. The city includes two islands in the Nile, Zamalik (Gazira) and Rawdah (Roda), which are

linked to the mainland by bridges. Cairo has the largest population of any city in the Middle East and Africa. It is Egypt's administrative center and, along with Alexandria, the heart of its economy. Cairo's manufactures include textiles, food products, pharmaceuticals, chemicals, plastics, and metals. The first railroad in Africa (built 1855) linked Cairo with Alexandria, and today Cairo has extensive rail facilities and is also a road hub. Almost directly across the Nile from Cairo was MEMPHIS, an ancient Egyptian capital. Babylon, a Roman fortress city, occupied a part of SE Cairo now known as Old Cairo. Cairo was founded in 969 by the Fatimid general Jauhar Al Rumi to replace nearby Al Qatai (established in the 9th cent. by an Abbasid governor of Egypt) as the capital of Egypt. In the 12th cent. Saladin ended Fatimid rule and established the Ayyubid dynasty (1171-1250). To defend the city against an attack by Crusaders, Saladin erected (c. 1179) the citadel, which still stands, and extended the walls of the city (originally built by Jauhar), parts of which remain. Cairo prospered under the rule of the Mamelukes, who added many buildings of high artistic merit, but the city declined after it was conquered (1517) by the Ottoman Empire. At the time of its capture (1798) by French forces led by Napoleon I, the city had about 250,000 inhabitants. British and Turkish forces ousted the French in 1801, and Cairo was returned to Ottoman control. Under Muhammad Ali (ruled 1805-49), Cairo became the capital of a virtually independent country and increased in commercial importance. Many Europeans settled in the city. During World War II, Cairo was the Allied headquarters and supply center for the Middle East and was the site (1943) of the CAIRO CONFERENCE. From 1958 to 1961 the city was the capital of the United Arab Republic, which joined Egypt and Syria. Today much of Cairo is modern, with wide streets, its famed mosques, palaces, and city gates are found mostly in the older sections. The mosques of Amur (7th cent.), Ibn Tulun (876-79), Hasan (c. 1356), and Qait Bay (1475) are especially noted for their bold design. Khedive Ismail's palace on Zamalik island is a notable 19th-century structure. The Mosque of Al Azhar (970) and adjoining buildings house Al Azhar Univ., considered the world's leading center of Koranic studies. Cairo is also the seat of the American Univ. in Cairo, Cairo Polytechnic Institute, the Higher Institute of Finance and Commerce, the College of Fine Arts, and the Higher Institute of Theatrical Arts. The Univ. of Cairo is nearby, in Al Jizah. Cairo has many museums, the Egyptian National Museum is especially noted for its holdings of ancient Egyptian art. The Nilometer, a graduated column first built in 716 and used to measure the Nile water level, is on Rawdah island, where the infant Moses is believed to have been found in the bulrushes. Cairo is the center of Coptic Christianity in Egypt.

Cairo (kā'rō, kā'rō), city (1970 pop. 6,277), seat of Alexander co., extreme S. Ill., on a levee-protected tongue of land between the Mississippi and Ohio rivers (spanned there by several bridges), inc. 1857. A port of entry, it is a center for shipping by river, rail, and highway and the processing and distributing point for a large and fertile farm area. Manufactures include flour, lumber, cottonseed oil, textiles, woodwork, and silica. The city and surrounding area are popularly called "Egypt" because of the delta-like geographical similarity. Settlement was attempted there in 1818, but permanent settlement did not begin until 1837. Cairo was a strategic point in the Civil War, it was a crowded military camp, a depot for Union supplies, and General Grant's headquarters during much of his Western campaign. The city has often been endangered by floods, but Federal flood control projects have decreased the danger. Fort Defiance State Park, the site of a Civil War fort, on the southern edge of town, offers a magnificent view of the convergence of the Ohio and Mississippi rivers.

Cairo Conference, Nov. 22-26, 1943, World War II meeting of U.S. President Franklin D. Roosevelt, British Prime Minister Winston Churchill, and Generalissimo Chiang Kai-shek of China at Cairo, Egypt. A joint declaration pledged continuation of the war against Japan until unconditional Japanese surrender, forswore territorial ambitions, and promised to strip Japan of all territory acquired since 1895. Korea was to receive independence "in due course." The TEHRAN CONFERENCE was held immediately afterward.

Cairolì, Benedetto (bānādēt'ō kīrō'lē), 1825-89, Italian patriot and premier. One of five brothers all noted as heroes of the Risorgimento, he was the only brother to survive the wars leading to Italian unification. Benedetto took part in the expedition of

Giuseppe GARIBOLDI to Sicily in 1860 and later became a leftist member of parliament, advocating, with Giuseppe MAZZINI, the occupation of Rome. Premier in 1878 and from 1879 to 1881, he resigned his office after failing to prevent the establishment of a French protectorate over TUNISIA, which was a blow to Italian colonial policy.

caisson (kā'sən, -sōn) [Fr., =big box], in engineering, a chamber, usually of steel but sometimes of wood or reinforced concrete, used in the construction of foundations or piers in or near a body of water. There are several types. The open caisson is a cylinder or box, open at the top and bottom, of size and shape to suit the projected foundation and with a cutting edge around the bottom. It is sunk by its own weight and by excavation, then filled with concrete. Pneumatic caissons are usually employed in riverbed work or where quicksand is present. In this type the cylinder or box has an airtight bulkhead high enough above the cutting edge to permit men to work underneath it. The air in the chamber beneath the bulkhead is kept under pressure great enough to prevent the entrance of water, while shafts through the bulkhead permit the passage of men, equipment, and excavated material between the bottom and the surface. At the top of each shaft is an AIR LOCK to permit communication with the outside without altering the air pressure in the working chamber. As the working chamber moves down, the caisson above the bulkhead and about the shafts is filled with concrete, and when a sufficient depth or bedrock is reached, the working chamber itself is filled, so that there is a solid block of concrete from base to top. Workers leaving a pneumatic caisson after hours of labor under high pressure are given special decompression treatment to accustom them to the lower atmospheric pressure and thus to prevent caisson disease (see DECOMPRESSION SICKNESS). A type of caisson often called a camel is used to raise sunken vessels. It consists of a cylinder filled with water, which is sunk, attached to the vessel, and emptied by pump or compressed air, so that its buoyancy can assist in raising the vessel. Caissons are also sometimes used for closing the entrance to dry docks or as a substitute for gates in canal locks.

caisson disease: see DECOMPRESSION SICKNESS

caisson sinking* see SHAFT SINKING

Caithness (kāth'nēs, kāthnēs'), county (1971 pop. 27,754), 686 sq. mi. (1,777 sq. km), NE Scotland, northernmost county of the Scottish mainland. Wick is the county town. The Thurso is the chief river. The northeastern section of Caithness, flat and treeless, contains most of the county's small percentage of arable land. The southwest is barren, with peat moors and sheep runs. Agriculture and fishing are the main occupations; there are growing dairy and glassmaking industries. Britain's first large nuclear breeder reactor was opened at DOUNREAY in 1959. Originally part of the Pictish nation, Caithness was absorbed into the Viking earldom in the 9th cent. and reverted to Scottish rule only in 1202. It was the scene of frequent clan warfare until the end of the 17th cent. In 1975, Caithness became part of the Highland region.

Cajal, Santiago Ramon y. see RAMÓN Y CAJAL

Cajamarca (kahamar'ka), city (1969 est. pop. 28,000), N. Peru. An important commercial center, Cajamarca is situated at an altitude of c. 9,000 ft (2,740 m) and has a cool, dry climate. Most of the population is Indian. Grains and alfalfa are raised in the region, and gold, silver, and copper come from nearby mines. FRANCISCO PIZARRO captured the Inca ruler ATAHUALPA in 1532 at Cajamarca. Inca ruins and nearby thermal springs attract many tourists.

Cajetan, Saint (kā'jātan, ka''yātan'), 1480-1547, Italian churchman and reformer. Son of the count of Thiene, he studied civil and canon law, but abandoned work as a jurist at the papal court to become a priest. He advocated communities of priests who lived in poverty and worked among the people. He was the leader in founding the congregation of the Theatines, formally begun in 1524 and named for a cofounder and first superior, the bishop of Chieti [Lat. = Theate], who was later PAUL IV. Cajetan's vigor in reform made him a notable figure, and the Theatines were very active in the Catholic Reformation. Cajetan was canonized in 1671. Feast: Aug. 7.

Cajetan [Lat. = from Gaeta], 1469?-1534, Italian prelate, cardinal of the Roman Catholic Church, b. Gaeta. His original name was Giacomo de Vio. He joined the Dominicans (c. 1484), became general of his order (1508), and was made a cardinal (1517). He played a leading role at the Fifth Lateran Council as an advocate of reform. As papal legate in Germany

in 1518 and 1519 he attempted to reconcile the differences of Martin Luther with the church. He strongly opposed the divorce of Henry VIII of England from Katharine of Aragon. Cajetan's political skills helped secure the elections of Holy Roman Emperor Charles V and Pope Adrian VI. Always a student, he translated parts of the Bible, and his commentaries are published with the *Summa* of St Thomas Aquinas in the pontifical edition of that work.

Cakchiquel: see QUICHÉ

cake, originally a small mass of dough baked by turning on a spit, in present usage a dessert made of flour, sugar, eggs, seasonings, usually some leavening and liquid besides the eggs, and shortening. This last ingredient is not always used, unshortened cakes depend mainly on beaten eggs for leavening (e.g., spongecake and angel food cake). The early method of making sweet cake was by adding other ingredients to a portion of bread dough. Some cakes, such as fruitcake or poundcake, called for many eggs and for wine, brandy, or sack (an Elizabethan wine), these ingredients supplying the leavening agent. Modern cakes are generally raised with baking powder, baking soda, or beaten eggs.

Calabar (kāl'əbār', kāl'əbār'), city (1969 est. pop. 89,000), SE Nigeria, a port on an estuary of the Gulf of Guinea. Rubber is processed, and palm oil, cacao, rubber, and timber are exported. Calabar, an important Niger delta trading state in the 19th cent., grew as a center of the palm oil trade.

calabash: see GOURD

Calabrese, II. see PRETI, MATTIA

Calabria (kala'brēā), region (1971 pop. 1,962,899), 5,822 sq mi (15,079 sq km), S Italy, a peninsula projecting between the Tyrrhenian Sea and the Ionian Sea, separated from Sicily by the narrow Strait of Messina. It forms the toe of the Italian "boot." CATANZARO is the capital of Calabria, which is divided into Catanzaro, Cosenza, and Reggio di Calabria. The region is generally mountainous, with narrow coastal strips. Farming is the main occupation, olives, plums, grapes, citrus fruit, and wheat are grown, and sheep and goats are raised. Fishing is well developed along the Strait of Messina. The region's few manufactures include processed food, wine, forest products, chemicals, and metal goods. There are several large hydroelectric plants. The ancient BRUTTIUM, the region was named Calabria in the 8th cent., before then Calabria referred to the present S APULIA. Taken in the 11th cent. by ROBERT GUISCARD, Calabria was first part of the Norman kingdom of Sicily and after 1822 became part of the kingdom of Naples (see NAPLES, KINGDOM OF). The region was conquered by Garibaldi in 1860. Feudal landholding patterns prevailed in Calabria until the 20th cent. These, along with malaria, destructive earthquakes (particularly in 1905 and 1908), droughts, and poor transportation facilities, have hindered the economic development of the region and resulted in large-scale emigration (late 19th cent.-20th cent.) to foreign countries and to the industrial cities of N Italy. There is a polytechnic institute at Reggio di Calabria.

caladium (kalā'dēām) see ARUM

Calah (kā'lā) or **Kalakh** (ka'lakh'), ancient city of Assyria, S of Nineveh and therefore S of present Mosul, Iraq. Known as Calah in the Bible, it is the same as the ancient Nimrud, named after a legendary Assyrian hunting hero. Calah emerged as a famous city when Ashurnasirpal II chose (c. 880 B.C.) the site for his capital. Excavations carried on since the mid-19th cent. have revealed remarkable bas-reliefs, ivories, and sculptures. Also discovered were the palaces of Ashurnasirpal II, Shalmaneser III, and Tiglathpileser III. Calah continued to be a royal residence even after Nineveh became the political capital. The famous black obelisk of Shalmaneser III was discovered in Calah by A. H. Layard in 1846. Calah is mentioned in Gen. 10:11,12.

Calahorra (kalaō'rā), town (1970 pop. 16,340), Logroño prov., NE Spain, in Old Castile, on the Cidacos River near its confluence with the Ebro. Calahorra is a farm (cereals and grapes) and manufacturing center. Known in ancient times as Calagurris, it is the place where Pompey unsuccessfully besieged (76-72 B.C.) the rebel Sertorius. An old cathedral (c. 5th cent., restored 15th cent.) and some Roman ruins survive today, and the Casa Santa, where the martyrs Emeterius and Celedonius are said to be buried, is the site of an annual pilgrimage. Quintilian was born in the town.

Calais (kā'lā), city (1968 pop. 74,908), Pas-de-Calais dept., N France, in Picardy, on the Strait of Dover.

An industrial center with a great variety of manufactures, it has been a major commercial seaport and a communications center with England since the Middle Ages. It was fortified (13th cent.) by the counts of Boulogne. In 1347, after a siege of 11 months, Calais fell to Edward III of England. A bronze monument by Rodin commemorates the famous episode of the six burghers who offered their lives to save the town; they were spared when Edward's queen, Philippa, interceded. The city remained in English hands until it was recovered (1558) by the French under François de Lorraine, the duke of Guise. It was the scene of much fighting (1940, 1944) in World War II. A Gothic church survived.

calamander wood: see EBONY

Calamity Jane, c. 1852-1903, American frontier character, b. Princeton, Mo. Her real name was Martha Jane Canary, and the origin of her nickname is obscure. Little is known of her early life beyond the fact that she moved with her parents to Virginia City, Mont., in 1865 and that she grew up in mining camps and rough frontier communities. In 1876 she appeared in Deadwood, S. Dak., dressed in men's clothes and boasting of her marksmanship and her exploits as a pony-express rider and as a scout with Custer's forces. In her later years she toured the West in a burlesque show and appeared at the Pan-American Exposition in Buffalo, N.Y. She died in poverty and obscurity in Deadwood, where she is buried beside Wild Bill Hickock. See biographies by Duncan Aikman (1927) and Mrs. Glenn Clairmonte (1959), R. J. Casey, *The Black Hills and Their Incredible Characters* (1949).

calamus (kāl'āmas) see ARUM

Calamy, Edmund (kāl'āmē), 1600-1666, English Presbyterian preacher. For 10 years he was lecturer at Bury St. Edmunds until in 1636 his opposition to the observance of certain church ceremonies forced him to withdraw and so identify himself with the Puritan party. He was pastor (1639-62) of the Church of St. Mary Aldermanbury in London. A leader among the Presbyterians, Calamy was a member of the Westminster Assembly (1643). He was one of the five authors of the composite work *Smectymnuus*, directed against Bishop Joseph Hall's apology for a moderate episcopacy. Opposed to the execution of Charles I, Calamy was among those sent to meet Charles II in Holland. At the Restoration, he was made a chaplain to the king, but declined a bishopric. Ejected under the Act of Uniformity (1662), he was imprisoned for a short time for having preached after ejection. A number of his sermons were published. His grandson, Edmund Calamy, 1671-1732, nonconformist minister in London, also published many sermons, but he is particularly remembered for his *Account of the Ministers Ejected by the Act for Uniformity* (1702), edited by A. G. Matthews as *Calamy Revised* (1934). His autobiography appeared in 1829.

Calan, Abraham. see CALOVIUS, ABRAHAM

Calatayud (kalatayōōt'), town (1970 pop. 17,217), Zaragoza prov., NE Spain, in Aragon, on the Jalon River. It is in an agricultural area and has sugar refineries. Founded (8th cent.) by the Moors and conquered (1120) by Alfonso I of Aragon, it retains a Moorish castle and the collegiate Church of Santo Sepulcro, once the main church of the Knights Templars in Spain. Near Calatayud stood ancient Irbilis, birthplace of Martial.

Calatrava, Campo de (kampō' thā kalatra'va), region in Ciudad Real prov., central Spain, in New Castile. It gave its name to the Knights of Calatrava, Spain's oldest military order, whose original seat was the fortress of Calatrava la Vieja, now in ruins. Founded (1158) by the Cistercians as a defense against the Moors, the order was very powerful, holding large possessions until the 13th cent., later it declined. In 1499 the title of grand master passed to the Castilian crown and thence to the Spanish crown.

calcareous rock: see LIMESTONE, MARBLE

calcareous soil (kalkār'ēās), soil formed largely by the weathering of calcareous rocks and fossil shell beds. Different varieties usually contain chalk, marl, and limestone and frequently a large amount of phosphates. They are often very fertile, as in the case of the buckshot soils of the S. United States. Sometimes calcareous soils are flinty, thin, and dry. They often form a large part of the soil of deserts, which may prove very fertile when sufficient moisture for crops is applied.

Calcasieu (kāl'kāsōō), river c. 200 mi (320 km) long, rising in W. central La. and flowing S. through Lake

Charles and Calcasieu Lake to the Gulf of Mexico. The river, which is partly navigable, connects the port of Lake Charles city with the Intracoastal Waterway and the Gulf of Mexico.

calceolaria (kāl'sēōlār'ēā) see FIGWORT

Calchas (kāl'kās), in Greek legend, priest whose prophecies aided the Greeks in the TROJAN WAR. In medieval romances, he is the father of Cressida.

calcia: see CALCIUM OXIDE

calciferol: see VITAMIN

calcination (kāl'sənā'shan), in metallurgy, process of heating solid material to drive off volatile chemically combined components, e.g., carbon dioxide. It is sometimes a step in the extraction of metals from ores. Calcination is distinguished from drying, in which mechanically held water is driven off by heating, and from roasting, in which a material is heated in the presence of air to oxidize impurities. Originally calcination meant the method of obtaining lime (calcium oxide) from limestone by heating it to drive off carbon dioxide.

calcite (kāl'sīt), very widely distributed mineral, commonly white or colorless, but appearing in a great variety of colors owing to impurities. Chemically it is calcium carbonate, CaCO₃, but it frequently contains manganese, iron, or magnesium in place of the calcium. It crystallizes in the hexagonal system, its crystals being characterized by highly perfect cleavage. Calcite also occurs in a number of massive forms, in which it may be coarsely to finely granular (as in marble), compact (as in limestone), powdery (as in chalk), or fibrous. One crystalline form, called dogtooth spar because of its dogtooth appearance, exhibits faces of perfect scalene triangles. Another form, satin spar, is finely fibrous and has a satin luster. ICELAND SPAR is clear, transparent calcite. Other important forms of the mineral are LIMESTONE, MARBLE, CHALK, MARL, STALACTITE and STALAGMITE formations, TRAVERTINE, and Oriental ALABASTER. Millions of tons of calcite, in the form of limestone and marble, are mined annually. Besides its use as a building stone, it is the raw material for quicklime and cement, and is used extensively as a flux in smelting and as a soil conditioner.

calcium (kāl'sēām) [Lat., =lime], metallic chemical element, symbol Ca, at no. 20, at wt. 40.08, m.p. about 845°C, b.p. 1487°C, sp. gr. 1.55 at 20°C, valence +2. Calcium is a malleable, ductile, silver-white, relatively soft metal with face-centered, cubic crystalline structure. Chemically it resembles strontium and barium, it is classed with them as an ALKALINE EARTH METAL in group IIa of the PERIODIC TABLE. Calcium is chemically active, it tarnishes rapidly when exposed to air and burns with a bright yellow-red flame when heated, mainly forming the nitride. It reacts directly with water, forming the hydroxide. It combines with other elements, e.g., with oxygen, carbon, hydrogen, chlorine, fluorine, arsenic, phosphorus, and sulfur, forming many compounds. Calcium metal is usually prepared by electrolysis of fused calcium chloride to which a little calcium fluoride has been added. It is used in alloys with other metals, such as aluminum, lead, or copper, in preparation of other metals, such as thorium and uranium, by reduction, and (like barium) in the manufacture of vacuum tubes to remove residual gases. The metal is of little commercial importance compared to its compounds, which are widely and diversely used. The element is a constituent of LIME, chloride of lime (bleaching powder), MORTAR, plaster, cement (see CEMENT, HYDRAULIC), CONCRETE, WHITING, putty, precipitated CHALK, GYPSUM, and plaster of Paris. Tremolite, a form of asbestos, is a naturally occurring compound of calcium, magnesium, silicon, and oxygen. Calcium carbide reacts with water to form acetylene gas, it is also used to prepare calcium cyanamide, which is used as a fertilizer. The phosphate is a major constituent of bone ash. The arsenate and the cyanide are used as insecticides. Generally, calcium compounds show an orange or yellow-red color when held in the Bunsen burner flame. Although calcium is the fifth most abundant element in the earth's crust, of which it constitutes about 3.6%, it is not found uncombined. It is found widely distributed in its compounds, e.g., ICELAND SPAR, MARBLE, LIMESTONE, FELDSPAR, APATITE, CALCITE, DOLOMITE, FLUORITE, GARNET, and LABRADORITE. It is a constituent of most plant and animal matter. Calcium is essential to the formation and maintenance of strong bones and teeth. In the human adult the bone calcium is chiefly in the form of the phosphate and carbonate salts. A sufficient store of vitamin D in the body is necessary for the proper utilization of calcium. Calcium also functions in the regulation of the heart beat and in the conversion of

prothrombin to thrombin, a necessary step in the clotting of blood. Calcium bicarbonate causes temporary hardness in water, calcium sulfate causes permanent hardness. Although **LIME** (calcium oxide) has been known since ancient times, elemental calcium was first isolated by Sir Humphry Davy in 1808.

calcium carbonate, CaCO_3 , white chemical compound that is the most common nonsiliceous mineral. It occurs in two crystal forms, calcite, which is hexagonal, and aragonite, which is rhombohedral. Calcium carbonate is largely insoluble in water but is quite soluble in water containing dissolved carbon dioxide, combining with it to form the bicarbonate $\text{Ca}(\text{HCO}_3)_2$. Such reactions on **LIMESTONE** (which is mainly composed of calcite) account for the formation of stalactites and stalagmites in caves. Iceland spar is a pure form of calcium carbonate and exhibits birefringence, or double **REFRACTION**.

calcium chloride, CaCl_2 , chemical compound that is crystalline, lumpy, or flaky, is usually white, and is very soluble in water. The anhydrous compound is hygroscopic, it rapidly absorbs water and is used to dry gases by passing them through it. Calcium chloride is commercially available usually as the dihydrate, $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$, it is used to melt ice on roads, to control dust, in brines for refrigeration, and as a preservative in foods. It is also used in the monohydrate and hexahydrate forms. Calcium chloride is a by-product of the **SOLVAY PROCESS** (a major source of the compound) and is present in natural brines.

calcium hydroxide, $\text{Ca}(\text{OH})_2$, colorless crystal or white powder. It is prepared by reacting **CALCIUM OXIDE** (lime) with water, a process called slaking, and is also known as hydrated lime or slaked lime. When heated above 580°C it dehydrates, forming the oxide. Like the oxide, it has many uses, e.g., in **LIMING** soil, in sugar refining, and in preparing other compounds. It is a strong base and is widely used as an inexpensive alkali, often as a suspension in water (milk of lime), it is used in leather tanning to remove hair from hides. It is used in **WHITEWASH**, **MORTAR**, and plaster. It is only slightly soluble in water, about 0.2 grams per 100 cubic centimeters, so its solutions are weakly basic. Limewater is a clear, saturated water solution of calcium hydroxide. It is used in medicine to treat acid burns and as an antacid. Because calcium hydroxide readily reacts with carbon dioxide, CO_2 , to form calcium carbonate, a mixture of gases can be tested for the presence of CO_2 by shaking it with limewater in a clear container, if CO_2 is present, a cloudy calcium carbonate precipitate will form.

calcium oxide or calcia, chemical compound, CaO , a colorless, cubic crystalline or white amorphous substance. It is also called lime, quicklime, or caustic lime, but commercial lime often contains impurities, e.g., silica, iron, alumina, and magnesia. It is prepared by heating **CALCIUM CARBONATE** (e.g., **LIMESTONE**) in a special lime kiln to about 500°C to 600°C , decomposing it into the oxide and carbon dioxide. Calcium oxide is widely used in industry, e.g., in making porcelain and glass, in purifying sugar, in preparing **BLEACHING POWDER**, calcium carbide, and calcium cyanamide, in water softeners, and in mortars and cements. In agriculture it is used for treating acidic soils (**LIMING**). It is incandescent when heated to high temperatures, the Drummond light, or limelight, provides a brilliant white light by heating a cylinder of lime with the flame of an oxy-hydrogen torch. Calcium oxide is a basic anhydride, reacting with water to form **CALCIUM HYDROXIDE**, during the reaction (slaking) much heat is given off and the solid nearly doubles its volume.

Calcol (kāl'kōl), Judahite 1 Chron 26 Chalcol 1 Kings 4:31

calculating machine, device for performing numerical computations, it may be mechanical, electromechanical, or electronic. The electronic **COMPUTER** is also a calculating machine but performs other functions as well. Early devices used to aid in calculation include the **ABACUS** (still common in the Orient) and the counting rods, or "bones," of the Scottish mathematician John Napier. The **SLIDE RULE**, invented in 1622 by William Oughtred, an English mathematician, is still widely used to make approximate calculations. In 1642, Pascal devised what was probably the first simple adding machine using geared wheels. In 1671 an improved mechanism for performing multiplication by the process of repeated addition was designed by Gottfried W. von Leibniz. A machine using the Leibniz mechanism was the first to be produced successfully on a commercial scale, devised in 1820 by the Frenchman Charles X. Thomas, it could be used for adding, subtracting, multiplying, or dividing. A mechanism permitting the construction of a more compact ma-

chine than the Leibniz mechanism was incorporated into a machine devised late in the 19th cent by the American inventor Frank S. Baldwin. Later the machine was redesigned by Baldwin and another American inventor, Jay R. Monroe. At about the same time, W. T. Odhner of Russia constructed a machine using the same device as Baldwin's. Charles Babbage, an English mathematician, and William S. Burroughs, an American inventor, also made important contributions to the development of the calculating machine. The simple modern adding machine is equipped with a keyboard on which numbers to be added are entered, a lever to actuate the addition process, and an accumulator to display the results. A full keyboard may consist of 10 columns of keys with 9 keys in each column, numbered 1 through 9. Each column can be used to enter a figure in a particular decimal place so that a number up to 10 digits long can be entered, if no key is pressed in a given column, a zero is entered in that decimal place. The lever is pulled in one direction when a number is to be added and in the opposite direction when it is to be subtracted. The accumulator is a set of geared wheels, each corresponding to a decimal place and having the digits 0 through 9 printed on its circumference. When a given wheel makes a complete rotation, the next wheel is advanced by one digit. There are many variations on this basic setup. Some machines provide only 10 keys, numbered 0 through 9, on which to enter numbers. Most modern machines have an electric motor that actuates the addition process when a special key on the machine is depressed, some have a mechanism that prints on a paper tape the individual entries and the totals. With some modifications, printing adding machines can be used as calculators, i.e., machines that can also multiply and divide. Mechanical rotary calculators are more sophisticated devices, designed to provide rapid answers to involved calculations. They normally do not provide printed results. Electronic calculators became available in the early 1960s, and in the early 1970s miniature types, some of them pocket size, were marketed as consumer items. Electronic calculators have 10 keys that can be used to enter numbers into the machine, additional keys are provided to enable the user to perform a range of operations, from basic arithmetic in simple devices to the generation of complex mathematical functions in more advanced types. The results of an operation are either shown on an electronic display or are printed. Some of these machines are actually small computers with limited memory and programming capabilities. Electronic calculators are considered to be superior to mechanical machines because they are generally faster, smaller, quieter, more reliable, and more versatile. See G. R. Brooksphear, *The Fundamental Operations of Calculating and Adding Machines* (1962), A. L. Walker et al., *How to Use Adding and Calculating Machines* (3d ed 1967).

calculus, branch of **MATHEMATICS** that studies continuously changing quantities. The calculus is characterized by the use of infinite processes, involving passage to a **LIMIT**. Two kinds of limit are of particular interest in the calculus. The differential calculus arises from the study of the limit of a quotient, $\Delta y/\Delta x$, as the denominator Δx approaches zero, where x and y are variables, y may be expressed as some function of x , or $f(x)$, and Δy and Δx represent

The derivative $f'(x)$ of the function $f(x)$ at the point Q represents the slope of the tangent line at that point.

corresponding increments, or changes, in y and x . The limit of $\Delta y/\Delta x$ is called the derivative of y with respect to x and is indicated by dy/dx or $D_x y$.

$$\lim_{\Delta x \rightarrow 0} \Delta y/\Delta x = dy/dx = D_x y$$

The symbols dy and dx are called differentials (they are single symbols, not products), and the process of finding the derivative of $y = f(x)$ is called differentiation. The derivative $dy/dx = df(x)/dx$ is also denoted by y' , or $f'(x)$. The derivative $f'(x)$ is itself a function of x and may be differentiated, the result being termed the second derivative of y with respect to x and denoted by y'' , $f''(x)$, or d^2y/dx^2 . This process can be continued to yield a third derivative, a fourth derivative, and so on. Although the method of increments used to find the limit of $\Delta y/\Delta x$ can be applied to all differentiation, in practice formulas have been developed for finding the derivatives of all commonly encountered functions. For example, if $y = x^n$, then $y' = nx^{n-1}$, and if $y = \sin x$, then $y' = \cos x$. In general, the derivative of y with respect to x expresses the rate of change in y for a change in x . In physical applications, the independent variable (here x) is frequently time, e.g., if $s = f(t)$ expresses the relationship between distance traveled, s , and time elapsed, t , then $s' = f'(t)$ represents the rate of change of distance with time, i.e., the speed, or velocity. Everyday calculations of velocity usually involve dividing the distance traveled, Δs , by the time elapsed, Δt , during the period in question, this ratio, $\Delta s/\Delta t$, is the average velocity for the time period Δt . The derivative $f'(t) = ds/dt$, however, gives the velocity for any particular value of t , i.e., the instantaneous velocity. Geometrically, the derivative is interpreted as the slope of the line tangent to a curve at a point. If $y = f(x)$ is a real-valued function of a real variable, the ratio $\Delta y/\Delta x = (y_2 - y_1)/(x_2 - x_1)$ represents the slope of a straight line through the two points $P(x_1, y_1)$ and $Q(x_2, y_2)$ on the graph of the function. If P is taken closer to Q , then x_1 will approach x_2 and Δx will approach zero. In the limit where Δx approaches zero, the ratio becomes the derivative $dy/dx = f'(x)$ and represents the slope of a line that touches the curve at the single point Q , i.e., the tangent line. This property of the derivative yields many applications for the calculus, e.g., in the design of optical mirrors and lenses and the determination of projectile paths. The second important kind of limit encountered in the calculus is the limit of a sum of elements when the number of such elements increases without bound while the size of the elements diminishes. For example, consider the problem of determining the area under a given curve $y = f(x)$ between two values of x , say a and b . Let the interval between a and b be divided into n subintervals, from $a = x_0$ through $x_1, x_2, x_3, \dots, x_{n-1}, x_n = b$. The width of a given subinterval is equal to the difference between the adjacent values of x , or $\Delta x_i = x_i - x_{i-1}$, where i designates the typical, or i th, subinterval. On each Δx_i a rectangle can be formed of width Δx_i , height $y_i = f(x_i)$ (the value of the function corresponding to the value of x on the right-hand side of the subinterval), and area $\Delta A_i = f(x_i)\Delta x_i$. In some cases, the rectangle may extend above the curve, while in other cases it may fail to include some of the area under the curve, however, if the areas of all these rectangles are added together, the sum will be an approximation of the area under the curve. This approximation can be improved by increasing n , the number of subintervals, thus decreasing the widths of the Δx 's and the amounts by which the ΔA 's exceed or fall short of the actual area under the curve. In the limit where n approaches infinity (and the largest Δx approaches zero), the sum is equal to the area under the curve.

$$A = \lim_{n \rightarrow \infty} \sum_{i=1}^n \Delta A_i = \lim_{n \rightarrow \infty} \sum_{i=1}^n f(x_i) \Delta x_i = \int_a^b f(x) dx$$

The last expression on the right is called the integral of $f(x)$, and $f(x)$ itself is called the integrand. This method of finding the limit of a sum can be used to determine the lengths of curves, the areas bounded by curves, and the volumes of solids bounded by curved surfaces, and to solve other similar problems. An entirely different consideration of the problem of finding the area under a curve leads to a means of evaluating the integral. It can be shown that if $f(x)$ is a function whose derivative is $f'(x)$, then the area under $f(x)$ between a and b is equal to $F(b) - F(a)$. This connection between the integral and the derivative is known as the Fundamental Theorem of the Calculus. Stated in symbols

$$\int_a^b f(x) dx = F(b) - F(a), \text{ where } F'(x) = f(x)$$

The function $F(x)$, which is equal to the integral of $f(x)$, is sometimes called the antiderivative of $f(x)$, while the process of finding $F(x)$ from $f(x)$ is called

The area under the curve $y = f(x)$ may be found by calculating the sum of the elements of area ΔA , whose width is Δx and whose height is $f(x)$.

integration or antidifferentiation. The branch of calculus concerned with both the integral as the limit of a sum and the integral as the antiderivative of a function is known as the integral calculus. The type of integral just discussed, in which the limits of integration, a and b , are specified, is called a definite integral. If no limits are specified, the expression is an indefinite integral. In such a case, an arbitrary constant C must be added to the function $F(x)$ resulting from integration, since in computing the derivative any constant terms having derivatives equal to zero are lost, the expression for the indefinite integral of $f(x)$ is

$$\int f(x) dx = F(x) + C.$$

The value of the constant C must be determined from various boundary conditions surrounding the particular problem in which the integral occurs. The calculus has been developed to treat not only functions of a single variable, e.g., x or t , but also functions of several variables. For example, if $z = f(x, y)$ is a function of two independent variables, x and y , then two different derivatives can be determined, one with respect to each of the independent variables. These are denoted by $\partial z / \partial x$ and $\partial z / \partial y$ or by $D_x z$ and $D_y z$. Three different second derivatives are possible, $\partial^2 z / \partial x^2$, $\partial^2 z / \partial y^2$, and $\partial^2 z / \partial x \partial y = \partial^2 z / \partial y \partial x$. Such derivatives are called partial derivatives. In any partial differentiation all independent variables other than the one being considered are treated as constants. The calculus and its basic tools of differentiation and integration serve as the foundation for the larger branch of mathematics known as ANALYSIS. The English physicist Isaac Newton and the German mathematician G. W. Leibniz, working independently, developed the calculus during the 17th cent. See Richard Courant and Fritz John, *Introduction to Calculus and Analysis*, Vol. I (1965); Morris Kline, *Calculus: An Intuitive and Physical Approach* (2 vol., 1967); A. W. Goodman, *Modern Calculus with Analytic Geometry* (2 vol., 1967-1968).

calculus of variations, branch of MATHEMATICS concerned with finding maximum or minimum conditions for a relationship between two or more variables that depends not only on the variables themselves, as in the ordinary CALCULUS, but also on an additional arbitrary relation, or constraint, between them. For example, the problem of finding the closed plane curve of given length that will enclose the greatest area is a type of isoperimetric (equal-perimeter) problem that can be treated by the methods of the variational calculus, the solution to this special case is the circle. Another famous problem is the brachistochrone problem, that of finding the curve along which an object will slide to a point not directly below it in the shortest time, the solution is a cycloid curve (a curve traced out by a fixed point on the circumference of a circle as the circle rolls along a straight line). In general, problems in the calculus of variations involve solving the definite integral (single or multiple) of a function of one or more independent variables, x_1, x_2, \dots , one or more dependent variables, y_1, y_2, \dots , and derivatives of these, the object being to determine the de-

pendent variables as functions of the independent variables such that the integral will be a maximum or minimum. The calculus of variations was founded at the end of the 17th cent. and was developed by Jakob and Johann Bernoulli, Isaac Newton, G. W. Leibniz, Leonhard Euler, J. L. Lagrange, and others.

Calcutta (kalkūt'a), city (1971 pop. 3,141,180), capital of West Bengal state, E India, on the Hooghly River. It is the second-largest city in India and one of the largest in the world. Ten of Calcutta's suburbs—Howrah, South Suburban, Bhatpara, South Dum Dum, Kamarhati, Garden Reach, Panihati, Baranagar, Hooghly-Chinsura, and Serampore—have well over 100,000 people. The population of Greater Calcutta in 1971 was 7,005,362. Its area is 228 sq mi (591 sq km). Calcutta is the chief port and major industrial center of E India; jute is milled, and textiles, chemicals, paper, and metal products are manufactured. Calcutta's airport is the busiest in India. Nearly 60 languages are spoken in the city, which suffers from terrible poverty, chronic unemployment, overcrowding, inadequate transportation, and the resultant social unrest. Calcutta was founded c 1690 by the British East India Company. In 1756 the nawab of Bengal, Siraj-ud-daula, captured Calcutta and killed most of its garrison by imprisoning it overnight in a small, stifling room, known as the notorious "black hole." Robert Clive retook the city in 1757. From 1833 to 1912, Calcutta was the capital of India. The Univ. of Calcutta (founded 1857), several unaffiliated colleges, and the Indian Museum, which houses one of the world's outstanding natural history collections, are in the city. The Maidan, a large river-front park surrounded by government buildings, is Calcutta's most attractive section.

Caldara, Antonio (antō'nyō kaldā'ra), 1670-1736, Italian composer. In 1714, Caldara obtained a position at the imperial court in Vienna, where he remained until his death. He composed a large amount of sacred and secular vocal music, as well as chamber works. His canons were especially popular. Franz Joseph Haydn was influenced by Caldara.

Caldecott, Randolph (kōl'dəkat), 1846-86, English artist and illustrator. He is famous for his drawings of contemporary English country life and for his charming and humorous illustrations, including those for Washington Irving's *Old Christmas* and *Bracebridge Hall* and Blackburn's *Breton Folk*. Perhaps his best are the colored illustrations for a series of 16 children's picture books, including *The House that Jack Built* and *The Grand Panjandrum Himself*. The Caldecott Medal for excellence in children's-book illustration is named for him. See memoir by Henry Blackburn (1886, repr. 1969).

Calder, Alexander (kōl dər), 1898-, American sculptor, b. Philadelphia, son of a prominent sculptor, Alexander Stirling Calder. Among the most innovative modern sculptors, Calder was trained as a mechanical engineer. In 1930 he went to Paris and was influenced by the art of Mondrian and Miro. In 1932 he exhibited his first brightly colored constellations, called MOBILES, consisting of painted cut-out shapes connected by wires and set in motion by wind currents. The Museum of Modern Art, New York City, has several examples. These buoyant inventions and his witty wire portraits, his colorful and complex miniature zoo (1925, Whitney Mus., New York City), and his immobile sculptures known as STABLES, have brought Calder world renown. Many of his recent works are huge, heavy, and delicately balanced mobiles produced for public buildings throughout the world. Calder is also noted for his book illustrations and stage sets. He has studios in Roxbury, Conn., and Paris. See his autobiography (1966) and *Mobiles and Stables* (1968), study by J. J. Sweeney (1951), Jean Lipman, ed., *Calder's Circus* (1972).

Caldera, Rafael (rafael' kaldā'ra), 1916-, president of Venezuela (1969-74). A lawyer and professor of sociology, he was first elected to the chamber of deputies in 1941 and was a founder of the center-right Christian Social party in 1946. He was imprisoned several times during the dictatorial regime of Marcos Perez Jimenez, which he opposed. After the dictator's overthrow Caldera in 1958 ran unsuccessfully for the presidency, he served instead as president of the chamber of deputies. In the elections of Dec., 1969, he won the presidency with barely 30% of the vote. Faced with an uncooperative congress, he had difficulty in getting legislation passed. He was awarded a life seat in the senate at the end of his term.

caldera: see CRATER

Calderón Bridge (kaldārōn'), site of a decisive battle in the Mexican revolution against Spain, fought on the Lerma River E of Guadalajara, Jalisco, Mexico. On Jan. 17, 1811, insurgents commanded by HIDALGO Y COSTILLA met the royalists under CALLEJA DEL REY. On the point of victory, Hidalgo's men were panicked by the explosion of an ammunition wagon. Their flight led to the collapse of the independence movement under Hidalgo.

Calderón de la Barca, Pedro (pā'thro kaldārōn' dā la bar'ka), 1600-1681, Spanish dramatist, last important figure of the Spanish Golden Age, b. Madrid. Educated at a Jesuit school and the Univ. of Salamanca, he turned from theology to poetry and became a court poet in 1622. His more than 100 plays were carefully contrived, subtle, and rhetorical. The earlier plays, of the cloak-and-dagger school, include *La dama duende* [the lady fairy] and *Casa con dos puertas mala es de guardar* [the house with two doors is difficult to guard]. His finest work is in his more than 70 autos sacramentales (one-act religious plays), among them *El divino Orfeo* and *A Dios por razón de estado* [to God for reasons of state]. Of his philosophical dramas the best known are *El magico prodigioso* [the wonderful magician] and *La vida es sueño* [life is a dream], one of the masterpieces of the Spanish theater. Calderon took holy orders in 1651 and thereafter wrote few plays except the autos, of which he supplied two a year for the Corpus Christi festival. See studies by Salvador Madariaga (1920, repr. 1965), J. H. Parker and A. M. Fox (1971), Edwin Honig (1972), and Heinz Gerstinger (tr. 1973).

Calderón Guardia, Rafael Ángel (rafael' ang'hēl kaldārōn' gwār'dēa), 1900-1970, president of Costa Rica (1940-44). A practicing physician, he entered politics in 1934, serving successively as vice president and president of congress (1935-39). He was leader of the Republican, or Calderista, party. As president, he brought Costa Rica into World War II on the Allied side and cooperated closely with the United States. He later served (1966-70) as ambassador to Mexico.

Caldwell, Erskine (kōld'wəl), 1903-, American author, b. White Oak, Ga. His realistic and extremely earthy novels of the rural South include *Tobacco Road* (1933), *God's Little Acre* (1933), *This Very Earth* (1948), and *Summertime Island* (1969). Among his volumes of short stories are *Jackpot* (1940) and *Gulf Coast Stories* (1956). With his first wife, Margaret Bourke-White, he published *You Have Seen Their Faces* (1937), about Southern sharecroppers.

Caldwell, Taylor (janet Taylor Caldwell), 1900-, American novelist, b. London, England. Her best-selling works range from romance to satire to fictionalized biography and often reflect her Christian heritage. They include *Dynasty of Death* (1938), *The Devil's Advocate* (1952), *Dear and Glorious Physician* (1959), *The Captain and the Kings* (1972), and *Glory and the Lightning* (1974).

Caldwell, Zoe (zō'ē), 1934-, Australian actress. Caldwell joined the Shakespeare Memorial Theatre Company at Stratford-on-Avon in 1958. Her Broadway debut in *Slapstick* earned her the Antoinette Perry Award, as did her playing of the lead in *The Prime of Miss Jean Brodie* (1963). Her other theatrical performances include *Colette* (1970) and *A Gift to the Nation* (1971).

Caldwell, city (1970 pop. 14,219), seat of Canyon Co., SW Idaho, on the Boise River, inc. 1890. On the site of an Oregon Trail camping ground, the city is now a major processing and distribution center for an agricultural and livestock area. Mobile homes and recreational vehicles are manufactured. It is the seat of an agricultural-experiment station and The College of Idaho.

Caleb (kā'lēb), principal spy sent into Canaan, noted for his faithfulness to God. Num. 13:6, 14, 32:12, Joshua 14:6-14. The name is mentioned elsewhere, apparently in connection with a clan inhabiting S. Palestine. 1 Sam. 30:14, 1 Chron. 2:18, 19, 42:46, 48, 49. Chelubai. 1 Chron. 2:9. The name Caleb-ephraiah (-ē'f'ra) at 1 Chron. 2:24 is a textual error.

Caledonia (kā'lidō'nēa), Roman name for that part of the island of Great Britain that lies N of the firths of Clyde and Forth. The name first occurs in the works of Lucan (1st cent. A.D.) and has been used in modern times rhetorically and poetically to mean all of Scotland or the Scottish Highlands.

Caledonian Canal, waterway, c 60 mi (100 km) long, cutting across Highland region (Inverness-shire), N Scotland, from Moray Firth to Loch Linne by way of the Great Glen. Built in two phases (1803-22 and 1843-47, opened 1822) to save shallow-draft vessels the circuitous route around N Scotland, it is of little use today except for pleasure craft. Of the

waterway, 38 mi (61 km) consists of the natural waters of Lochs Ness, Oich, and Lochy. The canal has 29 locks.

Calef, Robert (kă'lăf), 1648-1719, known primarily as author of *More Wonders of the Invisible World* (1700). A Boston cloth merchant, probably born in England, he bitterly attacked Cotton Mather for his part in the Salem, Mass., WITCHCRAFT trials. The book, published in London because Boston printers would not accept it, generally condemned the view of witchcraft then prevailing and had a salutary effect throughout New England. It is reprinted in S. G. Drake, comp., *The Witchcraft Delusion in New England*, (3 vol., 1866, repr. 1970).

calendar [Lat., from *Kalends*], system of reckoning time for the practical purpose of recording past events and calculating dates for future plans. The calendar is based on noting ordinary and easily observable natural events, the cycle of the sun through the seasons with EQUINOX and SOLSTICE, and the recurrent phases of the moon. The earth completes its orbit about the sun in 365 days 5 hr 48 min 46 sec—the length of the solar year. The moon passes through its phases in about 29½ days, therefore, 12 lunar months (called a lunar year) amount to more than 354 days 8 hr 48 min. The discrepancy between the years is inescapable, and one of the major problems for man since his early days has been to reconcile and harmonize solar and lunar reckonings. Some peoples have simply recorded time by the lunar cycle, but, as skill in calculation developed, the prevailing calculations generally came to depend upon a combination. The fact that months and years cannot be divided exactly by days and that the years cannot be easily divided into months has led to the device of intercalation. The simplest form of this is shown in ancient calendars which have series of months alternating between 30 and 29 days, thus arriving at two mean months of 29½ days each. Similarly four years of about 365¼ days each can be approximated by taking three years of 365 days and a fourth year of 366. This fourth year with its intercalary day is the leap year. If calculations are by the lunar cycle, the surplus of the solar over the lunar year (365 over 354) can be somewhat rectified in three years by adding an extra (intercalary) month of 33 days. Reckoning of day and year was considered necessary by practical peoples to determine sacred days, to arrange plans for the future, and to keep some intelligible record of the past. There were, therefore, various efforts to reconcile the count in solar, lunar, and semilunar calendars, from the Egyptians and the Greeks to the Chinese and the MAYA. The problem was fundamental. So for chroniclers was the establishment of a fixed point in time for calculating years in an ERA.

The Roman Calendar. The prevailing modern method of constructing a calendar in the Christian West came originally from the Egyptians, who worked out a formula for the solar year (12 months of 30 days each, five extra days a year, and an extra day every four years). This was to be adopted later by the Romans. In its most primitive form the Roman calendar had no such refinement. It apparently had 10 months, which were (to use corresponding English terms whenever possible) March (31 days), April (29 days), May (31 days), June (29 days), Quintilis (31 days), Sextilis (29 days), September (29 days), October (31 days), November (29 days), and December (29 days). To fill out the 365 days a number of blank days or occasional intercalary months were used (later, January (29 days) and February (28 days) were added at the end of the year. In the time of the early republic the so-called year of Numa was added. The Romans thus arrived at a cycle of four years: the first year had four months of 31 days, seven of 29, and one, February, of 28; the second year had a February of 23 days and an intercalary month of 27 days; the third year was like the first; the fourth year had a February of 24 days and an intercalary month. The chief trouble with this system was that in a four-year cycle there were four days too many. What was worse, the PONTIFEX MAXIMUS was given the power soon after 200 B.C. to regulate the calendar (which for ordinary civil purposes was expressed in terms of the consulates of whatever men held it). The practice grew up of using the intercalations for the promotion of political ends to lengthen or to shorten an official's term. When Julius Caesar was pontifex maximus, the calendar had been so much abused that January was falling in autumn.

The Julian Calendar. At this point the methods of the Egyptian calendar were borrowed for the Roman. Julius Caesar on the advice of the astronomer Sosigenes added 90 days to the year 46 B.C. (67 days between November and December, 23 at the end of

February). This caused the spring of 45 B.C. to begin in March. To retain this position of the seasons, he changed the length of most of the months. March, May, Quintilis (subsequently named August to honor Augustus), and October he left as they were, he added 2 days each to January and Sextilis (subsequently named July after Julius Caesar himself), February was 28 days long except that in every fourth year a day was inserted between the 23d and the 24th of the month. In Roman computation three days in the month were used for counting the date. These three were the Kalends (1st day of the month), the Nones (the 7th day in March, May, July, and October, the 5th in the other months), and the Ides (the 15th day in March, May, July, and October, the 13th in the other months). The days were counted before, not after, the Kalends, Nones, and Ides. Thus, Jan. 10 was the fourth day before the Ides of January or the fourth day of the Ides of January, because the Romans counted inclusively. Jan. 25 was the eighth of the Kalends of February, Feb. 3 was the third of the Nones of February. Feb. 23 was the seventh of the Kalends of March and remained so when an intercalary day was inserted every fourth year between it and Feb. 24, hence in a leap year there were two days counted as the sixth of the Kalends of March. The leap year was therefore called bissextile [Lat., = sixth twice]. There is a legend that alterations in the length of the months were made later by Augustus to flatter his own vanity, but there seems to be no foundation for this story.

The Gregorian Calendar. The Julian year is 365 days 6 hr, hence a little too long. Therefore, by the 16th cent. the accumulation of surplus time had displaced the vernal equinox to March 11 from March 21, the date set in the 4th cent. In 1582 Pope Gregory XIII rectified this error. He suppressed 10 days in the year 1582 and ordained that thereafter the years ending in hundreds should not be leap years unless they are divisible by 400. The year 1600 was a leap year under both systems, but 1700, 1800, and 1900 were leap years only in the unreformed calendar. The reform was accepted, immediately in most Roman Catholic countries, more gradually in Protestant countries, and in the Eastern Church the Julian calendar was retained until the 20th cent. The present generally accepted calendar is therefore called Gregorian, though it is only a slight modification of the Julian.

Old Style and New Style. The reform was not accepted in England and the British colonies in America until 1752. By that date the English calendar was 11 days different from that of the Continent. For the period before the reform was introduced, the Gregorian style is called the New Style (N.S.), and the Julian the Old Style (O.S.). New Style years begin Jan. 1, but Old Style years began usually March 25. Thus Washington's birthday, which is Feb. 22, 1732 (N.S.) was Feb. 11, 1731 (O.S.). To avoid confusion sometimes both styles are given, thus 1731/32 or 1731/2 or 11 Feb. 1731/22 Feb. 1732.

The Christian Ecclesiastical Calendar. The church calendar with its movable feasts shows an interesting example of a harmony of several different systems. The key to it is the reconciliation of the seven-day week with the Roman calendar (see WEEK). The resurrection of Jesus has always been traditionally reckoned as having taken place on a Sunday (first day of the week), hence the annual feast celebrating the event, EASTER, should fall on a Sunday. The Bible places the Passion with relation to the Passover. Since the Jewish Passover is on the evening of the 14th (eve of the 15th) Nisan (see below), it may fall on any day of the week, hence Easter must fall on a Sunday near the 14th Nisan. In ancient times some Eastern Christians celebrated Easter on the 14th Nisan itself, these were called *Quartodecimans* [Lat., = fourteenth]. In 325 the First Council of Nicaea determined that Easter should fall on the Sunday following the full moon next after the vernal equinox, the full moon being theoretically the 14th day, and Nisan beginning with a new moon in March. The vernal equinox was considered by the church to fall on March 21. The paschal, or Easter, moon is the moon the 14th day of which falls next after (not on) March 21. Today Easter is calculated mathematically according to a system not taking all factors of the lunar period into consideration, hence it nearly always varies somewhat from what it should be according to true astronomical calculation. Several different systems have been used for determining Easter, today some Eastern churches use a different one from that of the West. In the 6th and 7th cent. in England, there was a great dispute between Christians who derived their rite from the Celts and Christians who had been converted as a result of the

mission of St. Augustine. The dispute over Easter arose because the Celts retained a computation for Easter based on a lunar cycle of 84 years, while the Romans had, in the 5th cent., given up the 84 year cycle for a 532-year cycle. The dispute was settled at the Synod of Whitby in favor of the Roman system, which prevailed from that time over the entire West. For a conventional means of computing Easter, see the Anglican Book of Common Prayer.

The Jewish Calendar. The Jewish calendar is today a lunisolar or semilunar calendar, i.e., an adjustment of a lunar calendar to the solar year. The months are Tishri (30), Marheshvan (29 or 30), Kislev (29 or 30), Tebet (29), Sebat or Shebat (30), Adar (29), Nisan (30), Iyar (29), Sivan (30), Tammuz (29), Ab (30), and Elul (29). The intercalary month of 30 days is added after Adar, Nisan being in ancient times the first month, and the intercalation is arranged to take place seven times in 19 years. The common year is referred to as a defective, regular, or perfect year, depending upon whether its length is 353, 354, or 355 days, the leap year may have 383 (defective), 384 (regular), or 385 (perfect) days. The Jewish civil year begins about the autumnal equinox, with the festival of Rosh ha-Shanah (the first of Tishri), which in 1974 fell on Sept. 17-18, marking the start of the Jewish year 5735.

The Muslim Calendar. The Muslim calendar is the only widely used purely lunar calendar, its year varying from 354 to 355 days. Hence the seasons and months have no connection, and there are about 33 Muslim years to every 32 Gregorian years. The months are Muharram (30), Safar (29), 1st Rabi'a (30), 2d Rabi'a (29), 1st Jumada (30), 2d Jumada (29), Rajab (30), Shaban (29), Ramadan (the fast, 30), Shawwal (29), Dhu-l-Kada (30), and Dhu-l-Hijja (month of the pilgrimage, 29 or 30).

Other Calendars. The old Chinese calendar was devised to have six 60-day cycles, each cycle having 10-day periods and three such periods going to make up a month. By the 5th cent. B.C. the solar year was calculated at 365 244/4 solar days and the solar month at 29 53059/59 days. The difference between solar time and the cycles was adjusted by intercalary months and shorter intercalary periods. The years were arranged in major cycles of 60 years with minor cycles of 5 years each. An interesting calendar is that of the MAYA, who used a year of 365 days divided into 18 20-day periods, with a 5 day period at the end. A recurrent series of 20 days was used also, like our week. A remarkable feature was that the year was never readjusted to the error in its length, instead, the feasts and dates were adjusted to the calendar. The AZTEC calendar was very similar. Many attempts have been made to devise new calendars, adjusting the months more regularly to the solar year, discarding the week, making the months equal in length, and the like, but they have never been widely adopted. The most celebrated is the FRENCH REVOLUTIONARY CALENDAR. In the 20th cent. the movement toward calendar reform has been strong, the aim being not to abandon but to refine the intercalary system of the Julian-Gregorian calendar. For the method of computing years from a fixed point (e.g., the birth of Christ and the HEGIRA), see ERA. The adoption of such era systems has made computation of time much easier. The Athenian system of identifying years by archons, the Roman system of identifying them by consuls, and the system used both earlier and later of reckoning by the year of the reign of certain kings offers enormous difficulties, and the establishment of chronology is one of the major problems in ancient and medieval history. The classic work on chronology is that of the Benedictines, first published in 1750, *L'Art de vérifier les dates des faits historiques* [the art of verifying the dates of historical acts]. See P. W. Wilson, *The Romance of the Calendar* (1937), Harold Watkins, *Time Counts: The Story of the Calendar* (1954), K. G. Irwin, *The Three Hundred Sixty-Five Days* (1963).

calendering, a finishing process by which paper, plastics, rubber, or textiles are pressed into sheets and smoothed, glazed, polished, or given a more or less embossed surface. The material is passed through a series of rollers, the resulting surface depends on the pressure exerted by the rollers, on their temperature, composition, and surface designs, and on the type of coating or glaze previously applied to the material to be calendered.

calendula (kalēn'jəla), any species of the genus *Calendula*, Old World plants of the family Compositae (COMPOSITE family). The common calendula (*C. officinalis*), an annual with yellow to deep orange flower heads produced through a long blooming season, was a popular garden flower in Shakespeare's time—his "marigold." Its dried florets have

been used as a food coloring and for flavoring stews and soups (whence the name pot marigold) and have also long been used medicinally. *Calendula* is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Compositae.

Calexico (kalék'síkō), city (1970 pop 10,625), Imperial co., S Calif., at the Mexican border, inc. 1908. A port of entry from its adjacent sister city of Mexicali, Mexico, it is also a trade center in the southern part of the fertile Imperial Valley.

calif, golden, idol erected by the Israelites on several occasions. Aaron made one while Moses was on Mt Sinai. Ex 32. Jeroboam placed one at Bethel and another at Dan (1 Kings 12:26-32). Hosea denounced one in Samaria (Hosea 8:5,6). A bull cult was widespread in Canaan at the time of the invasion of the Israelites. The use of such a cult recalls Apis in Egypt and the Minotaur in Crete.

Calgary (käl'garē), city (1971 pop 403,319), S Alta., Canada, at the confluence of the Bow and Elbow rivers. Calgary is a wholesale and processing center for a large agricultural and stock-raising area. It is also the headquarters of many oil and natural gas firms. The city began (1875) as a fort of the Northwest Mounted Police. It is the site of the Univ. of Calgary. The Calgary Stampede, inaugurated 1912, is an annual rodeo.

Calgary, University of, at Calgary, Alta., Canada, coeducational, provincially supported, founded 1945 as a branch of the Univ. of Alberta. It gained full autonomy in 1966. It has faculties of arts and science, fine arts, business, education, engineering, environmental design, medicine, and graduate studies, as well as schools of nursing, physical education, and social welfare. The Banff School of Fine Arts is affiliated with the university.

Calhoun, John Caldwell (käl'hōon'), 1782-1850, American statesman and political philosopher, b. near Abbeville, S.C., grad. Yale, 1804. He studied law under Tapping Reeve at Litchfield, Conn., and began (1808) his public career in the South Carolina legislature. Frontier born, he acquired a large plantation by marrying (1811) his cousin, Floride Calhoun. Later he came to represent the interests of the Southern planter aristocracy. A Congressman (1811-17) and acting chairman of the House Committee on Foreign Affairs, Calhoun was one of the leading "war hawks," who whipped up enthusiasm for the War of 1812. He remained a nationalist for some time after the war, speaking for a strong army and navy, for encouragement of manufacturing, for internal improvements, and for a national bank, many of these causes he later opposed. Calhoun was an efficient Secretary of War (1817-25) under President Monroe and was Vice President (1825-29) under John Quincy Adams. Throughout Adams's administration he opposed the President and aligned himself with the supporters of Andrew Jackson. An able constitutional lawyer, he made an imposing figure skillfully presiding over the Senate. When the Jacksonians finally triumphed in 1828, Calhoun was again elected Vice President, and it was widely assumed that he would succeed Jackson in office. But relations between the two men soon cooled. Calhoun, prodded by his wife and his supporters, offended the President in the Eaton affair (see O'NEIL, MARGARET). Jackson finally became furious when he discovered that years before Calhoun had privately denounced Jackson's conduct in Florida while publicly giving the impression that he had supported the general. Primarily, however, Jackson and Calhoun had come to disagree on the nature of the Union. As the pre-eminent spokesman for the South, Calhoun tried to reconcile the preservation of the Union with the fact that under the Union the South's dominant agricultural economy was being neglected and even injured at the expense of the ever-increasing commercial and industrial power of the North. When a still higher tariff replaced (1832) the Tariff of Abominations of 1828, Calhoun maintained that the Constitution, rightly interpreted, gave a state the power to nullify Federal legislation inimical to its interests. He returned to South Carolina, had a state convention called, and directed the passage of the famous ordinance of NULLIFICATION. In Dec., 1832, he quit the vice presidency after being elected to the Senate, where he eloquently defended his STATES' RIGHTS principles in dramatic debates with Daniel Webster. The firmness of Andrew Jackson and the compromise tariff proposed by Henry CLAY resolved the nullification crisis in 1833, but the larger issue of states' rights persisted, leading ultimately to SECESSION and the Civil War. Meanwhile, Martin VAN BUREN, Calhoun's bitter political enemy, held the vice presidency in Jackson's second term and went on to suc-

ceed Jackson in the office Calhoun had coveted for many years. As the abolitionists grew stronger in the North, Calhoun became an outspoken apologist for slavery and bent every effort to maintain the delicate balance between North and South in the Senate by opposing the prohibition of slavery in newly admitted states. Thus, while serving briefly (1844-45) as Secretary of State under John Tyler, he completed negotiations for the admission of Texas as a slave state, but later tried to avert war with Mexico. Again (1845-50) in the Senate, he advocated compromise in the Oregon boundary dispute but opposed the admission of California as a free state in the debates over the COMPROMISE OF 1850. In rejecting the Wilmot Proviso, Calhoun set forth the theory that all territories were held in common by the states and that the Federal government merely served as a trustee of the lands. His *Disquisition on Government and Dis-course on the Constitution and Government of the United States*, both published posthumously, crystallized his political philosophy. The Constitution, he stated, established a government of concurrent majorities composed of two elements—the state governments and the Federal government. Hence the states enjoy the power of veto, or nullification, and the right of secession results necessarily from the origin of the Union as a compact among the sovereign parties. His theories attempted to formulate democracy in terms of protection for a minority, specifically, the South, and they were later embodied in the Confederate constitution. Because his ideas are associated with an institution—slavery—offensive to the idealism of most Americans, Calhoun has never been a popular figure in U.S. history. He was, however, the intellectual giant of political life in his day. Calhoun's plantation, with his house, Fort Hill, is now the campus of Clemson Univ. See his works (ed. by R. K. Cralle, 6 vol., 1851-55), his papers (ed. by R. L. Meriwether and W. E. Hemphill, Vol. I-VII, 1959-1973), biographies by C. M. Wiltse (3 vol., 1944-51), M. L. Coit (1950), and G. M. Capers (1968).

Cali (ka'lā), city (1971 est. pop. 950,500), capital of Valle del Cauca dept., W Colombia, on the Cali River. It is an industrial and commercial center of the upper Cauca valley. Livestock, minerals, lumber, and farm products are shipped through the city, and tires, tobacco products, textiles, paper, chemicals, and building materials are manufactured. Cali is also a tourist center. The city was founded in 1536, but its growth is relatively recent, with the population more than doubling in the 1950s. In the city are two universities and the headquarters of the Cauca valley development project, which is modeled after the Tennessee Valley Authority. Cali's landmarks include an aqueduct and a cathedral.

Caliari, Paolo: see VERONESE, PAOLO

calico, plain weave cotton fabric in one or more colors. Calico, named for Calicut, India, where the fabric originated, was mentioned by historians before the Christian era and praised by early travelers for its fine texture and beautiful colors. Block-printed cottons from Calicut imported into England c. 1630 were called calicuts. The name calico was soon applied to all Oriental cottons having an equal number of warp and weft threads, then to all plain weave cottons. In the latter part of the 18th cent. calico became an important item in England's growing textile industry.

calico cat: see CAT

Calicut (kāl'likat) or **Kozhikode** (kō'zhəkōd'), city (1971 pop. 333,980), Kerala state, SW India, on the Malabar coast of the Arabian Sea. Once the leading port of S India, it declined in the 19th cent. but remains the center of India's timber trade. Cashew nuts, spices, tea, and coffee are exported. Calicut was (1498) Vasco da Gama's first Indian port of call, and the city soon became a center for European traders. The term *calico* was first applied to Calicut cotton cloth, which was then an important manufacture. Calicut passed to British rule in 1792.

California, state (1970 pop. 19,953,134), 158,693 sq mi (411,014 sq km), W United States, admitted as the 31st state of the Union in 1850. The capital is SACRAMENTO. The largest cities and major seaports are LOS ANGELES, SAN FRANCISCO, OAKLAND, and SAN DIEGO. California is bounded on the N by Oregon, on the E by Nevada and Arizona (from which it is separated by the Colorado River), on the S by Mexico, and on the W by the Pacific Ocean. Ranking first among the U.S. states in population and third in area, California has a diverse topography and climate. A series of low mountains known as the Coast Ranges extends along the 1,200-mi (1,930-km) coast. The region from Point Arena, N of San Francisco, to the south-

ern part of the state is subject to tremors and sometimes to severe earthquakes caused by the San Andreas fault. The Coast Ranges receive heavy rainfall

in the north, where the giant cathedral-like redwood forests prevail, but the climate of these mountains is considerably drier in S California, and S of the Golden Gate no major rivers reach the ocean. Behind the coastal ranges in central California lies the great Central Valley, a long alluvial valley drained by the Sacramento and San Joaquin rivers. In the southeast lie vast wastelands, notably the Mojave Desert, site of Joshua Tree National Monument. Rising as an almost impenetrable granite barrier E of the Central Valley is the Sierra Nevada range, which includes Mt. Whitney, Kings Canyon National Park, Sequoia National Park, and Yosemite National Park. The Cascade Range, the northern continuation of the Sierra Nevada, includes Lassen Volcanic National Park. Death Valley National Monument is E of the S Sierra Nevada. Although agriculture is second to industry as the basis of the state's economy, California is a leading state in the production of fruits and vegetables and is the largest producer in the United States of many crops, including tomatoes, carrots, lettuce, asparagus, broccoli, spinach, and strawberries. The state's most valuable crops are hay, grapes, tomatoes, and cotton. Cattle and dairy products also contribute a major share of farm income. The state produces the major share of U.S. domestically produced wine. California's farms are highly productive as a result of good soil, a long growing season, and the use of modern agricultural methods. Irrigation is widely used. The gathering and packing of crops is done largely by seasonal migrant labor (including thousands of Mexicans), and one of California's major social problems is the improvement of the farm workers' condition. Fishing is another important industry. California leads the nation in commercial fishing. Much of the state's manufacturing depends on the processing of farm produce and upon such local natural resources as mineral deposits and forests. Petroleum is the state's most valuable mineral, and in the late 1960s California ranked third in the country in oil production. Other important products are natural gas, cement, and sand and gravel. Since World War II heavy industry in the state has increased enormously, notably in the manufacture of transportation equipment, electronic equipment, machinery, and metal products. Defense-contract industries, particularly in S California, represent a major base of the region's economy and have contributed to the growing wealth and population of the area. California has long been a major U.S. center for motion-picture and television film production, but in the late 1960s its position became threatened by a trend toward on-location filming. One of the state's most acute problems is the need for an adequate water supply. The once fertile Owens valley is now arid, its waters tapped by Los Angeles 175 mi (282 km) away, and water is piped to the coast across the Mojave Desert from the Colorado River 200 mi (322 km) away. In the lush, fruit-growing Imperial Valley, irrigation is controlled by the All-American Canal, which also draws from the Colorado. To the N in the Central Valley the water problem is one of bad distribution, an

imbalance lessened by the vast CENTRAL VALLEY PROJECT California's pleasant climate and natural beauty have attracted many retired persons, and senior-citizen communities have sprung up in the state. Tourism is an important source of income. Disneyland, San Francisco and the Golden Gate Bridge, the giant Sequoia (among the oldest living things on earth), many national parks and forests, and beautiful beaches are among California's numerous attractions. The first voyage (1542) to Alta California (Upper California), as the region N of Baja California (Lower California) came to be known, was commanded by the Spanish explorer Juan Rodriguez Cabrillo, who discovered San Diego Bay and explored farther north along the coast. In 1579 an English expedition headed by Sir Francis Drake landed near Point Reyes, N of San Francisco, and claimed the region for Queen Elizabeth I. In 1602, Sebastian Vizcaino, another Spaniard, explored the coast and discovered Monterey Bay. Colonization was slow, but finally in 1769 Gaspar de Portola, governor of the Californias, led an expedition up the Pacific coast and established a colony on San Diego Bay. The following year he explored the area around Monterey Bay and later returned to establish a presidio there. Soon afterward Monterey became the capital of Alta California. Accompanying Portola's expedition was Father Junipero Serra, a Franciscan missionary who founded a mission at San Diego. Franciscans later founded several missions that extended as far N as Sonoma, N of San Francisco. The missionaries sought to Christianize the Indians but also forced them to work as manual laborers, helping to build the missions into vital agricultural communities. Cattle raising was of primary importance, and hides and tallow were exported. The missions have been preserved and are now open to visitors. In 1776, Juan Bautista de Anza founded San Francisco, where he established a military outpost. The early colonists, called the Californios, lived a pastoral life and for the most part were not interfered with by the central government of New Spain (as the Spanish empire in the Americas was called) or later (1820s) by that of Mexico. The Californios did, however, become involved in local politics, as when Juan Bautista Alvarado led a revolt (1836) and made himself governor of Alta California, a position he later persuaded the Mexicans to let him keep. Under Mexican rule the missions were secularized (1833-34) and the Indians released from their servitude. The degradation of the Indian, which continued under Mexican rule and culminated after U.S. settlers came to the area, was described by Helen Hunt Jackson in her novel *Ramona* (1884). Many mission lands were subsequently given to Californios, who established the great ranchos, vast cattle-raising estates. Colonization of California remained largely Mexican until the 1840s. Russian fur traders had penetrated S to the California coast and established Fort Ross, N of San Francisco, in 1812. Jedediah Strong Smith and other trappers made the first U.S. overland trip to the area in 1826, but U.S. settlement did not become significant until the 1840s. In 1839, Swiss-born John Augustus Sutter arrived and established his "kingdom" of New Helvetia on a vast tract in the Sacramento valley. He did much for the overland American immigrants, who began to arrive in large numbers in 1841. Some newcomers met with tragedy, including the DONNER PARTY, which was stranded in the Sierra Nevada after a heavy snowstorm. Political events in the territory moved swiftly in the next few years. After having briefly asserted the independence of California in 1836, the Californios drove out the last Mexican governor in 1845. Under the influence of the American explorer John C. Fremont, U.S. settlers set up (1846) a republic at Sonoma under their home-styled Bear Flag. The news of war between the United States and Mexico (1846-48) reached California soon afterward. On July 7, 1846, Commodore John D. Sloat captured Monterey, the capital, and claimed California for the United States. The Californios in the north worked with U.S. soldiers, but those in the south resisted U.S. martial law. In 1847, however, U.S. Gen. Stephen W. Kearny defeated the southern Californios. By the Treaty of Guadalupe Hidalgo (1848), Mexico formally ceded the territory to the United States. In the same year a major event in California's history occurred while establishing a sawmill for John Sutter near Coloma, James W. Marshall discovered gold and touched off the California gold rush. The forty-niners, as the gold-rush miners were called, came in droves, spurred by the promise of fabulous riches from the MOTHER LODE. San Francisco rapidly became a boom city, and its bawdy, lawless coastal area, which became known as the

Barbary Coast, gave rise to the vigilantes, extralegal community groups formed to suppress civil disorder. American writers such as Bret Harte and Mark Twain have recorded the local color as well as the violence and human tragedies of the roaring mining camps. With the gold rush came a huge increase in population and a pressing need for civil government. In 1849, Californians sought statehood and, after heated debate in the U.S. Congress arising out of the slavery issue, California entered the Union as a free, non-slavery state by the Compromise of 1850. San Jose became the capital. Monterey, Vallejo, and Benicia each served as the capital before it was finally moved to Sacramento in 1854. In 1853, Congress authorized the survey of a railroad route to link California with the eastern seaboard, but the transcontinental railroad was not completed until 1869. In the meantime communication and transportation depended upon ships, the stage coach, the pony express, and the telegraph. Chinese laborers were imported in great numbers to work on railroad construction. The Burlingame Treaty of 1868 (see BURLINGAME, ANSON) provided, among other things, for unrestricted Chinese immigration. That was at first enthusiastically endorsed by Californians, but after a slump in the state's shaky economy, the white settlers viewed the influx of the lower-paid Chinese laborers as an economic threat. Ensuing bitterness and friction led to the Chinese Exclusion Act of 1882 (see CHINESE EXCLUSION). A railroad-rate war (1884) and a boom in real estate (1885) fostered a new wave of overland immigration. Cattle raising on the ranchos gave way to increased grain production. Vineyards were planted by 1861, and the first trainload of oranges was shipped from Los Angeles in 1886. By the turn of the century the discovery of oil, industrialization resulting from the increase of hydroelectric power, and expanding agricultural development attracted more settlers. Los Angeles grew rapidly in this period and, in population, soon surpassed San Francisco, which suffered greatly after the great earthquake and fire of 1906. Improvements in urban transportation stimulated the growth of both Los Angeles and San Francisco, the advent of the cable car and the electric railway made possible the development of previously inaccessible areas. As industrious Japanese farmers acquired valuable land and a virtual monopoly of California's truck-farming operations, the issue of Oriental immigration again arose. The bitter struggle for the exclusion of Orientals plagued international relations, and in 1913 the California Alien Land Act was passed despite President Woodrow Wilson's attempts to block it. The act provided that persons ineligible for U.S. citizenship could not own agricultural land in California. Successive waves of settlers arrived in California, attracted by a new real-estate boom in the 1920s and by the promise of work in the 1930s. The influx during the 1930s of displaced farm workers, depicted by John Steinbeck in his novel *The Grapes of Wrath*, caused profound dislocation in the state's economy. During World War II the Japanese in California were removed from their homes and placed in relocation centers. Industry in California expanded rapidly during the war, the production of ships and aircraft attracted many workers who later settled in the state. Prosperity and rapid population growth continued after the war. Many Negroes who came during World War II to work in the war industries settled in California. By the 1960s they constituted a sizable minority in the state, and racial tensions reached a climax. In 1964, California voters approved an initiative measure, Proposition 13, allowing racial discrimination in the sale or rental of housing in the state, a measure later declared unconstitutional by the U.S. Supreme Court, and in 1965 riots broke out in Watts, a predominantly black section of Los Angeles. Also in the 1960s migrant farm workers in California formed a union and struck many growers to obtain better pay and working conditions. Unrest also occurred in the state's universities, where student demonstrations and protests in 1964 provoked disorders. In 1970, S. California was struck by the worst brush fire in state history, and in 1971 a severe earthquake hit S. California along the San Andreas fault. The state's first constitution was adopted in 1849. The present constitution dates from 1879 and provides for initiative, referendum, and recall of public officials. The state's executive branch is headed by a governor elected for a four-year term. California's bicameral legislature has a senate with 40 members elected for four-year terms and an assembly with 80 members elected for two years. Local government is carried out on the county and city level. The state elects 2 Senators and 43 Representatives to the U.S. Congress and has 45 electoral votes.

Republicans have played a more dominant role than Democrats in California politics during the 20th cent. Ronald Reagan, a former movie actor and leading conservative Republican, was elected governor in 1966 and reelected in 1970. In 1974, Edmund G. Brown, Jr., a Democrat and the son of a former governor (1959-67), was elected governor. Among the state's more prominent institutions of higher learning are the Univ. of California, with eight campuses, Occidental College and the Univ. of Southern California, at Los Angeles, Stanford Univ. at Stanford, the California Institute of Technology, at Pasadena, Mills College, at Oakland, and the Claremont Colleges, at Claremont. See R. G. Cleland, *From Wilderness to Empire* (rev. ed. by G. S. Dumke, 1959), D. E. Fehrenbacher, *A Basic History of California* (1964), Federal Writers' Project, *California, A Guide to the Golden State* (rev. ed. 1967), L. Pitt, *The Decline of the Californios: A Social History of the Spanish Speaking Californians, 1846-1890* (1967), R. Kirsch, *West of the West: Witnesses to the California Experience, 1542-1906* (1968), R. J. Roske, *Everman's Eden: A History of California* (1968), C. A. Hutchinson, *Frontier Settlement in Mexican California* (1969), A. F. Rolle, *California: A History* (2d ed. 1969), J. W. Caughey, *California* (3d ed. 1970), Walton Bean, *California: An Interpretive History* (2d ed. 1973).

California, Gulf of, arm of the Pacific Ocean, c 700 mi (1,130 km) long and 50 to 130 mi (80-209 km) wide, NW Mexico, separates Baja California from the Mexican mainland. The gulf is part of a depression in the earth's surface that extends inland to the Coachella Valley, S Calif. The Imperial Valley and the Salton Sea, once part of the gulf, have been cut off from it by the growth of the Colorado River delta. The gulf deepens from north to south, its greatest depth is c 8,500 ft (2,590 m). The coastline is irregular, with numerous islands, Tiburon, inhabited by aboriginal tribes, is the largest. Storms and tidal currents hinder navigation in the gulf. Commercial and sport fishing thrive, pearl, sponge, and oyster beds are harvested. The region is a developing tourist center, La Paz, Guaymas, and Mazatlan are major cities. The area was first explored in 1538 by the Spaniard Francisco de Ulloa.

California, Lower. see BAJA CALIFORNIA

California, University of, at nine campuses, main campus at Berkeley, land-grant and state supported, coeducational, the largest state university system in the United States, chartered 1868, opened 1869 when it took over the College of California (est. 1853 at Oakland as Contra Costa Academy). In 1873 it moved to the present Berkeley campus. At Berkeley are the Lawrence Radiation Laboratory, the main library, which houses over 4 million manuscripts and a large number of collections relating to many fields, and an extensive museum system including museums of paleontology, zoology, and anthropology. The Los Angeles campus (est. 1881 as Los Angeles State Normal School, transferred to the university 1919) is known for its theater department. The brain and nuclear medicine institutes are among the several research programs there. At La Jolla is the Scripps Institution of Oceanography (est. 1901, transferred to the university 1912), whose research facilities include several ships and marine laboratories. In the 1950s the institution became the nucleus of the San Diego campus, which added an undergraduate program in 1964. The San Francisco campus (est. 1864 as Toland Medical College, transferred to the university 1934) is employed exclusively by the medical sciences. Other campuses are at Riverside (est. 1907 as the Citrus Experiment Station), Santa Barbara (est. 1891 as a private school, transferred to the university 1944), Davis (opened 1909), Irvine (est. 1960, opened 1965), and Santa Cruz (est. 1965). The university also operates the Los Alamos Scientific Laboratory, the Lick Observatory, numerous agricultural experiment stations, and a statewide extension service.

California Institute of Technology, at Pasadena, Calif., originally for men, became coeducational in 1970, founded 1891 as Throop Polytechnic Institute, called Throop College of Technology, 1913-20. The institute's research facilities, principally in science and engineering, include the Jet Propulsion Laboratory (operated in conjunction with the National Aeronautics and Space Administration), the Hale Observatories (originally the Mount Wilson and Palomar observatories), the Guggenheim Aeronautical Laboratory, and a cosmic ray laboratory.

California Joe, 1829-76, American frontiersman and scout, whose real name was Moses Embree Milner, b. Stanford, Ky. He went to California in the gold rush, later moving into the Oregon country. He was

a sharpshooter for the Union army during the Civil War, after which he became a scout in the Indian campaigns, serving under George A. Custer and Philip H. Sheridan, both commended him in reports. Custer once appointed him chief of scouts, but California Joe got so drunk within a few hours that he had to be demoted. In 1875 he guided the government expedition led by W. P. Jenny to investigate the mineral resources of the Black Hills. He was shot in a private quarrel. See biography by his grandson, J. E. Milner, and E. R. Forrest (1935).

California poppy: see **POPPY**

California State College System, coordinating agency established 1960 by the merging of individual California state colleges, consisting of 19 campuses, 14 of which have university status. It is one of the three California public systems of higher education, the other two being the Univ. of California system (see **CALIFORNIA UNIV. OF**) and the California junior college system. The oldest school in the system (founded 1857) at San Jose was the first institution of public higher education in California. The newest campus was opened at Bakersfield in 1970. The other branches are at Dominguez Hills, Fullerton, Hayward, Long Beach, Los Angeles, San Bernardino, Pomona, San Luis Obispo, Chico, Fresno, Arcata (Humboldt campus), Sacramento, San Diego, Northridge, San Francisco, and Turlock (Stanislaus campus). The university's special programs include an off-campus degree program and weekend colleges. In 1972 the system's official title became the California State University and Colleges.

californium (kāl'fōr'neəm), artificially produced, radioactive metallic chemical element, symbol Cf, at no. 98, mass number of most stable isotope 251, m.p., b.p., and density unknown, valence +3. Californium is a member of the ACTINIDE SERIES of chemical elements, found in group IIIB of the PERIODIC TABLE. Its chemical properties are similar to those of LANTHANUM. Twelve isotopes of californium are known, with half-lives ranging from about 4 min for californium-242 to about 800 years for californium-251, the most stable isotope. Californium-249 (half-life 323 years) is most useful for chemical investigations, it is obtained by the decay of berkelium-249. Four solid compounds of californium have been prepared, they are the trichloride, oxychloride, oxyfluoride, and oxide. Californium-252 (half-life 2.6 years) is produced in nuclear reactors for use as a source of neutrons. Californium was first produced in 1950 by Glenn T. Seaborg, S. G. Thompson, A. Ghiorso, and K. Street in a cyclotron at the Univ. of California at Berkeley by bombarding curium-242 with alpha particles, resulting in californium-245 (half-life 45 min).

Caligula (kalig'yōlā), A.D. 12-A.D. 41, Roman emperor (A.D. 37-A.D. 41), son of GERMANICUS CAESAR and AGRIPPINA I. His real name was Caius Caesar Germanicus. As a small child, he wore military boots, whence his nickname [caligula=little boots]. After the death (A.D. 33) of his brother, Drusus, Caligula and Tiberius' grandson, Tiberius Gemellus, were the heirs apparent. On the death of TIBERIUS the army helped make Caligula emperor. Shortly afterward he became severely ill, it is widely believed that he was thereafter insane. He earned a reputation for ruthless and cruel autocracy, and torture and execution became the order of the day. He was responsible for serious disturbances among the Jews, and he nearly caused a rebellion in Palestine by attempting to erect a statue of himself in their temple. He is reported to have made his horse a consul and a member of a priestly college. His reign ended when Chaerea, a tribune of the Praetorian Guard, assassinated him. CLAUDIUS I succeeded to the throne. See J. P. V. D. Balsdon, *The Emperor Gaius* (1934).

caliphate (kāl'ifāt', -fīt), the rulership of ISLAM. Islam is, theoretically, a theocracy, and its caliph the vicegerent of God. When Muhammad the Prophet died, a caliph (Arabic, =successor) was chosen to rule in his place. The caliph had temporal and spiritual authority but was not permitted prophetic power, this was reserved for Muhammad. The first caliph was ABU BAKR. He was succeeded by UMAYYAD, UTHMAN, and ALI. These are the Orthodox caliphs. After Ali's death there was a division in Islam. MUAWIYA became caliph and founded the Umayyad dynasty, chiefly by force of arms. Its capital was Damascus. The SHITES, however, continued to recognize the descendants of Ali and in 750 won the caliphate for them, massacring the members of the Umayyad family. These Shiite caliphs were of the ABBASID family. Their caliphate is sometimes called the caliphate of Baghdad. One Umayyad, ABD AR-RAHMAN I, escaped the general massacre of his family and fled to Spain, where the emirate of Cordoba was set up in 780. This

later became the caliphate of Cordoba, or the Western caliphate, and persisted until 1031. A third contemporary caliphate was established by the FATIMIDS in Africa and lasted from 909 to 1171. After the fall of Baghdad to the Mongols under Hulagu Khan in 1258, the Abbasids fled to Egypt. After this date the caliphate was virtually nonexistent, since the Abbasids in Egypt had not the slightest power. The Ottomans captured Egypt in 1517, Selim I assumed the title of caliph (by questionable right). The Ottoman sultans, however, kept the title until the last sultan, Muhammad VI, was deposed. He was succeeded briefly by a cousin, but in 1924 the caliphate was abolished altogether. A year later Husayn ibn Ali, king of Arabia, proclaimed himself caliph, but he was forced to abdicate by Ibn Saud. Since then several pan-Islamic congresses have attempted to establish a rightful caliph. See William Muir, *The Caliphate* (1898, repr. 1964), Alfred von Kremer, *Orient under the Caliphs* (tr. 1920), T. W. Arnold, *The Caliphate* (1924, repr. 1966), A. S. Tritton, *The Caliphs and their Non-Muslim Subjects* (1930, repr. 1970), Muhammad Ali, *Early Caliphate* (tr. 1947), S. Khuda Bakhsh, *The Caliphate* (1954), P. K. Hitti, *History of the Arabs* (10th ed. 1970).

Calisher, Hortense (kāl'ishər), 1911-, American author, b. New York City, grad. Barnard, 1932. Her novels are difficult to categorize, blending character analysis with complex story lines. Written in careful yet constantly fresh prose, they have been compared to works by Dickens and James. Among her works are *Extreme Magic* (1964), a short-story collection, and the novels *False Entry* (1961), *Textures of Life* (1963), *The New Yorkers* (1969), *Queenie* (1971), and *Standard Dreaming* (1972). See Calisher's *Herself* (1972).

calisthenics: see **GYMNASTICS**

Calixtines: see **HUSITES**

Calixtus I, Calixtus I (both kəl'ik'stəs), or **Callistus I**, **Saint** (kəl'is'təs), c. 160-c. 222, pope (217-222), a Roman, successor of St. Zephyrinus. As archdeacon to Zephyrinus he established the famous Calixtus Cemetery, where all the popes of the 3d cent. except Calixtus himself are buried. His election to the papacy was opposed by HIPPOLYTUS (later antipope), who accused him of monarchianism and of laxness in disciplining repentant sinners. Calixtus in fact excommunicated the chief monarchianist, SABELLIUS. His other important action, to grant absolution under conditions of true contrition to certain classes of sinners (apostates, murderers, adulterers), considered by many as unforgivable, was important in the development of the church's doctrine of penance. Calixtus died in the reign of Alexander Severus and may have been a martyr. He was succeeded by St. Urban I. Feast Oct. 14.

Calixtus II, Calixtus II, or **Callistus II**, d. 1124, pope (1119-24), a Burgundian named Guy, successor of Gelasius II. He was archbishop of Vienne during the investiture controversy with Holy Roman Emperor HENRY V. When Gelasius died while in exile in France, Calixtus was consecrated pope at Vienne. He immediately summoned a large council at Rheims (1119) that proceeded to anathematize the emperor and the antipope that Henry had installed (1118). Gregory VIII. Public reaction sided with the pope and the antipope was imprisoned. Henry, confronted by a church united against him, submitted. He signed (1122) the famous Concordat (see **WORMS CONCORDAT**) guaranteeing the freedom of the church in its elections. Thus was the investiture controversy ended and the reform program of Gregory VII realized. Calixtus then called to Rome (1123) the first great ecumenical council of the West (see **LATERAN COUNCIL, FIRST**) to ratify the achievements of the Hildebrandine reform. He was succeeded by Honorius II.

Calixtus III, Calixtus III, or **Callistus III**, 1378-1458, pope (1455-58), a Spaniard (b. Jativa) named Alonso de Borja or, in Italian, Alfonso Borgia, successor of Nicholas V. He acted as arbitrator between his friend Alfonso V of Aragon and the papacy, and for this he was made a cardinal (1444). Calixtus was elected soon after the fall of Constantinople, and he promptly proclaimed a crusade against the Turks. He spared nothing to aid John HUNYADI, who won a victory with St. John Capistrano at Belgrade (1456). In 1457, Calixtus turned to SCANDERBEG, in Albania, sent him money, and named him captain general of the crusade. Calixtus' reign was embittered by a quarrel with Alfonso, who expected returns, notably the march of Ancona, for his friendship. The pope would not give away church lands and resented Alfonso's failure to help the crusade. Calixtus' nepotism gave the Borgia family its position in Italy. Ca-

lixus was, like other Borgias, an able administrator. He was succeeded by Pius II.

Calixtus, Georgius (jór'jēəs), 1586-1656, German theologian, whose original name was Georg Callisen. He extended the influence of MELANCHTHON, advocating syncretism, and sought a basis, such as the Apostles' Creed, for uniting Christian churches. Because he tended to minimize the differences in doctrine and to emphasize the importance of Christian living, he was charged by some of the Lutherans with favoring Roman Catholic dogmas and by others with pro-Calvinism. He failed to win the Lutherans to his support at the Conference of Thorn (1645).

call, in securities trading, contract allowing the holder to purchase a given stock at a specific price within a designated period of time. It is the opposite of a put, which is a contract allowing the holder to sell a given stock at a specific price within a designated period of time. Puts and calls are both types of privileges, or options, that add flexibility to the securities market. In return for his use of a put or call, the investor must pay a fee to the securities seller (the maker), who, in turn, pays a commission to the broker who brought the two parties together. Calls are generally used by investors who want to profit from a rise in stock prices but, at the same time, want to avoid sharp losses. Thus, an investor holding a call chooses one of two options. If the market advances he can buy the designated security at the lower price quoted in the call, and then sell the stock at a profit. If the market declines, he can simply exercise his option not to buy the stock, thereby avoiding a major loss, the only expense being the cost of the option. Unlike a call, a put is used by investors seeking to profit from a fall in stock prices. For example, an investor holding a put for a stock that declines in price is able to sell the stock at the higher price quoted in the put, thereby profiting by the amount the stock declines from the put price, if the stock price rises the investor can lose only the money used to purchase the put option. Puts and calls are generally written for one, two, three, or six months, although any period over 21 days is accepted by the New York Stock Exchange. A straddle and a spread are combinations of puts and calls occasionally used by sophisticated investors. In a more generalized sense, the term *call* may refer to any demand for payment. See L. T. Al- verson, *How to Write Puts and Calls* (1968), Paul Sarnoff, *Puts and Calls: The Complete Guide* (1970), Louis Engel, *How to Buy Stocks* (5th ed. 1971).

calla or calla lily: see **ARUM**

Callaghan, Morley (Morley Edward Callaghan), 1903-, Canadian novelist. During the 1920s he spent time in Paris, where he became friends with Ernest Hemingway, whose influence can be detected in Callaghan's spare literary style. Callaghan's novels and short stories are marked by a Christian view of life. They often concern individuals whose essential characteristic is a strong, and often unintentional, sense of self. Among his best-known novels are *Such Is My Beloved* (1934) and *The Many Colored Coat* (1960). Callaghan's other works include the novels *Strange Fugitive* (1928) and *A Passion in Rome* (1961) and such story collections as *Native Argosy* (1929) and *Stories* (1967). His years in Paris are recalled in *That Summer in Paris: Memories of Tangled Friendships with Hemingway, Fitzgerald and Some Others* (1963).

Callao (käl'yo'), city (1970 est. pop. 335,400), capital of Lima dept., W. Peru, on Callao Bay of the Pacific Ocean. It is Peru's major seaport. The harbor, which is sheltered by an island and a small peninsula, handles more than three fifths of the nation's imports and exports. Callao was founded in 1537, at the same time that Francisco PIZARRO founded Lima. As the gateway to Lima it was frequently attacked. The English navigator Sir Francis Drake sacked the city in 1578. It was held by Spanish loyalists until 1826, even though Peru achieved independence in 1821. Later, during the War of the Pacific (see **PACIFIC WAR OF THE**), Callao was occupied (1881-83) by Chile. Subjected to earthquakes and tidal waves, the city was completely destroyed in 1746 and was severely damaged in 1940. Several landmarks from the colonial period survive.

Callas, Maria Meneghini (mār'ē mēnēg'ēnē käl-lās), 1923-, Greek-American soprano, b. New York City. At 13, Callas moved to Greece, where she studied at the Royal Conservatory in Athens. Her professional debut took place in 1947 at Verona. In 1949, Callas married the Italian industrialist Giovanni Battista Meneghini; they separated in 1959. She first appeared at La Scala (Milan) in 1950 at Covent Garden

(London) in 1952, and at the Metropolitan Opera in 1956. Callas is celebrated for her dramatic intensity and versatility. Her acting in Pasolini's film *Medea* (1970) was widely acclaimed.

Calleja del Rey, Félix María (fā'lēks marē'a kalyā'-ha dēl rā), 1750-1826, Spanish general, viceroy of New Spain (1813-16), conde de Calderón. In command of the post of San Luis Potosí when the revolution under HIDALGO y COSTILLA broke out, he led a large force into the field and defeated Hidalgo at Aculco and at Calderón Bridge and besieged MORELOS y PAVÓN in Cuautla (1812). As viceroy, Calleja continued to repress revolution, and by the time he left Mexico most of the insurrectionists were defeated. After his return to Spain, he held several high posts.

Calles, Plutarco Elias (plō'tar'kō ālē'as ka'yās), 1877-1945, Mexican statesman, president (1924-28). In 1913 he left schoolteaching to fight with Álvaro OBREGÓN and Venustiano CARRANZA against Victoriano HUERTA. In 1920 he joined Obregon and Adolfo de la HUERTA in the rebellion against Carranza. After Obregon's term as president, Calles, who had been a cabinet member, became the presidential nominee. Adolfo de la Huerta, claiming election fraud, revolted (Dec., 1923), but Obregon and Calles established their supremacy by force (1924), Calles became president. His administration was noted for its revolutionary zeal, which often precipitated violence. At the outset agrarian reform was pursued vigorously but recklessly. Many rural schools were built, although teachers were still scarce and underpaid. Material improvements were given special attention, vast road-building and irrigation projects were undertaken. The struggle between church and state reached a new level of bitterness. In 1926 the enforcement of anticlerical legislation provoked violence, in 1926-27 the *cristeros*, terrorists whose slogan was "Viva Cristo Rey" [long live Christ the King] took up arms in the states of Colima, Jalisco, and Michoacán. Military chieftains reciprocated by victimizing innocent Roman Catholics, and government officials used the strife to political advantage. At the same time legislation over land and petroleum rights brought about a serious dispute with the United States, relations between the two countries improved when Dwight W. MORROW was appointed (1927) ambassador, and the oil question was temporarily settled. Calles created and directed a powerful national army and dissolved the private militia that threatened internal peace. He unified the government and molded the National Revolutionary party into the dominant force in Mexican politics. Calles rapidly lost his radicalism when he gained power and became a landowner and financier, he moved toward dictatorship. Already in control of the labor movement, he made himself the force behind the Callistas, a circle of financiers and industrialists who dominated the country's economy and politics. Thus he became undisputed *Jefe Máximo*, or political chieftain, of Mexico. When Obregon was assassinated (1928) after his reelection to the presidency, Calles appointed Emilio Portes Gil. In 1930 he declared the agrarian reform program a failure. In the same year he engineered the election of Pascual Ortiz Rubio. Two years later he removed him to appoint Gen. Abelardo Luján Rodríguez. The mighty labor union, CROM (see LOMBARDO TOLEDANO, VICENTE), was smashed. The conflict with the church, temporarily subdued (1929) by Morrow, was resumed, priests were openly persecuted. Communist unions, previously used by Calles in his campaign against the CROM, were ruthlessly suppressed, and a Callista-backed fascist organization, the Gold Shirts, harassed minority groups. As the new champion of conservatism, Calles in 1935 openly opposed the policies of his former protégé, Lázaro CÁRDENAS, but was defeated in the contest, in 1936 he was exiled. He was allowed to return under an amnesty in 1941. See study by R. H. Murray (1927), biography (in Spanish) by R. J. Zevada (1971).

Calley, William L. see MY LAI INCIDENT

Callias (kāl'ēās), fl. 449 B.C., Athenian statesman, he was related to Cimon and also to Aristides. He distinguished himself at the battle of Marathon (490 B.C.) and was a three-time winner of the Olympic chariot races. Callias was sent to Susa to negotiate for peace c. 449 B.C. The result of his work was an agreement usually called the Peace of Callias (or Treaty of Callias), by it ARTAXERXES I agreed to respect the independence of the Delian League and its members and to send no warships into Greek waters, in return Athens agreed not to interfere with Persian "influence" in Asia Minor, Cyprus, and Egypt. There is doubt that such a treaty was actually ever drawn up, however, peace did exist between

Persia and the cities of Greece until the end of the century. According to ancient historians, when Callias returned to Athens he was fined 50 talents for betraying the city. Callias was also supposed to have been one of the negotiators of a treaty between Athens and Sparta (446-445 B.C.) that resulted in 30 years of peace.

Callias, d. c. 370 B.C., Athenian leader, one of the generals of the Peloponnesian War. In his old age Callias was one of the ambassadors sent to Sparta with Callistratus to negotiate a peace treaty in 371 B.C. The treaty was ineffective, and friction between EPAMINONDAS of Thebes and AGESILAUS II of Sparta became acute. Callias was a rich man and his wealth was ridiculed by his contemporaries, including Aristophanes. His house is the scene of Xenophon's *Symposium* and Plato's *Protagoras*.

Callicrates (kalī'krā'tēs), 5th cent. B.C., Greek architect. In association with Ictinus he built (447-432 B.C.) the Parthenon at Athens. At Athens also he designed (c. 427) the Temple of Nike.

calligraphy (kalī'grā'fē) [Gr., =beautiful writing], skilled penmanship practiced as a fine art. In Europe two sorts of handwriting came into being very early. Cursive script was used for letters and records, while far more polished writing styles, called uncials, were used for literary works. Both styles can be seen in Papyrus fragments from the 4th cent. B.C. After the first cent. A.D., the development of the half uncial or minuscule letter from the Roman capital gave rise to an extraordinarily beautiful and long-lasting calligraphy. As tools and materials of high quality came into use, masterpieces of calligraphic art were produced, e.g., the Irish Book of Kells (8th cent., Trinity College, Dublin, see under KELLS) and the English Lindisfarne Gospels (8th cent., British Mus., see HOLY ISLAND). Carolingian minuscule script and its splendid and complex derivative, known as Gothic, were the principal calligraphic styles from the 9th to the 14th cent. The humanistic handwriting style of the Renaissance, a deliberate imitation of Carolingian minuscule, was both aesthetically pleasing and extremely legible. The Italian manuscript copyists of the middle to late 15th cent. produced many glorious calligraphic works. Among the best known of these masters were Matteo Contugi, Gianrinaldo Menzio, and Pierantonio Sallando. Alphabet design became a subject of study, and several technical treatises were published on writing styles. By the late 16th cent., with the secure establishment of the printing press, the art of calligraphy declined generally throughout Europe. Penmanship of a relatively inferior sort was taught in elementary schools in England and in the United States until the late 19th cent. The 20th cent. has experienced a revival of interest in the art, influenced by the work of Owen Jones and William MORRIS. Fine calligraphy is currently taught in art and craft schools and is exhibited in museums. In the East calligraphy has been consistently practiced as a major aesthetic expression. In China, from the 5th cent. B.C., when it was first used, calligraphy has always been considered equal, or even superior, to painting. Chinese calligraphy began with a simplified seal script, known as "chancery script," in which the width of the strokes varies and the edges and ends are sharp. The perfection of the brush in the 1st cent. A.D. made possible the stylization of chancery script into "regular script," distinguished by its straight strokes of varying width, and clear, sharp corners, and a cursive "running hand." The Japanese value calligraphy as highly as do the Chinese. They began to practice it only in the 7th cent. A.D., with the introduction of Buddhist manuscripts from China. KUKAI, c. 800, invented the syllabic script which was based on Chinese characters. This art is also practiced with the limited letter alphabet of Arabic. Because the Muslim faith discourages pictorial representation and reveres the Koran, the Islamic peoples esteem calligraphy as highly as do those of the Far East. The earliest Islamic calligraphy is found in the beautiful Korans, written with black ink or gold leaf on parchment or paper in formal, angular script. Begun by the 8th cent., this script was fully developed by the 10th. Elaborations, such as foliation, interfacing, and other complexities were invented later, but they are used only for decorative work. Korans continued to be copied in austere and monumental letters. In the 12th cent., rounded cursive style was invented and spread throughout Islam. Many different cursive scripts developed thereafter. In Islam calligraphy decorates mosques, pottery, metalwork, and textiles, as well as books. See INSCRIPTION, PALEOGRAPHY. See Georg Schwander, *Calligraphy* (1959), Heather Child, *Calligraphy Today* (1964), Dorothy

Miner, ed., *2,000 Years of Calligraphy* (1965, repr. 1972), Arthur Baker, *Calligraphy* (1973).

Callimachus (kalīm'akās), fl. 2d half of 5th cent. B.C., Greek sculptor from Athens. He was famous as the maker of the gold lamp in the Erechtheum and a seated image of Hera for a temple at Plataea. There are several Roman copies of his works, one is *Pan and the Three Graces* (Capitoline Mus., Rome). He reputedly originated the Corinthian capital and invented the running drill used for simulating the folds of drapery in marble.

Callimachus, fl. c. 265 B.C., Hellenistic Greek poet and critic, b. Cyrene. Educated at Athens, he taught school at Eleusis, a suburb of Alexandria, before obtaining work in the Alexandrian library. There he drew up a catalogue, with such copious notes that it constituted a full literary history. He also wrote criticism and other works in prose, but is most notable as a poet. His works were extraordinarily numerous, it is said that he wrote more than 800 different pieces. Of these, six hymns (meant only for reading, with no religious use), a number of epigrams, and fragments of other poems survive. His greatest work was the *Aetia*, a collection of legends strung together. Other longer poems of which fragments survive are *The Lock of Berenice*, *Hecale*, and *Iambi*. Callimachus' poetry is notable for brevity, polish, wit, learning, and inventiveness in form. His literary quarrel with Apollonius of Rhodes over whether well-crafted short poems were superior to long poems is well known.

Callinus (kalī'nās), fl. 7th cent. B.C., Greek poet. He is the earliest of the known elegiac poets. An excerpt from a patriotic exhortation to his fellow Ephesians is the longest of the few fragments of his poetry that survive.

Calliope (kalī'ōpē) see MUSES ORPHEUS

calliope, in music, an instrument also called steam organ or steam piano in which steam is forced through a series of whistles controlled by a key board. It is usually played mechanically, and its shrill music is a familiar accompaniment of circus parades. It is named for the Muse of Eloquence.

calliopsis (kalī'ēōp'sis) see COREOPSIS

Callirrhoe (kalī'rōē) see ALCAEON

Callisthenes (kalīs'thēnēs), c. 360-c. 327 B.C., Greek historian of Olynthus, nephew of Aristotle. He accompanied Alexander the Great into Asia as the historian of the expedition. At first he compared Alexander to a god, but later he became one of the principal critics of the orientalizing manners of the court. He was suspected of complicity in a conspiracy against Alexander and put to death, and this turned the Peripatetics, Aristotle's followers, against Alexander. Callisthenes' histories of contemporary affairs in Greece are lost. In medieval times he was believed to be the author of the standard biography of Alexander, a work that actually was written much later than Callisthenes' lifetime.

Callisto (kalīs'tō), in Greek mythology, an attendant of Artemis. Because she forsook her chastity and bore a son, Arcas, to Zeus, she was transformed into a bear by Artemis. According to another legend she was changed into a bear by the jealous Hera. Arcas, while out hunting, was about to kill her when Zeus intervened and transferred them both to the heavens, Callisto becoming the constellation Ursa Major [great bear] and Arcas becoming Arcturus.

Callisto, in astronomy, one of the 12 known moons, or natural satellites, of JUPITER.

Callistratus (kalīs'tratās), d. c. 360 B.C., Athenian statesman and orator. Believing Thebes to be more dangerous to Athens than Sparta, he favored a peace with Sparta. He and CALLIAS in 371 B.C. were the delegates to negotiations on an ineffective peace treaty. His failure to check Thebes led to his impeachment in 366 B.C., but he saved himself with his brilliant defense—an oration that is supposed to have inspired Demosthenes to study rhetoric. After new failure he fled Athens and was condemned in absentia for having urged Athens to allow Thebes to occupy Oropus in Boetia. When he returned he was put to death.

Callistus see CALIXTUS

Calixtus see CALIXTUS

Calloc'h, Jean Pierre (zhaN pyēr kalōkh'), 1688-1917, Breton poet. Important in the revival of Breton literature, he wrote in the Vannes dialect of Brittany. His lyrical verse displays a love for the sea and a fascination with death, his chief work, *Ar en deulin* [on both knees] (1925), celebrates the life of Breton fishermen. Calloc'h, who died in World War I, is often regarded as Brittany's finest poet. He sometimes wrote under the pseudonym Bleimor.

Callot, Jacques (zhāk kalō'), c 1592–1635, French etcher and engraver, b Nancy. Callot was an influential innovator and a brilliant observer of his time. In 1612 he went to Florence where he learned to etch and where he developed and introduced the use of a hard varnish ground that allowed both greater flexibility and finesse. In the service of Cosimo II de' Medici, he created many works: the *Capricci*, small, vivacious figure groups, gay scenes of Medici court life, the vast *Fair at Impruneta* (1620), and sparkling illustrations of the theater, among them his *Commedia dell'arte* group, which was reproduced in his *Balli* (1621). On Cosimo's death in 1621, Callot returned to Nancy and, under the patronage of the ducal court, gained a considerable reputation. He became known for his fantasies, grotesques, beggars, and caricatures, then much in vogue. He was commissioned in 1627 by the Infanta Isabella of Brussels to engrave the siege of Breda, and by Louis XIII to etch the sieges of Rochelle and the island of Re and a series, *Views of Paris*. Too independent for court favor and deeply affected by the scenes of carnage he had witnessed, he retired to Nancy, where he executed in 1633 his masterwork, the two series entitled *Miseries of War*. These studies of human brutality and suffering were the first dispassionate, unromanticized treatment of the horror of war, they were used as source material by Goya for his war etchings. Callot produced nearly 1,500 plates and 2,000 drawings in a wide variety of styles and subjects. The grandeur and brilliance of his work profoundly influenced many major masters, including Rembrandt and Watteau. His technical innovations established important procedures for subsequent etchers. See the complete illustrated catalog with the definitive study by J. Lieure (5 vol., 1924–29, in French), studies by Edwin Bechtel (1955) and Brown Univ. Art Dept. (1970).

callus see CORNS AND CALLUSES

Calmar see KALMAR, Sweden

Calmet, Augustin (ōgüstān' kalmā'), 1672–1757, French biblical scholar, a Benedictine abbot at Nancy and Sens. His critical commentaries were widely studied until the 19th cent when the higher criticism changed the technique of biblical criticism. He also wrote a valuable history of Lorraine.

Calmette, Léon Charles Albert (lāōn' sharl albē' kalmē't'), 1863–1933, French physician and bacteriologist. He was founder and director of the Pasteur Institutes at Saigon and at Lille. From 1917 he was affiliated with the Pasteur Institute in Paris. He discovered a serum for snake bite, studied bubonic plague at Oporto, and with Alphonse Guérin introduced BCG, a tuberculosis vaccine. He wrote *Recherches expérimentales sur la tuberculose* (1907–14), *Tuberculose chez l'homme et chez les animaux* (1920, tr 1923), and *La Vaccination préventive par le BCG* (1927).

Calneh (kāl'nē) 1 Place, in S Babylonia, founded by Nimrod with other cities, the word may mean "all of them." Gen 10:10. 2 Unidentified city, possibly in N Syria. Amos 6:2. It is perhaps the same as Calno, named with Carchemish. Isa 10:9. Some identify it with Canneh.

Calonne, Charles Alexandre de (sharl ālēksān'dra da kalōn'), 1734–1802, French statesman, controller general of finances (1783–87). Faced with a huge public debt and a steadily deteriorating financial situation, Calonne adopted a spending policy to inspire confidence in the nation's financial position. Brief prosperity was followed by a ruinous collapse. He then proposed a direct land tax and the calling of provincial assemblies to apportion it, a stamp tax, and the reduction of some privileges of the nobles and clergy. To gain support, Calonne had King Louis XVI call an Assembly of Notables, but the Assembly (1787) refused to consider Calonne's proposals and criticized him bitterly. Dismissed and replaced by Étienne Charles LOMÉNIÉ DE BRIENNE, Calonne fled (1787) to England, where he stayed until 1802. Many of Calonne's official papers have been published and two general works on politics have been translated into English, *Considerations on the Present and Future State of France* (1791) and *The Political State of Europe* (1796).

calorie, abbr cal, unit of HEAT energy in the metric system. The measurement of heat is called CALORIMETRY. The calorie, or gram calorie, is the quantity of heat required to raise the temperature of 1 gram of pure water 1°C. The kilocalorie, or kilogram calorie, is the quantity of heat required to raise the temperature of 1 kg of pure water 1°C, it is equal to 1,000 cal. The kilocalorie is used in dietetics for stating the heat content of a food, i.e., the amount of heat energy that the food can yield as it passes through the

body, in this context, the kilocalorie is usually called simply the calorie. The amount of heat energy needed to effect a 1°C temperature increase in 1 gram of water varies with temperature (see HEAT CAPACITY), thus the temperature range over which the heating takes place must be stated to define the calorie precisely. The 15° calorie, or normal calorie, is widely used in chemistry and physics, it is measured by heating a 1-gram water sample from 14.5°C to 15.5°C at 1 atmosphere pressure. The 4° calorie, also called the small calorie or therm, is measured from 3.5°C to 4.5°C (water is most dense at 3.98°C), the large calorie, or Calorie, is equivalent to 1,000 small calories. The average value of the calorie in the range 0°C to 100°C is called the mean calorie, it is 1/100 of the energy needed to heat 1 gram of water from its melting point to its boiling point. The calorie may also be defined by expressing its value in some other energy units. The 15° calorie is equivalent to 4.185 JOULES (J), 1.162 × 10⁻⁶ kilowatt-hours, 3.968 × 10⁻³ British thermal units, and 3.087 foot-pounds, the 4° calorie equals 4.204 J, and the mean calorie equals 4.190 J. Two other calories sometimes used are the International Steam Table calorie, equal to 4.187 J, and the thermochemical calorie, equal to 4.184 J. When the calorie is used for precision measurement of heat energy, the particular calorie being used must be specified.

calorimeter: see CALORIMETRY

calorimetry, measurement of HEAT and the determination of HEAT CAPACITY. Heat is evolved in exothermic processes and absorbed in endothermic processes, such processes include chemical reactions, transitions between the states of matter, and the mixing of two substances to form a solution (see THERMODYNAMICS). A number of different units are used in heat measurement, e.g., the CALORIE, the BRITISH THERMAL UNIT (Btu), and the JOULE. The apparatus used in heat measurement is called a calorimeter. The measurement given by the most common type of calorimeter depends upon the temperature change in a fixed quantity of water (or some other liquid whose heat capacity is known) when heat is transferred between the water and an exothermic or endothermic process. If the temperature change is not too large, then the heat transferred is equal to the heat capacity of the water times the mass of the water times the change in temperature. The accuracy of this method of heat measurement depends on the assumption that all the heat transferred in the process passes into or out of the water in which the temperature change is measured, no heat being lost to the environment and none being absorbed by the walls of the container. The amount of heat given off by the combustion of a fuel can be determined very accurately in the so-called bomb calorimeter, which consists of a combustion chamber (the "bomb") set in another chamber filled with water. Heat generated by combustion of the fuel is transmitted to the water, raising its temperature. The calorie content of food is tested this way.

Calovius, Abraham (kalō'vēās), 1612–86, German Lutheran theologian, whose original name was Kalan or Calan. He was (1637–43) a professor of theology at Königsberg, then pastor at Danzig, and after 1650 teacher, general superintendent, and finally dean of the theological faculty at Wittenberg. In his many tracts he defended the strict orthodox party against Catholic, Socinian, Arminian, and other views. He particularly attacked the syncretistic doctrines of Georgius CALIXTUS.

Calpe (kāl'pē), ancient name, possibly Phoenician in origin, of GIBRALTAR. It is one of the PILLARS OF HERCULES, at the eastern end of the Strait of Gibraltar.

Calpurnia (kāl'pūr'nēa), d. after 44 B.C., Roman matron. The daughter of Lucius Calpurnius Piso Caesoninus (see under PISO, family), she was married to Julius Caesar in 59 B.C. She was loyal to him despite his many infidelities and his neglect. The picture of her in Shakespeare's *Julius Caesar* is drawn mainly from Plutarch.

Calpurnius (Titus Calpurnius Siculus) (kāl'pūr'nēās), fl 1st cent A.D., Roman poet. His *Eclogues* (seven pastorals) imitate Vergil with grace and charm.

Caltagirone (kal'tājērō'nā), city (1971 pop 37,458), SE Sicily, Italy. An agricultural and sulfur-mining center, it has been famous for its majolica ware since the Arab occupation (9th cent.).

Caltanissetta (kāl'tānēs-sēt'ta), city (1971 pop 60,072), capital of Caltanissetta prov., central Sicily, Italy. It is an agricultural center and an important sulfur-producing center. Of note are the Church of Santa Maria degli Angeli (14th cent.) and a 16th-century cathedral.

Calumet (kāl'yōōmēt'), industrial region of NW Ind and NE Ill., along the south shore of Lake Michigan. It has one of the world's greatest concentrations of heavy industry, especially steel manufacturing. The chief cities of the region are Gary, East Chicago, and Hammond (all in Indiana).

calumet [Fr. = reed], name given by the French in Canada to the peace pipe of the North American Indians, it consisted of a long, feathered stem, with or without pipe bowl. Such pipes were considered sacred, offering communion with the animate powers of the universe and embodying the honor and the source of power of the Indians who possessed them. Every aspect of their fashioning and decoration was symbolic and varied from tribe to tribe. Calumets were particularly used at the conclusion of peace treaties and in ceremonies of adoption. They served as ambassadors' credentials and were passports of safe-conduct wherever recognized. To refuse to smoke the calumet when invited was considered an extreme insult. The pipes were principally used by the Siouan and Algonquian peoples of the Great Plains and in the SE United States. However, pipes were used throughout most of North America, and communal smoking, wherever found, usually carried the guarantees of amity, granted with food sharing. In the Middle West PIPESTONE was much used in making them.

Calumet City, city (1970 pop 32,956), Cook co., NE Ill., an industrial suburb in the greater Chicago metropolitan area, near the Ind. line, settled 1868, inc 1911. It has steelworks and chemical and meat-packing industries. Formerly called West Hammond, it grew as a suburb of Hammond, Ind.

Calumet Harbor, artificial harbor on Lake Michigan, at the mouth of the Calumet River, NE Ill., in S Chicago. The harbor, dredged to 27 ft (8 m), is formed behind a breakwater extending c 2 mi (3.2 km) into Lake Michigan. It is the fastest developing unit of the Port of Chicago and the principal terminal for shipping on the Great Lakes and the St. Lawrence Seaway. The chief products handled there are the raw materials for steelmaking, finished iron and steel products, and grain. The dredged and dock-lined Calumet River (c 8 mi/13 km long) connects the harbor with Lake Calumet (c 2 sq mi/5 sq km) in S Chicago. Once a shallow body of water with marshy shores, the lake has been transformed into a modern deepwater port. Heavy industries, huge grain storage bins, and warehouses surround it. Canals connect the lake with the Calumet region of Indiana and with the Illinois Waterway.

Calumet Park, village (1970 pop 10,069), Cook co., NE Ill., a residential suburb of Chicago, inc 1912.

Calvados (kalvadōs'), department (1968 pop 519,695), in Normandy, N France, on the English Channel. CAEN is the capital.

Calvaert, Denis or Denys (both dānē' kāl'vart), 1540–1619, Flemish mannerist painter in Italy, where he was known as Il Fiammingo. He studied in Antwerp and later in Bologna under Prospero Fontana. While a student he assisted in the execution of frescoes in the Vatican. On returning to Bologna he established a school, where he taught Guido Reni and Domenichino. Most of Calvaert's carefully drawn works, painted in smooth enamel-like colors, are in the churches and national museum of Bologna.

Calvary (kāl'vārē) [Lat. = a skull] or **Golgotha** (gōl'gatha) [Heb. = a skull], place, where Jesus was crucified, outside the wall of Jerusalem. Its location is not certainly known. Mat 27:33, Mark 15:22, Luke 23:33, John 19:17–20. The traditional identification of the site of Calvary was made by St. Helena, when she found (327) what was believed to be a relic of the Cross (see CROSS). The spot is within the Church of the HOLY SEPULCHER. In the 19th cent. Charles G. Gordon proposed a site near the Damascus Gate, this is called the Garden Tomb or Gordon's Calvary.

Calve, Emma (kāl'vā'), 1858–1942, French operatic soprano, pupil of Mme Marchesi. She sang in the principal opera houses of Europe and between 1893 and 1904 sang often at the Metropolitan Opera, New York City, where her portrayal of Carmen was especially acclaimed. See her autobiography (1922).

Calverley, Charles Stuart, 1831–84, English poet and translator. Expelled from Oxford for a youthful prank, he earned academic honors at Cambridge. He became famous for the wit and erudition of his light verse, particularly his parodies (published under the initials C. S. C.). A barrister, he suffered an injury in 1867 that resulted in a brain concussion and curtailed his legal career. His published works include *Translations into English and Latin* (1866) and *Fly Leaves* (1872).

Calvert, Cecilius, 2d Baron Baltimore, c 1605–1675, first proprietor of the colony of MARYLAND. He received the province in 1632 as a grant from the king, in place of his father, George Calvert, who died as the charter was being issued. Cecilius Calvert never visited the province himself, but governed it by deputies until his death, his last deputy being his only son, Charles Calvert, who succeeded to his title. See W. H. Brown, *George Calvert and Cecilius Calvert* (1890), C. C. Hall, *The Lords Baltimore and the Maryland Palatinate* (1902).

Calvert, Charles, 3d Baron Baltimore, 1637–1715, second proprietor of Maryland. He was sent over as deputy governor of that province in 1661 by his father, Cecilius Calvert, 2d Baron Baltimore, and at his father's death in 1675 succeeded to the proprietorship. A Roman Catholic faced by an overwhelming Protestant population, he ruled arbitrarily, restricting the suffrage, and filling the offices with his partisans. He became involved in a bitter dispute with William PENN over the northern boundary of his grant and in 1684 went to England to defend himself in this dispute and to answer charges of favoring Catholics and obstructing customs collection. He never returned. His charter was overthrown by a Protestant revolt in 1689, and in 1692 a royal government was established. See C. C. Hall, *The Lords Baltimore and the Maryland Palatinate* (1902).

Calvert, Edward, 1799–1883, English painter and engraver. A great admirer of William Blake, Calvert, along with several of his contemporaries, formed a group around Blake called the Brotherhood of the Ancients. Calvert's art celebrated the life of primitive society. In his later work he was deeply influenced by a visit in 1844 to Greece. See Laurence Binyon, *The Followers of William Blake* (1925).

Calvert, George, 1st Baron Baltimore, c 1580–1632, colonizer. In 1606 he became private secretary to Sir Robert Cecil, then a secretary of state. His advance was rapid. In 1609 he became a member of Parliament, in 1613 clerk of the privy council, and in 1619 secretary of state and a member of the privy council. He defended the measures of James I in the House until his resignation in 1625, when he declared himself a Roman Catholic. The king then created him Baron Baltimore. Calvert had been a member of the Virginia Company and a member of the council of the New England Company, but, wishing to found his own colony, he was granted in 1623 the peninsula of Avalon in Newfoundland. He spent much money on a colony that was established there, but it did not prosper, and in 1629 Baltimore petitioned for a grant farther south where the weather was less severe. In 1632 the king granted him the territory N of the Potomac River that became the province of Maryland. Baltimore prepared the charter of his proposed colony but died before it could be accepted. The grant passed to his son, Cecilius Calvert. See C. C. Hall, *The Lords Baltimore and the Maryland Palatinate* (1902).

Calvin, John, 1509–64, French Protestant theologian of the Reformation, b. Noyon, Picardy. Calvin early prepared for an ecclesiastical career, from 1523 to 1528 he studied in Paris. His opinions gradually turned to disagreement with the Roman position, and a demonstrated ability at disputation led him in 1528, at his father's instance, to study law at Orleans and Bourges. After his father's death in 1531 he returned to Paris, where he pursued his own predilection—the study of the classics and Hebrew. He came under the humanist influence and became interested in the growing rebellion against conservative theology. He experienced c 1533 what he later described as a "sudden conversion," and he turned all his attention to the cause of the Reformation. As a persecuted Protestant, Calvin found it necessary to travel from place to place, and at Angoulême in 1534 he began the work of systematizing Protestant thought in his *Institutes of the Christian Religion*, considered one of the most influential theological works of all time. Completed at Basel in 1536 and later frequently revised and supplemented, the original work contained the basic Calvinist theology. In the *Institutes* Calvin diverged from Catholic doctrine in the rejection of papal authority and in acceptance of justification by faith alone, but many of his other positions, including the fundamental doctrine of predestination, had been foreshadowed by Catholic reformers and by the Protestant thought of Martin Luther and Martin Bucer. In 1536, Calvin was persuaded by Guillaume Farel to devote himself to the work of the Reformation at Geneva, and there Calvin instituted the most thoroughgoing development of his doctrine. At first the Genevans were unable to accept the austere reforms and departures

from established church customs, and in 1538 the opposition succeeded in banishing Farel and Calvin from the city. Calvin went to Basel and then to Strasbourg, where he spent three fruitful years preaching and writing. By 1541 the Genevans welcomed Calvin, and he immediately set himself to the task of constructing a government based on the subordination of the state to the church. Once the Bible is accepted as the sole source of God's law, the duty of man is to interpret it and preserve the orderly world that God has ordained. This goal Calvin set out to achieve through the establishment of ecclesiastical discipline, in which the magistrates had the task of enforcing the religious teachings of the church as set forth by the synod. The Genevan laws and constitution were recodified, regulation of conduct was extended to all areas of life. Ecclesiastical discipline was supplemented by a systematized theology, with the sacraments of baptism and the Lord's Supper given to unite man into the fellowship of Christ. Calvin wrote extensively on all theological and practical matters. He was involved in many controversies. Among them were his violent opposition to the Anabaptists, his disagreement with the Lutherans over the LORD'S SUPPER, which resulted in the separation of the Evangelical Church into Lutheran and Reformed, and his condemnation of the anti-Trinitarian views of Michael SERVETUS, which ended in the notorious trial and burning of Servetus in 1553. The extension of Calvinism to all spheres of human activity was extremely important to a world emerging from an agrarian, medieval economy into a commercial, industrial era. Unlike Luther, who desired a return to primitive simplicity, Calvin accepted the newborn capitalism and encouraged trade and production, at the same time opposing the abuses of exploitation and self-indulgence. Industrialization was stimulated by the concepts of thrift, industry, sobriety, and responsibility that Calvin preached as essential to the achievement of the reign of God on earth. The influence of Calvinism spread throughout the entire Western world, realizing its purest forms through the work of John KNOX in Scotland and through the clergymen and laymen of the civil war period in England and the Puritan moralists in New England. See selections from his writings, ed. by John Dillenberger (1971), Quirinus Breen, *John Calvin* (1931, repr 1968), Georgia Harkness, *John Calvin: The Man and His Ethics* (1931), W. C. Northcott, *John Calvin* (1946), A. T. Davies, *John Calvin and the Influence of Protestantism on National Life and Character* (1946), A. M. Schmidt, *John Calvin and the Calvinist Tradition* (tr 1960), Kilian McDonnell, *John Calvin, the Church, and the Eucharist* (1967).

Calvin, Melvin, 1911–, American organic chemist and educator, b. St. Paul, Minn., grad. Michigan College of Mining and Technology, 1931, Ph.D. Univ. of Minnesota, 1935. In 1937 he joined the faculty at the Univ. of California, where he became director (1946) of the bioorganic division of the Lawrence Radiation Laboratory (which became the Laboratory of Chemical Biodynamics in 1960) and professor (1947) of chemistry. For his work in determining the chemical reactions that occur when a plant assimilates carbon dioxide, Calvin was awarded the 1961 Nobel Prize in Chemistry. His writings include *The Photosynthesis of Carbon Compounds* (with J. A. Bassham, 1962) and *Chemical Evolution* (1969).

Calvinism, term used in several different senses. It may indicate the teachings expressed by John Calvin himself, it may be extended to include all that developed from his doctrine and practice in Protestant countries in social, political, and ethical, as well as theological, aspects of life and thought, or it may be employed as the name of that system of doctrine accepted by the Reformed churches (see PRESBYTERIANISM), i.e., the Protestant churches called Reformed in distinction from those professing Lutheran doctrines (see also REFORMED CHURCHES). Early Calvinism differed from Lutheranism in its rejection of consubstantiation regarding the sacrament of the Lord's Supper, in its rigid doctrine of predestination, in its notion of grace as irresistible, and in its theocratic view of the state. Luther believed in the political subordination of the church to the state, Calvinism produced the church-dominated societies of Geneva and Puritan New England. Calvinism, stressing the absolute sovereignty of God's will, held that only those whom God specifically elects are saved, that this election is irresistible, and that man can do nothing to effect this salvation. This strict Calvinism was challenged by Jacobus ARMINIUS, whose more moderate views were adopted by the Methodists and the BAPTISTS. Calvinism challenged Lutheranism throughout Europe, spread to Scotland, influenced

the Puritans of England, and received its expression in the United States in the modified New England theology of the elder Jonathan EDWARDS. The doctrinal aspects of Calvinism receded under the rationalism of the 18th and 19th cent. In more recent times, however, in the Reformed theology of Karl BARTH the Calvinist stress on the sovereignty of God has found new and vital expression. See J. T. McNeill, *The History and Character of Calvinism* (1954, repr 1967), B. G. Armstrong, *Calvinism and the Amyraut Heresy* (1969).

Calvinistic Methodist Church, Protestant Christian denomination, closely allied to PRESBYTERIANISM. It originated in Wales (1735–36) with the evangelistic preaching of Howell Harris, Daniel Rowlands, and others. In Wales it is considered to be the only denomination distinctly Welsh in origin, and it has developed into the most important of the Welsh nonconformist churches. The Methodist societies that evolved under the Welsh revivalists were so organized as to prevent any break with the Established (i.e., Anglican) Church. They were for a time associated with the Methodists of England, for some six years, from c 1742, George WHITEFIELD was the leader of the Welsh Calvinists. Those in England who accepted his views, as opposed to the Arminian doctrines taught by John WESLEY, either remained within the Church of England, joined the Connexion of the countess of HUNTINGDON, or in time became affiliated with the Congregationalists or Independents. The Welsh Calvinistic Methodists, however, held their own vigorously and grew in numbers. Thomas CHARLES of Bala, who joined them in 1784, was a leader of wide influence in religious and educational work. In 1811 they separated from the Established Church and set up a new church, Presbyterian in polity. In 1823 a confession of faith was adopted. Later, theological schools were founded at Bala and at Trevecca. The church was formally guaranteed autonomy in 1933. The Calvinistic Methodist Church was introduced (c 1826) into the United States by Welsh settlers in central New York state. In 1920 it united with the Presbyterian Church in the United States.

Calvo, Carlos (kar'lös käl'vō), 1824–1906, Argentine diplomat and historian. He spent much of his life in diplomatic service abroad. He edited a collection of Latin American treaties and did other historical work but was most important as a writer on international law. Although he was influenced by Henry Wheaton, his development of international doctrines broke new paths. His best-known work is *De-recho internacional teórico y práctico de Europa y América* (Paris, 1868, greatly expanded in subsequent editions, which were published in French). In this book he expressed the principle known as the Calvo Doctrine, which would prohibit the use of diplomatic intervention as a method of enforcing private claims before local remedies have been exhausted. It is wider in scope than the DRAGO DOCTRINE, which grew out of it. The Calvo Clause, found in constitutions, treaties, statutes, and contracts, is the concrete application of the doctrine. Used chiefly in concession contracts, the clause attempts to give local courts final jurisdiction and to obviate any appeal to diplomatic intervention.

Calvus: see under LICINIUS, Roman gens.

calycanthus, any plant of the genus *Calycanthus*, aromatic shrubs of N. North America, Asia, and Australia. An American type, the Carolina allspice, is cultivated for the aromatic fragrance of its flowers. *Calycanthus* is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Magnoliales, family Calycanthaceae.

Calypso (kalip'sō), nymph, daughter of Atlas, in Homer's *Odyssey*. She lived on the island of Ogygia and there entertained Odysseus for seven years. Although she offered to make him immortal if he would remain, Odysseus spurned the offer and continued his journey.

calyx (kāl'iks) see SEPAL.

cam, mechanical device for converting a rotating motion into a reciprocating, or back-and-forth, motion, or for changing a simple motion into a complex one. A simple form of cam is a circular disk set eccentrically on a shaft in order to induce (when the shaft rotates) a rising and falling motion in a rod or some other moving part held against its edge. There are cams of many diverse shapes, e.g., oval, elliptical, and scalloped-edged, each shape being designed to induce the particular kind of motion required in a moving part. Cams are widely used in many different kinds of machines.

Camacho, Manuel Ávila: see ÁVILA CAMACHO MANUEL.

Camagüey (kāmāgwā', kāmāwā'), province (1970 pop 813,204), E Cuba CAMAGÜEY is the capital. The area is a vast prairie, surrounded on three sides by extensive coastal plains. The major economic activities are cattle raising (practiced there since the early colonial period) and the cultivation of sugarcane. Meat-packing, pineapple canning, and other agricultural processing industries are carried on.

Camagüey, city (1970 pop 196,854), capital of Camagüey prov., E Cuba. The island's third most populous city, Camagüey, is a leading hub of rail, road, and air transport as well as an important commercial center. The economy is based on agriculture and cattle raising. Industries (mainly meat-packing and dairy processing) are mostly related to agriculture. Founded in 1514 as Santa María del Puerto Príncipe, the city was moved to its present site in 1528 and renamed for the Indian village that previously occupied that site. During the colonial period Camagüey produced salted beef for the Spanish fleets and was often sacked by English, French, and Dutch pirates. The city, which has retained much of its Spanish colonial atmosphere, is noted for its churches, mansions, and narrow twisting streets.

Camargue (kāmārg'), island, c 215 sq mi (560 sq km), Bouches-du-Rhône dept., SE France, in the Rhône delta. Formed by sedimentation, the marshy island has numerous shallow lagoons cut off from the sea by sandbars. The northern part of the island has been partially reclaimed and is used for cattle raising (the cowboys are called *gardians*). There are reed-covered swamps in the south.

Camarillo (kā'marē'yō), city (1970 pop 19,219), Ventura co., S Calif., inc. 1964. It is the center of a fertile farm area where citrus fruits and flowers are grown. Camarillo also has electronic and aerospace industries and plants that manufacture magnetic tape and containers. St. John's College and a state mental hospital are located there.

camass or **camas** (both kām'ās), any species of the genus *Camassia* (or *Quamasia*), hardy North American plants of the family Liliaceae (LILY family), chiefly of moist places in the far West, where their abundance has given rise to various place names. The bulbs of the common camass (*C. quamash*) were a staple food of Northwestern Indians; it is now cultivated as an ornamental for its showy blue to white blossoms. Camass, or quamash, was the Indian name. An eastern camass is called wild hyacinth. The death camass (*Zygadenus venenosus*), with leaves poisonous to sheep, is similar in appearance but distinguishable by having three styles instead of six. Camass is classified in the division MAGNOLIOPHYTES, class Liliatae, order Liliales, family Liliaceae.

Cambacérés, Jean Jacques Régis de (zhāN zhāk rāzhēs' də kāNbāsārēs'), 1753-1824, French revolutionary and legislator. He was deputy to the National Convention, member of the Committee of Public Safety and of the Council of Five Hundred, second consul under Napoleon (1799-1804), and archchancellor of the empire. Throughout his career, his chief interest was in developing the principles of revolutionary jurisprudence. He played a major part in the preparation of the CODE NAPOLEON. In 1808, Cambacérés was made duke of Parma. Minister of justice in the HUNDRED DAYS (1815), he was exiled after the restoration of the monarchy until 1818.

Cambay (kāmbā'), town (1971 pop 62,133), Gujarat state, W India, on the Mahi River estuary. The industries of Cambay include textile weaving and carpet making. Oil and natural gas are found nearby at Lunj. Once a great port under the Muslim rulers of Gujarat (14th-15th cent.), Cambay lost its importance when the harbor silted up. Until 1948 the town was the capital of the former princely state of Cambay. The Gulf of Cambay, a shallow arm of the Arabian Sea, lies between Kathiawar peninsula and Gujarat.

Cambert, Robert (rōbēr' kāNbēr'), c 1628-1677, French composer, pupil of Chambonnières. His *Pastorale d'Issy* (1659) and other works are among the first real French operas. With the librettist Pierre Perrin (1625-75) he created French RECITATIVE in operas, including *Pomone* (1671), which contains all the elements of later French opera such as short symphonies, airs, and dialogues. Both men founded the first French opera company in 1669, but after losing control of this venture to Jean Baptiste Lully, Cambert settled in London where he was murdered.

Cambiaso, Luca (lōō'kā kāmbyā'zō), 1527-85, leading Italian painter and sculptor of the Genoese school, known also as Luchetto da Genova, son and

pupil of Giovanni Cambiaso, a fresco painter. His inventiveness and facile execution in both oil and fresco won him early recognition. His best works are in churches and palaces of Genoa and vicinity. In 1583 he went to Spain, where he worked on the decoration of the Escorial.

Cambio, Arnolfo di: see ARNOLFO DI CAMBIO

cambium (kām'bēām), thin layer of reproductive tissue lying between the bark and the wood of a stem, most active in woody plants. The cambium produces new layers of phloem on the outside and of xylem (WOOD) on the inside, thus increasing the diameter of the STEM. In herbaceous plants the cambium is almost inactive; in monocotyledonous plants it is usually absent. In regions where there are alternating seasons, each year's growth laid down by the cambium is discernible because of the contrast between the large wood elements produced in the spring and the smaller ones produced in the summer. These are the annual rings, by which the age of a tree can be established. A tree dies when it is "ringed," or girdled, i.e., cut through the cambium layer. The cork cambium, which lies outside the phloem layer, produces the cork cells of BARK.

Cambodia (kāmbō'dēā), officially Khmer Republic, republic (1973 est. pop 7,200,000), 69,898 sq mi (181,035 sq km), SE Asia. PHNOM PENH is the capital. Cambodia is bordered by Laos on the north, by South Vietnam on the east, by the Gulf of Siam on the south, and by Thailand on the west and north. The heart of the country is a saucer-shaped, gently rolling alluvial plain drained by the Mekong River and shut off by mountain ranges, the Dangrek Mts. form the frontier with Thailand in the northwest and the Cardamom Mts. are in the southwest. About half the land is tropical forest. In general, Cambodia has a tropical monsoon climate, with the wet southwest monsoon occurring between November and April and the dry northeast monsoon the remainder of the year. During the rainy season the Mekong swells and backs into the Tonle Sap (Great Lake), increasing the size of the lake almost threefold. The seasonal rise of the Mekong floods almost 400,000 acres (162,000 hectares) around the lake, leaving rich silt when the waters recede. Conditions are ideal for the cultivation of rice, by far the country's chief crop. Livestock raising (cattle, buffalo, poultry, and hogs) and extensive fishing supplement the diet. Corn, vegetables, fruits, peanuts, tobacco, cotton, and sugar palms are also raised. Pepper is grown in the south, and great amounts of rubber are produced on large plantations. In the early 1970s, however, heavy fighting in the countryside put almost all of the rubber plantations out of operation. Rice and rubber are traditionally the principal exports of Cambodia, but exports have fallen sharply since the onset (1970) of the civil war. Inadequate transportation hampers exploitation of the country's vast forests. Mineral resources are limited, phosphate rock, limestone, semiprecious stones, and salt are extracted. The country's industries are based primarily on the processing of agricultural, fish, and timber products. Cambodian industry has relied on considerable foreign capital, the People's Republic of China financed the construction of textile, plywood, paper, glass, and cement factories, and Czechoslovakia supplied a sugar refinery and tire and tractor-assembly plants. In the early 1970s, Cambodia accepted foreign aid from the United States as well as from Japan, Australia, New Zealand, Great Britain, Thailand, and Malaysia. Enormous amounts of U.S. military and economic aid financed the government's fight against insurgency. A major U.S. peacetime project was the construction of a four-lane highway linking Phnom Penh with the new seaport (completed 1960) of Kompong Som (formerly Sihanoukville) on the Gulf of Siam. Cambodia is connected by road systems with Thailand, Laos, and South Vietnam, waterways are an important supplement to the roads. The country has two rail lines, one extending from Phnom Penh to the Thai border and the other from Phnom Penh to Kompong Som. One of the few underpopulated countries of SE Asia, Cambodia is inhabited by Cambodians (or Khmers), who comprise about 85% of the population. There are large minorities of Vietnamese and Chinese, other ethnic groups include the Cham-Malays and the hill tribesmen. Hinayana Buddhism is the state religion and about 90% of the people are Buddhists, the Cham-Malays are Muslims. Khmer is the national language, but French is widely used. **History.** The Funan empire was established in what is now Cambodia in the 1st cent. A.D. By the 3d cent. the Funanese, under the leadership of Fan Shih-man (reigned 205-25), had conquered their neighbors and extended their sway to the lower Mekong River

In the 4th cent., according to Chinese records, an Indian Brahman extended his rule over Funan, introducing Hindu customs, the Indian legal code, and

the alphabet of central India. In the 6th cent. Khmers from the rival Chen-la state to the north overran Funan. With the rise of the KHMER EMPIRE, Cambodia became dominant in SE Asia. After the fall of the empire (15th cent.), however, Cambodia was the prey of stronger neighbors. To pressure from Siam on the western frontier was added in the 17th cent. pressure from ANNAM on the east, the kings of Siam and the lords of Hue alike asserted overlordship and claims to tribute. In the 18th cent. Cambodia lost three western provinces to Siam and the region of COCHIN CHINA to the Annamese. Intrigue and wars on Cambodian soil continued into the 19th cent., and in 1854 the king of Cambodia appealed for French intervention. A French protectorate was formally established in 1863, and French influence was consolidated by a treaty in 1884. Cambodia became part of the Union of INDOCHINA in 1887. In 1907 a French-Siamese treaty restored Cambodia's western provinces. In World War II, under Japanese occupation, Cambodia again briefly lost those provinces to Siam. In Jan., 1946, France granted Cambodia self-government within the French Union, a constitution was promulgated in May, 1947. A treaty signed in 1949 raised the country's status to that of an associated state in the French Union, but limitations on the country's sovereignty persisted. King Norodom Sihanouk campaigned for complete independence, which was finally granted in 1953. Early in 1954, Communist VIET MINH troops from Vietnam invaded Cambodia. The GENEVA CONFERENCE of 1954 led to an armistice providing for the withdrawal of all foreign forces from Cambodia. An agreement between France and Cambodia (Dec., 1954) severed the last vestige of French control over Cambodian policy. Cambodia withdrew from the French Union in 1955 and was admitted into the United Nations later that year. King Norodom Sihanouk abdicated in March, 1955, in order to enter politics, his father, Norodom Suramarit, succeeded him as monarch. Sihanouk subsequently formed the Popular Socialist party and served as premier. After Suramarit's death in 1960, the monarchy was represented by Sihanouk's mother, Queen Kossamak Nearireak. Sihanouk was installed in the new office of chief of state. Throughout the 1960s, Sihanouk struggled to keep Cambodia neutral as the neighboring countries of Laos and South Vietnam came under increasing Communist attack (see VIETNAM WAR). Sihanouk permitted the use of Cambodian territory as a supply base and refuge by North Vietnamese and VIET CONG troops while accepting military aid from the United States to strengthen his forces against Communist infiltration. In 1963, Sihanouk accused the United States of supporting antigovernment activities and renounced all U.S. aid. Following a series of border incidents involving South Vietnamese troops, Cambodia in 1965 severed diplomatic relations with the United States. Sihanouk remained on friendly terms with the Communist countries, especially Communist China, and established close relations with France. Economic conditions deteriorated after the renunciation of U.S. aid, and North Vietnamese and Viet Cong troops continued to infiltrate. In the spring of 1969 the United States instituted aerial attacks against Communist strongholds in Cambodia, these bomb-

ings, carefully kept secret from the American people, later became an important issue in US politics. As Communist infiltration increased, Sihanouk began to turn more toward the West, and in July, 1969, diplomatic ties with the United States were restored. Relations with South Vietnam and Thailand, after years of border disputes and incidents, began to improve. In Aug., 1969, Lt. Gen. Lon Nol, the defense minister and supreme commander of the army, became premier, with Sihanouk delegating considerable power to him. Sihanouk began negotiating for the removal of Viet Cong and North Vietnamese troops, who now numbered over 50,000 and occupied large areas of Cambodia. His actions, however, were not enough to ease the growing concern of many army leaders. Discontent with Sihanouk's rule was further heightened by rising inflation, ruinous financial policies, and governmental corruption and mismanagement. On March 18, 1970, while Sihanouk was in Moscow seeking help against further North Vietnamese incursions, premier Lon Nol led a right-wing coup deposing Sihanouk as chief of state. Sihanouk subsequently set up a government-in-exile in Peking. Soon after the coup, Cambodian troops began engaging Communist forces on Cambodian soil. In April, 1970, US and South Vietnamese troops entered Cambodia to attack Communist bases and supply lines. US ground forces were withdrawn by June 30, but South Vietnamese troops remained, occupying heavily populated areas. The actions of the South Vietnamese troops in Cambodia and the resumption of heavy US air bombings in their support, with the inevitable destruction of villages and killing of civilians, alienated many Cambodians and may have created considerable sympathy for the Communists. The number of Cambodian Communists (known as the Khmer Rouge) increased from about 3,000 in March, 1970, to over 30,000 within a few years. Most of the North Vietnamese and Viet Cong troops were able to withdraw, leaving in progress a raging civil war fought by Cambodians but financed by the United States, North Vietnam, and Communist China. On Oct. 9, 1970, the national assembly declared Cambodia a republic and changed the country's name to the Khmer Republic. By that time, however, the national government controlled less than one third of Cambodia's total land area. Phnom Penh, most of the provincial capitals, and the central plain S of Tonle Sap. Despite extensive US military aid, the insurgents retained firm control of the northeast provinces and most of the countryside. In Feb., 1971, Lon Nol suffered a paralytic stroke and vice premier Sisowath Sirik Matak assumed power (although Lon Nol technically remained premier). Fighting between government and insurgent forces became increasingly savage and bitter, culminating in a major government defeat (Dec., 1971) on a highway N of Phnom Penh, after which most of Cambodian territory E of the Mekong River fell to the insurgents. In 1972 student agitation in Phnom Penh for the removal of Sisowath Sirik Matak from power led to the resignation (March 10) of chief of state Cheng Heng, who transferred his post to the ailing Lon Nol. Two days later Lon Nol dissolved the government and declared himself president as well as chief of state and commander in chief. A new constitution providing for a presidency was approved by popular referendum in April, and Lon Nol was formally elected president in June, 1972, the defeated candidates charged irregularities in the election. Meanwhile, more and more territory fell into Communist hands, despite intensive US bombing attacks which persisted until the halt imposed by the US Congress in Aug., 1973. The government's military position became desperate, with government forces concentrating primarily on keeping communications open with an increasingly beleaguered Phnom Penh. In Sept., 1972, severe food shortages in Phnom Penh sparked two days of rioting and large-scale looting, in which government troops participated. Lon Nol, aided by his brother Lon Non, exerted an increasingly oppressive rule, with massive political arrests and newspaper seizures. US pressure for a more representative government finally resulted (April, 1973) in the appointment of a member of the opposition party, In Tam, to the premiership, but the experiment was short-lived. In Tam resigned in Dec., 1973 and was succeeded by Long Boret of the ruling party. The Khmer Rouge insurgents launched a large-scale attack against Cambodia's third largest city, Kompong Cham, in Sept., 1973, and shelled Phnom Penh in 1974 and early 1975, inflicting heavy civilian casualties. Before the country was torn by civil war the government had made great strides in expanding educational facilities. Cambodia has

about ten institutions of higher learning, including the National Univ. of Phnom Penh, the Univ. of Fine Arts, and the Technical Univ., all in Phnom Penh, and technical universities in Battambang, Kompong Cham, and Takeo. See M. F. Herz, *A Short History of Cambodia* (1958), D. J. Steinberg et al., *Cambodia* (1959), R. M. Smith, *Cambodia's Foreign Policy* (1965), Michael Leifer, *Cambodia, The Search for Security* (1967), F. P. Munson et al., *Area Handbook for Cambodia* (1968), Milton Osborne, *The French Presence in Cochinchina and Cambodia* (1969), Maslyn Williams, *The Land in Between: The Cambodian Dilemma* (1970).

Cambodian art and architecture: see ANGKOR and KHMER EMPIRE

Cambon, Jules Martin (zhul martān' kaNbōN'), 1845-1935, French diplomat, brother of Pierre Paul Cambon. He served (1891-96) as governor general of Algeria, where he pursued a conciliatory policy and was largely responsible for the decree (1896) establishing administrative autonomy for Algeria. In 1897 he was made ambassador to the United States, and he mediated the peace preliminaries of the Spanish-American War. He was ambassador at Madrid (1902-7) and at Berlin (1907-14), and from 1920 to 1922 he was chairman of the Council of Ambassadors, the group charged with overseeing the enforcement of the Treaty of Versailles (1919). His political works include *The Diplomatist* (tr. 1931). See biography by Genevieve Tabouis (tr. 1938).

Cambon, Pierre Joseph (pyēr zhōzēf'), b. 1754 or 1756, d. 1820, French financier and revolutionary. A merchant of Montpellier, he became a member of the Legislative Assembly and the Convention, and he guided the financial policy of the Revolution from Oct., 1791, to April, 1795. He refunded the debt, calling in all old government bonds (both royal and revolutionary), and issuing new certificates at 5%, that put a halt to wild speculation in bonds. His measure also freed the government temporarily from repaying the principal on the debt. Advocating war to "free" Europe, he advanced the policy of exploiting conquered territory. His fiscal program, which failed to halt inflation, was attacked by Maximilien ROBESPIERRE, whose fall was partly caused by Cambon's countercharges. Cambon was distrusted by the Thermidorians, and his career ended after his brief triumph. He was exiled after the Bourbon restoration.

Cambon, Pierre Paul (pōl), 1843-1924, French diplomat, brother of Jules Martin Cambon. Named resident minister to Tunis in 1882, he conceived and organized the new Tunisian protectorate under the bey. As ambassador to Great Britain (1898-1920), he helped to create the Entente Cordiale (1904) and the Anglo-Russian agreement of 1907, and he encouraged Great Britain to enter World War I (see TRIPLE ALLIANCE and TRIPLE ENTENTE). He was one of the most able diplomats in French history.

Camborne-Redruth (kām'bōrn, -būrn, rēd'rōth), urban district (1971 pop. 42,029), Cornwall, SW England. The neighboring urban districts of Camborne and Redruth were combined in 1934. Tin and copper mines in the area have been greatly depleted, but rock drills and mining machinery are made in the district, and the School of Metalliferous Mining is in Camborne. John Wesley preached to outdoor gatherings near the present mines. At the summit of Carn Brea hill are prehistoric remains.

Cambrai (kaNbrā'), city (1968 pop. 39,922), Nord dept., N France, a port on the Escaut (Scheldt) River. It has long been known for its fine textiles and gave its name to cambric, first manufactured there. Clay, metal, and wood products are also manufactured in Cambrai. An episcopal see since the 4th cent., and seat of an archdiocese since the 16th cent., Cambrai and the surrounding county of Cambresis were ruled by the bishops under the Holy Roman Empire until they were seized by Spain (1595) and by France (1677). Fenelon was archbishop from 1695 to 1715. The original cathedral was destroyed in 1793. Cambrai suffered devastation in both world wars, it was occupied by the Germans from 1914 to 1918 and from 1940 to 1944.

Cambrai, League of, 1508-10, alliance formed by Holy Roman Emperor Maximilian I, King Louis XII of France, Pope Julius II, King Ferdinand V of Aragon, and several Italian city-states against the republic of Venice to check its territorial expansion. The republic was soon on the verge of ruin. Its army was defeated by the French at Agnadello (1509), most of the territories it had occupied were lost, and Maximilian entered Venetia. The republic had to make concessions to the pope and to Ferdinand. In 1510 the pope became reconciled to Venice and began

forming the HOLY LEAGUE against France. The republic emerged from the war having suffered serious losses but by no means crushed.

Cambrai, Treaty of, called the **Ladies' Peace**, treaty negotiated and signed in 1529 by Louise of Savoy, representing her son Francis I of France, and Margaret of Austria, representing her nephew Holy Roman Emperor Charles V. The treaty renewed the Treaty of Madrid (see FRANCIS I), except that it did not exact the surrender of Burgundy to Charles.

Cambria (kām'brēā) [Latinized form of Welsh *Cymry*=Welshmen], ancient name of Wales.

Cambrian Mountains (kām'brēān), rugged upland plateau occupying most of Wales, Aran Fawddwy (2,970 ft/905 m) is the highest point in the mountains. The area has deep lakes and is cut by numerous river valleys, the Wye and Severn rivers rise there. Sheep grazing is the principal economic activity.

Cambrian period [Lat. *Cambria*=Wales], first period of the Paleozoic geologic era (see GEOLOGIC ERAS, table). It was named by the English geologist Adam Sedgwick, who first studied (1831-35) in NW Wales the great sequence of rocks characteristic of the period. Comprising mainly sedimentary rock, i.e., conglomerate, sandstone, shale, and limestone, they were formed in shallow seas that covered large areas of North America, Europe, and Asia. In the United States, Lower Cambrian, or Waucobian, formations are found chiefly in the Appalachian and Cordilleran geosynclines, or downward thrusts of the earth's crust, which were then arms of a sea, the most notable deposits are the sandstone near Waucoba Springs, S Calif., and the thick strata, or layers, of conglomerate and sandstone in Georgia, Tennessee, and North Carolina. Middle Cambrian, or Albertan, formations are rare in the Appalachian region, which was above water in the Middle Cambrian, but they are found in New Brunswick, near Brantree, Mass., and throughout the Cordilleran region. In the Upper Cambrian, or Croixian, epoch, the shallow seas spread over a great part of the continent, depositing, among other formations, the St. Croix sandstone of Wisconsin and the upper Mississippi valley, some of the Arbuckle limestone of Oklahoma, and the Potsdam sandstone on the northern slope of the Adirondacks and elsewhere. In the USSR the Cambrian beds are remarkable in that they comprise mostly undisturbed and unconsolidated sand and clay despite their great age. The Cambrian rocks are notable as the first to contain many easily recognizable fossils. The known Cambrian fauna—all marine—includes every phylum of invertebrates, the possibility that vertebrate fossils may be found cannot be excluded. The dominant animal was the trilobite, and the various rock series are distinguished according to the different genera of trilobites they contain. Brachiopods, snails, and sponges were also common. The seemingly abrupt appearance of such a highly developed and diversified fauna is best explained by the assumption that more primitive forms flourished during the interval between the close of the Precambrian era and the beginning of the Cambrian, of which all geologic record has been destroyed by erosion.

Cambridge (kām'brīj), municipal borough (1971 pop. 98,519), county town of Cambridgeshire and Isle of Ely, E central England, on the Cam River. It is an ancient market town, and although light industries such as the manufacture of agricultural tools, precision instruments, radios, and cement have developed on the outskirts, the town is most famous as the site of CAMBRIDGE UNIV. Originally the site of a Roman fort, the town was an administrative and trading center in Anglo-Saxon times. William I built a fort and mint there. Two monastic establishments were built in early medieval times. The university was founded in the 13th cent. The present town still maintains much of its medieval atmosphere and appearance. There are many old inns, hostels, houses, winding streets, and narrow passages that have not altered greatly with time. Cambridge abounds in medieval churches, the most important of which are St. Benet's or Benet's, the oldest, dating back to the late Saxon period, St. Edward's (begun 12th cent.), where Hugh Latimer preached, St. Mary the Great (1478), the university church, and the Church of the Holy Sepulchre, one of the four Norman round churches in England. In 1974, the borough became part of the newly reorganized nonmetropolitan county of Cambridgeshire.

Cambridge, 1 City (1970 pop. 11,595), seat of Dorchester co., E Md., Eastern Shore, a port of entry on the Choptank River at its mouth on Chesapeake Bay, founded 1684, inc. as a city 1884. The state's second largest deepwater port (after Baltimore), it is a fish

ing and yachting center. The city has shipyards, sea-food and vegetable canneries, and electronic, clothing, and printing industries. The Meredith house (1760) there is headquarters for the county historical society. Nearby Old Trinity Church (c 1675, restored 1960) is said to be the oldest church in the United States still in use. 2 City (1970 pop 100,361), seat of Middlesex co., E Mass., across the Charles River from Boston, settled 1630 as New Towne, inc. as a city 1846. A famous educational and research center, it is the seat of Harvard Univ. (founded 1636), Radcliffe College, Massachusetts Institute of Technology, Lesley College, and several theological seminaries. It is also an industrial city; its manufactures include electrical machinery, scientific instruments, rubber goods, glass, wire cables, and machine shop products. Its printing and publishing industry dates from about 1639, when Stephen Daye established the first printing press in America. Cambridge was a gathering place for colonial troops, there, on July 3, 1775, Washington took command. It was the first seat of the Massachusetts constitutional convention of 1780. Craigie House (1759), which served as Washington's headquarters (1775-76), was the home of Longfellow from 1837 until his death in 1882. Other historic structures are Elmwood (1767), the birthplace and home of James Russell Lowell, the Cooper-Frost-Austin house (c 1657), and the Episcopal church (1761). Lowell, Longfellow, Mary Baker Eddy, and many other notable people are buried in Mt Auburn Cemetery. 3 Industrial city (1970 pop 13,656), seat of Guernsey co., E central Ohio, in a farm, coal, natural gas, and clay area, settled 1798 by immigrants from the Isle of Guernsey, inc. 1837. It is the trade and manufacturing center for a dairy and livestock area. Lakes and parks surround the city, and the large Salt Fork State Park is nearby. Muskingum College is to the west, in New Concord.

Cambridge Bay, Canadian government post and weather station, on the southeast shore of Victoria Island, Franklin district, Northwest Territories.

Cambridge Platform, declaration of principles of church government and discipline, forming in fact a constitution of the Congregational churches. It was adopted (1648) by a church synod at Cambridge, Mass., and remains the basis of the temporal government of the churches. It had little to do with matters of doctrine and belief. The Congregationalists of Connecticut later subscribed (1708), in the Saybrook Platform, to a more centralized church government, resembling Presbyterianism. See also CONGREGATIONALISM.

Cambridge Platonists, group of English philosophers, centered at Cambridge Univ. in the latter half of the 17th cent. In reaction to the mechanical philosophy of Thomas Hobbes this school revived certain Platonic and Neoplatonic ideas. Chief among these was a mystical conception of the soul's relation to God and the belief that moral ideas are innate in man. Although tending toward mysticism, the school also stressed the importance of reason, maintaining that faith and reason differ only in degree. The assertion of the founder of the school, Benjamin Whichcote, that "the spirit in man is the cradle of the Lord" became the motto for the entire movement. Other leading members were Ralph CUDWORTH, Henry MORE, and John SMITH. See G. R. Cragg, ed., *The Cambridge Platonists* (1968); Ernst Cassirer, *The Platonic Renaissance in England* (tr 1953, repr 1970).

Cambridgeshire and Isle of Ely, county (1971 pop 302,507), E central England. The county town is CAMBRIDGE. Most of the area is alluvial fenland, rising to the low, chalky East Anglian Hills in the south, with the Gogmagog Hills near Cambridge the most conspicuous feature. The main rivers are the Ouse, with its tributaries, and the Nene. Efforts to reclaim the fens date back to the days of Roman occupation, but in the subsequent periods of invasion by Danes, Saxons, and Normans they were abandoned. The fens were finally drained in the 17th cent. Cornelius Vermuyden, a Dutchman, completed a vast drainage project in 1653. Agriculture predominates in the county. Wheat, barley, potatoes, sugar beets, and fruits are raised, and there is market gardening. Food processing is an important industry. Among other industries are radio engineering and the manufacture of cement, bricks, and scientific instruments. The urban district of Ely has been an ecclesiastical center for centuries. Cambridge Univ. dates from the early 13th cent. In 1974, Cambridgeshire and Isle of Ely became part of the new nonmetropolitan county of Cambridgeshire.

Cambridge University, at Cambridge, England. Originating in the early 12th cent. (legend places its

origin even earlier than that of OXFORD UNIV.), Cambridge was organized into residential colleges, like those of Oxford, by the end of the 13th cent. Its colleges, with their dates of founding, are Peterhouse, or St Peter's (1284), Clare (1326), Pembroke (1347), Gonville (1348, refounded as Gonville and Caius, 1558), Trinity Hall (1350), Corpus Christi (1352), King's (1441), Queens' (1448), St Catharine's (1473), Jesus (1496), Christ's (1505), St John's (1511), Magdalene (1542, pronounced mōd'līn), Trinity (1546), Emmanuel (1584), Sidney Sussex (1596), Downing (1800), Selwyn (1882), Churchill (1960), and Fitzwilliam College (founded 1887 as a noncollegiate society, became a college 1968). The women's colleges are Girton (1869), Newnham (1873), and New Hall (1954). Girton and Newnham were pioneers in university education for women. Although women took university examinations in the 1880s and after 1921 were awarded degrees, their colleges were not admitted to full university status until 1948. Hughes Hall (1885) and St Edmund's Hall (1896) are noncollegiate institutions for undergraduates. Darwin College (1964), Wolfson College (1965, founded as University College, renamed 1973), Lucy Cavendish Collegiate Society (1965), and Clare Hall (1966) are graduate institutions. Cambridge was a center of the new learning of the Renaissance and of the theology of the Reformation, in modern times it has excelled in science. Its faculties include classics, divinity, English, architecture and history of art, modern and medieval languages, Oriental studies, music, economics and politics, history, law, philosophy, engineering, geography and geology, mathematics, biology, archaeology and anthropology, and medicine. Its famous Cavendish Laboratory of experimental physics was opened in 1873; the Cavendish professors have been outstanding names in physics. The chapel of King's College (1446), the Fitzwilliam Museum, and the botanic gardens are notable features of the university. Instruction at Cambridge is similar to the system at Oxford, except that tutors are called supervisors and the degree examination is known as the tripos. Until 1948, Cambridge Univ. sent two representatives to Parliament. The Cambridge Univ. Press dates from the 16th cent. See Edmund Vale, *Cambridge and Its Colleges* (1959), F. A. Reeve, *Cambridge* (1964), C. R. Benstead, *Portrait of Cambridge* (1968).

Cambuluc see PEKING, China.

Cambyes (kām'bī'sēz), two kings of the Achaemenid dynasty of Persia. Cambyes I was king (c 600 B.C.) of Anshan, ruling as a vassal of Media. According to Herodotus he married the daughter of the Median king Astyages, some scholars dispute this. Cambyes' son was CYRUS THE GREAT. Cambyes II, d. 521 B.C., was the son and successor of Cyrus the Great and ruled as king of ancient Persia (529-521 B.C.). He disposed of his brother SMERDIS in order to gain unchallenged rule. He invaded Egypt, defeating (525 B.C.) Psamtik at Pelusium and sacking Memphis. His further plans of conquest in Africa were frustrated, and at home an impostor claiming to be Smerdis raised a revolt. Cambyes died, possibly by suicide, when he was putting down the insurrection. Darius I succeeded him.

Camden, Charles Pratt, 1st Earl: see PRATT, CHARLES, 1ST EARL CAMDEN.

Camden, John Jeffreys Pratt, 2d Earl and 1st Marquess: see under PRATT, CHARLES, 1ST EARL CAMDEN.

Camden, William, 1551-1623, English scholar, chief historian and antiquary of Elizabethan times. His two chief works are *Britannia* (1586) and *Annales rerum Anglicarum et Hibernicarum regnante Elizabetha* [annals of affairs in England and Ireland in the reign of Elizabeth]. He was a conscientious scholar in editing old manuscripts and in collecting materials of antiquarian interest. He was also a teacher (1575-97) and headmaster (1593-97) at Westminster School and helped to revive the study of Anglo-Saxon. He wrote a Greek grammar long popular in English secondary schools and aided Sir Robert COTTON in collecting materials.

Camden, borough (1971 pop 200,784) of Greater London, SE England. Camden was created in 1965 by the merger of the metropolitan London boroughs of Hampstead, Holborn, and St Pancras. Hampstead is a residential district popular with writers and artists. John Keats, John Constable, George Du Maurier, and Kate Greenaway, as well as Karl Marx, lived there. It is also known as a piano-making center. Highgate Cemetery in Hampstead contains the graves of George Eliot, Michael Faraday, Herbert Spencer, Christina Rossetti, and Karl Marx. Within Holborn is part of Bloomsbury, another artists and writers area. Holborn also houses the BRITISH MU-

SEUM, the Univ. of London, Gray's Inn and Lincoln's Inn (see INNS OF COURT), law courts, the Royal College of Surgeons, and Hatton Garden, known for its trade. Benjamin Disraeli was born in Holborn, which is also the site of London's tallest building, the Post Office Tower. St Pancras has three famous railroad stations: Euston, King's Cross, and St Pancras.

Camden, 1 City (1970 pop 15,147), seat of Ouachita co., 5 Ark., on the Ouachita River, inc. 1847. It is a railroad and river shipping point. Its manufactures include paper, pottery, furniture, air conditioners, and house trailers. 2 Industrial city (1970 pop 102,551), seat of Camden co., W N J., a port of entry on the Delaware River opposite Philadelphia, settled 1681, inc. 1828. The arrival of the Camden and Amboy RR in 1834 spurred the city's growth as a commercial, shipbuilding, and manufacturing center. Some of its present large industries had their beginnings in the 19th cent. Richard Esterbrook in 1858 opened a steel-pen factory, and the Campbell canned-foods company originated in 1869. Other manufactures are electric and electronic goods, and paper and wood products. Walt Whitman's home is preserved, and the poet is buried in the city, where he lived from 1873. Of interest are the Campbell Museum and the county historical society's museum in Charles 5 Boyer Memorial Hall (formerly the Joseph Cooper house, built 1726). Access to Philadelphia is via the Walt Whitman Bridge (1957) and the Benjamin Franklin Bridge (1926). Rutgers Univ. at Camden is there.

camel, hoofed ruminant of the family Camelidae. The family consists of three genera, the true camels of Asia (genus *Camelus*), the wild GUANACO and the domesticated ALPACA and llama, all of South America (genus *Lama*), and the VICUNA, also of South America (genus *Vicugna*). The two species of true camel are the single-humped Arabian camel, or dromedary, *Camelus dromedarius*, a domesticated animal used in Arabia and North Africa, and the two-humped Bactrian camel (*C. bactrianus*) of central Asia. Some wild Bactrian camels exist in Turkistan and Mongolia. The humps are storage places for fat. Camels range in color from dirty white to dark brown and have long necks, small ears, tough-skinned lips, and powerful teeth, some of which are sharply pointed. The camel uses the mouth in fighting. Adaptations to desert life include broad, flat, thick-soled cloven hoofs that do not sink into the sand, the ability to go without drinking for several days—or longer if juicy plants are available, and valvular nostrils lined with hairs for protection against flying sand. Horny pads help to protect the chest, knees, and thigh joints against injury from the hard surfaces on which the camel sleeps. Strong camels usually carry from 500 to 600 lb (230 to 270 kg) and cover about 30 mi (48 km) a day. Some Bactrian camels can transport 1,000 lb (450 kg). A light, fleet breed of dromedary is used for riding and not for bearing heavy loads. The name dromedary was formerly applied to any swift riding camel. Geologic findings indicate that the camel originated in North America, that one group migrated to Asia and the other to South America, and that both became extinct in North America probably after the glacial period. Camels are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Camelidae.

camellia (kām'ē'ya) [for G. J. Kamel], any plant of the genus *Camellia*, evergreen shrubs or small trees native to Asia but now cultivated extensively in warm climates and in greenhouses for their showy white, red, or variegated blossoms and glossy, dark-green foliage. Camellias are closely related to the tea plant, both being members of the family Theaceae (TEA family). Several species yield oil from the seeds, e.g., the widely cultivated *C. japonica* (commonly called japonica) and, especially, the Asiatic *C. sasanqua*, the source of tea-seed oil used in textile and soap manufacture and, when suitably refined, for cooking. Camellias are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Theales, family Theaceae.

Camelot (kām'əlōt), in ARTHURIAN LEGEND, the seat of King Arthur's court. The origin of the name is unknown. It has been variously located at Cadbury Camp, Somerset, Winchester, Camelford, and Caerleon.

Camembert cheese (kām'ēmbâr, Fr. kamaNbër), unpreserved rennet cheese, drained on straw mats and ripened with a penicillium mold to a creamy consistency. Made since the late 18th cent. near Camembert village, NW France, it is exported in considerable quantity.

Camēnae (kamē'nē), in Roman mythology, water nymphs gifted in prophecy. At Rome they had a sacred spring from which the vestals drew water for their rites. In later myth they were identified with the Greek Muses.

cameo (kām'ēō), small relief carving, usually on striated precious or semiprecious stones or on shell. The design, often a portrait head, is commonly cut in the light-colored vein, and the dark one is left as the background. Glass of two colors in layers may be cameo-cut, a famous Roman example is the PORTLAND VASE. The art originated in Asia as a decoration on the reverse side of seals. The Greeks were noted for their exquisite designs and cutting on jewelry and on decorations for jewel caskets, vases, cups, and candelabra. The Romans were adept cutters, and Rome remains a center of experts in this art. The art was revived during the Renaissance, and cameo jewelry was a vogue of the Victorian era.

cameo cat: see CAT

camera, lightproof box or container, usually fitted with a lens, through which an image of the scene being viewed is focused and recorded on film or some other light-sensitive material contained within. The original concept of the camera dates from Grecian times, when Aristotle referred to the principle of the *camera obscura* [Lat., =dark chamber] which was literally a dark box—sometimes large enough for the viewer to stand inside—with a small hole, or aperture, in one side. (A lens was not employed for focusing until the Middle Ages.) An inverted image of a scene was formed on an interior screen, it could then be traced by an artist. The first diagram of a camera obscura appeared in a manuscript by Leonardo da Vinci in 1519, but he did not claim its invention. The recording of a negative image on a light-sensitive material was first achieved by the Frenchman Joseph Nicéphore Niépce in

Image formed by a camera

1826, he coated a piece of paper with asphalt and exposed it inside the camera obscura for eight hours. Today there are many different types of camera in use, all of them more or less sophisticated versions of the ancient camera obscura. Nearly all of them are made up of the same basic parts: body, lens, shutter, viewfinder, and focusing mechanism. Except for pinhole cameras, which focus the image on the film through a tiny hole, all other cameras use a lens for focusing. The focal length of a lens, i.e., the distance between the rear of the lens (when focused on infinity) and the film, determines the angle of view and the size of objects as they appear on the film. The speed of a lens is indicated by reference to its maximum opening, or aperture, through which light enters the camera. This aperture, or *f-stop*, is controlled by an iris diaphragm (a series of overlapping metal blades that form a circle with a hole in the center whose diameter can be increased or decreased as desired) inside the lens. The higher the *f-stop* number, the smaller the aperture, and vice versa. A shutter controls the time during which light is permitted to enter the camera. There are two basic types of shutter—leaf-type and focal-plane. The leaf-type shutter employs a ring of overlapping metal blades similar to those of the iris diaphragm, that may be closed or opened to the desired degree. It is normally located between the lens elements but occasionally is placed behind or in front of the lens. The focal-plane shutter is located just in front of the film plane, and has one or two cloth or metal curtains that travel vertically or horizontally across the film frame. By adjusting the shutter speed in conjunction with the width of aperture, the proper amount of light (determined by using a light meter

and influenced by the relative sensitivity of the film being used) for a good exposure can be obtained. The image is focused on the film by adjusting the distance between the lens and the film. In most 35-mm cameras (among the most widely used of modern cameras) this is done by rotating the lens, thus moving it closer to or farther from the film. With twin-lens reflex and larger view cameras, the whole lens and the panel to which it is attached is moved toward or away from the film. To view the subject for composing (and, usually, to help bring it into focus) nearly every camera has some kind of viewfinder. One of the simplest types, employed in most view cameras, is a screen that is placed on the back of the camera and replaced by the film in making the exposure. This time-consuming procedure is avoided in the modern 35-mm single-lens (and other) reflex cameras by placing the screen in a special housing on top of the camera. Inside the camera, in front of the film plane, there is a movable mirror that bounces the image from the lens to the screen for viewing and focusing, and then flips out of the way when the shutter is tripped, so that the image hits the film instead of the mirror. The mirror returns automatically to place after the exposure has been made. In rangefinder cameras the subject is generally viewed by means of two separate windows, one of which views the scene directly and the other of which contains an adjustable optical mirror device. When this device is adjusted by rotating the lens, the image entering through the lens can be brought into register, at the eyepiece, with the image from the direct view, thereby focusing the subject on the film. Most of today's 35-mm cameras, both rangefinder and reflex models, incorporate a rapid film-transport mechanism, lens interchangeability (whereby lenses of many focal lengths, such as wide-angle and telephoto, may be used with the same camera body), and a built-in light meter. Many also have an automatic exposure device whereby either the shutter speed or the aperture is regulated automatically (by means of a very sophisticated solid-state electronics system) to produce the "correct" exposure. Simple box cameras, which are no longer manufactured, and most of the cameras of the Eastman Kodak Instamatic type are fixed-focus cameras with limited or no control over exposure. Twin-lens reflex cameras use one lens solely for viewing, while the other focuses the image on the film. Also very popular today are the new, compact, 35-mm rangefinder cameras, 126 cartridge cameras, and the subminiature cameras, including the new 110 "pocket" variation of the Instamatic type and the sophisticated Minox, which uses 9.5-mm film. Other categories in use include roll- and sheet-film single-lens reflex (SLR) cameras that use 120 and larger size films, self-processing Polaroid cameras (see LAND, EDWIN H.), press cameras and view cameras that use $2\frac{1}{4} \times 3\frac{1}{4}$ in., 4×5 in., 5×7 in., 8×10 in., and 11×14 in. film sizes, stereo cameras, the double slides from which require a special viewer, and various special types such as the super wide-angle and the panoramic cameras. (The numbers 110, 120, and 126 are film-size designations from the manufacturer and do not refer to actual measurements.) See PHOTOGRAPHY, STILL. The motion picture camera comes in a variety of sizes, from 8 mm to 35 mm, but all operate on the same basic principles. Exposures are usually made at a rate of 18 or 24 frames per second (fps), which means that as the film goes through the camera it stops for a very brief moment to expose each frame. This is accomplished in nearly all movie cameras by a device called a rotary shutter—basically a half-circle of metal that spins, alternately opening and closing an aperture, behind which is located the film. To make the film travel along its path and hold still for the exposure of each frame, a device called the claw is required. This is another small piece of metal that alternately pops into the sprocket holes or perforations in the film, pulls the film down, then retracts to release the film while the frame is being exposed, and finally returns to the top of the channel in which it moves to grasp the next frame. The movement of the shutter and claw are synchronized, so that the shutter is closed while the claw is pulling the frame downward and open for the instant that the frame is motionless in its own channel or gate. Motion picture film comes in spools or cartridges. The spool type, employed mostly in 16- and 35-mm camera systems, must be threaded through the camera and attached to the take-up spool by hand, whereas a film cartridge—available for most of today's popular super-8-mm systems—avoids this procedure. In all modern movie cameras the film is driven by a tiny electric motor that is powered by batteries. Lenses for movie

cameras also come in "normal," wide-angle, and long focal lengths. Some older cameras had a turret on which were mounted all three lens types. The desired lens could be fixed into position by simply rotating the turret. Many modern super-8 cameras come with a single zoom lens, incorporating many focal lengths that are controlled by moving a certain group of lens elements toward or away from the film. Most of these cameras have an automatic exposure device that regulates the *f-stop* according to the reading made by a built-in electric eye. Movie camera lenses are focused in the same way as are still cameras lenses. For viewing purposes, most of today's super-8's use a beam splitter—a partially silvered reflector that diverts a small percentage of the light to a ground-glass viewfinder, while allowing most of the light to reach the film. Other cameras have a mirror-shutter system which transmits all the light, at intervals, alternately to film and viewfinder. Many of the super-8 cameras also contain some kind of rangefinder, built into the focusing screen, for precise focusing. Although various kinds of devices for making pictures in rapid succession had been employed as early as the 1860s, the first practical motion picture camera—made feasible by the invention of the first flexible (paper base) films—was built in 1887 by E. J. Marey, a Frenchman. Two years later Thomas Edison invented the first commercially successful camera. However, cinematography was not accessible to amateurs until 1923, when Eastman Kodak produced the first 16-mm reversal safety film, and Bell & Howell introduced cameras and projectors with which to use it. Systems using 8 mm film were introduced in 1923, super-8, with its smaller sprocket holes and larger frame size, appeared in 1965. See MOTION PICTURE PHOTOGRAPHY. See *The Encyclopedia of Photography* (1971), *The Focal Encyclopedia of Photography* (rev. ed. 1972), David MacLoud, *Peterson's Guide to Movie Making* (1973).

Camerarius, Rudolph Jacob (kāmarār'ēas, Ger. rōō'dōlf ya'kōp kamara'rēōōs), 1665–1721, German botanist and physician. The first to present a clear and definite picture of sex in plants, Camerarius based his conclusions on careful experiments and observations. He described the stamen as the male organ and the ovary as the female organ and emphasized their relationship to the formation of seeds. He became a professor at the Univ. of Tübingen in 1688.

Cameron, Andrew Carr, 1834–90, American labor leader, b. Berwick-on-Tweed, England. He worked as a printer in Chicago, where he became interested in the labor movement. In the *Workingmen's Advocate*, which he edited from 1864 to 1877, he strongly advocated independent political action by labor. Cameron helped found the National Labor Union in 1866 and was its delegate to the convention of the International Workingmen's Association in Basel in 1869. He was president of the Chicago Trades Assembly, the Grand Eight Hour League, and the Illinois State Labor Association.

Cameron, John, c. 1579–1625, Scottish scholar and theologian. As teacher, lecturer, and preacher at Bordeaux, Saumur, and other cities on the Continent, he came to be celebrated for his learning and ability. He was appointed (1622) principal of the Univ. of Glasgow by James I of England, but his belief in the divine right of kings and his stand for passive obedience made it impossible for him to remain in this post long. Returning to France after less than a year, he became (1624) professor of divinity at Montauban. Not long afterward he was attacked by an enemy of the doctrine of passive obedience and died. His writings, in Latin and French, were largely concerned with his views on man's free will and the grace of God. Those who held the same opinions were sometimes known as Camerionites and practiced a moderate form of Calvinism. His collected works were published in 1642, with a memoir by Louis Cappel.

Cameron, Julia Margaret, 1815–79, English pioneer photographer, b. Calcutta. Born and married into the high ranks of the British Civil Service, Cameron became an intimate of many of the most famous people of her day. In 1864 she became an ardent amateur photographer, demanding long, arduous sittings from her illustrious friends. She sought to illuminate the inner person of her subject, and her celebrated portraits, including those of Tennyson, Carlyle, Ellen Terry, and Longfellow, are remarkably spontaneous. Some of her works were published as *Victorian Photographs of Famous Men and Fair Women* (rev. ed. 1973). See biographies by Helmut Gernsheim (2d ed. 1969) and Brian Hill (1973).

Cameron, Richard, 1648–1680, Scottish leader of the Cameronians, an extreme group of COVENANTERS. In 1672, under the influence of the open-air preacher John Welch, he became a Covenanter preacher and was known for his eloquence. Strongly opposing the measures aimed at reestablishing the Episcopal Church in Scotland, and objecting to any state control of the church, he led a small company who, in the Sanguhar Declaration (1680), disowned the royal authority of Charles II. A price was set on Cameron's head and within a short time he and a little band of supporters were overtaken by royal troops. Cameron and many of his group were killed. Later (1743) the Cameronians, growing in numbers, formed a presbytery, taking the name Reformed Presbyterians. This denomination is still represented by congregations in Scotland, the north of Ireland, and North America, but the greater number united (1876) with the Free Church of Scotland, which, in 1929, incorporated them in the reunited Church of Scotland. A body of Cameronians formed the nucleus (1689) of the celebrated Cameronian regiment of the British army. See biography by John Herkless (1896).

Cameron, Simon, 1799–1889, American politician and financier, b. Lancaster co., Pa. From humble beginnings he rose to be a newspaper publisher and with considerable success branched out into canal and road construction, railroad promotion, banking, and iron and steel manufacturing. His private wealth brought him influence in the Democratic party, he played a major role in winning the vice presidential nomination for Martin Van Buren in 1832 and in James Buchanan's election to the Senate the following year. Cameron was elected (1845) to Buchanan's vacated seat in the U.S. Senate but, defeated for reelection, served only until 1849. Having joined the new Republican party in 1856, he was returned (1857) to the Senate when three Democratic legislators also voted for him. In the Senate, Cameron bitterly attacked the pro-Southern policies of his former friend President Buchanan. At the Republican national convention in Chicago in 1860 he was a candidate for the presidential nomination but after the first ballot supported Abraham Lincoln, first exacting from Lincoln's managers, however, the promise of a cabinet post. Lincoln reluctantly recognized the bargain, made without his knowledge, and Cameron resigned from the Senate to serve (March, 1861–Jan., 1862) as Secretary of War. The President's worst fears were realized as notorious corruption in army contracts and appointments aroused the nation. Lincoln eased him out gracefully by appointing him minister to Russia, but Cameron resigned that post in Nov., 1862. The House of Representatives passed (April, 1862) a resolution of censure against him, but Cameron bounced back in 1867, when, in defeating Andrew H. Curtin for the Senate, he became absolute Republican boss of Pennsylvania. He retired from the Senate and from active participation in politics in 1877 but only after making sure that his son, James Donald Cameron, succeeded him in the Senate. The machine he created, later run by his son, Matthew S. QUAY, Boies PENROSE, William S. VARE, and Joseph R. Grundy successively, so dominated Pennsylvania that it was not until Franklin Delano Roosevelt's victory in 1936 that the Democrats carried the state in a national election. See biography by E. S. Bradley (1966), L. F. Crippen, *Simon Cameron: Ante-Bellum Years* (1942, repr. 1972).

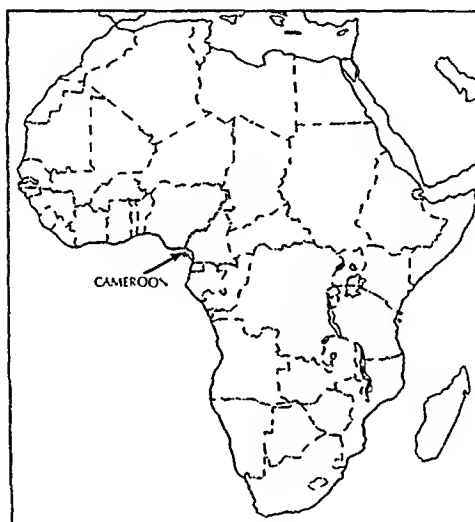

Cameron, Thomas Fairfax, 3d Baron Fairfax of. See FAIRFAX OF CAMERON, THOMAS FAIRFAX, 3d BARON.

Cameron, Verney Lovett, 1844–94, English traveler in Africa. A naval officer, he served (1868) in the British expedition against Ethiopia and assisted in the suppression of the East African slave trade. He was sent (1873) by the Royal Geographical Society to relieve Livingstone but, finding him dead, recovered his papers, explored and mapped Lake Tanganyika, and proceeded to the Atlantic, the first European to cross equatorial Africa. His expedition was recorded in *Across Africa* (1877). In 1882 he explored the Gold Coast with Sir Richard Burton and was coauthor with him of *To the Gold Coast for Gold* (1883).

Cameron of Lochiel, Donald (lòkh-ēl'), 1695?–1748, Scottish clan chieftain, known as the Gentle Lochiel, grandson of Sir Ewen Cameron. He was the first of the major chieftains to join Charles Edward Stuart, the Young Pretender, in the unsuccessful Jacobite uprising in 1745. He was wounded in the battles of Falkirk and Culloden (1746) and escaped to France with the pretender.

Cameron of Lochiel, Sir Ewen or Evan, 1629–1719, chief of the Scottish highland clan of Cameron after 1647. On behalf of Charles II he led his clan in an uprising against the Commonwealth in 1653, and only in 1658 did he submit to the Puritan general George MONCK. He accompanied Monck to London in 1660 and was received at the court of the restored Charles II. He was knighted in 1681. A supporter of James II, he took part in the Jacobite victory over the forces of William III at Killiecrankie in 1689 and sent his clan to aid the Jacobite rebellion of 1715. Lochiel was a romantic warrior of great strength, and from one of his feats Sir Walter Scott drew his description of the fight between Roderick Dhu and Fitz James in *The Lady of the Lake*.

Cameroon, United Republic of, republic (1973 est. pop. 6,100,000), 183,568 sq mi (475,442 sq km), W central Africa. It is bordered on the W by the Gulf of Guinea, on the NW by Nigeria, on the NE by Chad, on the E by the Central African Republic, on the S by the Congo Republic, Gabon, and Equatorial Guinea, and on the SW by the Bight of Biafra. YAOUNDE is the capital, and DOUALA is the largest city and main port. Cameroon is triangular in shape. A coastal strip 10 to 50 mi (16–80 km) wide in the southwest is covered with swamps and dense, tropical rain forests; it has one of the wettest climates in the world, with an average annual rainfall of 152 in (386 cm). Near the coast are volcanic peaks, dominated by Cameroon Mt. (13,354 ft/4,070 m), the highest point in the country. Beyond the coastal marshes and plains, the land rises to a densely forested plateau c. 1,000 ft (300 m) above sea level. The

interior of the country is a plateau c. 2,500 to 4,000 ft (760–1,220 m) high, where forests give way to savanna. This plateau forms a barrier between the agricultural south and the pastoral north. The extreme northern regions, near Lake Chad, are dry, thorn-bush lands. Among the many rivers that drain Cameroon are the Benue, the Wouri, the Sanaga, and the Nyong. The country consists of the former French Cameroons and the southern portion of the former British Cameroons. The French, or eastern, section constitutes four fifths of the country and supports the bulk of the population. With more than 150 ethnic groups, Cameroon has one of the most diverse populations in Africa. Bantu-speaking peoples, such as the Douala, predominate along the southern coast and in the forested areas. In the highlands are the Bamileke. Important northern groups include the Fulani and the Kirdi. Islam is the dominant religion of the northern, Arabic-influenced regions, most of the southerners are animists, although Christianity has made some converts. The north, where cattle raising is the chief occupation, is the least economically developed part of Cameroon, whose regional disparities pose a major problem for the government. Agriculture is the mainstay of the country's economy. Cameroon is one of the world's leading cocoa producers, coffee, bananas, palm products, tobacco, peanuts, and rubber, all grown mainly on plantations, are also important. Cotton production is centered in the Benue River valley. Only about 10% of the country's land is cultivated. The principal subsistence crops are bananas, cassava, plantains, peanuts, millet, sorghum, and manioc. Fishing and forestry follow agriculture as leading occupations, but the vast timber reserves remain largely untapped. Cameroon's mineral resources in-

clude gold, diamonds, bauxite, tin, and mica. Prospecting for oil and natural gas is under way. The Edea Dam on the Sanaga River provides the bulk of the country's electricity and powers a large aluminum smelter; all the finished aluminum is exported. The country's other industries are focused around agricultural processing and the manufacture of light consumer goods, an inadequate transportation system has hampered further industrialization. Cameroon's exports consist mainly of agricultural products, France being the major trading partner, followed by other members of the European Common Market. The official languages of Cameroon are French and English. Throughout history the region witnessed numerous invasions and migrations, especially by the Fulani, Hausa, Fang, and Kanuri. Contact with Europeans began in 1472, when the Portuguese reached the Wouri River estuary, and a large-scale slave trade ensued, carried on by Portuguese, Spanish, Dutch, French, and English traders. In the 19th cent., palm oil and ivory became the main items of commerce. The British established commercial hegemony over the coast in the early 19th cent., and British trading and missionary outposts appeared in the 1850s, but the English were supplanted by the Germans, who in 1884 signed a treaty with the Douala people along the Wouri estuary and proclaimed the area a protectorate. The Germans began constructing the port of Douala and then advanced into the interior, where they developed plantations and built roads and bridges. An additional area was acquired from France in 1911 as compensation for the surrender of German rights in Morocco. Two years later, German control over the Muslim north was consolidated. French and British troops occupied the region during World War I. After the war the area ceded in 1911 was rejoined to French Equatorial Africa, and in 1919 the remainder of Cameroon was divided into French and British zones, which became League of Nations mandates. Little social or political progress was made in either area, and French labor practices were severely criticized. Both mandates, however, remained loyal to the Allies in World War II. In 1946 they became United Nations trust territories. In the 1950s guerrilla warfare raged in the French Cameroons instigated by the radical nationalist Union of the Peoples of the Cameroons, which demanded immediate independence and union with the British Cameroons. France granted self-government to the French Cameroons in 1957 and internal autonomy in 1959. On Jan. 1, 1960, the territory became independent, with Ahmadou Ahidjo as its first president. The British-administered territory was divided into two zones, both administratively linked with Nigeria. In a UN-sponsored plebiscite in early 1961, the northern zone voted for union with Nigeria, and the southern zone voted for incorporation into Cameroon, which was subsequently reconstituted as a federal republic with two prime ministers and legislatures but a single president. National integration proceeded gradually. In 1966 the dominant political parties in the east and west merged into the Cameroon National Union (CNU). In 1972 the population voted favorably on a national referendum to adopt a new constitution setting up a unitary state to replace the federation. A presidential form of government was retained. Cameroon is a one-party state, with the CNU in control. There is a 120-member national assembly. See W. R. Johnson, *The Cameroon Federation* (1970), V. T. LeVine, *The Cameroon Federal Republic* (1971), N. N. Rubin, *Cameroon* (1972).

Cameroon Mountain (kām'arōn), active volcano, 13,354 ft (4,070 m) high, in the Cameroon Highlands, W Cameroon, highest point in W Africa. The western side of the mountain receives an average annual rainfall of more than 400 in (1,016 cm) and is covered with tropical rain forest. Cocoa, banana, rubber, and tea plantations are found on the lower slopes.

Cameroons, fr. *Cameroon*, Ger. *Kamerun*, former German colony, W Africa, on the Gulf of Guinea and extending N to Lake Chad. Germany's penetration of the area began in 1884 and by 1902 its possession was recognized. A portion of French Equatorial Africa was added in 1911 in return for the surrender of German rights in Morocco. In World War I, French and British troops occupied the Cameroons. After the war the territory ceded in 1911 was rejoined to French Equatorial Africa, and in 1919 the remainder of the Cameroons was divided into French and British zones, which became mandates under the League of Nations. In 1946 the mandates were made trust territories of the United Nations. British Cameroons consisted of two noncontiguous

sections lying on the eastern border of Nigeria, the more southerly extended to the coast. French Cameroons was administered as a separate territory with the capital at Yaounde. In 1960, French Cameroons became the Cameroon Republic, in 1961 the southern section of British Cameroons was joined to the Cameroon Republic to form the Federal Republic of Cameroon (United Republic of Cameroon after 1972), while the northern section passed to Nigeria.

Camillus (Marcus Furius Camillus) (kāmīl'ās), d. 365? B.C., Roman hero. He was a patrician who, the Roman historians say, was elected dictator five times (396, 390, 386, 368, 367 B.C.) and on each occasion won a signal victory. He captured Veii, saved Rome from the Gauls, defeated the Aequi and Volscians, took Praeneste (the modern Palestrina), and defeated the Gauls at Alba Longa. Modern historians do not accept in full the traditional account of Camillus' victories.

Camisards (kām'isardz, Fr. kamēsar'), Protestant peasants of the Cévennes region of France who in 1702 rebelled against the persecutions that followed the revocation (1685) of the Edict of Nantes (see NANTES, EDICT OF). The name was probably given them because of the shirts they wore in night raids. Led by the young Jean CAVALIER and Roland LAPORTE, the Camisards met the ravages of the royal army with guerrilla methods and withstood superior forces in several battles. In 1704, Marshal Villars, the royal commander, offered Cavalier vague concessions to the Protestants and the promise of a command in the royal army. Cavalier's acceptance broke the revolt, although others, including Laporte, refused to submit unless the Edict of Nantes was restored, scattered fighting went on until 1710. See A. E. Bray, *The Revolt of the Protestants of the Cévennes* (1870), H. M. Baird, *Huguenots and the Revocation of the Edict of Nantes* (1895).

Cammaerts, Émile (āmēl' kāmarts), 1878-1953, Belgian poet. In 1908 he settled in England, becoming a professor at the Univ. of London in 1933. His poetry of World War I, which appeared in French, was translated and collected in *Belgian Poems* (1915) and *New Belgian Poems* (1916). Later works, in English, include *Upon This Rock* (1943), a poignant character sketch of a son killed in the war, and volumes on Belgian history and culture.

Camões or Camoens, Luís de (both lōōēsh' dī kāmōiNsh'), 1524?-1580, Portuguese poet, the greatest figure in Portuguese literature. Born of a poor family, Camões gained wide familiarity with classic literature at the Univ. of Coimbra. It is thought that he fell in love with a lady of the Lisbon court, Dona Caterina de Ataíde, who became the inspiration for his fiery love poems. Banished from court in 1546 because of this romance, he served as a soldier in a Moroccan campaign, where he lost an eye. After his return from Africa he was imprisoned in 1552 for wounding a minor court aide in a street fight. He was released the next year after consenting to serve in India. Apparently he had already begun his most celebrated work, *The Lusads* [Port. *Os Lusíadas*=sons of Lusus, i.e., the Portuguese] (1572), but this journey may have caused him to make Vasco da Gama's voyage over the same route the central theme of his epic. After fighting in India, Camões was given an official post at Macao in China. In 1558 charges were brought against him for maladministration at Macao, and he was put aboard a ship for Goa in India. The ship was wrecked, but he managed to save his manuscript for *The Lusads*, and he returned to Portugal in 1570 by way of Mozambique. The publication of his epic won him a meager royal pension. Camões's last years were spent in poverty, and in 1580 he died in obscurity, although his work had begun to enjoy world fame. By 1655 it had appeared in English in a version by Sir Richard Fanshawe. Although modeled on Vergil and showing the influence of Ariosto, it is imitative of neither and is a great epic in its own right. The beauty of its poetry is enlivened by a vigorous and realistic narrative that embraces not only the voyage of Vasco da Gama but also much of Portuguese history. Apart from *The Lusads*, however, Camões's flawlessly crafted sonnets and lyrics would have won him lasting fame. See J. D. M. Ford's edition of *The Lusads* with English notes to accompany the Portuguese text (1946), study by H. H. Hart (1962).

camomile: see CHAMOMILE

Camon (kām'ōn), unidentified place. Judges 10:5

Camorra (kāmōr'a), Italian secret criminal association in Naples. Of controversial origin, it first came to light in 1830. Its activities spread by intimidation, blackmail, and bribery until Naples was controlled by the hierarchical organization, which even sold its

electoral backing and had its own parliamentary deputies. The Camorra appears to have been used by the Bourbon rulers of Naples as a quasi-police network to crush opposition. Efforts to break the power of the Camorra, begun in the 1880s, culminated in the 1911 murder trial at which numerous members were convicted. The Camorra was suppressed after Benito Mussolini's takeover in 1922.

camouflage (kām'āflazh), in warfare, the disguising of objects with artificial aids, especially for the purpose of making them blend into their surroundings or of deceiving the observer as to the location of strategic points. The principle, of course, is observed in the world of nature (see PROTECTIVE COLORATION) and has long been used by man. Scientific camouflage was greatly developed in World War I, when the French, in particular, used elaborate devices to conceal military objectives and industrial plants. False landscapes were created, using wire screens as a foundation for foliage, and ships were dazzle-painted to conceal their course by distortion of perspective. In World War II camouflage was further developed and was used on a large scale by all belligerents. With the development of RADAR and AERIAL PHOTOGRAPHY during that war, camouflage diminished greatly in utility, however, camouflage again became important, particularly in the guerrilla campaigns of the Vietnam War.

Camp, Walter Chauncey, 1859-1925, American football expert, b. New Britain, Conn., grad. Yale, 1880. He was a prominent athlete at Yale, where he was football coach after 1888, later, Camp became athletic director. Often called the father of American football, he had a leading role in developing the game and shaping its rules. Camp originated (1889), with Caspar W. Whitney, the practice of choosing an All-American football team. In World War I he adapted for use in training camps the calisthenics known as the daily dozen. He wrote more than 30 books on football and physical fitness.

Campagna di Roma (kampa'nyā dē rō'mā), low-lying region surrounding the city of Rome, c. 800 sq. mi. (2,070 sq. km), Campania, central Italy. A favorite residential area in Roman times, it was later largely abandoned for centuries because of the prevalence of malaria and the lack of sufficient water for cultivation. Much of the region was reclaimed in the 19th and 20th cent. It is now used to grow crops and to pasture cattle, new settlements have been founded. There are remains of Roman aqueducts and tombs.

Campagnola, Domenico (dōmē'nēkō kampa'nyō-lā), 1500?-c. 1564, painter and engraver. Although Campagnola worked exclusively in Italy, there are documents indicating that he was of German origin. He was a pupil and the adopted son of Giulio Campagnola, and he may have assisted Titian in the decorating of the Scuola del Santo. He painted chiefly in the churches of Padua. His best-known works are three frescoes in the Scuola del Carmine, Padua, *Four Prophets* (Academy, Venice), and *Holy Family* (Pitti Palace, Florence). His composition and warmth of color indicate his debt to Titian. Campagnola is celebrated also for his engravings, woodcuts, and masterly pen-and-ink drawings, which resemble Titian's closely in their clear linear quality and deep shading. Examples are in the Uffizi and in the British Museum.

Campagnola, Giulio (jōō'lyō), b. c. 1482, d. after 1513, Italian painter and engraver. He painted miniatures and altarpieces but is best known for his finely executed engravings, many of them after the works of Giovanni Bellini and Giorgione.

campaign, political, organized effort to secure nomination and election of candidates for government offices. In the United States, the most important political campaigns are those for the nomination and election of candidates for the offices of President and Vice President. In each political party such nominations are made at a national CONVENTION preceding the presidential election. The contending parties are organized with a national chairman at the head of an elaborate system of national, state, and local committees. The committees have campaigns to run at all levels, but nothing else approaches the effort made in presidential campaigns. The costs have become enormous, political advertising, especially television, being the greatest expense. As a result, parties and candidates need to raise many millions of dollars. Financial contributions by corporations, individuals, and Federal employees, as well as expenditures by the parties' national committees have been restricted by law. Closer regulation of contributions was established

by Congress in 1972 and again in 1974, when a measure of public financing was allowed for. In Great Britain the system of parliamentary government permits the overthrow of the cabinet by a vote of no confidence at any time, and, compared with U.S. congressional elections, this results in a more unified party campaign. British parliamentary and local elections are never held concurrently, campaigns are short and intensive, and party expenditures are comparatively very moderate and are fixed by law. See V. O. Key, *Politics, Parties and Pressure Groups* (5th ed. 1964), N. W. Polsky, *Presidential Elections* (3d ed. 1971), D. D. Dunn, *Financing Presidential Elections* (1972), H. E. Alexander, *Money in Politics* (1972).

Campan, Jeanne Louise Henriette (zhān lwēz aNreēt' kaNpāN'), 1752-1822, French educator and author. She served as a reader to Louis XV's daughters and as lady-in-waiting to Marie Antoinette. In 1792 she founded a school for girls at Saint-Germain, which Hortense de Beauharnais attended, and directed it until her appointment (1806) as principal of the academy established by Napoleon at Écouen. She retired in 1814. Among her works, published posthumously, are *Memoires sur la vie privée de Marie Antoinette* (1823), *Journal anecdotique* (1824), and *Correspondance inédite avec la reine Hortense* (1835).

Campana, Pedro: see KEMPENER, PIETER DE

Campanella, Tommaso (tōm-ma'zō kāmpanēllā), 1568-1639, Italian Renaissance philosopher and writer. He entered the Dominican order at the age of 15, and although he was frequently in trouble with the authorities, he never left the church. Imprisoned in 1599 on the grounds that he was plotting against the Spanish rule of Naples, he was released in 1626 on the representation of Pope Urban VIII. His best-known work is *Civitas solis* (1623, tr. *The City of the Sun*), an account of a utopian society that closely follows the pattern of Plato's *Republic*. Although he retained much of scholasticism and insisted on the preeminence of faith in matters of theology, he emphasized perception and experiment as the media of science. His importance, like that of Francis Bacon and Bruno, depends largely on his anticipation of what came to be the scientific attitude of empiricism. For his *Civitas solis*, see Henry Morley, ed., *Ideal Commonwealths* (1890). See biography by B. M. Bonansea (1969).

Campania (kampa'nyā), region (1971 pop. 5,054,822), 5,249 sq. mi. (13,595 sq. km), central Italy, extending from the Apennines W to the Tyrrhenian Sea and from the Garigliano River S to the Gulf of Policastro. It includes the islands of Capri, Ischia, and Procida. NAPLES is the capital of Campania, which is divided into Benevento, Caserta, Naples, and Salerno provs. (named for their capitals). The central coast of the region is mostly high and rocky, with volcanic ridges and the crater of Vesuvius. However, the northern and southern coastal areas are fertile plains, famous since ancient times for their agricultural output. The interior of Campania is mountainous. Farm products of the region include grapes, citrus fruit, olives, apricots, grain, and vegetables. Industry is mostly clustered along the shore of the Bay of Naples; manufactures include textiles, shoes, chemicals, pharmaceuticals, refined petroleum, metal goods, wine, and motor vehicles. There is also a thriving tourist industry. Various Italic tribes, Greek colonists, Etruscans, and Samnites lived in the region before it was conquered (4th-2d cent. B.C.) by Rome. In Roman times the term *Campania* referred mainly to Naples and its surrounding area. After the fall of Rome the Goths and the Byzantines occupied the region, it later became part of the Lombard duchy of Benevento (except Naples and Amalfi, which were independent republics). In the 11th cent. the Normans conquered Campania, and in the 12th cent. it became part of the kingdom of Sicily. Naples soon rose to prominence, and after the SICILIAN VESPERS revolt (1282) it was made the capital of a separate kingdom. For the later history of Campania, see NAPLES KINGDOM OF and TWO SICILIES KINGDOM OF THE. In World War II there was heavy fighting around Naples after the Allied landing (Sept., 1943) at SALERNO. There is a university at Naples.

campanile (kāmpanē'lē, Ital. kampa'nē'lā), Italian form of bell tower, constructed chiefly during the Middle Ages. Built in connection with a church or a town hall, it served as a belfry and watch tower and often functioned as a civic or commemorative monument. The campanile generally stands as a detached unit. At the top is the bell platform, where the main architectural emphasis, generally a group

of arched openings, is concentrated. Originating in the 6th cent., the campaniles were the earliest church towers in Europe and were generally circular in shape, examples of this type remain at Ravenna. Beginning with the 8th cent., the square plan became most common, being constructed in all parts of Italy. The Lombardy section produced the richest development of the campanile. Brick is the material most used, often combined with stone for the cornices and string courses, the latter surrounding the tower at each story level in the Roman examples. The celebrated campanile of Florence, known as Giotto's campanile (1334), is entirely faced in marble and ornamented with sculptures. Also of marble is the leaning tower at PISA.

campanula (kämpän'yala) see BELLFLOWER

Campbell, Scottish noble family, the head of which is the duke of Argyll. The Campbells of Lochow (Lochawe) rose to power in W Scotland in the later Middle Ages. In 1445, Sir Duncan Campbell of Lochow (d 1453) received the title of Baron Campbell, and his grandson Colin Campbell (d 1493), 2d Baron Campbell, was created 1st earl of Argyll in 1457. In the succeeding century the earls of Argyll played an ever more prominent role in Scottish affairs. Archibald Campbell (d 1558), 4th earl of Argyll, became one of the leading Protestant lords of the congregation. Even more important, however, was his son Archibald Campbell, 5th earl of ARGYLL, also a lord of the congregation, who was deeply involved in the upheavals of the reign of Mary Queen of Scots. He was succeeded by his half-brother, Colin Campbell (d 1584), 6th earl of Argyll, who was in turn succeeded by his son Archibald Campbell (1575-1638), 7th earl of Argyll. The 7th earl became a Roman Catholic and in 1619 surrendered management of his estates to his son Archibald Campbell, 8th earl and 1st marquess of ARGYLL. The 8th earl and his son Archibald Campbell, 9th earl of ARGYLL, were the most powerful Presbyterian nobles in Scotland during the tumultuous events of the 17th cent., both were executed for treason. Archibald Campbell, the 10th earl, finally managed to regain the family estates and was created (1701) 1st duke of ARGYLL. He and, more especially, his kinsman John Campbell, 1st earl of BREADALBANE, have been blamed (possibly unjustly) for the massacre (1692) of the MacDonalds of Glencoe by Campbell soldiers. John Campbell, 2d duke of ARGYLL, and his brother Archibald Campbell, 3d duke of ARGYLL, kept the family in the forefront of Scottish affairs. The 3d duke, however, died without legitimate issue, and the succession passed to a cadet branch of the family, the Campbells of Ma-more. Of subsequent holders of the title the most prominent were George Douglas Campbell (1823-1900), 8th duke of Argyll, who held a series of cabinet positions, the most important as secretary of state for India in William Gladstone's first ministry (1868-74), and John Douglas Sutherland Campbell (1845-1914), 9th duke of Argyll, who married Princess Louise, daughter of Queen Victoria, and was governor general of Canada (1878-83).

Campbell, Alexander, 1788-1866, clergyman, co-founder with his father, Thomas Campbell (1763-1854), of the DISCIPLES OF CHRIST. Of Scottish lineage, both were born in Ireland and educated at the Univ of Glasgow. Both were Anti-Burgher Presbyterians, a division opposed to the discipline of the main church. In 1807 the father went to America, where he was welcomed among the Scotch-Irish in SW Pennsylvania. His habit of asking all Presbyterians to join his church members in the communion service was contrary to a ruling of the Anti-Burgher synod in which he was preaching, and his action was condemned by his presbytery. Although his synod upheld him, the atmosphere remained so hostile that he and his followers, who were popularly called Campbellites, withdrew. In 1809 they formed the Christian Association of Washington, Pa., setting forth its purposes in a "Declaration and Address" that is considered the most important document of the Disciples body. In that year Campbell was joined in America by his son, Alexander, and the other members of his family. In c 1812, having accepted the doctrine of immersion, the Campbells and their followers were invited to join the Baptists. Until c 1827 they were nominally Baptists, but there were differences which caused trouble. Alexander Campbell, who had by this time assumed the leadership, advocated a return to scriptural simplicity in organization and doctrine, his followers became known as Reformers. He founded (1823) the *Christian Baptist* to promote his views and traveled throughout the new Western states, addressing large audiences. He edited (from 1830) the *Millennial*

Harbinger, wrote *The Christian System* (1839), and in 1840 founded Bethany College in West Virginia and became its president. Meanwhile, the Reformers had seceded from or been forced out of many Baptist churches, and Campbell suggested that they form congregations and call themselves Disciples of Christ. Many of the "Christians," led chiefly by Barton Warren STONE, joined congregations of the Disciples, in 1832 the two leaders agreed to unite their efforts. See Robert Richardson, *Memoirs of Alexander Campbell* (2 vol, 1868-70), D R Lindley, *Apostle of Freedom* (1957), S M Eames, *The Philosophy of Alexander Campbell* (1966), E J Wrather, *Creative Freedom in Action* (1968).

Campbell, Colin, d 1729, Scottish architect, who, in England, became one of the initiators of the Neo-Palladian movement. Campbell's most important contribution to this revival of classicizing architecture was his publication of *Vitruvius Britannicus* (3 vol, 1715, 1717, 1725). These volumes consisted of engravings of classical buildings in England—at first mainly those of Inigo Jones, but the later volumes presented designs by Campbell and other contemporary architects. Campbell's major buildings were Wanstead House, Essex (1715-20, destroyed), which incorporated what Campbell claimed to be England's first classical portico, the remodeling of Burlington House, London (c 1717), and Mereworth Castle, Kent (1723). They derive from obvious Palladian precedents. Through his writings and his executed buildings, Campbell's influence on English architecture was great.

Campbell, Colin, Baron Clyde, 1792-1863, British general. He commanded troops in China (1842-46) and India (1847-54) and in the famous victory at BALAKLAVA (1854) in the Crimean War. For his services in India in suppressing the Indian Mutiny (1857) he was created baron in 1858. He was made a field marshal in 1862. See biography by Lawrence Shadwell (1881).

Campbell, Donald Malcolm, 1921-67, British automobile and boat racer. The son of Sir Malcolm Campbell, from whom he inherited his passion for assaulting speed records and his mechanical inclinations, he helped to design a hull that would not disintegrate at speeds over 200 mi (322 km) per hr on water. His work attracted the attention of numerous British engineering firms and government departments. Campbell was killed in his jet-powered boat *Bluebird* as he tried to reach a speed of 300 mi (483 km) per hr. At the time of his death he held the world's speed record on water, 276.33 mi (444.89 km) per hr and had driven at an average speed of 403.1 mi (648.9 km) per hr on land. See biography by Douglas Young-James (1968).

Campbell, John, 1653-1728, American editor, b Scotland. After emigrating to Boston, he was postmaster of the city from 1702 to 1718 and wrote newsletters for regular patrons. In 1704 he started printing these newsletters as a weekly half sheet, devoted mostly to foreign news, entitled the *Boston News-Letter*. Sold to Bartholomew Green in 1722, it was the first successfully established paper to appear in colonial America.

Campbell, John Francis, 1822-85, Scottish Gaelic scholar. He is known for *Popular Tales of the West Highlands* (4 vol, 1860-62) and *Leabhar na Feinne* (1872), a collection of Gaelic folk ballads. A meteorologist also, he invented an instrument to record the intensity of the sun's rays.

Campbell, John, 1st Baron Campbell, 1779-1861, British jurist. He was a member of the Whig party in the House of Commons from 1830 and in the Lords from 1841. Ambitious legally rather than politically, he became attorney general (1834-41), lord chief justice (1850), and lord chancellor (1859). Campbell was associated with legal reforms in the areas of real estate and local government, but his role was that of organizing the investigating commissions and guiding the bills through Parliament. He was more directly responsible for the Libel Act (1843), the Copyright Act (1846), and the Obscene Publications Act (1857). He wrote *Lives of the Lord Chancellors* (1845-47) and *Lives of the Chief Justices* (1849-57).

Campbell, Sir Malcolm, 1885-1949, English automobile and speedboat racer. A racing enthusiast from boyhood, Campbell set many speed records for motorcycles, airplanes, automobiles, and motorboats and in 1931 was knighted for his accomplishments. Driving his famed automobile *Bluebird* at Bonneville Flats, Utah, in 1935, Sir Malcolm was the first to reach the 300 mi (483 km) per hr mark. He then turned to speedboat racing and in 1939 set a new record of 141 mi per hr. His son Donald Campbell (1921-67) raised the water speed record to more

than 300 mi per hr before his boat, also known as *Bluebird*, exploded in the water, killing him.

Campbell, Mrs. Patrick, 1865-1940, English actress, whose maiden name was Beatrice Stella Tanner. Remembered today for her association with G B Shaw, she was an actress of great beauty and wit. She made her debut in 1888 but achieved her first London success in 1893 in the title role of Pinero's *Second Mrs Tanqueray*. In 1901 she made the first of her numerous tours to the United States, in 1912 she met Shaw at whose request she created the role of Eliza Doolittle in *Pygmalion*. See her *My Life and Some Letters* (1922, repr 1969) and her correspondence with Shaw (ed by Alan Dent, 1952). Jerome Kilty's play *Dear Liar* (1960) is based on the Campbell-Shaw correspondence.

Campbell, Robert: see ROB ROY

Campbell, Robert, 1804-79, American fur trader and merchant, one of the mountain men, b Ireland. He came to the United States c 1824. Having been advised to lead an outdoor life because of a lung ailment, he joined (1825) a fur trapping expedition. He trapped and traded in the Rocky Mts until 1832, when he and William Sublette formed a partnership, which offered competition to the American Fur Company. Suffering reverses, they confined their activities to the mountain territory. The partnership was dissolved in 1842, and Campbell returned to St Louis, where he amassed a fortune in merchandising, real estate, and banking. In 1851 and again in 1869 he served as Indian commissioner.

Campbell, Robert, 1808-94, Canadian fur trader and explorer, b Scotland. Employed as a young man by the Hudson's Bay Company, he was sent in 1834 to the Mackenzie River region, where he remained until 1852. He discovered the Pelly River in 1840, descending it in 1843 to its confluence with the Lewes River to form the Yukon. Here he established Fort Selkirk in 1848. Later (1850-51) he followed the Yukon to its junction with the Porcupine River at Fort Yukon. He worked as a trader for Hudson's Bay until 1871, when he was discharged, and spent his last years as a rancher in Manitoba. He wrote *The Discovery and Exploration of the Pelly River* (1883). See Clifford Wilson, *Campbell of the Yukon* (1970).

Campbell, Roy, 1901-57, South African poet. His persuasive and robust poetry, reminiscent of the 19th-century English romantics, includes *The Flaming Terrapin* (1924), *Mythic Emblems* (1936), and *Flowering Rifle* (1939). A fascist, Campbell fought with Franco's army in the Spanish civil war. During World War II, Campbell served with the British army in Africa. His collected poems were published in 1957. See his autobiography (1952).

Campbell, Thomas, 1763-1854, American clergyman, a founder of the DISCIPLES OF CHRIST. See CAMPBELL ALEXANDER, his more famous son.

Campbell, Thomas, 1777-1844, Scottish poet. He is best known for his war poems "Hohenlinden," "The Battle of the Baltic," and "Ye Mariners of England." Among his other volumes of poetry are *The Pleasure of Hope* (1799), *Gertrude of Wyoming* (1809), and *Theodoric* (1824).

Campbell, William, 1745-81, American Revolutionary soldier, b Augusta co, Va., brother-in-law of Patrick Henry. He fought in Lord Dunmore's War (1774) and helped expel the royal governor from Williamsburg in 1776. Campbell and his group of Virginia riflemen in 1780 joined Sevier and Shelby at Kings Mt (see CAROLINA CAMPAIGN), where he was in command. Later Campbell saw action at Guilford Courthouse, at Eutaw Springs, and in the Yorktown campaign.

Campbell, (William) Wilfred, 1861-1918, Canadian poet, b Kitchener, Ont. Although ordained an Episcopal minister, he spent most of his life as a civil servant. His fame rests mainly on *Lake Lyrics* (1889), a volume of nature poetry. He also wrote historical novels and poetic dramas, and he edited the *Oxford Book of Canadian Verse* (1913). See his *Poetical Works* (1923).

Campbell, 1 City (1970 pop 24,770), Santa Clara co, W Calif., in the fertile Santa Clara valley, founded 1885, inc 1952. A processing center for fruits and vegetables, it has a huge fruit-drying facility. 2 City (1970 pop 12,577), Mahoning co, NE Ohio, on the Mahoning River, adjacent to Youngstown, inc 1908. It has extensive ironworks and steelworks.

Campbell-Bannerman, Sir Henry, 1836-1908, British statesman. Entering Parliament (1868) as a Liberal, he served as secretary to the admiralty (1882-84), secretary of state for Ireland (1884), and secretary of state for war (1886, 1892-95). He was knighted in 1895. In 1899 he was elected leader of

the Liberal party (succeeding Sir William Harcourt) and led opposition to British policy in the South African War (1899-1902). When the Conservative government resigned in 1905, Campbell-Bannerman became prime minister. Before ill-health caused his retirement in 1908 he had furthered many Liberal measures, including that of self-government for the Transvaal and the Orange Free State. See biographies by J. A. Spender (1923) and John Wilson (1974).

Campbellites: see CAMPBELL, ALEXANDER, DISCIPLES OF CHRIST

Campbellton (kām'bāltən), city (1971 pop. 10,335), N N B, Canada, on the Restigouche River near the head of Chaleur Bay. The city has large sawmills and is a shipping port for pulpwood. It is a starting point for canoe, fishing (salmon and trout), and hunting trips into the forested interior.

Camp Borden, large military training establishment, S Ont., Canada, NW of Toronto. It covers an area of 20,000 acres (8,094 hectares) and also includes an armored-vehicle range at Meaford, to the northwest.

Camp David, U.S. presidential retreat, Md. see CATOCTIN MOUNTAIN PARK under NATIONAL PARKS AND MONUMENTS (table)

Campeche (kampā'chā), state (1970 pop. 250,391), 19,672 sq mi (50,950 sq km), SE Mexico, on the Gulf of Campeche. The city of Campeche is the capital. Comprising most of the western half of the YUCATÁN peninsula, the state lies in hot, humid, and unhealthy lowlands. Rainfall in the southwestern sector is heavy. Much of the state is extensively forested, and logwood (called *campeche* in Spanish) is one of the chief exports. Agriculture (especially the growing of sisal hemp) and stock raising are important, and some minerals are exploited. Using Campeche as a base, the Spanish explorer Francisco de Montejo led (1531-35) expeditions against the Maya Indians. The coast was a haunt of pirates from the 17th cent. to the 19th cent. The principal ports are Campeche and Carmen, a small town on an island at the entrance to the Laguna de Terminos.

Campeche (kampā'chā), city (1970 est. pop. 70,000), capital of Campeche state, SE Mexico, on the Yucatan peninsula. It is fortified and surrounded by 18th-century walls. Fish canning is the chief industry. The harbor is shallow, and vessels must anchor far from shore. Campeche, once the site of the pre-Columbian town called Kimpech (whose remains are still observable), was founded in 1540 by the son of the Spanish conquistador Francisco de Montejo. It was sacked frequently by English buccaneers. From 1862 to 1864, French forces blockaded the city. The city has a 16th-century cathedral.

Campeggio, Lorenzo (lōrēnt'sō kampē'djō), 1472?-1539, Italian churchman and diplomat, cardinal of the Roman Catholic Church. He was well known as a jurist before turning to the church (c.1510) upon the death of his wife. He was made bishop in 1512 and cardinal the following year. He was chosen as legate for the most delicate missions. In 1518 he went to England to secure the adherence of HENRY VIII to an alliance against Turkey. He did not succeed, but he received (1524) the bishopric of Salisbury from Henry, which he held *in absentia* until 1534. In 1528, Cardinal Campeggio went again to England to act with Cardinal WOLSEY as judge in the divorce of KATHARINE OF ARAGON. He followed his instructions to temporize and adjourned the hearing. Cardinal Campeggio was sent to Germany in 1524 to attempt a pacification of the Lutherans, but except for a promise from Holy Roman Emperor Charles V to enforce the Edict of Worms he obtained nothing. He ardently supported the reformation of the church, especially of the papal court and of the administration of the Holy See.

Camperdown (kām'pərdoun'), Du. *Kamperduin* [the dune of Kamp], locality near the village of Kamp, North Holland prov., NW Netherlands, on the North Sea. In 1797 the British defeated the Dutch in a naval battle off Camperdown.

Camp Fire Girls, American organization for girls from 6 to 18 years old. It was founded (1910) by Luther Halsey GULICK (1865-1918) and other educators "to perpetuate the spiritual ideals of the home" and "to stimulate and aid in the formation of habits making for health and character." The seven crafts of its program are the home, the creative arts, the outdoors, frontiers (of science), business, sports and games, and citizenship. The Camp Fire members are divided into four age groups—Blue Birds (6 to 8), Camp Fire Girls (9 to 11), Junior Hi Camp Fire Girls (12 to 13), and Horizon Clubs (14 to 18). The official organ of the organization is the *Camp Fire Girl*.

Camp Gagetown, military camp, S central N B, Canada. It was established in 1952 and is the largest (436 sq mi/1,129 sq km) military camp in Canada. **Camphausen, Ludolf** (lōō'dōlf kamp'hōuzən), 1803-90, Prussian statesman and businessman. A leading merchant in Cologne, he headed the liberal ministry appointed by King Frederick William IV of Prussia after the revolutionary outburst of March, 1848. He was forced to resign in June when the Prussian assembly became more liberal and the king more conservative. He was an important figure at the FRANKFURT PARLIAMENT.

camphor, C₁₀H₁₆O, white, crystalline solid KETONE with a characteristic pungent odor and taste. It melts at 176°C and boils at 204°C. The natural variety, Japan camphor, is obtained by steam distillation of the wood of the camphor tree (*Cinnamomum camphora*) native to China, Japan, and Formosa (its chief natural source). Since this source is inadequate, camphor is widely synthesized from α -pinene, which is obtained from oil of turpentine. Camphor is widely used as a plasticizer in the manufacture of celluloid and some lacquers. It is used in medicine as a stimulant, a diaphoretic, and an inhalant. Camphor ice is a mixture, containing principally camphor and wax, used for external application. Camphor is practically insoluble in water but soluble in alcohol, ether, chloroform, and other solvents. The alcoholic solution is known as spirits of camphor.

Campi, Giulio (jōō'lyō kam'pē), c.1500-c.1572, Italian painter and architect, founder of a school of painters at Cremona. He was a pupil of his father, Galeazzo Campi (c.1475-1536), a well-known painter, and of Giulio Romano, and he studied the works of Correggio and Raphael. Giulio produced many excellent altarpieces and frescoes in Milan, Mantua, and Cremona, the frescoes in the Church of Santa Margherita, Cremona, are entirely his work. Among his pupils were his two brothers, Cavaliere Antonio Campi, b. before 1536, d. 1591, painter, architect, and historian of Cremona, and Vincenzo Campi, 1532-91, whose works consist principally of portraits and still-life pieces. Another brother was Bernardino Campi, 1522-c.1590, a painter of great skill with a vigorous and original style, excelling in fresco painting and portraiture. Bernardino's most important work is the series of biblical frescoes in the cupola of San Sigismondo, Cremona, a work of colossal dimensions admirably executed.

Campion, Thomas: see CAMPION, THOMAS

Campin, Robert (kam'pin), 1378-1444, Flemish painter who with the van Eycks ranks as a founder of the Netherlandish school. This artist has been identified as the Master of Flemalle on the basis of three panels in Frankfurt-am-Main said to have come from the abbey of Flemalle near Liege. Campin was active in Tournai, having become a citizen of that city in 1410 and the dean of the painters' guild in 1423. To him have been attributed the *Mérode Altarpiece* in the Cloisters, New York City, a *Nativity* in Dijon, the *Annunciation and Marriage of the Virgin* in Madrid, the *Madonna of Humility* in London, and a number of other panels in various collections. Campin's style matured in the fresh climate of one of the mercantile urban centers of Northern Europe, where artistic taste came increasingly to reflect the values of the rising middle class. His works are characterized by a robust and highly developed realism and concern for the details of daily life, which constituted an important stage in the stylistic evolution leading to the art of Jan van Eyck. It is believed that Roger Van der Weyden was apprenticed in Campin's workshop. See Erwin Panofsky, *Early Netherlandish Painting* (1953), M. S. Frinta, *The Genius of Robert Campin* (1966).

Campina Grande (kampē'na gran'di), city (1970 pop. 195,794), Paraíba state, NE Brazil, on the Borborema plateau. It is an important commercial and financial center and a shipping point for products from the Brazilian interior (hides and skins, cotton, and agave). Industries in the city are linked to agriculture and cattle raising. Textiles, leather goods, cheese, and butter are the principal products. The city was founded in the late 17th cent. and developed rapidly as an important point on the route from the coast to the interior.

Campinas (kampē'nas), city (1970 pop. 376,497), São Paulo state, S Brazil. It is a growing industrial and financial city, the processing and distributing center for a diversified agricultural region, and a major transportation hub. Consumer products, agricultural tools, and railroad equipment are among its manufactures. The city was founded in the 18th cent. Coffee cultivation in the region and the city's location

as the main railroad junction in the state accounted for its prosperity by the late 19th cent. As coffee production moved westward, the economy diversified. Campinas has a famed agronomical-research institute and a state university.

Campion, Saint Edmund (kām'pēən), c.1540-1581, English Jesuit martyr, educated at St. Paul's School and St. John's College, Oxford. As a fellow at Oxford he earned the admiration of his colleagues and his students and the favor of Queen Elizabeth by his brilliance and oratorical ability. He went (1569) to Dublin to help in the proposed restoration of the university there. Although he had reluctantly taken orders as a Protestant, he had open Roman Catholic leanings and fled in disguise (1571) to England and then to the Continent, where he studied at Douai, joined (1573) the Society of Jesus, and was ordained (1578). In 1580 he and another Jesuit, Robert PERSONS, were sent as Jesuit missionaries to England. Campion's travels were marked by many conversions and did much to guarantee the survival of Roman Catholicism in England. Copies of his secretly printed pamphlet, *Decem rationes* [10 reasons], against the Protestants, appeared at Oxford in 1581. The long pursuit by the government ended (July, 1581) with the taking of Campion. He was racked three times, but though his body was broken he conducted debates with Protestant theologians bravely and won more converts. He defended himself ably against trumped-up charges of sedition but was nevertheless condemned and hanged, drawn, and quartered. He was beatified in 1886. In 1970, Campion and the other English and Welsh martyrs of the Reformation were canonized. See biography by Evelyn Waugh (3d ed. 1961).

Campion or Campian, Thomas, 1567-1620, English poet, composer, and lutenist, a physician by profession. Campion wrote lyric poems that he and other composers set to music. His graceful, simple lute songs were published in five *Books of Airs* (1601-1617). He wrote a treatise on English poetry, condemning the use of rhyme, but he used rhyme freely in his own poems. His treatise *A New Way of Making Fowre Parts in Counterpoint* (1613) has often been republished. See study by Edward Lowbury et al. (1970).

campion. see PINK

Camp Lejeune, U.S. marine corps base, 82,969 acres (33,576 hectares), SE N.C., SE of Jacksonville, est. 1941. It is the major East Coast training center and support base for the Atlantic Fleet Marine Force.

camp meeting, outdoor religious meeting, held usually in the summer and lasting for several days. The camp meeting was a prominent institution of the American frontier. It originated under the preaching of James MCGREADY in Kentucky early in the course of a religious revival (c.1800) and spread throughout the United States. Immense crowds flocked to hear the noted revivalist preachers, bringing bedding and provisions in order to camp on the grounds. The meetings were directed by a number of preachers who relieved each other in carrying on the services, sometimes preaching simultaneously in different parts of the camp grounds. Shouting, shaking, and rolling on the ground often accompanied the tremendous emotional release that followed upon "conversion," although these extravagances were opposed and discouraged by conservative ministers. Camp meetings were usually held by evangelical sects, such as the Methodists and Baptists, and by the Cumberland Presbyterians and other newer denominations that developed out of the religious revival. In modified form they continued to be a feature of social and religious life in the region between the Alleghenies and the Mississippi River until comparatively recent times, in a sense, they survive in summer conferences and assemblies, such as the Chautauqua Institution and the Ocean Grove Camp Meeting Association. See C. A. Johnson, *The Frontier Camp Meeting* (1955).

Campoamor, Ramón de (ramōn' dā kampāmōr'), 1817-1901, Spanish poet, the first to break with the romantic tradition of long, tragic, and emotional poetry. One of the most popular Spanish poets of his time, he was noted for his humorous short poems collected in *Doloras* (1846), *Pequeños poemas* (1872-74), and *Humoradas* (1886-88). Less well known are the two long narrative poems, *Colón* [Columbus] (1853) and *El drama universal* (1869). Campoamor's works are no longer generally popular.

Campobasso (kam'pōbas'sō), city (1971 pop. 41,807), capital of Molise and of Campobasso prov., S central Italy. It is an agricultural and industrial center. Manufactures include cement, soap, textiles,

and cutlery. In the city are a 15th-century castle and a museum of archaeology.

Campobello (kām'pōbēl'ō), island, 9 mi (14.5 km) long and 3 mi (4.8 km) wide, in Passamaquoddy Bay, NB, Canada, just off the coast of Maine. The island passed to Canada by the Convention of 1817. President Franklin Delano Roosevelt had a summer home in Welchport, the main settlement, for many years. It is now preserved in Roosevelt-Campobello International Park (see NATIONAL PARKS AND MONUMENTS, table).

Campo Formio, Treaty of (kam'pō fōr'myō), Oct., 1797, peace treaty between France and Austria, signed near Campo Formio, a village near Udine, NE Italy, then in Venetia. It marked the end of the early phases of the FRENCH REVOLUTIONARY WARS. The treaty generally ratified the preliminary Peace of Leoben, signed at the conclusion of Napoleon Bonaparte's Italian campaign (see NAPOLEON I). Bonaparte signed for France, Count Cobenzl for Austria. Austria ceded its possessions in the Low Countries (the present-day Belgium) to France and secretly promised France the left bank of the Rhine. The republic of Venice, invaded despite its attempts to maintain neutrality, was dissolved and partitioned. All Venetia E of the Adige, as well as Istria and Dalmatia, passed to Austria, the present provinces of Bergamo and Brescia went to the newly founded CISALPINE REPUBLIC, the IONIAN ISLANDS went to France.

Campanones, Pedro Rodríguez de, conde de Campanones (pā'thrō rō'thrē'gāth kōn'dā dā kām'pōma'nās), b. 1723, d. 1802 or 1803, Spanish statesman, economist, and author. As minister under Charles III and briefly under Charles IV, he introduced administrative, social, and economic reforms. He wrote on the revival of industry and on the professional education of the working classes.

Campos, Arsenio Martínez de: see MARTÍNEZ DE CAMPOS ARSENIÓ

Campos (kām'pōs), city (1970 pop. 319,112), Rio de Janeiro state, SE Brazil, on the Paraíba River near its mouth. It is the commercial hub of a rich agricultural region and a transportation center. More than half of the state's sugar output is produced in Campos. There are also distilleries in the city. Campos was founded in the early 17th cent. and under the empire was an important slave center.

Campus Martius under ROME see Rome before Augustus, Roman Empire, Renaissance and Modern Rome

Cam Ranh Bay (kam rān), inlet of the South China Sea, 10 mi (16 km) long and 20 mi (32 km) wide, S central South Vietnam. It is an excellent harbor linked to the sea by a strait (1 mi/1.6 km wide). The bay was the site of one of the largest U.S. military facilities (est. 1965) in South Vietnam during the Vietnam War.

Camrose, city (1971 pop. 8,673), central Alta., Canada. It is in a mixed farming area and is a railroad center. Camrose Lutheran College is there.

Camulodunum, England see COLCHESTER

Camus, Albert (al'bēr' kamu'), 1913-60, French writer, b. Algiers. Camus was one of the most important authors and thinkers of the 20th cent. While a student at the Univ. of Algiers, he formed a theater group and adapted, directed, and acted in plays. He became active in social reform and was briefly a member of the Communist party. Shortly after his essay *Noches [weddings]* appeared (1939), he went to Paris as a journalist. In World War II he joined the French resistance and was principal editor of the underground paper *Combat*. Noted for his vigorous, concise, and lucid style, Camus soon gained recognition as a major literary figure. His belief that man's condition is absurd identified him with the existentialists, but he denied allegiance to that group; his works express rather a courageous humanism. The characters in his novels and plays, although keenly aware of the meaninglessness of the human condition, assert their humanity by rebelling against their circumstances. His essay *Le Mythe de Sisyphe* (1942, tr. *The Myth of Sisyphus*, 1955) formulates his theory of the absurd and is the philosophical basis of his novel *L'Étranger* (1942, tr. *The Stranger*, 1946) and of his plays *Le Malentendu* (1944, tr. *Cross Purpose*, 1948) and *Caligula* (1944, tr. 1948). The essay *L'Homme révolté* (1951, tr. *The Rebel*, 1954), dealing with historical, spiritual, and political rebellion, treats themes found in the novels *La Peste* (1947, tr. *The Plague*, 1948) and *La Chute* (1956, tr. *The Fall*, 1957). Other works include the plays *L'État de siège* (1948, tr. *State of Siege*, 1958), and *Les Justes* (1950, tr. *The Just Assassins*, 1958), journalistic essays, and stories. Camus was awarded the 1957 Nobel Prize in Literature. See his *Notebooks* ed. by Philip Thody (2

vol., 1963, 1965), studies by John Cruikshank (1960), Germaine Bree (4th ed. 1972), Donald Lazere (1973), and Lev Braun (1974).

Canā (kā'nā), ancient town of Galilee. Here Jesus performed his first miracle by turning water into wine at a wedding. John 2, 1, 11, 4, 46, 54, 21, 2.

Canaan (kā'nān) 1 Son of Ham and the ancestor for whom the Canaanites were named. Gen. 9:20-27, 10:6, 15:19. 2 Territory, the same as ancient Palestine, lying between the Jordan, the Dead Sea, and the Mediterranean and sometimes including Transjordan. It was the Promised Land of the Israelites, and after their delivery from Egypt they subjugated it. Gen. 12:5, Ex. 3:8, Num. 13:17, 29, 14:45, 21:3, Joshua 22:11, 32, Judges 1. The Canaanites are the inhabitants of Canaan and are probably related to the Amorites. In Mark 3:18 the name signifies one of the Zealots. Chanaan is a variant of Canaan. See UGARIT, ASHERAH, BAAL, PHILISTIA, PHOENICIA.

Canada, country (1971 pop. 21,568,311), 3,851,787 sq mi (9,976,128 sq km), N North America. The capital is OTTAWA. It is a federation of 10 provinces—NEWFOUNDLAND, NOVA SCOTIA, NEW BRUNSWICK, PRINCE EDWARD ISLAND, QUEBEC, ONTARIO, MANITOBA, SASKATCHEWAN, ALBERTA, and BRITISH COLUMBIA—and the YUKON TERRITORY and the NORTHWEST TERRITORIES. Canada occupies all of North America N of the United States (and E of Alaska) except for the French islands of St. Pierre and Miquelon. It is bounded on the E by the Atlantic Ocean, on the N by the Arctic Ocean, and on the W by the Pacific Ocean and Alaska. A transcontinental border, formed in part by the Great Lakes, divides Canada from the United States, Nares and Davis straits separate Canada from Greenland. The ARCTIC ARCHIPELAGO extends far into the Arctic Ocean. Canada has a very long and irregular coastline, Hudson Bay and the Gulf of St. Lawrence indent the east coast and the Inside Passage extends along the west coast. The ice-clogged straits between the islands of N Canada form the Northwest Passage. During the Ice Age all of Canada was covered by a continental ice sheet that scoured and depressed the land surface, leaving a covering of glacial drift, depositional landforms, and innumerable lakes and rivers. Aside from the Great Lakes, which are only partly in the country, the largest lakes of North America—Great Bear, Great Slave, and Winnipeg—are entirely in Canada. The St. Lawrence is the chief river of E Canada. The Saskatchewan, Nelson, Churchill, and Mackenzie river systems drain central Canada, and the Columbia, Fraser, and Yukon rivers drain the western part of the country. Canada has a bowl-shaped geologic structure rimmed by highlands, with Hudson Bay at the lowest point. The country has eight major physiographic regions—the Canadian Shield, the Hudson Bay Lowlands, the Western Cordillera, the Interior Lowlands, the Great Lakes-St. Lawrence Lowlands, the Appalachians, the Arctic Lowlands, and the Innuitians. The exposed portions of the Canadian Shield cover more than half of Canada. This once-mountainous region, which contains the continent's oldest rocks, has been worn low by erosion over the millennia. Its upturned eastern edge is indented by fjords. The Shield is rich in minerals, especially iron and nickel, and in potential sources of hydroelectric power. In the center of the Shield are the Hudson Bay Lowlands, encompassing Hudson Bay and the surrounding marshy land. The Western Cordillera, a geologically young mountain system parallel to the Pacific coast, is composed of a series of north-south trending ranges and valleys that form the highest and most rugged section of the country. Mt. Logan (19,850 ft/6,050 m) is the highest point in Canada. Part of this region is made up of the Rocky Mts. and the Coast Mts., which are separated by plateaus and basins. The islands off W Canada are partially submerged portions of the Coast Mts. The Western Cordillera is also rich in minerals and timber and potential sources of hydroelectric power. Between the Rocky Mts. and the Canadian Shield are the Interior Lowlands, a vast region filled with sediment from the flanking higher lands. The Lowlands are divided into the prairies, the plains, and the Mackenzie Lowlands. The prairies are Canada's granary, while grazing is important on the plains. The smallest and southernmost region is the Great Lakes-St. Lawrence Lowlands, Canada's heartland. Dominated by the St. Lawrence River and the Great Lakes, the region provides a natural corridor into central Canada, and the St. Lawrence Seaway gives the interior cities access to the Atlantic. This section, which is composed of gently rolling surface on sedimentary rocks, is the location of extensive farmlands, large industrial centers, and most of Canada's population. In SE Canada and on New-

foundland is the northern end of the Appalachian Mt. system, an old and geologically complex region with a generally low and rounded relief. The Arctic Lowlands and the Innuitians are the most isolated areas of Canada and are barren and snow covered for most of the year. The Arctic Lowlands comprise much of the Arctic Archipelago and contain sedimentary rocks that may have oil-bearing strata. In the extreme north, mainly on Ellesmere Island, is the Innuitian Mt. system, which rises to c. 10,000 ft (3,050 m). Canada's climate is influenced by latitude and topography. The Interior Lowlands make it possible for polar air masses to move south and for subtropical air masses to move north into Canada. Hudson Bay and the Great Lakes act to modify the climate locally. The Western Cordillera serves as a climatic barrier that prevents polar air masses from reaching the Pacific coast and blocks the moist Pacific winds from reaching into the interior. The Cordillera has a typical highland climate that varies with altitude, the western slopes receive abundant rainfall, and the whole region is forested. The Interior Lowlands are in the rain shadow of the Cordillera, the southern portion has a steppe climate in which grasses predominate. S Canada has a temperate climate, with snow in the winter (especially in the east) and cool summers. Farther to the north, extending to the timberline, is the humid subarctic climate characterized by short summers and a snow cover for about half the year. On the Arctic Archipelago and the northern mainland is the tundra, with its mosses and lichen, permafrost, near year-round snow cover, and ice fields. A noted phenomenon off the coast of E Canada is the persistence of dense fog, which is formed when the warm air over the Gulf Stream passes over the cold Labrador Current as the two currents meet off Newfoundland.

Economy. Manufacturing is Canada's most important economic activity, engaging 22% of the work force. The remainder are employed in service industries (27%), trade (17%), construction (6%), transportation (6%), finance, real estate, and insurance (6%), government (6%), and agriculture (5%). Manufacturing accounts for more than half the value of all Canadian production. The leading products are motor vehicles, pulp and paper, processed meat, petroleum, iron and steel, dairy products, and processed metals. Industries are centered in Ontario, Quebec, and, to a lesser extent, British Columbia. Agriculture contributes about one tenth of the value of production. The sources of the greatest farm income are livestock and dairy products. Among the biggest income-earning crops are wheat, oats, barley, and corn. Canada is one of the world's leading agricultural exporters, especially of wheat. Manitoba, Saskatchewan, and Alberta are the great grain-growing provinces, and, with Ontario, are also the leading sources of beef cattle. The main fruit-growing regions are found in Ontario, British Columbia, Quebec, and Nova Scotia. Apples and peaches are the principal fruits grown in Canada. The fur industry, once so important, but no longer dominant in the nation's economy, is centered in Ontario. Canada is a leading mineral producer. It is the world's largest source of asbestos, nickel, zinc, and silver, and the second largest source of potash, molybdenum, gypsum, uranium, and sulfur. The mineral wealth is located in many areas, some of the most productive regions are Sudbury, Ont. (copper and nickel), Timmins, Ont. (lead, zinc, and silver), and Kimberley, British Columbia (lead, zinc, and silver). Petroleum is found in Alberta and Saskatchewan. Fishing is an important economic activity in Canada. Cod and lobster from the Atlantic and salmon from the Pacific are the principal catches. About two thirds of the take is exported. The United States is Canada's leading trading partner, followed by Great Britain and Japan. Manufactured goods comprise the bulk of the imports, motor vehicles and parts are both the largest import and export. Other important exports are newsprint, wheat, and minerals. A major problem for Canada is that large segments of its economy—notably in manufacturing, petroleum, and mining—are controlled by foreign, especially U.S. interests. This deprives the nation of much of the profits of its industries and makes the economy vulnerable to developments outside Canada.

People. More than 40% of the Canadian population are of British descent, and some 30% are of French origin. Nearly 75% of the total population live in cities, the largest of which are MONTREAL, TORONTO, EDMONTON, VANCOUVER, CALGARY, HAMILTON, and OTTAWA. Canada has complete religious liberty. The country is about equally divided between Roman Catholics and Protestants. The largest Protestant denominations are United Church of Canada, Angli-

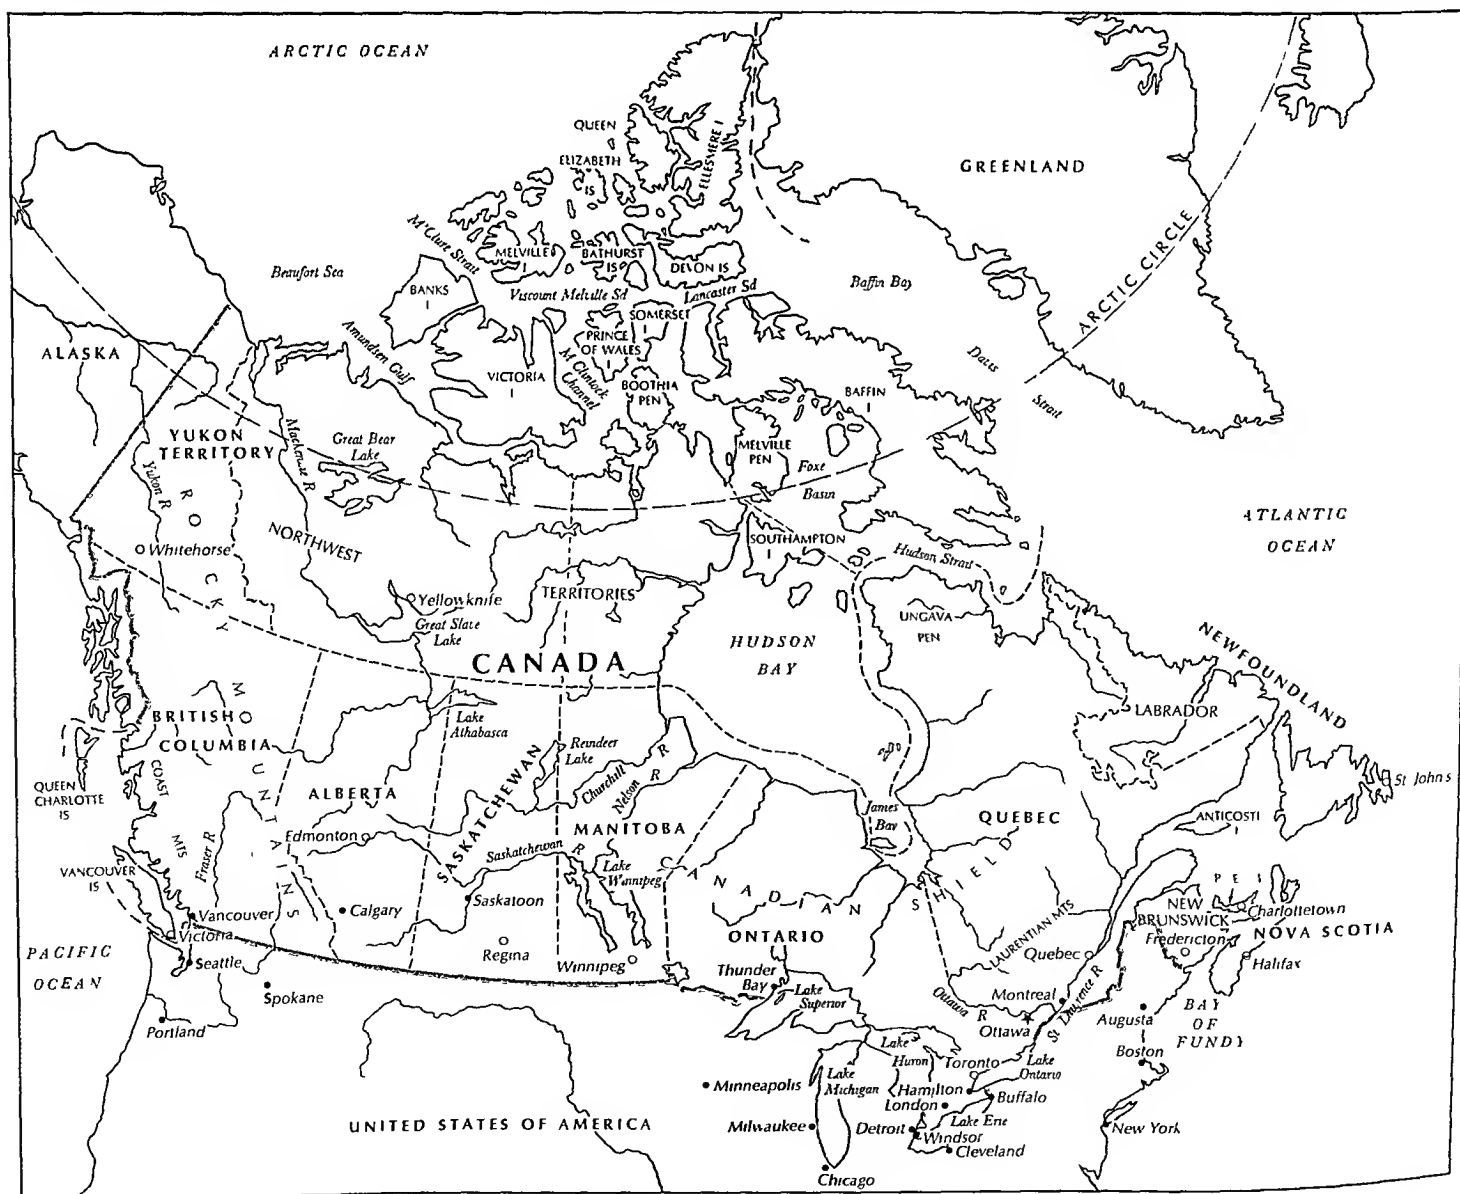

can Church of Canada, and Presbyterian English and French are the official languages, and federal documents are published in both languages

Government Canada is an independent constitutional monarchy and a member of the Commonwealth of Nations. The monarch of Great Britain and Northern Ireland is also the monarch of Canada and is represented in the country by the office of governor general. The basic constitutional document is the British North America Act of 1867. The Canadian federal government has authority in all matters not specifically reserved to the provincial governments. The provincial governments have power in the fields of property, civil rights, education, and local government. They may levy only direct taxes. The federal government may veto any provincial law. Power on the federal level is exercised by the Canadian Parliament and the cabinet of ministers, headed by the prime minister. The Parliament has two houses: the Senate and the House of Commons. There are a maximum of 110 senators, apportioned among the provinces and appointed by the governor general upon the advice of the prime minister. Senators may serve until age 75. Members of the House of Commons are elected, largely from single-member constituencies. After the 1971 census there were 264 members. Elections must be held at least every five years. The Commons may be dissolved and new elections held at the request of the prime minister. There are two main political parties, the Liberal party and the Progressive Conservative (or Conservative) party. Other important parties are the right-wing SOCIAL CREDIT party, the socialist New Democratic party, formerly the CO-OPERATIVE COMMONWEALTH FEDERATION, and the French Canadian nationalist Union Nationale. Canada has an independent judiciary; the highest court is the Supreme Court, with nine members.

Early History and French-British Rivalry An unknown number of Indians and Eskimos inhabited Canada before the white man arrived. The Vikings landed in Canada A.D. c. 1000. John CABOT, sailing under English auspices, touched the east coast in 1497. In 1534, the Frenchman Jacques CARTIER planted a cross on the Gaspé Peninsula. These and many other voyages to the Canadian coast were in search of a northwest passage to Asia. Subsequently, French-English rivalry dominated Canadian history until 1763. The first permanent white settlement in Canada was founded in 1605 by the sieur de MONTS and Samuel de CHAMPLAIN at Port Royal (now ANnapolis Royal, N.S.) in ACADIA. A trading post was established in Quebec in 1608. Meanwhile the English, moving to support their claims under Cabot's discoveries, attacked Port Royal (1614) and captured Quebec (1629). However, the French regained Quebec (1632), and through the Company of New France (Company of One Hundred Associates), began to exploit the fur trade and establish new settlements. The French were primarily interested in fur trading. Between 1608 and 1640, fewer than 300 settlers arrived. The sparse French settlements sharply contrasted with the relatively dense English settlements along the Atlantic coast to the south. Under a policy initiated by Champlain, the French supported the Huron Indians in their warfare against the Iroquois, later in the 17th cent., when the Iroquois crushed the Huron, the French colony came near extinction. Exploration, however, continued. The Company of New France was disbanded (1663) by the French government, and the colony was placed under the rule of a royal governor, an intendant, and a bishop. The power exercised by these authorities may be seen in the careers of Louis de Buade, comte de FRONTENAC, the greatest of the colonial governors, Jean TATON, the first and greatest of the intendants, and François

Xavier de LAVAL, the first bishop of Quebec. There was, however, conflict between the rulers, especially over the treatment of the Indians—the bishop regarding them as potential converts, the governor as means of trade. Meanwhile, both missionaries, such as Jacques MARQUETTE, and traders, such as RADISSON and Groseilliers, were extending French knowledge and influence. The greatest of all the empire builders in the west was Robert Cavelier, sieur de LA SALLE, who descended the Mississippi to its mouth and who envisioned the vast colony in the west that was made a reality by men like Duluth, Bienville, Iberville, and Cadillac. The French, however, did not go unchallenged. The English had claims on Acadia, and the Hudson's Bay Company in 1670 began to vie for the lucrative fur trade of the West. When the long series of wars between Britain and France broke out in Europe, they were paralleled in North America by the FRENCH AND INDIAN WARS. The Peace of Utrecht (1713) gave Britain Acadia, the Hudson Bay area, and Newfoundland. To strengthen their position the French built additional forts in the west (among them Detroit and Niagara). The decisive battle of the entire struggle took place in 1759, when Wolfe defeated Montcalm on the Plains of ABRAHAM, bringing about the fall of Quebec to the British. Montreal fell in 1760. By the Treaty of Paris in 1763, France ceded all its North American possessions to Britain (except Louisiana, which went to Spain).

British North America The French residents of Quebec strongly resented the Royal Proclamation of 1763, which imposed British institutions on them. Many of its provisions, however, were reversed by the QUEBEC ACT (1774), which granted important concessions to the French and extended Quebec's borders westward and southward. This act infuriated the residents of the Thirteen Colonies (the fu

Cross-references are indicated by SMALL CAPITALS

ture United States) In the American Revolution the Canadians remained passively loyal to the British crown, and the effort of the Americans to take Canada failed dismally (see QUEBEC CAMPAIGN). Loyalists from the colonies in revolt (see UNITED EMPIRE LOYALISTS) fled to Canada and settled in large numbers in the Maritime Provinces and Quebec. The result, in Quebec, was sharp antagonism between the deeply rooted, Catholic French Canadians and the newly arrived, Protestant British. To deal with the problem the British passed the Constitutional Act (1791). It divided Quebec into Upper Canada (present-day Ontario), predominantly British and Protestant, and Lower Canada (present-day Quebec), predominantly French and Catholic. Each new province had its own legislature and institutions. This period was one of further exploration. Alexander MACKENZIE made voyages in 1789 to the Arctic Ocean and in 1793 to the Pacific. Mariners also reached the Pacific Northwest, and such men as Capt. James COOK, John Meares, and George VANCOUVER secured for Britain a firm hold on what is now British Columbia. During the War of 1812, Canadian and British soldiers repulsed several American invasions. The New Brunswick boundary (see AROOSTOOK WAR) and the boundary W of the Great Lakes was disputed with the United States for a time, but since the War of 1812 the long border has generally been peaceful. Rivalry between the NORTH WEST COMPANY and the Hudson's Bay Company erupted into bloodshed in the RED RIVER SETTLEMENT and was resolved by amalgamation of the companies in 1821. The new Hudson's Bay Company then held undisputed sway over RUPERT'S LAND and the Pacific West until US immigrants challenged British possession of Oregon and obtained the present boundary (1846). After 1815 thousands of immigrants came to Canada from Scotland and Ireland. Movements for political reform arose. In Upper Canada, William Lyon MACKENZIE struggled against the FAMILY COMPACT. In Lower Canada, Louis J. Papineau led the French Canadian Reform party. There were rebellions in both provinces. The British sent Lord Durham to study the situation, and his famous report (1839) recommended the union of Upper and Lower Canada under responsible government. The two Canadas were made one province by the Act of Union (1841) and became known as Canada West and Canada East. Responsible government was achieved in 1849 (it had been granted to the MARITIME PROVINCES in 1847), largely as a result of the efforts of Robert BALDWIN and Louis H. LAFOURNAISE. The movement for federation of all the Canadian provinces was given impetus in 1860s by the need for common defense, the desire for some central authority to press railroad construction, and the necessity for a solution to the problem posed by Canada West and Canada East, where the British majority and French minority were in conflict. When the Maritime Provinces, which sought union among themselves, met at the Charlottetown Conference of 1864, delegates from the other provinces of Canada attended. Two more conferences were held—the Quebec Conference later in 1864 and the London Conference in 1866 in England—before the British North America Act in 1867 made federation a fact. The four original provinces were Ontario (Canada West), Quebec (Canada East), Nova Scotia, and New Brunswick.

The New Nation The new federation acquired the vast possessions of the Hudson's Bay Company in 1869. The Red River Settlement became the province of Manitoba in 1870. In 1873, Prince Edward Island joined the federation, and Alberta and Saskatchewan were admitted in 1905. Newfoundland joined in 1949. Canada's first prime minister was John A. MACDONALD (served 1867–73 and 1878–91), who sponsored the CANADIAN PACIFIC RAILWAY. In the West, religious tension and objections to lack of political representation and unfair land-grant and survey laws produced rebellions of metis, led by Louis RIEL in 1869–70 and 1884–85. Under the long administration (1896–1911) of Sir Wilfrid LAURIER, rising wheat prices attracted vast numbers of immigrants to the Prairie Provinces. Between 1891 and 1914, more than three million people came to Canada, largely from continental Europe. In the same period, mining operations were begun in the Klondike and the Canadian Shield. Large-scale development of hydroelectric resources helped foster industrialization and urbanization. Under the premiership of Robert L. BORDEN, Canada followed Britain and entered World War I. The struggle over military conscription, however, deepened the cleavage between French Canadians and their fellow citizens. During the depression that began in 1929, the Prairie Provinces were hard hit by droughts that shriveled the

wheat fields. Farmers, who had earlier formed huge cooperatives, sought to press their interests through political movements such as Social Credit and the

Co-Operative Commonwealth Federation Under the premiership of W. L. Mackenzie KING, Canada played a vital role on the Allied side in World War II. Despite economic strain Canada emerged from the war with enhanced prestige and took an active role in the United Nations. Canada joined the North Atlantic Treaty Organization in 1949. Since the war, uranium, iron, and petroleum resources have been exploited, uses of atomic energy have been developed, and hydroelectric and thermal plants have been built to produce electricity for new and expanded industries. King was succeeded by Louis ST. LAURENT, the first French-speaking prime minister. John G. DIEFENBAKER, a Conservative, came to power in 1957. A major problem for Canada in recent decades has been to prevent economic domination by the United States. The St. Lawrence Seaway was opened in 1959. The Liberals returned to office in 1963 under Lester B. PEARSON. After much bitter debate, the Canadian Parliament in 1964 approved a new national flag, with a design of a red maple leaf on a white ground, bordered by two vertical red panels. The new flag symbolized a growing Canadian feeling against emphasizing Canada's ties with Great Britain. The Pearson government enacted a comprehensive social security program. The Montreal international exposition, Expo '67, opened in 1967 and was applauded for displaying a degree of taste and interest far superior to that of most such exhibitions. Pearson was succeeded by Pierre Elliott TRUDEAU, a Liberal, in 1968. The Trudeau government was faced with the increasingly violent separatist movement active in Quebec in the late 1960s and early 70s. In elections in Oct. 1972, Trudeau's Liberal party failed to win a majority, but he continued as prime minister, dependent on the small New Democratic party for votes to pass legislation. In July, 1974, the Liberals reestablished a majority, winning 141 of 264 seats in the House of Commons, and Trudeau remained prime minister.

Bibliography Classic works on early Canada are those of Francis Parkman. See also Edgar McInnis, *Canada, a Political and Social History* (3d ed. 1969), R. R. Kruegel and R. G. Corder, *Canada, a New Geography* (1970), G. M. Wrong, *The Rise and Fall of New France* (2 vol., 1928, repr. 1970), D. G. Canada balsam, yellow, oily, resinous exudation obtained from the BALSAM FIR. It is an oleoresin (see RESIN) with a pleasant odor but a biting taste. It is a TURPENTINE rather than a true balsam. On standing, the essential oil in Canada balsam evaporates, leaving behind the resin as a hard, transparent varnish. Canada balsam is valued as an optical mounting cement, e.g., for lenses and microscope slides, since it yields, when dissolved in an equal volume of xy-

lene, a noncrystallizing cement with a refractive index nearly equal to that of ordinary glass. It is used also in paints and polishes.

Canada Company, land settlement company chartered in England in 1826. It was initiated by the Scottish novelist John Galt, who proposed that Upper Canada (Ontario) sell government lands in order to raise money to compensate settlers who had suffered losses from the War of 1812. Galt became (1827) the company's representative in Canada. The Canada Company acquired lands along the Lake Huron side of the S. Ontario peninsula and founded Guelph and Goderich. In general the company was one of the most successful colonizing schemes, meeting its charter requirements by 1843. It remained in operation until the 1950s.

Canada First movement, party that appeared in Canada soon after confederation (1867). Its purpose was to encourage the growth of nonpartisan loyalty to the new dominion of Canada. In Toronto, in 1874, it founded the Nation and the National Club and entered the political field as the Canadian National Association, which encouraged immigration and native industry, and a more independent stance for Canada. Although its official career was short-lived, the party's ideals were expressed by Canadian writers and were absorbed by the older political parties. In this way the movement had an effect on the development of Canadian nationalism. See W. S. Wallace, *The Growth of Canadian National Feeling* (1927).

Canada thistle: see THISTLE

Canaday, John, 1907–, American art critic, b. Fort Scott, Kansas. Canaday is noted for his conservative position in the art world. It is expressed in his column for the *New York Times*, which covers a wide range of art subjects. He is an authority on 19th-century art. His works include *Mainstreams of Modern Art* (1961), *Culture Gulch* (1969), and *Lives of the Painters* (4 vol., 1969). Early in 1974, Canaday began a weekly column of restaurant reviews for the *Times*. He also writes mysteries under the pseudonym Mathew Head.

Canadian, river, 906 mi (1,458 km) long, rising in NE Mex. and flowing E across N Texas and central Okla. into the Arkansas River in E Okla. In the mid-1800s, the Canadian River valley was followed by pioneers going West along the Fort Smith–Santa Fe Trail. Eufaula Reservoir stores the water of the Canadian and North Canadian rivers, its dam generates electricity. Sanford Dam impounds Lake Meredith, which lies over one of the world's largest natural gas fields. The lake is part of Lake Meredith National Recreation Area (see NATIONAL PARKS AND MONUMENTS, table).

Canadian art and architecture Among the outstanding art forms of early colonial Canada was French-Canadian wood carving, chiefly sculptured figures of saints and retables for the churches. This art flourished from 1675 (when Bishop Laval established a school of arts and crafts near Quebec) until c. 1850. The art reached its height after the separation from France when, freed from the French Renaissance tradition, it developed a local character beautifully exemplified in such work as that in the Church of the Holy Family on Orleans Island and in the Provincial Museum at Quebec. The two great Quebec families of carvers were the Levasseurs (18th cent.) and the Baillargés (19th cent.). The colonial period also produced fine embroidery (examples are kept at the Ursuline convent, Quebec) and several outstanding portraits executed in a naive folk-art style. Before 1880 almost the only other paintings and drawings produced in Canada were those by the colonial topographers, many of them English army officers. Most of this work is purely documentary. Paul KANE, who painted Indians, and Cornelius KRUEGHOF, who depicted the life of the settlers, were the earliest genre painters. Thomas Davies produced vibrant landscapes in watercolor in the second half of the 18th cent. J. A. Fraser, known for his scenes of the Rockies, was instrumental in founding the Ontario College of Art at Toronto in 1875. Five years later the Royal Canadian Academy of Arts (at Montreal) and the National Gallery of Canada (at Ottawa) were founded. Since 1910 the National Gallery has played an active part in Canadian life through its traveling exhibits. Its collection is the finest in Canada. Today there are art schools and galleries in all the major Canadian cities. In the late 19th cent. the outstanding artists were the landscapists Daniel Fowler, F. M. Bell-Smith, and Robert Gagen, the portrait painters Rob-

ert Harris, Antoine Palamondon, and Theophile Hamel, and two great cartoonists, J. W. Bengough and Henri Julien. They were followed by a number of celebrated painters, including George A. Reid, Franklin Brownell, Florence Carlyle, F. McG. Knowles, Horatio Walker, M. A. de Foy Suzor Côté, William Brymner, Maurice Cullen, Tom Thomson, and J. W. Morrice, who worked chiefly outside Canada and is perhaps the most celebrated of Canadian landscapists. In 1920, Franklin Carmichael, Lawren Harris, A. Y. Jackson, Franz H. Johnston, Arthur Lismer, J. E. H. MacDonald, and F. Horsman Varley formed the Group of Seven, dedicated to painting the Canadian landscape. Traveling and working all over the dominion, they did much to awaken the interest of the country at large. Their approach, which emphasized flat, strongly colored design, tended toward a poster style. The cultural center of the Seven was Toronto, in Montreal toward the end of World War II a new, radical group was formed, including Alfred Pellan, John Lyman, P. E. Borduas, and J. P. Riopelle. They evolved the automatist movement, influenced by Matisse, Picasso, and Surrealism. Other major painters, working in a wide variety of styles, include David Milne, Emily Carr, Pegi Nicol MacLeod, B. C. Binning, J. L. Shadbolt, and Harold Town. In the late 1960s the OP ART movement flourished in Montreal. Canadian painters currently at work employ a variety of styles and cannot be grouped as a school. After the decline of wood carving, little sculpture was produced until 1900. Philippe Hébert, Suzor-Côté, Alfred Laliberte, Tait McKenzie, and Walter Allward became well-established sculptors. Among the later sculptors, Emanuel Hahn, Louis Archambault, Elizabeth Wyn Wood, and Henri Hebert are notable. The French Canadians have an important tradition in such decorative arts and crafts as metalworking and rug hooking. In the graphic arts Clarence Gagnon, W. J. Phillips, and Albert Dumbuchel are considered among the foremost Canadian print makers of the 20th cent. Canadian architecture adheres in the main to foreign trends, especially in the planning of public buildings. From the 18th to the 20th cent., French Renaissance, English Georgian, regency, and Gothic revival designs were successively dominant. A notable example of Gothic revival is found in the buildings of Parliament Hall, Ottawa (begun 1859), by Thomas Fuller and others. Based on the ideas of H. H. Richardson, well-known structures in the châteaueau style are the Château Frontenac (1890), Quebec City, and the Banff Springs Hotel (1913), Banff, Alberta. Major modern buildings include the Electrical Building and Civic Auditorium, Vancouver, British Columbia, and the Shakespearean Festival Theatre, Stratford, Ont. Church and domestic architecture in Canada have consistently shown originality. Particularly in Quebec during the colonial period, charming rural stone houses and churches were developed—typically low and rectangular, with steep pitched roofs and uptilting eaves. Safdie's remarkable "Habitat," a dynamic and original approach to housing, was erected in Montreal for Expo '67. For a discussion of Canadian Indian art see NORTH AMERICAN INDIAN ART. See studies on Canadian art by Graham McInnes (rev. ed. 1950), J. R. Harper (1966 and 1972), and William Townsend, ed. (1970), on architecture by Alan Gowans (1958) and Pierre Mayrand and John Bland (1971), Dennis Reid, *A Concise History of Canadian Painting* (1974).

Canadian football see under FOOTBALL

Canadian literature, English Although Canadian writing began as an imitative colonial literature, it has steadily developed its own national characteristics. Because of the huge immigrations, first of New England Puritans from 1760 on and later of American Loyalists during the Revolution, Canadian literature followed U.S. models almost until the confederation in 1867. Before 1800 the rigors of pioneering left little time for the writing or the appreciation of literature. The only notable works were journals, such as that of Jacob Bailey, and the recorded travels of explorers, such as Henry Kelsey, Samuel Hearne, and Sir Alexander Mackenzie. The first Canadian novelist of note was John Richardson, whose *Wacousta* (1832) popularized the genre of the national historical novel. With *The Clockmaker* (1836) T. C. Haliburton began his humorous series on Sam Slick, the Yankee peddler. Historical novelists writing c. 1900 included William Kirby, author of *The Golden Dog* (1877), and Sir Gilbert Parker, author of *The Seats of the Mighty* (1896). The novels of Sara Jeannette Duncan, such as *A Social Departure* (1890), were noted for their satire and humor. The Rev. C. W. Gordon (Ralph Connor) produced *Black Rock* (1898), a series of novels on pioneer life in W.

Canada. Animal stories became popular in the works of Ernest Thompson Seton, Sir C. G. D. Roberts, and Margaret Marshall Saunders. Since 1900, Canadian novels have tended toward stricter realism, but have remained predominantly regional. Among the most prominent authors have been Lucy M. Montgomery, author of *Anne of Green Gables* (1908), Mazo de la Roche, well known for her series on the Whiteoaks family of Jalna, Frederick P. Grove, author of *Settlers of the Marsh* (1925), a novel of farm life, and Laura Salverson and Nellie McClung, novelists of immigrant and rural life in W. Canada. Important novelists during and after World War II include Morley Callaghan, Gvethalyn Graham, John Buell, Hugh MacLennan, Mordecai Richler, Malcolm Lowry, Ethel Wilson, Robertson Davies, Brian Moore, Margaret Laurence, and Margaret Atwood. Their novels have focused attention on Canadian city life, social problems, and the large problem of Canadian cultural division. Stephen Leacock is well known for his humorous essays as well as for his scholarship. Other notable essayists include Sir Andrew Macphail, Archibald MacMechan, and Lorne Pierce. Genuinely Canadian poetry was late in developing. In the 18th cent. Puritan hymnists, such as Henry Alline, and refugee Tory satirists, such as Jonathan Odell, took their models from American colonial or English neoclassical literature. Before the confederation of 1867 the only poets of note were Charles Sangster, the first to make use of native material, and Charles Heavysege, whose long poetic drama *Saul* brought him widespread acclaim. Starting c. 1880, the "confederation school"—C. G. D. Roberts, Archibald Lampman, Bliss Carman, and Duncan Campbell Scott—began producing a large body of romantic poetry, describing nature and Canadian rural life. In 1905, long after her death in 1887, Isabella V. Crawford was recognized as an important poet, she was followed by Emily Pauline Johnson and Marjorie Pickthall. Other poets of the early part of the century included Wilfred Campbell, W. H. Drummond, Francis Sherman, John McCrae, and the greatly popular Robert W. Service. In 1926 the prolific E. J. Pratt broke away from the romantic tradition with *The Titans*, his highly original and powerful epics place him among the foremost Canadian poets. Notable contemporary poets in the Pratt tradition include Kenneth Leslie, Earle Birney, W. W. E. Ross, Dorothy Livesay, and Anne Marriott. Other poets sharing the modern cosmopolitan tradition of the United States and W. Europe are F. R. Scott, L. A. Mackay, A. M. Klein, P. K. Page, Irving Layton, Raymond Souster, James Reaney, Margaret Avison, Phyllis Webb, Leonard Cohen, and Margaret Atwood. See bibliography by R. E. Watters (2d ed. 1972), C. F. Klinck, ed., *A Literary History of Canada* (1965), Edmund Wilson, *O Canada* (1965), Norah Story, *The Oxford Companion to Canadian History and Literature* (1967), A. J. M. Smith, ed., *Modern Canadian Verse in English and French* (1967), R. P. Baker, *A History of English Canadian Literature to the Confederation* (1920, repr. 1968).

Canadian literature, French. Except for the narratives of French explorers (such as Samuel de Champlain and Pierre Esprit Radisson) and missionaries, no notable writing was produced before the British conquest of New France in 1759. Since that time the inspiration of most Canadian writing in French has been the passionate concern of French Canadians to preserve their identity in a country dominated by the English language and cultural tradition and by the Protestant religion. There has been little contact between the two literatures. Until the 20th cent. French Canadian literature found its models mainly in writers of France and its themes in nationalism, the simple lives and folkways of the habitants, and the devotion to the Roman Catholic Church. The first artistic expression of this spirit was F. X. Garneau's *Histoire du Canada* (1845–48), still the classic of French Canadian nationalism. Other historians, including Benjamin Sulte, Thomas Chapais, and L. A. Groulx, also placed their emphasis on pride in and protection of their French heritage. This school of thought inspired the first nationalist poet, Octave Crémazie, and the Quebec school of poets, novelists, and historians who began a deliberate effort in 1861 to create a national literature, with such French authors as Hugo and Lamartine as their chief models. The group included Philippe Aubert de Gaspé, J. B. A. Ferland, Louis-Honoré Fréchette, Pamphile LeMay, Abbé H. R. Casgrain, Antoine Gérin-Lajoie, and Nérée Beauchemin. There developed c. 1900 a new group of writers, chiefly in Montreal, who tried to achieve the stricter technique and keener artistic perceptions of the Parnassians of France. These more sophisticated poets included Charles Gill,

René Chopin, and Louis Dantin. Some writers of the new group, such as Émile Nelligan, considered French Canada's first native poetic genius, and Paul Morin, abandoned the national note for exotic subjects, others, such as Albert Lozeau and Albert Ferland, found inspiration in Canadian nature. About this time men of letters, notably Adjutor Rivard, began a movement to preserve the purity of the French language in Canada. Influential critics included Camille Roy, Henri d'Arles, and the poet Louis Dantin. In the novel, a rural romanticism was expressed in the works of Felicité Angers (Laure Conan). A more realistic fiction took impetus from Louis Hémon's *Maria Chapdelaine* (1913), a novel of the peasants of the Lake St. John country. There followed a stream of fiction on habitant life in the backwoods, on the farms, and in the villages, by such native Canadians as Robert Choquette, F. A. Savard, Claude Henri Gignon, Roger Lemelin, and Ringuelet. Although some novels were set in cities and the notable author Robert Charbonneau explored the psychological defeatism of his characters, the realistic regional novel about the simple Catholic community remained dominant until the 1950s. Important poets since 1914 include Clement Marchand, whose inspiration is often religious, Alfred DesRochers, who writes of the life of the soil, and Robert Choquette and Roger Brien, whose romantic lyrics are eloquently individualistic. Following World War II there was evidence of a new, less self-conscious spirit. Poets and novelists, trying to settle the vexing problem of language, declared that pure French should be standard, with the use of Canadianisms accepted wherever these served a purpose. Although it was still possible to detect the influence of France (often with a lag of 30 years), at midcentury much creative writing in Canada, as elsewhere, was characterized by experiment with subject matter and technique. Among the poets of the new trend were Anne Hébert, Alain Grandbois, Saint-Denis-Garneau, Gatien Lapointe, Pierre Trottier, Rina Lasnier, Fernand Ouellette, and Jacques Godbout and Jean Guy Pilon, the last two forming the nucleus of a group in Montreal which started the literary magazine *Liberte* in 1959. In fiction of the 1950s and 60s urban problems replaced rural concerns, and irony and skepticism national pride. Foremost among contemporary novelists are Gabrielle Roy, Yves Thériault, Robert Elie, Roger Lemelin, André Langevin, Jean Simard, Claire Martin, Marie-Claire Blais, and Girard Bessette. See Ian F. Fraser, *The Spirit of French Canada* (1939), Edmund Wilson, *O Canada* (1964), A. J. M. Smith, ed., *Modern Canadian Verse in English and French* (1967), Norah Story, *The Oxford Companion to Canadian History and Literature* (1967).

Canadian Mounted Police: see ROYAL CANADIAN MOUNTED POLICE

Canadian National Railways, government owned but corporately operated transportation system in Canada, extending from coast to coast with many branch lines in each province and in the United States. The system is an amalgamation of five separate railroad enterprises that were unified in 1922. The system also operates telegraph, steamship, and air services.

Canadian Pacific Railway, transcontinental transportation system in Canada and extending into the United States, privately owned and operated. The construction of a railroad crossing the continent in Canadian territory was one of the conditions on which British Columbia entered the confederation in 1871. After many difficulties and a political scandal, intensive work began in 1880. The main line from Montreal to the Pacific coast was completed in 1885.

Canadian Shield or Laurentian Plateau, U-shaped region of ancient rock, the nucleus of North America, stretching N from the Great Lakes to the Arctic Ocean. Covering more than half of Canada, it also includes most of Greenland and extends into the United States as the Adirondack Mts and the Superior Highlands. The first part of North America to be permanently elevated above sea level, it has remained almost wholly untouched by successive encroachments of the sea upon the continent. It is the earth's greatest area of exposed Archaean-age rock, the metamorphic rocks of which it is largely composed were probably formed in the Precambrian era. Repeatedly uplifted and eroded, it is today an area of low relief (c. 1,000–2,000 ft/305–610 m above sea level) with a few monadnocks and low mountain ranges (including the Torngat and Laurentian Mts.) probably eroded from the plateau during the Cenozoic era. During the Pleistocene epoch, continental ice sheets depressed the land surface (see HUDSON BAY), scooped out thousands of lake basins,

and carried away much of the region's soil Drainage is generally very poor on the shield The southern part of the shield has thick forests while the north is covered with tundra The region is largely undeveloped but has great water-power potential and is a source of minerals, timber, and fur-bearing animals

canafistula (kän'yäfīs'chälə) see SENNA

canaigre (kän'igrē) see BUCKWHEAT

Çanakale (chānak'älē) or **Chanakkale** (-kalā), city (1970 pop 27,074), capital of Çanakale prov., NW Turkey, on the Asian shore of the Dardanelles It is famous for its fine pottery and has an important fish-canning industry The city has long been fortified and has a 15th-century fort, which is still used by the Turkish army In World War I the city and fort were bombarded (1915) during the Gallipoli campaign Near Çanakale are the mouth of the historic Aegospotamos River and the ruins of the ancient towns of Abydos and Sestos

Çanakale Boğazi, Turkey see DARDANELLES

Canal, Antonio: see CANALETTO

canal, an artificial waterway constructed for navigation or for the movement of water The digging of canals for irrigation probably dates back to the beginnings of agriculture, and traces of canals have been found in the regions of ancient civilizations Canals are also used to provide municipal and industrial water supplies The drainage of wet lands may be accomplished by means of a canal, by this method the Fens of England and the Zuider Zee in the Netherlands were drained Canals can be used for flood control by diverting water from threatened areas into storage basins or to other outlets In some cases canals are used to generate electricity, the Moscow-Volga Canal is used for such a purpose Navigation canals developed after irrigation canals and for a long time were level, shallow cuts, or had inclined planes up which vessels were hauled from one level to the next, locks (see LOCK, CANAL) developed separately in China (10th cent.) and Europe (Holland, 13th cent.) Over the years canals have been expanded in width and depth in order to accommodate larger craft, and they have, in some cases, been constructed to form bridges or to pass through tunnels to overcome topographic difficulties Movement on canals was long accomplished by animal tows or by poling, in the 20th cent. mechanized tows and self-propelled barges appeared The GRAND CANAL OF CHINA (the longest in the world) was completed in the 13th cent. and is the most notable of the early canals France, Belgium, Holland, and Germany were the first in Europe to develop inland waterway systems by using canals to connect rivers, these countries now have a dense network of waterways (see RHINE CANALS, MIDLAND CANAL) Canal building was widespread in the 18th and 19th cent. During that period England developed an elaborate canal network, and there was also a canal-building boom in the United States in the 19th cent., especially after the completion of the ERIE CANAL However, the rise of railroads brought a decline in the building and use of canals as inland waterways Canals have been built to shorten sea voyages or to make them less hazardous, e.g., the SUEZ CANAL, the PANAMA CANAL, and the KIEL CANAL Canals improve conditions on natural waterways by bypassing falls (the WELLAND SHIP CANAL), shallows, or swift currents (the Sij Canal in the Danube River's Iron Gate gorge) Canals may provide inland cities with direct access to the sea (the MANCHESTER SHIP CANAL), or shorten the distance between cities (the ALBERT CANAL) In the 20th cent. canals regained importance, as modern technology provided the means to overcome greater topographic obstacles and facilitated the construction of larger canals and the expansion of existing ones See T. C. Bridges, *Great Canals* (1936), P. 5 Payne, *The Canal Builders* (1959), H. S. Drago, *Canal Days in America* (1972)

Canal du Midi (känäl' dü mēdē'), canal, c150 mi (240 km) long, linking Sete and Toulouse, S France It was built to carry oceangoing ships between the Atlantic Ocean and the Mediterranean Sea, but because of its size it now carries only barge traffic

Canalejas y Méndez, José (hōsā' kanälā'hās ē män'däth), 1854-1912, Spanish politician After holding several cabinet posts, he became premier in 1910 A democratic radical who hoped to reform the Liberal party, Canalejas advocated curbing the power of the religious orders and breaking up the large estates, but made little progress His firm measures against labor unrest alienated many of his left-wing supporters, and he was assassinated by an anarchist

Canaletto (känälēt'tō), 1697-1768, Venetian painter, whose original name was Antonio Canal He studied with his father, Bernardo Canal, a theatrical scene painter, and spent several years in Rome Returning to Venice, he devoted himself to painting the linear, dramatic, and topographically accurate Venetian scenes upon which his fame chiefly rests From 1746 to 1755 he lived in England and produced many fine landscapes, notably those of Eton College He painted series of picturesque views for English collectors, one of which is in the collection of the Duke of Bedford Canaletto is unsurpassed as an architectural painter His works are finely detailed yet delicate and airy Among his notable works are *View on the Grand Canal and Regatta on the Grand Canal* (National Gall., London), *Church of Santa Maria Della Salute* (Louvre), *View of Venice* (Uffizi), and *The Piazzetta, Venice* (Metropolitan Mus.) He was a master draftsman and produced many superb drawings and etchings that were not preparatory but complete in themselves Toward the end of his life his painting became increasingly mechanical and mannered but in no way less skillful Examples of Canaletto's works are in the major European and American collections His nephew and pupil, Bernardo Bellotto, was also called Canaletto See studies by Vittorio Moschini (tr 1956) and W. G. Constable (1961)

Canal Zone: see PANAMA CANAL ZONE

Cananaean (känänē'an), epithet of St. SIMON

Canandaigua (känändä'gwə), city (1970 pop 10,488), seat of Ontario co., W central N.Y., in the Finger Lakes region, at the northern end of Canandaigua Lake, settled 1789, inc. 1913 It is a resort and farm-trade center, with various industries The county historical-society museum contains a copy of the treaty with the Iroquois Confederacy, signed there in 1794 by Timothy Pickering The courthouse was the scene of Susan B. Anthony's trial (1873) for voting A U.S. veterans' hospital is in Canandaigua

Canandaigua Lake: see FINGER LAKES

Canaris, Constantine: see KANARIS, CONSTANTINE

Canaris, Wilhelm (vil'hēlm kana'ris), 1887-1945, German admiral He occupied various positions in the German navy during and after World War I In 1935 he was made chief of the *Abwehr* [military intelligence] A conservative, Canaris at first welcomed Hitler, but Hitler's methods and the fear that a new war would destroy Germany drove him into the opposition The *Abwehr* became a center of conspiracy against the regime Under Canaris's protection, one of his subordinates, Hans Oster, helped organize opposition to the Nazi regime In April, 1943, many of Oster's co-conspirators were arrested and the *Abwehr* was put under constant surveillance, but Canaris was not dismissed until Feb., 1944 He was arrested shortly after the attempt (July, 1944) on Hitler's life, though he was not directly involved in the plot He was executed by the Gestapo in April, 1945

Canarsee Indians (känārsē), North American Indians whose language belongs to the Algonquian-Wakashan linguistic stock (see AMERICAN INDIAN LANGUAGES) They occupied the western part of Long Island, N.Y., and sold the site of Brooklyn to the Dutch They paid tribute to the Mohawk, and when they stopped paying and defied the Mohawk, they were almost destroyed

canary, common name for a familiar cage bird of the family Ploceidae (Old World FINCH family), descended from either the wild serin finch or from the very similar wild canary, *Serinus canarius*, of the Canary Islands, Madeira, and the Azores and introduced into Europe in the late 15th or early 16th cent. The wild birds are usually gray or green, selective breeding has produced both plain and variegated birds, mostly yellow and buff but sometimes greenish Germany is traditionally the center for training and breeding canaries, the Harz mt. and the St. Andreasberg canaries originated there The birds are trained to sing by exposure to other birds of superior ability or to musical instruments The song of roller canaries is a series of "tours," a complex set of rolling trills delivered with the bill almost closed, choppers sing with the bill open Canaries breed rapidly in captivity and with proper care may live to 15 years or more Canaries are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Ploceidae

Canary Islands, Spain *Islas Canarias*, group of seven islands (1970 pop 1,170,224), 2,808 sq mi (7,273 sq km), off Spanish Sahara, in the Atlantic Ocean They constitute two provinces of Spain Santa Cruz de Tenerife (1970 pop 590,514), 1,239 sq mi (3,209 sq km), includes Tenerife, Palma, Gomera, and Hierro

Las Palmas (1970 pop 579,710), 1,569 sq mi (4,064 sq km), includes Grand Canary, Lanzarote, and Fuerteventura Fuerteventura is 67 mi (108 km) from the African coast The islands, of volcanic origin, are rugged, Mt. Teide (12,162 ft/3,707 m) is the highest point in Spain Pliny mentions an expedition to the Canaries c. 40 B.C., and they may have been the Fortunate Islands of later classical writers They were occasionally visited by Arabs and by European travelers in the Middle Ages Jean de Bethencourt, a Norman, settled at Lanzarote in 1402 and, with the support of the kingdom of Castile, became its king in 1404 The Treaty of Alcacovas (1479) between Portugal and Spain recognized Spanish sovereignty over the Canaries, conquest of the Guanches, the indigenous inhabitants of the islands, was completed in 1496 The islands became an important base for voyages to the Americas The Canaries were frequently raided by pirates and privateers, Las Palmas beat off Francis Drake in 1595 but was ravaged by the Dutch in 1599 In the French Revolutionary Wars, Horatio Nelson was repulsed (1797) at Santa Cruz Wine was the main export of the Canaries until the grape blight of 1853, its place was taken by cochineal until aniline dyes came into general use, sugarcane then became the chief commercial crop Today the leading exports are bananas, tomatoes, potatoes, and tobacco, which are grown where irrigation is possible There is fishing on the open seas, and the Canaries, with their warm climate and fine beaches, have become a major tourist center

canary wood or **canary whitewood**, name applied to the timber of the tulip tree (see MAGNOLIA) in some parts of the United States and to an Australian eucalyptus, the Indian mulberry, and to two species of the genus *Persea* of the laurel family

canasta: see RUMMY

Canberra (kän'bərə), city (1971 pop 141,575), capital of Australia, in the Australian Capital Territory, SE Australia The Canberra urban agglomeration (1971 pop 156,334) includes a small area in New South Wales The federal government is the largest employer in Canberra, there are also printing and service industries The site chosen (1908) for the capital city was first settled in 1824 In 1913, Canberra officially became the second capital of the commonwealth (succeeding Melbourne), however, although the Parliament first met there in 1927, the transfer of federal functions was not completed until after World War II The city was planned by the American architect Walter Burley Griffin Canberra is the seat of the Royal Military College, Australian National Univ., Mount Stromlo Observatory, and other research and scientific institutions

Canby, Edward Richard Sprigg, 1817-73, Union general in the Civil War, b. Kentucky, grad. West Point, 1839 He fought in the Seminole War and in the Mexican War In the Civil War, Canby commanded the Dept. of New Mexico, where he thoroughly repelled the Confederate invasion (1862) He was made a brigadier general of volunteers in March, 1862, and was on special duty in the War Dept. in Washington from Jan., 1863, to March, 1864, except for four months as the commander of New York City during the DRAFT RIOTS of 1863 Canby was promoted to major general in May, 1864, and assigned to command the Military Division of West Mississippi He captured Mobile in April, 1865, and in May received the surrender of the last Confederate armies After the war Canby held various commands in the South until 1870, when he was sent to the Dept. of the Columbia on the Pacific coast He was killed during a peace conference with the MO-DOC INDIANS See biography by M. L. Heyman, Jr. (1959)

Canby, Henry Seidel, 1878-1961, American editor and critic, b. Wilmington, Del., grad. Yale, 1899 He taught at Yale for over 20 years, achieving professorial rank in 1922 He established and edited (1920-24) the *Literary Review* of the New York *Evening Post*, afterwards joining with others to found and edit (1924-36) the *Saturday Review of Literature*, *Seven Years' Harvest* (1936) is his intellectual diary culled from its files His critical and literary works include *Classic Americans* (1931), *Thoreau* (1939), *Whitman* (1943), *The Brandywine* (1941), *The Gothic Age of the American College* (1936), and *Turn West, Turn East* Mark Twain and Henry James (1951)

cancan (kän'kän), a lively French dance marked chiefly by high kicking It was developed in Paris in the 1830s and became a popular social dance there By the mid-19th cent. it was incorporated into dance revues and stage productions Jacques Offenbach wrote the best-known cancan music Henri de

Toulouse-Lautrec made celebrated paintings and lithographs of famous cancan dancers

Cancer [Lat., =the crab], in astronomy, CONSTELLATION lying on the ECLIPTIC (the sun's apparent path through the heavens) between Gemini and Leo, it is a constellation of the ZODIAC. It contains the star cluster PRAESEPE, but no bright stars. The tropic of Cancer takes its name from this constellation, in which the summer solstice was located about 2,000 years ago. Now, because of the PRECESSION OF THE EQUINOXES, the summer solstice has moved westward into the constellation Gemini. Cancer reaches its highest point in the evening sky in March.

cancer, common term for NEOPLASMS, or tumors, that are malignant. Like benign tumors, malignant tumors do not respond to body mechanisms that limit growth. Unlike benign growths, malignant tumors show an atypical cell structure, with undifferentiated, rather than functional, specialized cells. Also unlike normal cells, cancer cells growing in laboratory tissue culture do not stop growing when they touch each other on a glass or other solid surface but grow in masses several layers deep, they are said to lack contact inhibition. Loss of contact inhibition accounts for two other characteristics of cancer cells: invasiveness of surrounding tissues, and metastasis, or spreading via the lymph system or blood to other tissues and organs. Cancers are graded as to degree of malignancy on a scale of one through four, often, however, the distinction between even benign and malignant neoplasms is obscure. Virtually all organs and tissues are susceptible to cancer. Cancer tissue, growing without limits, competes with normal tissue for nutrients, eventually killing normal cells by nutritional deprivation. Cancerous tissue also causes secondary effects, with the symptoms of a malignant growth caused by the pressure of the growing tumor against surrounding tissue, or the metastasis of cancer cells and their invasion of other organs. Symptoms are often nonspecific, e.g., weakness, loss of appetite, and weight loss. Sometimes side effects of tumor growth are more severe than the actual effects of the malignancy, for example, some tumors secrete materials such as serotonin and histamine that can cause drastic vascular changes. A tumor of an endocrine gland, such as an adrenal carcinoma, may be responsible for producing enormously increased numbers of hormone-secreting cells. Conversely, cancers that destroy tissue may also have serious effects, e.g., malignant destruction of bone tissue may raise the blood level of calcium. A large proportion of human cancers may be caused, or at least triggered, by various chemical agents. Alkylating agents such as NITROGEN MUSTARD are thought to have a carcinogenic effect because they chemically alter the cell's nucleic acids. Nitrates, common additives in processed meat, react with amines in the stomach to form nitrosoamines, which some authorities believe may be carcinogenic to humans. Other commonly occurring carcinogens are azo dyes, polycyclic hydrocarbons, and urethane. Certain carcinogens present occupational hazards. Asbestos particles, once inhaled, remain in the lung and act as an irritant. In the asbestos and construction industries, workers have a high probability of developing a fatal cancer of the chest lining or abdominal lining 25 to 30 years after the initial inhalation of ASBESTOS. Oral cancer, common in India, is commonly attributed to the chewing of betel nuts. Although the apparently increasing incidence of some types of highly malignant cancers, e.g., certain lung cancers and LEUKEMIAS, may be a result of improvements in disease detection and diagnosis, an increase in cigarette smoking and an increase of atmospheric pollutants are also thought to play a part. Other cancers may be triggered by such changes in the body's internal environment as hormone imbalances. For example, as first reported in 1970, some daughters of mothers who had been given diethylstilbestrol (DES) during pregnancy to prevent miscarriage, developed vaginal adenocarcinomas as young women. There are genetic tendencies for certain types of cancer, e.g., breast or stomach cancer, and certain benign tumors, e.g., certain tumors of the eye, cartilage, and skin, some of which may later become malignant. Physical agents such as X rays and radioactive elements are also carcinogenic, the high incidence of leukemia and other cancers in Japanese survivors of the atomic bombing of Hiroshima and Nagasaki is evidence of this carcinogenic effect. In light-skinned people who spend much time outdoors, sunlight may be carcinogenic. Sometimes irritations and diseases may predispose an individual to cancer, as in the occurrence of cancer of the esophagus associated with frequently swallowing very hot liquids. Increasing

evidence implicates viruses in induction of cancer. In the early 20th cent., Peyton Rous, an American virologist, showed that certain fowl sarcomas could be transmitted by injection of an agent invisible under the microscope and later shown to be an RNA-containing virus. Since then other oncogenic, or tumor-causing, viruses have been identified in experimental animals. Viruses of the herpes group, some of which cause cold sores and chicken pox, have been shown to cause cancer in experimental animals. Recent evidence indicates that other members of the herpes group, such as the virus causing infectious mononucleosis, may cause human cancer. Cancers can often be detected by visual observation, palpation, X-ray study, inspection by various optical probing instruments (endoscopy), and BIOPSY. Cancers caught early, before metastasis, have the best cure rates. Once found, cancers are treated by surgery, chemotherapy, and radiation. Surgery is most effective if the cancer is caught early, while still localized. Some cancers that spread to the lymph system have frequently prompted extensive surgical removal of tissue (see MASTECTOMY). Many cancers formerly treated surgically are now being attacked by other means, e.g., radiation therapy. Use of radioactive elements specific for particular target organs, such as radioactive iodine specific for the thyroid gland, is effective in treating malignancies of those organs. Laser beams are used to treat certain cancers, and certain subatomic particles, i.e., pions, are being used experimentally. Chemotherapeutic agents that are IMMUNOSUPPRESSIVE DRUGS are used to selectively destroy cancer cells. In general they interfere with nucleic acid and protein synthesis, rapidly proliferating cells like cancer cells are most susceptible. Hormones such as ESTROGEN and TESTOSTERONE, which may be carcinogenic under some conditions, are also used in cancer chemotherapy. Unfortunately, currently available chemotherapeutic agents are not usually curative but merely ameliorate the severity of the disease, in addition, they are often toxic to normal rapidly proliferating cells such as bone marrow cells. A chemotherapeutic technique known as isolated perfusion can be used to minimize exposure to many toxic drugs. In this method a pump and two tubes are attached to two places in a network of blood vessels so that the drug only circulates through the part of the system that is malignant. New approaches to cancer therapy, still largely in the experimental stage, include immunological methods such as vaccinating against cancer-causing viruses or injecting sensitized lymphocytes, i.e., antibody-forming cells (see IMMUNITY). Recent research is also directed toward elucidating the cellular events that are manifested as uncontrolled growth and cancer. The fact that there are many ways to interfere with the controls on genes may help to explain why cancer is apparently caused by a diversity of agents, and why agents that interfere with the expression of genetic information, e.g., nitrogen mustard, radiation, and some hormones, are sometimes carcinogenic and sometimes therapeutic. See A. C. Braun, *The Cancer Problem* (1969); Victor Richards, *Cancer: The Wayward Cell* (1972); B. N. Brooke, *Understanding Cancer* (1973); D. M. Prescott, *Cancer: the Misguided Cell* (1973).

Candace (kän'dasē, kändā'sē), title for queens in ancient Ethiopia. One of them made war (c. 22 B.C.) on the Roman governor of Egypt, who defeated her and destroyed Napata, her capital. Another Candace is mentioned in the Bible as the queen of the eunuch converted by Philip (Acts 8:27-39).

Candela, Felix (fä'lēks kändā'la), 1910–, Mexican architect, b. Madrid. Candela studied in Madrid but was forced to flee Spain after his participation in the Spanish civil war. He went to Mexico in 1939 and set up his own construction firm, gaining renown for his design of thin-shelled concrete domes. Among his best-known works are the Cosmic Ray Pavilion (1950-51) for Mexico's University City, the Church of La Virgen Milagrosa (1953), Mexico City, and Los Manantiales restaurant (1958), Xochimilco. See study by Colin Faber (1963).

candela (kändē'la), abbr. cd, official name for the CANDLE, the unit of luminous intensity in the INTERNATIONAL SYSTEM OF UNITS. See PHOTOMETRY.

candelabrum (kän'dəla'brəm), primarily a support for candles, designed in the form of a turned baluster or a tapered column, also a branched candlestick or a lampstand. Though most used and developed during the Renaissance, the candelabrum originated in Etruria and Rome. Candelabra found in Etruscan and Pompeian ruins are usually of bronze. From ancient Rome come the tall and monumental candelabra used in temples and public buildings. Of

bronze or marble, they had triangular pedestals from which rose columnar shafts, finely sculptured and terminating at the top in a bowl used for holding illuminating oil and incense. With these as inspiration, Italian Renaissance artists produced superb candelabra in rich materials for altars, chapels, and processions. In that period the distinctive form of the candelabrum came also to be a ubiquitous decorative motive, used freely in architectural ornament, tapestry borders, stained-glass windows, and furniture. It was even converted (especially in Lombardy) into a definite architectural element, taking the place of a column or colonnette, as in windows of the Certosa at Pavia. See F. W. Robins, *The Story of the Lamp (and the Candle)* (1939).

Candia, Crete. See IRAKLION.

candle, cylinder of wax or tallow containing a wick, used for illumination or for ceremonial purposes. The evidence of ancient writings is not conclusive as to the history of the candle, words translated "candle" may have meant "torch" or "lamp," and the "candlestick" was probably a stand for one of these lights. The candle probably evolved from wood, rushes, or cords dipped in fat or pitch. Candles as well as lamps were used in Roman times, by the Middle Ages candles (tallow for the poor and wax for the wealthier) were quite common in Europe. Tallow, beeswax, and vegetable wax such as bayberry in the American colonies, candleberry in the East, and waxberry in South America were supplemented by spermaceti in the late 18th cent., by stearine c. 1825, and by paraffin c. 1850. Twisted strands for wicks were replaced (c. 1825) by the plaited wick. Candles were commonly made by repeated dipping in melted tallow, by pouring tallow or wax into molds, or by pouring beeswax over the wicks. Most modern candles are machine-made by a molding process, although candle making as an art survives in industrialized countries. In literature, art, and religion the candle has had a wide range of symbolism, it commonly represents joy, reverence for the divine, and sacrifice (since the candle spends itself). Candles have been especially important in Jewish religious services. In the Roman Catholic Church candles are blessed on Candlemas Day. The very large paschal candle stands at the Gospel side of the altar, it is blessed and lighted during the Exultet on the vigil of Easter and is relighted at important ceremonies until Ascension Day.

candle, in weights and measures, unit of luminous intensity, it is defined as 1/60 of the intensity of a BLACK BODY, or ideal radiator, at the temperature at which platinum solidifies (2046°K). The candle is one of the fundamental units of the INTERNATIONAL SYSTEM OF UNITS, its official name is the candela. See PHOTOMETRY.

candleberry: see BAYBERRY.

candlefish: see SMELT.

Candlemas, Feb. 2, Christian festival commemorating the Purification of the Blessed Virgin and the Presentation of Christ in the Temple. The name Candlemas is derived from the procession of candles, inspired by the words of Simeon "a light to lighten the Gentiles" (Luke 2:32). In the Roman Catholic Church the candles for use in the ensuing year are blessed on this day. An old superstition claims that the weather is foretold by the ground hog (see WOODCHUCK) on Candlemas.

candlepower: see PHOTOMETRY.

Candlewood Lake, 8.4 sq mi (21.8 sq km), W. Conn. It is formed behind a power dam S of the Rocky River's junction with the Housatonic River. Along its 65-mi (105-km) shoreline are summer resorts and recreational facilities.

candy: see CONFECTIONERY.

candytuft, any plant of the genus *Iberis* of the family Cruciferae (MUSTARD family), low-growing plants of the Old World. A number of half-hardy annuals and evergreen perennials are cultivated—chiefly in borders and rock gardens—for the flat-topped or elongated clusters of flowers of various colors. Candytufts are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Capparales, family Cruciferae.

cane, in botany, name for the hollow or woody, usually slender and jointed stems of plants (particularly RATTAN and other bamboos) and for various tall grasses, e.g., SUGARCANE, sorghum, and also other grasses used in the United States for fodder. The large, or giant, cane (*Arundinaria macrostachya* or *gigantea*), a BAMBOO grass native to the United States, often forms impenetrable thickets 15 to 25 ft (3.6-7.6 m) high—the canebrakes of the South. The stalks are used locally for fishing poles and other

purposes, and the young shoots are sometimes eaten as a potherb

cane, walking stick Probably used first as a weapon, it gradually took on the symbolism of strength and power and eventually authority and social prestige Ancient Egyptian rulers carried the symbolic staff, and in ancient Greece, some gods were represented with a staff in hand In the Middle Ages, the long staff or walking stick was carried by pilgrims and shepherds A scepter carried in the right hand symbolized royal power, carried in the left hand of a king the staff represented justice The church, too, adopted the staff for its officials, the pastoral staff (crosier), which is long and has a crooked handle, symbolizes the bishop's office The word cane was first applied to the walking stick after 1500, when bamboo was first used After 1600 canes became highly fashionable for men Made of ivory, ebony, and whalebone, as well as of wood, they had highly decorated and jeweled knob handles They were often made hollow in order to carry possessions or supplies or, in some cases, to conceal a weapon In the late 17th cent oak sticks were extensively used, especially by the Puritans The cane continued in men's fashions throughout the 18th cent, as with the women's fan certain rules became standard for its use From time to time women adopted the cane, particularly for a short time when Marie Antoinette carried the shepherd's crook In the 19th cent the cane became a mark of the professional man, the gold-headed cane was especially favored See Kurt Stein, *Canes and Walking Sticks* (1973)

Canea, Crete see KHANIA

Canellopoulos, Panayotis: see KANELLOPULOS, PANAYOTIS

cane sugar: see SUCROSE

Caney Fork, river, 144 mi (232 km) long, rising in central Tenn and flowing NW to the Cumberland River On Caney Fork are Great Falls Dam and Center Hill Dam, which provide flood control and power for the surrounding area and impounds a 36-sq mi (93-sq km) lake Caney Fork is part of the Tennessee Valley Authority

Canfield, Dorothy: see FISHER, DOROTHY CANFIELD

Canfield, Richard Albert, 1855-1914, American gambler, b New Bedford, Mass A well-known gambling operator in Providence, R I, Canfield went in the 1880s to New York, where his gambling establishment became famous It was closed in 1904 largely through the efforts of W T JEROME, district attorney Canfield was a noted art collector The solitary game Canfield was named for him See biography by Alexander Gardiner (1930)

Can Grande della Scala: see SCALA, CAN FRANCESCO DELLA

Caniapiscaw: see KANIAPISKAU, river, Canada

Canisius, Peter: see PETER CANISIUS SAINT

Canis Major [Lat, =greater dog], CONSTELLATION lying near the celestial equator, SE of Orion Known as the Large Dog (CANIS MINOR is the Small Dog), it was associated with the figure of a dog by many cultures, the ancient Greeks identified it as one of Orion's hunting dogs, while the Scandinavians called it Sigurd's dog It contains SIRIUS, the brightest star in the heavens, also known as the Dog Star Other bright stars in Canis Major are ADHARA (Epsilon Canis Majoris), Mirzam (Beta Canis Majoris), and Wezen (Delta Canis Majoris) The constellation reaches its highest point in the evening sky in February

Canis Minor [Lat, =lesser dog], small CONSTELLATION lying near the celestial equator, E of Orion and NE of Canis Major, the Large Dog Known as the Small Dog, Canis Minor is traditionally identified as one of Orion's hunting dogs It contains the bright star PROCYON The constellation reaches its highest point in the evening sky in late February

Cankar, Ivan (ĕ'vön tsän'kär), 1876-1918, Slovenian poet Considered one of the great Slovenian literary figures, he was influential in the development of modern satire, symbolic drama, and the psychological novel The struggle of the outcast poor is a theme of his satirical novel *Yemey's Justice* (1907, tr 1926) and many other works Cankar also wrote satires on politics and culture

Canker, small sore on the inside of the mouth A canker appears as a shallow, whitish ulcer surrounded by a thin, red area It is tender, sometimes painful, and may occur singly or as one of a group of sores Cankers develop on the inner surfaces of the lips or cheeks, on the gums, under the tongue, or on the roof of the mouth The cause is unknown, but cankers have been associated with friction, injury, allergy, and viral infection They generally heal by themselves in a few days but can be recurrent

cankerworm, name for two destructive INCHWORMS, or larvae of geometrid moths The spring cankerworm (*Paleacnta vernata*) and the fall cankerworm (*Alsophila pometana*) are named for the seasons at which the adults emerge from underground pupation The spring cankerworm larva overwinters as a pupa, the fall cankerworm as an egg The larvae, dark green to brown and about 1 in (2.5 cm) long, feed on the leaves of orchard and shade trees The spring cankerworm has two pairs of posterior appendages (prolegs), the fall cankerworm has three The wingless female lays her eggs on the bark, and one control method is the placing of bands of sticky paper around the tree trunks to trap the females before laying When alarmed, cankerworms drop and hang suspended in mid-air at the end of a long silken thread secreted from their mouths, they ascend this thread after the danger has passed The English sparrow was originally introduced in the United States to combat the spring cankerworm Cankerworms are classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Geometridae For control methods see bulletins of the U S Dept of Agriculture

canna [Lat, =cane], any plant of the genus *Canna*, tropical and subtropical perennials, grown in temperate regions in parks and gardens for the large foliage and spikelike, usually red or yellow blossoms Today, most cultivated cannas are hybrids, but two species are found wild in the S United States, one called Indian shot because of the hard shotlike seeds *C. edulis*, Queensland arrowroot, is cultivated in the tropics for its rootstock, a commercial ARROWROOT starch *Canna* is classified in the division MAGNOLIOPHYTA, class Liliatae, order Zingiberales, family Cannaceae

cannabis: see HEMP, MARIJUANA

Cannae (kän'ē), ancient village, Apulia, SE Italy, scene in 216 B C of Hannibal's crushing defeat of the Romans Hannibal's troops assumed a crescent-shaped formation to meet the Roman troops, which were especially concentrated in the center As the Romans advanced, Hannibal by brilliant strategy managed to encircle the entire Roman force and cut it to pieces

Cannanore (kän'anör', -nör'), town (1971 pop 55,111), Kerala state, SE India Formerly the capital of the Kolattiri Raja, it traded with Arabia and Persia in the 12th and 13th cent Vasco da Gama visited Cannanore in 1498 at the invitation of the Kolattiri Raja, and it became a Portuguese settlement Control passed to the Dutch in the mid-17th cent, and the British captured Cannanore in 1783 Today it is a military station and a district administrative center Coconut products, rice, pepper, timber products, dried fish, cotton fabrics, and tobacco are traded

Canneh (kän'ē), unidentified city, apparently in N Syria Ezek 27:23 See CALNEH 2

cannel coal: see COAL

Cannes (kän), town (1968 pop 68,021), Alpes-Maritimes dept, SE France An important and fashionable resort on the French Riviera, Cannes also has shipbuilding and textile industries Napoleon I landed nearby on his return (1815) from Elba Churches from the 16th and 17th cent are in the old part of town An international film festival is held in Cannes each spring

cannibalism (kän'tibalizəm) [from Span *canibal*, referring to the Carib Indians], practice of certain peoples of eating human flesh The practice of cannibalism has been noted in such widely divergent places as Africa, South America, the South Pacific islands, and the West Indies According to available anthropological evidence, the partaking of human flesh was almost always a ritual practice Only very rarely, under the pressure of such calamities as famine or isolation by a snowstorm, an airplane crash, or a shipwreck, have human beings resorted to eating other human beings in order to survive Various skeletal prehistoric finds suggest that ancient man practiced HEAD HUNTING and cannibalism, but associated evidence strongly supports the magico-religious theory that victims for these rites were always sought among alien groups Various peoples, however, have been known to eat part of their kinsmen's corpses out of respect for the deceased and in order to absorb some magic powers This aim of life transfer seems to lie behind all cannibalism and head-hunting The two practices rarely occur together, and some anthropologists believe that the latter may have evolved from the former Among a few peoples, which may represent a connecting link, the head of the enemy is preserved and the rest of his body or selected parts of it are eaten See Gary Hogg, *Cannibalism and Human Sacrifice* (1958, repr 1966)

Canning, Charles John Canning, Earl, 1812-62, British statesman, third son of George Canning Succeeding to the peerage conferred on his mother, he took his seat as Viscount Canning in the House of Lords (1837) and served as Sir Robert Peel's under-secretary for foreign affairs (1841-46) and Lord Aberdeen's postmaster general (1853-55). Appointed (1856) governor general of India, he became known as "Clemency Canning" for his efforts to restrain revenge against the Indians during the INDIAN MUTINY In 1858, when the power of government was transferred from the East India Company to the British crown, Canning became the first viceroy of India He was created earl in 1859 and retired in 1862 See H S Cunningham, *Earl Canning and the Transfer of India* (1892)

Canning, George, 1770-1827, British statesman Canning was converted to Toryism by the French Revolution, became a disciple of William Pitt, and was his undersecretary for foreign affairs (1796-99) To bring ridicule upon English radicals and Whigs who favored the Revolution, he contributed numerous articles to the *Anti-Jacobin* (1797-98) During the war against Napoleon I, he served as treasurer of the navy (1804-6) and was foreign minister (1807-9) He exerted great influence in military affairs, planning the seizure of the Danish fleet at Copenhagen (1807) and supporting British intervention in Spain and Portugal (see PENINSULAR WAR) However, he quarreled with Lord CASTLEREAGH, and after a duel, in which Canning was wounded, both resigned from the ministry He later served (1816-20) as president of the board of control for India, resigning in protest against the government's prosecution of Queen Caroline Recalled to the foreign office after Castlereagh's suicide (1822), he reversed previous policy toward the HOLY ALLIANCE, refusing to cooperate in the suppression of European revolutions He protested the decisions of the Congress of VERONA (1822) and, although unable to prevent French intervention in Spain, later sent an army to Portugal to foil absolutist intervention there His policies toward the Spanish colonies in America, whose independence he recognized, led to the promulgation of the MONROE DOCTRINE He arranged the French-Russian-British agreement, which, after his death, resulted in Greek independence After the death of Lord Liverpool, Canning became (April, 1827) prime minister, but he died four months later See biography by Wendy Hinde (1973), studies by D Marshall (1938), C A Petrie (2d ed, 1946), H W V Temperley (1925, repr 1966, and 1905, repr 1968)

Canning, Stratford: see STRATFORD DE REDCLIFFE, STRATFORD CANNING, VISCOUNT
